Name/Location	UE 435 Public Comments
William Blackmore – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. William Blackmore 8433 SE Schiller St Portland, OR 97266-3159 whblackmore@gmail.com - 3/25/2024 12:33:42 AM</p>
Wendy Newsome – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. Emily Herbert – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a Board Member of Sullivan's Gulch Neighborhood Association, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Increasing utility rates are not affordable or fair. Please as our PUC, be responsive to the data showing that the battery storage proposed would cost only a fraction of what PGE is requesting. I am a member of the Citizens Utility Board and strongly support their proposal for a just rate. We cannot keep allowing utilities to force customers to pay for their bad policies. Please dismiss this case and tell PGE that enough is enough. Sincerely, Dr. Emily Herbert 2120 NE Halsey St Apt 29 Portland, OR 97232-1549 ewh1960@gmail.com - 3/25/2024 12:33:47 AM</p>

Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mx. Taylor Xchihua 3237 NE Bryce St Portland, OR 97212-1722 xochihuat@gmail.com - 3/25/2024 12:34:50 AM</p>

Kelly Rauer – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). This rate increase is atrocious, along with the last one, and completely unnecessary! We are already struggling to make ends meet, rent costs are skyrocketing and unlivable, food and goods prices are inflated merely for corporate greed and more or utilities are following suit! This is outrageous! As a PGE customer, I demand the Commission rejects PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Tabbitha Wolfe 12130 SW Tiedeman Ave Portland, OR 97223-4024 wolfecub1988@gmail.com - 3/25/2024 12:36:01 AM</p>

Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mrs. Ashlee Jacobson Dunbar 5607 SE Lambert St Portland, OR 97206-9056 amorganj@gmail.com - 3/25/2024 12:37:12 AM</p>

As a PGE customer, I strongly encourage the Commission to reject PGE's disgusting request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these disgusting greedy increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a GREEDY WISHLIST for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Deborah Boncutter 4735 SW Luradel St Portland, OR 97219-6839 deborahjeanne11@gmail.com - 3/26/2024 12:32:35 AM</p>

Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. Julian Mull 5220 SE Francis St Portland, OR 97206-3958 julian.mull118@gmail.com - 3/26/2024 12:34:02 AM</p>

Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr Jacob Foulk 1720 SW 4th Ave Portland, OR 97201-5512 jacobdfoulk@gmail.com - 3/26/2024 12:35:24 AM</p>

Oliver Daofu – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. I pay for my electric bill alone as my partner is disabled. I've lived in Portland my whole life and now am facing rising living costs - \$1400 rent with \$300 electric bills on top (not even counting costs like food, car insurance, other bills etc) has been brutal to say the least. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mx. Oliver Daofu 3815 SE 64th Ave # B Portland, OR 97206-3620 odaofu@gmail.com - 3/26/2024 12:35:30 AM</p>

Kat Audick – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). It is becoming nearly impossible as a small business owner to afford staying open. The hikes it electric feels like you are pushing out local business for bigger companies that the people of Portland don't want here. Please consider supporting your local people vs. huge corporations. As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. Skye McLaren Walton – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. Skye McLaren Walton 1068 SW Gaines St Portland, OR 97239-7411 skyemclarenwalton@gmail.com - 3/26/2024 12:36:33 AM</p>
Audrey Belisle – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Torsten Kieper - WEST LINN	<p>I am a PGE customer and I oppose the rate increase proposed by PGE. I do not believe that the addition of these battery storage resources actually improves their system reliability in the way that they claim. PGE has a history of not fully relying on its peaking resources during winter outages, because PGE's distribution system also tends to experience widespread unplanned outages. Put differently, PGE doesn't need to shed load or call on its most expensive resources (like the Peak Time Rebates program) during winter events, because nature takes care of the load shedding for them, through downed trees and iced lines. etc. No amount of additional storage or peaking generation is going to solve that problem - PGE needs to be focused on developing a reliable distribution system, using modern conductors that allow for more efficient use of the system, rather than rate-basing expensive storage resources under the guise of "reliability" when in fact they will likely never be called upon during an extreme cold weather event until PGE undergrounds its lines. Until then, it would be much more productive for PGE to be focused on conservation and demand-response based solutions. These solutions may not come with the same capital expenditure and rate-base as a BESS, so I understand why they are not as appealing to an investor-owned utility such as PGE, but the proven track record of these solutions at BPA - both for energy efficiency and non-wires solutions - demonstrates that they improve system reliability at less cost than new storage or generation resources. Authorizing an increase in the rate of return for PGE investors rewards bad behavior on the backs of PGE ratepayers who have already experienced a 30% rate increase in less than two years. PGE has not invested in its distribution system in a way that has improved system reliability in the years that I have lived here. Until they do that, I don't see what the investors have done to earn greater rewards. - 3/26/2024 3:09:13 PM</p>

People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. Jasper Trotter 2206 SE Salmon St Portland, OR 97214-3942 sophiaapplepie@gmail.com - 3/27/2024 12:31:55 AM</p>

Lana Laren Wall – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Melanie Rivas – Salem	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). I not only demand that PGE be ordered to not raise the energy rates in the immediate future, the state should also decrease prices back to what they were in 2022-23. Damages require remedies and this option appears cheaper for PGE than a class action lawsuit. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Melanie Rivas 1144 Mariel PI S Salem, OR 97306-8109 melanie.b.rivas@gmail.com - 3/27/2024 12:32:54 AM</p>

Somaly lam – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Miss Somaly Lam 5247 SE Flavel St Portland, OR 97206-8222 somaly.lam04@gmail.com - 3/27/2024 12:33:00 AM</p>

Christina Rixie – Hillsboro	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms Christina Rixie 2174 NE Thorncroft Dr Hillsboro, OR 97124-9066 hoover.chrissy@gmail.com - 3/27/2024 12:34:04 AM</p>

Kai Neuenschwander – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Miss kai neuenschwander 711 NE Randall Ave Apt 206 Portland, OR 97232-2387 kai.neuen@gmail.com - 3/27/2024 12:35:06 AM</p>

Jessi Presely-Grusin – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills they received this past January, and PGE's rates for Oregon households have already gone up by 30% between December 2022 and January 2024. People cannot afford these increases. Now is NOT the time to entertain PGE's unreasonable request to raise bills- especially taking into account that PGE's top 5 executives continue to net over a million dollars per year. We are counting on you, the Commission, to put a stop to this and to protect customers who have no other option as to utility service provider. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million of that budget is actually earmarked for battery storage. This increase is just a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mx Jessi Presley-Grusin 2615 NE Clackamas St Portland, OR 97232-1728 jessipresleygrusin@gmail.com - 3/27/2024 12:35:48 AM</p>

We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Miss Veranda De La Torre 2325 SE 117th Ave Portland, OR 97216-4024 veradel17@gmail.com - 3/27/2024 12:36:04 AM</p>
Mark Puhlman - LAKE OSWEGO	<p>Enough is enough. You ask us to transition to electricity to improve the environment, then you hit us with two huge rate hikes. You will chase the public back to gas. Deny this rate increase. Enough is enough Dr. Mark Puhlman DNP - 3/27/2024 3:26:59 PM</p>
Shawn Murphy - TIGARD	<p>I think it is totally unfair in regards to PGE's consistent rate increases. I have no choice on who provides my electricity and therefore it's a monopoly. Why are rate payers required to bail out PGE - they need to manage there losses. I thought the NW was suppose to have affordable electricity, does not feel like it! Thanks, Shawn - 3/27/2024 8:43:15 PM</p>
Sarah Medley – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Sarah Medley 730 NW 20th Ave Portland, OR 97209-1351 sarah.medley3@gmail.com - 3/28/2024 12:32:03 AM</p>

Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mx. Katya Manges 3922 SE Salmon St Apt B Portland, OR 97214-4466 katyamanges@gmail.com - 3/28/2024 12:33:26 AM</p>
Chris Bullard – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Julie Reardon – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). The CEO of PEG makes \$6 million annually. This company's rate increases are selfish and hurting hard working people who are struggling to keep their housing and feed their children. Their behavior to take and take and take from us is insulting and criminal. I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregonians. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage which is estimated at \$17 million. This is about lining the pockets of top 5 highest paid employees who are benefiting from millions of dollars in PGE stocks. Please dismiss this case and tell PGE that enough is enough. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, X Stacy Richards 2004 NE Rosa Parks Way Portland, OR 97211-5347 stacymyway@gmail.com - 3/28/2024 12:34:27 AM</p>
Queen Sydney Morrison – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. Amanda Blum – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). At what point is it enough? It feels crazy to have to point out how unreasonable these utility hikes are. If competition was allowed and we had a choice, or if the company was on the verge of bankruptcy, that might be different. But instead, the utility is very healthy, and prioritizing returns over customers. Please remember that families are already struggling, and these rate hikes have incredibly real repercussions when it comes to people choosing a/c and heat. Consumers don't have a choice, but luckily, PGE doesn't either. They have to take the deal they make with the county. Grow a backbone and stand up to them, for us. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Amanda Blum 2821 SE 45th Ave Portland, OR 97206-1615 amanda@howlingzoe.com - 3/28/2024 12:34:58 AM</p>

Kat Curtis – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. We need to know that our policy makers have our peoples backs. We need to only ask our community to pay whats actually reasonable. We cant keep being asked for more and more at an unreasonable rate. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. A lot of us are living paycheck to paycheck. Every dollar counts. Over-drafting your account by \$0.50, can cause a \$35-\$60 fee. These changes matter. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mx. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Erin Walker 5595 NE Sandycrest Ter Portland, OR 97213-2648 erinwalking@gmail.com - 3/28/2024 12:35:30 AM</p>

Cindy Phillips – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Cindy Phillips 3538 SE Cora Dr Portland, OR 97202-3333 cindybogdas@gmail.com - 3/28/2024 12:35:33 AM</p>

Heather Birdsong – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly urge the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers, including my family, are still reeling from the rate increase and ice storm bills this January (plus spiraling food and materials costs, stagnated wages, and ongoing pandemic-related business hurdles). PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024, and we are feeling it. As a self-employed freelancer who works from home, these increases have a direct, negative impact on my ability to live within my earned income. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again, at the expense of Oregonians. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Heather Birdsong 2335 NW Raleigh St Unit 411 Portland, OR 97210-3730 hlbirdsong@gmail.com - 3/28/2024 12:35:48 AM</p>

We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Julie Toporowski 16680 SE Valley View Rd Milwaukie, OR 97267-6330 jmarierodriguez24@gmail.com - 3/28/2024 12:36:29 AM</p>

RT Tougas – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a Portland resident, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mx. Stephanie Symonds - BEAVERTON	<p>A monopoly should not legally be allowed to increase prices however they feel and continue to give bonuses to their higher ups. Take the bonuses and apply that cost saving measure to the publics "rate" of using electricity. - 3/28/2024 9:23:39 AM</p>

Name/Location	UE 435 Public Comments
Mary Hoeft - SALEM	I am a PGE customer and I oppose the proposed rate increases PGE is requesting for 2025. I am a low income individual, and I am on a very limited budget and these increases on top of the ones that were approved for 2024, which was too high, is not right. The discounts they offer are NOT enough to help and people are finding themselves with having to choose between heat or food. Wages and incomes are not going up like its reported at least not compared to these increases and the "discounts for low-income households" isn't high enough to even help. I think PGE should eat the cost of any upgrades or other technologies they want to implement. That is a choice not a federal requirement, at least not I am aware of, therefore they should eat the cost and customers shouldn't be forced to absorb it. The impact on people's incomes and abilities to pay and keep heat in their homes should be taken in consideration more than any profit they could make off of it and I am not the only one who believes that the increases they implemented this year was WAY TOO HIGH. - 3/28/2024 2:12:31 PM
Stella Garza - BEAVERTON	Please do not raise PGE costs again next year. Give us time to adjust to the huge price increase this year. Families and Seniors on fixed income are struggling with the rise in costs for food, housing, interest rate, etc. Thank you. - 3/28/2024 5:02:45 PM
Kevin Rhodes – Portland	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer and portlander, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. Kit Adams – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. Kit Adams 9025 SE Ash St Portland, OR 97216-1550 kit2adams@gmail.com - 3/29/2024 12:32:46 AM</p>

AJ Waters – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. AJ Waters 5328 SE Ogden St Portland, OR 97206-8249 ajwaters521@gmail.com - 3/29/2024 12:33:51 AM</p>

Francine Kaufman – NA	<p>From: Francine Kaufman <francine.k@frontier.commailto:francine.k@frontier.com>> Sent: Friday, March 22, 2024 2:41 PM To: PUC_PUC.RSPF <puc.rspf@puc.oregon.govmailto:puc.rspf@puc.oregon.gov>; bob@oregoncub.orgmailto:bob@oregoncub.org> Subject: Oregon Clean vehicle Rebate program Some people who received this message don't often get email from francine.k@frontier.commailto:francine.k@frontier.com>. The reopening of the clean vehicle rebate program between April and June of 2024 is applaudable. Unfortunately for people who already own electric vehicles and who live in multi-family dwellings including condominiums, apartments etc. built before a certain year when the requirement to include charging station infrastructure in those started, are still not likely to benefit from a rebate of the cost buying an electric vehicle. The cost to install charging stations and the cost of energy to charge an electric vehicle from our local electric companies is cost prohibitive, including from Portland General Electric, who just raised their rates by 18% and are wanting to raise them again by another 7%. Until the state of Oregon rewards lower income residents who live in multi family dwellings built before electric vehicle ev charging infrastructure was required with rebates commensurate with the cost of installing charging stations and using them the state of Oregon will not truly be supporting electric vehicles usage. Yahoo Mail: Search, Organize, Conquer - 3/29/2024 12:34:34 AM</p>

Emily Schnipper – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. I am currently unemployed due to chronic health issues, but in the past I have worked as a case manager, and part of that was helping people get assistance on their electrical bills. The process, which is farmed out to myriad local nonprofits, all with their own procedures, is extremely time-consuming and difficult to navigate. Not to mention there are not enough funds for everyone in need. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Miss Graciella Luna 7461 N Van Houten Ave Portland, OR 97203-4262 ggluna8947@gmail.com - 3/29/2024 12:34:58 AM</p>
Jessica Martinez – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Stefani Varney 8934 SE Hawthorne Blvd Portland, OR 97216-1847 stefani.varney@gmail.com - 3/29/2024 12:36:25 AM</p>
Emily Johnstone – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Laura - CORVALLIS	Transcribed verbatim by Consumer Services staff - dr. RECEIVED MAR 15 2024 P.U.C. Dear PUC - Please stop giving the utilities whatever they want (PAC Power 30% since 2021) - think bigger - OR business & residences. Hold your ground. /s/ Laura Corvallis - 3/29/2024 1:37:23 PM
Chuck F - BEAVERTON	increased pge rates could possibly lead to more illnesses as people will likely try to shut off or reduce heat due to high rates. more property damage from frozen pipes in the winter as renters will go some place warm and leave the heaters off at there apartments-property managers will raise rent further to pay for these repair costs. increased pge rates further radicalism towards or opposing the 1%-pge customers don't care about making pge shareholder investors happy when there customers can barely pay there bills. renters or homeowners will risk property damage or safety by bringing in portable fireplaces or kerosene heaters to create heat to get around high energy bills. there will be more apartment and home fires from increased energy bills-more taxing on emergency services. renters will likely shut panel breakers often to reduce bills which will likely blow out appliances causing property managers to raise rent rates to pay for damages-perhaps homeowners will do this as well and blow through costly low life appliances that are monopolized by a slow migration from china as well that could take several months before they are replaced. - 3/30/2024 10:55:25 PM

Jeanne Roy – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage you to reject PGE's request to raise rates by 7.2% for Oregon households. The cost of electricity for our home was higher than ever, even though there are only two of us in the house instead of five. I understand that PGE has requested \$202 million under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wish list for management and includes many issues the Commission rejected just months ago. I do not think the PGE request is a fair deal for households. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mrs. Jeanne Roy 6805 SW 12th Ave Portland, OR 97219-2003 jeanneroy62@gmail.com - 4/1/2024 12:31:36 AM</p>

Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, . jobe fallen 7466 N Fiske Ave Portland, OR 97203-4520 jobefallen@gmail.com - 4/1/2024 12:32:11 AM</p>

People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mrs. Maira Navarrete 8730 N Endicott Ave Portland, OR 97217-7138 maira.navarrete@gmail.com - 4/1/2024 12:33:12 AM</p>

Julia Crammond – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Erin Telles – Oregon City	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Continuing to raise rates at a ratio that is FAR above cost of living and necessary is unconscionable. With skyrocketing costs that do not equitably benefit customers, we are continuing to add to the divide between rich and poor. A 30% raise in 2 years is absolutely ludicrous. PGE has already been given far more than is necessary to cover the improvements they are making. Stop giving in to their unreasonable demands and put the people first. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms Christina Davis 36435 SE Gordon Creek Rd Corbett, OR 97019-9709 christina@reworksinc.com - 4/1/2024 12:34:27 AM</p>

Klaus Heyne – Corbett	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). This winter was yet another PGE disaster in one of the mostpopylated counties of Oregon: downed power lines which killed our power for 10 days are so Third World! Unless PGE invests in underground power distribution in areas of high incidence of outages due to overhead lines going down (they have the data!), there is no justification for another rate increase As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households without improving the power distribution infrastructure. We cannot keep allowing utilities to continuously ask for rate increases but not improving services. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. Klaus Heyne 41101 SE Louden Rd Corbett, OR 97019-8769 klausheyne@yahoo.com - 4/1/2024 12:34:45 AM</p>

Hancy Hedrick – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). I was involved in helping my low-income brother avoid homelessness in 2022. He was not able to pay his PGE or water utility bill for months, until other low-income benefits were received. So as a PGE customer, former social worker, and as one concerned that we don't create new burdens for low-income households, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. Paula Yocum – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. This is absolutely ridiculous. How many folks do you want to put on the street before you stop this absurdity. Yes, this will put more people out on the street. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. I strongly believe that infrastructure changes need to be made as we move into a new world. PGE needed to start making those changes years ago. Did they? No!! Now they want rate payers to foot the bill. No more rate increases on rate payers backs. Honestly, if I could consistently generate enough power from my solar panels I'd go off the grid. At this point in time I can't. And this leads me to another issue on cuts on the credits we who have solar panels that PGE wants to make. My understanding is that pge is intimating that the credits aren't worth the amount that pge is paying to us for them. If this were true it would have always been the case and they would never have given us the amount that they do. Those credits are worth every kilowatt that we earn. They are most likely worth more than what we earn. My stand is that pge miscalculated and now they want rate payers to pay the cost. Pge needs to eat the cost and they also don't get to reduce the price we get for our solar credits. And they need to manage much better than they do. Stop catering to pge. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms Paula Yocum 8924 SE Morrison St Portland, OR 97216-1729 paula.yocum@gmail.coml - 4/1/2024 12:34:56 AM</p>

Inga Fisher Williams – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms Inga Fisher Williams 5858 S Riveridge Ln Apt 16 Portland, OR 97239-5913 ifisherw@gmail.com - 4/1/2024 12:35:29 AM</p>

Name/Location	UE 435 Public Comments
Judy Arielle – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Greetings! I recently have transitioned from gas to all electric for heating and cooking in my home. As a result I have been shocked to see the rate hikes that PGE is proposing. Going electric is a steep that homeowners can do to help forstall the effects of greenhouse gases on our climate. It behoves the Commission to help homeowners to make this transition by curtailing rate hikes by PGE! As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. NA - PORTLAND	<p>They said the rate hikes are for future investment and or that the public is paying for the storm that cause damage. Ok so after the money has been taking enough does the rate hike stop? And are we going to get compensation for using our money to invest on what pge is going to do? Doesnt seem fair to raise rates for consumers to pay indefinitely so pge can invest and make more profit from using consumers money to do so. - 4/1/2024 10:59:52 AM</p>
Tyler Welch – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Dr. Bill Harris 2803 NW Cumberland Rd Portland, OR 97210-2803 bbharris1936@gmail.com - 4/2/2024 12:32:26 AM</p>
Jake McConnel – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. One example of cost-saving measures that could be implemented: With all the radical tree trimming PGE has undertaken, where is the coordination with Cityof Portland to identify and plant trees under the wires that provide shade and oxygen but will not require on-going trimming of all the suckers that grow up each time the previous trimming stressed the tree. Fuel to enter each neighborhood, and to run the chipper, could be greatly reduced by making permanent more logical rules about how to prevent the necessity of these services. Please, let's make part decisions to protect the citizens of our community including your workers, and PGE customers instead of asking more of the customers and those who must put their lives in danger during weather events. Please. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. M. Andre 2940 SE Brooklyn St Portland, OR 97202-2027 andme@teleport.com - 4/2/2024 12:32:53 AM</p>

Viv Weinstein – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mx. Viv Weinstein 2424 NW Kearney St Portland, OR 97210-3042 radgad37@gmail.com - 4/2/2024 12:33:25 AM</p>

Kyrstin Pinsly – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Dear Regulators, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. I'm 21 years old and living on my own. I am not unlike the many other customers of yours who make just enough to get by. If rates are increased many of us will not be able to pay you. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. The upper class should not be the only ones able to afford a comfortable home. Sincerely, Kyrstin Pinsly (They/He) Please dismiss this case and tell PGE that enough is enough. Sincerely, Mx. Ryan Holmes – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. Ryan Holmes 11329 NE Flanders St Portland, OR 97220-2323 ryankholmes@gmail.com - 4/2/2024 12:34:24 AM</p>
Tyler Owings – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Jayden Becker – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I urge the Commission to dismiss PGE's proposal for a 7.2% rate hike for Oregon households. Many customers are still grappling with the aftermath of January's rate increase and ice storm expenses. PGE's rates for Oregon households have surged by 30% since December 2022. These increases are unsustainable for people already facing financial strain. It's not the time to consider PGE's unjustifiable request for higher bills. We rely on the Commission to intervene and safeguard customers like myself. PGE's request, supposedly for battery storage projects, amounts to \$202 million (7.2%), with only a fraction allocated to actual storage. Instead, it appears to be a wish list for management, revisiting issues previously rejected by the Commission. We cannot allow utilities to persistently push for detrimental policies. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. jayden becker 3420 SE 56th Ave Portland, OR 97206-2986 jaydenmbecker@gmail.com - 4/2/2024 12:35:03 AM</p>

As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. And lastly, there are many of us who are on fixed incomes, or who don't get a raise to keep up with the increased energy costs. This is a hardship on those of us in these situations. We are still trying to adjust to the new increased costs. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Diana Kruse 15200 SW Alderbrook Dr Portland, OR 97224-5689 dianablooms06@msn.com - 4/2/2024 12:35:41 AM</p>

	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). I am deeply disheartened to hear the PGE will once again be raising its prices after raising its prices earlier this year. As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. I work with some of the most vulnerable populations in the Portland area and I already see them crushed by the weight of utility bills and rent they are unable to pay. How, in good conscience, can this rate increase take place after a very recent 18% rate increase? My heart aches for the folks who are already struggling and already on the brink of houselessness. We need to protect the most vulnerable in our community. We need to protect EVERYONE in our community from the greediness of large corporations. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. 	<p>AN 8 MILLION DOLLAR ANNUAL SALARY FOR THE PRESIDENT AND CEO OF PORTLAND GENERAL ELECTRIC IS TOTALLY ABSURD. IT'S OF NO SURPRISE THAT ELECTRICAL RATES ARE SO FAR OUT-OF-LINE AND UNAFFORDABLE FOR THE AVERAGE OREGON FAMILY. A LARGE PART OF YOUR JOB IS TO CONTROL EXPENDITURES AND SALARIES ARE EASILY CONTROLLABLE. THERE ARE THOUSANDS OF QUALIFIED PEOPLE WHO WOULD BE CONTENT WITH A LOT LOWER SALARY. I STRONGLY URGE YOU ALL TO GET WITH THE PROGRAM AND DO YOUR JOB FOR THE FINANCIAL BENEFIT OF OREGONIANS. THANKING YOU SINCERELY, MIKE WHERITY... - 4/2/2024 12:36:01 AM</p>

Kevin Gee - GRAND RONDE	<p>If PGE intends to increase their rates then they first should be required to either trim the trees out of their lines OR bury the lines so that we don't have outages everytime the wind blows a measly 10 mph. We are constantly without power and lots of times it is not just for 1 day but for much longer than necessary. It was only last year or the year before we were without power for 10 days in my area. This is not acceptable and we cannot even access emergency services when this occurs. The response times for things like this are severely lacking. It is PGEs responsibility to take care of their lines if they are to use them for doing business and charging people. It is not up to residents to foot the bill for maintaining THEIR equipment. It is quite frankly the cost of doing business and as a business owner myself I have several costs of conducting business myself such as credit card processing fees and other things. PGE is not exempt from paying their OWN cost of business expenses just the same as ANY other business entity on this planet. They are not above the laws or above paying for their own expenses. So, until they can do something about continued outages, slow response times to outages and paying for their own equipment maintenance and expenses? NO to their requested increases. Trim the trees OR bury the lines. It's time to spend the money to do that and then you won't have all of the expenses for repairs. Use your brain and upkeep your equipment and take care of YOUR business and stop expecting citizens to do it and take care of your business for you. Thanks. - 4/2/2024 1:41:47 PM</p>

Ed Miska – West Linn	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, my rates went up 21.9% in January, NOT 18% because PGE eliminated the lower cost first 1000 kWh rate. I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. Battery storage costs are still at outrageous cost levels and as such should not be on the table. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. We need the state legislature to be more realistic too, since seem to be in collusion with PGE to do lots of uneconomical changes. Also outrageous executive pay in public utilities should not have excess compensation paid for by us users! The top PGE person is compensated by about \$6M/year. That is outrageous! Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. Ed Miska 29255 SW Mountain Rd West Linn, OR 97068-9687 ed.miska@gmail.com - 4/3/2024 12:32:02 AM</p>

As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr David Potts 2159 S Alpine St Cornelius, OR 97113-7329 dav1189pot2@gmail.com - 4/3/2024 12:32:20 AM</p>
Mike LaPorte – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. Rick Silverman – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE's rate increase is a wish list you rejected from last year. They added battery storage capacity to the wish list, which may be something to consider. But their wish list for more profits going back to shareholders should be signed with a note. ' No!' Rick Silverman PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, - Rick Silverman 2416 SW Mitchell St Portland, OR 97239-2129 gizmot@teleport.com - 4/3/2024 12:32:25 AM</p>

James and Elizabeth Davis – Beaverton	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Additionally, this has a disproportionate impact on vulnerable populations like the disabled and elderly, who often live in older buildings not insulated to protect against the more extreme weather we now experience in Oregon thanks to climate change. For people on a fixed income, increases like this are devastating, especially for those who require electricity to power medical equipment. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mx. Blanca Gutierrez – Medford	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Blanca Gutierrez 24 S De Anjou Ave Medford, OR 97501 g.blanca.p@gmail.com - 4/3/2024 12:33:18 AM</p>
Carol Mollet – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Robin Burgess – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). I am a PGE customer in Southeast Portland, and I am writing to urge the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. PGE already took in a tremendous amount of money from their customers during the ice storm, and it was evident from the response to the ice storm power outages that PGE is not using that money for more robust emergency infrastructure or adequate staffing. They have had plenty of time and resources to implement such changes, as PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects, but only about \$17 million of that money is allocated for battery storage. The rest of the money is going toward issues the Commission rejected just months ago, and toward padding the pockets of administrators. This rate hike will disproportionately impact Black, Indigenous, disabled, low income and housing insecure Oregonians. We cannot let our most vulnerable community members keep falling victim to bad utilities policy. I am calling on the Commission to dismiss this case and grant the motion submitted by Oregon Citizens' Utility Board. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mx. Robin Burgess 6814 SE Division St Portland, OR 97206-1269 fburgesspdx@gmail.com - 4/3/2024 12:33:25 AM</p>

Tabitha Delorio – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mrs. Tabitha DeLorio 8310 NE Humboldt St Portland, OR 97220-4759 tabitha.a.gentry@gmail.com - 4/3/2024 12:34:16 AM</p>
Emily Andrews – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Camila Schlesinger – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mrs. Camila Schlesinger 4515 E PORTLAND Portland, OR 97215 canaan.schlesinger@gmail.com - 4/3/2024 12:35:15 AM</p>
Drew Flowers – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Whitney Handrich – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. We can't continue to afford our electric bills if the rates keep increasing! It is too much but we have no alternatives. Our bills more than doubled this winter. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms Enesha Holiman 2140 N Williams Ave Portland, OR 97227-2077 enieshaw@gmail.com - 4/4/2024 12:32:08 AM</p>

Name/Location	UE 435 Public Comments
Pat Attaway – Portland	<p>ataserves@everyactioncustom.com. Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms Pat Attaway 2327 NE Wasco St Portland, OR 97232-1643 ATAserves@yahoo.com - 4/4/2024 12:32:13 AM</p>
Memry Smith – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Melissa Navarro – Scappoose	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). I am outraged by the proposal to increase the rate, so quickly after the recent rate increase. It seems that the additional rate increase was planned the entire time. Customers are struggling as it is; many senior citizens, disabled citizens, and families are struggling just to keep their home warm and provide hot water for themselves and you are making it feel like it is a luxury to even keep the electricity on in a home. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mrs. Melissa Navarro 52032 SE 9th St Scappoose, OR 97056-4542 melissanav24@gmail.com - 4/4/2024 12:32:19 AM</p>

As a PGE customer, I encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Rachel Springer 235 NE Shaver St Portland, OR 97212-1053 rachel.j.springer@gmail.com - 4/4/2024 12:33:15 AM</p>

Alice Smith - PORTLAND	<p>We will freeze and burn thanks to your unconscionable ruling allowing PGE to raise rates when power service is already unaffordable. Under the leadership of Patricia Poope we have had immeasurably harmful changes to policy that have irreparably harmed customers across the board. Those who can choose to use solar energy are now having that resource stolen from them thanks to Poope ending the payback program. Those of us who were living comfortably have been harmfully abused by her excessive rate hikes at a time when rent and groceries have become prohibitively expensive. My bills have risen almost double what they were last year under Poope and still, her greed has no bounds. She wants more. So many families have dropped out of the green energy plan because Poope has made it prohibitively expensive to afford clean energy even after her financially abusive policies have stolen energy from clean energy sources. I am filing complains with federal regulatory commissions requesting a review of this decision and your department's interests in defrauding Oregonians to enrich PGE shareholders. Shame on you all. - 4/4/2024 7:04:42 AM</p>
Travis Teague - HAPPY VALLEY	<p>While it's understandable that Portland General Electric may need to adjust rates to cover increasing operational costs, substantial rate increases can burden customers and undermine economic stability. Such hikes disproportionately affect vulnerable communities, including low-income households and small businesses, exacerbating financial strain. Instead of imposing heavy financial burdens on consumers, PGE should explore alternative strategies such as operational efficiency improvements, renewable energy investments, and seeking out governmental subsidies or grants to mitigate the need for significant rate hikes. This approach ensures that the burden of maintaining a reliable energy supply is shared equitably and responsibly among all stakeholders, without disproportionately impacting those least able to afford it. - 4/4/2024 10:03:55 AM</p>

Mary Ann Dhulst - PORTLAND	<p>No one can pay these bills! Why would PUC ok them to raise rates 18%? The people are struggling and out on the street! I live in a one bedroom apt and pay \$200 for electricity. I can't pay these high of bills! - 4/5/2024 3:29:20 PM</p>

Name/Location	UE 435 Public Comments
Kathleen Trapp - KEIZER	<p>I oppose the ridiculous outrages rate hikes imposed on Oregonian from PGeIE... wildfires and national disasters will happen tgat is why we are all forced to have insurance of every kind... constantly rising Insurance prices is what the consumers are gouged with yet our cost of living keeps sky rocketing.... yet wages Don't. Utilites gas water sew ELECTRIC....AND IT GET BLAMED ON WILD FIRES AND DISASTERS... why utilities commissioners make 6 figure incomes... enough gouging..... a 2 or 3 % increase is more than enough every year or so but 18% - 40%is out of control... Pay your federal taxes stop taking pay increases and Pay your insurance Hike like we have to...STOP GOUGING CONSUMER TO HOARD SALARIES AND MONEY!!!! Utilities and insurance companies alike!!! - 4/6/2024 12:58:54 PM</p>
Patty Pairan - YAMHILL	<p>My husband and I have lived at the same address for the past 22 years. It is a 110 year old house and over the past 6 years we have upgraded our siding, adding new insulation, installed high end windows, new furnace w/heat pump and new water heater. We were on Equal Pay and our bill went from \$150 to \$172 per month. That's when we switched to the Time of Day program. I am a stickler when regarding, showers, laundry and cooking, yet our bill is still high. I looked at old PGE bills I had from 2013, 2015, 2017 and 2023 all for the same month time frame. Surprisingly we used less kilowatts in 2013 through 2017 than we are now. That is something I cannot comprehend. I have talked to PGE numerous times and requested out meter to be looked at. Each time they say everything is fine. We are doing everything we can to keep our electric bill low by doing laundry and showers on weekends or before 7am and ALL cooking no later than 4:30pm. Yet I look at the tracking on the PGE website and ALWAYS see higher usage from 6pm-2am. Something is wrong with that. I always turn the heat down so it does not run at night, We have very early hours in the morning so we do not stay up past about 9pm. It is unclear what is happening during the night to use so much energy. No matter what we do we can't get ahead of the game when it comes to our electric bill. - 4/6/2024 3:14:28 PM</p>

Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms Shanna Watson 13144 SE Stark St Portland, OR 97233-1554 sweetriver37@gmail.com - 4/8/2024 12:31:50 AM</p>
Rjork Halverson – Mount Angel	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. Rjork Halverson 795 Alder St Mount Angel, OR 97362-9412 rjork.halverson@gmail.com - 4/8/2024 12:31:52 AM</p>

Nancy Zwerling - PORTLAND	<p>RE: PGE Rate Increase Request, As a retired senior who lives in Multnomah County, I was unhappy to see a significant rate increase request from PGE since I already pay hundreds of dollars every month in electric bills. My question is what is the companies annual income? Do they have the profits to pay for those services they are asking to be covered by the rate hike? I do not want to pay for, as stated in The Oregonian, "higher profits for shareholders and taking on financial risks for the company". I have found that if there are significant improvements needed on a house or apartment it is the owner (PGE in this case) that pays. To pass it on to the renter (PGE consumer) without the company first making a significant investment smacks of over charging. PGE calls a '7.4% increase a bold move', I call it gouging. - 4/8/2024 5:45:25 PM</p>

NA - SALEM	<p>RECEIVED MAR O 8 2024 P.U.C. Letter converted by Consumer Services staff - dr I need you to understand what it is like to be poor right now, because you approved the rate increase for PGE last year, which means that you just... clearly don't. Here's what my life as like, as someone who's just barely scraping by. The only new clothing I have bought in the last 2 years is underwear, socks, and a few plain t-shirts that were on clearance at Bi-Mart for \$3 apiece, I learned to cut my own hair. I can't afford cable TV or any other streaming service right now. It's not in the budget. I keep my home cold all winter and deal with it with blankets. In summer, I just have to suffer as much as I can stand it before I let the AC run. Extreme heat and cold make my chronic pain worse. They're both miserable seasons. Fast food is a luxury. Nice restaurant food is something I experience maybe once every six months. Food stamps just barely cover what I need for a month and the food prices keep going up, despite what the newspapers say about "inflation easing", I have the cheapest internet and phone service I can get I have the cheapest EVERYTHING I can get, honestly. Sometimes I buy a book or a heavily discounted video game that released several years ago. That's as much luxury as I can afford for myself right now. I normally spend less than \$30 a month on anything fun. Everything else goes to bills. Two of my teeth needed crowns years ago. I'm on the Oregon Health Plan, but it only pays for crowns if you're pregnant. There's no way I could possibly afford a crown. Every time I eat, I chew very slowly, trying to delay the inevitability of losing these teeth. I am living with mold and leaks I can't afford to have repaired. Problems that keep slowly getting bigger the longer they go un-addressed, just like my teeth. The rent keeps going up. The price of basic necessities keeps going up. Every time my wages increase, it's immediately negated by something else getting more expensive. I am scared. I am always scared. I am never not scared. I'm in PGE's relief program for low-income Oregonians, but that bill is still brutal all summer and all winter. I already use LED bulbs. I already unplug things I'm not using. There is nothing else I can give up. There is nowhere else I can cut back. There is no other public program that will help me. I've looked again and again. Nobody else will help me, because I have no children and I'm not the right kind of disabled. Please do not allow PGE to increase their rates again in 2025. Please tell them no. Please. Please. Please. Please. I might be able to scrape by for a while begging on the internet for donations and getting help from friends and family, but others won't. For some people, this will be what tips them into horrific situations, like living without power or losing their homes. We don't have a strong safety net. You can't just assume that people will figure it out and land safely. Please don't hurt us any more. Please, please, please spare us from another cruel increase. The working poor have already given up enough. Please don't let them hurt us. - 4/9/2024 4:22:21 PM</p>

John Movius - PORTLAND	<p>These rate hikes, proposed on top of existing recent rate hikes, are unreasonable and working families feel the squeeze. In a time of inflation and wage stagnation, with Portland metro area becoming increasingly unaffordable to middle class people, extreme rate hikes in two years are absurdly out of touch. Rate hikes in any business or utility are to be expected, especially after COVID inflation. But rate hikes at this level are extreme and would only be possible with a monopoly who give consumers no other choice. Unethical, unreasonable. No one I have spoken with -- in my neighborhood, peer group, clients, family members, friends, coworkers -- supports these absurd rate increases! - 4/10/2024 7:52:19 AM</p>

We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mx Syd Agrifoglio 905 NE Stafford St Portland, OR 97211-3579 domagrifoglio@gmail.com - 4/15/2024 12:31:51 AM</p>

Katherine Gonzalez – Fairview	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Krysta Scott - SALEM	Please do not raise rates while we are drowning in a sea of profiteering. Use the previous rate increase money and government grants to repair, improve, and modernize the infrastructure. The weather is changing - the power infrastructure in Oregon was not built for what is coming. Get some truthful public relations ads out there - show us where the money is going. Ask for donations from the wealthy corporations that rely on you for power to make the system better for everyone. Thank you. - 4/15/2024 9:55:20 AM
Shelly R - PORTLAND	The latest increase is too high. It's my understanding that there may be another rate increase coming. I sit in the dark at my house every night, barely use my stove, and still have a bill over \$100. I live alone. There is nothing more I can do to decrease my bill. People can't afford to take on all of these increases. - 4/15/2024 9:43:18 PM
Aaron Free - PORTLAND	How is it Legal for a power company to monopolize a market? I have no options except PGE! I rent so I don't think my apartment management is gonna approve me having solar panels installed. So I just get rate hike after rate hike cause I have so easily been able to afford the electric provide to me for the last 5 years! In that 5 years I have twice now lived in apartment without power 4 months and 6 months. Both times facing eviction over it I have been able to get assistance to keep that from happening. Thank you to those who are helping! It's helping less fortunate but it's also padding the pockets of corporate greed! Go on push your hikes! You know that there is only so much longer for you to do so! Technology is moving at an accelerated pace these days and more sustainable energy is knocking at your door! Hope your ready to be out in the dark and evicted. You are deserving of it! - 4/16/2024 6:50:01 AM
Robert Taylor - PORTLAND	PGE has annual revenue of 3 billion a year, that's a lot of cash. They're traded as a fortune 1000 company, not a 500 company. They don't need to raise the rates on us senior citizens. - 4/16/2024 10:35:53 AM

Name/Location	UE 435 Public Comments
Levi Manselle - COLTON	<p>As an Oregon resident, business owner, employee, and property owner, I am writing in strong opposition to the proposed rate increase submitted by Pacific Power and PGE. I implore the Oregon Public Utilities Commission, as the regulation entity responsible for approving electric rate increases for Oregon, to read this letter of opposition in its entirety as we have already been hit with significant rate increases and now face the prospect of yet another massive rate increase. Rates were relatively reasonable a few years ago however the recent rate increases I have seen my weighted average kWh rate double when including fees and other charges when dividing out the total kWh power consumption. This not only makes it difficult to run a business, but also more difficult to attract new and existing businesses to Oregon. The cost of doing business has increased dramatically since Q4 of 2022 and today, April 19th, 2024. We have seen rate increase after increase after increase, which is very frustrating and costly as much of these rate increases are being spurred by speculation and outside pressures from California and potential regulatory action that may occur in the future. The ripple effect of high electricity rates affects all aspects of life and our local economies, including increased costs for food, housing, transportation, and all other segments as increased energy costs deeply impact all aspects of businesses and our community. The cost of doing business has become too high in Oregon and another massive rate hike by PGE and Pacific Power is sure to drive businesses out of Oregon altogether. While the cost of doing business has risen, we have seen a positive trend in the adoption and implementation of energy efficient homes, appliances, industrial systems and more. Improving infrastructure is a priority but it's unfair and abnormal for energy to be the ONLY industry seeing non-stop double digit rate increases on a continuous basis. Electricity is a modern basic necessity and without it we are unable to keep fresh food refrigerated, cook, and heat/cool our homes. Virtually all businesses cannot operate without electricity. From the information I have seen provided by power companies it appears there is a substantial amount of money to be made selling power to neighboring states at higher rates and PGE and Pacific Power appear to be speculating that upstream providers will be selling power at higher rates in the future and they are simply trying to hedge potential regulatory costs, unrealistic green power projects, and future rate increases by price gauging rate payers today for speculative future costs which may or may not come to fruition. Current rates are too high today and unaffordable for most people. This last winter was the most costly power bills I have ever experienced. Additional rate hikes are premature and unfair, especially as corporate spending has crossed the threshold of wanton waste with sports arenas naming rights and other marketing mis-spends as these entities operate within designated territory with zero competition. These hikes are nothing more than a money grab for corporate entities for parent companies like Berkshire Hathaway (92% ownership stake in Pacific Power) which is an unfair burden for rate payers. These power companies seem to believe the sky is the limit and they can charge whatever they want to, while realistically they need to be more fiscally responsible, invest in smart infrastructure during repair and replacement cycles, and minimize the various 'green' projects that are ineffective and inefficient. I strongly encourage you to implement a rate freeze and deny Pacific Power and PGE's requests for jacking up our rates even higher, to where irreparable harm will be done to rate payers. Thank you for your attention in this matter and consideration. Best Regards, Levi Manselle - 4/19/2024 5:22:11 PM</p>

J Roberts - PORTLAND	PGE needs to learn how to properly budget its previous 30% rate hike, instead of squeezing even more money out of a captive customer base. If PGE can't balance its own budget, the solution is government ownership, not rate hikes. - 4/23/2024 12:07:39 PM

Carin Mateyko – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Carin Mateyko 3153 SW Dolph Ct Apt 17 Portland, OR 97219-3845 carinmateyko@gmail.com - 4/24/2024 12:33:34 AM</p>

Casey Nakamura – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a customer of PGE, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households!! Thousands of PGE customers are still reeling from the most recent rate increase and ice storm bills back in January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. No working class person can afford these increases. These rates are extremely unreasonable and only serve shareholders. As representatives of Portland residents it is your responsibility to protect them and put a stop to this. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Casey Nakamura 3922 SE 32nd Ave Portland, OR 97202-3425 caseynakamura@gmail.com - 4/24/2024 12:33:37 AM</p>
Travis Noddings – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). We are in the midst of an unprecedented cost of living and housing affordability crisis. I'm a housing case manager at a local nonprofit, and every month I help folks with their highly burdensome energy costs utilizing emergency assistance funds to help them get their power turned back on. PGE has raised the rates every single year, and is currently trying to INCREASE their profit margin while households are suffering. We must stand up to private utility greed, and stop further rate hikes that tenants cannot afford. PGE is exacerbating the housing crisis to pay their share holders, and we cannot let that continue. Please, we are desperate. The Utility Commission exists to protect consumers from the exploitation that they are facing and we are not receiving the protection we need. Please reject the rate increase! Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. Margaret – NA	<p>I'd like you to know how disappointed in and angry with your corporation I am for raising your rates. I'm struggling to stay in my house, which at age 64 I own outright in spite of having to take medical retirement. You are impacting seniors and the disabled who worked hard for many years. What do you do with people like us when we're out on the streets? You pay higher taxes. Please stop raising rates. Margaret Sent from my iPad - 4/24/2024 12:34:08 AM</p>
Susan Kaller - PORTLAND	<p>PLEASE, you've already raised rates SO MUCH. ENOUGH! No more rate increases. PGE needs to focus on its core business. Providing power to customers. - 4/25/2024 7:06:35 PM</p>

Name/Location	UE 435 Public Comments
Rene Ferran - CORNELIUS	Why should PGE receive a dime when it screwed over customers during this winter's storm. It needs to get its act together before it gets to raise rates again - 4/25/2024 7:39:51 PM
Jan Reid - BEAVERTON	Regarding another proposed rate increase for PGE customers - please take a look at the impact to your fixed- and lower-income customers during this time of inflation and economic stress. The level at which PGE provides customer subsidies is too low, and people are struggling out here to make ends meet. Many of us are also helping family members who can't afford their electric bills, even with full time jobs. PGE should learn how to budget their existing resources more effectively, as their customers are all required to do. PLEASE take a pause on the rate hikes. - 4/25/2024 7:51:48 PM
Brenda O'Neil - OREGON CITY	We cannot keep paying for PGE'S mistakes.PGE should restructure, realign, work with less, like we are forced to do.I truly feel if another rate hike goes through then there should be a vote to recall the positions of those that approved it.We the people are tired of the tyranny at PGE's monopoly. - 4/25/2024 8:51:40 PM
Ford Prefect - CLACKAMAS	12% increase was granted 1.1.23, 18% increase 1.1.24, and a proposed 7.5% increase 1.1.25(?) would bring the total rate increases to 42% in a 25 month period. In what supply-side distorted reality is this not ridiculously burdensome for ratepayers? Rubber-stamp, captured regulatory bureaucrats are the only doormats who wouldn't flatly refuse all increases. PGE's investors and dividend recipients can eat a 0%. Appalling. - 4/25/2024 8:58:42 PM
Mel Zillick - PORTLAND	It looks like you all are headed towards letting PGE raise their rates yet again. I just can't believe this. I used to work at NWN and they struggled to get you to let them raise rates yet the entire public under PGE will continue to suffer as a result of this path. This is also going to make more folks stay with natural gas as a result. If their story of reducing carbon emissions is the reason this will not work. Natural gas natural gas natural gas!!! https://www.oregonlive.com/environment/2024/04/pge-rate-hikes-oregon-regulators-say-they-cant-dismiss-increase-request.html - 4/25/2024 9:14:50 PM
Nick Finke - LAKE OSWEGO	I want to comment on PGE's requested rate increase for battery storage plants. This 8% increase is money spent on a fantasy project. As someone who used to be in the energy industry, I ran the numbers and the math doesn't add up. These plants will not provide enough storage capacity for a major event, let alone overnight storage. They're requesting to spend a couple hundred million to buy a few hours of storage. That money could be spent on another gas plant or a leaker plant that would be able to run 24/7 in the event of a summer or winter high load situation. Investing in additional generation would be much more cost effective than battery storage. - 4/25/2024 9:16:49 PM

NA - PORTLAND	Regarding UE 435, rate increases proposed by PGE. As a PGE ratepayer, I oppose any additional increases proposed by PGE in the near future. The recent increases were already too much, and the utility needs to find other ways to cover their costs. They can work to be more efficient, find other investors, use loans, and/or reduce profits to cover any additional needs in the next 1 to 2. While I'm not an electric utility expert, something just doesn't seem right here, and the commission should double efforts to represent the citizens who have no other choice, and keep rate increases to an absolute minimum. - 4/25/2024 9:33:06 PM
Rhian Beam - BEAVERTON	As a citizen of Beaverton, we have no choice but to use PGE. As such, continuing to raise rates when people are already struggling, including ourselves, not to mention the ACP ending so many people already have to pay much more for Internet again. Approving an increase in PGE costs to the consumer, is downright criminal and cruel. - 4/25/2024 10:37:05 PM

Name/Location	UE 435 Public Comments
Mary Fitzgerald - SANDY	<p>I do not support PGE's proposed rate increase. 1) Citizen ratepayers need a clear yet detailed presentation as to the need for any rate increase. I have yet find a concise executive summary that would allow me to make substantial comments regarding the need for this. Hence, citizens are primarily making "enough is enough" comments that the OPUC can largely dismiss. I ask that you provide a concise executive summary beyond PGE's pretty one page graphic found on their web page. 2) While most PGE employees are solid, the company performance is not without significant hiccups (ie beyond poor storm response communication). Some issues can be solved without throwing more money at it. I don't see that PGE is trying to improve their product where they can do so without asking for higher rates. Again. - see #1 above. 3) I see the contract arborist crews are treating the same sections over and over again in the same year. It sure seems to lack efficiency. These crews must be working on a day rate vs bidding the job. How is PGE making their vegetation management cost effective? What is the vegetation management costing PGE? How does the OPUC determine if their costs are reasonable to justify a rate increase? 4) its unreasonable to stomach a rate increase when the information on PGE's investor pages show "proven dividend growth". For those of us without the means to make significant financial investments, I wish our service area was customer owned co-op or a PUD where we could vote for the board members. We are stuck with PGE. 5) Finally - my story. I live in 1,000 ft sq home built in 1994. I heat primarily with a pellet stove with a ductless heat pump being my other source of heat. In January this year I had my highest bill ever. What was particularly concerning was that I was visiting friends out of town for two weeks of that month so my heat pump was set at 55F or lower and my water heater was turned off. No lights. I unplugged energy draining devises. Just a refrigerator and the heat pump going. During one of the weeks that I was home, was the power outage for 5 days. So I was only using a "normal" amount of power for about 10-12 days yet my bill was the highest its ever been. I have called the Energy Trust of Oregon for ideas to reduce my usage - they basically said that I was doing it all other than one appliance upgrade. - 4/25/2024 11:04:28 PM</p>
Kathy Birch - PORTLAND	<p>americans have lived greedily probably since the second world war and i must observe that includes how i was raised. now it seems the government and pundits are trying to convince us we can keep doing it for a low cost . i believe this is error. we will have to pay for energy and change and infrastructure. but there is still greed involved at the top: the chief executive of excel energy has compensation package with stock options of many millions of dollars. i have not seen what my provider's executives make but i assume its in the same stratosphere . this is where utility board should be focusing not on suggesting that priorities such as infrastructure and wildfire prevention can not both be priorities . consumers need to pay the price and yes this should probably include ways to support people with lower incomes. - 4/25/2024 11:48:25 PM</p>

