

**BEFORE THE PUBLIC UTILITY COMMISSION
OF OREGON**

LC 70

In the Matter of
PACIFICORP, dba PACIFIC POWER
2019 Integrated Resource Plan.

THE RENEWABLE ENERGY
COALITION'S OPENING
COMMENTS

I. INTRODUCTION

The Renewable Energy Coalition (the "Coalition") respectfully submits these Opening Comments for consideration by the Oregon Public Utility Commission (the "Commission" or "OPUC") in the matter of PacifiCorp's 2019 Integrated Resource Plan ("IRP"). In this IRP docket, PacifiCorp provided a data response that finally recognizes the value that qualifying facilities ("QFs") provide to its system when they renew their power purchase agreements ("PPAs"). The Commission should acknowledge this value and affirmatively direct PacifiCorp to assume in its IRP that all or a reasonable number of existing QFs will renew their contracts, and that these renewing QFs provide value to the Company and ratepayers. PacifiCorp currently assumes that no QFs will renew.

This assumption feeds into PacifiCorp's avoided cost pricing for renewing QFs. When existing QFs renew their contracts, they suddenly go from being paid for their capacity for years at the end of their prior PPAs, to being paid nothing for their capacity for years at the beginning of their new PPA. Nothing, practically speaking, has changed. The QF is still providing the same value to PacifiCorp's system, it is just no longer being paid for it. This absurd result must be remedied, especially in light of PacifiCorp's recent analysis confirming this conclusion.

The Coalition has been raising this issue since at least 2014, and despite Commission orders directing PacifiCorp to act on this issue, little real change has occurred in terms of compensating existing QFs for the capacity value they provide when they renew their contracts. In this 2019 IRP docket, however, PacifiCorp provided the results of some modeling that confirms the Coalition’s assertions that QFs provide significant capacity value to PacifiCorp’s system. In this modeling, PacifiCorp modeled the impact of renewing QFs on its resource acquisition decisions. The modeling reveals that by assuming that all existing QFs will renew their contracts at the end of their current PPAs, PacifiCorp would defer the acquisition of a simple-cycle combustion turbine (“SCCT”) by three years. PacifiCorp should recognize the value QFs provide in its IRP and should appropriately compensate them for this value when they renew their PPAs.

II. DISCUSSION

The value that QFs provide to PacifiCorp and treatment of those QFs in the IRP is relevant because QF avoided cost prices often directly flow out of IRP assumptions. When a qualifying facility enters into a power purchase agreement with an Oregon utility, there is usually a period of time at the beginning of the contract during which the utility is “resource sufficient.” In other words, a period of time in which the utility does not have an immediate need for resources. PacifiCorp is “resource deficient” during the later years when it needs resources. Generally, this resource need is reflected in avoided cost prices as higher prices in the later contract years because the QF can help defer those future capacity additions.

However, when an existing QF renews its contract, the current structure of avoided costs means that such QFs will *not* be compensated for the capacity value at the beginning

of a new or renewed contract. This is despite the QF having previously been providing significant capacity value to the utility and being compensated for that capacity value at the end of their last contract. PacifiCorp historically assumed that all small QFs renewed their contracts. After the Commission directed PacifiCorp to pay QFs for the value that they provide when they renew their contract, PacifiCorp changed its IRP assumptions to assume that no QF will renew their contract. PacifiCorp made this change solely to avoid compliance with the Commission's direction. As described below, this is an incorrect assumption, and PacifiCorp should be required to assume that QFs will renew their contracts and compensate them accordingly for this value provided.

A. The Existing QF Capacity Issue Has Been Before the Commission Since 2014

Existing QFs provide capacity value to PacifiCorp and should continue to be paid for that value when they renew their power purchase agreements commencing with the first day of the new project. This issue has been developed over the course of the last several years and PacifiCorp was already required to take steps towards addressing this issue as a follow-on to its 2017 IRP.

The Coalition has raised this issue in multiple prior proceedings and despite Commission rulings in their favor, the PacifiCorp failed to implement any changes. In UM 1610, the Commission agreed “that a certain amount of capacity may not be valued if utilities assume in their IRPs that existing QFs nearing contract expiration will automatically renew.”¹ This was in response to the QFs’ assertions that “[t]he utilities plan

¹ *In re Investigation into Qualifying Facility Contracting and Pricing*, Docket No. UM 1610, Order No. 16-174 at 19 (May 13, 2016).

in their IRPs on existing QFs to renew their contracts, thereby allowing deferral of capacity investments, yet QFs are not compensated for the capacity value associated with the deferral and are effectively providing it for free.”² The Commission then directed each utility to work with stakeholders to address this issue in its next IRP.³

In PacifiCorp’s next IRP, it asserted that it complied with the Commission’s order “by *not* assuming QFs will renew.”⁴ PacifiCorp then assumed that *no* QFs would renew their contracts. PacifiCorp changed its assumptions not based on any new information, but in order to avoid conducting any analysis or paying QFs for the value associated with those that renew their contracts.

