UM 2143 Investigation into Resource Adequacy in the State-Schedule Change Announcement

This announcement provides an update on the UM 2143 Resource Adequacy (RA) Investigation schedule.

Schedule Update

On January 10, 2023, the Oregon Public Utility Commission (Commission) held a Special Public Meeting on Resource Adequacy and Docket No. UM 2143, with speakers from the Western Electric Coordinating Council, Northwest Power and Conservation Council, Western Power Pool, and Staff providing insights on technical aspects of resource adequacy and the Commission's own resource adequacy investigation in UM 2143. At this Special Public Meeting, Staff summarized its October 2022 process proposal, which included circulating draft rule language for resource adequacy standards in January 2023 with a workshop to follow soon afterwards.

In light of the discussion and learnings from the Special Public Meeting, Staff intends to modify its schedule so that it can circulate an updated straw proposal before moving to draft rule language. Staff plans to circulate its updated straw proposal on or before February 17, 2023. Along with the updated straw proposal, Staff will provide a detailed timeline for stakeholder discussion of Staff's straw proposal revisions and a date in March 2023 on which it will circulate draft rules. Further schedule updates will follow.