Georgiy Shevtsov - GRESHAM	<p>Yet another rate hike is completely outrageous! The rate hike hit us during winter, and our bill skyrocketed! My only choices were pay for the electricity, or find a metal can to burn wood in. But then I'd need to get firewood, which isn't easy when it's frozen outside. I'm retired, living in a fixed income from social security. Already, I'm forced to do the driving gigs (Uber eats, door dash, instacart, etc) to just get by. You're not the only one raising your prices, after all! If I cannot afford to pay for your new rate, what am I to do? Freeze to death? On your end, you just lose a long time customer. I understand that it takes money to maintain equipment, to upgrade, etc., but your customers don't have bottomless wallets! Additionally, there's a lot to be said for investing our money strategically, not investing in everything at once! Or perhaps charge your corporate clients more, and stop making people choose between food and heat! Lately, we've had some very cold winters, and extremely, hellishly-hot summers. That really affects our bottom line. There have been enough rate hikes in the last 3 years!!! Please, no more!!! - 4/25/2024 11:49:18 PM</p>
Veronica Cabrera - Beaverton	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Veronica Cabrera 2435 SW Ecole Ave Beaverton, OR 97005-1106 cabrerav50@yahoo.com - 4/26/2024 12:32:17 AM</p>
NA	<p>Do your job PUC. Regulate these rate increases that are happening to frequently and at too high a rate. This is insane. - 4/26/2024 12:32:20 AM</p>
NA	<p>the consumer should not have to pay for the companies negligence in maintaining their line. We are now paying for the fines they face from the wildfires when they have more than enough annually to upkeep and upgrade their infrastructure. Trim Some fat from the CEO and shareholder earnings you greedy swine. The Working Oregonian can't afford another rate hike over and over again.. Show quoted text - 4/26/2024 12:32:22 AM</p>

Trim Some fat from the CEO and shareholder earnings you greedy swine. The Working oregonian can't afford another rate hike over and over again. - 4/26/2024 12:32:25 AM
NA	It's your job to cap thus how many will you allow per year and every year this is unfair and unaffordable. Shame on You for allowing this to happen again . Where is the money supposed to come from? Fixed income and low income households do not receive enough benefit from the assistance program to afford this. This is flat out greed and we can't afford it - 4/26/2024 12:32:28 AM
Andrew Greeno - HAPPY VALLEY	I oppose the proposal of PGE to raise rates for electricity in Oregon. As documented by news reports and their own press releases and public statements, PGE has had record profits, including their leadership who directly benefits, so to think that somehow that has nothing to do with their outrageous price increases is to ignore the facts at hand. 12% price increase in January 2023 and another price increase in January this year is hurting Oregonians who are already overly taxes and burdened in this poor economic climate, in comparison to the rest of the country. This type of activity is not sustainable. PGE needs to explore what they can do to reduce expenses to fulfill their obligations to the public. Since they have no competition in the market and operate as a monopoly,. Oregon and the commission overseeing these type of rate hikes must play a more aggressive role in curtailing bad business behavior. Their profit levels should not be what they are if they truly need to increase rates. If this was any other industry we wouldn't even be debating this fact. - 4/26/2024 1:09:18 AM
Nicole - SANDY	As a disabled Oregonion on a very fixed income, and only able to afford living in a home that's not terribly energy efficient, having rates go up this drastically yet again will erode my ability to buy as many groceries and medications as I need to try and remain healthy. At some point, these double digit increases need to stop. We cannot afford it, and not just people who are at the very bottom of all earners, but families who are already barely skating by with the increases we've seen in everything else we need to survive like food, fuel and medical care. Please don't allow this to happen again. Thank you. - 4/26/2024 1:23:59 AM
NA - MILWAUKIE	Rate increases are unsustainable on top of all of the other increases consumers have had in the last few years. Expecting the general public to pay more while just a few benefit from discounts and new EV chargers is unfair. What other pet projects that only benefit a few are the rest of us paying for. Since the State of Oregon has decided PGE has to be emissions free, I would expect PGE to focus on making that transition affordable rather than doing pet projects and additional upgrades. Please be more responsible with your clients money. We aren't getting 12-18% raises every raises every year, so we can't afford 12-18% increases in basic cost of living. - 4/26/2024 4:51:49 AM

Name/Location	UE 435 Public Comments
Marc Lewis - GRESHAM	Absolutely not. The requested rate increase is absolutely absurd. As rate payers abilities to keep up are already stretched paper thin, pge's deep pockets keep getting bigger. 7 days my family was without power during the winter storm. That's when it became evident that it's less expensive to power my house with a gasoline generator at \$4.35/gallon than to pay pge's exorbitant prices. This is not about upgrades, wildfire mitigation, or any other nonsense they are lying about. This is about increasing this private company's profit margin for its executives and share holders. Please do not allow any more rate increases. - 4/26/2024 7:26:43 AM
Brett Luelling - LAKE OSWEGO	Costs are spiraling out of control in our city and this rate increase will only make the situation worse. PGE is consistently asking for large pay increases while paying out large sums to executives. Show fiscal restraint and target investments before you continue bilking your rate payers. - 4/26/2024 7:30:25 AM
April Luelling - LAKE OSWEGO	Costs are spiraling out of control in our city and this rate increase will only make the situation worse. PGE is consistently asking for large pay increases while paying out large sums to executives. Show fiscal restraint and target investments before you continue bilking your rate payers. - 4/26/2024 7:30:57 AM
Mark Prochnau - PORTLAND	I disapprove of PGE's continual rate hikes. I work for a large company in Portland and all of our departments had to come up with 5% budget cuts. Each department had to deal with these cuts, and could do as they see fit. Some departments cut wages, others hours...etc. At this point with the crazy utility fees, taxes and costs associated in Portland this PGE increase has pushed us to work on a plan to leave Oregon within 2-3 years. Oregon is going to have more and more homeless people requiring services and less people who work to pay for them. If I ever become destitute and unemployed in whatever place we move to I'll move back to Oregon for all the freebies they give out and subsidies for utilities etc. The working people's backs are breaking in Oregon and PGE is part of the problem. How about cutting all PGE's administration salaries by 5% and I'm sure they will have the money not to increase fees. - 4/26/2024 8:13:21 AM
Tambi Hurd - SALEM	I am opposed to PGE's latest request for a rate increase. With 30% increases already implemented in the last year, another increase is unreasonable and burdensome. I understand one of the companies that PGE buys electricity from is lowering its price to PGE. So, why does another increase to PGE's ratepayers make sense? Any savings should be returned to customers. Please put customers first in your decision, and deny PGE's rate increase request. - 4/26/2024 8:47:19 AM

Name/Location	UE 435 Public Comments
Stacy Kidd - PORTLAND	PGE has been incredibly greedy lately and you've been allowing them to take advantage of Oregonians. This is a last straw for me as a citizen. Myself and my tax dollars are going to move to a state that doesnt allow corporations to bankrupt their customers while doing nothing to improve service or better their customers experience. They already force me to pay more if I want to use there clean energy options, wash my clothes after work, or tirm my air on during "peak" times. Its all hidden fees, extra fines, some new tax, or any other possible way they can find to add dome extra padding to your bill, bow despite 2 years of record high rate increases you are willing to entertain another? If PGE is unable to manage their finances and stick to a strict budget they deserve to face the consequences of that, I sacrafice my wants and dreams to ensure my lifestyle meets my budget and its unfair to heap the financial burden of that on my shoulders because they won't or can't. Again, Your destroying the State of Oregon and turning its people against you, you are creating your own civil discourse and you absolutely will be held responsible for your choices. - 4/26/2024 9:52:37 AM
Gail Crosby - EAGLE CREEK	First I was asked to volunteer for a 10 percent increase to fund green energy. A month later I'm told there will be a 27 percent increase. I had to ask to be taken off the green program. Now thy want another 7 percent. How are older people on fixed incomes supposed to be able to live any more?? Are you all trying to drive is out of our homes? We are being asked to fund a new High School out here. No one asked me if I wanted the new subdivisions, but apparently I have to pay for all the new kids to have schools. Old folks are getting pushed out of our previously affordable homes. I think anyone over 65 should have a moratorium against all costs rising in such a precipitous manner. - 4/26/2024 10:26:09 AM
Pete Renfrow - DUNDEE	Do Not allow another rate increase for PGE. They can afford to lend electric bikes to citizens in Portland and then state they need more money. Those of us who are not poor yet not wealthy either bear the costs of these ridiculous increases. In my case, I already cut heating in my home to 3 days a week because my retirement income is fixed. - 4/26/2024 10:26:18 AM
Debbie A - GRESHAM	I strongly oppose the proposed 2025 PGE rate increase. Surely there has to be a way to work on the infrastructure of the company without another increase. People are already struggling and do not need more money going to PGE: It is just not good economic sense now to have another increase with all other costs being so high for consumers. I would suggest a line-by-line audit of PGE funds expenditure and see where was can be eliminated and better used. - 4/26/2024 11:02:44 AM
Amaya-Giselle Vy - GRESHAM	My partner and I work full time. I recently moved to full time at Portland State University where our union fought for a Cost of Living Adjustment in order to fight against inflation. The COLA that my union has fought for is essentially useless if important and necessary utilities are going to be consistently inflated. We are barely making enough to support ourselves despite working over 80 hours combined a week. Please do not make this increase PGE. - 4/26/2024 12:12:16 PM

Name/Location	UE 435 Public Comments
Kelly French - SANDY	Please do not increase the electric rates again! We already don't subscribe to renewable energy because of the price increase, now the basic rate is almost unaffordable for many. The rates were just increased a few months ago. - 4/26/2024 1:08:14 PM
Candise Coffman - PORTLAND	I am on a disabled fixed income. Once behind on my bill I can't catch up! I won't be able to turn on my heat at all this next winter if u raise rates again. This last winter my heat was always set to 60 degrees and my bill was still out of this world!!! - 4/26/2024 1:29:35 PM
Richard Mayer - SALEM	No to PGE Rate increase. - 4/26/2024 2:00:20 PM
Max Bordman - PORTLAND	I am writing to request that Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Please put the needs of Oregonians before the needs of Portland General Electrics (PGE) Stock Holders by rejecting their proposed increase of 7.5% in 2025. In 2023 the CEO of Portland General Electric Received a bonus of \$1,195,782 and made over \$6 million in total compensation (\$4,181,138 was awarded as stock) -- if a company can afford to issue bonuses they do not need to increase the price of their product. Myself and all of my loved ones in Oregon have been struggling to keep up with our bills as a result of their 17% increase in 2024, I plead that you do not allow PGE to further cripple Oregon taxpayers with another increase. As many of my fellow Oregonians have commented, PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. Enough is enough, please do your part by rejecting their proposal. - 4/26/2024 2:33:34 PM
Zachary Numan - PORTLAND	PGE has already raised residential rates by 30% in the past 2 years. They have also announced dividends for its shareholders and have made a higher EPS than analysts predicted, racking in a revenue 14% higher than expected. They clearly do not need the rate hikes if they are still making profits for the rich. The commission should not allow for this rate increase to go through and burden Oregonians even further, in the name of making the big city folk on Wall Street richer. - 4/26/2024 2:40:59 PM
NA - SILVERTON	Rate hikes this high are unconscionable. This means the difference between paying this bill or buying groceries. Between being comfortable in my own house, or choosing to be extremely cold to save money. There has to be a way to provide residents services without further increased rates. - 4/26/2024 4:02:26 PM
Tonya Bryant - GRESHAM	Please do not hike up the energy bill , it's already tough to make ends meet, you're going to have more people on the streets, this inflation is hurting everyone. Enough is enough Thank You, signed Barely Making ends meet as id - 4/26/2024 5:30:42 PM
Makena Terlson - CORNELIUS	Hello. I've lived here for 23 years now. I can't afford another price increase. Please don't raise rates. I will vote any way to ensure this, and I'm organizing with my neighbors to protect against this. - 4/26/2024 5:32:45 PM

Name/Location	UE 435 Public Comments
Phillip Bryant - GRESHAM	I am being squeezed out of every paycheck , no one can afford another utility going up any % it is difficult to make all my bills already . Before my water usage is even measured I pay 180.00 in just fees , it has gotten way out of hand, I vote NO , Thank you - 4/26/2024 5:34:29 PM
Ed Neff - BEND	A rate increase is OK, but keep in mind there are many retired seniors in this area. And we are NOT ALL FLUSH. So moderate your amt of increase please. - 4/26/2024 7:10:31 PM
Kevin Molskness - HAPPY VALLEY	PGE has raised their rates 30% since the beginning of 2023. Their profits have also increased substantially over the same time period. This has all been on the backs of the citizens in Oregon. PGE provides a public utility, an essential part of everyday life. It is unconscionable that a for-profit corporation runs this utility and seeks to line their pockets with the hard earned money of people who don't have a choice. You must reject this proposal at the very least, and should also consider rolling back some of the recent rate increases. You can not let corporate greed dictate our essential utilities. - 4/26/2024 8:03:13 PM

Rebecca Ruppert - SALEM	I cannot believe PGE wants another rate hike!! We are in a time of inflation. What are you trying to do to people, especially senior citizens?! Pure greed, that's all this is! Just sto it now. - 4/27/2024 7:27:41 AM

Name/Location	UE 435 Public Comments
Terry Bouie - SALEM	<p>Public Comment on Proposed Rate Increase by Portland General Electric Dear Commissioners, I am writing to express my concerns regarding the proposed rate increase by Portland General Electric (PGE). As a customer, I find the average 7.4% rate hike for 2025 deeply concerning. While I understand that PGE cites reasons such as modernizing the grid and enhancing reliability, the impact on consumers cannot be overlooked. As a resident, I rely on PGE for essential services, and any significant increase in rates directly affects my household budget. Reasons for Concern: Reliability Enhancement: PGE's investment in local Battery Energy Storage System projects is commendable. However, the burden of these upgrades should not disproportionately fall on customers. We need assurance that these investments will indeed enhance reliability and prevent outages. Growing Customer Needs: Modernizing the grid to meet customer needs is essential. However, transparency is crucial. How will these enhancements benefit individual customers? Will they lead to more stable service during extreme weather events? Hydro, Wind, and Plant Improvements: While maintaining and modernizing generation facilities is vital, customers deserve clarity on how these improvements translate into long-term benefits. How will these investments directly impact our bills? Community Impact: PGE's role extends beyond profit. It impacts our communities, especially vulnerable households. The Commission must consider the social implications of rate increases. Recommendations: Transparency: PGE should provide detailed information on how each investment directly benefits customers. Transparency builds trust. Mitigation Measures: Consider measures to mitigate the impact on low-income households. Can PGE offer targeted assistance or discounts? Customer Engagement: Involve customers in decision-making. Public hearings are essential, but ongoing dialogue ensures better outcomes. In conclusion, I urge the Commission to scrutinize PGE's proposal rigorously. Let us strike a balance between PGE's needs and the well-being of Oregonians. Our voices matter, and I hope you will consider them in your decision-making process. Thank you for your attention to this critical matter. Sincerely, Terry Bouie 5045 Hearth Court NE, Salem Oregon 97305 - 4/27/2024 7:59:46 AM</p>
Dolores Schmidt - PRINEVILLE	<p>Pacific Power just raised the rates and now they want to again raise 21.6%. How do they think the people that are on Social Security, like myself, can afford all these increases in the monthly rates? I keep my heat pump at 68 during the day and shut it off at night just so I don't have such a big bill every month, and still it is pretty big in the colder months. I have to wear a jacket during the day, and cover over with a blanket to keep warm when I watch TV in the evening to be able to afford the monthly bill. Can we trust them to do what they say they want the extra money for? They need to fix the grid before they do anything else so we are not vulnerable in a cyber attack against the grid. I am not for the increase and I guess they figure there are not enough homeless people around as there will surely be more if they increase it this much. - 4/28/2024 10:17:53 AM</p>

Name/Location	UE 435 Public Comments
Kelly Woodham - SANDY	Average people can't afford this, we're already suffering. The increased revenues PGE is looking for will not materialize as projected due to the fact that everyone will use less power and therefore generate less revenue, and it will cause hardship. People will be forced to switch to propane or solar panels. What's that going to do to the desired revenue increase? - 4/28/2024 3:01:18 PM
NA	You guys are supposed to help advocate for families of oregon, you're responsibility is to help oregon families. You're singlehandedly destroying families ability to afford to live and flourish by continually approving rate increases. Forcing an almost 50% increase in the last 10 years is completely absurd, you're causing housing to be more unaffordable, food to be harder to afford and families and children to suffer so a company can monopolize the energy field. The expansions that they want they can afford to pay without increasing rates to the consumer by 50% going from a 100 to 150 dollar bill to almost 300 a month takes food out of kids mouths and the ability to afford basic necessities harder to get. Shame on all 3 of you power hunger folks getting a good kick back from pge. - 4/29/2024 12:33:41 AM

NA	<p>Safeguarding Affordable and Sustainable Electricity for All Oregonians The latest proposal by Portland General Electric (PGE) to raise rates by 7.5% has thrust utility regulation into the spotlight in Oregon. However, this routine-sounding rate case reflects larger societal forces shaping the future of electricity production, distribution and equitable access. As state regulators evaluate PGE's request, they must wrestle with the compounding impacts of climate policy, the explosive growth of energy-intensive technologies like artificial intelligence (AI), and the conflicting incentives of private equity investor ownership over a critical public utility. Their decision will have ramifications far beyond this single rate hike, signaling Oregon's priorities for maintaining affordable and sustainable electricity as a bedrock of economic prosperity and societal wellbeing. The Mounting Tolls on Residential Ratepayers For Oregon households and small businesses, the strain is already becoming untenable. PGE's proposed 7.5% increase follows an 18% rate spike only this January and another 12% hike the year prior. As the nonprofit Oregon Citizens' Utility Board highlighted in their motion to dismiss this latest proposal, residential customers are reeling from these compounded shocks atop other inflationary pressures. The accumulated burden portends an affordability crisis in which electricity's costs potentially spiral out of reach for many. For essential utilities providing the lifeblood of the modern economy, such a trend raises profound equity issues. Exacerbating this dynamic, the rate hikes' cross-subsidization heavily favors large commercial and industrial energy users. PGE's proposal imposes over 20% cumulative increases on households while limiting hikes to just 10-14% for big businesses, manufacturers and the tech industry. While differing costs-to-serve each customer class justify some discrepancies, a near doubling of rates for households versus corporations appears disproportionately imbalanced. PGE counters that these expenditures across new wind farms, grid upgrades, wildfire mitigation and more are necessitated by Oregon's vanguard policy goals. In 2021, the state passed a law requiring utilities to fully decarbonize by 2040, with an interim 80% emissions cut by 2030. So, argues PGE, massive infrastructure overhauls are unavoidable to replace fossil generation with clean sources and energy storage on this legally-binding timeline. This logic holds some validity. Being national pioneers in transitioning from carbon-intensive electricity requires enormous anticipating investments that mature utilities will pass onto consumers. Ambitious policymaker mandates come with unavoidable costs consumers must share - assuming ratepayer cost allocations match principles of affordability, equity and environmental stewardship. However, scrutinizing PGE's incentives and capital allocation strategies raises doubts over whether this utility is prudently prioritizing investments for the public interest. Accusations from consumer advocates that PGE is pursuing an 'all of the above' business approach devoid of disciplined weighing of trade-offs or optimizing ratepayer value demands investigation. A utility presenting itself as simply needing to bankroll anything tangentially attached to the energy transition acts more as an opportunistic profit-seeker than a judicious guardian of the public energy commons. The Corrupting Influence of Private Equity Ownership One factor potentially skewing PGE's motivations away from the public good is its ownership structure. An eye-popping 62% equity stake is held not by ratepayers or the public sector, but by private investment funds solely extracting profits over short-term holding periods before exiting. Such concentrated financial control over an essential infrastructure by entities legally obligated to maximize returns above all other considerations represents an inherent conflict with affordable electricity accessibility. Private equity's insidious impacts on electricity affordability have been extensively documented. From 2012-2021, America's investor-owned utilities doubled capital expenditures on costly</p>

	<p>fossil fuel projects while clean energy investments stagnated. During this same period, private funds amassed over \$100 billion in utility holdings. One egregious example saw two private equity firms deliberately shut Ohio's last nuclear plant simply to boost revenues at grid-destabilizing coal plants they controlled while ratepayers absorbed the resulting cost spikes. Nationwide evidence shows private equity taking operational control and imposing austerity through layoffs, rateDeaper analysis is warranted into whether PGE's spending plans truly align with prudent grid modernization investments apportioned equitably. Or if instead they reflect unbounded investment appetites distorted by private equity return-on-equity dictates that canethics and affor - 4/29/2024 12:33:44 AM</p>
Joy McAndrew – NA	<p>As a residential customer and small business owner...it feels so unfair for Pacific to ask for a substantial rate increase when they're making an insane profit already. I don't know what else to say except -- please deny their request. We had a smaller rate increase last year and my bill went up significantly. Respectfully, Joy McAndrew - 4/29/2024 12:33:47 AM</p>
Judith Keeney – Canby	<p>To Whom It May Concern: As a property owner in rural Clackamas County, these excessive rate increases by PGE are stifling. Electricity for our property was fairly reasonable until this last 18% increase. Now our electric bills average between \$500-\$600 every month. Electricity each month costs more than all of our groceries for the same period of time. I think candlelight dinners will become standard fare for PGE's customers. Please rein in PGE and deny this most recent request for another 12% increase. Robert L. & Judith D Keeney 22962 S Haines Rd Canby, OR 97013 - 4/29/2024 12:33:50 AM</p>

Corey McCraw – Banks	<p>Good evening, I am a concerned citizen speaking up about the next proposed rate increase by the monopoly known as pge. It's unfortunate for utility customers that there is no way to introduce competition into the market. Without any competition PGE has been able to steadily increase rates well beyond the rate of inflation. PGE continues to put the stranglehold on it's customers with no remorse. The people around here are unwilling victims of rape in the form of a company doing whatever they want without giving a damn about those they serve. They invest in too many green programs that don't pay off just so they can appease a low emissions agenda that doesn't make sense. We already were getting most of our electricity from green sources so how can they justify all this new spending that they pass on to their customers? Normally when a large company or corporation wants to grow or add new technology they "invest" using their own capital with the promise of it paying off in the long run. PGE knows what they're doing is not cost effective so they punish the customers with outrageous rate increases on back to back to back years. Hopefully the public utilities commission will see what's going on and take the side of the people of the state, their neighbors, friends, and taxpayers versus letting PGE continue to walk all over everyone unchallenged and unfazed. Corey McCraw Banks, OR Sent from my Verizon, Samsung Galaxy smartphone - 4/29/2024 12:33:53 AM</p>
NA	<p>Another one? Seriously? ARE YOU INSANE? So wrong, so unfair to us, the CONSUMER/CUSTOMER. WE HAVE ALL HAD ENOUGH. OUR household works hard to control and cut down on electricity. It does not matter how much power we save and how hard we work at it. You still have to unreasonably raise rates, which ruins our efforts and hard work to save our power usage rate and the monthly power bill. You ----- . Work with us damn it! Work with us. It seems PGE is extremely GREEDY. GREED IS A SIN. HELP US, THE CONSUMER/CUSTOMER. THAT IS WHAT YOU SHOULD BE CONCERNED ABOUT. GET YOUR PRIORITIES STRAIGHT. Get organized with Yahoo Mail - 4/29/2024 12:33:55 AM</p>
Beth Jameson – Lake Oswego	<p>Hello! Why not change when rate increases go into effect, so that they don't hit at the most expensive time of the year? Just a thought. Also, net zero is complete insanity, but I realize you're not responsible for that part. Cheers, Beth Jameson Lake Oswego - 4/29/2024 12:33:58 AM</p>
Jeffrey Rames - BRIGHTWOOD	<p>Giving PGE a 19% rate increase was just too much to bare. Why would you give them this rate increase when you know their service is well below standards. All we got was a larger electric bill, new shiny trucks and more power outages. So, here we are again with PGE completely ignoring our issues here in Brightwood and the Mt hood Village areas. Our PUC completely ignoring our complaints. No major investments made to a very substandard infrastructure. More outages, more rate increases. - 4/29/2024 11:08:55 AM</p>

Jennifer Valentine – Portland	<p>PUC.PublicComments@puc.oregon.gov I am sending opposition to the proposed rate increase by PGE. I just sent a letter last week about HOW MUCH CAN OUR BUDGETS STRETCH???? We have just had increases from PGE recently and this is unfortunately not the only increase we have all seen since 2020 --from electric rates and food prices, to medicines we are all feeling the pinch in our daily routines. I have an energy efficient house and do not use electric to heat my home or cook, but my rates in the last year have been close to \$100 per month on average. This is a big increase from just two years ago when it was more like \$65 per month. Crazy! What or who suffers? We have less to spend in supporting our overall local economies --no theater, no movies, no eating out, no weekend getaways to the coast, no live music events, no extra purchases, etc. And for many, these cuts are more challenging when they are on social security income or minimum wage jobs --I have a good job and find it increasingly challenging to balance the budget each month. It has been hard to deal with the increases in monthly utility rates, from water to electric and now electric again!? We are drowning in being \$25 and \$35 and \$45 more per month for everything. I have a decent job, but worry how to stretch my pay. I can only imagine how the senior citizens or those on minimum wage are only one bill away from houselessness. Increased rates are ridiculous! Why are utilities not asking the legislature or our congress representatives for infrastructure dollars to support needed investments and upgrades?. We should not now be paying for backlogged infrastructure needs that the utility failed to budget for instead making profits for shareholders. Priorities don't appear to be the customers. PGE should have invested in putting solar panels on our houses to gain more green energy across Oregon. Why have they not and why would I have to spend \$35,000 of my own funds to do so when it would go back to the grid? We also should not have to pay for lawsuits from those who lost their homes in wildfires a few years ago when the utility chose not to heed high wind and other warnings about the dangerous weather. They need to be more accountable and not just trying to make profits for shareholders. Please vote no on rate increases, Jennifer Valentine 5581 Hawk Hill St. SE Salem, OR 97306 - 5/1/2024 12:33:28 AM</p>
Cori-Ann Woodard – NA	<p>As a senior citizen who grew up, went to college and worked most of my adult life in Oregon, I find the proposed rate increase insulting, intolerable and ridiculous. Inflation has hit us all hard, iver and over, recently. We shouldn't have to chose between between power, food and shelter. If those primary needs are not met, what does that say about us as people; as individuals with families who have built our lives in Oregon? Are we not valid, valuable and worth something more than yet another over the top price increase? I think we are worthy of more respect than that. No more, PGE. We've had enough. Thank you, Cori-Ann Woodard Sent from AOL on Android - 5/1/2024 12:33:31 AM</p>

Wayne and Phila Kelsey – Portland	As a PGE customer we have seen multiple recent increases that put an unfair burden on us as Senior Citizens. Now PGE wants another big increase in rates. We are on a fixed income and have been forced to decrease our bill by severely restricting our electric use. PGE needs to invest its own profits into developing strategies to cope with Oregon mandates and climate change. Expecting ratepayers to pay these exorbitant increases time and again is ridiculous, irresponsible, and cruel. Wayne and Phila Kelsey 14808 NE Newport St, Portland, OR 97230 - 5/1/2024 12:33:34 AM
Sharon Williams – Gresham	I read in the Oregonian that PGE is requesting another rate increase. My PGE bills are already so high I'm wondering if I can still afford to use electricity! I know there are many Oregonians who have less income than I do and worry for them. We cannot continue to have our utility bills keep rising uncontrolled. Do your job for the people of Oregon and keep utility bills affordable. We all have to live within our means, including utility companies. How much do the administrators of PGE make? Can some of them be eliminated? Sharon Williams 110 SW 5th Street Gresham, OR 97080 - 5/1/2024 12:33:37 AM
NA	PGE's latest increase request should be denied. They are not behaving in the customer's best interest at all. They are only acting in the best interest of their shareholders. The costs have increased way too much, and it is getting hard to afford. Thank you Sent from my iPhone - 5/1/2024 12:33:39 AM
Warren A Westmoreland - BEND	PGE is a public utility. PGE is given perks and discounts that a free-market business would never receive. PGE has been negligent in up-grading their infrastructures. PGE has no problem in increasing both upper management salaries and stockholders dividends. PGE is a guaranteed return on investment because PGE is a PUBLIC UTILITY! Because of this fact, the stockholders should bear the brunt of their elected management's inability to maintain PGE's infrastructure over the last fifty years. It is not the Public Utility Commission's job to "point the finger" at PGE's management BUT maybe the stockholders should be more involved in their company and NOT expect the public to support their ever-increasing dividends demands. PGE is a public utility. PGE should NOT receive an increase in their rate structure in January, 2025. - 5/1/2024 6:20:48 PM
Janet Hively – Corvallis	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Ms. Janet M Hively 1975 SE Crystal Lake Dr Unit 111 Corvallis, OR 97333-0003 boiester@gmail.com - 5/2/2024 12:33:58 AM

Name/Location	UE 435 Public Comments
Joan Bradely – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms Joan Bradley 5512 SE 43rd Ave Portland, OR 97206-5733 jsb1954@comcast.net - 5/2/2024 12:34:00 AM</p>
Ramano Crocker – Beaverton	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I am extremely disappointed the Commission has rejected CUB's request to deny PGE's latest request to raise rates yet again. (Egads--it's been less than 6 months since the last rate increase!) Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. Working people cannot afford these increases. Certainly, seniors like myself, living on fixed incomes, cannot. As a ratepayer, I feel betrayed by the Commission's even entertaining PGE's latest request-- essentially the wish list they wanted the last time. It's time to say "Enough!" to PGE and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. But only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mrs. Ramona Crocker 9720 SW Robbins Dr Beaverton, OR 97008-7943 sage33@comcast.net - 5/2/2024 12:34:04 AM</p>

Gary Poulos – Talent	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Shareholders chose to risk their investments in a company because they believe that the management will make sound business decisions that will increase the value of that investment. And if management fails in that responsibility, the cost of that failure must be born by those who took the investment risk. This is what incentivizes investors to do their due-diligence before choosing where to invest their funds, and if the management fails them in this regard, shareholders should replace the management. To do otherwise would only serve to encourage investment speculation. It is also my understanding that both the previous and currently proposed Pacific Power rate increases were/are, to a large degree, due to poor management decisions regarding maintenance, and to the legal repercussions of those management decisions. As a rate payer, I have nothing whatsoever to do with the management decisions of those in charge of Pacific Power, and should not be held fiscally responsible for such. To charge rate payers for poor management will only discourage shareholders in their performance of due-diligence prior to investing. It will also encourage both irresponsible shareholder speculation and their retention of poor managers. For these reasons, I strongly encourage you to unequivocally oppose such customer rate increases. Shareholders must always be held solely responsible for the financial risks they take when in search of rewards. Your responsibility as the PUC is not to protect investors. It is to protect ratepayers and to insure reliable electric service to Oregon citizens. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. Gary Poulos 333 Mountain View Dr Unit 57 Talent, OR 97540-9314 garyjp@gmail.com - 5/2/2024 12:34:10 AM</p>

Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. PGE's CEO has a yearly compensation of \$6.97 million off the backs of PGE customers. This is a perfect example of a system set up to enrich a small group of people at the expense of everyone else, and yet another case that displays why private-for-profit business doesn't belong anywhere near the utilities business, its straight up avarice, and there is no real oversight. We cannot keep allowing utilities to continuously gouge consumers to enrich themselves. This is especially clear during this era of rampant price gouging throughout the economy (with executives literally caught bragging about it to their deranged shareholders), inflation, and regulatory capture that are bleeding the citizens dry. Utilities are a service, not a profit or toll-taking mechanism, let's keep it that way. Thank you. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr Samuel Berg 29601 NE David Ln Newberg, OR 97132-6457 sber6415@gmail.com - 5/2/2024 12:34:18 AM</p>

Name/Location	UE 435 Public Comments
Rodrigo Lara – NA	Hello How can PGE even ask for more money for the 2025 year when we just experienced an increase in 2024 of 17%? What was the rate increase for previous year's? From what I've read, the proposed rate increase is the same reason the 2024 rate increased was proposed. With all of the taxes set upon the Oregon tax payer, and even worse for Multnomah county residents, when can we expect to stop having exorbitant expenses added to our annual budget? Please vote no and tell the public company to do a better job of managing their balance sheet. Rodrigo Lara - 5/2/2024 12:34:24 AM
Victoria Israelson - ROSEBURG	UE435 docket comment as follows. Being a senior citizen on retirement so on a fixed income all rate hikes affect us a lot more then some people. I look around my community and see quite a few people with low incomes just trying to get by, put food on the table, pay bills, buy gas to go to work. How can a company expect us to pay for their upgrades when we can't even pay for our own. There has to be another way to fix the electric problem. Ask the government for help in communities that are not capable of helping a company such as a power company up grade the system. I disagree with a rate hike for people under a certain pay scale. - 5/3/2024 11:20:32 AM
Rebecca Esparza - BEAVERTON	We can't keep hiking up already absurd prices for things that should be considered a human right - access to heat and light and electricity Industry and company I selected is not where I'm employed but its the industry and company that relate to my comment so I'm assuming that's what I was supposed to put - 5/3/2024 8:48:48 PM
Kassandra Madden - OREGON CITY	I don't understand why our tax dollars go into building batteries to hold enough power for any given situation for any amount of consumers, when we can put up solar panels or those companies can and there would be no rate increase other than the cost of solar panels, which would then be lowered once again because of the solar panels providing beyond enough sufficient energy. - 5/4/2024 12:09:37 PM
Kassandra Madden - OREGON CITY	Government will pay for solar panels, it's not necessary to raise the rate, the people can't afford the cost of living and to keep the lights on. Stop being greedy! Think smart not hard! - 5/4/2024 12:12:19 PM

Name/Location	UE 435 Public Comments
<p>Miranda Gilly - HILLSBORO</p>	<p>PGE already raising rates for customers who can't afford the normal PGE bills during the month is ridiculous PGE as a whole as a company makes so much money that they could cover the cost for surcharges infant structure charges, and any other charges related. PGE needs to revise their cost to be more effective to the American dollar. Every American is struggling ever since Biden took office. All of our bills have raised more than 10% percent, inflation, gas prices percentage to live, including grocery cost, childcare, etc. has put more burden on the American people than ever before if we don't look at the effectiveness and the cost when it comes to the ratios of how much out of everyone's paycheck is paying for all of these other charges then we as a society and we as a power company need to definitely take a hard look in the mirror . PGE really needs to discuss. How can we help the American people? What can we do to make it less of a burden to live? What can we do to make it less of a burden to have working electricity a warm house to live in during the winter months or using surcharge power to power, our house for cooling or appliances, etc., you name it PGE rates for customers is unrealistic and downright inappropriate. What PGE is going to do if they raise rates for customers is there are going to put a lot of customers and families who are under the poverty percentage level due to inflation due to surcharge prices and again groceries childcare household items, shopping, gas prices, etc. healthcare everything is going up and what PGE needs to look at is to reach out to the government for support , because if you charge more toward the American people for electricity, you are going to get rid of. Hope you are going to put a lot of families in danger because they will not be able to afford to be warm to afford to be cool in the summer months and to afford to live in general, what PGE needs to be looking at is, how can we decrease our rates discount our rates or work with the government to make a plan where we can put less stress on the American people what can we say to our president? That'll support and affect changes toward our company so that we can make sure that our people are customers that we love and want to take care of can actually live without the burden of stress of electricity and more charges, that's what we need to look at. We don't need to be discussing all these price margins that only increase PGE's efficacy or PGE's company and general if PGE needs more money to support it business, it needs to take a hard look and a hard discussion with the government because the government has more funds than the American people do at this point and time , most people are living paycheck to paycheck and most people are actually not living and having to not live life to the fullest because American dollar does not go far anymore nowadays and 2023 if BGE wants to make charges that include increases for bills for the American household and needs to have a long hard discussion with Mr. President Biden and the government to discuss what can we do to help the American people when it comes to affording their electricity bill not how much can we charge the American person for PGE not how much can we charge the average person or the low income household for our services. - 5/4/2024 1:01:18 PM</p>

NA	From: Todd B <toddlr1970@gmail.com> Sent: Friday, April 26, 2024 7:49 PM To: PUC PUC.PublicComments * PUC <PUC.PublicComments@puc.oregon.gov> Subject: UE 433 Rate hikes toddlr1970@gmail.com<mailto:toddlr1970@gmail.com>. To whom it may concern I would like to state that the rate hikes being done by any of the power companies such as Pacific Power or PGE are outrageous and are damaging to the common worker and their families. We are paying record prices for power while they are getting record profit. When they keep jacking up rates and you sit by and do nothing you are telling them that their profits are more important than the people that work and live here. Enough is enough, there has to be something done to stop this. Between power and gasoline for vehicles we are paying record prices so they can get record profits. Stop punishing the working people and start making large corporations pay their share of the power bill. I understand that this probably won't affect you as much as it does for the common worker and families that are living paycheck to paycheck, but we are fed up with government agencies that don't do anything to help the people. All you seem to care about is keeping the big companies happy. How about you start putting the people that live and work in Oregon first for a change and they'll the power companies that they cannot do another rate increase, they have already raised rates multiple times in the last few years. Tell them NO. - 5/6/2024 12:33:46 AM
Linda and Ross Morgan – NA	Re: docket number UE435 We strongly oppose additional rate increases for PGE. On top of multiple large increases, any additional increases will create hardships for far too many Oregonians. Public utilities should be able to function within the existing rate structures with minimal increases. Linda & Ross Morgan - 5/6/2024 12:33:49 AM

As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Mrs. Chelsea Stuva 1020 NE 183rd Ave Apt 128 Portland, OR 97230-6768 chelsea.stuva@gmail.com - 5/6/2024 12:34:05 AM

Barbara Troxel - Gresham	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. I have always paid my bills on time. I am no longer working; I am retired, and not by choice. Cancer made that decision for me 3 years ago, and I barely, as in extremely close to not making it, tolerated the chemo and radiation. I had to retire after working 40 years as a registered nurse. I did not work for a corporation, and most of the jobs I worked for did not offer retirement plans. I am now on a fixed income, and everything is much more expensive. When my PGE bill went over \$120.00, for a single person in a small place, that was it. I now have my heat set at an extremely low level and wear sweaters, in layers, to keep warm. Most of the time, I live in the dark. I know PGE doesn't give a you-know-what. But if people do not speak up, then the wealthy owners, managers, shareholders, and even the peons working for that company will not be inundated with reports from very unhappy customers. I wouldn't want to wish my cancer experience on anyone, except robbers like those running this utility company. Please do not approve PGE's rate increase request. Sincerely, Ms. Barbara Troxel 1285 NW Riverview Ave Gresham, OR 97030-4956 barbtroxel@comcast.net - 5/6/2024 12:34:13 AM</p>

Lance Martin – Salem	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Ever since the passing of Ron Eachus PGE has been given a blank check as far as rates go. Ron held PGE's feet to the fire when it came to rate increases. It's time for some of the same by the current commissioners. Please do not approve PGE's rate increase request. Sincerely, Mr. Lance Martin 945 Summer St NE Salem, OR 97301-1234 duckmartin74@yahoo.com - 5/6/2024 12:34:41 AM</p>
Noren Lesage – Lake Oswego	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly urge the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. That is just outrageous! PGE customers cannot afford these increases. Our household income did not go up 18% in January to cover the rate increase PGE passed on to its customers. And it certainly is not going to go up 7% to cover this latest "ask" from PGE. Please do NOT approve PGE's unreasonable request to raise bills. You, the Commission, have the power to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Ms. Noreen Lesage 523 9th St Lake Oswego, OR 97034-2914 noreenlesage@yahoo.com - 5/6/2024 12:34:45 AM</p>

Missy Lee – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers, including myself, are still reeling from the rate increase and ice storm bills this January. My family and I were severely impacted by the storm, and our power went out for +3 days. I am still upset about how PGE & the Commission handled it all. PGE's rates for Oregon households have already increased by 30% from December 2022 to January 2024. How is it possible that PGE is allowed to raise the rates this often? Why did the Commission allow this in the first place? I thought we could count on you to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Ms Missy Lee 11420 SE Pardee St Portland, OR 97266-3357 missy.a.lee@gmail.com - 5/6/2024 12:34:47 AM</p>
Mary Freeman – Newberg	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Sheila Wagnon - RICKREALL	My family cannot afford electricity rates currently and an increase in rates would place an undue strain on our budget when our income has not raised comparably 7% - 5/6/2024 3:14:49 PM
Brian Belica - PORTLAND	I strongly oppose a further increase to electricity rates. Rates have increased 30% since December 2022. Further, it is discouraging further adoption of electrification as rates continue to become more unaffordable. Please oppose this. I do not support any part of the proposed increase. If it requires delaying projects, I would rather see projects delayed rather than further burden Oregonians. - 5/6/2024 3:20:14 PM

Name/Location	UE 435 Public Comments
Harry H - PORTLAND	We already had a huge rate increase of 17% in Jan 2024. And now PGE has the gall to come ask for another rate increase? PGE power delivery breaks down both in peak winter and in peak summer. It happens every year. Big snowstorm, power out. Big heatwave, power out. How about PGE provide Oregon residents with reliable power delivery before asking for a rate increase. - 5/6/2024 3:24:54 PM
Marilyn Mueller - SALEM	PGE Employees get 25% discount on bills. The person I know gets 6 figure salary and then 25% discount and bonuses. I am retired on a fixed income and this bugs me. The PUC should investigate the benefits PGE employees are getting to see if they are using the rate increases to help cover this. I do the time of day discounts to help, but my bill was still around \$400 last month. I am doing what I can to be efficient but these high bills are hard to handle. I hope the increase does not go through. - 5/6/2024 3:32:55 PM
Ann Helm - LAFAYETTE	PGE should be held accountable for gouging customers for decades. - 5/6/2024 3:39:36 PM
Melissa Bartolome - SALEM	We do not support PGE nor this ridiculous rate increase from a monopoly, which is supposed to be illegal but they have the government in thier pockets along with all of the money. When I can shop for and pick my utilities they can pay for thier p.o wn maintenance, upgrades, brand new trucks/Van's, etc. - 5/6/2024 3:43:17 PM

Name/Location	UE 435 Public Comments
Nathan Clement - PORTLAND	<p>I am not sure if that is the correct docket. I am opposed to this rate increase, families are struggling to make ends meet as it is. The cost of inflation has crippled all us single income families and we are struggling as it is to put food on the table, and they want to increase our electricity to pay for "their investments in local battery energy storage projects to provide enhanced reliability and resilience during peak demand, transmission and distribution to allow dependable energy flow as demand grows, and upgrades to technology and generation facilities for increased resilience and long-term, dependable power. As their statements says "Their investments" why if it is theirs are they expecting us to pay for it? If I invest in a project that's going to be beneficial to me, does that mean I can charge them? Why do every day Oregonians have to pay for this, why are we paying them for something we don't get to share in the potential financial gains? If they want to expand, let them cover the cost, why with the proposal they are expecting us to cover the cost of their idea? That makes absolutely no sense, if that's the case then when can the average citizen see the profit from this investment? When is PGE going to give it back to us? Surely they would make up the difference with the addition of new customers, why make the ones who are already customers pay? Is this going to lower my electricity bill? No it is not, because it's an increase in my bill, the same bill I am already having trouble paying because of the drastic cost of inflation, groceries are thru the roof, gas for vehicles is rocketed to mars, on top of that some of us are still trying to recover from covid and being unemployed for 2 years. What incentive does that average person trying to live in Oregon get from this? Besides the obvious more money going into a bill. I will say it again, I am opposed to this suggestion, this idea, this plan, and if "they" want to make investments then they get to endure the costs and not make the average Oregonian cover the cost with bill increases. - 5/6/2024 3:46:56 PM</p>
Matthew Skelton - PORTLAND	<p>The proposed increase in utility cost to businesses in the Portland market risks the closure of many clients struggling to simply stay open. Hotels, particularly those in downtown Portland, are still struggling with low demand. Our revenues are far below 2019 metrics but the costs associated with staying open are increasing exponentially. We are risking losing more businesses downtown by squeezing them out due to increases like the proposed PGE price spike. Please consider that your clients are not in a position to demand increases whenever they see fit. Without some common sense and understanding into the state of the market we will lose clients simply because the environment is inhospitable for business owners. I can assure you that the clients you lose will not be quickly replaced. Portland as a market is not favorable and will not be rebounding any time in the next three years. - 5/6/2024 3:55:15 PM</p>

Becca Kolibaba - WELCHES	This is absolutely ridiculous that PGE is requesting another increase of 7%. Given the fact we just had a huge increase, this is unacceptable. The cost of living for most is out of control, if you permit this additional increase you are essentially making many people choose between heat and other essential needs such as food. We live in a small community, our water company doubled the cost last year. Combine that with an 18% increase to power and now a requested increase of 7%?? Our small community is mostly low income, working families or seniors on limited income. Maybe PGE should take some corporate cost cuts instead of increasing the rates again; especially this soon. Do better !!! - 5/6/2024 4:00:16 PM
Allen Hannigan - PORTLAND	It's bullshit and it's unfair - 5/6/2024 4:04:58 PM
Tamara Witcosky - PORTLAND	On the proposed rate increase, it makes no sense to me that PGE just raised the rates substantially and now want to raise them again. This January we were out of power for 4 days then 2 more a day or 2 later. This was during the time of the sub freezing temperatures and winds. We could have a low cost redundancy system in place and PGE won't even listen to the proposal. We have personally put in a very expensive solar project with no help from PGE and are doing what we can to cut usage. This increase after an 18% increase this year is not sustainable. I strongly oppose another increase, even though with my solar it won't affect me. Our community is pricing people out of homes with rent increases and adding a power increase will not help the unhoused community but only increase the problem - 5/6/2024 4:26:17 PM

David Mc Neel - OREGON CITY	<p>Having been a PGE contract employee I know that generally the people at PGE try to serve the rate payers the best they can. However, I have to wonder what the upper management team is doing to help provide the best for the average rate payer. Upper management at PGE is for the most part disconnected from the average employee and frustrations they face in getting their jobs done efficiently. The MAXIMO computer program is a cumbersome, difficult to learn and use program. System mapping programs that are needed and used everyday are also difficult to use and frequently are missing system information that is critical to designing new facilities and restoring power after an outage. The old "Can Do" attitude of the old PGE is now dead and gone. This attitude reduces day to day efficiency, and significantly increases the length of time it takes to restore outages. System fitness at PGE has been pushed to the absolute bottom of the priority list. This is the reason system reliability during storms and extreme weather events suffers so dramatically. The Standards Group has had so much turnover that crews and System Designers aren't sure what the current standards are. The PUC should audit day to day operations at PGE and identify areas of needed improvement. Maybe then upper management would engage and begin properly managing PGE. On the political front PGE is not completely at fault for the recent rate increases. In this new woke climate crazy clown would we find ourselves living in many of the rate increases are directly tied to political mandates by Oregon Governors, legislators, and bureaucrats exacting their will on all Oregon Utilities. Many of the PGE engineers, and advisors have warned that the political mandates will result in huge rate increases. Still the OPUC presses forward with rate increase after rate increase. There is a breaking point with the rate payers all over the State of Oregon. Elections have serious consequences when it comes to the cost of energy for every Oregonian. Another 50% increase over the next five years in the cost of Electricity, and Natural Gas energy will bring many Oregonians to their financial knees. The cost of everything is driven by the cost of energy. Water and Wastewater rates, lighting, heating and cooling all public buildings, manufacturing costs, and the cost to extract raw materials are all impacted upward as energy costs rise. The compounding effect of another PGE rate increase must be considered. - 5/6/2024 4:36:13 PM</p>
Mark Douglas - PORTLAND	<p>This is nuts, won't this be the third increase in 3 or so years, to a tune of 25% total increase? I am sorry, but it makes no sense. Especially when the increase is larger for small businesses than industrial. With these kind increases, I believe it is only fair that individuals and small business should be the smallest increase if one is really justified, which I really question. I know my electric has more than doubled in the last 5 years, and I do not see how that makes any sense even with the relatively high inflation over the last couple of years. Please stop letting them do this every year. It needs to be capped at the current inflation rate at very least. Plus, I would assume the rate increase would be highest for buyers outside the state, I see no info on how their purchases are going up anywhere. - 5/6/2024 5:03:49 PM</p>

Michelle Martinez - GASTON	I absolutely am against PGE getting another rate hike! They already raised us by a huge jump this past January. Also, I know from people who have worked there that they were overcharging customers because of a glitch in their new computer systems. I and several others in my community tried several times in November and December of 2022 to get this addressed and never got any satisfaction, just the run around. I was even told by an employee that maybe I should turn off my Christmas lights. I did not even put any up that year because my Oct., Nov bills were so outrageous. Then he told me it was my pellet stove fan which uses very little electricity and we were both working and hardly ever home! Their CEO just got another big raise and is making over 6 million a year while gouging the everyday joe who is just trying to make ends meet. I know people that are not even using hot water heaters anymore, but boiling their water for baths and dish washing because the cost is too high. It's time for PGE to start making some cuts admiunistratively instead of passing their huge raises and overstaffing at the top to the customers. How many senior citizens are going without or with very little heat , lights, hot water because they can't afford the high rates along with the cost of current inflation. It's time for PGE to quit laying it all on the consumer while they put millions in the pocket of their employees and the bank. - 5/6/2024 5:48:42 PM
NA - WEST LINN	A 18% increase wasn't enough!? That rediculus, how do we afford this!? - 5/6/2024 6:07:34 PM