The Commission acknowledged that “non-renewal may not be the best planning assumption when many (or most) QFs do, in fact, renew.”⁵ The Commission then, directed “PacifiCorp, Staff and parties [to] discuss a potential study of the capacity value of renewing QFs, and Staff shall bring this issue to a public meeting before the 2017 IRP Update.”⁶ The parties began working together in August through October of 2018. On October 22, 2018, the Coalition sent PacifiCorp an email with their recommendations.⁷ That is where this issue was left, until PacifiCorp filed this 2019 IRP.

In this IRP docket, the Coalition inquired into the status of PacifiCorp’s study in a data request, to which PacifiCorp responded on November 26, 2019 that it “has committed

⁷ Attachment A.

to running a study which assumes the renewal of [QFs] and will supplement the response. . . as soon as the results of the extended QFs study becomes available.”⁸

Therefore, despite being before the Commission since at least 2014 (Phase I of UM 1610), the Coalition raising it numerous times since then, and a lot of work already being done on this issue, PacifiCorp as of November 2019 had not even completed any sort of study. As discussed below, PacifiCorp provided a supplement to that data response the following monthy finally providing its study results. This has gone on long enough. PacifiCorp should be directed in this proceeding to use this analysis to appropriately account for the capacity value that existing QFs provide.

B. PacifiCorp Should Assume that All QFs Will Renew Their PPAs

It is not reasonable to assume that no QFs will continue operating and delivering power to PGE beyond their current PPA. Utilities “should consider all costs with a reasonable likelihood of being included in rates over the long term, which extends beyond the planning horizon and the life of the resource.”⁹

It is more likely than not that a QF will renew or seek to enter a new contract with PacifiCorp at the conclusion of its current contract. A new QF can often decide in which utility’s service territory it wants to locate in order to achieve the best outcome. However, once operational, the QF has fewer options to sell its electricity, because it will likely incur significant transmission charges if it wants to sell to a more distant utility. While some

⁸ Attachment B (PacifiCorp’s Response to Coalition Data Request 4 dated Nov. 26, 2019).

⁹ *Re Commission Investigation into Integrated Resource Planning*, Docket No. UM 1056, Order No. 07-047 Appendix A at 2 (Feb. 9, 2007).

QFs are able to sell to a more distant utility, the vast majority continue to sell to their interconnected utility. Therefore, existing QFs are more likely to renew or enter a new contract with the utility to which they are directly interconnected.

PacifiCorp’s own records show that virtually all QFs will continue operating and renew their contracts. Of the thirty-six QFs that have had a PPA with PacifiCorp expire, only one has shut down.¹⁰ Nearly all have renewed or executed a new contract with PacifiCorp, and will continue to operate and provide significant value to PacifiCorp’s system for years to come. For example, Biomass One, L.P., an approximately 30 MW biomass facility, initially executed a PPA with PacifiCorp in 1987, which expired in 2011, and is currently operating under a renewed contract that does not expire until 2036.¹¹ Farmers Irrigation District, which operates a 4.15 MW hydro facility, initially executed a PPA in 1983, which expired in 2010, and continues to operate under a renewed PPA expiring in 2025.¹² Middlefork Irrigation District, which operates a 3.7 MW hydro facility, initially began operations in 1983 and has also renewed its PPA through 2021.¹³ These QFs, and Coalition members, are examples of the types of businesses that have been providing PacifiCorp with power for decades yet are not fully compensated for the capacity value they provide.

¹⁰ Attachment B (PacifiCorp’s Response to Coalition Data Request 1 and Attachment REC 1 dated Nov. 26, 2019). Note: one other QF appears to have renewed at the expiration of its initial PPA, but then apparently “self-terminated.” It is not clear whether this QF has shut down completely or chose to sell to someone else.

¹¹ *Id.*

¹² *Id.*

¹³ *Id.*

These QFs show that a QF's lifespan significantly outlasts that of a single PPA. Many of these facilities are built to last 100 years, and a single PPA entered into now is only a maximum of 20 years long. It would be an extreme rarity for one of these plants to shut down after the initial PPA. This is especially true because many QFs likely acquire their up-front capital financing based only on the initial PPA, so continuing to operate beyond that first PPA, could theoretically be under much more favorable economics.

