Re: LC 80 – Reply to Parties Comments on PGE’s Long Lead-time Resource Request for Information

On June 7, 2024, PGE filed an update on the long-lead time Request for Information (RFI) process contemplated in LC 80. The RFI anticipates seeking responses that could help prepare for future acquisition cycles (both from a market signal perspective and in terms of preparing the grid for new technologies and locations).” PGE appreciates the comments submitted by Renewable Northwest (“RNW”) and Form Energy on June 21, 2024 in response, and we look forward to continued collaboration throughout the process.

Form Energy’s comments recommend having the RFI solicit information from all resources, with resources being defined broadly, and that the RFI not request certain project information such as location and commercial service date.

RNW’s comments similarly encourage PGE to more broadly define the resource categories and that PGE modify the information requested. RNW also requested that PGE address protection of commercially sensitive information.

PGE agrees that the RFI should be as inclusive as possible, and we will incorporate the “resource type” feedback as suggested and encourage responses to the RFI from projects of any resource type, regardless of their development maturity. Regarding project data requested, PGE does need basic project information, such as project location and an initial estimate of when a project might seek operation. For entities that respond but that do not yet have that information, we will work collaboratively with them to make the responses as actionable as possible.

PGE's Reply to RFI Comments

We look forward to continuing to work with RNW, Form Energy, and other participants throughout the RFI effort. PGE anticipates sharing results of the RFI at a workshop later this year.

Sincerely,

/s/ Jacob Goodspeed