Lidiya Khoroshenkikh - PORTLAND	<p>I am writing to express my concerns regarding the proposed rate increase, which I believe will have a negative impact on all households in Portland. It is evident that the quality of service provided has declined over the past year, yet consumers continue to be burdened with increasing payments. Many families are currently struggling with the recent price spike, and the consequences were particularly dire this past January when numerous families were left without power during freezing weather conditions for days. Even now, many households can't pay their monthly bills. With inflation affecting all essential goods and services, including power, many people are being pushed to rely excessively on their discount program. This program burdens the average consumer since a percentage of their monthly bill goes towards it. With the increasing number of people forced to join the program, more individuals will struggle financially. Over the years, the average Portlander has found it increasingly difficult to afford living in Portland, and these actions are exacerbating this issue, potentially forcing residents to either relocate or face homelessness. Additionally, I would like to address the discrepancy between the promised rate increase of 18% communicated to consumers last year and the actual 24% increase discovered when analyzing the cost per kilowatt. When I contacted PGE regarding this matter during the summer, the response I received from the representative was dismissive and unhelpful, such as "we don't specialize in math," "Just see your next bill; it won't be that much of a difference," and "you're the only one who cares." It is concerning that such misinformation and lack of transparency exist within the company. Therefore, my main question about this price spike is: what will be the actual rate increase? I urge you to reconsider the proposed rate increase, as it will only further burden Portlanders and contribute to the ongoing affordability crisis. Furthermore, with the mismanagement of funds within PGE, Portlanders are bearing the brunt. The CEO of PGE has a salary of \$6.97 million dollars, yet the average household is living paycheck to paycheck in the current economy. PGE has the funding to pursue projects but is choosing to increase the burden on its consumers instead of working with its current budget. I hope that you will prioritize the well-being of Portlanders and strive to provide fair and transparent services. - 5/6/2024 6:21:56 PM</p>
Lance Ward - OREGON CITY	<p>I understand rate hikes are necessary and are expected time to time. I think the last 2023/2024 rate hike was too high for one implementation. Our monthly bill went up \$100.00. I am opposed to another rate increase so soon after the most resent one forced on the public. I recommend increases be limited to a smaller amounts like the ones governing property tax. Property taxes are limited to 5% and I think that a yearly 5% increase gives customers a year to budget for the increase and reduces the shock of such an increase. Yes this requires more increases, up to 3 or 4 over the same years. But it would be more manageable for family's. I oppose this new hike so close to the last one and suggest consider a new hike in 3 years. - 5/6/2024 8:02:08 PM</p>
NA - GRESHAM	<p>PGE has increased it's rates and created hardships in our community. - 5/6/2024 8:19:02 PM</p>

Name/Location	UE 435 Public Comments
Mary Stafford - LINCOLN CITY	As a customer I believe the increase asked for is beyond reasonable and should NOT be allowed. We should not be responsible for their lack of keeping equipment safe and years of their turning an eye on aged equipment and putting millions of dollars in their own pockets instead. Homes and peoples lives were list to their negligence. - 5/6/2024 8:41:15 PM
Gerardo Ortiz- Camacho - PORTLAND	Hello. I'm really against any more increases on my electric bill. Economy at this time is really bad, they should increase it to all the big companies. They are for sure making way more than individuals like my self and many others. - 5/6/2024 10:07:55 PM
Vicki Zeitner - PORTLAND	Why not cut Pope's salary instead of raising rates on the poor? Portland General Electric (POR) CEO Maria Pope's total yearly compensation is \$6.97 million, which is 16.4% salary and 83.6% bonuses, including company stock and options. She also directly owns 0.2% of the company's shares, which are worth \$8.82 million. I earn less than \$50k, cannot afford a rate hike and am ineligible for assistance. - 5/6/2024 10:12:15 PM
Jon Funrue - SILVERTON	In a time of hyperinflation when all costs are going up and on the heels of a large increase by PGE last year, I oppose this rate increase request. The people of Oregon are suffering to pay bills now. I believe the economy will be turning down even more in the near future which will cause more pain for many Oregonians. All are being effected. If the users have to suffer and live on less then PGE should have to become more efficient and do the same. - 5/7/2024 7:37:58 AM

Shawn Rice - PORTLAND	<p>I can't find out which docket as I don't know your knowledge-base well enough, so I will pick a docket which includes the title of the problem. Please know that I'm talking about YET ANOTHER RATE HIKE RIGHT AFTER THE LAST SEVERAL! Since 2022, PGE has increased prices heavily every year. You approved an 18% last year alone! The last TWO years have seen a 30% increase, and that's STILL not enough for PGE huh?</p> <p>(https://www.bizjournals.com/portland/news/2024/03/20/pge-oregon-rising-electricity-rates.html) You want to raise it to around 40% in 3 years!?!?! According to your dividend history (https://investors.portlandgeneral.com/stock-information/dividend-history), the money that you are taking from the public is going directly to shareholders, not to infrastructure. Have you raised your pay rate by 40%? Do you find ways to decrease the cost to the public who pays for your infrastructure with our taxes? What is it that Maria Pope and the rest of the C-levels are doing that warrants their positions? What justifies the amount of money that they take from PGE's bottom line as their salary? Yet another price hike in the face of stagnating wages (including your own) empirically proves that the C-Level team at PGE is taking advantage of their status as a PUC, and at the detriment to the entire paying public. Please do not increase costs YET AGAIN! You are begging the question; "what did you do with the last few large increases we gave you? PGE is acting fiscally irresponsible, and should not be permitted to take their poor budgeting out on the paying public. DO NOT HIKE THE PRICES YET AGAIN, the last was "historically high" AND JUST HAPPENED, make do with the money that you have already chiseled, and drop the Dividends and Corporate pay rates and perks to make up the difference. We are not interested in how much money they get to keep after abusing their positions as they have. A side note: The fact that the "Public Comment Guidelines" contain nothing aside from "rules about not swearing or displaying justified anger in the face of overt disrespect and wanton thievery" is a dead giveaway that you are all aware of the public's feelings toward this decision. You are a PUBLIC UTILITY, start acting like it; you already get our money through taxes and high-rates, give the obvious greed a rest already! Your C-Level team are blatant and terrible thieves, please fire them immediately, Shawn Rice - 5/7/2024 9:04:37 AM</p>

Adrienne Taylor - GRESHAM	<p>In a word NO. No more rate hikes when the CEO, Pope, is making 6.2 million dollars a year (this includes her stock options and it may be more because different places report different amounts). In fact the top jobs at PGE Oregon are all making over a million a year. They did a terrible job managing the money they have from their customers paying their bills. They took as much as they could get away with and did not invest in the types of things they want more of their customers money to invest in? SO SO many people were without power in the winter of 2023 for way too many days. These people in charge should be forced to take a pay cut, hire more actual workers (I mean how much work does Pope even actually do not 6.2 million worth that is for sure). I am tired of companies like this who have "oversite" by "outside" groups getting to just take from people. And the quotes were intentional The PUC, the Oregon Citizens' Utility Board, and others reviewing this increase are going to recommend it. Maybe it needs to happen and the system does need more money but public utilities like this should not be paying CEOs and others this much money at all let alone to do a terrible job. She should have to go door to door apologizing for the terrible response during the winter of 2023. I read her letter she wrote all us paying customers about how great things were going to be in 2023 they were not great and she did nothing that should give her 6.2 million. NO public utility should be paying out this kind of money. How is this even happening? Do better Oregon. - 5/7/2024 10:21:28 AM</p>
Eric Davis - PORTLAND	<p>Given that PGE already got a previous rate increase (18% in Jan 2023) and that they brag about their profits on their investor webpages, charging another 7.4% for customers who have no choice to switch seems like a monopolistic abuse of power. All other businesses have to balance investments out of their regular revenue, yet PGE having a monopoly status means they can foist those costs onto customers. If PGE wants to charge more for the same service, they should be forced to compete with other suppliers in a free marketplace. - 5/7/2024 3:26:32 PM</p>

Greg Daiker – Molalla	<p>From: Greg Daiker <daikersachers@gmail.com<mailto:daikersachers@gmail.com>> Sent: Tuesday, May 7, 2024 1:42 PM To: YOUNG Kandi * PUC <Kandi.YOUNG@puc.oregon.gov<mailto:Kandi.YOUNG@puc.oregon.gov>> Subject: Re: PGE Proposed Rate Increase - Ways to Comment daikersachers@gmail.com<mailto:daikersachers@gmail.com>. Kandi, When is it going to stop? The rates have already gone up significantly as well as a number of other rate increase from other sources. Does anyone ever take that into account? I believe PGE does a great job but has anyone been privy to any waste throughout PGE? How about some cost cutting measures without interrupting service? If I don't like the cost for your electricity, what is my alternative? Let me point out a few of the reasons my savings have dwindled, and by the way, my wife and I are on a fixed income. Is lowering the thermostat going to cover the additional rate increases? Food Gas Auto Insurance Home Insurance Taxes School Bond Bond for a New Police Station ETC Sure, you're only asking for a 7% increase but look at the total picture. Do you get the idea I'm fed up? You should and I'm opposed to rate increases of any kind and therefore, a no vote on a school bond measure might not be in the public's best interest but all these increases have to stop somewhere. Please convey to appropriate individuals my displeasure at even suggesting another rate increase. Greg Daiker Molalla, OR 97038 - 5/8/2024 12:32:31 AM</p>
Elisa Catillo – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Rico Bartolo – Tualatin	<p>Some people who received this message don't often get email from I am voicing disagreement with this large residential increase of 7% which is 200% over the CPI measurement of inflation of about 3% (see attached graph from DOL). You identified some lofty goals and I would like you to be more transparent about the economic benefits of the investments in battery storage and how much of this increase is driven by unrealistic green and climate change concerns. As you can read, many EU countries and the UK are backing away from these types of investments as consumers are unwilling to pay for them while we struggle with higher interest rates, higher housing costs and pain at both the grocery store and gas station. Trying to drive these cost increases on taxpayers who are still struggling with inflation just shows that the politicians in power neither care nor share our pain. These programs should be deferred until we we are over this nasty inflation. Send me a link to a more detailed, less mushy summary with ROI or cost-benefit analysis! Rico Bartolo 10268 SW Susquehanna Dr, Tualatin, OR 97062 - 5/8/2024 12:32:40 AM</p>
Ally Harris – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households because we are in an historic housing and climate crisis. Increasing our PGE bills will only make more Oregonians across the state more financially insecure, which could exacerbate the housing crisis. While taxpayer dollars are going to fight homelessness, it seems like a step back to raise utility bills. These constant utility increases will make it harder for low-income people to stay afloat in this economy, thus making people more housing insecure. Now is not the time to approve PGE's unreasonable request to raise bills. We need to make sure the housing crisis in our state has been improved. Please do not approve PGE's rate increase request. Sincerely, Ms. Ally Harris 4312 SE 24th Ave Portland, OR 97202-3903 ally@ojta.org - 5/8/2024 12:32:43 AM</p>

NA	<p>PGE has raised rates at a rate that far exceeds inflation for the last few years. It outpaces everyone's salary increases and isn't disproportionately affects low income or fixed income people. The justification I keep hearing is that they have increased rates from fire insurance and maintenance of the lines that is needed. These are both problems of them not doing the maintenance that was needed over the years. Instead they pocketed the money and now want us to pay the bill. If there is no way around a rate increase the entire payment structure should change to look more like taxes. For example if you use 100kwh your rate is x. If you use 200 kwh your rate is y. If you did this with rates for business and residential you would. - make a real incentive for people to make improvements. - help low/fixed income people who normally have lower power usage. There are obviously details around size and number of tiers as well as solar net metering that would need to be worked out. Hope all of this helps. - 5/8/2024 12:33:09 AM</p>
NA	<p>To PUC for public comment: After PGE's last big--and recent!--rate increase, I tried to compensate for the extra cost of keeping the temperature in my home liveable by cutting down more on my use of heat. It didn't work. The last rate hike made the increased cost of heating my home unnegotiable. Now PGE wants to hit residents again? Perhaps it is giving its administrators and employees an increase in salary/wages to compensate? This is not the case for the majority of us, the public. I am a disabled, low-income senior, homebound, and live alone. Very frugal and a conscientious environmentalist, I always use electricity very sparingly. In the winter, this means I am often cold in my home even when bundled in layers of warm clothing. I limit my heating to the use of an energy efficient small portable heating unit only in the area where I am sitting, and never during the night. Just use a lot of blankets. I don't use A/C in the summer unless I must, when we are having one of our dangerous-global-warming-three-digit-degree-heat-dome days. Cutting my energy use back further is not possible. Neither is the chance of ever receiving an adequately compensating cost-of-living increase in my meager retirement income. And, why increase residential customers more than industries, who in a double hit some way just pass their increases on to us? They are the powerful entities polluting our atmosphere with global warming, toxic gases. Instead, encourage their conscientious, responsible use of energy, cutting of waste, and quest for alternatives by appropriately hiking their rate, not mine and other responsible citizens like myself with little blame and recourse. Nowadays, it has become more comfortable, less costly to be able to go to work in an adequately heated or air-conditioned office (probably like yours...) than to be homebound and heat and cool my small apartment. Everything continues to become more and more expensive. And we, the public, are truly feeling it. Sandra Less Resident and tax paying US Citizen Milwaukie, OR 97222 - 5/8/2024 12:33:12 AM</p>

Aaron Shelley – NA	aaron@mthoodcenter.com. I oppose the rate hike as stated. This is a significant rate increase. Though they have justified the increase with the development of new systems, the anticipation of new subscribers would obviously generate additional revenues. Since a large portion of their rate hike is predicated on the fact that they are building new infrastructure to accommodate new subscribers, one would suspect that the new subscribers themselves would cover a significant portion of the infrastructure required to service them. Additionally, an external audit of PGE efficiencies would be a logical step. Before any substantial rate hike, an audit of operational expenditures, and capital expenditures should be conducted. PGE has a reputation in the community of being wasteful in many areas. This audit would be done to help to improve OpEx and CapEx efficiencies. Piper Denney – Portland	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a Portland resident and PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers, myself included are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. I have a decent full time job and I struggle with these increases, so I can't imagine how difficult it is now for older folks on fixed incomes and those working minimum wage jobs trying to support their families. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Jason Sawyer – NA	From: Jason Sawyer <jsunsawyer@gmail.com<mailto:jsunsawyer@gmail.com>> Sent: Monday, May 6, 2024 3:14 PM To: YOUNG Kandi * PUC <Kandi.YOUNG@puc.oregon.gov<mailto:Kandi.YOUNG@puc.oregon.gov>> Subject: Re: PGE Proposed Rate Increase - Ways to Comment I will move away from Portland and they will have one less customer to charge if these rate increases go into effect. - 5/8/2024 12:33:25 AM
NA	Have the CEO take a pay cut. Stop making money off poor people. I will not let you use the \$17 meter removal fee as part of your rate hike no way. If it comes down to a lawsuit so be it but I'm fighting PGE 100% . The \$17 fee was monthly for 3 years until recently that PGE is doing everything they can to steal as much money as possible. We need a class action lawsuit to permanently shut PGE down and get a normal electricity provider; one that doesn't force death meters (aka smart meters) as other utility providers offers analog meters but not the criminals at PGE and forget about the worthless utility commission. They are totally in the pocket of PGE and any action they do is aiding robbery by PGE! Absolute fact and my experience! - 5/8/2024 12:33:28 AM

Jillian Bowy – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Please, please, please reject PGE's request. A lack of foresight and planning on PGE's part to put profits towards these costs rather than forcing them on the customers shouldn't fall on the shoulders of those same customers. Compounded by the fact that a small portion is going towards improvements. This is all too much and is creating harder and harder living situations. I shouldn't have to compromise my grocery budget so I can pay for utilities. As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. Lauren Ettin – NA	<p>May 4, 2024 Hello OPUC and PGE: I was dismayed to find out that a second large rate increase is requested/planned for residential customers so soon after the PGE's January 2024 rate increase of 18 percent. Eighteen per cent?! That is unbelievable. Hopefully residential customers can cut out another necessity so they can pay their much higher bills to PGE. It is too soon to consider another rate increase for residential customers. They have the least ability to adjust to higher bills. I suggest PGE do more internal assessment for cost savings, chat with their shareholders about what amount of shareholder revenue is fair, look to commercial entities, like existing and expected data centers that use HUGE amounts of electricity - and remember, PGE is there to serve all of its customers. Lauren Ettlin ETTLINRL44@GMAIL.COM<mailto:ETTLINRL44@GMAIL.COM> 7024 SE Pine Street Portland, OR 97215 -- ETTLINRL44@GMAIL.COM<mailto:ETTLINRL44@GMAIL.COM> - 5/8/2024 12:33:56 AM</p>

Charae Gibbs - PORTLAND	<p>I am strongly OPPOSED to the proposed PGE rate increase for 2025, and any future rate increases, until the company is restructured to operate like a true public utility and not a for-profit business. I rarely speak up, but knowing that each hard-earned dollar we spend on something so necessary as electricity is profiting another group of people, makes me sick to my stomach. We deserve an electric utility provider whose motivation is to help people receive electricity, not make money. My grievances with this latest proposed rate increase, and any future increases as PGE is currently structured, include: 1) Electricity is necessary to live and should be affordable for all. Our family of four and two dogs, on one income, is feeling the financial burden of the 20% increase in 2024. We can't begin to imagine how hard it would be for a low income family to afford something so necessary to live. And with high summer temperatures projected on the horizon, we are very concerned about how we will afford to keep our house at a livable temperature. 2) Electric service providers should be in business to help people, not build profits. PGE, as a for-profit business, is by definition in business to make money. That's why businesses exist. And that works well for other products, but electricity is not a "nice to have" product. We require it to live and therefore it doesn't make sense to have it provided by an entity whose primary goal is to make money. Regardless of how much their marketing messages make it sound like they care about their "customers," their decisions will always be driven by the need to make money, versus serving us the people. 3) We are considered PGE "customers," but we have no choice but to use their services. Being a "customer" suggests that PGE has earned our business and that we choose to do business with them. The fact is that we have no choice, and have no other option but to use PGE and pay the prices they and the Oregon PUC set. As a result, PGE has no real motivation to improve, aside from making more profits, because unlike other for-profit companies, PGE has no competition and their customers are guaranteed regardless of what they do and we have no choice but to take whatever they give (or take) from us. In conclusion, are there PGE projects that need funding? We have no doubt there are, we see many of the things they want to fix firsthand. But should that cost be passed on to PGE consumers? That is where we are drawing the line. No more increases until they can stop taking a profit from every bill we pay. The whole situation with PGE and the rate increases leaves us feeling helpless and disgusted, while PGE investors and beneficiaries enjoy the profits of our hard-earned money. It feels wrong on so many levels. I will keep speaking up in hopes of a positive change for all of my neighbors who are required to use PGE. I ask the Oregon PUC to please deny the latest PGE proposed rate increase and require PGE to come up with a plan under their current budget to fund the projects they need. Thank you for the opportunity to comment and express my hopes and concerns. Best regards, Charae Gibbs - 5/8/2024 9:53:27 AM</p>

Jason Slade - SHERIDAN	<p>I am highly irritated by the rate increases taking place with PGE. They rates have gone up far enough in the last 3 years and PGE should be managing their money better instead of gouging the customers year after year. There should be no further increases at all for PGE. The rate increases cause working people like me to have to refigure our budgets completely and everything is getting more expensive. PGE needs to cut it out and the commission needs to say no more and say no to this rate increase. - 5/8/2024 11:40:10 AM</p>

Jeffrey White - FOREST GROVE	In a day and age that record breaking corporate profits are now suddenly called "inflation." A rate increase is not needed, what is needed is for all privately held public utilities be turned back over to the public. Nobody should have to pay welfare to millionaires who own electrical utilities or put up with price gouging masked as inflation. Nor should the rate payers be held accountable for wildfire negligence by the power company and those costs passed on to the customers. - 5/8/2024 8:34:49 PM
Sierra Grant – Portland	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. John Lewis – NA	We're on fixed income and your rate increases are unreasonable. We're already being hit up with rising medical costs, food costs, and insurance costs. Given inflation and the most basic needs becoming more expensive, you might consider the un proportionality of the amount you are foisting on us all. This is unfair. And it's real mean to low income families. It pushes me to demand an inquiry into your business structure and remuneration and rewards to executives. Perhaps it is time to demand a PUC for the common good. And I don't say that lightly. We already give our days volunteering and trying to help others. But I'll make time to fight this one. John Lewis Sent from my phone - 5/9/2024 12:33:42 AM
Mark Horton - NEWBERG	I feel that Pge's rates are not justified. The rates are making it impossible for the middle class to the retired and lower economic class to make ends meet. Where will this end. I wouldn't mind if a rate increase and government subsidies would encourage an affordable energy product for the future. As an example revisiting a modern xlean nuclear product, more aolar farms incentives to have a hybrid system in the home 110,220 and 12 volt. Does PGE sell our power out of state. The salaries of Pge from the executives to the lower level employees pay wise. Lets take a deep dive into their books and think outside of the box/. I live alone traded in my woodstove and wall heaters for a split duct system. I spent thousands on spray foam on daylight basement, I have R40 in the ceiling and keep my thermostat between 60 downstairs and 65 upstairs. My bill in winter is between 260 and 300. Thats after I spent close to 16,000 for my supised energy efficient system. They need to invest in anti storm infrastructure. Also the tree trimming program is a racket. They trim kust enough so they will be back in a couple years. Get as much of the plant underground it will be cheaper and more stable in the long run. I was an ex telephone company employee of 34 years in Portland. Stop treating te the customer like a pinata full of inexhaustible cash! - 5/9/2024 3:22:15 PM
Jason Colver - OREGON CITY	Enough is enough! How many more times will you increase the cost to the taxpayers!!! We paid for the Bonneville dam that provides 80% of the power you sell us. How can you justify charging us MORE!??? Seriously tell us how you can justify it?? - 5/9/2024 9:59:58 PM

Juile Granger – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Already enough! I am an all electric home with solar panels on my roof and electric is the future, but increases such as there has been gives a BAD NAME to electric. As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Ms Julie Granger 5946 NE 45th Ave Unit A Portland, OR 97218-1460 partner@g2online.org - 5/10/2024 12:31:46 AM</p>
Phil Houston – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Annie Capestany – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Climate change and extreme weather means all people need more air cooling in summer and heating in the winter. Now is not the time to increase rates, especially considering other recent rates increases. Why does PGE deserve bigger profits? As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Ed Miska – NA	<p>From: Ed Miska <ed.miska@gmail.com<mailto:ed.miska@gmail.com>> Sent: Thursday, May 9, 2024 1:47 PM To: YOUNG Kandi * PUC <Kandi.YOUNG@puc.oregon.gov<mailto:Kandi.YOUNG@puc.oregon.gov>> Subject: issues. Re: PGE Proposed Rate Increase - Ways to Comment ed.miska@gmail.com<mailto:ed.miska@gmail.com>. 1. I think your message would have had more impact if you noted that all residential customer rates went up 21.9% for the first 1000 kWh this January. So the new increase is on top of that! 2. The state of Oregon is in collusion with PGE causing a lot of the increases. Mostly using "climate change crisis", that is NOT a CRISIS, as the excuse. How is CUB dealing with that? Since PGE is getting a profit on all aspects pushed on them they are generally happy to go along! The state of Oregon should eliminate utility profit on anything related to "crisis" or found to be uneconomical. 3. One suggestion I have made earlier is that no public utility should be able to charge any executives labor for more than the president of the united states pay level. The CEO of PGE getting a ludicrous about \$6M in compensation/year charged to customers is outrageous! - 5/10/2024 12:32:27 AM</p>

Barbara Byrd – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. This is especially burdensome for seniors, many of whom - like me - are living on a fixed income. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Dr. Barbara Byrd 4428 SE Ogden St Portland, OR 97206-8456 bbyrd@uoregon.edu - 5/10/2024 12:33:11 AM</p>
Marilyn Costamagna – Medford	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Name/Location	UE 435 Public Comments
John Carr – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. As a voluntary member of the utility's Green Future program, I am committed to supporting a shift away from fossil fuels to cover base load. But if this rate increase represented a real investment in battery storage, the vast majority of the funds would be earmarked for that purpose. My understanding is that only \$17 million of the \$202 million requested is set aside for this. I'm also concerned that the proposed rate increase is a means to subsidize new load from commercial projects like data centers. As electricity usage increases, PGE brings in more money. If that increased income is not enough to cover the cost of connecting these new commercial projects, the difference should be charged to those commercial customers specifically, not to ratepayers universally. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. Now is not the time to approve another increase. Please do not approve PGE's rate increase request. Sincerely, Mr. John Carr 2918 SE 67th Ave Portland, OR 97206-1938 jcarrpdx@gmail.com - 5/10/2024 12:33:39 AM</p>

Name/Location	UE 435 Public Comments
Lisa Merrill – NA	<p>Greetings, I would like to contest the proposed rate hike. I do work, but barely make a living wage because of increases in food, gas, and utility prices. My car insurance doubled this last year because of where I live! I am not home during the day, and even when I am home, the only appliance I have on are my TV and fridge (my heat is gas). All my light bulbs have been changed to LED. But, I can't seem to keep my electric bill under \$80. We are coming into summer where alot of us will be using fans and portable or window air conditioners to stave off the heat. Some of us might have to make a hard choice to not use those if we can't afford to pay for the electricity to run them. There are too many elderly, low income Portland residents that could get sick or die from heat exhaustion. I'm not sure what else I need to do to keep this from happening. Thank you, Lisa Merrill - 5/10/2024 12:34:43 AM</p>

Call/email with any questions and/or comments. Thanx, Bob -- Bob Frisbie, P.E. Email: bobfrisbie52@gmail.com Cell: 253.224.3524 May 8, 2024 Robert G. Frisbie, P.E. 9730 SW 158th Avenue Beaverton, OR 97007 Email: bobfrisbie52@gmail.com Ph: 253.224.3524 Public Utility Commission of Oregon Attention: Filing Center 201 High Street SE, Suite 100 Salem, OR 97308-1088 Email: PUC.PublicComments@puc.oregon.gov Re: Frisbie Comments On Advice No. 24-06, UE 435 PGE General Rate Increase Request Dear Public Comments Center: General Background: My family owns two (2) EVs and most of the time these vehicles are charged at my home on an 11 kW charger. I travel to Redmond, WA from time to time and have used TESLA chargers along I-5 as well as the chargers (7 kW) at the Redmond, WA hotel where I stay. Additionally, I took my TESLA on a road trip to Yellowstone National Park in June 2023. I have therefore witnessed over the past year various charging experiences such as non-functional chargers, vandalism, waiting for a charging station and paying time related fees after my charging session is over. Robert G. Frisbie submits the following comments in regards to this filing: 1. Refer to Schedule 50, RETAIL ELECTRIC VEHICLE (EV) CHARGING a. Recommend Level 2 Chargers be defined as 11 kW versus the 7 kW noted under "DEFINITIONS". Charging has evolved to the point where it is quite common to have 11 kW chargers being installed in residential homes. 60A breaker protection and 48A charger loads/11 kW. 7 kW chargers are too slow and tend to tie up charging spaces with prolonged charging times. Since PGE going forward is going to be installing EV charging stations, Level 2 chargers defined as 11 kW chargers is the path forward. b. The rate for Off-Peak Fee at \$0.12/kWh to too low. My residential home rate to date without taxes is approximately \$0.17/kWh and this does not incorporate my costs to install an 11 kW (60A/48A, 240v) charger to my existing house panel. The PGE rate needs to contain components just like my residential rate, i.e Basic charge, Energy Charge, Transmission Charge and Distribution Charge. Additionally the rate needs to contain a recovery for the charger/depreciation and its installation, billing charge, maintenance charge, site development charge, engineering, permits, etc. Since my residential charge is \$0.17/kWh, I would estimate this PGE EV charger rate should be a minimum of \$0.34/kWh. 2. Refer to SCHEDULE 7, RESIDENTIAL SERVICE a. I recommend</p>

	<p>the Commission insert a new category for residential service charges where service is outside the City Limits for the various City's being served by PGE. This new rate category would be intended for those living out side the City Limits, to pay for the added cost PGE is incurring for vegetation management and protecting the infrastructure against vegetation-caused system damage and related service charges. b. Various individuals and other entities all have looked to PGE to pay for damages caused by system failures. Most of these claims related to areas outside the City Limits. People have a right to live where they desire, but I believe when that living location is outside the more densely populated areas the cost to provide service is greater than within the City Limits especially as the vegetation fire risk due to a system failure is high in those areas. I recommend the basic charges for all four components of the "Energy Charges" be increased to pay the cost of the necessary insurance to cover vegetation caused damage as well as the maintenance costs associated with the increased vegetation management. Thank you for the opportunity to comment on this rate case. Call/email/write me with any questions. Robert G. Frisbie, P.E. - 5/10/2024 10:36:55 AM</p>
Kevin Bennett - BEAVERTON	<p>I went without power for four and a half days in the middle of winter. I suffered financial loss. PGE's response to that power outage event was terrible, from communication during and after. PGE has failed to do a good job protecting the power grid. The quality of what they say they have done over the past 20 years never comes up in discussion. They say they trimmed trees away from power lines, but the actual quality of the work is never evaluated or assessed. Why isn't PGE required to begin the long process of burying those power lines underground? Why hasn't that work been done? It is the solution to events like this past winter. PGE website is a joke. There are still temporary power lines up in residential neighborhoods, why hasn't that work been completed? Secure the power transmission lines via putting them underground, I'll agree to a rate increase if those new funds are allocated for that purpose. Ugh..... come on PGE do better! your pal, Kevin - 5/10/2024 2:22:04 PM</p>

Malachi Hutchens - HILLSBORO	The proposed rate increase is unnecessary and inhumane. It negatively affects many families - most of which are struggling enough as is. In this era these aren't just 'utilities,' they are necessities. - 5/11/2024 2:04:06 PM
Carolyn Blumenson - PORTLAND	I oppose raising rates! Portland is already too expensive to live in. If rates are increased again I do not know how I will be able to stay here long term. This affects not only myself, but all residents. PGE continues to waste our money with DEI initiatives, redundant positions, and bloated salaries. They should not be permitted to raise rates. - 5/11/2024 6:30:42 PM
Maria Espinoza - HILLSBORO	No queremos mas aumento de pagos por favor - 5/11/2024 10:33:06 PM
Misty Smith - PORTLAND	I oppose this rate increase that is proposed by PGE. The utility bill is already cost prohibitive during certain times of the year. The executive branch of PGE needs to reassess their own salary and benefits. My father repaired elevators in the corporate suite of PGE and the outlandish, over the top expenses he witnessed was a gross misuse of funds. A helipad for the CEO, expensive artwork, etc..The public utility commission needs to perform an audit of the corporate level of these energy companies. It's quite outrageous. - 5/12/2024 11:29:34 AM

<p>Sylvia Zimmerman- Blikas - BEAVERTON</p>	<p>Hello PGE. Thank you for this opportunity. I hope to show how my disposable income cannot possibly be used for your company upgrades. When American ingenuity supplies flowing low-cost energy to all, with surplus to sell to other countries, that will be a day I celebrate. I barely know how electric power companies work, but do currently experience paralyzing anxiety regarding energy use reduction, increased payment for less use and lack of monetary reserve at the end of my day. I am a senior residing in Washington County. - _____ During the 2024 January ice storm of 11 degrees, I shivered in my apartment using candlelight for heat, barely eating. My temperature gages read 34-44F. Good can come from bad though, and my empathy widened for people freezing in tents, waiting out longer days in electric voids and those caught in winter war across the world. PGE texted (I had confidence in) that electric restoration would happen in early evening hours two days in a row, but it was not turned on until the third day. I used a battery charger to keep my cell phone alive for emergency as if I wasn't already in one. On our icy hill, I couldn't risk driving to a warming center. In addition I wanted to protect my pipes from freezing. _____ I want to mention I now pay for utilities that used to be free for renters. No average renter can handle additional financial stress because of essential service rate creeps and hikes let alone a senior trapped in the same apartment since 2008 when rent increases began to open wide. Once affordable, a huge rent increase forced us to relocate to reasonable rent in the area for a year, but that has turned into 16 years. Moving within the city was used to love is no longer an option. The cost of moving, storage and catastrophic rent spikes in all places within this area are prohibitive. Moving out of state would take credit. _____ I have kept my Green energy commitment to you and everyone. Where are the results for my investment in your company? Your hikes seem cruel in the face of hard times. _____ Just recently paying off accumulated credit debt to survive the 2008 recession, we thought we could finally live with more flexibility. Wanting a good free life, we have just begun saving for a retirement at 70 (20 years too late and six years away)... to maximize social security benefits (which I foresee as being sucked up by utilities and healthcare costs to keep investors laughing). We are working class just like you. Does hard work paid off? Not so much. COVID threat, rent increases, inflation, high health care costs and gas prices have not been a picnic. _____ How many of our good fellows including seniors will be pushed onto the street (middle class) this year and next? Very close to third world existence, financial gaps and disparity in America alone create a visible wound for the nation. _____ Tent people "tap-in" to commercial business to share power and access outlets to charge phones in desperation. _____ Our light bulbs have been switched to LED at our own cost, we run larger laundry loads using cold water in low use hours, wear thrift down jackets and hats indoors, turn off power strips and hang cloths to dry in summer. Where is the reward for creative conservation and cooperation to reduce use and costs? We use as much natural light as possible in our lack for design apartment built in the 60's! The trunk of my car has been a refrigerator in winter. Should I buy a watt or an egg? _____ True Oregonians are unable to survive in the place we were born. We will take both ancillary and management skills with us when uprooting. Portland and the Northwest lifestyle is unsustainable for those without money to burn. Portland is the new California. Degradation of our beautiful city by theft, graffiti and rioting alone makes moving away more tempting. In addition, real estate (AI) algorithms have shocked and skyrocketed home values taking with them contentment, security and the American dream. _____ Anyone on credit to move and eat furthers perplexing choices down welfare road. Our salary is high compared to others and yet our life quality continues to erode. _____ Even considering all this, I believe every problem has a solution! Here are</p>

	<p>a few ideas. Work to reduce your business (PG & E's) rates and costs for energy production without compromising delivery, raising rates, laying people off or ignoring safety for the public. Employ more people who can take PGE into the next decades. Even though tax is a dirty word, you can constrict energy for businesses that pollute heavily. We have a public right to clean air, energy demand and cherished waters. Find every energy and water leak physical and financial. Choose three months to raise public rates where low use is likely. That is when the public CAN pay for it. Use underground cables, not poles, to avoid weather issues. Offer reward for those who lower use by 30%. Give Blazer Tickets (not coupons). - 5/12/2024 12:53:27 PM</p>
Jennifer Maffie – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Ms. Jennifer Maffei 2718 SE 30th Ave Apt B Portland, OR 97202-1377 jmmaffei45@gmail.com - 5/13/2024 12:32:16 AM</p>

Jim Parr – Keizer	<p>From: Jim Parr <jlparr@earthlink.net<mailto:jlparr@earthlink.net>> Sent: Friday, May 10, 2024 11:31 AM To: YOUNG Kandi * PUC <Kandi.YOUNG@puc.oregon.gov<mailto:Kandi.YOUNG@puc.oregon.gov>> Subject: RE: PGE Proposed Rate Increase - Ways to Comment jlparr@earthlink.net<mailto:jlparr@earthlink.net>. Hello Kandi, Regarding Pacific Power, they are asking that every customer pay an additional \$10.00 per month to help construct increased wild fire resistance. This is in addition to the monthly power use. So a customer pays extra to pay for infrastructure improvements BUT has no ownership in the company. Considerable this: what if you are a loyal local Ford auto customer. You buy your Ford from the local dealer. Then, your Ford dealer wants to charge all of their regular customers an annual \$120.00 fee so that they can increase the size of their display room. Customer is paying for the larger display floor but has no ownership in the company. This same argument applies to PGE's request for an increase to pay for infrastructure improvements. Customers pay their monthly electricity bill plus additional fees for projects for which they do not gain any ownership of. Thank you for referring my comments to the investigators for me. Jim Parr. (Keizer) - 5/13/2024 12:32:22 AM</p>

<p>Tony Ogden – NA</p>	<p>Below is a comment from a PGE customer to file with UE 435. Thank you. From: Tony Ogden <tonyogden@mac.com> Sent: Friday, May 10, 2024 9:18 AM To: YOUNG Kandi * PUC <Kandi.YOUNG@puc.oregon.gov> Subject: Re: PGE Proposed Rate Increase - Ways to Comment tonyogden@mac.com<mailto:tonyogden@mac.com>. Hello, Thank you for sharing this information. We are stridently opposed to any rate increase, but I doubt that our opinions will matter. We never received from the OPUC or PGE any substantive response to our complaints related to the January storm. We were completely ignored then in a time of serious and life threatening circumstances, so I have no confidence that anything we contribute at this point will matter. Clearly PGE gets what it wants and it doesn't have to deliver the service that customers expect. And, I am at a complete loss as to what the OPUC does to hold any utility within its jurisdiction accountable. I have lived in 5 states, Colorado, DC, and Virginia among them, where the weather can be much worse. I have never experienced power outages as we do here in Portland, Oregon. Five major outages in the past few years and all the lines in our neighborhood are buried. PGE just had a rate increase and the thought of another helped solidify our decision to leave the area completely. So, we will be joining the exodus from the area and contributing to the net negative population growth in Oregon. It is a sad state of affairs, and I see little hope for progress. Regards, Tony _____ Tony Ogden 202-277-1627 On May 6, 2024, at 3:10?PM, YOUNG Kandi * PUC <Kandi.YOUNG@puc.oregon.gov<mailto:Kandi.YOUNG@puc.oregon.gov>> wrote: ? Nadia Hasan – Beaverton	Dear Commissioners, I am writing about the PGE rate increases being proposed in an upcoming meeting. As a working family watching the rising costs of goods and services, the dollar is not stretching very far for our family of five and I worry deeply that rate increases could have an enormous impact on our home and greater Beaverton community. This rate increase could cost many people the ability to put their families in extracurricular activities among other things - many families are still struggling to get by in a post-pandemic world. As a city councilor, I hear from families every week who are trying to make it and having to make hard choices between food and their health. I am asking you to gravely consider whether a rate increase is necessary at this time when so many are unemployed and navigating costs at home. Thank you, Nadia RE: Public Utility Commission : Upcoming Decisions of Interest : State of Oregon Councilor Nadia Hasan (she/her) City of Beaverton Public Records Law Disclosure: This email is subject to mandatory retention schedules and may be made available to the public. - 5/13/2024 12:32:48 AM

Joel Belan – Portland	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). To clean my city water alone energy rates are unaffordable! As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Mr. Joel Belan 420 SE Grand Ave Portland, OR 97214-1137 joeledwardbelan@gmail.com - 5/13/2024 12:33:02 AM

Kathryn Chambers - SALEM	The PUC continues to approve utility rate increases without requiring PGE to show they have made budgetary adjustments to pay for some of the costs they are incurring. PGE is a stock company and as such they should be regulated to assure they do not make profits the sole goal of this company. The fact that PGE CEO, Maria Pope receives an enormous compensation package tied to corporate profits is just one example of the motivation of this company to increase customer's rates. Meanwhile, Oregon's governor is promoting affordable housing which will never be realized if unaffordable utility rates are driving people out of their homes. The governor of Oregon. Please do not burden Oregon citizens who are just trying to survive. - 5/13/2024 3:13:38 PM
David Schliebe - JEFFERSON	Please PGE stop already with rate hikes. I can't ask for more money for my Social security check. Or ask for more money from my employer. - 5/13/2024 8:01:02 PM
Amber Pfaff - PORTLAND	I strongly disagree with allowing PGE to raise rates again. They've already raised it a hefty amount last year and it's impossible for me to pay off in full as it is now. I'm disabled & therefore on a fixed income of less than \$11,000 a year. I do not have the money for another rate hike, and if my electricity gets shut off, I get evicted. I'm squeezed dry in this city and can't afford to move elsewhere. PGE's CEO is a multi-millionaire, so maybe look there for the extra money they want to take from people like me. Their waste of money is not my problem and I don't have a choice in which company I get my electricity from. They take advantage of this and it absolutely contributes to the homeless problem in the area. If they hike rates again, it's going to be even worse. This is unethical and disgusting. - 5/14/2024 12:04:07 AM
Shelley Teraoka - NORTH PLAINS	I'm retired and my fixed income cannot sustain rising costs of living. Another price raise of electric costs will put me over the edge. Can there be a price break for elderly? - 5/14/2024 5:42:58 AM
Cynthia Kidman - MILWAUKIE	I opposed this increase since they had one over 20% last year and with all the increases in cost of living it gets harder. The projects they want to fund should come from grants and other nonprofit organizations/fundings instead of the customers. I think more research should be conducted on battery power since disposal is a major concern. Increases should not be allowed every year, but be considered every 2 to 5 years. - 5/14/2024 6:19:14 AM

Name/Location	UE 435 Public Comments
Charlie Kovas - TIGARD	The rate increase is untenable and should be rejected. Portland already has some of the highest electricity rates in the nation. - 5/14/2024 6:46:52 AM
John Hermes - PORTLAND	Hi, I am writing to say that PGE should not be allowed to raise their rates again. This is too much too quickly it is hurting rate payers especially pore or economically disadvantaged Portlanders who can not afford this. Please say no to this request. - 5/14/2024 7:06:45 AM
Mikael Kush - PORTLAND	"PGE and its company-sponsored political action committees ("PACs") make contributions from time to time in support of our strategy and objectives." This is their OWN policy statement. In other words, they bribe politicians. Are we going to let large corporate monopolies with the help of their political influencers pick every dime out of the pocket of working citizens? NO! Reject this rate hike, completely. Some of are having a hard time paying are bills. The Portland General Electric's CEO Maria Pope gets a total yearly compensation of \$6,970,000. Maybe a rate hike won't make much difference to her. - 5/14/2024 7:31:18 AM
Julie Davis - TROUTDALE	Why is a public forum not being held for the PGE rate increase request for 2025. When I called PGE about the last rate hike in 2024, I was told it was for litigation, as well as upgrades. We should not have to pay for the electric companies litigation and/or settlements. They have had years to do upgrades. They are for profit and will continue to hurt consumers by raising rates until no can afford to even live in their homes. I live in a manufactured home and before this year, the most I have ever had to pay for electric was about \$250. And that was during the coldest months. But this year there were 2 months where I paid close to \$400 each of those months. I just can't afford that. If that rate increase does go thru for 2025 that will make the rate increase for PGE 41% since 2021. That is absolutely ridiculous. Please provide a forum for the PGE rate increase also. This rate increase will hurt so many people. People on a fixed income, families, low income. We don't need any more rate increases. Thank you. - 5/14/2024 8:57:19 AM
Hayden Nguyen - PORTLAND	The rate of percentage increase for average usage have increased recently and that hike has impacted residents. As a single person renting, paying close to \$200/month in electricity is ridiculous and not feasible. My landlords have made updates to the electrical panel, replaced the current electric wall units with mini-split units, and insulated the property which helped considerably to reduce the cost of electric per month. However, with the last increase in average usage rate, I am seeing bills that are closer to the original amount I was paying. With this proposed increase, it would probably equate or exceed that original amount. It is not sustainable for people with single income. - 5/14/2024 12:37:21 PM

Alvin Klausen - SALEM	<p>May 14, 2024 Oregon Public Utility Commission (PUC) 201 High St SE #100 Salem, OR 97301 RE: PGE Rate Case - Docket UE 435 Dear Chair Decker and Members of the Commission, The Marion County Board of Commissioners writes to express our strong opposition to the proposed rate increases submitted by Portland General Electric (PGE) for 2025. The proposed 7.4% rate increase, following the recent substantial rate hikes, would impose undue financial strain on residents of Marion County, particularly during this period of historical high inflation. We are deeply concerned about the negative impact this increase would have on our community members, especially those who are already struggling to make ends meet. While we acknowledge PGE's intentions to enhance grid reliability and transition towards renewable energy sources, we believe that burdening ratepayers with additional costs is not the solution, especially given the current economic challenges faced by many households. We urge the Oregon Public Utilities Commission to thoroughly evaluate the necessity and justification for this rate increase. It is imperative that any decision regarding rate adjustments takes into account the economic hardships faced by residents, particularly low-income families and individuals. We respectfully request that the Oregon Public Utilities Commission carefully consider the concerns raised by Marion County and its residents before making any decisions regarding PGE's rate increase proposal. We believe that a fair and balanced approach is necessary to ensure the well-being of our community members while addressing the challenges of modernizing our energy infrastructure. Thank you for your time and consideration on this matter. Sincerely, Kevin Cameron Danielle Bethell Colm Willis Chair Commissioner Commissioner - 5/14/2024 1:30:35 PM</p>
Jeremy Mills - PORTLAND	<p>I would like to say that the last thing Oregon needs right now is ANY rate increase - for any utility. Infact, any STATE doesnt need that right now. People are already struggling and barley scraping by. Particularly FAMILIES and creative peoples - the 2 groups, historically, our state has wanted here. The reasons should not matter outside of this. We should not have had a single rate increase since COVID, but here we are. I already have to choose between food or paying my power bill in full. I urge you to tell these utilities to stop the requests until inflation cools and we see some semblence of normalcy in our state. What will happen? We just wont have electricity? Yeah, right. - 5/14/2024 5:01:37 PM</p>

Name/Location	UE 435 Public Comments
Elvis Clark - MILWAUKIE	<p>Wouldn't it be least cost to expand existing natural gas combined cycle generating plant capacity, already sited on existing transmission corridors and/or near load centers, not needing battery storage, than having to build out a whole new "green" electrical generation system based on the come that somehow the environmental benefits of the latter exceed the extra cost of the latter; and also, giving consideration to the risks that this new Net Zero generating system will actually work as reliably as the old conventional power plant system. I suspect that this year's 18% enacted rate increase, and this new proposed rate increase are largely tied to having to meet the Net Zero mandates. The PUC needs to present what the rate payer rate difference is between a simple adding to combined cycle natural gas generating capacity versus the legislated Net Zero mandates. If this rate differential is over 10% in additional costs for Net Zero, I would say the PUC needs to exercise the loophole provision for moderating the pace of Net Zero adoption. (The PUC should also take account of the extra taxes that rate payers are subject to in subsidizing the Net Zero and Electric Vehicle systems - ratepayers are taxpayers, too.) Also, New Data centers, new construction and EV charging stations should pay a higher rate than existing rate payers, as it is the formers that are driving much of the need for new PGE investments. Cost increases caused by new sources of incremental demand should be singled out and made to pay for these upgrades, not existing customers and their existing electricity demand. Another idea is to explore the idea of making new data centers - what with their electric energy intensity - supply their own on-site generation to meet their own on-site electricity demands. The PUC should seek legislative approval to allow Data centers a pilot program to add nuclear modular power generators. - 5/14/2024 6:25:40 PM</p>
Cary Moro - PORTLAND	<p>you have to stop the extortion of PGE customers by continuously raising their rates. I'm a single person and live alone in a small apartment and can no longer afford heat my apartment in the winter which gets incredibly cold because it's old and poorly insulated nor can I run fans in the summer even though it gets sweltering hot. my monthly bill is just to heat one room we're in over \$200 a month and that's not continuous 30 days of heat I don't have an AC unit I can't afford to use it you have to stop these green grabbing increases. you have no right to allow this theft - 5/14/2024 6:41:45 PM</p>
Jack Brallier - HAPPY VALLEY	<p>Rates are already astronomical, we can barely afford to pay power at the current rate and they want more money? It's unsustainable. Maybe instead of milking residents for more and more money, PGE should focus on wise spending instead of maximizing share holder return. Power is a right at this point, a right that has costs but it should be for the benefit of the population. Not a few already rich folks just trying to squeeze the middle class for even more. - 5/14/2024 6:56:59 PM</p>
Debby Patten - MILWAUKIE	<p>I am struggling to make ends meet with all the higher costs of everything. PGE has already increased our rates so much in a short time. Please do not let this continue. - 5/14/2024 8:15:52 PM</p>

Name/Location	UE 435 Public Comments
John Gipe - SANDY	No. Enough is enough. Use some of the profits paid to shareholders to cover whatever PGE thinks they need. This has to stop, electricity can't be "for profit" any longer. The solar farms in my area don't even provide electricity to my area. They send it elsewhere and charge those customers more for distribution. Half of my bill is distribution charge and I average \$250 a month. My power is delivered through one simple unreliable line. This has to stop. How do we, the customers apply for a rate decrease? When do we get a say in how and where our power comes from? No one should ever be "priced out" of a basic necessity. - 5/14/2024 10:00:55 PM
Dixie Fortune - CANBY	PGE just got a 17% pay hike. My monthly bill is over \$380 a month now. We do not do laundry between 5pm and 9pm and only use cold water. We CAN'T afford to pay more. We're already having to choose what we can cut back on so we can pay the bill. How many people do you know gets a 24% pay raise in 2 years. It's more like a 6 to 10%. - 5/14/2024 11:32:46 PM
NA - PORTLAND	I am writing to express my strong opposition to the proposed rate hike by Portland General Electric (PGE). As a resident of Portland, I have witnessed firsthand the significant increase in electricity costs over the past few years, and I believe that another hike would place an undue burden on individuals and families already struggling to make ends meet. Since 2021, Portland residents have faced a series of electricity cost increases that have stretched household budgets to their limits. The recent 18% hike in January 2024 was particularly jarring, leaving many of us grappling with higher utility bills and reduced disposable income. This sudden surge in expenses has forced families to cut back on essential items and sacrifice other necessities to cover basic utilities. An additional rate hike so soon after the January 2024 increase would exacerbate the financial strain on Portland residents. Many of us are still reeling from the impact of the previous hike and simply cannot afford to absorb another substantial increase in our electricity bills. It is unfair to ask individuals and families to shoulder the burden of rising utility costs, especially when wages have not kept pace with the escalating prices. Moreover, the timing of this proposed rate hike could not be worse, given the ongoing economic challenges facing our community. As we strive to recover from the effects of the pandemic, it is crucial that we prioritize the financial well-being of all Portlanders and ensure that essential services remain accessible and affordable. I urge PGE to reconsider its proposal and explore alternative solutions to address any financial challenges it may be facing. Rather than placing the burden solely on ratepayers, I encourage PGE to seek out efficiencies, explore renewable energy options, and advocate for fair and equitable policies that benefit both customers and the company. - 5/14/2024 11:40:48 PM
David Van Tassel – Beavercreek	With all the rate hikes and the distribution fee. We pay a higher electric payment than our car payment. More than we paid for rent 20 years ago. This is crazy. If you want to raise the payment. Please get rid of the distribution fee. David Van Tassel Beavercreek Or. - 5/15/2024 12:32:12 AM