Therefore, it is more likely that all QFs will renew or that nearly all will renew, and at a minimum, PacifiCorp's default assumption that no QFs renew is not correct.

C. QFs Provide Significant Capacity Value to PacifiCorp

QFs provide significant value to PacifiCorp. PacifiCorp ultimately provided a study, which models QF renewals.¹⁴ The results appear significant.¹⁵ Assuming that all QF PPAs continued through the end of the study period, an SCCT that would have been constructed in 2026 is pushed out to 2029, and an additional SCCT replaces some battery storage in 2029.¹⁶

This analysis reveals that assuming QF renewals can have a major impact on PacifiCorp's forecasted capacity needs and the more fundamental point that the Coalition has been making since 2014: that existing QFs already provide significant capacity value and should be compensated for it when they renew.

¹⁴ See Attachment B (PacifiCorp's 1st Supplemental Response to Coalition Data Request 4 dated Dec. 18, 2019).

¹⁵ The Coalition has not independently verified the accuracy of PacifiCorp's methodology in this study.

¹⁶ See Attachment B (PacifiCorp's 1st Supplemental Response to Coalition Data Request 4 dated Dec. 18, 2019).

D. The Commission Can Acknowledge the Value of Existing QF Capacity in Two Possible Ways

In the IRP process, the Commission should acknowledge that QFs provide significant capacity value to PacifiCorp and require that PacifiCorp recognize such value as well. While the Commission does not address QF avoided cost pricing in the IRP process, the assumptions made in the IRP often flow directly into the avoided costs. Here the Commission can direct PacifiCorp implement two possible solutions to compensate existing QFs for the significant capacity value they provide.

First, the Commission could require that PacifiCorp simply continue paying a QF the capacity payment at the beginning of their renewed PPA, i.e., there would be no “sufficiency period” at the beginning of the new contract. This is how the Idaho Public Utility Commission (“IPUC”) has addressed this issue. The IPUC “[found] it reasonable for utilities to establish capacity deficiency at the time the initial. . . contract is signed. As long as the QF renews its contract and continuously sells power to the utility, the QF is entitled to capacity based on the capacity deficiency date established at the time of its initial contract.”¹⁷ The IPUC reasoned that “[t]his adjustment recognizes that in ensuing contract periods, the QF is considered part of the utility’s resource stack and will be contributing to reducing the utility’s need for capacity.”¹⁸

¹⁷ *In re Idaho Power Company’s, Avista Corporation’s, and Rocky Mountain Power Company’s Petitions to Modify Terms and Conditions of PURPA Purchase Agreements*, IPUC Docket Nos. IPC-E-15-01, AVU-E-15-01, PAC-E-15-03, Order No. 33357 at 25-26 (Aug. 20, 2015).

¹⁸ *Id.* at 26.

Second, the Commission could direct PacifiCorp to determine exactly what capacity value the QFs provide, and simply compensate them for that value. The deferral of the construction of a SCCT by three years and the avoidance of battery storage is of significant value to PacifiCorp and its ratepayers. The Commission should not determine the specific amount of value at this time, but should allow Staff and stakeholders to review and vet PacifiCorp's analysis when the rates are actually calculated. This is what the Commission directed in UM 1610, but what has not occurred to date.

III. CONCLUSION

For the reasons articulated herein, the Commission should not acknowledge PacifiCorp's IRP assumptions and direct PacifiCorp to assume that QFs will renew or enter new contracts with PacifiCorp at the end of their current contracts.

Dated this 10th day of January 2020.

Natasha

Thanks for your patience.

We recommend the assignment be redrafted as:

PacifiCorp will present the IRP initial load and resource balance (L&R) assuming that QFs renew their contracts at the end of their terms, consistent with past IRPs.

For the purpose of valuing QF capacity, PacifiCorp will prepare an alternative initial L&R that uses the planning assumption that QFs do not renew at the end of their contract term.

In UM 1610, Mr. Higgins argued that the assumption that small QFs are presumed to extend their contracts upon expiration *should not be used in determining the value of QF capacity*, because doing so resulted in a logical circularity. To cure this, Kevin argued that, *for the purpose of valuing QF capacity*, PacifiCorp should develop an Alternative IRP scenario that re-determined the preferred resource portfolio absent the (assumed) renewing QFs in order to properly value the capacity that QFs would avoid. This exercise would be performed solely for the purpose of valuing QF capacity and was not intended to be a methodology change for the IRP.

