

Hello UM 1930 Stakeholders,

At the July 31, 2019 Community Solar Program (CSP) Interconnection Workshop, Staff and stakeholders engaged in a very productive discussion of solutions to make CSP interconnections fair and functional. The primary outcomes of the workshop were:

1. Staff will host a follow-up workshop to continue discussion of Staff proposal regarding cost allocation and new concepts raised by stakeholders; and
2. Staff and several volunteer stakeholders will flesh out the various new concepts in writing to facilitate further discussion.
 - Joint utilities: Develop a review process for CSP generators unlikely to export power beyond distribution circuit.
 - CCSA/OSEIA/SparkNW: “Preemptive” distribution cost-sharing where the utility funds distribution system upgrades to be reimbursed by the generators utilizing those upgrades.
 - Staff: Summarize additional ideas raised.

Below is the schedule for these activities, designed to balance the need for robust discussion with the timing constraints of the CSP program launch:

- **August 16, 2019:** Staff and stakeholders circulate new concept proposals in writing to UM 1930 service list.
- **August 28, 2019:** Follow-up workshop on Staff and alternative proposals.
 - Time: 9:00 a.m. – 2:00 p.m.
 - Location: TBD Portland

Staff thanks all stakeholders for their continued participation in this docket and efforts to ensure a successful CSP launch.