Douglas Dunford – NA	<p>From: Douglas Dunford <dwdd44@gmail.com<mailto:dwdd44@gmail.com>> Sent: Tuesday, May 14, 2024 10:21 AM To: YOUNG Kandi * PUC <Kandi.YOUNG@puc.oregon.gov<mailto:Kandi.YOUNG@puc.oregon.gov>> Subject: Re: PGE Proposed Rate Increase - Ways to Comment dwdd44@gmail.com<mailto:dwdd44@gmail.com>. PGE does not need another rate increase, there stock is going up because of the rate increase their dividend is going up, in other words they need to take \$ from their dividends there is no reason we rate payers need to pay more so there dividends & stock will look good on the market. Sent from my iPhone - 5/15/2024 12:32:14 AM</p>
Wendy McKee – NA	<p>Hello, I just saw an article about an upcoming public comment session regarding PGE rate hikes. I don't want to Zoom in so I'd like to enter my commentary here. Thank you for offering an opportunity for public feedback. I read that PGE made record profits last year so why did they need the 18% hike - and even more now? They've been working on alternate energy for a long time - why do they suddenly need so much more money? PGE was found liable for major wildfire damage in California. I read they are not allowed to pass on those charges to rate payers. But you cannot convince me that is not exactly what they are doing!!! Top brass, fearing stockholders (and any reduction in their own pockets) more than caring anything about their customers, they don't want their share price (their own pockets) to drop due to the expense of paying that liability. Of course they wouldn't do it directly - I fully expect they have planned an intricate shell game, where ultimately they will be able to say, oh look, our {some account, such as renewable energy} has an excess - we'll use that to pay for our liability. Has anybody with great sleuthing accounting skills actually sat down and followed the money? There is an awful wave of greed now running this country. With businesses no longer being small neighborhood size, customer concerns are barely visible behind the focus on shareholders and raking in as much money as possible. Gas was record high in 2022; when 2022 reports came out in 2023, we found out oil companies made record profits in 2022. Enriching the top brass at the expense of citizens. Recently an announcement came out that grocery stores have contributed significantly to inflation by keeping their prices high even after supply issues loosened up. Enriching top brass at the expense of citizens. The company RealPage is facing multiple lawsuits for advising whole swaths of landlords they could raise their rents - instead of competition it's become collusion. Companies are buying up mobile home parks and jacking up lot rentals 300% and more with nothing to show for it. Businesses see other businesses getting away with this so that not only is it widespread, it's today's game plan. I have to think this is the biggest reason inflation is not going down, in spite of the normal Fed processes. And PGE is right in there. There is no such thing as a business! There are only people. PGE's top brass made the decisions that led to being found liable for the wildfires - top brass should directly receive the consequences - not "the company." PLEASE P.L.E.A.S.E. don't start any rate hike in the middle of winter!!!! For crying out loud - start it the first of June! Especially when the accumulated hikes are becoming a factor in people being able to afford to keep living inside!!! And please consider working it in gradually, instead of suddenly one big jump - especially in the middle of winter. I'm also wondering about the makeup of this commission - are any of you, or your families, etc, benefitting from PGE hikes??? Allowing this much rate hike, especially with so many struggling to stay housed, sticks out as really abnormal to me, especially when that previous big one was passed so quickly, in spite of public outcry. And now another hike right on the heels, not</p>

Name/Location	UE 435 Public Comments
	<p>stopped only delayed, and only by public outcry. I think it would not only be a good idea, but I'm requesting that you make it clear: how each of you got onto this committee, if any of you have family or friends benefitting from higher rates, and ANY connection any of you have to PGE or any way in which you could benefit from passing rate hikes. Kickbacks? I don't like suggesting such things but I want to know, and your decisions have made me wonder. Also, if they have all that profit, why aren't they doing more to make their system less vulnerable to outages? Like everyone else, I've always thought, oh - it's a big storm, or really cold, or whatever - it's normal to expect outages. But I've had a change of perspective: electricity is - What. They. Do. It's not like the local government starting to run a power plant or me, or any other person dabbling in power - this is what they do! And they've been doing it for decades. I now feel, why in the world are we still having such major, dangerous outages, when they've had decades to improve their product???? Thank you for a way to comment. I don't know what your plan is to address all the concerns that will be voiced, but just as you put out public notice of comments, I hope you will compile a full list of comments and your responses to each and every one, and publicize that just as you did the comment sessions. Thank you, Wendy McKee Yahoo Mail: Search, Organize, Conquer - 5/15/2024 12:32:17 AM</p>
<p>Trevor Irish – Portland</p>	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. NA	I am opposed giving PGE, PP&L, or NW Natural a rate increase greater than the US CPI. As a senior citizen living on Social Security I have seen our utility bills increase by 50-100% over the past 3 years. Our PGE bill used to average \$65 per month and now it's around \$100. Our gas bill went from \$50 per month on the yearly average plan in 2020 to \$100 today. If the President and Oregon Governor want to eliminate the use of fossil fuels then they should pay the increased cost facing utilities to go green. Sincerely Robert Vance 1124 SE 45th Ave Portland OR 97215 logr1@comcast.net Sent from my iPhone - 5/15/2024 12:32:27 AM
Britney VanCitters – Portland	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Mike Zotter – Milwaukie	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. It is absurd and extremely greedy of PGE to ask for another hand out. In fact, I am upset that regulators are ever allowing PGE to ask for more money; the answer to PGE's request should have been a resounding "NO" by regulators like yourself. People cannot afford these increases. And even if they could, PGE does not need more money. They WANT more money because that's what they always want. But their wants can not trump the needs of most PGE customers. Otherwise, this is all a sham. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Mr. mike zotter 4917 SE Mintone Dr Milwaukie, OR 97222-4610 zottermj@yahoo.com - 5/15/2024 12:32:34 AM</p>
Susan Delles – Rouge River	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Ms. Susan Delles 2801 Sykes Creek Rd Rogue River, OR 97537-9771 sdelles@jeffnet.org - 5/15/2024 12:32:36 AM</p>

Jim Parr – Keizer	<p>From: Jim Parr <jlparr@earthlink.net<mailto:jlparr@earthlink.net>> Sent: Friday, May 10, 2024 3:05 PM To: YOUNG Kandi * PUC <Kandi.YOUNG@puc.oregon.gov<mailto:Kandi.YOUNG@puc.oregon.gov>> Subject: RE: PGE Proposed Rate Increase - Ways to Comment jlparr@earthlink.net<mailto:jlparr@earthlink.net>. Hello Kandi, Regarding the PGE rate increase request: Among their several items, PGE is asking to be able to increase their profit. These increased profits go to the shareholders and there is no actual service benefit to their customers. Also, PGE customers that use the least amount of electrical power pay the highest per unit cost. This is not fair. Whether a small or large consumer, everyone should pay the same per unit cost. This structure is also contrary to the environmental message that we should be frugal and minimize our consumption of resources. As it is, based upon the current per-unit cost, customers using the least amount of power are subsidizing the large quantity user. Despite the companies message that conservation is the best option, customers that are "frugal" for all of the right reasons are not rewarded. Regarding both PGE and Pacific requests for rate increases for infrastructure improvements, I would like to know.....are shareholders also being charged for improvements? Shareholders have ownership. The typical customer has NO ownership in the companies but is being asked for money to fund improvements! Thank you for forwarding my responses to the examining officer(s). Jim Parr. (Keizer). - 5/15/2024 12:33:01 AM</p>
Jan Coleman - HAPPY VALLEY	<p>I am submitting a request to not approve further rate increases for PGE. Please!! We Are a retired couple trying to live on a fixed income. And PGE rates have continued to increase. We've lived in an older home in this valley for over 25 years. At least we have housing. But PGE needs to understand that we did not move here after selling a million dollar home in California. Happy Valley has also approve a rate increase for Underground cables. This needs to stop. All the hype about inflation is just an excuse to raise rates everywhere!! Thank you. - 5/15/2024 4:47:07 AM</p>
Wilda Parks - MILWAUKIE	<p>Please do not permit Portland General Electric to increase their costs again. As a senior citizen with a very limited Social Security income, it's extremely difficult to manage all the increases in everything around us. But this is one increase that should not be permitted especially since they just recently increased their fees and electricity is vital to a secure lifestyle. - 5/15/2024 8:37:00 AM</p>

Name/Location	UE 435 Public Comments
Josh Newport - HAPPY VALLEY	I am afraid that PGE is currently using the consumer as its personal pocketbook to cover unanticipated costs due to poor planning and management. The cost of electricity (A COMMODITY) has increased by over 18% since last year and Portland General Electric is trying to add another 7% making the total over 25% over two years. This is an insane rate hike especially when there is no other option for electricity in our area, PGE has a monopoly. The consumer is held hostage by corporate mismanagement and if PGE can not operate their business with the nearly 20% rate increase (which goes straight to the bottom line) that was made at the beginning of this calendar year, the commission should look hard at forcing the consumer to open its pocketbook again to cover costs. Please take into consideration that these rate increases take money away from financially strained individuals forcing them into making decision whether they would like to eat, pay their rent or have their power on. I am doing my part to reduce my usage of electricity but at the same time, I am not seeing PGE do anything except making me pay more for less usage. ENOUGH IS ENOUGH! - 5/15/2024 9:00:26 AM
Katie Fitzpatrick - TIGARD	The recent 18% increase that took place January 2024 has put a financial strain on my family as well as many others in our community. Our power bill has nearly doubled since last year going from an average of \$88 to now \$160+ even after installing a new energy efficient heating system. It is making it so hard to live in the great state of Oregon due to the expensive utility costs. By adding an additional 7% increase we will be forced into looking to move outside PGE jurisdiction just so we can survive. I believe that charging families more than you will be charging industrial companies is wrong. They are big corporations and will be using more power so they should be the ones paying the higher amounts, not your individual citizens. I really hope that you can take our thoughts into consideration and re-think this excessive additional increase. - 5/15/2024 9:45:12 AM
Gregg Ritter - HILLSBORO	STOP THE RATE INCREASE PGE just raised rates significantly and it is unacceptable to allow them to do it again. Especially when they are recording corporate profits and paying dividends on a public utility. There is no cause to continue squeezing payers (many of whom are low income) when there is no alternative. Deny this rate increase request and consider a moratorium if possible - 5/15/2024 9:47:27 AM
Marc Wasserman - TIGARD	Hello, I'm writing to specifically object to the proposed 31% increase in the off-peak energy cost under the Residential Time of Day plan, Schedule 7, as proposed in UE 435. Portland General Electric specifically advertises this plan to its customers, including myself, as a way to save money by shifting our energy use towards nighttime hours. We have made significant changes to our energy use including investing in timers to control high-load appliances in response to the low cost of nighttime energy. By now turning around and proposing to increase the off-peak energy cost by 31% over 2024 prices, this is a slap in the face of customers who trusted PGE's marketing and advice that shifting power to off-peak hours would save money. Please reject the off-peak rate increase for the TOD plan in Schedule 7 for 2025. - 5/15/2024 10:00:42 AM

Name/Location	UE 435 Public Comments
Richard Chase - TUALATIN	I am among thousands of fixed income customers of PGE who stand to struggle with ever increasing utility rates. I have also paid extra in support of Green Energy programs (as well as implementing every energy conservation practice I can) but am already at a rate that forces me to cancel my participation in order to partially offset my bill. It is time for PGE to step up and invest in more efficient operations and cost cutting, negotiate with BPA, etc. which rate payers cannot do. - 5/15/2024 10:44:43 AM
James Duncan - TUALATIN	My wife and I are seniors, reliant largely upon our Social Security benefits to live on. We are already getting the PGE 20% discount, which turned out to be eaten up by our annual rent increase. We are curious as to why PGE is asking for two increases in such a short period of time. - 5/15/2024 11:28:36 AM
William Poff - OREGON CITY	You people need to get a handle on things and stop facilitating the thievery going on at PGE. How about while allowing them to continuously raise our rates, you also put a freeze on the income the top execs bring in? How about instead of allowing them to double the rates within a two year period, you actually show some oversight and stop the fleecing? I realize the goal here in Oregon is to keep people poor but this is ridiculous. These constant rate increases are nothing more than new linings for already rich pockets. I am not sure what percentage you people get as kickbacks but this needs to stop. - 5/15/2024 2:17:14 PM
Heidi - SALEM	The proposed increase in PGE's rates should be prevented. Since the last increase I've witnessed multiple PGE customers share their shock at the utility bill increase and suffer financial hardship from it. In the midst of inflation and other hardships, placing additional financial strain on families is simply unethical. If PGE is needing funding for projects, especially much needed infrastructure updates, the CEO should direct portions of their ever-increasing salary towards this. Change and updates are needed but it shouldn't weigh on the already laden backs of customers who have no other choice in this monopoly. - 5/15/2024 2:30:33 PM
William Poff - OREGON CITY	PGE needs to stop raising rates while being allowed to make the personal income they do. While fleecing the state they need to reduce their income. If these increases are to better the system then they need to contribute as well. - 5/15/2024 2:47:21 PM
NA - PORTLAND	PGE just imposed a double digit rate hike on customers and is subsequently already prepared to ask for more. The customers are not the investors and we should not be asked to bear the burden of cost to invest in improvements. We are paying for what they have to offer now and those who own hundreds of thousands of dollars in their stocks, such as the private equity groups that own large percentages of shares, are the investors. Why didn't they ask for a sufficient increase in the RECORD increase for 2024? If PGE is able to pay dividends to shareholders, then why don't they have sufficient funds to invest in their own infrastructure? Bottom line, as consumers we do not have a choice which energy company to use, so we should not be seen as a bank to year after year withdraw funds for investment at the same time that they improve their actual investors dividends. - 5/15/2024 2:50:07 PM

Name/Location	UE 435 Public Comments
NA - BEAVERTON	I think I speak for most people when I say that another increase in rates on top of the 18% that PGE has already put in place is not welcome. Utilities and their rates are already sky high; forget mortgage rates/rent, food prices, gas prices, etc. Many folks that are serviced by PGE are doing their best to keep their heads above water financially, another rate increase (especially at the beginning of summer when electricity usage is high, which seems predatory) is simply not feasible. This could be the difference between feeding a family and having no food on the table. - 5/15/2024 3:12:54 PM
Dan Rapoza - SILVERTON	The previous rate increase had a noticeable impact on our bill. Another increase, especially so close to the previous one, would be intolerable to many. And if rate increases are indeed passed, please then work with the Legislature to make solar affordable for individual households. - 5/15/2024 3:29:47 PM
Leanne Stoneberg - HILLSBORO	I sent the following email in March.....I never received any response back from you. I'm one angry Oregonian. These rate hikes are ridiculous and not necessary, especially since the CEO of PGE can give herself such a grand raise. I'm strongly opposing any further rate hikes and further more expect that the rates would be lowered. I know I'm not the only angry one over this! I called PGE on February 28 to express my extreme concerns and frustrations with the rate hike. I find it even more appalling the CEO would take such a large pay raise. During my conversation with the manager I spoke with at PGE I was informed I could express my concerns with PUC and the Oregon legislatures who are all responsible for this rate hike so that is what I'm doing. Ironic the people of Oregon wouldn't have any say in such a thing as a rate hike, especially one so substantial. I also understand that the raising of our rates isn't done yet and there is more to come. Is that correct? Will we, the citizens of Oregon, be seeing another rate hike in April? How much this time? Are you SERIOUSLY expecting to have bills paid in full? My familys home bill went from \$275 to \$500 in less than a month with little change in usage. Thats a substantial jump. How would you honestly expect a family to pay such a large sum, especially with the rising costs of food?!?! Is the CEO of PGE planning on paying what family's can't come up with? Better yet, are those that voted for this and went along with this rate hike going to pitch in and help all of us family's pay these ridiculous bills? I'm pretty disgusted with this all together to be honest. As my family and I are trying to keep up with the inflation of food prices that this wonderful (not so much) administration has instituted, the raising prices of a power bill makes it EXTREMELY difficult to meet or even pay the bill in full. To have our home bill experience such a jump is ridiculous. As we have worked hard to remodel the home, replace windows to help and put in quality insulation, I'm extremely frustrated as our bill continues to climb. Our home is heated with a wood stove and not so much power usage. As I told the manager on the phone call with PGE, this is a two way street. The Oregon legislators voted for this...(NOT ME) But it takes someone on the other side to agree to go along with this. Anyone who thinks this is a good idea can pay any and all my future bills along with the families of all the Oregon citizens. This is utterly ridiculous! Its time for all of you who voted for this to be out! Its time for the PUC to hear from the people. Don't think I won't be at any and all meetings, rallys, and gatherings making my voice heard. - 5/15/2024 3:58:31 PM

Name/Location	UE 435 Public Comments
Katie Rehagen - PORTLAND	Dear PGE, Please do not follow through with this second rate increase. You just raised rates and I am struggling to pay my bill in the winter. Portland is becoming unlivable. Can you reconsider? Thank you, Katie Rehagen - 5/15/2024 4:44:16 PM
Joshua Shelton - OREGON CITY	I am not in favor of another PGE rate increase. I am barely surviving with the current rate increase and another rate increase is not sustainable. With so much increase in the world right now it would be helpful to have some normal and make PGE operate with what they have. They had 2.92 billion last year and estimate to be 3.10 billion this year according to companiesmarketcap.com. If you cannot operate with that kind of revenues then something is the matter. PGE talks about being a valuable member of the community, if they were they would understand another 7% increase would kill their community they are part of. Yes inflation is high everywhere but PGE already had an increase and they should be good enough for at least three years. Please help PGE customers out and reject this rate increase and any other rate increases the next three years. We need a break badly. Also, if PGE can offer assistance to people that can't pay their bill then that shows they have a lot in the coffers and more money is not the answer. Please please give us a break - 5/15/2024 4:52:08 PM
Stephen Tyler - GLADSTONE	I oppose PGE raising their rates. I am retired and on a fixed income. They continue every year raising their rates in an absorbent amount. Please tell them to live within their means like normal Oregonians. Thank you - 5/15/2024 4:59:03 PM
Candice Fuller - OREGON CITY	I am aware PGE is wanting to raise rates again. I would like to know first the break down where the previous just in Jan 2024 rate increase is going. A breakdown of the profit and loss needs to be made public before giving another rate increase. With the economy in inflation the public can not afford another rate increase especially the elderly. I do not support this at this time,. Candie Fuller - 5/15/2024 5:04:22 PM
Tina Ray - GRESHAM	With the current state of the economy, Oregonians simply cannot afford another rate increase. We are overwhelmed with all of the rising costs we are required to pay. - 5/15/2024 5:52:35 PM
Jared Rose - PORTLAND	An additional rate increase request from PGE should be rejected and furthermore a cap on rate increase requests should be instituted by the PUC. PGE has continually increased rates in a manner that far outpaces historically high inflation, far outweighs cost-of-living adjustments and is far greater than any business would normally attempt to pass on to their willing customers. They have also coupled these absurd rate increases with increasingly spotty service. As unwilling customers forced to use PGE's service, there needs to be some level of consumer protection put into place. - 5/15/2024 6:00:32 PM
Michelle Elliott - PORTLAND	We are stretched to the limit with the latest increase. We do not support another one. PGE needs to allocate their existing funds to cover expenses and projects. We are not bottomless pits of money. - 5/15/2024 6:03:22 PM

Name/Location	UE 435 Public Comments
Anna B - PORTLAND	<p>I left California to come to Portland in 2013, when rent and energy costs were at least 2x less than they are now. I have since become a disabled homeowner. I have brought family up here, 3 on Social Security because they are at retirement age. Let's crunch some numbers for a second given living expense. Some people were given help on utility bills if they are in certain public programs like food stamps, but the maximum was 20% off. Those in special programs, many already in poverty or fixed incomes, have already given about 11% extra since 2022 rates. Being permanently disabled or on SSI, you get a cost of living increase of about \$50-300/year. If the rates are raised again, that 20% of support is useless. You've gamed us again. PGE has raised their prices every year and they have almost doubled in the last 10 years, many people living on fixed income will be completely priced out, even if they are homeowners that aren't paying exorbitant amounts of rent or property costs. If they are priced out, who is going to pay for electricity? I can point to someone. The CEO of PGE made \$14.1 million in 2022, \$17 million in 2023. You are asking Portland residents to pay over \$6 million extra with another rate hike. Why should the population of Portland pay for such drastic salary increases of Patricia Poppe? The way I see it, our money is not being put towards anything but her increased paycheck. How about we take the amount PGE is paying to lobby lawmakers? \$1 Million to make up a chunk for a year of rate hiking. The millions in bailouts Newsom and PGE got during 2022, and during Covid? Use those instead to fix horrendously outdated infrastructure that should've been fixed decades ago. We are losing human lives, homes, schools, and livelihoods already to the failing electric systems as fires and sudden cold snaps become more common. My family was impacted by the storms. They were lucky to only lose a portion of their home, the damages in the tens of thousands, and without power or hot water for 2 weeks. They luckily had a generator to make up for the terrible electric grid and towers that snapped like matches. PGE will have to think who's going to shoulder the bill when more people begin to migrate out of Portland to get away from prices that we once left Los Angeles and San Francisco to escape. Don't let PGE get away with this. Don't let Portland lawmakers get away with this. Don't give them a bigger paycheck that they already aren't using, getting tax benefits out of, and getting bailouts for. If they are allowed to, I'll take my money, family and business elsewhere. - 5/15/2024 6:22:40 PM</p>
Mary Crosby - KEIZER	<p>Re: Docket UAE 435- I'm done with everything increasing except my take home pay. Why don't I just sign my paychecks over to the government at this point and call it good. Please reconsider this increase. I can't anymore. - 5/15/2024 6:24:24 PM</p>
NA - PORTLAND	<p>You already raised my rates 8% and now you're considering another hike??? Imagine how you could actually help people by cutting the salaries at the top. I'd love an itemized overview of where my Money is actually going. You say infrastructure but why don't you clarify??? Disgusting. There's not much more to say. - 5/15/2024 6:31:25 PM</p>

Name/Location	UE 435 Public Comments
Kirsti Ness - HILLSBORO	I am extremely disappointed in PGE wanting to file yet another rate increase on its customers. By pushing this through, they are putting customers in risk of not having power to their homes - they will be forced to choose between paying their rent/mortgage, food, etc. They say that customers can apply for financial assistance, but the reality is that if you are considered "middle class", you won't get approved. Just because you are make a certain amount, does not mean you can afford the ridiculous amount that PGE charges. Also, the public really doesn't have any choice in shopping around for their electricity. PGE has a total monopoly on electricity. That's not ok. The fact that their CEO makes millions of dollars in compensation and bonuses is horrible. And now they want to raise our rates again?? Seriously, what the hell? - 5/15/2024 6:54:02 PM
Adam Kimbrough - PORTLAND	I oppose any rate increase whole heartedly. - 5/15/2024 7:07:46 PM
Juanita Rubio - PORTLAND	With the cost of living and increase in taxes, people being pushed out of their homes because of rent increases on top of everything else you are proposing a 7.3 increase on electric bill?! But yet minimum wages is at 15.45 in some parts of Oregon. I don't know how you expect an average person to afford anything else other than the essentials. Oh what you don't! - 5/15/2024 7:17:52 PM
Patty Debois - TIGARD	We cannot afford a 7.3% increase! People are struggling as it is. Please manage the money that is already in your budget. We're tired of trying to make ends meet. - 5/15/2024 7:25:52 PM
Maira Dawson - SALEM	This docket is a load of bull poop. If this docket is approved it would allow PGE in two years to increase their profits by 25%. In an ever increasingly unstable economy, that increase could me far more people going without power. For fixed income people, that could mean not having the ability to afford medicines or food or other daily items they need. With the increase in usage due to extreme weather, bills are already increasingly higher. In previous years I have paid less than 100/month for power and now the bills are closer to double that at times. They have no competition in the area so the public is forced to pay them as it is for power service. Why should the the energy commission allow a company to bleed the residents for their own profits. - 5/15/2024 7:27:41 PM
Jacqueline Bonelli - HAPPY VALLEY	No, rates have already increased significantly. NO on any rate increases. - 5/15/2024 7:49:43 PM
Valerie Hunter - HAPPY VALLEY	It is not fair that we have to keep paying for PGE when they have billions in funds. They can pay for there claims and be reasonable. We need other options instead of just PGE as it is representing a monopoly ran company and not for the public anymore . - 5/15/2024 7:55:02 PM
Ryan Bonelli - HAPPY VALLEY	I do not agree with the rate increase and I also do not agree with the new "green" infrastructure PG&E is proposing. - 5/15/2024 8:00:41 PM

Name/Location	UE 435 Public Comments
Zach Mayfield - GRESHAM	I do not support this. As a middle class life long Oregonian, we are already struggling to keep up with utility bills, and the last pge increase has been a struggle. I believe another one will put many into further financial hardship including myself. - 5/15/2024 8:28:20 PM
Zeal Mayfield - PORTLAND	I opposed any rate increase. The rate was already increased a significant amount, and that represents a considerably financial burden. I'm a strong believer that necessity is the mother of invention. If PGE doesn't have the option to just force consumers to pay more money, they will be faced with the necessity to become financially efficient. - 5/15/2024 8:40:03 PM
Teresa Gregory - HILLSBORO	The thought of you entertaining a rate hike in the midst of the inflationary struggle the American people are having is repulsive. However, it doesn't surprise me either. Not sure how you sleep at night. - 5/15/2024 8:40:04 PM
Lidiya Khoroshenkikh - PORTLAND	<p>To Whom this May Concern I am writing to express my concerns regarding the proposed rate increase, which I believe will have a negative impact on all households in Portland. It is evident that the quality of service provided has declined over the past year, yet consumers continue to be burdened with increasing payments. Many families are currently struggling with the recent price spike, and the consequences were particularly dire this past January when numerous families were left without power during freezing weather conditions for days. Even now, many households can't pay their monthly bills. With inflation affecting all essential goods and services, including power, many people are being pushed to rely excessively on your discount program. This program burdens the average consumer since a percentage of their monthly bill goes towards it. With the increasing number of people forced to join the program, more individuals will struggle financially. Over the years, the average Portlander has found it increasingly difficult to afford living in Portland, and these actions are exacerbating this issue, potentially forcing residents to either relocate or face homelessness. Additionally, I would like to address the discrepancy between the promised rate increase last year of 18% communicated to consumers last year and the actual 24% increase discovered when analyzing the cost per kilowatt. When I contacted PGE last year regarding this matter, the response I received from the representative was dismissive and unhelpful, such as "we don't specialize in math," "Just see your next bill; it won't be that much of a difference," and "you're the only one who cares." It is concerning that such misinformation and lack of transparency exist within the company. Therefore, my main question about this price spike is: what will be the actual rate increase? I urge you to reconsider the proposed rate increase, as it will only further burden Portlanders and contribute to the ongoing affordability crisis. Furthermore, with the mismanagement of funds within PGE, Portlanders are bearing the brunt. The CEO of PGE has a salary of \$6.97 million dollars, yet the average household is living paycheck to paycheck in the current economy. PGE has the funding to pursue projects but is choosing to increase the burden on its consumers instead of working with its current budget. I hope that you will prioritize the well-being of Portlanders and help the average worker struggling to get by. - 5/15/2024 8:43:57 PM</p>

Name/Location	UE 435 Public Comments
Zach Mayfield - GRESHAM	I oppose this proposal. The price hikes are killing us and making living unaffordable. - 5/15/2024 8:44:28 PM
Larry Gregory - HILLSBORO	The thought of you having another rate hike in the midst of this economy where Americans are struggling to survive shows just how heartless you people are. - 5/15/2024 8:44:44 PM
Trace Guimont - OREGON CITY	I am opposed to an increased rate for power. EWEB and other power companies are able to deliver power for a fraction of the cost that PGE is already charging. There is no reason that PGE should need to charge more per kW/h than they already are. - 5/15/2024 8:47:09 PM
Lindsey Voorhees - TIGARD	No more increases! We have no more to give. Use the ample funding you have already squeezed from us WISELY and stop asking for more. Portland families are suffering from a long history of high taxes and fiscal irresponsibility. We won't stand for it to continue. You've lost our trust. Earn it back and then try again for more \$\$\$. - 5/15/2024 8:55:36 PM

Lisa - BEAVERTON	Shame on this second increase with families and people suffering inflation already. You should be ashamed of yourselves. No one wants your filthy pet projects that cause destruction and damage to the natural ecosystems on land and sea. And yeah I am educated in physics. You are a failure CEO and need to resign. - 5/15/2024 11:14:46 PM
Lidia Martinez - BEAVERTON	PG&E has a record of promises unfulfilled and who answers for their mistakes? The citizens that they are charging an arm and a leg. Those depending on them to do their due diligence and finally get their things together. From the constant issue with not tending to power lines in time to ensure proper functioning to the wind farm safety concerns. Who sits at the helm and performs the proper audits and how money is spent? I have neighbors struggling to pay their bills and PGE wants yet another hike up on rates. This is not ok. I hope and pray our voices are heard. - 5/15/2024 11:17:46 PM
NA - PORTLAND	The rate increases are untenable. I just purchased a home and I am in shock how much it has risen over the last few years. I don't even have electric heat, just appliances and it is well over \$100 monthly for just one person! - 5/16/2024 12:26:51 AM
Steven Miller - BEAVERTON	We need a more reliable grid with power sources that can withstand the greens desire to move to electricity for everything. Which will be a disaster without making the right investments. Like say partnering with NuScale to deploy their amazing technology to serve the needs of OREGON citizens. I vote NO on raising more money to give us more of the same. - 5/16/2024 12:49:36 AM
Carl Hossman - GRESHAM	We can't afford these ridiculous increases. Please stop thinking that you need to save us with worthless windmills or solid panels. - 5/16/2024 2:35:06 AM
Barbara Knotts - CORBETT	I do not agree with a rate hike for PGE. A rate hike was just instituted recently and it was a very large jump in the rate. Electric prices are already at a high point and the last jump is too recent. - 5/16/2024 5:57:49 AM

Name/Location	UE 435 Public Comments
Jessica Sanders - MOLALLA	Please do not let PGE raise rates. We are not making it as it is now. I cannot afford another rate increase. I fear I will have to move out of my home state of Oregon as prices are getting so high and my income is not catching up. - 5/16/2024 6:37:07 AM
Leanne Stoneberg - HILLSBORO	I sent the following email in March.....I never received any response back from you. I'm one angry Oregonian. These rate hikes are ridiculous and not necessary, especially since the CEO of PGE can give herself such a grand raise. I'm strongly opposing any further rate hikes and further more expect that the rates would be lowered. I know I'm not the only angry one over this! If the CEO of PGE can give herself such a large raise, then maybe she should take a pay cut and help pay instead of raising rates on your customers. I called PGE on February 28 to express my extreme concerns and frustrations with the rate hike. I find it even more appalling the CEO would take such a large pay raise. During my conversation with the manager I spoke with at PGE I was informed I could express my concerns with PUC and the Oregon legislatures who are all responsible for this rate hike so that is what I'm doing. Ironic the people of Oregon wouldn't have any say in such a thing as a rate hike, especially one so substantial. Are you SERIOUSLY expecting to have bills paid in full? My familys home bill went from \$275 to \$500 in less than a month with little change in usage. Thats a substantial jump. How would you honestly expect a family to pay such a large sum, especially with the rising costs of food?!?! Is the CEO of PGE planning on paying what family's can't come up with? Better yet, are those that voted for this within our Oregon legislature and the PUC planning to help all of us family's pay these ridiculous bills? I'm pretty disgusted with this all together to be honest. As my family and I are trying to keep up with the inflation of food prices that this wonderful (not so much) administration has instituted, the raising prices of a power bill makes it EXTREMELY difficult to meet or even pay the bill in full. To have our home bill experience such a jump is ridiculous. As we have worked hard to remodel the home, replace windows to help and put in quality insulation, I'm extremely frustrated as our bill continues to climb. Our home is heated with a wood stove and not so much power usage. As I told the manager on the phone call with PGE, this is a two way street The Oregon legislature and the PUC appear to be working together.....WHY?!?! The Oregon legislators voted for this...(NOT ME) But it takes someone on the other side to agree to go along with this. Anyone who thinks this is a good idea can pay any and all my future bills along with the families of all the Oregon citizens. This is utterly ridiculous! Its time for the PUC to hear from the people. Its time for you all to listen up, I STRONGLY oppose any and all rate hikes! - 5/16/2024 6:55:49 AM
Guy Priano - BORING	NO RATE INCREASE! - 5/16/2024 7:35:29 AM
NA - HILLSBORO	No - 5/16/2024 7:36:03 AM
Steve Rice - WEST LINN	In regard to the requested 7.2% rate increase, I disagree with where PGE is prioritizing improvements. My largerest concern is in libe/tree maintenance experience. I understand doing maintenance to avoid forest fires or in winter storm damage avoidance. Yet for the last month I've been witnessing local and out-of-state private contractors doing completely unnecessary maintenance. As someone on a fixed income, funding yet another rate increase is truly burdensome. Let's stop spending money just to satisfy a phantom potential problem - 5/16/2024 7:49:53 AM

Name/Location	UE 435 Public Comments
James Baucom - PORTLAND	The rate increase requested by PGE of 7.3% will drive increased inflation in their service area causing undue harm to people trying to make ends meet. PGE was recently granted a previous 17.4 % rate increase. This rate increase allowed PGE to deliver dividend payments to its stockholders. What infrastructure have they invested in to support additional load caused by EV cars & conversions from natural gas stoves & heating? Please give the ratepayers relief and deny this rate increase. - 5/16/2024 8:02:30 AM
Kelly Young - WOODBURN	As a teacher who is the only income for her family, I have 2 jobs. I cannot afford anymore on my electric bill!! As it is I try to do laundry during off peak hours to save on my electric bill. I don't see how you can possibly justify this increase. You have made so much money and you just increased our bills this year. Please stop!! - 5/16/2024 8:12:10 AM
Susan Bradshaw - WOOD VILLAGE	I don't see how people like myself can pay a lot more for their electricity. Right now I'm on a reduced plan because my income is just my SS check. With the cost of living going up and up I can't afford to pay more. I'm 73 years old and trying to find a part time work from home job. I have physical limits so there are limits as to how much work I can do. I'm now behind on my house payments. - 5/16/2024 8:14:06 AM
Jennifer Kamprath - BEAVERTON	Oregonians are suffering from massive inflation, due to overspending nationally at the state level and locally. We are suffering. People are having to choose utilities or food and here is PGE with their hand out again. How many millions does the CEO make? several million dollars last I looked. This utility and those who run it should feel ashamed. Another increase from PGE is almost laughable at this point. My bill is higher than when I was running the AC 24/7 This utility is greedy and heartless. Oregon is rated the most corrupt state in the union. Prove it wrong and do the right thing with NO MORE rate increases - 5/16/2024 9:17:05 AM
Frieda Cummings - MULTNOMAH	I oppose this rate increase. Electricity is a basic need and an increase in costs will financially burden families like ours who are already combining households to afford housing and utilities.(we are retired and share household with kids and grandkids). - 5/16/2024 9:40:36 AM
Mary Ann Lowe - TIGARD	Please do not allow PGE to increase rates yet again. People in the government need to understand that many of us are on the edge of homelessness & cannot afford the continued dramatic increases for everything essential. PG E gas already obtained massive increases & the government sponsored programs providing discounts have ended. Groceries, gas, housing, healthcare, auto & home repairs, & all utilities gave all had astronomical price increases. What are we supposed to do if we can't afford to live? - 5/16/2024 10:51:45 AM
Danielle Giger Myers - OREGON CITY	I am opposed to a rate increase from PGE. Not only for me, but for everyone working hard to pay their bills. Please look at managing your money better instead of asking for more. - 5/16/2024 10:55:14 AM

Name/Location	UE 435 Public Comments
Lara Uskovich - PORTLAND	Greetings, I oppose docket #UE435, which is PGE requesting a 7.3% increase. This is a monopoly that needs to be curtailed. We as citizens do not have another option to get our electricity from another source. PGE has already impletmented an increase. This will hurt families who dont have big incomes, it will hurt small businesses. It seems like these increases go unnoticed to people who have lots of extra income that have moved to Portland and dont feel the sting of all the utility increases. This is affecting people who are on fixed incomes. How are we supposed to be a city of inclusivity when these utility increases will be driving lower income and middle income people out? How much does the CEO make? Take it out of their gigantic paycheck, not our measly ones. Thank you. - 5/16/2024 11:03:48 AM
Sara Thomas - BEAVERTON	Cut shareholders profits instead of increasing rates. - 5/16/2024 11:16:16 AM
Karen Marie Jaramillo - GRANTS PASS	So you want to make electricity a \$\$\$ luxury now? Solar panels anyone? - 5/16/2024 11:52:29 AM

Name/Location	UE 435 Public Comments
Monica F - TIGARD	<p>Subject: Strong Opposition to PGE's Proposed Rate Increase To the Public Utility Commission, I am writing on behalf of my family of five to express our strong opposition to PGE's recent request to increase annual revenues by approximately \$202.0 million, or 7.3%. As a household that is already struggling to make ends meet, this proposed rate hike will have a significant negative impact on our financial stability and overall quality of life. Our family consists of two working parents who are both small business owners, and three school-aged children. Despite our best efforts to manage our finances, we live paycheck to paycheck, making it increasingly difficult to absorb any additional expenses. The proposed rate increase by PGE would add yet another financial burden that we simply cannot afford. Moreover, we are an environmentally conscious household committed to reducing our carbon footprint. We have invested in energy-efficient appliances and other green technologies to minimize our energy consumption and support a sustainable future. This rate increase feels like a punishment for our efforts to live responsibly and sustainably. It undermines the incentive to invest in green technology if the cost of electricity continues to rise. Furthermore, the timing of this request is particularly troubling. With the current economic uncertainties and the cost of living continually rising, an increase in utility rates will exacerbate the financial strain on families like ours. The proposed rate hike is excessive and will disproportionately impact working families and small business owners who are already struggling to recover from economic challenges. In light of these considerations, we urge the Public Utility Commission to reject PGE's rate increase request. Instead, we encourage PGE to explore alternative solutions that do not place undue financial strain on its customers. Efforts could include improving operational efficiencies, investing in renewable energy sources, and seeking federal or state assistance to offset costs. Our family believes that affordable and reliable energy is a fundamental right. We respectfully ask the Commission to prioritize the needs of everyday consumers and protect us from unjust and burdensome rate increases. Thank you for considering our perspective.</p> <p>- 5/16/2024 12:16:28 PM</p>
Pedro Chavez - PORTLAND	<p>I am writing to voice my concern about this increase in rates. The Rate, we are paying of .08814, Is already high. I just moved into a home, Year over year, the bill has increased about twenty two percent. That last increase is making it harder for me to maintain where I was at financially speaking. With all the other increases happening year-over-year. I now have to increase my income About forty five percent To maintain the living expenses that have increased. Not only have my living Expenses have increased, so have insurance premiums, Homeowners insurance, Vehicle insurance. Not to mention our savings account is diminishing month by month. Thanks for hearing me out. - 5/16/2024 12:19:11 PM</p>

Name/Location	UE 435 Public Comments
Matt Torrey - FOREST GROVE	Please no rate increase we are already paying way to much this increase has nothing to do with energy. It's due to the simple fact that PGE does not hire their own employees anymore. They subcontract everything that's why their bill is so much higher. so they're just trying to pass it on to the consumer that way their profit margin stay the same. Meanwhile, one little windstorm comes along at the end of summer and they shut your power off and still charge you for it on the average pay scale if it passes where does it stop? - 5/16/2024 12:43:35 PM

Jami Burns - PORTLAND	PGE's latest proposal of yet another rate hike, when they just passed a drastically steep rate hike, is astounding and further flat out denies consumers in the Portland Metro area their basic rights' and at a time of a horrible economic climate! It's insulting, unethical and simply NOT RIGHT to consumers in this area. This is truly disgraceful. - 5/16/2024 1:30:47 PM
Jerron Carlson - TIGARD	do not increase the price of power. - 5/16/2024 1:30:48 PM
NA - PORTLAND	It is with deep concern that I address the recent request from PGE for yet another price increase, mere months after the hike in January 2024. This relentless pursuit of additional funds places an undue burden on the shoulders of hardworking Oregonians, already grappling with the challenges of rising inflation. How can we, the consumers, be expected to continually bear the weight of these escalating costs? PGE must recognize the strain their actions place on everyday individuals and families. Rather than perpetually seeking to fill their bank accounts, it is imperative that PGE reassess its priorities and consider alternative measures. One such avenue for consideration is a thorough examination of the company's profits and the dividends lining investors' pockets. Surely, there is room for adjustment within these realms before resorting to further squeezing the wallets of the very communities they serve. As the cost of essentials such as gas and groceries continue to climb, maintaining a semblance of financial stability has become an intricate balancing act for many Oregonians. It is incumbent upon PGE to acknowledge the economic realities faced by their customers and to align their actions accordingly. In light of the recent price increase and the ongoing economic pressures faced by consumers, I urge the Oregon Public Utility Commission to reject PGE's request for another hike. Let us send a clear message that enough is enough and demand accountability from those entrusted with providing essential services to our community. - 5/16/2024 1:59:37 PM

Name/Location	UE 435 Public Comments
Laura Claeys - HILLSBORO	I oppose any rate increases. Pge just had an almost 30% increase approved. Our electric bill has increased more than than the current inflation rate. This rate needs to be denied and pge should use the increase they already got for what they need. - 5/16/2024 2:19:49 PM
Rachel Correll - OAK GROVE	I oppose the request for PGE to increase rates by another 7% after PGE rates increased by 18% in 2023. The PUC should be voting in the interest of the people. Paying more for utilities is not in the public's best interest during a time where inflation and taxes are at an all time high for Oregonians. Like the rest of us, PGE can work with what they have already have (\$500 million in annual revenue after 2023's rate increase?!!!). Enough is enough. - 5/16/2024 2:45:46 PM
Zita Podany - PORTLAND	Docket No. UE 435 I strongly oppose PGE getting another usurious rate hike. They already had three of them in succession. They hire contractors that create problems which end up costing them more money. They can't seem to coordinate work orders and work to be done in neighborhoods. They don't seem to plan and set money aside for emergencies. Fiscal management is not their strong suit. Our household has to adhere to a strict budget and careful planning. PGE needs to do the same. Year after year they have increased their rates to an unsustainable level on most of us. My paychecks are not keeping up with their rate increases. They have already tapped us out this year with the huge hike they got in January 2024. No more rate hikes. Too easy to be fiscally irresponsible if you know you can keep coming back to the public trough to get more money. We want to see a full audit of where every cent has been spent. They need to do what we have been doing for the past three years--- tightening our belts and cutting expenses. Electricity is not a luxury but a basic need. I oppose this rate hike (especially since it is the third one in three years and each is a HUGE rate hike. To PGE it is an "only by this much" increase; for us it is a "huge burden, a bleeding-edge burden." - 5/16/2024 3:17:00 PM
Holly Dodgson - TUALATIN	We simply cannot afford another excessive rate increase. The rates were just raised in January. Your CEO makes \$11+ million a year while Oregonians are struggling to pay for electricity. - 5/16/2024 3:29:11 PM
Dan Correll - PORTLAND	I stand firmly opposed to this proposed increase to my rate, these increases are not sustainable to the public while it might seem small' when you add all the smalls together it becomes just to much. I don't get pay raises like what's being asked for by PGE, it's just got to stop !!!!! Dan Correll - 5/16/2024 3:54:38 PM
NA - TUALATIN	PGE needs to specifically say exactly what the extra revenue is needed for. Their misuse of revenue in the past has been rampant. For example, as a public utility their CEO made almost \$7 million dollars, which is 50 times what the average employee makes there. This is a gross misuse of funds. - 5/16/2024 4:02:41 PM

Name/Location	UE 435 Public Comments
Julie Blackman - PORTLAND	I oppose PGE's request for an increase in residential rates to take effect in January, 2025. PGE's rates have increased by 30% since 2022. The last increase was 19%, which has had an enormous impact on households in the service region. After an increase of that size PGE should be able to manage for at least 2-3 years without additional increases. PGE states that increases are necessary for a variety of reasons, few of which have to do with increased residential demand. We are all aware of the growing number of data farms, etc., which consume staggering amounts of power (while providing relatively few jobs in the surrounding community). If PGE is so eager to serve these industrial customers perhaps it should shift the costs of doing so to those industrial customers. PGE's service has declined as its rates have risen. It needs to be told 'no' firmly and forcefully. Please reject this requested increase. Thank you for your attention to my concerns. - 5/16/2024 4:42:10 PM
Ty Hickey - TIGARD	Portlanders are facing a record inflation and interest rates and are struggling to make ends meet and raising the cost of basic necessities like electricity is unconscionable especially when PGE is making billions in Revenue already - 5/16/2024 4:42:34 PM
Ty Hickey - TIGARD	Portlanders are facing a record inflation and interest rates and are struggling to make ends meet and raising the cost of basic necessities like electricity is unconscionable especially when PGE is making billions in Revenue already - 5/16/2024 4:42:35 PM
Kellie Smith - MULINO	To whom it may concern, I oppose of UE435. There has already been 2 increases with PGE and with another possible one now, it's causing more harm than good. My whole community struggles with the current PGE rates. Repairing power outages are un-organized and take to long to fix with how much money is going back to PGE. No more increases. Thank you. - 5/16/2024 4:55:44 PM
Cassandra Johnson - TUALATIN	Electricity should be fundamental to survival any more. We cannot afford to keep the increase PGE costs. It is making living untenable. I should not have to choose between keeping my home running or feeding my child. - 5/16/2024 4:57:45 PM
Janice Newton - SANDY	Please don't raise our rates again! You just raised them and if you raise them again it will hit our cost of living here so hard! We are barely able to live here as it is! With inflation and the various taxes it is just getting too expensive. I am a native Oregonian and it is getting to the point that we may have to leave our beloved state! Raising the rates will really hit the middle class, the poor and seniors. Not to mention the various businesses, who will then pass their rate increase onto us ,the consumer. I am really concerned about our kids as well, they have it so much harder than we did. We can't print money like the government can! - 5/16/2024 4:59:50 PM
Jennifer Cosenza - TIGARD	No! We are all struggling to stay within our own budgets and scraping by PGE should budget like the rest of us. Please do not do this. It results in rent increases, and continued struggling for small businesses and homeowners. Do not do this. Timing is awful. - 5/16/2024 5:34:13 PM

Name/Location	UE 435 Public Comments
Jennifer Stone - TIGARD	PGE just raised our rates by 17% in January and were very VERY slow to restore power (or even communicate) during the ice storm. Please do not allow an additional 7% rate increase. - 5/16/2024 5:44:23 PM
Helen Ware - GRESHAM	I am a PGE customer in Gresham. I am also a Senior Citizen and a concerned citizen. I do not want to see PGE get another rate increase as the 17% last year has already been hard on my budget as well as the budgets of most people I know. I feel the new request is a money grab, using upgrading infrastructure as an excuse to increase profits for the company. Profiting at the expense of the everyday citizen is unconscionable in my opinion. Please do not grant this money grab by PGE. Thank you. Helen Ware Gresham, OR - 5/16/2024 5:44:29 PM
NA - PORTLAND	The rates were just increased by around 17-18 percent at the beginning of the year. An additional 7% would be an unbearable financial burden for so many residents who are already struggling. This is not the time for upgrades. Please wait at least an year and give ample notice so people can prepare. - 5/16/2024 5:47:44 PM
NA - PORTLAND	Undue financial burden. This is a case of cost of doing business--not of increasing share holder value. Newly Planned upgrade especially after last year increase is ridiculous. - 5/16/2024 6:14:27 PM
Merrily Schulenberg - PORTLAND	I am on a fixed income. I am elderly and not well. I am so cold in the winter and so hot in the summer to try to save on my electric bill. I eat cereal for dinner because food is so expensive. I don't use my oven. I have many doctor bills and prescriptions are so high. There is nothing else I can do to save on my electric bill. I don't get help to pay it. We can't afford to pay more and more money. - 5/16/2024 6:39:54 PM
John Chambers - TIGARD	How do expect people to keep paying more and more for so many services. Food, gas, rent, healthcare, insurance and more from electricity? Prices are rising yet people's wages have not increased. For some people it has been the same for years. Companies are raising rates just so their profits can expand and share holders can get more money. Yet those who are working hard are not seeing any increases. Please don't raise the rates AGAIN!! Thank you for your time - 5/16/2024 6:52:19 PM
Lora Meisner - SALEM	Not sure I chose right docket # but I am against PGE request for another 7+% increase --too high. Maybe cut executive salaries and give them 3% increase - 5/16/2024 7:00:57 PM
Brenda Smith - BEAVERTON	Please do not raises prices more. - 5/16/2024 7:51:08 PM

Matt Hays - PORTLAND	When my power bill was \$550 for one month during the winter, I stopped eating out. When it was \$800, I signed up for food stamps. When I couldn't afford it, I had to ask for public assistance. This is for a 2 bedroom home. - 5/16/2024 9:39:48 PM
Lisa Burch - HILLSBORO	No! My bill has gone up dramatically! - 5/16/2024 10:03:45 PM