Kevin's argument in UM 1610 was directed to QF *pricing*, not to the IRP per se. That is, Kevin did not challenge the reasonableness of the assumption for *planning purposes* that small QFs would renew their contracts. Therefore, there is no reason to change the planning assumptions in the IRP in response to Kevin's recommendation.

Thanks

On Oct 15, 2018, at 5:57 PM, Siores, Natasha <Natasha.Siores@pacificorp.com> wrote:

Thanks Brittany. Staff's were the only comments we received. Taking that into consideration we've revised our description as follows.

PacifiCorp will present the IRP initial load and resource balance (L&R) in two ways. The first initial L&R will use the planning assumption that QFs do not renew at the end of their contract term. For informational purposes, the second initial L&R will assume that all QFs renew through the end of the IRP study period.

In addition, the company will perform a sensitivity to assess portfolio expansion impacts and system costs. The first portfolio will use the planning assumption that QFs do not renew at the end of their contract term. For informational purposes, a comparative portfolio will assume that all QFs renew through the end of the IRP study period. In the comparative portfolio, renewal QF pricing is unknown and will be considered zero for modeling purposes.

Regards,
Natasha

** STOP. THINK. External Email **

Hi, Natasha,

I view the proposed work below as the first step, as I believe it will provide MWs but not an associated financial value. I think we'll need to discuss ways to move that second part forward.

What do others think?

Thanks,

Brittany

Subject: RE: PacifiCorp IRP - Capacity Value of Renewing QFs Planning Call -
Follow-Up

Hello all,

Following up from our call two weeks ago, here is the description of the work we propose to do to address the value of renewing QF issue from the IRP Order that we discussed on our call.

· PacifiCorp will present the IRP initial load and resource balance (L&R) in two ways. The first initial L&R will use the planning assumption that QFs do not renew at the end of their contract term. For informational purposes, the second initial L&R will assume that all QFs renew through the end of the IRP study period.

Please let us know if there are questions or additional feedback on this. Thank you.

Regards,
Natasha

Subject: PacifiCorp IRP - Capacity Value of Renewing QFs Planning Call - to be held 9/4

Hello LC 67 Parties,

We've managed to find a new date for this call.

PacifiCorp, REC and OPUC Staff have scheduled a call on September 4, 2018, from 3:30pm to 4:30pm, to address the following issue from the 2017 IRP Order. Please see call in information below.

"PacifiCorp, Staff and parties should discuss a potential study of the capacity value of renewing QFs, and Staff shall bring this issue to a public meeting before the 2017 IRP Update." (Appendix A, p. 22)

We plan to use this initial call to discuss how to approach this issue and to develop a plan and/or next steps. Note that the 2017 IRP Order was issued just a few days before the 2017 IRP Update was filed, so there was not an opportunity to discuss this and bring it to a public meeting before the 2017 IRP Update.

Date/Time:

Tuesday, September 4, 2018 from 3:30pm to 4:30 pm

Call-in Information:

Join by phone

(503) 813-5252 or (855) 499-5252

Conference ID: 979416

Regards,
Natasha

Natasha Siores

Pacific Power Regulatory Affairs

PacifiCorp Response to the Coalition's Data Request No. 1,

Attachment REC 1,

PacifiCorp Response to the Coalition's Data Request No. 4,

and

PacifiCorp 1st Supplemental Response to Data Request No. 4

REC Data Request 1

Please provide a complete list of qualifying facility contracts that have entered into PPA with PacifiCorp since 1980 including the following information, and please provide all work papers in original electronic format:

- (a) Project Name
- (b) PPA execution date
- (c) Resource Type
- (d) Nameplate Capacity
- (e) Actual Commercial Operation Date
- (f) Contracted Commercial Operation Date
- (g) Type of PPA (Standard or Non-Standard)
- (h) Current PPA Expiration date
- (i) Whether the contract is for a new or existing project, and if renewing, then the dates for each contract
- (j) For QFs that began operating and whose contracts expired, whether the QF entered into a new contract with PacifiCorp, and, if not, why not.

Response to REC Data Request 1

The company objects to this data request on the basis that it is unduly burdensome and unlikely to lead to information relevant to review of the 2019 Integrated Resource Plan (IRP) proceeding. The IRP is forward looking, covering the period 2019 through 2038. Qualifying facilities (QF) included in the IRP are existing / executed QF power purchase agreements (PPA). The IRP does not make any assumptions for QF PPAs based on historical information. Without waiving these objections and based on the foregoing clarification, the company responds as follows:

Please refer to Attachment REC 1.