Name/Location	UE 435 Public Comments
Roger Shutters - PORTLAND	We can not allow ANOTHER rate hike on utilities. We are surrounded by ever increasing suffering in the form of homelessness and subsequent issues that arise around it. This suffering directly correlates to unchecked, skyrocketing rent and utility prices. I work 40 hrs a week and already taxed to death. Enough is enough. - 5/16/2024 10:23:42 PM
NA - BEAVERTON	Homeowners are having to adjust to such a massive increase already- please don't take advantage of the people who don't have other options for electricity. There will be a time for an increase, but this is so close to the current increase. - 5/16/2024 10:38:39 PM
D W - PORTLAND	Please refuse the additional rate hike PGE is requesting. PGE announced record profits for 2023 raking in \$2.2 billion, a nearly 25 percent increase. - 5/16/2024 11:12:10 PM
NA	I strongly disagree with this rate increase. You have already increased the prices and should not punish hard working Oregonians who are already struggling. Shame on PGE and anyone else who votes for this. Balance your budget. NO NO NO - 5/17/2024 12:31:45 AM
Virgina Quimby – Beaverton	vsquimby@everyactioncustom.com. Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Ms. Virginia Quimby 15205 SW Emerald St Beaverton, OR 97007-7150 Vsquimby@hotmail.com - 5/17/2024 12:31:47 AM
Linda Andren – Portland	sunraven2@hotmail.com<mailto:sunraven2@hotmail.com>. PGE - Many of your customers are elders, as I am. Many are on fixed incomes. Your recent rate increase of 18% already impacted many; hit my budget hard! Please rethink this proposal. This increase may well cause households' electricity to be turned off! With the current outrageous property taxes, increases in general necessary expenses, and now your proposed rate increase, many of us will be forced out of homes we have lived in for 50 years or more. I SAY NO TO PGE INCREASED RATES. Please don't do this to your long-time customers! Linda Andren 10808 SW 39th Av Portland, OR 97219 - 5/17/2024 12:31:49 AM

Name/Location	UE 435 Public Comments
Anna Kharisova – NA	Hello, This message is to express my strong opposition to the proposed increase requested by PGE. We are a family of three, who live in a small townhome. Our electrical bills went from \$90 during the hot summer months to \$140 during the winter months. I'm terrified of what my bill will look like this summer. The last increase has been devastating, and PGE greedily continues to request more and more. An average Oregon family can't afford these constant increases. The increase will affect families and small businesses that are supposed to be the backbone of this community, but instead, the state just finds another way how to take our money away: new taxes, and levies, fees are increasing and being added every year with no end in sight. This is your responsibility to take into consideration the economic well-being of the residents and acknowledge that we can't afford this increase. Sincerely, Anna Kharisova - 5/17/2024 12:31:51 AM
Rochelle Yambra – Oregon City	Regarding UE435 I'm am emplororing you not to increase the PGE rates. It costs over \$500 a month already to heat our house in the winter. We can't afford to convert to another form of heat. Please don't make this a worse financial burden! Thank you! Rochelle Yambra 164 Canemah Rd. Oregon City, OR 97045 - 5/17/2024 12:31:54 AM
Carl Ellis – NA	I am a resident of Silverton and I strongly oppose another rate increase. Portland General, like all of us, needs to do better with what they have. I certainly haven't received a 26% raise over the last two years. -- Carl Ellis - 5/17/2024 12:31:56 AM
NA	No! Sent from my iPhone - 5/17/2024 12:31:58 AM
Kay Lynn Schwab – Clackamas	Stop the rate hikes we pay enough for what should be free. Kay -- Kay Lynn Schwab Call, Kay Direct: 503-504-2528 MORE Realty, Inc. 10121 SE Sunnyside Rd S-300 Clackamas,Or 97015 OR Real Estate Broker license #870300223 "AO KAY" - 5/17/2024 12:32:01 AM
Bryant – NA	Do not raise energy rates. Costs of living for families are already too strenuous. - Bryant - 5/17/2024 12:32:03 AM
Lisa Boley – NA	I object to any PGE rate hike. Like many, I simply don't have income to cover an increase for anything. Rent, kids, Dr. appointment, or pay my PGE bill. Difficult choices for many - this rate hike will harm low-income workers, single parent families, and retired folks the most. Respectfully, Lisa Boley - 5/17/2024 12:32:06 AM

Katie Beymer Nguyen – Portland	<p>Hello, Thank you for taking the time to hear testimony from Oregon Residents. I volunteer my time in my NE Portland community daily. I am writing to you to share the hardships that Portlanders & Oregonians are facing. Just this weekend we severed over 80 households in our neighborhood at our neighborhood event. Consistently we were hearing from people that don't have any extra funds right now. They were so thankful that we were helping them. The major majority at the event were homeowners or renters, Not living in "affordable" housing. Most of the people in my neighborhood in Parkrose, NE Portland, are long time Residents. We have family's that have lived here for multiple generations. We have the highest tax rate in the city out in east county. It is very expensive to live here in comparison to our annual income. But people want to continue to live here; in their homes. People all around us are barely hanging on to their homes. Many of which are long time family homes. When you allow rate increases, you are pushing out our Portlanders! You can't turn a blind eye to that or use the media's perspective that the middle class is doing well. We need you to understand how this rate increase would affect families or individuals. So please hear us. Please step into the community. Listen with your own ears and see with your own eyes. This testimony can't put into words how bad things are getting for people. Current Residents cannot take any more utility bills, or taxes for that matter. Please, say no to this increase! Work on better using this money that is already being paid. Utilities is a huge business and it shouldn't cost us that much to have electricity, water or gas. Use what you have now and work towards giving Decreases to Residents. There are a lot of people the would work hard to find ways to decrease rates. This should be a priority right now. An increase would start gentrification in my neighborhood. It would push people out of their homes, out of their communities. People will have to move to survive the economy. It's so sad to see neighbors expensive medical bills, high property taxes, high utility bills, high grocery costs, high gas prices, insurance rates.... Middle class people are barely getting by. East county residents deserve to feel safe in their homes and not feel like they need to move out of Portland because they can't afford to live here. I myself am an independent contractor and my income this year in Q2 is way down. My husband and I think about moving frequently to find a place we can better afford. Our jobs are here, our heart is here. I'm a 4th Generation Parkrose resident - settlers from Scotland. And my husband's family settled here from Vietnam. Our kids are 5th generations living here. And I think about that often.. will be be able to continue to live her without change? Who is standing up for people like us and our neighborhood? Who will say enough is enough? Electricity really should be cheap - it is not expensive to make electricity. It's the overhead and the money trails that have led us here. Do not allow this again. PGE is just taking advantage of us here in Portland. I've heard chatter from folks who live in the Eastside of 122nd, trying to figure out how to get into PPL, since rates are considerably cheaper. We shouldn't have to suffer and be committed to PGE. We should have the ability to vote them out and use PPL since we are so close to the line. Who is speaking up about this point as well? Thank you again for your time. I hope this testimony gives you a glimpse into the hardships people all around us are facing & the gentrification we do not want to continue to see around us. Thanks, Katie Beymer Nguyen - 5/17/2024 12:32:09 AM</p>
NA	<p>No, the PUC should not be granted a rate hike! Do your job! Regulate this PUBLIC utility! Get Outlook for iOS - 5/17/2024 12:32:11 AM</p>

Name/Location	UE 435 Public Comments
NA	Good morning, I know there is some discussions on raising the rate of the cost of electricity and I would like to give my feedback and answer any questions you may have or do whatever needs done to prevent this from happening. Thank you for your time, have a lovely day. - 5/17/2024 12:32:13 AM
JR Slattum – NA	It is beyond unconscionable that Oregon regulators and PGE are demanding a new 7% increase, especially directly after a 17% increase in 2024. Leadership is haphazardly chasing green energy- destroying previous abundant energy before new energy is secured. Cheap hydro and natural gas is being eliminated before we even have the infrastructure to offset. Not to mention the science isn't settled with these new green energies- they often create as much environmental damage and sometimes more. Who is lobbying leadership? Low income and middle class Oregonians are being forced to carry the burden- since our income is disproportionately affected by utilities bills. All this in the face of record profits and revenue??? With record inflation, the 2nd highest effective tax rate, and record cost-of-living We The People are not being represented in Oregon. We are being bled dry-- The Art of J.R. Slattum www.JRSlattum.com - 5/17/2024 12:32:15 AM
Brandon Wingerter – NA	Public Comment concerning Docket # UE435 We, many of the people and myself included and those of us who have assembled on Oregon recognize that your intention to authorize another rate increase for the benefit of PGE who filed for such request only benefits those that are requesting the increase, and only initially. Times are tough financially for most and this increase will only further burden all of the people who are currently using PGE services. It is not acceptable for you to continue increasing prices on already financially burdened people! I, along with many others DO NOT AGREE with this increase and I hereby state for the record that you should strike this request down and we say NO to this attempt at further inflicting yet another financial hardship upon the people that would otherwise create a ripple effect of causing more people to incur additional costs not just in their monthly PGE bill but additionally with increased cost across the board for goods and services on a local level due to the increased cost to operate business as well. This is a shame that you all are even attempting to increase the cost knowing very well that the outcome will only burden the people initially but in the long term will also cause PGE's own demise as eventually people will not be willing and able to continue paying for services that are already so costly and will either discontinue service and/ or seek out alternative power options or find their own solution which may include but not be limited to doing without their service altogether. Thank you for not authorizing this increase in advance, Brandon Wingerter brandon.wingerter@gmail.com<mailto:brandon.wingerter@gmail.com> (503) 884-8850 - 5/17/2024 12:32:17 AM

Timothy Dalbey – NA	I'd like to voice extreme reservation about raising electricity rates. Recently I've stopped heating my house in the winter - choosing only to do so when my kids are home - because the cost of electricity is prohibitively expensive. Raising rates again would just exacerbate those issues. My hope is that the utility returns to providing consumer value - that is value in excess of what a fair market price is. Right now it feels like they are really on the wrong side of the equation. Thanks, Timothy Dalbey - 5/17/2024 12:32:20 AM
Mary Ann Swanson – NA	To: PUC Comment: I am a 74 year old female on social security. I am retired and receive minimum increases from social security. I live in Estacada, OR; I live within my financial income. The 18% increase from PGE caused me to turn down my thermostat so much that my hands were cold. I have no other option other than electricity to heat my house. I live within my means. All private and public companies receive income from their customers. I believe that PGE should not under any circumstances receive an additional 7.4% increase. The 18% increase last year hurt many, many people! PGE should be required to budget like every other company and resident. It is not fair to price gouge the public; they should update their needs over time based on their income from customers. I would love to receive an 18% increase from Social Security; instead our government is talking about an 18% cut in the future. Option: give seniors a price freeze! Mary Ann Swanson maryannswanson13@gmail.com<mailto:maryannswanson13@gmail.com> 503 467-1121 - 5/17/2024 12:32:23 AM
NA	NO RATE INCREASE !!! - 5/17/2024 12:32:25 AM
Jo Walbaum – NA	To Whom it May concern: I would like to address the yet another price hike for Portland General Electric. We just had a massive price hike of 18%. And this about ruined us financially to have such a high increase with all the other inflation costs of food, water, gas, etc. 18% is much much higher than a cost of living increase. How are we expected to pay for this? And now another increase of 7.3% again? That's over 25% increase!!! We don't get a 25% COLA increase- ever!! Is PGE mismanaging their income? Why can't they use the first increase to do what they need? At least spread it out over 5 years or something. Majority of Americans are unable to afford such increases. You will bankrupt companies and families just trying to live. I urge you- do not pass this new increase. Hold PGE accountable for the first increase- we've barely had time to adjust to that one. Sincerely, Jo Wallbaum - 5/17/2024 12:32:28 AM
	To whom it may concern: I'm writing to encourage PGE to abandon its recent rate increase. Citizens have been hit with significant inflation by the media reports record profits for many corporations. PGE looks to be doing pretty well as it is, without demonstrating any additional value for such a significant increase. Show the ratepayers where the value is in then we can talk. For now, no more increases. Thanks for your consideration. Alex Trauman - 5/17/2024 12:32:33 AM

NA	There was a rate hike if I believe 17% at the beginning of the year and I DO NOT BELIEVE We need another increase when there has already been along with all the other increases in utilities groceries, rents, property taxes, and a whole host of other entities the list is endless!!! ABSOLUTELY DO NOT IMPLEMENT A RAISE INCREASE. ENOUGH IS ENOUGH!!!! Sent from my iPhone - 5/17/2024 12:32:41 AM
Dan Halverstadt – NA	No thank you to the rate increases We are a struggling family and we don't need another rate increase on the heels of the one we just got Thanks Dan Halverstadt Sent from Yahoo Mail for iPhone - 5/17/2024 12:32:43 AM
Claudia Curt – Hillsboro	Hello, I am writing regarding the above docket number for yet another PGE rate increase. I am a senior citizen living on ONE fixed income. My rent is going up, the inflation and cost of everything is through the roof. I can't take any more electrical rate increases. My income cannot keep pace! PGE has socked it to us repeatedly. NO MORE! Claudia Curt Hillsboro, OR - 5/17/2024 12:32:46 AM

Name/Location	UE 435 Public Comments
Arina Khoroshenkikh – Portland	<p>To the Oregon Public Utility Commission, As a citizen of Portland Oregon, the request for increasing the annual revenues by 7.3% is outrageous. This increase will interfere with my quality of life and will make it harder in an already struggling economy. The average household is not stable enough to be a single salary, this increase will hurt the average household even more than can be expressed. This last winter has left a bad taste in my mouth and more people can say the same. After sitting in a cold house with no electricity, it left me personally with a very poor impression on PGE. I can not comprehend that after that I will have to pay even more to just simply have electricity after all that. I love this State and want to stay here till retirement but if this will keep escalating at this rate I will have to reconsider. I have lived here in such a beautiful lush green state with friendly people and wonderful sites for 22 years. I am starting to feel like I am being pushed up due to my socioeconomic status. Please reconsider this request. With Kindest Regards, Arina Khoroshenkikh - 5/17/2024 12:32:48 AM</p>
Neil Anderson – Portland	<p>I'm writing to request that you please not raise our rates. Taxes in Portland keep going up in every area, while the city gets dirtier and more dangerous. Please have mercy on the citizens of Portland and stop taking money from us while the city crumbles around us. --Neil Anderson - 5/17/2024 12:32:50 AM</p>
Annie V – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. I want to specifically mention that our Church (West Hills UU Fellowship) supports a number of non-profit organizations that help the low income and under served people in our area. These folks are barely making it week to week, and they are often faced with hard decisions about paying their rent, their PGE bill, or buying groceries, or gas for their car so that they can get to work. An increase for these people would be devastating - they are stretched to the limit now, please don't allow these increase to happen. It is my sincerest hope that you on the Commission will do the right thing, and deny this rate hike. -Annie Vigileos Please do not approve PGE's rate increase request. Sincerely, Ms. Annie V. 12140 SW 127th Ave Portland, OR 97223-1802 anniekv3@yahoo.com - 5/17/2024 12:32:53 AM</p>
NA	<p>Hello, I am an Oregon resident and PGE customer and I do NOT APPROVE of this 7.3% increase for PGE customers. Why is it that hard working Oregonians need to pay more just to live now a days, my wife and I work hard to support our 2 boys and take care of her parents, this increase would make that harder on our family. - 5/17/2024 12:32:55 AM</p>

Name/Location	UE 435 Public Comments
Vlad Khoroshenkikh – Portland	<p>Oregon Public Utility Commission, I am writing to express my concerns regarding the proposed rate increase, which I believe will have a negative impact on all households in Portland. It is evident that the quality of service provided has declined over the past year, yet consumers continue to be burdened with increasing payments. Many families are currently struggling with the recent price spike, and the consequences were particularly dire this past January when numerous families were left without power during freezing weather conditions for days. Even now, many households can't pay their monthly bills. With inflation affecting all essential goods and services, including power, many people are being pushed to rely excessively on your discount program. This program burdens the average consumer since a percentage of their monthly bill goes towards it. With the increasing number of people forced to join the program, more individuals will struggle financially. Over the years, the average Portlander has found it increasingly difficult to afford living in Portland, and these actions are exacerbating this issue, potentially forcing residents to either relocate or face homelessness. Additionally, I would like to address the discrepancy between the promised rate increase last year of 18% communicated to consumers last year and the actual 24% increase discovered when analyzing the cost per kilowatt. When I contacted PGE last year regarding this matter, the response I received from the representative was dismissive and unhelpful, such as "we don't specialize in math," "Just see your next bill; it won't be that much of a difference," and "you're the only one who cares." It is concerning that such misinformation and lack of transparency exist within the company. Therefore, my main question about this price spike is: what will be the actual rate increase? I urge you to reconsider the proposed rate increase, as it will only further burden Portlanders and contribute to the ongoing affordability crisis. Furthermore, with the mismanagement of funds within PGE, Portlanders are bearing the brunt. The CEO of PGE has a salary of \$6.97 million dollars, yet the average household is living paycheck to paycheck in the current economy. PGE has the funding to pursue projects but is choosing to increase the burden on its consumers instead of working with its current budget. I hope that you will prioritize the well-being of Portlanders and help the average worker struggling to get by. Vlad Khoroshenkikh - 5/17/2024 12:32:58 AM</p>

NA	<p>Hello, I am writing because I want to object to PGE's proposed rate hike for 2025. I am a homeowner who lives on a tight budget. When PGE increased rates by 18% beginning in 2024, my monthly bill for electricity has almost doubled--despite a drop in usage! In other words, like many, many other residential customers, I too have directly experienced far more than that 18% hike. When PGE proposes yet another rate hike, I do not trust that it will in fact be the percentage increase that PUC approves. PUC needs to examine the salary (and bonus) paid to PGE's CEO. PUC needs to examine the salary (and bonuses) received by PGE's executives. Why does PUC need to do both those things? Because many utility companies behave like corporations by gouging consumers while continuing to pay their CEOs and executives extremely high salaries. As PUC knows well, consumers cannot treat their utility companies like they do other corporations because utility companies are monopolies. PUC is supposed to protect consumers from exploitative utility monopolies. The number of complaints I have both read and heard about regarding PGE's 2024 18% rate hike (which, as stated, is almost always double or triple that 18%) indicates that consumers are not only unhappy with PGE but also with the lax oversight offered by PUC. To conclude, I urge PUC to reject the rate hike for 2025 and to only approve a rate hike once: * PGE has proven that its CEO and executive salary increases and bonuses for 2023 onwards do not exceed the cost of living; and * PGE has proven that its 18% rate hikes have in fact been 18%. (PUC could carry out a random sampling of residential and business utility bills.) Thank you. - 5/17/2024 12:33:26 AM</p>

Name/Location	UE 435 Public Comments
NA	<p>No to increased rates. We know where most of these rate increases are going, and it's to PGEs largest shareholders (Blackrock, Vanguard, and Wall St. generally). It does not serve Oregon's interests. At some point, the commission must return to its core job, and that's to protect Oregonians from predatory pricing, while insuring that our utilities run smoothly and at fair rates. Your job isn't to enable exploitation of consumers, while politicians and experts who pave the way for industrial polluters turn around and finger wag at people for their home energy use. Technology won't save us, if this is how the practice will go. We all understand the importance of modernizing the grid and maintenance. However, enough is enough. There are plenty of ways to pay for this besides sticking it to residents and small business. It's counter-productive and I dare say criminal to raise rates aggressively, with most of the profit being sucked away to NY, while low-income people have to choose between heating their home or groceries during the winter. Likewise during hot summer months and A/C. How do scenarios like this help us in our climate goals or socioeconomic justice initiatives (assuming that isn't all talk)? With actions like this, you might think that you're checking off one box, only to open a Pandora's Box somewhere else. I know it's currently fashionable to squeeze working people and screw the poor, but you, at least for once, can resist this sad fetish that won't get us anywhere. At our home, we're conscious about the energy we use. We have signed up for renewable energy. As rates have risen we've moderated our use, as much as is realistically possible, short of living by candle light or handwashing our clothes. Yet despite our energy use comparing favorably to other residential users - and by that I mean people who actually make a home, and who aren't working 60 hour weeks chasing dangled carrots and eating nothing but take out food - our bills continue to go up. It's not our kWh that is increasing substantially, but just the dollar amount. We're being gouged, simply for living a healthy and balanced lifestyle, that isn't about driving around errandsville and feeding the corporate cash nexus all day. This has to stop. Otherwise, support for renewables will wane. And by the way, the whole point to renewables is that it shouldn't cost too much to use for basic things and we should be able to use it without guilt, you know, because it's renewable. You have an opportunity to stop this shameless profit grab, and restore some perspective. Or you won't. But if you don't, change is coming whether you like it or not, because what can't last, won't last. Sincerely, Paul Ottaviano Beaverton P.S. - I'm a small shareholder in PGE and my reasons for this are simple. If they're going to bend us over, the least they can do is pay us a dividend. Noreen Gibbons – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. I am a senior on a (low) fixed income and while I appreciate being the recipient of PGE's low income "discount" program, I still struggle to pay my necessary utilities. I am vigilant about keeping my usage down as low as I can, being a good steward of planet Earth. This increase will have a big detrimental effect on myself a countless others!! PLEASE reconsider.....be CONSIDERATE! Please do not approve PGE's rate increase request. Sincerely, Ms Noreen Gibbons 10730 SW 72nd Ave Portland, OR 97223-8704 nmmgibbons@gmail.com - 5/17/2024 12:33:31 AM</p>
Rebecca Gammons – Beaverton	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. As a senior on a fixed income this is going to have a huge impact on me. I am already forgoing medical care and nutritional needs as much as I can to handle all the increases. This has to stop! Sincerely, Rebecca Gammons Please do not approve PGE's rate increase request. Julie – Portland	<p>Good morning, As a native Portlander I have some serious concerns about the direction that the PUC appears to have detoured. I am old enough to remember when my parents and grandparents were discussing the utility monopolies as well as the purpose and plan for the creation of the PUC. There was a definitive purpose that the PUC was created for. It was to expressly NOT allow the utility companies to raise rates without approval that would protect communities, small businesses, and the prosperity of the residents of Oregon. My question is ... what happened? For all intents and purposes it appears that the PUC has a money trail that leaves the character and integrity of the commission in question. Furthermore, how can you in good conscience accept rate increase proposals from PGE repeatedly and then not only approve them, but actually increase them over and above of what they originally requested? Who does that? If I ran my business that way I would be out of business before I started. Pardon me but SOMETHING STINKS IN A BIG WAY! As an adult who has seen many things change in this State since my childhood I can say unequivocally this entire situation is odoriferous and it will only be a matter of time until the agenda and money trail is exposed. Just in case there is any doubt about where I stand about PGE, let me be perfectly clear. NO! NO! NO! NO NEW RATE INCREASES!!! The supposed reports they have provided are bogus and not at all transparent. There is NO WAY the customers of PGE are going to allow this trajectory to continue without serious honesty and transparency. The strong arm tactics that PGE uses to prevent homeowners from deciding what choice of heating/cooling/power they want is unconscionable. If I want to use LP, LNG, wood, pellet, solar, wind, or any other form of energy in and on my own property I have a right to do so. It is NOT acceptable for PGE to 'deny' a request from a homeowner by refusing to allow connection, regardless of the source. PGE has every intention of monopolizing every form of energy as evidenced by their propaganda and treatment of customers. While we're discussing honesty, integrity, and transparency, when is the PUC going to provide the same to the citizens of Oregon by producing their fiscal ties and investments? Just thought I would ask. Your credibility is also being reviewed so it would be to your advantage to come clean as well to the citizens you are supposed to be representing. Have a nice day. Richard A – NA	This email is to express my opposition to any additional rate hikes by PGE or any other electricity provider in the state of Oregon. With the last rate hike, I saw my monthly bill increase to over \$500/month. This was after I upgraded my 27 year old furnace and heat pump to a new, more efficient model. We don't have the option to choose who our electricity provider is. Power generation is being forced over to expensive, wind and solar options that require power to be stored for non wind/solar periods. Coal, natural gas, water and nuclear power generation options are being eliminated before technology has reached a point to match the need. Oregonians cannot afford another rate hike on top of our national high gas prices, housing, and food prices. It is unsustainable. Richard A. - 5/17/2024 12:33:48 AM
Kellie Buster – NA	-----Original Message----- From: kellie buster <tkbusterus2000@yahoo.com> Sent: Tuesday, May 14, 2024 2:44 PM To: PUC PUCHearings * PUC <puc.hearings@puc.oregon.gov> Subject: Rate increase? tkbusterus2000@yahoo.com. Hi my name is Kellie Buster I am the President and Founder of Stop Pge! They alone have hurt our state in so many ways! You'd be smart to boot them out of your state! I will tell you we were looking to move to Oregon but not now! I did not know pge was all the way over there! We can't get homeowners insurance because pge has caused a lot of fires here, has killed people because their infrastructure is failing! My electric bill was \$850 we are moving out of this state! Our governor appointed the Cpuc, pge gave the governor 1.1 million to fight his recall! Pge gives money to political campaigns where they should not! They made 2.5 billion dollars in profit and their ceo made 17 million in profit and they want to raise rates? Don't be like California they will ruin Oregon! We started out with 30 ratepayers and are now 9 weeks later 1800 members and growing daily! Goal all of pge 16 million ratepayers then we will be a political power house! STOP PGE! Holly Knutson - BRIGHTWOOD	I heard about PGE purposed rate hike last night. As families struggle to meet basic needs- this seems unacceptable. As a family after the last rate hike, we turned our heat down to 65 and have sat with one light on. Our bill after rate hike jumped up to over \$1200. Not every house in Oregon has insulation and the right windows and Those people who make too much to qualify for home upgrades in weatherizing are out of luck. We are already struggling with that 20% rate home! Every light on I think that's 20% more and now they want another \$18% by time it's done! Figure out something else! Please. We cannot afford it our neighbors cannot afford it! - 5/17/2024 4:37:43 AM
Ilene Nutt - BEAVERTON	I oppose the additional rate increase that is for Portland General Electric (PGE) - Docket UE 435. I am a senior citizen, and I am barely making ends meet with only approx. \$150 a month for food after all my bills are paid. Please do not approve this increase until the economy improves. I do not qualify for utility reduction because my income is not poverty level. Thank You, Ilene Nutt - 5/18/2024 10:11:48 AM
David Strantz - PORTLAND	I can not believe PGE is TRYING to raise the rates 7% after the recent 17% aise in the rates. Does the Oregon Public Utily Commission EVER say No to PGE rate increases? Correct me if I am wrong the majority of our POWER comes from Hydroelectric sources. Its been a Wet year and no shortage of water. Government needs to stop the GREED. - 5/18/2024 11:08:37 AM
Cheryl Ford - PORTLAND	Hi, The company needs to do a better job of managing. It is totally unacceptable to have such a high gross income on the back of struggling families. Families having to choose between food and affording electricity. Especially while the person leading this company makes 8 million. Absolutely unbelievable. - 5/19/2024 5:07:05 AM

Name/Location	UE 435 Public Comments
Gregory Blaumer - PORTLAND	<p>I am strongly opposed to the upcoming PGE 7% rate increase planned for Jan 2025. PGE has increased rates 3 consecutive years - here they are: 2023 increase- between 7 and 20%. 2024-17% increase. Adding the planned 7% for 2025 - on the conservative end our rates increased +31%. At the higher end - over last last three years we have endured a total increase of +44% - this is intolerable and way out of line. PGE currently budges roughly \$17 mil for battery storage. The upcoming increase shows a budget of \$202 mil for battery storage. There's something wrong here - really from \$17 mil to \$202 mil????? Looking at the compensation of the CEO Maria Pope- here are the numbers: 2020- \$3.3 mil for salary and stock. 2021-\$5.3 mil. 2022- \$6.2 mil. 2023 - \$6.8 mil. Her compensation has increased 100% from 2020 through the end of 2023. Perhaps the CEO could reduce her annual compensation for a change in lieu of soaking the utility customers for the third time in three years. It is interesting that the CEO sold over 44,000 shares of stock in May 2024 - nearly \$2 millions dollars in total. PGE is apparently a very profitable and solvent public company - the most earnings report shows a +24% increase in total revenue - so the company is not having any issues regarding revenue. The company raises its dividend yearly. Here are the dividends per share by year: 2020:\$.39 per share. The new dividend for 2024 is now up to \$.50 per share. This current new dividend is 28% higher than the dividend in 2020. In my opinion this new rate increase including the last two years of increases show a large amount of mismanagement and bad policy decisions. I feel very sorry for the poor people who are struggling paying their monthly bills given the current inflation for food,other utilities, services and regarding other inflationary bills that the average utility customer have to contend with. Many are barely getting by now - another PGE rate increase that is not justifiabe by any means might put these poor folks on the brink. PLEASE OPUC - do not allow this un-warranted and unnecessary rate increase for PGE effective for January 2025. Thank you Gregory W Blaumer - 5/19/2024 12:34:40 PM</p>
NA - PORTLAND	<p>I can't afford to pay for an increased power bill. PGE's proposal is a slap in the face I'm barely able to afford my groceries, my child's daycare.. and yet PGE wants me to go into debt paying for electricity, which I have no other option on. Something needs to be done, something needs to change. All of these expenses cannot continue to fall on the consumer. We don't have any more to give. - 5/19/2024 1:34:35 PM</p>
Laura R - GASTON	<p>I'm not entirely sure which docket is for PGE wanting to increase by 7% but I know for a fact we cannot afford this with our 2 income family of 5. We are barely making ends meet right now and getting buried in debt each month trying to keep up on our bills. We've cut out so much from our budget to accommodate, made adjustments to lower any bills we can, even installed a wood stove to help lower the cost to heat our home and yet we are still unable to get by. I am currently seeking a second job to help us out, and my husband is working to find a better paying job for himself. We make too much to qualify for any assistance so we are stuck in the middle of being too broke to get by. The price increase last year hit us hard, we simply cannot afford another one. - 5/19/2024 1:44:41 PM</p>

Name/Location	UE 435 Public Comments
Louise Lopes - MULINO	<p>First, let me state that PGE has had rate increases in 2022 and 2023. The 2023 increase was very large. They do not need another increase in 2024. Years ago, the citizens who are served by PGE were given a choice on the ballot to make their electric power service be a PUD (Public Utility District). Unfortunately, PGE spent millions at the time and confused/frightened the general public into voting to turn it down. That was a grave mistake. I strongly suggest that PUC do whatever it can (such as lobby the State Legislature) to put another ballot initiative out for the vote to form a PUD; I'm positive this time it will pass. And case in point about PUD's over private, for-profit companies. I visited the Clark PUD about a year and a half ago. While I was there they told me they hadn't increased their rates in 20 years and were just going to do so - that speaks volumes about the difference. Private companies, like PGE (which is a monopoly) are beholden to their shareholders to make profits, about all else. They also pay their CEO (or equivalent) as well as top executives/management staff exorbitant salaries. All that emphasis and sole focus on making profits comes before serving the public, which is what a public utility needs to do. Other public utilities - such as communication (phone, internet) are not monopolies and customers have choices. Everyone must have electricity and therefore, since customers cannot choose their provider, it needs to be a true public utility (not a profit-driven enterprise), fully accountable and serving the public - not money for top-paid staff and shareholders. For years, PGE has passed all costs for capital projects and expansion directly to the consumer. PGE built it's solar and wind generation facilities by directly charging consumers a higher rate per KWH if they signed up for power from 'green' or environmentally friendly sources. The building of solar and wind generating facilities is just the cost of doing business, not to be borne on the backs of the customers trying to do something good for the Earth. Personally, I, a lifelong environmentalist (now with a whole property solar installation) would never sign up for the extra-cost 'green' power since I felt strongly (and still do) that is an expense for the 'for-profit' company as their general cost of doing business. PGE has not grown with the times. Years ago, the area it served has a relatively small population, which has significantly mushroomed over the decades of the 1990's onward. Since the company, poorly run and operated, top heavy with management salaries, did not hire the necessary employees to keep up with the every larger population. For example, from 1993 to 2020, even though I live very rural, I never had a power outage last more than 4 or 6 hours. Based on all the conversations I had with co-workers, etc. a power outage lasting more than a day was very rare. Then the large ice storm of 2021 happened and PGE was NOT prepared, even in the slightest. Power was out and stayed out to thousands and thousands of customers for a week to 10 days even though they brought in help from other areas/states. People were shocked at how unprepared PGE (a company that 'preaches' preparedness) was to handle the outages. Proof positive PGE had been investing its huge profits in salaries at the top and for the shareholders rather than hiring line staff. Bringing in crews from other states is not only costly but dangerous. I recently experienced this when a PGE lineman had to come out to my house which was experiencing an outage (as the only customer in the entirety of Clackamas County). He went up in his bucket truck to the transformer on the pole; that transformer only serves my house and is at the end of the feeder line. Work had been done on it during the most recent ice storm of this year (January 2024) and the out-of-state lineman (who we met and knew was from out-of-state) had used aluminum as a connector when it should not have been (and PGE does not use since it gets very hot and is unsafe). The PGE lineman did not know about this repair and got a big shock from it (fortunately not life-threatening). We could see the spark from below and across the street. And</p>

Name/Location	UE 435 Public Comments
	<p>heard him! A total downfall of using out-of-state crews due to understaffing - crews who follow their own area's cheap and unsafe procedures. As of the last 10+ years, the staff at PGE who answer the phones have shifted their emphasis from just helping the customer to doing as much to avoid answering questions and PR as they can. They are all about denying any wrongdoing, and not solving any problems. When my transformer was 'blowing up' a few years ago they argued with me on the phone as I watched the sparks fly prior to it exploding. I had to call 911 to get action. PUC needs to deny this rate increase and explore other avenues to ensure safe, reliable and affordable electricity for the citizens. - 5/19/2024 2:24:02 PM</p>
Georgeann Emmons - HILLSBORO	<p>Please deny PGE's request to increase our rates another 7.3%. We just had an 18% increase earlier this year that was outrageous. PGE needs to find another way to fund the improvements they want to make. An over 25% increase within a one year period is too burdensome for most average households and especially for senior citizens on fixed incomes. Their request is not in alignment with regular cost of living increases and is exceedingly presumptuous. Do they think their customers have huge bank accounts and lots of discretionary funds? Are they willing to reduce their own salaries or do layoffs like our struggling school districts or even small businesses that barely keep afloat? Please deny their request for a rate increase. Thank you. - 5/19/2024 3:07:40 PM</p>

George Vigileos – Tigard	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). In this country, there are lapses of reasonable judgment when the designated guardrails of the public good require direct intervention by that same public to correct an unreasonable decision. As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Mr. George Vigileos 12140 SW 127th Ave Tigard, OR 97223-1802 vigileos2@yahoo.com - 5/20/2024 12:31:45 AM</p>
Franer Barbara Bird – Portland	<p>-----Original Message----- From: Susan Franer <susan.franer@yahoo.com> Sent: Thursday, May 16, 2024 7:12 PM To: PUC PUChearings * PUC <puc.hearings@puc.oregon.gov> Cc: Barbara Bird <birdbb3@gmail.com> Subject: Docket UE 435 susan.franer@yahoo.com. To Members of the Oregon Public Utility Commission: As a new residents of Portland we are alarmed to see another proposed increase in our PGE rates. We understand infrastructure upgrades need to be consistently addressed but, we believe that 2024 already saw a 17% increase for these purposes. Another increase in utility rates one year later for essentially what seem very similar reasons strains credibility. We want to see transparency as to how the 2024 17% increase is being spent or allocated for spending before we would support any further increase. The public needs clear information on how the additional money we are already paying is being spent. We would posit that PGE should use some of the proceeds from the 2024 increase to address the what is listed as their current needs. Thank you for considering our request to reject this current rate increase before you. Sincerely, Susan Franer and Barbara Bird Susan M. Franer Barbara J. Bird 7617 SW 24th Ave Portland, Oregon 97219 - 5/20/2024 12:31:47 AM</p>
Katie – NA	<p>PGE has raised rates by 28% in the last year. That is a huge increase already. I don't think PGE has considered the population it serves, many of us are barely getting by as is. My electricity cost is 2-3x that of family and friends served by other electric companies and their electric usage is higher than mine. I recommend considering income based electricity rates, I would be more in favor of that. I understand PGE is trying to expand and fund infrastructure to become carbon neutral but please find another source to fund this. A majority of us don't have bottomless wallets. -Katie - 5/20/2024 12:31:50 AM</p>

Name/Location	UE 435 Public Comments
Chung-Huey Nina Kung – NA	<p>Public Comment Submission Regarding PGE Rate Increase Request - Docket UE435 Good evening, Commissioners Decker, Perkins, and Tawney: Thank you for the opportunity for public comments. My name is Chung-huey Nina Kung. I am a resident of Portland. I am here to ask you not to approve the 7.3% utility rate increase PGE is asking to place on residential customers, with additional rate increases possible. Recently, PGE had already increased its residential energy rates by 18%, and energy rates have been up 33% since December 2022. PGE is passing on costs of several wildfire-related damages that the courts found PGE to be at fault for. PGE is also raising the rates to expand fossil fuel infrastructure during the climate crisis. In addition, PGE is raising the rates to convert its coal facilities to natural gas facilities. This conversion is unsustainable, damaging to the environment, and impacts the health of customers. The rate increases are misplaced, unfair, and further damage health and livability. We've had a long winter, and many utility energy customers are still paying for winter heating. This rate increase adds additional burdens to us while we face soaring cost of living. Also, there are energy customers who rely on energy to refrigerate medications and operate prescribed medical equipments to manage their health conditions. Although PGE has a discount program, the discount is too small to reduce energy bills. The LIHEAP program only opens for application in October, and November for seniors and people with disabilities. So, many low-income families can not apply for them the rest of the year. Also, many low-income energy customers live in rented old buildings which are barely insulated. These homes take much more energy to heat and cool during cold winters and hot summers while housing costs soar. Despite weatherization, these buildings are not energy efficient and cost much more to heat and cool for comfort. So, residents are further in debt with these rate increases. Many of us have already done all we can to reduce energy use. I switched my energy use to off-peak hours. PGE calls me "Energy Super Star", but I still can't afford its electricity. I use nightlights for lighting at home. I cover my windows with blinds, and hang up drapes to separate rooms for individual room heating throughout the winter. I keep the room temperature at 55 degrees through the winter. This has not kept the rooms warm enough to fall asleep at night. With climate change, our winter has been extended, too. So, the rate increases add additional burdens. Many of my neighbors share the same burdens. For all these reasons, I urge you to not approve the energy rate increase PGE is asking. It makes utility energy further inaccessible to most residential customers in Oregon during this time of high inflation and climate crisis. Thank you, Chung-huey Nina Kung Oregon Resident and PGE Residential Customer Portland, Oregon - 5/20/2024 12:31:52 AM</p>
Lisa Boley – NA	<p>I object to any PGE rate hike. Like many, I simply don't have income to cover an increase for anything. Rent, kids, Dr. appointment, or pay my PGE bill. Difficult choices for many - this rate hike will harm low-income workers, single parent families, and retired folks the most. Respectfully, Lisa Boley - 5/20/2024 12:31:55 AM</p>
Mike – NA	<p>I object to any PGE rate hike. Like many, I simply don't have income to cover an increase for anything. Rent, kids, Dr. appointment, or pay my PGE bill. NA	I object to any PGE rate hike. Like many, I simply don't have income to cover an increase for anything. Rent, kids, Dr. appointment, or pay my PGE bill. Difficult choices for many - this rate hike will harm low-income workers, single parent families, and retired folks the most. - 5/20/2024 12:32:00 AM
Mary Reilly – NA	To whom it may concern: Please note my objection to the new proposed rate increase. If this new hike in rates is passed, people who are already struggling with the high cost of energy will find themselves in the position this winter of having to choose between being warm (electric heaters) or being fed (refrigerators and stoves). It is true that climate change is a concern, but efforts should be made toward sustainable energy sources, not unsustainable financial schemes. Thank you for your consideration, Mary Reilly zu.keeper@yahoo.com - 5/20/2024 12:32:02 AM
Helen Reily – Hillsboro	To whom it may concern: I object to this rate increase. The recent 17% rate increase we've suffered has already harmed many individuals in our community, including myself and many people I know. Stagnant wages and high inflation are pushing already marginalized people into poverty and need. This type of rate increase is unsustainable and unjust. For the sake of the most vulnerable members of our state, this new increase must not be passed and decreases should be considered. Sincerely, Helen Reilly 246 NE Donelson St. Hillsboro, OR 97124 - 5/20/2024 12:32:04 AM
Zita Podany – NA	From: Zita Podany <zitap123@yahoo.com> Sent: Thursday, May 16, 2024 3:21 PM To: PUC PUChearings * PUC <puc.hearings@puc.oregon.gov> Subject: PGE rate hike --- yet again?! zitap123@yahoo.com<mailto:zitap123@yahoo.com>. I would like to be informed how this ruling goes and what they are asking for. This is totally untenable that they have come back to the rate payer trough to ask for yet another rate hike after getting three rate hikes already in succession. Bad policies on their part should come out of their pocket and not gouge their rate payers. - 5/20/2024 12:32:07 AM
Alice Shapiro – Portland	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Mrs. Alice Shapiro 2545 SW Terwilliger Blvd Apt 1105 Portland, OR 97201-6312 alice.shapiro2@gmail.com - 5/20/2024 12:32:08 AM

Name/Location	UE 435 Public Comments
Anna Christensen – Hillsboro	To Whom it May Concern, I object to the proposed rate increase. If the latest increase of 17% was for some reason insufficient, please consider the possibility of using your influence to suggest the federal government reopen gas pipelines and thereby bring down energy costs for all of us in a struggling economy. Please further consider the possibilities of nuclear energy. Clearly the current system of falsely subsidized "renewable" energy sources is unsuccessful and unsustainable for both your business and your customers. Thank you, Anna Christensen 229 NE Donelson St. Hillsboro, OR - 5/20/2024 12:32:11 AM
Laura Edmonson – Aurora	lauraedmonson@protonmail.com. Dear commission members: I have nervously been waiting to hear if NW Natural Gas will be allowed to raise their rates after suffering such a huge hit to my monthly budget by PGE's recent sizable increase, and now I read that PGE wants more? This is too much; it's not only a matter of not being able to afford this, but I also am very concerned about what I read about PGE not using their funds effectively. Please reject an extra increase, and if you have the power to do so require a 3rd-party to look into PGE's wasteful spending. Respectfully, Laura Edmonson 14897 Rooster Rock Avenue NE Aurora, OR 97002 Sent from Proton Mail for iOS - 5/20/2024 12:32:14 AM
Brian Reilly – Hillsboro	Date: May 16,2024 To whom it may concern: I object to this rate increase. We've just had a 17% rate increase in recent months, which has put many of us under greater financial pressure. This new proposed increase will put those of us, such as myself and my wife, who are on Social Security, under even greater pressure. Inflation is running very high; groceries, gas, rent, and interest rates have all increased greatly. Therefore most of us are struggling to keep our heads above water. This increase will only make that more difficult. Respectfully submitted, Brian F. Reilly 246 NE Donelson St. Hillsboro, OR 97124 - 5/20/2024 12:32:17 AM
Mary Benson – Beaverton	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Joe and Marit Cadwell – NA	To whom it may concern. We are writing to express our deep concern regarding the proposed 7.3% increase in utility rates. As recent retiree's on a fixed income, rising costs create a significant burden on our household budget. Each year, essential utilities become more expensive, squeezing our ability to afford other necessities like food and medication. We understand the need for the company to operate efficiently, but a 7.3% increase is simply too much to bear, especially on the heels of your most recent double digit wage increase. We urge you to explore alternative solutions. Can operating costs be trimmed elsewhere? A 7.3% increase will have a real impact on many in our community. We implore you to find a more equitable solution that ensures reliable service without pushing residents like us toward financial hardship or the possibility of moving out of the area. Thank you for your time. Sincerely Joe + Marit Cadwell - 5/20/2024 12:32:25 AM
NA	Please dont increase the rate. I am on a small fixed income and will not be able to pay more. Please.....?? Get Outlook for Android - 5/20/2024 12:32:28 AM
Craig Veelle - MOLALLA	I would ask you not to increase the PGE rate by another 7 percent. It was just raised as you are aware. It either needs to be done all at once or none at all. Since this is a public agency I am asking you to vote in favor of the public this time. I do realize that there will need to be raises from time to time but this amounts to a greater than 25% increase (since it will be 7% on the already 18% increase) it is just way past the amount that regular people are increasing. Thank you - 5/20/2024 9:35:20 AM
Jay Leal - HILLSBORO	The PGE just went up 17.2 % already Why going to raise it again ?! Not fair at all Hard to pay electricity now - 5/20/2024 12:03:36 PM
Mary Crafts - SALEM	I would like to voice my opp0sition to PGE's rate increase request. They already received a substantial rate increase. Unfortunately, neither I nor anyone I know received a large increase in income. There has to be another way for PGE to get the monies they need. A bond, a government grant or something other than another increase in rates to comsumers. - 5/20/2024 3:24:09 PM

Name/Location	UE 435 Public Comments
Clarissa Lowe - SALEM	You already increased the cost by 18%! We are a hard working family, we pay all our bills on time and in full but this is getting absolutely ABSURD. The greed is very real and appalling. Are you going to just keep raising it until no one can pay their bill???? It's infuriating that you think you can just treat your customers , who by the way have NO choice is who they draw electricity from, like your personal piggy bank is shameful. I don't understand why you think adding another 7% on top of that 18% is ok and fine - it's absolutely not and I hope you enjoy your padded wallets while the rest of us decide weather or not we keep the lights on or the water running. - 5/20/2024 3:24:36 PM
Cj Williams - MILWAUKIE	No rate hike again. Learn to budget and better use of funds. - 5/20/2024 3:59:59 PM
NA - SALEM	Please PGE, don't raise my bill. I make 1500 a month and am barely making my monthly essentials. Reconsider lowering the hike we just had. - 5/20/2024 4:48:02 PM
Lissa Woolstenhulme-Lee - PORTLAND	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Lissa Woolstenhulme-Lee - 5/20/2024 9:16:08 PM

David Martin - PORTLAND	<p>## Notice of Potential Class Action Lawsuit To: The Honorable Tina Kotek Governor of Oregon 900 Court St. NE, Suite 254 Salem, OR 97301 Dear Governor Kotek, We, the concerned citizens of Oregon, write to you regarding the repeated and excessive rate hikes proposed by Portland General Electric (PGE). The utility's request for a 7.4% rate increase in 2025, following multiple rate hikes in recent years, has raised significant concerns about the financial burden on customers and the potential violation of consumer protection laws. Under Oregon Revised Statutes (ORS) 757.020 and 757.025, public utilities are required to provide fair and reasonable rates, and the Oregon Public Utility Commission (OPUC) is tasked with ensuring that utility rates are just and reasonable. However, PGE's frequent rate increases, totaling approximately 30% since 2022, appear to be excessive and unjustified, given the lack of proportional improvements in service quality and reliability. We believe that PGE's actions may constitute unfair or deceptive business practices, in violation of the Oregon Unlawful Trade Practices Act (ORS 646.605 to 646.652). Additionally, the utility's failure to adequately justify the rate hikes and demonstrate tangible benefits to customers could potentially be considered a breach of contract or a violation of consumer protection laws. As such, we are exploring the possibility of filing a class action lawsuit against PGE on behalf of Oregon customers, seeking compensation for the excessive rate increases and potential damages resulting from the utility's actions. We urge your administration to investigate this matter thoroughly and take appropriate measures to protect the interests of Oregon residents. ## Alternative Solutions While we understand the need for utilities to maintain and upgrade their infrastructure, we believe that there are alternative solutions that could mitigate the financial burden on customers and promote more sustainable and equitable energy practices: 1. Incentivizing energy efficiency and conservation programs to reduce overall energy demand and costs. 2. Promoting the adoption of renewable energy sources, such as solar and wind power, to diversify the energy mix and reduce reliance on fossil fuels. 3. Implementing rate structures that prioritize affordability for low-income households and vulnerable communities. 4. Encouraging public-private partnerships and innovative financing models to fund infrastructure upgrades without placing the entire burden on ratepayers. 5. Enhancing regulatory oversight and transparency to ensure that rate increases are thoroughly justified and aligned with the public interest. We urge your administration to work closely with stakeholders, including consumer advocacy groups, environmental organizations, and industry experts, to explore these alternative solutions and develop a comprehensive energy policy that balances the needs of utilities, customers, and the environment. We appreciate your attention to this matter and look forward to your prompt response and action to address the concerns of Oregon residents regarding PGE's rate hikes. Sincerely, [Concerned Citizens of Oregon] - 5/21/2024 6:16:31 AM</p>

David Martin - PORTLAND	<p>Formal Proposal to Portland General Electric (Docket No. 19379) To: Portland General Electric 121 SW Salmon St. Portland, OR 97204 Re: Docket No. 19379 - Comprehensive Proposal for Grid Modernization and Rate Reform Dear Portland General Electric, We, the undersigned citizens of Oregon, respectfully submit this formal proposal in response to your proposed 7.4% rate increase for 2025 under Docket No. 19379 before the Oregon Public Utility Commission (OPUC). While we acknowledge the need for investments in electrical grid modernization, frequent and excessive rate increases may not be the most appropriate or equitable solution, particularly for low-income and vulnerable communities in Oregon. Through a cross-comparative analysis of grid modernization strategies across the United States, we have identified several alternative approaches that could be implemented in Oregon: [The rest of the proposal remains the same as the previous version, outlining the eight key points regarding alternative funding strategies, regulatory reforms, and policy initiatives.] By adopting a comprehensive approach that combines alternative funding strategies, regulatory reforms, and policy initiatives, Portland General Electric can address the critical need for grid modernization while mitigating the financial burden on customers and promoting a more sustainable, equitable, and resilient energy future. We urge Portland General Electric to carefully consider this proposal and work collaboratively with the OPUC, stakeholders, consumer advocacy groups, environmental organizations, and industry experts to develop and implement a comprehensive grid modernization and rate reform plan for the state. Sincerely, [Concerned Citizens of Oregon] cc: Oregon Public Utility Commission (Docket No. 19379) Drafted By David Martin, Environmental Security Analyst - 5/21/2024 6:26:22 AM</p>
Jeff Hanson - BEAVERTON	<p>WE CANNOT ALLOW THESE CONTINUAL RATE HIKES FROM PGE. THE REASONS THEY ARE GIVING FOR NEEDING MORE MONEY ARE THE COSTS OF BUSINESS AND SHOULD NOT BE PASSED ALONG TO CONSUMERS. WE ARE ALL TRYING TO GET BY WITH THE HIGHER COSTS OF LIVING AND THESE INCREASES WILL MAKE IT ALL THE MORE DIFFICULT... WE SHOULD NOT HAVE TO CHOOSE BETWEEN FOOD AND ELECTRICTY. Craig Weeg - BORING	<p>Subject UE 435 How dare PGE ask for another rate hike! Make another 202 million in profit to help with Battery investment! When is this company going to get off the consumers backs ! How dare the Oregon Public utility commission even consider this! This company should not be private for profit! They are given special consideration with guaranteed rate protection preventing competition! I looked into putting a solar farm on my property years ago and was basically told I couldn't hook into the grid because PGE had a guaranteed rate that would prevent it from my farm from being utilized other than an expensive tax loss. If you grant them another hike I will sue Oregon PUC and PGE for running a Monopoly and PUC backing it with the guaranteed rate protection! HOW DARE YOU! - 5/21/2024 8:00:16 AM</p>

Name/Location	UE 435 Public Comments
Ronald Gillilan - ESTACADA	Hi, please don't let PGE raise our rates again. The 17% this year is a real stretch of reality. It hurts all of us in our pocketbooks and household budgeting . Thanks, Ron Gillilan - 5/21/2024 8:41:50 AM
April Bacewich - NEWBERG	I am submitting a plea once again to this Commision. Please, please, please say "NO" to Portland General Electric's requests for increasing consumer costs! People in this state are being systematically crushed from EVERY side. We rely on people like you to protect us. So please, with respect, do better! Gary Feierfeil - NEWBERG	All this will do is force more people out of their homes. All that are on a fixed income currently have issues meeting bills with all the increases since COVID. I wish I had a company like PGE that seems to get guaranteed increase profit for their products. - 5/21/2024 10:43:07 AM
Jamie Daubenspeck - PORTLAND	The recent request by PGE to raise rates again is egregious and would be a major setback for keeping Portland affordable. The requested increase would further burden those struggling to make ends meet and would likely cause further exodus from the Portland metro area. The improvements suggested by PGE are not essential to their operations and should be funded by the corporation. - 5/21/2024 10:46:41 AM
Geena Buxton - BEAVERTON	PGE is asking for an additional 7% in 2025 to support "investments in local battery storage systems". Reality is they want to make more money. First quarter of 2025 was amazing for PGE investors on the backs of those of us dealing with their 17% increase of last year. PGE is a public utility and I can't choose a competitor to get a lower rate. The Oregon Public Utilities Commission needs to treat them as such, draw a line in the sand and say NO MORE. Mortgages, food, cars, cost of living are all high right now and everyone is struggling. That means PGE stops lining the pockets of their investors and their leadership team and thinks of the customers. If that also means less investment in whatever "local battery storage systems" are then so be it. - 5/21/2024 3:57:25 PM
Tristan Deveney - PORTLAND	Do not allow PGE to raise rates AGAIN - 5/21/2024 7:48:24 PM
Kate Denison - PORTLAND	Please do not approve another PGE rate increase at a time when families are struggling to afford basic living expenses like groceries and utilities. Our family was hit extremely hard by the most recent 20% PGE rate increase just months ago. We are a working family with small children. Because we do not qualify for any financial assistance, we're forced to swallow huge costs for a basic need like electricity. Our salaries have not gone up. I do not know how PGE expects rate payers to swallow another 7.4% increase on the heels of a huge spike. Please, PUC, do not allow this proposal to move forward. - 5/22/2024 10:49:24 AM
Sam Green - PORTLAND	Raising rates to cover corporate losses due to their own negligence in causing wildfires is unacceptable. Do not allow these companies to profit off the backs of hard hit Oregonians - 5/22/2024 1:00:18 PM

Name/Location	UE 435 Public Comments
Mark Wiesner - BROOKS	Regarding PGE rate increase . Your mission statement says --access to safe, reliable and fairly priced utility service -- I would say PGE is far from this. The best thing to happen was the ice storm because it made them fix a massive amount of their junk. Poles and cross arms looked like piles of sawdust laying on the ground because the rot was so bad. Now after years of using irrigation pumps, they say it's not safe to use unless you upgrade to 4 wire. Most of our rural area has open delta 2 wire which they will not upgrade. So, every time we need to upgrade a pump it becomes a nightmare on the PGE end. We are currently spending over a million dollars to move our shop because I cannot get new 3phase power. The power pole next to my house is dated 1953. All of the rural area was designed for hardly any of the power we currently use in the modern world. I urge you to decline the rate increase. We are being priced out of our homes and businesses. - 5/22/2024 3:25:59 PM
Sarah Bartels - PORTLAND	This isn't about improving services. This boils down to PGE wanting to increase their profit margin on their service monopoly at the cost of consumers. They have good ROE as it currently stands. Greed is no excuse to gauge rates more than they already have. This proposal doesn't even deserve to be heard or considered. - 5/22/2024 6:00:19 PM
Flavia Devetag – Portland	Hello, As a citizen and resident of Multnomah county, I believe raising rates higher than they are already is quite inhumane. I already get low income discounts, barely turn the heat on, try to really be mindful of when I use appliances and I'm working with the "time of day" program, and yet my bills are quite expensive, even when I'm out of town for weeks out of the month. Dear Oregon Public Utility Commission, As my state's regulator, I expect you to keep the price of electricity down, NOT approve EVERT attempt by PGE to gouge monopolized customers with absurd increases every year.Let;s put this in perspective: the increase in Social Security lats year was 3.2%; you approved an increase to PGE rates at 18% so PGE's shareholders could bet better returns and PGE's CEO could make more than his 6 million dollars annually with stock rewards, too.you're tasked with protecting me and other utility customers from unjust utility bills and unnecessary cost increases. That's why I'm asking you to reject the false story that increases every year is the only option to meet an increase in electricity demand. We have the technologies that can meet power requirements at a lower cost than dirty and dated gas plants, and thanks to the Inflation Reduction Act, the Bipartisan Infrastructure Law, and state leadership, we also have new investments and policy tools to get there. We just need utilities, as well as grid operators and state regulators like you, to choose reliability and affordability over false justifications for outdated energy sources. We should not, cannot, and must not let utilities use America's economic momentum as an excuse to build more gas power plants, which would lead to a massive increase in climate pollution and costs for customers. I urge you to do everything in your power to refuse these schemes and act in accordance with what American customers want, which is more energy cost regulation, more affordable power, and utilities investing in clean energy options. I also STRONGLY urge you to REJECT ANOTHER PGE rate increase. Thank you, Clifford Spencer, MA, MS OR cliffordspencer@ymail.com - 5/23/2024 12:36:17 AM</p>
Carver Oblander – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Name/Location	UE 435 Public Comments
Andrew Moseley – NA	I oppose rate hikes. My understanding is that Oregon has laws in place requiring green energy by some date. I disagree with this and have written my legislators about this. Reliable, cheap options such as coal and nuclear are better options than wind or solar. I'm not sure I understand the purpose of the proposed battery storage that will cost all of us so much more money. Why is this needed? The last rate hike also came with offering a wider range of people financial assistance. There is also a separate charge on each of my pge bills for low income assistance. So those of us that are in the middle have to pay more so more people can have free or reduced electrical bills. This doesn't make sense. Rather than trying to redistribute wealth why not just keep everyone paying for what they use but make the utility cheap and reliable. Raising rates again chasing some green false dream is nuts. -Andrew Moseley - 5/23/2024 12:36:22 AM
Marcia Wood – NA	I object to granting PGE another rate increase during these tough times for families. My own bill is up from the most recent increase last year. About \$20-30 each month. Finance it from stockholders dividends. Thank you. Marcia Wood - 5/23/2024 12:36:25 AM
Ruthie Spoonemore – NA	Pure nonsense! They keep raising rates and yet have not considered the impact on lower income earners. STOP THIS MADNESS NOW! Ruthie Spoonemore ruthiespoonemore.com - 5/23/2024 12:36:27 AM
John Dedrick – Silverton	Say no to PGEs request for a rate increase. PGE can spend some of their huge profits on capital improvements. They claim that they will continue to make a profit with their current rates. If PGE does not want to continue service with less profit we can run a public utility to replace them or find another provider. No to rate increases when PGE is already profiting with the current rates. Sincerely, John Dedrick 1025 E Main ST Silverton, OR 97381 - 5/23/2024 12:36:30 AM
Jeni West – NA	Hi, I wanted to reach out and give a comment on PGE's recent rate increases. I find it appalling that in such an economic time as this, when families are finding it hard to put food on the table, that PGE would do not only one but TWO huge rate increases as well as an \$11 modernization charge??? This is ludicrous and should not be allowed. Someone needs to keep these companies in check because they are taking advantage of a public that has no other choice than to use their service and painstakingly pay their exorbitant rates. Thanks, Jeni West - 5/23/2024 12:36:32 AM
Joe Mizner – NA	From: joe mizner <joemizner@gmail.com<mailto:joemizner@gmail.com>> Sent: Friday, May 17, 2024 7:32 PM To: PUC CONSUMER PUC * PUC <puc.consumer@puc.oregon.gov<mailto:puc.consumer@puc.oregon.gov>> Subject: Future PGE rate increase & advise of an Audit joemizner@gmail.com<mailto:joemizner@gmail.com>. I STRONGLY object as I own 3 properties in Oregon and the one within PGE's service area has rates nearly double of my Hood river home that shares the Same Bonneville power feed. I advise that an in depth audit be completed on behalf of the public. Thanks, Joe Mizner - 5/23/2024 12:36:35 AM

Name/Location	UE 435 Public Comments
Kelly Merrick – Portland	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly ask the Commission to reject PGE's request to raise rates by 7% for Oregon households like mine. I understand that the increases are to pay for crucial system upgrades but passing on such high increases to customers would be a significant hardship for many people, let alone the thousands of PGE customers have not recovered from the rate increase and ice storm bills this January. People cannot afford these increases. Now is not the time to approve PGE's request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers. Please do not approve PGE's rate increase request. Sincerely, Mrs. Kelly Merrick 11010 SW 62nd Ave Portland, OR 97219-6768 kellymerrick10@gmail.com - 5/23/2024 12:36:37 AM
Bridget McBride – NA	No, no, no and NO. How much can people and businesses shoulder? Add another rate increase and that's up 58%. No wonder people and businesses are leaving Oregon. Karyna Graham of Hillsboro said it best: "It is inhumane that people have to choose western they're going to freeze, overheat or buy food for the month." PGE already got their huge rate increase this year. Let's see what they do with it. Maybe their CEO takes a pay cut for starters. WE CAN'T TAKE ANY MORE TAXES, FEES, RATE INCREASES, OR TOLLS. Bridget McBride 503.538.3553 bridget_mcbride@icloud.com<mailto:bridget_mcbride@icloud.com> - 5/23/2024 12:36:40 AM

Name/Location	UE 435 Public Comments
<p>Greg Blaumer – NA</p>	<p>To Whom This Might Concern: I am strongly opposed to the upcoming PGE 7% rate increase planned for Jan 2025. PGE has raised rates 3 consecutive years. Here are the increases: 2023: Between 7-20% increase. 2024: 17% increase. Planned 2025 increase: 7%. So over the three years conservatively speaking at the low end we have endured 31% of increases including the planned 7% increase for 2025. At the top end of the rate increases over the three years we have endured a total increase of +44%. A 44% increase is intolerable and way out of line. PGE currently budgets roughly \$17 million for battery storage. PGE is requesting a new budget for battery storage of \$202 million dollars. There is something wrong with these numbers PGE has disclosed for battery storage. This appears to be some type of management "wishlist" regarding battery storage. Looking at the compensation analysis for the CEO Maria Pope here are the annual compensation numbers: 2023: \$6.8 mil. 2022: \$6.2mil. 2021 : \$5.3 mil. 2020: \$3.3 mil. Her compensation has grown over 100% from 2023 versus 2020 this is only from 3 years. In lieu of a rate increase perhaps Maria Pope could reduce her total compensation for a change in lieu of soaking the utility customers for the third time in 3 years. It is interesting that in early May 2024 the CEO sold over 44,000 shares of stock nearly \$2 million dollars in total. PGE apparently is a very profitable and solvent as a public company. The most earnings report for the company shows a 24.2% growth in revenue so apparently the company is not having any issues regarding revenue from its customers. This company continually raises it dividend. In 2020 their annual dividend per share was \$.39. In May of 2024 they announced another increase in dividend the annual dividend is now \$.50. On a percentage basis from 2020 through the planned increase in May 2024 the current dividend is 28% higher than the dividend in 2020. In my opinion this new rate increase including the last two years of increases show a large amount of mismanagement and bad policy decisions. I feel very sorry for the poor people who are struggling paying their monthly bills given the current inflation for food, other utilities, and regarding other bills that the average utility customer have to contend with. Many are barely getting by another PGE rate increase that is not justifiable by any means might put these poor folks on the brink. Please OPUC do not allow this un-warranted and unnecessary rate increase for PGE. Thank you. Greg Greg Blaumer G.Blaumer@comcast.net - 5/23/2024 12:36:42 AM</p>

<p>Patricia Tawney – Colton</p>	<p>Fact check. The detail sheet uses 880 Kwh to estimate the rate increase. But the average house size in Portland is 1068 sq.ft. the average Kwh use for an average home is 1000 square ft using about 1000 kwh according to Energy 101, Oregon.gov. farms, like mine, use more because we pump our own water. PGE is trying to low ball the costs of their 202 million dollar bill. Ask home owners how much our average bill has gone up in the last two years. I use to average out my monthly bills to a single amount to even out the dips and peaks (I tried using PGEs service by the did a bad job and always had a bill true up bill in March). I paid \$130 a month. My average us is about 1000 kwh. Now my bill is \$180. Your increase will raise my bill to almost \$200 a month, every month, even in the summer. So much for the benefit of energy conservation. When PGE ends up needing the money anyway. I pay more because I buy green power products. That's not a 7% increase, it's a 70% increase in two years. Maybe PGE needs to look a little closure at how it spends our money? I appreciate that \$6.7 million is typical, that PG&E and GE bosses make more. But it's still outrageous! The Bonneville Power Administrator makes less that \$500,000. Maybe we need to become a public power company and provide a public retirement pay. Seattle's leader makes less than a million. Mary's pay use to be \$3.4 million, it's doubled. Why? Just because all CEOs are robbing rate payers blind doesn't mean we should just say fine, rob me too. These pay scales are outrageous and need to stop! Sincerely, Patricia J. Tawney 24081 S Upper Highland Rd, Colton, OR 97017 - 5/23/2024 12:36:45 AM</p>

Patricia Tawney – Colton	<p>I am opposed to more price increases. PGE has a trapped middle and lower income service customer. We can't afford the \$70,000 for an independant solar system. So we are trapped buying electricity from PGE. We first put in power in the 1950 when we were promised power would be too cheap to measure. 50 years later we were promised that deregulation would keep power cheap. We were promised that growth would pay for itself. None of these talking points have been true. None of them. We were told that PGE could be trusted to save electricity so we needed a new rate payer funded system to make sure we conserved power. But we received more conservation service from PGE than we have ever received from the so called energy trust. We buy green power and any other environmentally helpful power products. No thanks to the PUC. Why should customers of 70 years pay to develop power supplies for people who just go here? Why should I pay to protect my home from fires set by these ignorant new comers? It wasn't us that let Enron ruin the power market. It wasn't us that pretended climate change wasn't real. It wasn't us that allowed off road vehicles in the forest or failed to protect the forest from becoming dangerous shooting galleries. I prepared my home for at least a week without power. But now I have to pay for a power delivery service I don't need and which prioritizes urban areas ahead of me anyway. Why should I pay for a service I don't need, and won't benefit from. I end up paying twice. I have to prepare for long period of no power and I have to pay for reliability for cities from which I don't benefit. Everyone knows that when Ice storms come the city will be fixed first, while I could wait two weeks. I don't mind waiting but it isn't fair to ask me to pay for reliability I'm not likely to receive. Go ahead, get the city folks their lights on, but don't bill me for their crowded conditions and getting their lights back on in a day or two. It's not fair. Everyone makes justifications. But the truth is power was cheaper before we forced power companies to spilt their power and transmission businesses. It was cheaper before we allowed a competitive power market place where a few get rich and we pay. I have room for solar and so do my neighbors, but we can't afford to build small neighborhood supply systems. Why can't we get a loan from PGE or the Energy trust and pay it via our power bill? We did this with our energy efficient windows thirty years ago. Why can't we do solar the same way? The whole power business is now designed for a few players to play the market and make money off my neighbors and me. We don't need the energy trust, PGE did just fine helping us conserve. Enron's idea for the power market place were bad ideas and we shouldn't allow them in Oregon. People should pay for new development of resources they incurred. I am willing to pay to maintain the systems I already built but not new ones. Growth needs to pay for itself. New systems and lines need to be paid for by developers or new residents. Fire prevention starts with education. New owners from cities and other states need to take a class in fire prevention on how to live with tall timber. We need more fire patrols to prevent stupid and arson. But this shouldn't be part of my "energy" bill. It should be part of law enforcement. There should be reliability charges. If I can wait for my power to come back on, I get a discount. Folks who need their power on right away, should pay extra. I am willing to wait. Finally, the poor and elderly with fixed income are hurt the worst with these price increases. My stove broke recently and I found I didn't really miss it. If I remove appliances from my home can I get a discount? Let's get creative about power use. Do I really need all these appliances? Pay me and I'll give them up entirely, not just buy efficient ones, give them up entirely. Thank you for this opportunity. I know it doesn't really matter what we say, as you never turn down a request for a price increase, but it makes me feel better. Sincerely, Patricia J. Tawney S. Upper Highland rd Colton OR 97017 - 5/23/2024 12:36:48 AM</p>

Bob Quellette – NA	PGE has Increased Dividend from \$1.12 (2012) to \$1.98 (2024). It now pays a 4.42% Dividend, 1% more than DUK. Have you checked on Insider trading? It also raised its Board and CEO Pay by a considerable amount, more than your average rate payer probably got in pay. I think it changed its rate structure and it impacted those that have been below 1000KWH usage, more. But, I guess the PUC looks at that, before you rubber stamp increases. It's a monopoly on our electricity, what about moving to a PUC like Vancouver, WA? Do you look at why PGE needs this battery storage? What Technology are they going to finance? Why are they going to make lower profit after getting the increase? Where can I find answers to these questions. In talking to some PGE employees, they complained that the company has been remiss in its line maintenance for years, to save money, which is why the outages are more severe than they were in years passed. I know that is just hearsay, but maybe do some research? Concerned rate payer Bob Ouellette - 5/23/2024 12:36:50 AM
NA	As someone has already said; increases of utilities CANNOT and SHOULD NOT be a yearly practice. Claiming profits 'will be Less' seems ABSURD when the profit amounts are already mind-boggling and in lieu of actual customers; me, we, us; PEOPLE are struggling to pay our utilities Already. Sent from Yahoo Mail for iPhone - 5/23/2024 12:36:53 AM
Jadyn Harris – Portland	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. As a new grad looking into furthering my education, as a member of the community, as a OHSU hospital employee, as the future generation of this country, I can say that these rates are inaccessible to the working class, and continue to increase. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Miss Jadyn Harris 41ST Ave Portland, OR 97211 jadyneharris@gmail.com - 5/23/2024 12:36:56 AM
Dennis Smith – NA	No rate increase for PGE! Dennis Smith - 5/23/2024 12:36:59 AM
Janice – NA	ABSOLUTELY NOT! Janice - 5/23/2024 12:37:02 AM
Brian Springer – NA	Hi I don't think PGE needs another rate hike they need to learn how to budget the money they have and operate with in it . Maybe it's time to do away from them and go to a non profit public owned electric company . Sincerely Brian Springer,a senior citizen trying to live on SSI. - 5/23/2024 12:37:04 AM
Joe Mizner – OR	I STRONGLY object as I own 3 properties in Oregon and the one within PGE's service area has rates nearly double of my Hood river home that shares the Same Bonneville power feed. I advise that an in depth audit be completed on behalf of the public. Thanks, Joe Mizner - 5/23/2024 12:37:06 AM

NA - SALEM	Another huge rate increase on top of the one PGE just hit us with a few months ago is outrageous! This should not be passed! - 5/23/2024 7:14:40 AM
Happi Tate - PORTLAND	I would like to speak as a low income, disabled individual. I already qualify for discounts under water & gas to assist my housemates & I with our utility costs at the maximum rate. However, PGE has denied us this assistance even though they should be using the same qualifying measures they only give us a 10% rate drop. This barely covers their last increase. Between the inflation increases in rent, food & everything else these rate increases have felt especially egregious. Please do something to cap their profit mongering as it is just ridiculous at this point. They have a monopoly, there is no one else to seek these services from & privatized necessary services like this seems counterintuitive. We must legislate to rein them in. Thank you for your time. - 5/23/2024 3:45:07 PM
Loretta Davis – NA	Your last increase was a hard blow especially to us who are on fixed income. AND now asking for another increase???? I already have to keep the temperature turned down in my house in order to survive all the increases. Stop. You have increased your charges already too much. Stop wasting money and you will have more than enough to pay your CEO's and all the high salaries. This is ridicules. Enough is enough. Just because you know you can increase rates because you know we have to have electricity to survive is wrong. Stop the increase. A distraught customer, Loretta Davis Sent from my iPhone - 5/24/2024 12:33:41 AM

Shane Latimer - PORTLAND	<p>PGE has failed to provide adequate system resilience while appearing to provide extravagant shareholder benefits. While the need for conversion to green energy is important, such conversion needs to be built on a strong and resilient infrastructure. While the events of early January 2024 posed significant challenges to electrical infrastructure, it is clear from my family's point of view in our location in the forested areas above Hillsdale in Southwest Portland that PGE's infrastructure was inadequate prior to the January storm event. We routinely experience power outages in our area during even the lightest storms or wind conditions. We are certainly not going to relinquish our natural gas appliances and fireplaces given the poor electrical infrastructure that is currently in place. We have lived in our current location for approximately 9 years and have seen a significant degradation in the ability for PGE to provide power to our home: We used to experience power outages perhaps once every two years but now experience them multiple times a year, usually for more extended periods. One consequence of the lack of line resilience is that we have had to give up our family hobby of having saltwater aquaria: Even though we had several days of contingency electrical support for our aquaria, PGE was unable to maintain or restore power within that time and the result was the loss of at least \$1000 worth of aquarium livestock which included loved pets. It is our understanding that our local aquarium shop lost an estimated \$100,000 worth of livestock during the January 2024 event even though they were located in the business hub of Hillsdale. It is our opinion that PGE needs to reevaluate its shareholder compensation structure and improve system resilience prior to asking the Commission and its customers for rate increases. - 5/24/2024 9:23:15 AM</p>
NA - PORTLAND	<p>5-24-24 Letter converted by Consumer Services staff - dr RECEIVED MAY 21 2024 P.U.C. May 17, 2024 Oregon Public Utility Commission 201 High St. SE #100 Salem, OR 97301 Dear Commission Members: DO NOT grant PGE their 7.4% rate hike in 2025. We customers are still hurting from the 17.2% rate hike you allowed this year. (This was a shocking amount that really hurts customers.) This follows a 7% hike in 2023, 11% in 2022, (2021 I don't know), and 2% in 2020. They have received a rate hike practically every year lately and it probably goes back farther. This CANNOT continue. The customers can't bail them out all the time. In 2024 you allowed them to increase residential rates 17.2%, commercial by 15.9% and industrial by 11%. Why are residential customers paying the most? Industrial users should be paying the most because I'm sure they use the most electricity and they have all the money. Residential customers should pay the least. Why doesn't PGE get a loan from the state or the federal government for their proposed upgrades and improvements? What do they really need? Don't allow them to pass everything down to customers. You hear about utilities trying to do that with wildfire related things. It's time for you to help the customers and not PGE. Regards, Suffering PGE Customer - 5/24/2024 11:20:17 AM</p>

Name/Location	UE 435 Public Comments
Concerned Citizen Of Salem - SALEM	PGE has instilled a 7.2% rate increase in January of 2024 which was estimated to be about an additional \$5.00 per month for residential customers. I have seen a monthly billing of \$150.00 per month. It is sad that they keep increasing the cost of a utility for their customers. I am opposing an additional rate increase and believe it is due to the judgment for the lawsuits incurred because of the incurred for the and think the PUC can do better to serve the public by not allowing a continuous increase each year. It seems as though the August 2020 class action shareholder lawsuit settlement of \$6.75 million in which over \$125 million earnings and loss to stock pricing is to blame for these increases. It is not good business practices to try and recoup these losses from customers due to unguided and ill-conceived trading practices by PGE's executives. - 5/24/2024 4:47:16 PM
Keith Okerstrom - WILSONVILLE	I am opposing the waiver request: Reference: OAR 860-025-0030(3) The citizens, landowners, and tax payers want the process to go through the permit process. PGE must go through the established processes, anything else breaks public trust. Thank you for your representation. - 5/24/2024 4:59:01 PM
Ben Maceda - PORTLAND	Hello, I would like to voice my opposition to the proposed rate increases submitted by PGE. I do not think that competitive returns for investors should be a primary motivating factor for utilities. I would encourage them to find the money elsewhere, potentially from the bonuses that executives have been awarded. Thank you, Ben Maceda - 5/24/2024 5:45:27 PM
Jude Perez - PORTLAND	I couldn't figure out what docket # to link to my public comment but I'm writing to oppose PGEs 7% residential rate increase - or any increase for that matter. PGEs CEO has received increased compensation and bonuses in the last two years amid rate hikes. Meanwhile Portland residents have struggled with the rising cost of living and inflation. People need electricity to live. Students need lights on to complete their homework. Families need to turn on their AC during massive heat waves and turn the heat in the winter. We're even told to keep it at a specific temperature as to prevent pipe leaks. It's SO expensive to live a normal life at this point and especially if you don't have a CEO salary/bonuses. Please deny the request for any rate increases proposed by PGE. Thank you. - 5/26/2024 8:52:21 AM

Name/Location	UE 435 Public Comments
Steve St - ESTACADA	<p>I was listening to a report on OPB radio earlier this year, they were talking to a representative of Portland General Electric. The general conversation was about why after just getting the 17% rate increase in 2024 PGE felt that they needed an additional increase in 2025. What struck me and the reason I am writing was the the representative stated that in addition to concerns about increasing battery storage one of the main reasons for the 2025 increase was to "Guarantee" a double digit rate of return for their investors. Since PGE is basically a monopoly in the part of the state where I live I find this very offensive. My investments have no guaranteed rate of return, why should the investors in a monopoly expect to? In closing I am contacting the Oregon PUC to strongly oppose any further rate increases by PGE. We have had a 30% increase in our rates since 2022 and the next increase isn't supported by any actual need on the part of the utility. - 5/26/2024 1:42:54 PM</p>
Kristin Santose – Salem	<p>I read in the Statesman Journal that PGE made \$228 million in profits in 2023. And they are asking for another rate increase? Seems like pure greed to me. Petty absurd in my opinion. It's legitimate that they make a profit, but that amount seems excessive to me. In my opinion they are just trying to get the public to pay for the fact they got held liable for the Labor Day fires a few years back. I urge the PUC to deny this rate increase. They have already had two rate increases in the past two years. Most people can't afford this while the company is making a killing. Thank you for taking my opinion into account. Kristin Santose 476 Oregon Avenue NE Salem. Oregon 97301 503-588-2354 Sent from my iPhone - 5/27/2024 12:31:42 AM</p>
Rodney Gould – NA	<p>To whom it may concern, I would like to go on record as opposing PGE's latest rate increase request. This request on the heels of last year's 18% increase is unacceptable. I believe the company should be using their profits for capital projects like any other company. I would not be opposed to a small one-year surcharge to assist them, but don't feel the public should carry the burden of the entire project, especially with a perpetual rate increase. Thank you for your consideration, Rodney Gould - 5/27/2024 12:31:45 AM</p>
NA	<p>Hello, I am outraged about high electric bills, it is unaffordable and absolutely obnoxious that PGE increased rates and want to increase them again. My electric bill is already 400\$, it seems you can have electricity and heat only if you are wealthy. I am begging you not to allow PGE to increase rates again, this company pays high salaries to their CEOs and need to budget better. Are you gonna allow people to freeze to death during winter or have heat strokes in summer because we cannot afford to pay for electricity? Stop this greed! Concerned Citizen - 5/27/2024 12:31:48 AM</p>

Name/Location	UE 435 Public Comments
Thomas Gapen – Salem	Hello, I'm new to Oregon. We moved to South Salem 2.5 years ago and since then I've been shocked by the cost of utilities, particularly electricity. I'm even more shocked at the astronomical rate increases. I believe my electric bill has doubled since I moved here. And for PGE to request yet another 7% increase on the heels of the January increase of 18% is just staggering. The fact that the PUC allows these increases every time makes me wonder whose side are you on? Clearly the PUC does not have the public best interest in mind. I'm a voter and you can expect that I shall make my concerns known to the governor in an effort to find competent commissioners who will act in the public interest instead of those in corporations seeking to increase profits. Do not allow another increase from PGE. Thomas Gapen tgapen@gmail.com - 5/27/2024 12:31:50 AM
Loretta Davis – NA	Your last increase was a hard blow especially to us who are on fixed income. AND now asking for another increase???? I already have to keep the temperature turned down in my house in order to survive all the increases. Stop. You have increased your charges already too much. Stop wasting money and you will have more than enough to pay your CEO's and all the high salaries. This is ridicules. Enough is enough. Tom Sparks - EAGLE CREEK	It is my understanding the PGE is requesting a significant rate increase for 2025. Please refuse this request!!! Our electric bills are overwhelming us financially now, an even greater cost will make our lives very challenged. They are attempting to secure their investors' growth and prosperity at the painful expense of all the service users. Please block this planned increase!!!! - 5/27/2024 6:30:51 AM
Darrell Coleman - BEAVERTON	Subject: New Equal Pay program & Proposed 2025 Rate Hike. The Equal Pay notice says that this is designed to "help" the customer. However, this actually appears to be a money grab by PGE. If my household is any reflection of the average, we substantially reduced our electricity usage after the outlandish January rate increase. The new Equal Pay program should use the percentage increase/decrease based ONLY on 2024 year to date usage and then adjust the Equal Pay amount. Otherwise, the new program uses last year's usage, which is likely much higher and giving PGE a one-time upfront bonus. The PUC needs to have tighter controls and accountability oversight. While this message is not focused primarily on the 2025 proposed rate increase, this consumer is absolutely against the increase, especially in a time of tight consumer budgets. The PUC needs to evaluate the effectiveness and efficiency of the 2024 increase first, then publish those results to the public in a similar notice as the Equal Pay communication. All of that most likely will take more than one year. - 5/27/2024 9:49:12 AM

Name/Location	UE 435 Public Comments
Robin Kilpatrick - SANDY	PGE rate increase, a big fat NO! They just got one. Rates are rising far faster than costs. The high cost of the bird killers is unsustainable and wasteful. Solar power locks up land that could be used for farming and housing and it is also unsustainably expensive. Stop removing the dams, rivers are the best sustainable power generators we have. - 5/27/2024 3:34:50 PM
John Wallent - PORTLAND	I am making the comment on behalf of John Wallent. He would like the Commission to know he is adamantly against PGE raising rates. He is also speaking on behalf of his roommates. It is getting very difficult to young people to make ends meet in Portland. He lives in the Tabor area. He feels the CEO of PGE is making too much and the rates are too high. - 5/28/2024 10:27:01 AM
Chelsea Sommer - PORTLAND	Utilities are already too high. This increase will put an undue burden on the most vulnerable in a city that already has a huge amount of people on the verge of houselessness. - 5/28/2024 3:59:50 PM
Vikki Cosentino – NA	Over the last two years, PGE has raised our utility bills 40%. One of those rate increases was during the ice storm of Valentine's Day 2021. This affected millions of people, myself included. I was without power for 7 days. I had to stay with my family who were also without power for 11 days. During this time, my family was living off of a generator just a power their home. This was for light, propane heat, their water pump which is a well. My house was completely shut down and food was at my family's place. PGE was in no hurry to get power back on to at either location. Fortunately, I had a place to go but many people did not. However PGE had no problem raising rates during this horrendous time. During the COVID-19 Pandemic PGE rolled out a low income discount program for consumers like myself. Due to the fact that we were struggling to pay our bills. PGE is trying to raise their rates once again, on an average of 7.4% in 2025, this will again hurt residential customers. As a customer and living on less than \$950 a month from Social Security if PGE raises the electric rate another 7.4% (approximately \$10) customers, like myself will have to choose between certain essentials, like powering their home, food or medication. Making that choice for some people like myself who has a disability it could be a DEADLY decision. I do not want to face consequences, because I had to make the choice between powering my home, medication, or food, I rely on these basics as does everyone. My income is tight. I'm not only provide for myself. I provide for my service dog whom I rely on with the above income. I would not be able to do that with a proposed increase. Any utility company should not be allowed to raise their rate more than the COLA. The COLA in 2023 was 3.2%.. With the 40% increase, as well as a 7.4% increase in 2025 PGE would be getting a 47.4% increase in two years. That is far more than the COLA increase. 3.2%. by 44.2%. Consumers like myself that receive the low income discount through PGE would be wiped out. The proposed increase stinks of corporate greed. Leave the PGE rate where it is. Do not adjust the PGE rate more than the COLA rate. Respectfully, Vikki Cosentino - 5/29/2024 12:31:42 AM

Name/Location	UE 435 Public Comments
Robert Hoover - BEAVERTON	Stop raising rates already. You are hurting the public and don't seem to have any accountability. Oregon should provide some competition to protect consumers from this monopoly. - 5/29/2024 9:10:24 AM
David Lehman - WOOD VILLAGE	This is a cost that most people will have to deal with like a lot other services or items that are going up in price. I don't think we should be paying more for the PGE services. A company like PGE should be putting money away every month for improvements and replacement of equipment. Alot of companies I believe are just price gouging. When there is price increases in one area I decrease or stop spending my money in other areas. What this means is that I shop a lot more online than I do in my community, there for I am unable to support working people/businesses in my community. There are some businesses that I have not used less or not at all in my community for several years. I am on a fixed income (retired, disabled Veteran). PGE are not the only ones that are price gouging. - 5/29/2024 10:41:21 AM
Bob Houle - HILLSBORO	The Oregon Public Utility Commission has granted rate increases to PGE in the last two years that approximate 23%. If the latest request for a 7% increase is granted, electric rates for PGE customers will have increased 40% in three years. The Company may be able to justify such outrageous increases to the PUC, but a big dose of reality needs to be introduced into the rate setting process. The average PGE customer's income has not increased 40% in the last three years. Customers must live within their means and can't get a huge raise from their employer or social security to cover significant increased spending plans. If customers want to spend more money on something their current cash flow can't handle, they need to cut back on other spending to stay within their budget. Maybe PGE needs to cut executive salaries or new cars for executives to drive or other perks, or perhaps projects should be delayed until they can be afforded with reasonable rate increases. Consumers have no alternatives from which to shop for electricity, so the rate commission must do their job to protect the consumer from this monopoly. - 5/30/2024 11:12:45 AM
Eric J - GASTON	No on another PGE rate increase. Constant increase of Inflation and most people aren't making more money with sky rocket inflation is not the time. Greedy company. - 5/30/2024 2:06:55 PM
Kristi Cule - MILWAUKIE	My husband and I are disabled and we are on a fixed budget - 5/30/2024 2:18:45 PM
Mary Bell - GRESHAM	I feel that a rate increase on top of those already in place is a burden on seniors & fixed income families. Costs on everything has risen & electricity is a necessity not an option. Please consider a tiered rate increase & not just across the board. I understand fire prevention but that should be a burden on PGE who put their power lines in vulnerable areas & climate change has been talked about for decades. It's PGE who has been slow to respond & now rate payers are supposed to hurry & pay so PGE can safeguard their electric lines. Give rate payers some relief from 'hurry up & pay'. I don't want to have to turn off my home electricity everyday & only use it certain times of day at my discretion. That's not how I should have to live. - 5/30/2024 2:54:08 PM

Name/Location	UE 435 Public Comments
NA - ALOHA	Without a doubt a rate increase on the heels of the previous increase is not good for any community. Instead of raising rates how about using your profits and bonuses to cover updating your equipment and paying what is owed to folks who suffered loss because of your neglect. Stop making people pay for your mistakes. - 5/30/2024 4:42:15 PM
R L - HILLSBORO	In the past 5 years utility rates have increased exponentially; in some cases up to 50%. It's curious how the average consumer is expected to pay for these increases seeing as wages have certainly not gone up by 50%. There needs to be public approval for rate increases due to the fact that the public is being forced to work with these for profit utility companies, i.e. monopolies; no one chose to do business with these utility companies. Additionally, there needs to be more transparency on why these increases are needed and where the money is going. If the money is going to line CEO and stockholder pockets, then that's unacceptable. If it's a legitimate request to revamp the system, then okay, let's all review together and come to a compromise on what is an acceptable rate (increase). - 5/30/2024 6:20:02 PM
Neil Adams - ALBANY	We have already had a hike in our power bill. With everything else going up they are pricing us out of our homes. It is coming down to do I stay warm or have food to eat. It is not right to make all of us pay for the Paradise fire. - 5/30/2024 6:23:16 PM
NA - PORTLAND	The people of oregon do not agree with your tax hikes, especially for batteries! It's is bad enough you have monopolized or electricity so we don't have other options! This is wrong on so many levels especially when invasion is so high and people have to choose between food and electricity! - 5/30/2024 7:20:47 PM
Christine Powell - SALEM	PGE is already one of the highest Electric companies in Oregon. When combined with previous rate increases in the past two years, PGE's rate increase would raise rates by about 40% in a two-year period. That is absolutely ridiculous! 40%!! That's unheard of! We don't even get annual raise increases to match that increase. We can't keep up! Annual increase rates are not what should be happening. We already pay more than other electric companies. - 5/31/2024 9:00:01 AM
Roswitha Van Winkle - ASTORIA	I would appreciate if you would consider that many people are on a fixed income.Our power bill went up almost a hundred dolly this last winter.We heat our house only with a wood stove. I do appreciate the work of the people who are out in the field and how quickly they try to restore power when the power is down.Maybe the company needs to reassess where money could be saved .Maybe take a closer look at upper management,please start trimming from the top before you increase our rates anymore. - 5/31/2024 2:58:57 PM
Runa Kahan - CLACKAMAS	People can already not afford how high electric bills are, this once again puts the cost of climate change on people who have nothing rather than the smart solution - tax the billionaires already. People need power. For many, it is a life or death situation. We. Cannot. Afford. Another. Raise. We can't seek power elsewhere either. Do not raise rates. If PGE raises rates, all deaths due to not being able to afford heating, cooling, medical devices is on them. - 6/2/2024 1:53:06 AM

Name/Location	UE 435 Public Comments
Max Carey – NA	<p>I am writing to strongly protest the proposed PGE rate increase of 7%. Only six months ago, PGE increased its general residential rate by a whopping 17%, the largest increase in more than 20 years.¹ In just the last three years, PGE has already raised residential rates by 43.8%.² At the same time that its customers struggle to keep up with these massive rate hikes, PGE is raking it in: in 2023, they had profits of \$228 million, distributed \$179 million in dividends to share holders, and paid CEO Maria Pope an eye-popping \$7 million in total compensation.³ As if that isn't bad enough, NW Natural is also requesting a rate increase of 17%, which if granted would be a devastating one-two punch to working families that rely on both services. I find it disgusting that customers are required to support the massive profits of these private companies, even though many people are already struggling to keep up with the previous exorbitant rate hikes. Instead of protecting the profits of private companies and their obscenely-overpaid executives, the PUC should do its job and actually serve the PUBLIC. Sincerely, Max Carey Sources: 1 https://www.opb.org/article/2023/11/10/portland-general-electric-january-2024-rate-increase/ 2 https://katu.com/news/local/oregon-legislature-lawmakers-utility-nw-natural-rate-pacific-power-pge-idaho-power-hikes-causes-ways-to-lessen-impacts-citizens-utility-board-oregons-public-utilities-commission 3 https://investors.portlandgeneral.com/node/19341/pdf 4 https://www.sec.gov/ix?doc=/Archives/edgar/data/784977/000078497724000065/p-or-20240306.htm - 6/6/2024 12:33:03 AM</p>
Mark Manion - BEND	<p>I heard from the news PGE raise the rates 33% in the last 2 years and now they are asking for 18% more. If you walked into a store and found out they raised prices by 51% wouldn't you walk out the door and shop elsewhere? I'm sure PGE won't reveal it but I'll bet their shareholders have been asking for bigger dividends for decades and they have been taking it out of the powerline brush maintenance budget leaving us with fire danger from overgrown vegetation. They seem to put money into vegetation control on the mainline towers but drive down any highway and powerlines are surrounded by vegetation. Now there is a \$178 million judgement against PGE and they are trying to make the ratepayer pay for their poor judgement and greedy shareholders. I oppose this rate increase, the fat cat executives and shareholders should foot the bill! - 6/6/2024 7:39:32 PM</p>
Nanao Carey - PORTLAND	<p>You should not raise the electric rate. Especially while paying \$\$\$ for your ceo. Cut their salary first before exploiting us - 6/7/2024 9:41:22 PM</p>
Kathy Moseler - HILLSBORO	<p>Please deny PGE the rate increase of 7.2% for residents and 9.5% for small businesses. Especially for those below the 200% of Fed Poverty Guidelines. If not this would lead to more shutoffs. Please think of the people working honest and hard jobs to have a family, the building block of society. Remember small businesses have been the backbone of our country. We cannot survive as a healthy, vibrant community without seeing that the least among us are watched out for. Thank you for this opportunity to share my thoughts. - 6/10/2024 5:36:26 PM</p>

Name/Location	UE 435 Public Comments
David Schmitz - OREGON CITY	The commission says it also denies rate increases. No examples are given when increases have been denied. Over the last 5 or 10 years, how many approvals have been granted as compared to denials? I do not recall any denials recently. It seems to me these rate increase proposals are another example of companies getting on the inflation bandwagon to increase their profits and pad the accounts of their executives. - 6/10/2024 8:41:16 PM
NA - PORTLAND	I can't afford rate increases. When will they ever think of the people? - 6/11/2024 1:22:02 PM
NA - OREGON CITY	I know a few PGE employees who work from home. I know one who works two days a week and another who only goes into the office once a week. I do not think that it is effective for every employee to be working at home. The latter I guarantee does not put in her full hours. I think there are situations where people can work from home and there are definitely situations where people take advantage of the situation so they don't have to burn vacation time to do things they can do "remotely". The accountability is lacking and do not support an increase in any way shape or form because you as a company have not shown to be a good steward of what I pay you now. - 6/11/2024 4:21:41 PM
Laura Duncan - HILLSBORO	Hello, our home has been opting-in for renewable energy for years, and I thought that was a valuable investment. But our home cannot support this rate increase, it is beyond our means. As Oregon (and the Portland Metro area) becomes more expensive, rate increases are crippling the current generation of renters and homeowners. You are losing the public trust. I oppose rate increases in our utilities, especially those earmarked for climate change initiatives. I would rather use traditional methods of energy, instead of new wind towers or whatever else is costing so much money. - 6/11/2024 10:41:11 PM
Derek Shields - DAMASCUS	We've had to hold garage sales, sell a car and stop needed medication due to the already steep increase in electricity rates. This is bordering on criminal! - 6/11/2024 10:49:25 PM
Dottie Reynolds - SALEM	Do not raise pge rates. There is no need as pge ceo makes too much money. - 6/12/2024 12:08:14 AM

Name/Location	UE 435 Public Comments
Garry Smith – Stayton	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). I am a retired Navy veteran. I moved back to Oregon when I retired so I could afford a decent house and have enough money to pay by bills and still have some left over for food. For some reason the PUC believes people like me have enough left over money to continue to pay for annual increases by PGE. It's not true. My electric bill has ballooned since 2022. I now pay more than \$850 MORE per year just to keep the lights on. My military pension has not increased enough to even cover this and with horrible inflation on everything I am running out of funds. Only you can stop this gouging of Oregon citizens. Please deny the increase requested by PGE.</p> <p>Garry P. Smith As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, cdr garry smith 1630 Mountain Dr Stayton, OR 97383-1489 garrysmith01@gmail.com - 6/12/2024 12:31:50 AM</p>
Julie Harris – Beaverton	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. Vern Owens – Mulino	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. I read a summary of the projects PGE proposed to perform as a result of this increase and frankly they strike as low value. Additionally, I don't see PGE as good stewards of the money they already have. I've had personal experience with PGE's tree trimming contractor who last summer came down my road and trimmed the same threes three different times (only one belonged to me and it was minor). When I questioned them about their plan the Foreman told me they just drive around looking for trees to cut. Really?? Another time they came out with two men and three pieces of equipment to pull and old buried pole stub out of the ground they had been buried for years and causing no issues. When I asked why I was told there was no really good reason to do it other then they had this contractor available and needed to do something. My brother-in-law who lives in Mulino on Hwy 213 had a new pole lay in his yard for nine months. It was dropped off as a replacement for another pole. While laying there the pole warped, but was finally installed. When my BIL asked why the delay (numerous times) he was told, "because the new installation would affect traffic on Hwy 213." Did PGE not know that when they dropped off the pole? For me these are all indications of a company that has too much money to spend and does so in a very inefficient manner. Rather than granting them more money to spend inefficiently I'd like to see you, the Commission, look harder at how PGE spends its money and whether those spends are high value. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Mr. Vern Owens 26825 S Ranch Hills Rd Mulino, OR 97042-8611 vernlowensjr@gmail.com - 6/12/2024 12:32:29 AM</p>

Reggie Sullivan – Hillsboro	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). A 30% increase for PGE since December 2022 shows a lack of frugal spending on their part. No employee has had such a salary increase in that same period of time! Consumers have to make adjustments in their spending based on their income. PGE needs to reduce its spending so as not to have such high rate increase needs! We have been making adjustments in our electrical needs by shutting off our heating/cooling system. Keeping the home at 66° to 68° in not always comfortable, however, the electric bill for our household is being reduced! As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Name/Location	UE 435 Public Comments
Isabela Villarreal – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. It's absolutely asinine that renters are being burdened with additional costs and no additional benefits. The CEO of PGE makes over a million dollars a year, and for some reason renters are being asked to foot the bill for services that are not better or more expensive for PGE than last year. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me and all my neighbors. People are struggling to make rent, let alone an extremely expensive utility bill. It's unconscionable to allow them to continue to raise prices for something that is not worth more. Please do the right thing. Please do not approve PGE's rate increase request. Sincerely, Ms. isabela villarreal 1515 SE 31st Ave Portland, OR 97214-5093 isabela.m.villarreal@gmail.com - 6/12/2024 12:32:52 AM</p>
Charles Smith – Portland	<p>My name is Charles Smith. I live there to David Douglas High School in Southeast Portland and am a long time PGE customer and generally consider myself a supporter of the utility regard to most of their operations and projects. That said, I am submitting this comment to urg the Commission to reject PGE's lastest request to raise rates next year even further. PGE customers are still trying to adjust to the substatal and I beleive unprecedented large rate increases that increased rates for Oregon households by 30% from December 2022 to January 2024. People cannot afford these increases. The commission needs to send a clear and strong signal on behalf of consumers/rate payers that they are listening and that they are not a rubber stamp from the utilities every time they make a proposal to increase rates. I am a member of the Oregon Electric Vehicle Association and the things that I advocate for is for people to change their transportation and hvac to electric vehicles. Making this transition has all sorts of reasons with cleaner air being a big and tangible benefit. One of the arguments I had been able to make in favor of electric vehicles has been the stability of the rates and the ability of rate payers to have a voice in determing what the price would be . This is much better than the situation is for fossil fuels but the previously granted rate increases seriously weaken that argument. This is not the time to approve PGE's request to raise bills. Maybe send the signal to them that there is truly oversight and perhaps reduce the approval rates that were approved last time by a significant margin. If the utilities knew that bring in a rate case could result in haven't their rates reduced, they would be more careful in bringing such cases of making sure they had a good case to them. I think right now they're just in a habit of always asking because if you don't ask you don't get. It's a negotiation tactic. It is not a tactic that should be effective and is not appropriate for a rate case affecting so many of the public. We can't afford to play games . People's livelihoods , and they're very lives are at stake. - 6/12/2024 12:32:57 AM</p>