REC Data Request 4

Please refer to Oregon Public Utility Commission Order No. 18-138 from LC 67, PacifiCorp's 2017 IRP, page 12, where it notes:

In addition. Renewable Energy Coalition asserts that the company should be required to actually study the capacity benefits that qualifying facilities (QFs) provide, as directed in docket UM 1610. PacifiCorp responds that it has complied with the order by not assuming QFs will renew. We acknowledge that non-renewal may not be the best planning assumption when many (or most) QFs do, in fact, renew, but question the value of additional studies of the capacity of renewing QFs. We direct Staff to work with intervenors and bring this issue to a public meeting so that we can make a decision regarding whether a new study of existing QF capacity would be useful and how existing QF contract renewals should be modeled in the IRP.

What is the status of PacifiCorp's efforts to model the capacity value of QFs?

Response to REC Data Request 4

The company has committed to running a study which assumes the renewal of qualifying facilities (QF), and will supplement the response to this data request as soon as the results of the extended QFs study becomes available.

REC Data Request 4

Please refer to Oregon Public Utility Commission Order No. 18-138 from LC 67, PacifiCorp's 2017 IRP, page 12, where it notes:

In addition. Renewable Energy Coalition asserts that the company should be required to actually study the capacity benefits that qualifying facilities (QFs) provide, as directed in docket UM 1610. PacifiCorp responds that it has complied with the order by not assuming QFs will renew. We acknowledge that non-renewal may not be the best planning assumption when many (or most) QFs do, in fact, renew, but question the value of additional studies of the capacity of renewing QFs. What is the status of PacifiCorp's efforts to model the capacity value of QFs?

1st Supplemental Response to REC Data Request 4

In further support of the company's response to REC Data Request 4 dated November 26, 2019, the company provides the following supplemental response:

Please refer to Confidential Attachment REC 4 1st Supplemental which provides PacifiCorp's renewal of qualifying facilities (QF) study. Information regarding this study is provided below:

The company prepared a study which assumed the renewal of QFs modeled in the 2019 Integrated Resource Plan (IRP). This study was based on the assumptions used in the 2019 IRP Preferred Portfolio (P45CNW-MMR) but with the added assumption that all QF power purchase agreements (PPA) would continue at zero cost from the end of their existing contract through the end of the study period (December 31, 2038). With the QF PPAs extended, a 2026 simple-cycle combustion turbine (SCCT) resource shifts from 2026 to 2029, and an additional SCCT replaces some battery storage in 2029. Full details on the portfolio changes are provided in work papers provided in Confidential Attachment REC 4.1, specifically file "Renewal of QFs Study Att 1 CONF."

The same methodology used for the development of the 2019 IRP Preferred Portfolio was used for this study, including a pre-reliability System Optimizer model (SO model) run, 16 Planning and Risk (PaR) model runs to identify and establish incremental flexible capacity reliability requirements, and a final reliability SO model run. The extended QF SO model reliability portfolio was run in PaR as a 20-year stochastic run. Details on the results are provided in Confidential Attachment REC 4.1, specifically folder "Work Papers CONF." A comparison of the Extended QF PPA stochastic results to the 2019 IRP

Preferred Portfolio results is provided in Confidential Attachment REC 4.1, file “Renewal of QFs Study Att 2 CONF.”

Given the range of QF resource types being extended, it is difficult to interpret the aggregate results with regard to specific resource types. To facilitate this analysis, the company calculated the market value of the generation from all extended QF PPAs, based on an average of the modeled hourly market prices for the Palo Verde (PV) and Mid-Columbia (Mid-C) market hubs as provided in Confidential Attachment REC 4.1, file “Renewal of QFs Study Att 3 CONF.” This calculation helps distinguish between the value of solar generation and the value of baseload generation. Comparing the aggregate hourly market value to the PaR model results can provide a sense of the value of the extended QF resources relative to market prices. As shown in the figure below, the hourly market value of extended QFs exceeds the value identified by the PaR model for all years except 2028 and 2029.

Confidential information is designated as Protected Information under Order No. 18-216 and may only be disclosed to qualified persons as defined in that order.

Despite PacifiCorp's diligent efforts, certain information protected from disclosure by the attorney-client privilege or other applicable privileges or law may have been included in its responses to these data requests. PacifiCorp did not intend to waive any applicable privileges or rights by the inadvertent disclosure of protected information, and PacifiCorp reserves its right to request the return or destruction of any privileged or protected materials that may have been inadvertently disclosed.