Martin Miller - SALEM	Martin Miller , Salem Oregon The rate increase last year and the current rate increase proposal for PGE will have a dramatic affect on our farm operation . We operate with 5 irrigation wells on the different farms . We have seen Grower price decrease for the 2024 crop year and have to look at value of irrigation will add to our crops an may not use irrigation, specially with crop price decreases. Please don't allow PGE to continue increase cost , as we need to stay in business and can't increase our price of the crops we grow. Thanks - 6/12/2024 8:02:27 AM
Christina Ellison - GLADSTONE	Please do not increase rates with PGE. We are a single income family and cannot afford for more increases. I'm also confused why we have such expensive electricity prices when in Idaho it is much cheaper. We have dams here, but do we sell the electricity produced by Oregon dams to Idaho and other states? Why? - 6/12/2024 8:27:40 AM
Vanessa Nordyke - SALEM	I am writing in my capacity as a Salem City Councilor (Ward 7) to voice opposition to the Portland General Electric rate case (UE 435). In this capacity, I speak for myself and not on behalf of City Council or the Mayor of Salem. Instead, I speak at the behest of my constituents and other PGE customers who will bear the brunt of PGE's untimely and inequitable rate increase. I urge the Commission to consider the impact this rate increase will have on Oregonians living paycheck to paycheck, the single parents struggling to afford childcare, the seniors deciding whether to buy food or medication; and many others. All of them are just one late payment away from eviction. According to the Oregon Housing and Community Services, 25% of Salem renters spend 50% or more of their income on rent. Dozens of other Oregon cities have similar rates of rent-burdened residents. For far too many Oregonians, an unanticipated medical bill, a flat tire, or just bad luck is all that separates the housed from the houseless. Increasing rates will be the last straw for countless PGE customers. Please reject the rate increase. - 6/12/2024 9:34:02 AM
S Fox - TIGARD	I am opposed to the proposed rate increase. The alternative energy sources we are being forced to subsidize and develop through these rate increase, such as solar and wind are more expensive and less stable and reliable energy alternatives. I do not like being forced to pay for these inferior alternatives, I am a consumer not an investor. If PGE wants affordable energy then explore the tremendous improvements in nuclear energy making it safe and affordable to even small communities. - 6/12/2024 12:15:35 PM
Mike Hooker - AMITY	I am upset with PUC commission for allowing PGE to have monopoly on utilities where customer don't have the option to choose. I am also upset that the company is changing equal pay which is going to increase bill to under \$500 a month. PGE is forcing customers who are on fixed income to have to choose not to have power in their home. This is outrageous they just got an increase and asking for another 18%. This should be an automatic denial by the PUC. You can't force people into not have electricity, or choose between paying mortgage or their utility bills. - 6/12/2024 1:09:18 PM

Name/Location	UE 435 Public Comments
Karleen Simpson - OREGON CITY	I do not support any PGE rate increases. The latest electric rate increases have already made it difficult to stay comfortable in my home. I am retired and widowed, so I am at home a lot and have only one income. Tony Clifton - PORTLAND	These rate increases are outrageous and out of control. - 6/12/2024 3:51:12 PM
Kirsti Ness - HILLSBORO	I am very concerned, confused, upset, etc., with the potential rate that you are proposing again. By pushing this through, you are forcing pesto make a choice of paying their electric bill or paying their rent, mortgage, food bill, etc. You claim that the rate increases are necessary because of upgrades to the system, etc. But come on, we know that's not true. Like I've mentioned before, all this is going to pay your over-priced CEO. Why are we being penalized for these huge price hikes because you want to make so-called "upgrades" to the system? Why is it that your CEO making millions of dollars and then you have the audacity to want another rate increase? How does that equate out? It's shameful what you are doing. I'm urging the PUC to vote against this. Enough is enough. PGE and your over priced CEO can learn to make do with less just like the rest of us. - 6/12/2024 8:23:31 PM
Emily Mcintire - EAGLE POINT	Greetings Oregon Public Utility Commission, I am writing in regards to the proposed rate increases. As there are currently thousands of comments for you to go through- I am sure mine will not be something new... Simply put, Oregonians can't afford this. Agriculture can't afford this. Oregon has put the cart before the horse in our quest to be green by 2040. We lack the infrastructure to meet this need and have instead put it on the back of the electric companies- who then are putting it on the backs of their consumers. Many of whom are on fixed incomes, already struggling to make ends meet. We need to be looking at affordable energy sources that don't cost astronomical amounts to put into place. Hydro energy, natural gas- these are renewable and clean! Solar and wind- so expensive and when they fall apart- where are we going to put them?? We will have a whole new crisis on our hands in 20-30 years! Please, don't allow these rate increases to continue. Push back on our state mandates, ask for more time- push for more sources of energy that stabilize our economy- not massive infrastructure that will cause inflation to skyrocket once again. Thank you for your consideration. - 6/12/2024 8:27:37 PM
Anthony Fox - SALEM	I am opposed to a price increase just as I am opposed to more expensive and less reliable energy sources. The cost of living is becoming too high for everyone and a cost increase for electricity would add to the burden - 6/12/2024 9:51:21 PM

Name/Location	UE 435 Public Comments
Bob Terry - ALOHA	I am opposed to any rate increases at this time. PGE has not earned it. They continue to support and encourage ways to use more electricity yet continue to promote the use of such expensive means of generating it, that has a negative return, such as Hugh windmills that have a negative generation rate. As their subsidy tries up. Like the Fed/State Governments. The honest negatives to the environment is ignored! NO TO RATE INCREASE! !! - 6/12/2024 9:52:06 PM
Sophie Nugent – Portland	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Ms Sophie Nugent 1431 SW Park Ave Apt 701 Portland, OR 97201-3458 nugentsophie7@gmail.com - 6/13/2024 12:31:47 AM
Senator Janeen Sollman – NA	sen.janeensollman@oregonlegislature.gov. June 12, 2024 TO: Oregon Public Utility Commission RE: Docket UE 435 Dear Commissioners, Thank you for the opportunity to provide my written comments regarding Docket UE 435 for Portland General Electric's General Rate Case. I write today out of concern for my constituents, and all Oregonians, who are feeling the impacts of increased utility bills. I have personally heard from constituents in my district about the stress and worry of higher utility bills, and now we have learned of record utility shutoffs in April of this year. 8,715 households is unacceptable, and devastating for the stability of families. Oregonians are feeling the pain of increased costs in many areas, at the grocery store, at the gas pump and in their utility bills. These cost burdens threaten Oregonians' livelihoods and literally, their ability to keep the lights turned on. Additionally, because these increases occur during the wintertime, the choice for constituents is to stay warm and risk a high bill or suffer through a cold winter season and try to skimp and save where they can. This is not a choice people should have to make. Utility rates have seen double digit increases in the last couple of years. Adding an additional 7.20% on top of that will be an added pain point for customers. I ask that you thoughtfully make your determination on this rate case, and that you help spur a sustainable pathway for utilities to be made whole, while at the same time presenting viable and less impactful increases for customers. I want to express my appreciation for the access you have provided for Oregonians to weigh in on these issues, from public comment opportunities, whether virtual, in person, on a road tour, and the access to comment online. Thank you for the opportunity to allow me to share my comments on this issue. I respectfully ask you to please keep Oregonians, their financial stability, and access to utility at the forefront as you make your determination. Sincerely, Senator Janeen Sollman Senate District 15 - 6/13/2024 12:31:49 AM

Avalon Leonetti – NA	<p>This proposed rate increase is ridiculous. Especially considering that rates were raised near 20% less than a year ago. And were raised the year before that as well. Everyone I know is struggling to pay their bills, and greedy companies continuously hiking the price of utilities just so that they can line their pockets, pay their shareholders and fund lawsuits against the EPA doesn't sound like it's in the consumer's best interest. The very fact that our only utility company is a publicly traded company that is beholden to shareholders is grotesque. If price hikes like this continue I won't be staying around much longer, and I won't be the only one. Do better. Avalon Leonetti - 6/13/2024 12:31:54 AM</p>
Phil Goldsmith – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Melody Ghormley – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). I have been a PGE customers for nearly 60 years and, now as a senior on a fixed income, I can't afford these ever-increasing, shocking rate increases. Electric power is not like food or gasoline where you can shop around for less expensive items. And it's not something we can just "go without" like new sheets or candy. Please reject PGE's request to raise rates by 7% for Oregon households. My husband and I are still "catching up" from the rate increase and ice storm bills this January. I understand that PGE's rates for Oregon households have already gone up by 30% in just 13 short months, from December 2022 to January 2024. Maybe rich people can afford these higher-than-ever electric bills, but people like us cannot. PGE's request to raise rates is unreasonable at this time and they should get another increase for at least a few years. I am not interested in providing dividends for their shareholders. request to raise bills. We t is up to you - who are paid by US, to protect customers like us. Melody Ghormley and Kyle Kroker Please do not approve PGE's rate increase request. Sincerely, Ms. Melody Ghormley 3335 SE 10th Ave Portland, OR 97202-2723 melodyanng@yahoo.com - 6/13/2024 12:32:19 AM</p>

Brent – NA	<p>deaddrop678@yahoo.com<mailto:deaddrop678@yahoo.com>. This is in regards to the Portland General Electric rate increase request for 2024 and 2025. I am a disabled senior on a small fixed income. I was struggling to buy groceries in 2023. I am trying to stay out of the food pantries, to leave that for those in greater need. I have to buy groceries on \$180 from SNAP, because my below _market rent_ takes 80% of my monthly income. I haven't bought new clothing in 10 years. My car needs some minor repairs. Yet PGE got an 18% rate increase with little to no notice to the public for 2024, and they want a further 7% for 2025. I wish I got an 18% increase on my Social Security, hell, even 7% would be nice. Why are the executives getting large bonuses, instead of saving money for regular maintenance and upgrades? It is not like the improvements weren't predicted years ago. Their getting bonuses and high salaries, yet can't predict they will need expensive maintenance and upgrades. Oh, BTW, I used to work for Vestas Wind Turbines. I have helped in both construction of wind farms, and their service and maintenance. And why has the money to pay for these needed maintenance and improvements, been paid out in dividends, rather than set aside for future improvements. PUC, do your job, look out for the Oregon consumers, not the executives and shareholder's dividends. Quit rubber stamping their requests. You're about to put me on the street. Brent - 6/13/2024 12:32:33 AM</p>

Tara Horn – Portland	<p>Hello, I am a resident of NE Portland writing to voice my opposition to the PGE rate hike. I am a Pacific Power customer, but assume my electricity rates are tied to PGE rate hike because my bill has increased exponentially this year as PGE has raised rates. It is unconscionable that PGE wants to raise rates *again* to keep shareholder profits "competitive". Energy and utilities are a public service and basic human need, we should not be allowing corporations to exploit this need for profit. People aren't making more money - these rate hikes are coming out of people's rent and mortgage and grocery budgets. In 2022 we had a record high heat of over 120 degrees in Portland. I remember that month was the highest electric bill I'd ever had, around \$130, because of the A/C. My bill has been over \$130 every single month of 2024. Double what it was during the summer last year. With increasing extreme heat events these rates are going to result in people getting sick or dying because they can't afford to run an a/c when it's 100 degrees outside. Every business uses power to so these rate hikes drive up costs for essential goods like groceries across the board, or they put small businesses under because they don't have enough for it. I keep reading about the most recent 7% rate increase, but how does a 7% increase result in a bill 100% higher? How does that math work?? I even track our usage with our smart meter, and we've done so many energy efficient changes it seems impossible that our basic electrical needs cost so much now. Across every person in Portland alone, that increase represents a shocking amount of money that would otherwise be spent in our communities, on rent, on food, that's now going straight to a corporation that puts shareholder profits above public well being. PGE needs to manage its resources and its own budget to do its job, and stop squeezing our communities for more profit. This isn't Texas, Oregon is better than this! Thank you, Tara Horn Zip: 97211 Sent from my iPhone - 6/13/2024 12:32:36 AM</p>

Billy Wilson – Woodburn	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. My bill has went up over 30% recently. Not counting rate hikes year before. How much do you guys need from my retirement? I have less and less money for items that I need just to survive. Luxury items are not an option anymore. My options are running out. Your rebates and saving programs are not able to help us . Being a senior and going in debt to get Solar does not make sense for people in their mid 70's. Plus roof would have be replaced. Not enough years left in my life to recover my output by cost savings. Could you consider rolling back some of your increases instead of rising them? Why when rates go up they never go down? How about temporary increase until the amount of money you need is reached. How about thinking about selling your company back to the people of Oregon so we could take the greed out of the equation? Anything would help. I feel you only care about profits. When is enough, enough? If you've read this thank you very much. Bill Wilson Please do not approve PGE's rate increase request. Sincerely, Mr. Billy Wilson 935 6th St Woodburn, OR 97071-4113 aoregonwilson@gmail.com - 6/13/2024 12:32:44 AM</p>

Amy Murray – Portland	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to approve PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please do not approve PGE's rate increase request. Sincerely, Ms. Amy Murray 6530 SE Carlton St Portland, OR 97206-6628 gem2amarra@gmail.com - 6/13/2024 12:32:48 AM
Laura Roe – Portland	Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7% for Oregon households. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. With a reported income of \$2.92 BILLION in 2023, there is absolutely no justification for raising consumer rates. Shareholder profits should come out of my pocket. Please do not allow this to continue. Please do not approve PGE's rate increase request. Sincerely, Ms. Laura Roe 2427 SE 66th Ave Portland, OR 97206-1205 roe.laura@gmail.com - 6/13/2024 12:32:50 AM
Tamara Peyton - OREGON CITY	Honestly start thinking about the people who can't afford another increase!! Please stop raising rates if x trying lower them. We cannot afford higher costs. - 6/13/2024 12:42:59 AM
Greg Dirks - SANDY	It's hard to be supportive or even consider another rate increase after last year's 18% increase. The executive team at PGE has compensation in excess of a million dollars a year for each position, and its CEO had a compensation package worth \$6.8 million last year. Dividend payments to shareholders have also been regular and steady through this period. We're told that this rate increase is needed due to increased demand needs and resiliency. At what point do these improvements and investments in the system come from the shareholder, and not the ratepayer who has no other options or provider? In fact, with all the tariff and rate tiers, it's possible (and frequently occurs) for commercial users with solar that generate more power than it uses, to still have a sizable monthly bill. With the increased electrification mandates around the state, it's time for either the PGE shareholder to pay, or no longer be an investor owned utility. - 6/13/2024 7:55:07 AM
Karen Lange - MILWAUKIE	The rates increase hits hard after years of increasing our rates and right on top of 17% rate increase this year. Our utility bill is quickly becoming unaffordable. No more rates increases unless we see some sort of good faith gesture with PGE executives taking a pay cut. - 6/13/2024 9:33:28 AM

Edward Murrer - BEND	Constantly dumping rate increases on the public is not acceptable. That is without clear justification and a thorough economic analysis. The utilities need to PROVE to the rate payers exactly why a rate increase is justified. What is the utility doing to optimize their performance? What about executive salaries? What is being done for fire prevention? I am not against a rate increase if it is financially justified. Transparency will reduce push back. We don't have that. - 6/14/2024 11:58:31 AM
Aaron Starr - BEAVERTON	So you want to up rates, again, in the worst inflation in my life. Poor folks will be affected the most. No rate increase, please. - 6/14/2024 12:13:58 PM
Jennifer Fowler - KEIZER	Stop increasing our rates! We can't afford this! Anyone paying attention knows we are being taxed too much and inflation is way too high. Increasing utilities every year is unsustainable!!!!!! - 6/14/2024 12:16:19 PM

Self-Advocates Taking Action - PORTLAND	<p>We are contacting you today as representatives of Self-Advocates Taking Action, a group composed of individuals with intellectual and developmental disabilities residing in the tri-county area of Oregon. We are writing to express our opposition to the proposed 7% rate increase set for 2025. We have significant concerns regarding the potential negative impacts this increase may have on our community and all residents of Oregon. Our community members rely on fixed incomes and face strict asset limitations. We are unable to work in the same capacity as others, and any increase in income often leads to penalties and loss of essential support services. The rising costs of living put us at risk of homelessness and threaten our ability to access necessary services to thrive. These constant increases create instability in our lives and exacerbate existing disparities within our community. Rather than another rate hike, we believe that alternative solutions, such as room-to-room technology, safeguards, and accessible resources, are needed. For instance, a 20% discount on our bills does little to offset the impact of these ongoing increases. We require assistance in understanding the reasons behind these hikes and identifying resources to mitigate the additional costs. Electricity is a fundamental necessity for us, not a mere commodity. We rely on electricity for all kinds of things, and it is not a commodity. Durable Medical Equipment, Power Wheelchairs, Adaptive equipment, Lighting, Heating, and Cooling are all human rights and we need access to this to be healthy and safe. We use things that are necessary to live, without these devices we will lose lives. How will I afford the increase when I need electricity to live? While low-income programs offer assistance with AC units and air purifiers, without further support on our bills, many individuals cannot afford to utilize these items. Our housing often lacks proper heating, insulation, and air conditioning, and obtaining approval for necessary modifications is a challenge. As a result, we are left living in inadequate, expensive homes that do not meet our needs. We are troubled by the fact that only a small portion of the proposed budget is allocated for infrastructure upgrades, with a reported 8% directed towards these improvements. This raises questions about the allocation of remaining funds, the expansion of low-income programs, and the lack of collaboration with our community to assess the ramifications of the rate increase. We need expansion of low income programs which includes updating the metrics of who qualifies for these low income programs. We are unable to support a further increase that would impose greater burdens on our community. As environmental concerns grow due to corporate greed, we fear the potential loss of lives resulting from extreme weather conditions. Who will be held accountable for these tragedies, and how will the families affected receive justice? Thank you for considering our perspectives on this matter. - 6/14/2024 1:22:21 PM</p>
Jonathan Clark - HILLSBORO	<p>I am concerned that PGE is using the green energy transition as an excuse to raise rates and explain away power outages. The faster that PGE transitions to 100% green energy, the sooner it will no longer be subject to volatile fossil fuel prices. The sooner that PGE upgrades to a robust grid, through reconductoring, the more efficient and reliable it will be. If PGE needs more money for this transition, then it should apply to the state and federal governments for funding. It should not gouge its customers and turn off power to thousands of people when they cannot pay the higher prices. I oppose the docket proposal and expect more from PGE in its service to the public--a faster transition to green & stable technology, and a more compassionate policy for people struggling to pay the already high prices. Sincerely, Jonathan Clark - 6/14/2024 1:36:37 PM</p>

Name/Location	UE 435 Public Comments
Robert Tuck - TIGARD	We've seen massive cost increases for energy and it's way beyond what's reasonable or appropriate to place on the public, who have no other choice. If compensation is needed for storm response or assistance for green energy initiatives mandated by the state legislature, that needs to be made known and our government needs to assist or roll back those requirements. - 6/14/2024 2:17:50 PM
Sanjeev Tyagi - BANKS	Everyone is literally bleeding money nowadays , we didn't ask for these rate increases after the last recent rate increase, this is absolutely unjust and uncalled for. - 6/14/2024 2:17:57 PM
Sharon Pittman - SWEET HOME	People have not even had time to try and adjust their bills from the last increase!Are you trying to please your shareholders or your customers? - 6/14/2024 4:52:42 PM
Brad Battles - HILLSBORO	Members of the PUC, I ask that you deny any further rate increases for PGE. As a homeowner in Oregon, I have watched my utility bills increase while incomes for my family stay flat or barely rise at the rate of inflation. We need a break and with the rising price of groceries, other utilities, insurance, and just general cost of living, another rate increase for PGE on top of the 17% recently approved, is a bridge too far. - 6/14/2024 8:08:08 PM
Brian Buckley - OREGON CITY	The rate hike for 2024 was bad enough. But it cannot happen again. PGE is already forcing people to make health choices regarding heat and coolness by raising rates this year. Doing so again will only mean more sick and isolated people living in homes that are unhealthy. I don't know how insulated the PGE people are from the real world, but the reality is that people are already dealing with inflation on food, higher garbage bills, higher water/sewer bills, and rising property taxes. And now PGE want them to pay higher rates AGAIN? Let's be clear: because it's not higher amounts for higher usage, but higher amounts for *the same* usage, people are paying a higher percentage of their disposable income for the same services as before. That is unacceptable. And unfair. All told, PGE are asking for a 25% rate hike over two years. We might wonder how mismanaged a company must be if they need that. As a public utility commission, your first responsibility is to the wellbeing of the people of Oregon, not to a company that decided they needed to get 25% more for the same services. You have oversight here because of the monopoly given to utilities and because electric usage is inelastic. You should exercise that oversight to protect vulnerable customers and tell them no. Then ask them by what date they plan to start lower rates again so that the poor and vulnerable suffer less. - 6/17/2024 12:47:16 PM

Name/Location	UE 435 Public Comments
Thomas Delorenzo - BEAVERTON	In their March 2024 quarterly financial statement, PGE revealed that their income increased nearly 50%, with their profit margin increasing by more than 18%. This was soon after PGE came crawling to the commission begging that they needed a massive rate increase to help the "reliability" of their system, the same system that failed so spectacularly in the January cold snap and killed residents that depended on them. Now they come back again demanding even more money. They want us to forget that they have been issuing a 50 cent-per-share dividend to their stockholders when they bleat that they need more money or else the system will fail. Enough is enough. PGE doesn't need this new rate increase when they have clearly demonstrated already have so much income that they're throwing money at their investors and executives. If they want to actually improve their system, they can use some of the gift of hundreds of millions that that commission already handed them without comment last year for that instead of just enriching themselves and Wall Street. We've had it with these increases. - 6/18/2024 7:15:44 AM
Sergey Zalttskiy - PORTLAND	PGE needs to find another way. The cost of power is ridiculous and it's getting too much. I am on equal pay but it is still a lot of money. People barely have enough money to live off of and PGE needs to reduce pay of CEO or something to save money. - 6/18/2024 9:47:18 AM
Teresa Zak - GLADSTONE	Rate increases for Utilities are out of control. Combine rate increases for utilities, water, sewer, cable/internet, insurance, groceries, gas, you name it because not just items listed here EVERYTHING has gone up; people can not afford to survive any longer. We are a fixed income and then there are low income families, must say middle income is about low income anymore. How can you justify putting people in the position to pay higher rates when they can't even afford to put decent food on the table anymore. - 6/18/2024 3:02:19 PM
Janet Goinski - HILLSBORO	Please don't allow PGE another raise I'm 76 retired female widow who lives pay check to pay check, like many seniors. I qualified for a discount due to my income, but with rising costs I can't afford another rate increase. I know many people have already had their power shut off because it comes down to priorities. Do I want to feed my family - put gas in my car so I can get to work or sit in the dark This just isn't right , do you have a heart or is it all about money ? - 6/19/2024 6:47:48 PM
Edwin Simons - MILWAUKIE	Like many older/retired senior citizens of Oregon, I too was quite shocked at the rate/cost increase when I opened my February 2024 PGE utility bill! It actually took ALL OF MY COLA adjustment for this year and now PGE wants to make another rate increase for fiscal year 2025?! I already am struggling with medication costs and just living! Yet this rate increase was not enough? What are you people doing here? I thought you where supposed to be on looking out for the citizens! Not helping this HUGE extortion on the backs of the most vulnerable people in/of Oregon! DO NOT ALLOW THIS INCREASE TO HAPPEN! - 6/19/2024 9:14:12 PM

Name/Location	UE 435 Public Comments
Linda Ebert – NA	I am opposed to the rate hike for PGE. They already make over 26.42% net profit. When 10% profit is considered good this over twice that. PGE does not need a rate hike. Please do not give them one. Also, please stop mandatory shutoff for low income families. They had a hard time living and without power it is even harder to exist. If PGE wants more money reduce the CEO's salary. Sincerely, Linda Ebert - 6/21/2024 12:31:40 AM
Kimberly – NA	Hello - I am writing as a PGE customer to ask that you reject their request to increase utility costs (yet again) by 7%. The cost of electricity is already very expensive, and the increase will not actually result in better service delivery or a lower climate impact. When PGE went for their previous increase, it simply increased higher paid folks salaries and offset costs onto people who have no choice but to pay for electricity because it is a necessity for survival. This will also disproportionately impact low income communities and folks with set incomes. Please stop utility companies from this wild entitlement to greed and more money. At least do an assessment of if their last increase actually resulted in improvements climate resiliency and service for community. At least assess how much their top paid employees increased their pay after the last bump. We are tired of massive agencies charging us more and more with no tangible benefit to us. Support people over profits, Kimberly they/she - 6/21/2024 12:31:42 AM

Name/Location	UE 435 Public Comments
<p>Advocacy & Outreach Coordinator UCP – Portland</p>	<p>I am troubled by the lack of neighborhood impact studies conducted prior to the substantial rate increase. Different demographics will be affected in varying ways by these rate hikes, and without comprehensive impact assessments, individuals may face financial hardships. For example, elderly individuals are experiencing increasing rates of homelessness, as rising costs of living, including rent and bills, strain limited incomes. In Multnomah County, over 25% of the homeless population is aged 55 and above, unable to work and struggling to keep up with escalating living expenses. Failing to study these impacts and enhance financial assistance programs could potentially exacerbate homelessness among vulnerable populations. It is imperative to study the multifaceted impacts of this rate increase on communities such as families, generational families, Black, Indigenous, People of Color, disabled individuals, low-income households, and individuals living paycheck to paycheck. Homelessness is a pressing issue, and this rate increase must be thoroughly examined to avoid worsening the plight of those already facing financial hardship. Within this the price increase, PGE is emphasizing "investments in local battery energy storage systems." KOIN News looked into the filing and found that only about \$17 million of the \$202 million total increase would go towards battery storage facility projects in 2025, which is only 8% of the total budget. I am concerned about the lack of transparency surrounding the allocation of funds within PGE's proposed rate increase. This lack of clarity raises questions about where the remaining funds will be allocated. PGE is asking to increase their profit margin from 9.5% to 9.75% so that their shareholders and investors can make more money. Otherwise without a rate increase, the profit may go down to a 4% or 5% rate of return and the rate of return for the investors may not be comparable to rates of return for other utility investments across the country. These increases may seem like a small increase for those making this decision; however, many people who are already struggling would be left with yet another burden of cost. The conversation has shifted to 'what costs do we allow utilities to put into rates', than the question, 'what is a just and reasonable rate for the customers'? We should be reflecting on what is within this rate proposal, who is it benefiting, and how can we collaborate rather than tip it into a power struggle. Historically, a utility would file for rates, get a rate increase, then live with that rate increase for 3-5 years, until new investments, etc. started to erode their profit margins and it did affect their competitiveness with others for shareholder dollars. Now, there is no longer an idea that a utility will live with the rate that is set. The rate was set in January (2024), and in February (2024) - the next month - PGE is asking for another rate increase (March 2024). PGE is a monopoly in this area, we have no other option but to deal with their increases even if none of us can afford it. I am concerned about the financial cuts people will have to make to keep their homes a safe place. In 2022 around 100 people died due to extreme heat and lack of cooling options in their home. Many people at a certain point will have to make difficult decisions, do I pay my electric bill, or get my diabetic medication? Utilities are necessary to live, treating it as a commodity is unethical. PGE (and other utilities) want new mechanisms that allows them to raise rates, to shift risk from their shareholders to their customers. PGE is not just asking for the 7.4% rate increase in this proposal. They have also tacked on and embedded policy mechanisms into this proposal that allows them to more easily increase rates every year for the next 10 years. Changing the process on rate increases is disrespectful and feels like it is put in place within this new rate increase without transparency. I urge PGE to halt the proposed 7% rate increase until comprehensive impact studies are conducted and transparent information is provided regarding the rate adjustment process. Utilities are not an optional cost, it is a necessity to live safely in our modern world. Without proper heating, cooling,</p>

NA	<p>I am opposing UE 435 & asking you to rethink this. It is pure foolishness to raise rates when a vast number of Oregonian are already struggling to pay their current electric bill rates. There is zero wisdom in this decision - that will end up causing more families undo hardship. It is rather like whoever is making this decision is INTENTIONALLY CAUSING more families to struggle & leading to a future failure of this company. We oppose the continual raises on bills ... someone needs to put more thought into this action - including thinking about the future of Oregon, the citizens, and this company ... raise hikes are just going to cause further problems (maybe that is your evil intent?) - 6/21/2024 12:31:53 AM</p>

Name/Location	UE 435 Public Comments
John Maddalena – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. JOHN MADDALENA 2509 NE Flanders St Apt 202 Portland, OR 97232-3191 johnmaddalena@gmail.com - 3/19/2024 12:33:45 AM</p>
David Levocovitz – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Name/Location	UE 435 Public Comments
Keegan Ferrando – Portland	My PGE effective rate per kilowatt hour has gone up by 33% in the past year (Fall 2023 @ ~\$0.1267 kwh vs Spring 2024 @ ~\$0.16336). I oppose another rate increase for what should be obvious reasons. I also oppose this rate increase at a time where the entire US population has suffered from wage stagnation and "once in a generation" level of inflation that has eroded the purchasing power of our capital, on the heels of a significant rate increase at the start of 2024. While I appreciate that costs have increased for corporations in some fashion as well, I find it unconscionable that seasonal events such as heavy storms that expose poorly maintained infrastructure all ratepayers expect would be in good working order, are now going to pay extra to fill the gaps for this poor planning and profit extraction purposes. In addition to PGE failing to plan for the future, ratepayers are now also on the hook for the litigation fees from fallout of the same poor decisions. PGE needs to learn how to be more forward thinking and focused on delivering reliable power, on reliable infrastructure instead of reactionary rate increases to bridge the gaps of poor execution and leadership.
Rochelle Dimock – Beaverton	I am requesting the PUC does not consider allowing PGE another rate increase right now. If it's for wildfires, someone else needs to pay for it, and not the consumers. This is driving everyone to homelessness, please do not give them another rate increase for a reasonable length of time!
Patricia Heil – Molalla	PGE has already substantially raised their rates this year. Another hike in PGE bills would finally devastate so many people. I can't believe what I pay for electricity. I suffer to keep it low, such as freeze in the winter and get overheated in the summer. Please think about the consequences of your rate increase on millions of innocent people, particularly the elderly!!
Alex Gonzalez – Portland	I oppose a rate increase for PGE and Northwest natural. These are privately held companies, and they are responsible for their maintenance and any other governmental regulations that require them to invest in their infrastructure and or environmental impact. The customer is not responsible for any liabilities.
Brittany Ciasullo – Portland	Please no, we can't afford it! This is absurd.
Noah Redacted – Portland	If the energy rates are raised yet again, I will struggle. They do not need to be raised, and definitely not raised by the amount that is suggested. PGE will hurt so many struggling lives with this, and it will actively contribute to homelessness and poverty.

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 700

**Opening Testimony
Depreciation Expense, Amortization Expense,
Depreciate Reserve, Amortization Reserve, and
Allowance for Funds Used During Construction**

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Ming Peng. I am a Senior Economist employed in the Rates,
3 Safety and Utility Performance Program of the Public Utility Commission of
4 Oregon (OPUC). My business address is 201 High Street SE, Suite 100,
5 Salem, Oregon 97301.

6 **Q. Please describe your educational background and work experience.**

7 A. My witness qualifications statement is found in Exhibit Staff/701.

8 **Q. What is the purpose of your testimony?**

9 A. The purpose of my testimony is to discuss my review of several components
10 (listed below as Issues 1-5) of PGE’s revenue requirement in UE 435.

11 **Q. Did you prepare any exhibits for this docket?**

12 A. Yes. I prepared Exhibit Staff/702, consisting of PGE data responses.

13 **Q. How is your testimony organized?**

14 A. My testimony is organized as follows:

15	Summary of Findings and Recommendations	2
16	Issue 1: Depreciation Expense	3
17	Issue 2. Amortization Expense	11
18	Issue 3. Depreciation Reserve	14
19	Issue 4. Amortization Reserve	16
20	Issue 5. AFUDC.....	18

SUMMARY OF FINDINGS AND RECOMMENDATIONS

Q. Please summarize your findings and recommendations.

A. My recommendations are summarized below:

1. Depreciation Expense: I recommend temporarily using the depreciation parameters that are found in workpapers for PGE's Exhibit 500 for PGE's new battery storage plant.
2. Amortization Expense: I make no recommendation to amortization expense but recommend costs for capital construction be carefully reviewed to ensure no double counting on the hydro licensing fee.
3. Depreciation Reserve: I make no recommendation for depreciation reserve, but if depreciation expense is changed, the depreciation reserve will be changed accordingly.
4. Amortization Reserve: I do not recommend an adjustment to amortization reserve.
5. AFUDC: I do not recommend an adjustment to AFUDC.

ISSUE 1: DEPRECIATION EXPENSE

Q. What is depreciation?

A. Depreciation is defined by the National Association of Regulatory Utility Commissioners (NARUC) in relevant part as follows:

As applied to the depreciable plant of utilities, the term depreciation means the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of utility plant in the course of service from causes that are known to be in current operation, against which the company is not protected by insurance, and the effect of which can be forecast with reasonable accuracy. Among the causes to be considered are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and the requirement of public authorities.¹

The statement above defines depreciation from a valuation perspective.

From an accounting perspective, depreciation is the allocation of the cost of fixed assets less net salvage to accounting periods, which is a capital recovery concept. From a ratemaking perspective, both the valuation (rate base) and accounting (capital recovery) concepts of depreciation are important.

Q. Do Oregon statutes address utility depreciation rates?

A. Yes. ORS 757.140(1), states in relevant part:

Every public utility shall carry a proper and adequate depreciation account. The public utility commission shall ascertain and determine the proper and adequate rates of depreciation of the several classes of property of each public utility. The rates shall be such as will provide the amounts required over and above the expenses of maintenance, to keep such property in a state of efficiency corresponding to the progress of the industry. Each public utility shall conform its depreciation accounts to the rates so ascertained and

¹ NARUC, *Public Utility Depreciation Practices*, p.318 (1996).

1 determined by the commission. The commission may make
2 changes in such rates of depreciation from time to time as the
3 commission may find to be necessary.

4 **Q. How are utility property depreciation rates determined?**

5 A. To develop depreciation rates, it is necessary to estimate: (1) the combination
6 of survivor curve²-service life (Curve-Life) of utility property, and (2) the net
7 salvage³ (Gross Salvage – Cost of Removal) ratio. Based on these two
8 fundamental depreciation parameters (and other required elements, such as
9 asset value, asset remaining life, and depreciation method) the depreciation
10 rates are derived.

11 **Q. Why do we need to use authorized depreciation rate results for the**
12 **revenue requirement calculation?**

13 A. To compute the revenue requirement (RR), which is measured by cost-of-
14 service, a basic formula is followed:

15 **$$RR = O\&M \text{ Expense} + \text{“Depreciation”} + \text{Taxes} + \text{Return\%} \times \text{Rate Base}$$**

- 16 • Depreciation expense and reserve in UE 435 is derived by (Depreciation
17 rate) x (plant in service) x (allocation factor, if any).
- 18 • Depreciation expense represents a large percentage of total operating
19 expenses. The deferred income taxes, rate base, and cost of capital are
20 all affected by the depreciation. Therefore, to calculate depreciation

² "Survivor curves" are curves that show the number of units or cost of a given group which is surviving in service at given ages. The survivor curves were developed by the Engineering Research Institute of Iowa State University. These curves are frequently referred to as "Iowa Curves."

³ Net Salvage is the gross salvage of the property retired less the cost of removal. This will be negative if the cost of removal exceeds the gross salvage.

1 expense and reserve, we must use the Commission authorized
2 depreciation parameters.

3 **Q. What are key points to review?**

4 A. The key points to review are:

5 1. Depreciation Rates and Methods:

- 6 • Ensure the depreciation rates are appropriate for the type and useful life
7 of the assets.
8 • Verify the method of depreciation (straight-line, declining balance, etc.)
9 is consistently applied and compliant with regulatory guidelines.

10 2. Asset Categorization:

- 11 • Review the classification of assets to ensure they are correctly
12 categorized and depreciated according to their useful life.
13 • Check if any assets have been misclassified, leading to incorrect
14 depreciation rates.

15 **Q. How is depreciation expense determined for revenue requirement in a
16 rate case?**

17 A. Depreciation expense is based on the utility's Commission-authorized
18 depreciation rates. The Commission determines a utility's depreciation rates
19 after review of the utility's depreciation study. Under OAR 860-027-250(2) each
20 utility regulated by the Commission must file a depreciation study no less
21 frequently than every five years. The Commission approved PGE's currently
22 effective depreciation rates in Order No. 21-463 in Docket No. UM 2152.

1 For Depreciation Procedures, PGE is the only company in Oregon that
2 uses the "Average Service Life (ASL)" for "new generating plants" placed in
3 service after December 31, 2012, and uses "Equal Life Group (ELG)"
4 procedures for existing power plants before 2013.

5 **Q. Has PGE proposed any modifications to the existing depreciation rates**
6 **under Order No. 21-463 as part of this rate case?**

7 A. No. PGE did not modify the rates for any existing assets in Order No. 21-463,
8 UM 2152.

9 **Q. Has PGE proposed new depreciation parameters and rates for the new**
10 **Constable and Seaside Battery Storage Plants?**

11 A. Yes. PGE proposed new depreciation parameters and rates for Constable and
12 Seaside, as these are the first large-scale battery projects to be included within
13 PGE's rate base.

14 **Q. What is the FERC account for storage battery equipment?**

15 A. FERC Account 363 is for storage battery equipment. According to FERC, "[t]his
16 account shall include the cost installed of storage battery equipment used for
17 the purpose of supplying electricity to meet emergency or peak demands."

18 **Q. What does PGE propose for depreciation parameters for Seaside and**
19 **Constable Battery Storage Plants?**

20 A. PGE hired Gannet Fleming Valuation and Rate Consultants, LLC to
21 estimate the new depreciation parameters specific to these two projects.
22 PGE testifies the result of the consultants' project specific study estimates

1 an average depreciable life of approximately 20 years for both battery
2 projects.⁴

3 **Q. Do you have any concerns about PGE's newly proposed depreciation**
4 **parameters for the Seaside and Constable Battery Storage Plants in**
5 **relation to estimating depreciation expense?**

6 A. Yes. PGE testifies that its proposed depreciation rates are based on an
7 average depreciable life of approximately 20 years for both battery
8 projects.⁵ But in the PGE Exhibit 500 work papers, the projection life under
9 FERC Account 363 is different from PGE's testimony.

10 **Q. What aspects of the battery storage plant should be considered when**
11 **estimating depreciation parameters?**

12 A. To estimate the depreciation parameters, it is necessary to:
13 • Determine the initial cost of the battery system;
14 • Estimate the projected service life of the battery;
15 • Estimate the salvage value of the battery at the end of its useful life; and
16 • Calculate the annual depreciation expense using a depreciation method
17 and rate.

18 **Q. What is the impact on depreciation expense if the projection lives are**
19 **shorter than 20 years for the Seaside and Constable Battery Storage**
20 **Plants?**

⁴ PGE/200, Batzler-Ferchland/30; PGE/500.

⁵ PGE/200, Batzler-Ferchland/30.

1 A. Assuming the projection life for both plants is 15 years under FERC Account
2 363 and 363.1, plus net salvage values, the assumed annual depreciation
3 expense would be \$25.6 million based on my assumptions. Assuming the
4 projection life is 20 years, the annual depreciation expense will be \$18.9
5 million. Therefore, if the projected service lives are shorter than 20 years,
6 combined with the impact of net salvage value, the expected depreciation
7 expense will increase.

8 **Q. Do you have recommendations for PGE's depreciation parameters for the**
9 **Seaside and Constable Battery Storage Plants?**

10 A. Yes. I suggest temporarily using PGE's proposed depreciation parameters
11 in the Company's work paper Exhibit 500 until PGE's next depreciation
12 study in 2026, where there can be thorough analysis and consideration of
13 various factors that are necessary to evaluate the service life of new storage
14 battery plants and their financial implications.

15 **Q. Did you find errors in depreciation rate and remaining life for the**
16 **Constable Battery Storage Plants?**

17 A. Yes. In PGE's work paper Exhibit 500, for FERC Account 363, the values in
18 the columns for Constable related to the "depreciation rate" and "composite
19 remaining life" are swapped. PGE should swap these two numbers, placing
20 the number for remaining life under the depreciation rate column, and
21 placing the number for depreciation rate under the remaining life column.
22 After this correction, the annual depreciation expense will be correctly
23 calculated.

1 **Q. What is PGE's depreciation expense compared to the last rate case?**

2 A. PGE has increased the depreciation expense included in revenue requirement.

3 PGE explained the primary drivers of the increase in depreciation expense are:

- 4 • \$17.0 million for transmission and distribution facilities.
- 5 • \$6.6 million for general plant.
- 6 • \$2.8 million for thermal plant.
- 7 • \$1.8 million for wind, solar, and hydro plant.

8 **Q. How does Staff treat the increase in depreciation expense?**

9 A. An increase in depreciation expenses for an energy company is generally
10 driven by the expansion and enhancement of its asset base through capital
11 additions, replacements, upgrades, acquisitions, and compliance with
12 regulatory requirements. Therefore, in this case, the calculation of PGE's
13 depreciation expenses is based on the net plant balance, which included plant-
14 in-service in a rate base. The change of plant in service, for example, might
15 include capital additions, completion of construction projects, asset
16 replacement, and upgrades and improvements. Therefore, the depreciation
17 expense increase will reflect in the company's financial statements as an
18 elevated depreciation expense, even if the depreciation rate remains
19 unchanged. If the net capital to be recovered increases in a depreciation
20 schedule, the depreciation expense would increase accordingly. The plant-in-
21 service amount is reviewed by other OPUC staff.

22 **Q. Have you proposed any adjustments or made recommendations to PGE's**
23 **depreciation rates in the UE 435 rate case filing?**

- 1 A. I did not adjust PGE's existing depreciation rates that were used to calculate
2 the depreciation expense, because PGE used the OPUC-authorized
3 depreciation rates for any existing assets in Order No. 21-463, UM 2152.
4 I recommended PGE temporarily use the depreciation parameters (i.e. survival
5 curve, projection life, and net salvage rate) for battery storage plants in its work
6 paper Exhibit 500 until the next depreciation study in 2026.

ISSUE 2. AMORTIZATION EXPENSE**Q. What is amortization?**

A. Amortization refers to the process of allowing a utility to recover the cost of an intangible asset or debt over a specific period of time. Amortization ensures that expenses or repayments are matched with the revenue or benefits generated from the asset or loan.

Q. What are key aspects of amortization in your review?

A. The two key aspects are 1) intangible assets and 2) hydro power licensing fee amortization.

Q. What are intangible assets?

A. Intangible assets are non-physical assets that have a finite useful life, such as computer software, patents, trademarks, copyrights, and goodwill. The cost of an intangible asset is allocated over its useful life. This is similar to depreciation for tangible assets but applies to non-physical assets.

Q. Has PGE's expense for software amortization increased?

A. Yes. PGE explained that total software amortization is approximately \$82.1 million. This cost relates to capitalized software, which is typically amortized over either a 3-year, 5-year, or 10-year period for larger software programs, such as PGE's customer information and meter data management systems. PGE further explained that the software amortization approximately \$5.2 million higher in 2025 compared to 2024 is primarily due to the replacement of PGE's asset and resource management application. PGE states that the current application is obsolete and no longer supported.

1 **Q. Have you proposed any adjustments or made recommendations to PGE's**
2 **software amortization?**

3 A. No. I don't adjust amortization expense for these assets because the
4 Company maintains the consistent application of amortization methods and
5 useful life estimates. Also, I don't see overly aggressive amortization by
6 using unrealistically short useful lives to accelerate expense recognition.
7 The useful life or amortization terms for software and cloud software are
8 reasonable and aligned with industry standards.

9 **Q. What is a hydro relicensing fee in amortization and who charges the**
10 **fee?**

11 A. A hydro relicensing fee is a cost incurred by hydroelectric power plant
12 operators as part of renewing their operating licenses. These licenses are
13 issued by the FERC and typically need to be renewed every 30 to 50 years.
14 Normally they cost \$1 million per year. In some cases, Native American Tribes
15 may charge fees related to the impact of hydroelectric projects on their lands
16 and resources. These fees are often part of negotiated settlements or
17 agreements to mitigate the effects on fish, wildlife, and cultural resources.

18 **Q. What is the purpose of the hydro relicensing fee?**

19 A. The purposes of the fees are to: (1) ensure that hydroelectric projects operate
20 in a manner that protects water quality, fish, wildlife, and their habitats; (2) fund
21 construction, renovation, and other projects necessary to meet federal
22 requirements; and (3) cover the administrative costs associated with the review
23 and renewal of licenses.

1 **Q. How does Staff review hydro licensing fee amortization?**

2 A. I review to make sure that the hydro relicensing fee is properly amortized over
3 the license period and that if any construction costs, under FERC Account 332
4 - Reservoirs, Dams, and Waterways, are funded directly by the licensing fees,
5 those costs are not included in the rate base to avoid double counting.

6 **Q. How does PGE treat the hydro licensing fee in this revenue
7 requirement?**

8 A. PGE states its hydro relicensing fee is annual costs associated with non-
9 construction projects that have closed to Plant in Service, and these costs are
10 amortized over the life of the new license.

11 **Q. What is your recommendation for hydro licensing fee amortization issue?**

12 A. I recommend PGE ensure that if a construction project is fully funded by hydro
13 licensing fees, the net plant amount in the depreciation schedule would be
14 reflected as \$0.

15 **Q. Have you proposed any other adjustments to amortization expense?**

16 A. No. I make no recommendation for an adjustment to amortization expense.
17 FERC states that Account 303 - Miscellaneous Intangible Plant "shall include
18 the cost of patent rights, licenses, privileges, and other intangible property
19 necessary or valuable in the conduct of utility operations and not specifically
20 chargeable to any other account." Based on FERC guidance, I reviewed
21 amortization in the FERC Account 300s and found that the other amortization
22 calculations are reasonable.

ISSUE 3. DEPRECIATION RESERVE**Q. What is depreciation reserve?**

A. Depreciation reserve or accumulated depreciation is the total depreciation expense accumulated over the asset's life. It represents the cumulative reduction in the book value of assets due to wear and tear, age, or obsolescence.

Q. What is the relationship between depreciation reserve and rate base? and what is the commission's historical treatment of this issue?

A. In a revenue requirement, accumulated depreciation reserve typically has an inverse relationship with the rate base. The rate base is the value of the assets on which a utility is allowed to earn a return. It is generally calculated as the original cost of the assets minus accumulated depreciation. Therefore, as an average depreciation reserve increases, the Rate Base decreases.

Q. How do you review depreciation reserve?

A. Reviewing the Company's accumulated depreciation involves checking various aspects to ensure accuracy, compliance with regulations, and proper financial management. The calculation involves summing up annual depreciation expenses. If depreciation expense changes, the reserve changes accordingly.

Q. Have you adjusted depreciation reserve?

A. Not currently. The depreciation reserves are affected by depreciation expenses, asset retirements, sales, transfers, gross salvage, cost of removal, and other adjustments. If depreciation expense is changed, the accumulated depreciation should be changed accordingly. I did not make an adjustment to

1 depreciation expense; therefore, the accumulated depreciation would not be
2 changed. There is one exception, as I stated in previously: if any adjustments
3 are made to plant-in-service (which is being reviewed by other Staff witnesses),
4 the Company's final depreciation expense and accumulated depreciation
5 reserve would be changed accordingly.

ISSUE 4. AMORTIZATION RESERVE**Q. What is an amortization reserve?**

A. Amortization reserve refers to the accumulated amount set aside over time to systematically write off the cost of an intangible asset or a deferred expense over its useful life. Unlike depreciation, which deals with tangible assets, amortization deals with intangible assets such as patents, trademarks, goodwill, and deferred charges like financing costs.

Q. How did you analyze this issue?

A. My review focuses on the following steps:

1. Understanding Intangible Assets: Gain an understanding of the nature and types of intangible assets owned by the company, such as patents, trademarks, licenses, software, and goodwill.
2. Verifying Useful Lives: Verify that the estimated useful lives assigned to intangible assets are reasonable and supported by relevant factors such as technological obsolescence, contractual terms, regulatory requirements, and market conditions. Assess whether any changes in useful lives have been appropriately accounted for and disclosed.
3. Validating Amortization Expenses: Review the calculation of amortization expenses for each period and ensure that they are accurately computed based on the carrying amounts and useful lives of the intangible assets. Verify the consistency and accuracy of the amortization calculations across reporting periods.

1 **Q. What is the relationship between depreciation reserve and rate base and**
2 **what is the Commission's historical treatment of this issue?**

3 A. In a revenue requirement, accumulated amortization reserve has an inverse
4 relationship with the rate base, similar to accumulated depreciation.

5 Accumulated amortization represents the total amount of amortization expense
6 that has been charged against intangible assets over time. When calculating
7 the rate base, which includes both tangible and intangible assets, accumulated
8 amortization reduces the net book value of the intangible assets. Thus, an
9 increase in the accumulated amortization reserve leads to a decrease in the
10 rate base. In a revenue requirement, as an amortization reserve increases, the
11 Rate Base decreases.

12 **Q. Did you make any adjustment to this Issue?**

13 A. No. However, if the amortization expense is changed after additional
14 amortization, its reserve will be changed accordingly.

ISSUE 5. AFUDC**Q. What is AFUDC?**

A. Electric Plant Instruction No. 3 provides a formula for computing rates used to capitalize Allowances for Funds Used During Construction (AFUDC).⁶ The formula includes a component for the weighted average cost of long-term debt. The entire issue of the use-restricted long-term debt should be included with other long-term debt used in calculating AFUDC rates. Average balances of the trust or other special funds should be included in the computation of the average balance of Construction Work in Progress (CWIP) used in the formula.

AFUDC assigned to the project should be determined by applying AFUDC rates to the eligible project expenditures and also balances in the trust or special funds. Fund earnings during construction should be credited to the cost of construction of the project facilities.

Q. What is the purpose of the AFUDC review?

A. The purpose of this review is to address whether the Company complied with guidance⁷ related to AFUDC and the capitalization of assets based on the regulations of both FERC and the Commission in this filing.

Q. What is the regulatory treatment for AFUDC in Oregon?

A. Traditionally, the capitalized AFUDC rate is a part of the rate base. This allows the utility to recover the cost of financing during construction through rates

⁶ <https://www.ferc.gov/enforcement-legal/enforcement/accounting-matters/allowance-funds-used-during-construction>.

⁷ See FERC regulation 18 C.F.R. Part 101 (17), available at <https://www.law.cornell.edu/cfr/text/18/part-101>.

1 charged to customers. The AFUDC rate is an important component of a
2 utility's rate base, allowing the utility to recover the cost of financing
3 construction expenditures incurred during the development of long-term
4 projects.

5 **Q. Did you make any adjustments after the review?**

6 A. No. Staff proposed no adjustment to AFUDC in PGE's original filing because
7 PGE AFUDC rates do not exceed OPUC authorized weighted average cost of
8 capital (WACC) rate and complied with the OPUC policy to exclude CWIP in
9 the rate base, because Oregon does not allow a utility to recover costs of a
10 plant not yet placed in service in retail rates. The Company's AFUDC
11 calculations meet FERC calculation procedures and meet Oregon regulatory
12 requirements.

13 Please note that I may revise my recommendations based on testimony
14 filed by other participants in this rate case

15 **Q. Does this conclude your testimony?**

16 A. Yes.

CASE: UE 435
WITNESS: MING PENG

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 701

Witness Qualifications Statement

July 15, 2024

WITNESS QUALIFICATIONS STATEMENT

NAME: Ms. Ming Peng

EMPLOYER: Public Utility Commission of Oregon

TITLE: Senior Economist
Accounting and Finance Section of the Rates, Safety and Utility
Performance Program

ADDRESS: 201 High Street SE, Suite 100
Salem, OR 97301

EDUCATION & TRAINING:

M.S. Applied Economics
University of Idaho, Moscow

B.S. Statistics
People's University of China, Beijing

CRRA Certified Rate of Return Analyst in 2002
Society of Utility and Regulatory Financial Analysts

Depreciation studies – the Society of
Depreciation Professionals

NARUC Annual Regulatory Studies Program
Michigan State University, East Lansing

400+ credit hours on 30+ training topics in the public utility
industry

EXPERIENCE: 1/11/1999 – Present, Public Utility Commission of Oregon

I have been employed by the Public Utility Commission of Oregon (Commission)
for 25 years. My roles have included:

**Expert Witness, Case Manager, Principal Analyst, Econometrician,
Economist, Utility Analyst, and Policy Analyst.**

I have testified in various formal state hearings and performed numerous
analyses, including economic, financial, statistical, mathematical, marketing, and
policy analyses in the public utility industry.

Principal Analyst and Case Manager, Settlement Lead/Negotiator for Depreciation Ratemaking:

I have served as a Principal Analyst and Case Manager for the determination of Energy Property Depreciation Rates (Oregon Revised Statute 757.140) for the past 15 years. In this role, I've had a strong focus on Depreciation Rate Determination (fixed cost allocation, and capital recovery). I was also a Principal Analyst and Case Manager for the determination of Energy Property Depreciation Rates (Oregon Revised Statute 757.140) during this time period.

In this position, I investigated, analyzed, and calculated energy asset retirement cost and impact, as well as power plant decommissioning cost and impact, on customer rates. I reviewed, calculated, and analyzed fixed asset depreciation and proposed depreciation parameters for each of FERC accounts on Generation, Transmission, Distribution, General, and Coal Mining Plants. The energy sources I have worked on Steam/Coal, Hydraulic, Natural Gas, Wind, Solar, and Geothermal.

My analyses of "Power-Plant-Shutdown" activities (accelerated plant retirement, and decommissioning cost recovery) include the following cases:

1. PGE closes Boardman Coal-fired plant (UM 1679 & UE 215).
2. PacifiCorp closes Carbon Coal Plant in Utah (UE 246).
3. Multi-state PacifiCorp Klamath Hydro Dam Removal Cost recovery for (1) J. C. Boyle Dam, (2) Copco 1 Dam, (3) Copco 2 Dam, and (4) Iron Gate Dam removal under ORS 757.734 – Recovery of investment in Klamath River dams in OPUC UE 219.
4. Idaho Power Valmy Coal-fired power plant Shutdown (UE 316).
5. PGE Colstrip Coal-fired power plant Shutdown (UM 1809).

I conduct case investigations and analyses on Utility's filings, make rate adjustments, lead settlement negotiation, prepare testimony, and appear on behalf of the Commission. The energy companies I work with are: (1) PacifiCorp (serves 6 states), (2) PGE, (3) Northwest Natural Gas (NWN), (4) Idaho Power, (5) Avista Corp (Washington), and (6) Cascade Gas (CNG; Montana).

Lead Analyst and Case Manager on Financial Dockets:

Prior to my current position, I was a Lead Analyst and Case Manager for cost of debt capital for nine years. I reviewed market risks, derivatives and hedging, debt issuance, and stock flotation. My analysis directly informed utility and energy policy.

I advised the Commission on over 60 financial dockets. The Commission incorporated all of my recommendations into final orders.

I was certified by the Society of Utility and Regulatory Financial Analysts as a Certified Rate of Return Analyst in 2002.

Public Utility & Policy Analyst:

Rulemaking: I have formulated energy regulation rules for utility performance incentives and cost-of-service regulation.

Energy Utility Merger & Acquisition: I have testified in formal state hearings involving utility mergers & acquisitions. I conducted Acquisition Premiums & Credit Risk Analysis and testified on behalf of the Commission in MidAmerican Energy Company's application to purchase PacifiCorp. I also reviewed Scottish Power's earlier purchase of PacifiCorp, and PGE's emergence from Enron after the Enron bankruptcy.

Integrated Resource Planning (IRP, Least Cost Planning): I provided comments to the Commission for decision making on Boardman to Hemingway (B2H), a 500-kV transmission power line, which included a cost and benefit list, a pros and cons list, alternatives, and the relevant legal risks. I also provided comments on utility's IRPs, such as total cost for power generation, power capacity (MW) replacement cost, avoided cost for free fuel, and emission trading cost.

Clean Energy – Dollar Impact on Customer Rates: I analyzed and calculated the rate impact and comparative advantage of clean energy. I built the portfolio optimization models to analyze the coal-fired generating capacity replacement.

General Rate Cases: I have been a part of *almost every energy rate case* since I joined the Oregon PUC on January 11, 1999. Historically, my reviews included fuel price forecasting, property sales, load forecasting, weather normalizations, cost of debt, and capital structures. Currently, my reviews are focused on depreciation and reserve, and AFUDC Capitalization Policy.

Survey Sampling Design: Results of my statistical sampling design and sampling procedures are incorporated into my revenue requirement testimony in Commission Docket No. UM 1288.

Auditing, Interest Rate, Late Payment: I audited cost of capital and financial components. My survey report and analyses are published annually for Oregon (UM 779).

Survey for Market Competition & Economic Policy: I conducted and wrote the report on Telecommunications, "Market Competition and Economic Policy Survey Analysis" for House Bill 2577. This report has been published on the OPUC web annually for 15 years.

Mentor in the ICER - International Confederation of Energy Regulators: I was selected to act as a mentor in the ICER (International Confederation of Energy Regulators) Women in Energy (ICER WIE) pilot mentoring program. My

Docket No. UE 435

Staff/701
Peng/4

mentoring topics focus on Incentive Regulation; Rate and Economic Impacts of “Cost-of-Service” regulation in the U.S.; “Price-Cap Performance Based Regulation” in UK; Cost of Capital, Energy Demand and Price Forecasting Modeling; Least Cost Planning; Regulatory Policy; and Renewable Energy issues within regulated rate structures.

OREGON**

STAFF EXHIBIT 702

**Exhibits in Support
Of Opening Testimony**

July 15, 2024

March 28, 2024

To: Marc Hellman
Public Utility Commission of Oregon

From: Jaki Ferchland
Manager, Revenue Requirement

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 124
Dated March 14, 2024

Request:

Please provide the calculations of depreciation, amortization expenses and reserves and include all: a) links, b) formulas, c) references, d) notes, and e) term definitions to your work paper in this filing. Your response should enable Staff to verify such data as a) Plant Balance, b) Depreciation Rates, c) Depreciation Expense, d) Depreciation Reserve, and e) Oregon Allocation Factors (including all ties to the UE 435 Revenue Requirement Model) Gross Plant, Accumulated Depreciation, and Depreciation Expense.

Response:

Attachment 124-A provides the requested information. See “Net Plant Recon Detailed” tab for summary roll forward of gross plant and accumulated reserve activity for the test year. See “Depr Query – 2025 GRC v2” tab for a detail of depreciation expense by property group, depreciation group, functional class and depreciation component. See “UM2152” tab for depreciation rates utilized. Depreciation parameters used for the Clearwater Wind Farm are from the Docket No. UM 2152 parameters approved for the Wheatridge Wind Farm.

CASE: UE 435
WITNESS: DUSTIN BALL

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 800

**REDACTED
Opening Testimony**

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Dustin Ball. I am a Utility Analyst 3 employed in the Rates, Safety
3 and Utility Performance Program of the Public Utility Commission of Oregon
4 (OPUC). My business address is 201 High Street SE., Suite 100, Salem,
5 Oregon 97301.

6 **Q. Please describe your educational background and work experience.**

7 A. My witness qualifications statement is found in Exhibit Staff/801.

8 **Q. What is the purpose of your testimony?**

9 A. I present Staff analysis and recommendations on Portland General Electric
10 Company's property and casualty insurance Test Year expense, and PGE's
11 transmission and distribution (T&D) capital Investments, generation capital
12 Investments and information and technology (IT) capital Investments. My
13 recommendations, along with other Staff recommendations, may change
14 based on further review, discovery, and information received based on
15 testimony offered by other parties.

16 **Q. Did you prepare any exhibits for this docket?**

17 A. Yes. I prepared Exhibit Staff/801, consisting of 2 pages, Exhibit Staff/802,
18 consisting of 19 pages, Exhibit Staff/803 consisting of 2 pages, and Exhibit 804
19 consisting of 4 pages.

20 **Q. How is your testimony organized?**

21 A. My testimony is organized as follows:

22	Issue 1. Property Insurance	3
23	Issue 2. Casualty Insurance.....	7
24	Issue 3. Transmission and Distribution Capital Investments.....	16

1	Issue 4. Generation Capital Investments	18

ISSUE 1. PROPERTY INSURANCE

Q. What is PGE’s proposed Test Year expense for property insurance?

A. Lines of coverage included in PGE’s property insurance include all-risk property, fidelity and crime, and sabotage and terrorism. PGE forecasts property insurance costs for 2025 at \$6.8 million.¹ PGE testifies that its proposed 2025 Test Year expense is a \$3.7 million reduction from property insurance costs incurred in the 2023 Base Year due to the restructuring of the property insurance program to a “post-loss” funding model.²

Q. Please summarize Staff’s adjustments for property insurance.

A. Staff proposes a downward adjustment to the Company’s forecasted 2025 property insurance of \$2,149,000. This adjustment is attributable to updating PGE’s cost for 2024 to the actual cost as well as removing the escalation factor for 2025. Meaning, while PGE’s Test Year expense for property insurance may be \$3.7 million more than costs incurred in the 2023 Base Year, it is significantly higher than PGE’s actual costs in 2024.

Q. What was PGE’s originally forecasted cost for property insurance for 2024?

A. PGE originally forecasted property insurance premium amounts for 2024 of \$6.2 million.³

Q. What is PGE’s actual cost for property insurance in 2024 and why is it different from the originally forecasted amount?

¹ PGE/300, Trpik-Mersereau-Batzler/7, Table 2.

² PGE/200, Batzler-Ferchland/6, Lines 11-13.

³ PGE/300, Trpik-Mersereau-Batzler/7, Table 2.

1 A. PGE reports the actual cost of property insurance for 2024 was [BEGIN

2 CONFIDENTIAL] [REDACTED]

3 [REDACTED]
4 [REDACTED] [END CONFIDENTIAL].⁵

5 **Q. What is the growth rate used by PGE to escalate property insurance**
6 **premiums from 2024 to the amount forecasted for 2025?**

7 A The Company applied a 9.7 percent escalation rate to property insurance
8 premiums.⁶

9 **Q. Does PGE explain how it arrived at this 9.7 percent growth rate?**

10 A. Yes. PGE states the forecasted 9.7 percent increase to property insurance
11 premiums from 2024 to 2025 is based on oral input provided by the company's
12 third-party broker in Q3 2023.⁷

13 **Q. Has the Company provided any further documentation supporting this**
14 **growth rate?**

15 A. No.

16 **Q. What is Staff's proposed growth rate to escalate property insurance**
17 **premiums from 2024 to 2025?**

18 A. Staff proposes to apply no growth rate.

19 **Q. Please explain further.**

⁴ PGE Response to Standard Data Request (SDR) 68.

⁵ Staff/803, PGE Response to Staff Data Request (DR) 543.

⁶ PGE/300, Trpik-Mersereau-Batzler/7, Line 6.

⁷ Staff/802, PGE Response to Staff DR 545.

1 A. PGE has not provided documentation to support its proposed growth rate other
2 than indicating it received oral input from a third-party broker. Additionally,
3 under a post-loss funding model, future year property insurance costs will
4 fluctuate based on the losses incurred by PGE as well as other entities in the
5 overall pool. Additional analysis is required to evaluate the loss history of the
6 overall pool and to determine the anticipated property insurance expense
7 under different loss scenarios.

8 **Q. Is Staff exploring other potential adjustments related to property**
9 **insurance?**

10 A. Yes, Staff is in the process of evaluating the dividend history for Everen, the
11 post-loss insurance company PGE joined. According to PGE, each member of
12 Everen must purchase one share of the company and the number of shares
13 corresponds with the number of members.⁸ PGE holds one share, there are
14 currently 70 members and 70 outstanding shares.⁹

15 **Q. Does Everen have a history of paying dividends to shareholders?**

16 A. Yes, in a March 2024 announcement, Everen declared a \$350 million dividend
17 payable on or before September 30, 2024 to shareholders of record on
18 March 19, 2024. Everen has also highlighted it has returned over \$3.1 billion in
19 dividends to shareholders over the past decade.¹⁰

⁸ Staff/802, PGE Responses to Staff DRs 533-535.

⁹ *Id.*

¹⁰ <https://www.morningstar.com/news/business-wire/20240325711236/everen-declares-350-million-dividend-and-announces-retirement-of-chief-executive-officer-in-2025>.

1 **Q. Does Staff propose an adjustment related to potential Everen**
2 **dividends?**

3 A. Staff has sent additional data requests around this issue and analysis is
4 currently ongoing to determine if an adjustment is necessary.

ISSUE 2. CASUALTY INSURANCE

Q. Which lines of casualty insurance do you cover in your review of PGE's Test Year expense?

A. The lines of casualty insurance covered as part of my review include general and auto liability, fiduciary liability, workers, compensation, nuclear liability, cyber liability, aviation hull and liability, sabotage and terrorism, and surety bonds.

Q. What is PGE's proposal for these lines of coverage?

A. PGE forecasts the cost of the casualty insurance premiums for these lines of coverage at \$23.73 million for 2025 as shown in the below table.

Table 1. Casualty Insurance (in millions) Included in UE 435

Fiduciary Liability	\$0.21
General & Auto Liability	\$20.62
Workers' Compensation	\$0.78
Nuclear Liability	\$0.45
Cyber Liability	\$1.10
Aircraft Hull & Liability	\$0.17
Surety Bonds	\$0.40
Total	\$23.73

Q. Why does the amount of \$23.73 million you cite above not match the amount shown in PGE's Opening Testimony?¹¹

¹¹ UE 435/PGE/300, Trpik-Mersereau-Batzler/7, Table 2.

1 A. The reason for the difference is because the amount reported by PGE also
2 includes PGE's directors and officers liability insurance premium. I excluded
3 this from my review as it is being addressed separately in Staff/1200, Yamada.

4 **Q. Does PGE highlight any changes for its casualty insurance in arriving at**
5 **the forecasted 2025 cost for this rate case?**

6 A. Yes, PGE highlights an expected 22.0 percent rate of growth for general and
7 auto liability, anticipated growth of greater than 10 percent for workers'
8 compensation insurance, and continued double-digit rate increases for its
9 cyber liability policy.¹²

10 **Q. Does Staff agree with these forecasted changes by PGE?**

11 A. No. Staff does not agree with the forecasted rates of growth PGE has applied
12 in arriving at the forecasted costs of its general and auto liability, workers'
13 compensation, or cyber liability policies.

14 **Q. What is Staff's proposed adjustment for general and auto liability**
15 **insurance?**

16 A. Staff proposes to use updated pricing for the 2024 general and auto liability
17 policy as the starting point and to apply a reduced rate of growth for 2025 to
18 arrive at a downward adjustment of \$4,637,841.

19 **Q. Please explain Staff's proposal to use updated pricing for the 2024**
20 **General and Auto Liability policy.**

21 A. At the time it filed this rate case, PGE indicated that the general & auto Liability
22 insurance premium amount for 2024 was forecasted at **[BEGIN**

¹² PGE/300, Trpik-Mersereau-Batzler/9-10.

CONFIDENTIAL] [REDACTED]

[REDACTED] **[END**

CONFIDENTIAL].¹³ In subsequent discovery, PGE identified the actual renewal cost for its general & auto liability in 2024 at \$15.5 million, \$1.4 million lower than originally anticipated.¹⁴ PGE explained in response that the lower amount was due to successful renewal negotiations.¹⁵

Q. Does PGE explain how it arrived at the proposed 22.0 percent growth rate for general and auto liability insurance?

A. Yes, PGE describes the adverse impacts of wildfire losses over the last decade and other exposures as increasing underwriting scrutiny as factor for the increase.¹⁶

Q. Does Staff agree the factors identified by PGE will have an impact to general and auto liability insurance rates.

A. Staff believes the factors described by the Company are valid examples of factors impacting general and auto liability insurance rates. However, Staff believes these impacts were recognized and accounted for in the most recent 2024 renewal. Staff has not been provided with documentation indicating such a significant rate of growth should be applied for 2025.

Q. What is Staff's proposed growth rate for general and auto liability insurance from 2024 to 2025?

¹³ Staff/803, PGE Response to Standard Data Request (SDR) 68.

¹⁴ Staff/802, PGE Response to Staff DR 255.

¹⁵ Staff/802, PGE Response to Staff DR 255.

¹⁶ PGE/300, Trpik-Mersereau-Batzler/9, lines 11-19.

1 A. Staff proposes to apply a 3.25 percent growth factor for general and auto
2 liability insurance as indicated in MarketScout’s quarterly report of the
3 industry’s composite rate index for property/casualty and personal insurance.¹⁷

4 **Q. Please summarize Staff’s proposed adjustment for general and auto**
5 **liability insurance.**

6 A. The below table shows summarizes Staff’s proposal.

7 **[BEGIN CONFIDENTIAL]**

[REDACTED]

[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]

8 **[END CONFIDENTIAL]**

9 **Q. What is Staff’s proposed adjustment for workers’ compensation**
10 **insurance?**

11 A. Staff proposes to use the 2023 workers’ compensation insurance cost as the
12 baseline and to apply no growth rate for forecasting workers’ compensation
13 insurance for 2025. Staff’s proposal is a downward adjustment of \$259,032.

14 **Q. Does PGE explain what is driving the growth it forecasts for workers’**
15 **compensation insurance?**

¹⁷ <https://marketscout.com/commercial-rates-in-us-up-3-9-on-all-property-and-casualty-placements/>.

1 A. Yes, PGE cites industry-wide losses combined with a general rise in medical
2 costs, inflation, wage growth, an aging workforce, along with the ongoing
3 transition back to more of an in-person work environment as driving factors.¹⁸

4 **Q. Does Staff concur with PGE's assertion for factors impacting future**
5 **workers' compensation insurance rates.**

6 A. While these factors will likely impact the workers' compensation rate, the items
7 identified by PGE do not appear to be factors that would be new to the 2024 or
8 2025 renewals. Staff believes the items identified by PGE have existed as
9 market pressures for the past several years and do not necessarily justify
10 double digit rate increases on a forward-looking basis.

11 **Q. How did Staff arrive at the proposal to apply no growth rate for**
12 **forecasting workers compensation insurance for 2025?**

13 A. Staff reviewed PGE's actual workers' compensation renewals over the last
14 several years and compared PGE's proposal with information from
15 MarketScout's quarterly report of the industry's composite rate index for
16 workers' compensation, which indicates flat (zero percent) anticipated
17 growth.¹⁹

18 **Q. How have PGE's worker's compensation insurance rates fluctuated over**
19 **the last several years?**

20 A. At the time it filed this rate case, PGE provided information indicating that its
21 workers compensation premiums were **[BEGIN CONFIDENTIAL]** [REDACTED]

¹⁸ PGE/300, Trpik-Mersereau-Batzler/9, line 20 - /10, line3.

¹⁹ <https://marketscout.com/commercial-rates-in-us-up-3-9-on-all-property-and-casualty-placements/>

1 [REDACTED]

2 [REDACTED] [END CONFIDENTIAL].²⁰

3 **Q. Has PGE provided updated pricing for its 2024 workers' compensation**
4 **renewal?**

5 A. No, PGE indicated this information will not be available until after July 1, 2024.

6 Once this updated information is available, Staff intends to compare the actual
7 renewal premium cost and year over year growth to both PGE's and Staff's
8 proposed inflationary factors.

9 **Q. Please summarize Staff's proposed adjustment for workers'**
10 **compensation insurance.**

11 A. The below table shows summarizes Staff's proposal.

12 **[BEGIN CONFIDENTIAL]**

[REDACTED]

[REDACTED]	[REDACTED]

13 **[END CONFIDENTIAL]**

²⁰ Staff/803, PGE Response to SDR 68.

1 **Q. What has PGE proposed for cyber liability insurance in UE 435?**

2 A. PGE has included cyber liability insurance at a cost of [BEGIN

3 **CONFIDENTIAL]** [REDACTED]

4 [REDACTED] [END CONFIDENTIAL].

5 **Q. What is Staff's proposed adjustment for cyber liability insurance?**

6 A. Staff proposes to use the 2023 cyber liability insurance cost as the baseline
7 and to apply a 7.0 percent annual growth rate for forecasting cyber liability
8 insurance for 2025. Staff's proposal is a downward adjustment of \$227,876.

9 **Q. Does PGE explain what is driving the forecasted growth for cyber**
10 **insurance?**

11 A. Yes, PGE cites high cyber-attack target value of the energy and utility sector as
12 the driving factor for double digit rate increases.

13 **Q. Does Staff believe the factors identified by PGE will have an impact on**
14 **future cyber liability insurance renewals.**

15 A. Yes, the value of assets in the energy and utility sector are likely a driving
16 factor to future rates, but the extent of future rate increases remains unknown
17 until firm quotes for the upcoming policy renewal are received.

18 **Q. When will the existing cyber liability policy be renewed?**

19 A. PGE reported that the cyber liability insurance policy will renew on
20 August 11, 2024.²¹

21 **Q. How did Staff arrive at a proposed 7.0 percent escalation rate for cyber**
22 **liability insurance?**

²¹ Staff/802, PGE Response to Staff DR 549.

1 A. Staff's proposal is to use information from MarketScout's quarterly report of the
2 industry's composite rate index for cyber liability insurance, which indicates a
3 7.0 percent anticipated growth.²² Once updated renewal information for the
4 2024 cyber liability policy is available, Staff intends to compare the actual
5 renewal date to both PGE's and Staff's proposed inflationary factors.

6 **Q. Please summarize Staff's proposed adjustment for cyber liability**
7 **insurance.**

8 A. The below table shows summarizes Staff's proposal.

9 [END CONFIDENTIAL]

²³ Staff/802, PGE Response to DR 71.

ISSUE 3. TRANSMISSION AND DISTRIBUTION CAPITAL INVESTMENTS**Q. What are transmission and distribution (T&D) capital Investments?**

A. T&D capital investments include investments in grid modernization, additional substations, and enhancements to the distribution system to address customer demands and to maintain resiliency and safety.

Q. Is Staff proposing adjustments related to T&D capital Investments?

A. Yes, Staff is proposing two adjustments. The first adjustment is related to updating three projects that have closed to plant at an amount lower than originally forecasted by the Company. The second adjustment is to remove project contingency amounts from T&D capital investments. The total reduction amount to T&D capital investments proposed for both adjustment items is \$37,813,666.

Q. Please describe Staff's proposed adjustment related to the three projects that have closed to plant at an amount lower than originally forecasted.

A. Staff obtained information in discovery for T&D capital investments that have closed to plant from January through April of 2024.²⁴ Through a review of this information, Staff identified three individual projects (Horizon-Keeler BPA #2 230kV Line, Shute WJ1 and WJ2 Upgrade, and Shute Feeder Reconfiguration) were completed at a net \$8,610,215 million less than originally forecasted in UE 435. Table 6 in Staff Exhibit/804 summarizes Staff's proposed adjustment.

²⁴ Staff/802, PGE Response to Staff DR 562.

1 **Q. Please describe Staff's proposed adjustment to remove project**
2 **contingency amounts from T&D capital investments.**

3 A. Staff is proposing a reduction in the amount of \$29,203,451 to T&D capital
4 investments related to removing project contingency costs from UE 435.

5 **Q. How did Staff arrive at the proposed reduction amount?**

6 A. Staff obtained information on project contingency amounts included as T&D
7 capital investments in PGE's UE 435 rate base.²⁵ PGE reported the total
8 amount of contingency funds included in UE 435 at \$29,819,359. Staff
9 reduced this amount for the contingency amounts on the projects that have
10 closed to plant, \$615,908, as a separate rate base adjustment is proposed for
11 those specific projects as described above. The resulting adjustment amount
12 is (\$29,203,451) as shown in Table 7 in Staff Exhibit 804.

13 **Q. Why should these contingency amounts be removed from project**
14 **costs for purposes of UE 435?**

15 A. Project contingency funds are generally amounts included in a project cost
16 estimate to help address unanticipated expenses or changes to the scope of
17 work as they arise. At this time, it is unknown if these funds will be expended
18 as part of the project. Additionally, even if these funds are spent on the project,
19 without the purpose being identified Staff is unable to determine if they will be
20 used for prudently incurred project expenses that were unavoidable with proper
21 project management.

²⁵ Staff/802, PGE Response to Staff DR 561.

ISSUE 4. GENERATION CAPITAL INVESTMENTS

Q. Please summarize areas you reviewed as it relates to generation capital investments.

A. This testimony will focus on PGE's proposed capital investments for the Diesel Particulate Filters (DPF) Installation Program for existing Distributed Standby Generation (DSG) units.

Q. What is the Distributed Standby Generation Program and why is PGE installing diesel particulate filters?

A. As described in PGE's opening testimony, the DSG program allows the Company to start, operate, and monitor customer-owned backup generators when needed contingency reserves.²⁶ PGE's existing program has a capacity of 115 MW. The Oregon Department of Environmental Quality revised the specifications of the General Air Containment Discharge Permit requiring the installation of installing DPF's to maintain compliance.

Staff also notes that the DSG program is one of many programs that are part of the Company's Virtual Power Plant, which is addressed in the testimony of Staff Witness Curtis Dlouhy.

Q. What has PGE included as the rate base addition related to the DPF Installation Program?

A. PGE included \$37.5 million as the amount that is anticipated to close to plant in 2024.

²⁶ UE 435/PGE/500, Felton/3-5.

1 **Q. Does Staff propose an adjustment related to the DPF Installation**
2 **Program?**

3 A. Yes, Staff proposes to reduce the PGE's originally forecasted investment to
4 include the actual cost for DPF installations that have been completed to date
5 and the projected cost for additional DPF installations that are currently
6 scheduled for completion by the end of 2024. This results in an allowable rate
7 base addition of \$19.7 million, a reduction of \$17.8 million from the amount
8 originally forecasted by PGE.

9 **Q. How did Staff determine which DPF installations have been completed**
10 **and which are scheduled for completion by the end of 2024?**

11 A. Staff obtained an updated project listing showing each site of anticipated DPF
12 installations, forecasted project cost anticipated completion date for all projects,
13 and actual cost and completion date for completed projects.²⁷ This information
14 is summarized in Table 8 in Staff/804.

²⁷ Staff/802, PGE Response to Staff DR 567.

ISSUE 5. IT CAPITAL INVESTMENTS**Q. What is PGE's proposal?**

A. PGE proposes to include \$68.8 million in additional IT capital investments that are anticipated to close to plant by December 31, 2024. IT capital investments proposed by the Company include six major IT projects in addition to miscellaneous other IT investments as outlined in PGE's Opening Testimony and include the following:²⁸

- IT Software Blanket – \$18.3 million
- Tech Refresh – \$15.0 million
- Zero Trust – \$5.7 million
- Network Fitness – \$5.5 million
- CTO Desktop Fitness – \$5.4 million
- Server Storage Fitness – \$4.3 million
- Energy Management System (EMS) Upgrade – \$4.3 million
- Other IT Capital Additions – \$10.3 million.

Q. Which of the major projects identified by PGE will your testimony address?

A. This testimony will focus on PGE's proposed IT capital investments for two blanket type IT projects and two non-blanket IT projects. Blanket projects include: Network Fitness of \$5.5 million and CTO Desktop Fitness of \$5.4

²⁸ PGE/300, Trpik-Mersereau-Batzler/12.

1 million. Non-Blanket Projects include: Zero Trust of \$5.7 million and the Energy
2 management Systems (EMS) Upgrade of \$4.3 million.

3 **Q. How does the Company characterize the blanket type projects.**

4 A. PGE characterizes blanket type projects as those that generally continue year-
5 over-year with a similar set of work processes or purchases. Reoccurring IT
6 capital programs and blanket type projects may not have defined start and end
7 days and the deliverables from year to year may vary based on demands.
8 Because they repeat year after year, they are often referred to as “ungated”
9 projects. Ungated projects typically use a combination of unit pricing, historical
10 trends, escalation factors and vendor pricing to develop annual budget
11 forecasts.²⁹

12 **Q. Please describe Staff’s proposed adjustments related to forecasted
13 blanket type projects.**

14 A. Staff is proposing two adjustments at this time related to Network Fitness and
15 CTO Desktop Fitness and is continuing to evaluate PGE’s Proposal related to
16 the IT Software Blanket investment.

17 **Q. What is PGE’s proposed capital investment related to Network Fitness
18 and CTO Desktop Fitness for UE 435 and how does the proposal
19 compare to historical investments for these projects?**

20 A. For purposes of UE 435, PGE forecasted investments of \$5.5 million for
21 Network Fitness and \$5.4 million for CTO Desktop Fitness will close to book
22 prior to December 31, 2024. From 2021 to 2023, actual investment amounts

²⁹ Staff/802, PGE Response to DR 245.

1 for Network Fitness have ranged from \$3.0 million to 4.5 million annually while
2 investments for CTO Desktop Fitness have ranged from \$2.6 million to \$3.6
3 million annually.

4 **Q. What is Staff proposing to include as IT Capital Investment amounts**
5 **for Network Fitness and CTO Desktop Fitness?**

6 A. Staff is currently unable to determine the actual investments that will be made
7 by December 31, 2024, and is proposing to reduce the Company's forecast to
8 an amount equal to the historical three-year average (2021-2023) for each of
9 these projects. This results in a proposed reduction amount of \$3,662,911. A
10 breakdown showing Staff's calculation is included in Table 9 in Staff/804.

11 **Q. Is Staff's proposing adjustments related to the non-blanket project for**
12 **the Zero Trust project or the EMS upgrade?**

13 A. Although Staff is not proposing a specific dollar amount adjustment at this time,
14 Staff is recommending the Commission require PGE to provide an officer
15 attestation for each of these projects being included in rates. Both of these
16 projects are scheduled for completion in December 2024 and at this time Staff
17 is unable to determine if the projects will be completed by the rate effective
18 date. Staff recommends the officer attestation include the project completion
19 date, actual project cost and a statement indicating that the investment is used
20 and useful as of December 31, 2024.

21 **Q. What is the amount Staff is recommending for inclusion in UE 435 for**
22 **the Zero Trust project and the EMS upgrade?**

- 1 A. For each of these projects, Staff recommends the Commission include the
- 2 lesser of the actual project costs upon completion or the originally forecasted
- 3 investment amount for each project, \$5.7 million for the Zero Trust project and
- 4 \$4.3 million for the EMS upgrade project.

SUMMARY

1
2 **Q. Please summarize your adjustments to PGE's Test Year expense and**
3 **rate base.**

4 A. I propose the following adjustments:

Table 10. Summary of Proposed Adjustments

Property Insurance	(\$2,149,000)
General and Auto Liability Insurance	(\$4,637,841)
Workers Compensation Insurance	(\$259,032)
Cyber Liability Insurance	(\$227,876)
Policy Holder Credits/Bonuses	(\$482,020)
Summary of Adjustment's to Test Year Expenses	(\$7,755,769)
T&D Capital Investments - Update to Actual Costs	(\$8,610,215)
T&D Capital Investments - Removal of Contingencies	(\$29,203,451)
Generation Capital - Diesel Particulate Filter Program	(\$17,846,184)
IT Capital – CTO Desktop Fitness	(\$2,173,150)
IT Capital – Network Fitness	(\$1,486,762)

WITNESS QUALIFICATION STATEMENT

NAME: Dustin Ball

EMPLOYER: PUBLIC UTILITY COMMISSION OF OREGON

TITLE: Utility Analyst 3
Rates and Telecommunications

ADDRESS: 201 HIGH ST SE SUITE 100, SALEM, OREGON
97301-3398.

EDUCATION: Bachelor of Science in Business
Administration/Management

EXPERIENCE:

I have been employed with the Public Utility Commission of Oregon since April 2024. I am currently a Utility Analyst 3 in the Rates and Telecommunications Section of the Rates Division. I was previously employed by the Public Utility Commission of Oregon from August 2007 through May 2011 as a Senior Financial Analyst responsible for reviewing the complex financial systems of utilities, identifying organizational wide financial issues, and presenting Staff recommendations to the Commission.

From May 2011 through April 2024, I was employed by the Oregon Department of Administrative Services as a Financial Analyst in the State's Risk Management Program, as a Policy and Budget Analyst in the Chief Financial Office, and as the Statewide Budget Reporting Administrator overseeing operational issues for the Chief Financial Office and developing statewide budget and financial management policy for the State of Oregon.

CASE: UE 435

UE 435
PGE Response to OPUC Standard Data Request 068
Dated March 10, 2015

Request:

In the following table format, please provide the following information for insurance premiums / self-insurance costs.

	Test Year	Base Year	Base Year - 1	Base Year - 2	Base Year - 3
Property Insurance Premiums					
Property – Uninsured Loss					
Liability insurance Premiums					
Terrorism – Premiums					
Terrorism – Uninsured Losses					
Workers’ Compensation Premiums					
Worker’s Compensation – Uninsured Losses					
Other risk Management Expenses (FERC accounts 924 and 925)					

Response:

Confidential Attachment 068-A contains the listing of PGE's property and casualty insurance premiums.

Confidential Attachment 068-B provides a list of auto and general liability retained losses.

Confidential Attachment 068-C provides a list of other risk management expenses in FERC accounts 924 and 925.

Attachments 068-A, 068-B, and 068-C contain protected information and are subject to General Protective Order No. 23-132.

PGE Response to OPUC Standard Data Request 071
Dated March 10, 2015

Request:

Please identify all policy holder (insurance) credits/bonuses that the Company has received in the previous three years. Does the Company anticipate receiving any policy holder credits/bonuses during test year or subsequent year? If so, please identify each individual credit and the amount of each credit. If any amount is an estimate, please indicate as such.

Response:

Confidential Attachment 071-A provides each individual continuity/membership credit and the amount of each credit that PGE received in policy years 2021, 2022, and 2023. PGE does not budget for membership credits since we cannot predict with any certainty when an insurer may elect to issue a credit and if so, in what amount. PGE is reliant on the insurers to determine when, if, and how much of a credit may be awarded.

Attachment 071-A contains protected information and is subject to General Protective Order No. 23-132.

PGE Response to OPUC Data Request 255
Dated April 19, 2024

Request:

Please provide an update for any insurance policies that have been renewed since or are set to terminate in the next three months, as originally requested in DR #70.

Response:

PGE expects the policies listed below to be renewed in the first half of 2024.

- Nuclear Liability on January 1, 2024.
 - Renewal costs are \$498,098.
- Crime on March 1, 2024.
 - Renewal costs are \$24,150.
- General & Auto Liability on March 15, 2024.
 - Renewal costs are \$15,482,963.
- Directors and Officers Liability on May 1, 2024.
 - Renewal costs are \$1,772,209.
- Fiduciary Liability on May 1, 2024.
 - Renewal costs are \$161,920.
- Workers' Compensation on July 1, 2024.
 - As of April 22, 2024, renewal costs are not known.

PGE Response to OPUC Data Request 533
Dated May 22, 2024

Request:

Please detail how the share structure for members of the pool operates—is it tied to the assets insured, or are the number of shares independent of assets insured?

Response:

Each member must purchase one share, as such the number of shares corresponds with the number of members.

Senior Manager, Revenue Requirement

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 534
Dated May 22, 2024

Request:

How many shares does PGE hold? What are PGE's rights as a shareholder?

Response:

PGE holds one share. With this share comes one vote. Additional voting strength is accrued with each ten-thousand dollar increment of cumulative allocable premium, with voting rights capped at 9.5%.

Confidential Attachment 534-A provides Everen's shareholder agreement.

Attachment 534-A contains protected information subject to General Protective Order No. 23-132.

Public Utility Commission of Oregon

From: Jaki Ferchland
Senior Manager, Revenue Requirement

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 555
Dated May 22, 2024

Request:

In response to DR #255, PGE reports the General & Auto Liability policy renewal cost of \$15,482,963. Please provide a reconciliation between this amount and the 2024 forecasted General & Auto Liability amount shown in Confidential Attachment A (Cell N15). Please provide a narrative describing factors that contributed to the difference.

Response:

PGE was able to obtain more favorable pricing to maintain coverage for wildfire liability due to the efforts of PGE's broker, who was able to approach and negotiate with insurers on the global market. PGE's response to OPUC Data Request No. 255 represents the actual premiums that came as a result of these negotiations, while PGE's response to OPUC Standard Data Request No. 068 represents the forecasted amount. As such, these two figures cannot be reconciled.

PGE Response to OPUC Data Request 562
Dated May 28, 2024

Request:

As a follow up to Data Request #235, please provide an updated spreadsheet showing information for T&D Capital Additions greater than \$3 million for the period of January 1, 2024 – April 30, 2024. Additionally for each project listed please provide the following:

- a. The complete project justification form,
- b. A status report for each project including,
 - i. Is the project on schedule to have all originally anticipated plant additions in service prior to 12-31-2024?
 - ii. Is the project over or under budget and by how much?
 - iii. An explanation on any project delays or budget variances.
- c. The originally forecasted total project cost included as a plant addition for UE435,
- d. The contingency amount included in originally forecasted total project cost.

Response:

- a. See PGE's response to OPUC Data Request No. 231, Confidential Attachments 231-A and 231-C for project justification forms.
- b. Attachment 562-A provides the requested information. This list includes ongoing projects that crossed the \$3 million threshold during the January 1 – April 30, 2024 period.
- c. Attachment 562-A provides the requested information.
- d. Attachment 562-A provides the requested information.

PGE Response to OPUC Data Request 567
Dated May 28, 2024

Request:

Referring to PGE's response to Data Request #239, for each project site listed in Attachment 239-A, please provide the following:

- a. The originally forecasted project cost,
- b. The contingency amount included in the originally forecasted project cost,
- c. If the project is complete, the actual cost for the project.

Response:

PGE objects to this request on the basis that the phrase "originally forecasted project cost" is ambiguous and unclear. Notwithstanding its objection, PGE responds as follows:

- a. PGE's early forecasts of projected costs did not include individual forecasts for each project site. The original DPF Project forecast was \$17.7 million, but this was from early 2023 and was an initial, high-level forecast prior to individual site scoping. Attachment 567-A provides the forecast costs by AWO for each site as originally forecast for UE 435. See tab "UE 435 2024 Forecast."
- b. There is no contingency included in PGE's test year forecast. Prior to the site-specific detailed forecast, \$1 million of contingency was included as part of the \$17.7 million forecast.
- c. Please see column D of Attachment 567-A, tab "Site Breakdown."

***As of 6/10/24; some sites may be subject to certain additional trailing costs**

CASE: UE 435
WITNESS: BRET STEVENS

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 900

Opening Testimony

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Bret Stevens. I am a Senior Economist employed in the Rates,
3 Safety and Utility Performance Program of the Public Utility Commission of
4 Oregon (OPUC). My business address is 201 High Street SE., Suite 100,
5 Salem, Oregon 97301.

6 **Q. Please describe your educational background and work experience.**

7 A. My witness qualifications statement is found in Exhibit Staff/901.

8 **Q. What is the purpose of your testimony?**

9 A. I discuss several issues in Portland General Electric’s (PGE) general rate case
10 including PGE’s Test Year load forecast, marginal cost study, rate spread, the
11 basic charge, rate base calculation, and PGE’s proposed Investment Recovery
12 Mechanism.

13 **Q. Did you prepare any exhibits for this docket?**

14 A. Yes. I prepared Exhibit Staff/902. The exhibit contains non-confidential data
15 requests in support of this testimony.

16 **Q. How is your testimony organized?**

17 A. My testimony is organized as follows:

18	Issue 1. Load Forecasting.....	3
19	Issue 2. Marginal Cost Study	7
20	Issue 4. Basic Charge.....	15
21	Issue 5. Load Following Credit.....	25
22	Issue 5. Rate Base Calculation.....	27
23	Issue 6. Investment Recovery Mechanism	34

24 **Q. Could there be changes or updates to Staff’s position and**
25 **recommendations?**

- 1 A. Yes. My testimony represents issues identified to date. My recommendations
- 2 and issues may change when informed by new data and after reviewing
- 3 testimony and analysis by other parties.

1

ISSUE 1. LOAD FORECASTING

2

Q. Please describe the results of PGE's load forecast.

3

A. PGE is forecasting a Test Year load of 22,298 GWh. Table 1 displays the Test Year load forecast by class.

4

Table 1. PGE 2025 Load Forecast by Class

Customer Class	Load (GWh)	Share of Total	Change from 2023
Residential	7,889	35.4%	1.6%
Commercial	6,953	31.2%	0%
Industrial	7,323	32.8%	16.6%
Irrigation	80	0.4%	-2%
Lighting	53	0.2%	-8.6%
Total	22,298	100%	5.5%

5

6

Overall, PGE is projecting load to grow by 5.5 percent compared to 2023.

7

Nearly the entirety of this growth is coming from the industrial class, which is

8

projected to grow 16.6 percent when 2025 loads are compared to 2023 levels,

9

or roughly eight percent per year.

10

Q. At a high level, please describe PGE's methodology for this forecast.

11

A. PGE utilizes a generally accepted standard for separately forecasting each

12

customer class. Residential forecasts are further broken out by dwelling type

13

and are the product of a separate use-per-customer forecast and customer

14

count forecast. Commercial and small industrial customer load is estimated at

15

a schedule-wide level. Large industrial customer forecasts are based on

16

information gathered from individual customers regarding their expected load in

17

the coming years.

1 PGE utilizes Autoregressive Moving Average (ARMA) models for its
2 residential customer and demand forecasts. ARMA models are often used by
3 Oregon-regulated utilities. ARMA models work well for forecasting electricity
4 demand because of their ability to model data with trends.

5 **Q. How does the load forecast in this case compare to the load forecast**
6 **used in the Company's last rate case - UE 416?**

7 A. The forecast methodology is largely the same as in UE 416. As noted by the
8 Company, PGE did maintain the automated ARMA process as used in docket
9 UE 416.¹

10 **Q. Please describe what an ARMA model is and why PGE uses this**
11 **approach.**

12 A. An ARMA model is a type of regression analysis that can remove some trends
13 and seasonality in a data series such that the differences between modeled
14 values and historical actuals can be assumed to have been generated by one
15 unpredictable random process across the entire time series. This allows the
16 modeler reasonable assurance that the model uses all available information
17 and that it is appropriate to use for near-term forecasts.

18 There is some subjectivity when applying these models. The modeler
19 must choose how many autoregressive and moving averages and which
20 covariates to include. An autoregressive lag, the "AR" portion of ARMA,
21 assumes that each subsequent observation of the dependent variable is, at
22 least partially, based on the previous observation(s). The simplest analogy of

¹ PGE/800, Riter-Greene/2.

1 this involves a “stock” variable. For example, if you were to predict the number
2 of city residents at the end of each year, it would be fair to characterize the
3 population in any given period as the population in the previous year plus or
4 minus any changes in the current year.

5 The modeler must choose whether to incorporate a lag of the error term,
6 which is the difference between the fitted and actual observations for a
7 dependent variable in any given period. This parameter accounts for the “MA”
8 portion of the ARMA term. This concept is slightly more complicated to
9 understand. For instance, if the population of Portland was 640,000 in 2021,
10 but your model estimated that there were 630,000 people, the error would be
11 10,000. When including a lag of the error term, the modeler assumes that the
12 error in the previous period(s) influences the realized value in the future.
13 Effectively the modeler would be choosing to include the lagged error term(s)
14 as an independent variable in a regression.

15 While the Company does not employ differencing in their models, it is a
16 tool used in Autoregressive Integrated Moving Average (ARIMA) models. The
17 “I” in the ARIMA term stands for “integration” which refers to differencing.
18 Differencing the data allows the model to examine the change in the dependent
19 variable, as opposed to the level of the dependent variable, such that the
20 model exhibits certain well-behaved properties such as stationarity.

21 **Q. Please describe how the Company chooses its ARMA parameters.**

22 A. PGE uses an automated parameter selection algorithm that selects ARMA
23 parameters based on how well the resulting model fits to historical data.

1 **Q. Does Staff have any issues with this technique?**

2 A. No. Staff is supportive of using an automated parameter selection method as
3 part of load forecasting.

4 **Q. Does Staff support the Company's use of ARMA models?**

5 A. Yes, for shorter term forecasts such as in general rate cases. Staff's
6 preference is for utilities to explore the use of ARIMA models. Often, ARMA
7 models are selected over ARIMA models as they better reflect the data.
8 However, sometimes more complicated time series modeling can be beneficial
9 for enhancing model performance.

10 Through conversation with the Company, Staff understands that the
11 Company chose to not explore using difference terms because the results of
12 these models would sometimes not reflect the historical data. While Staff
13 agrees that these models should not be used in these cases, Staff still posits
14 that when used correctly, differencing can be a helpful tool in forecasting. For
15 example, in some cases data could be better modeled by removing monthly
16 fixed effects and modeling data using a seasonal ARIMA model. In some
17 cases, this representation of seasonality can better reflect the data generating
18 process and lead to better fitting models.

19 **Q. Does Staff have any adjustments to PGE's load forecast?**

20 A. No.

1

ISSUE 2. MARGINAL COST STUDY

2

Q. Please describe PGE's proposed Marginal Cost (MC) study at a high

3

level.

4

A. Since 1974, the Commission has used marginal costs as one of the principal

5

factors for spreading revenue requirement among customer classes. PGE

6

explains that its marginal cost study results in "unit costs, expressed as costs

7

per customer, costs per kilowatt (kW) of demand, or costs per kilowatt hour

8

(kWh), which are then used to allocate the functional revenue requirement."²

9

The marginal cost methodology is needed because book values do not have a

10

comparable basis of depreciation and differ from replacement costs – thus

11

book values would not clearly indicate which schedules are more costly to

12

serve.

13

Q. Have there been any changes made to PGE's marginal cost study since

14

UE 416?

15

A. Yes. PGE is proposing substantial changes to its generation and customer

16

marginal cost studies. However, the Company is proposing to use its exact

17

distribution and transmission marginal cost studies from UE 416 as these

18

costs have not significantly changed since the last rate case.

19

Q. Please discuss PGE's proposed changes to the generation marginal

20

cost study compared to UE 416.

² PGE/1200, Macfarlane-Keene/1.

1 A. In UE 416, for the first time, PGE used non-emitting proxy resources to
2 calculate its marginal capacity and energy costs.³ The change PGE makes
3 in this current docket build off the UE 416 MC study and address concerns
4 about the UE 416 MC study as outlined in the UE 416 Fourth Partial
5 Stipulation, adopted in Order No. 23-386. In particular, PGE agreed to
6 include estimates of any marginal cost of capacity offsets attributable to the
7 capacity resource's ability to provide ancillary services or arbitrage
8 wholesale markets and any other benefits the capacity resource makes
9 available in addition to helping meet net load requirements.

10 **Q. Did PGE make this change?**

11 A. Yes. Staff is generally satisfied with PGE's inclusion of these adjustments
12 and is still investigating if any additional improvements can be made.

13 **Q. What other changes to the generation MC study were made?**

14 A. PGE made numerous other changes to the marginal cost study. First, the
15 Company included solar resources in its energy calculation for the first time.
16 In UE 416, wind was the only proxy energy resource considered. PGE also
17 updated nearly all parameters associated with wind and battery resources.
18 The data used for these resources came either from their most recent 2023
19 IRP, the National Renewable Energy Lab's (NREL) Annual Technology
20 Baseline (ATB) or from actual projects recently completed by the Company.
21 Lastly, PGE disaggregated some cost inputs so that their impact was more
22 transparent.

³ UE 416 PGE/1200, Macfarlane-Keene/2.

1 **Q. Does Staff have any issues with these changes?**

2 A. Not at this time. Staff does note that the results of the study are surprising.
3 Compared to the MC study in UE 416, the marginal energy cost of wind is
4 48 percent higher, and the marginal capacity cost of a four-hour battery is
5 nearly double what was initially proposed in UE 416. These changes in
6 results are driven by changes in the inputs of the study. For example, in the
7 capacity marginal cost study, the assumed overnight capital costs
8 associated with a four-hour battery are 62 percent higher than in UE 416,
9 while the effective load carrying capability (ELCC) is 20 percent lower than
10 in docket UE 416. These compounding changes lead to both the marginal
11 cost of generation and energy being significantly higher.

12 Staff has investigated the sources of these parameters and, at this
13 time, has found no issue with the sources used. However, Staff is continuing
14 to determine the reasonableness of these inputs and the output of the study
15 as a whole.

16 **Q. Do the high marginal costs produced in the generation marginal cost**
17 **study mean customers, as a whole, must have higher rates?**

18 A. No. The total energy revenue requirement is set based on Test Year energy
19 prices and only includes capital costs associated with plant that will be in
20 service by the rate effective date. The marginal cost study is used to
21 determine how much each class (residential, commercial, industrial, etc.)
22 will contribute to that overall revenue requirement. From a customer
23 standpoint, the overall energy and capacity marginal costs are less

1 important than the ratio of these metrics. The higher the capacity marginal
2 cost relative to the energy marginal cost, the more customer classes that
3 have “peaky” consumption (at the time of the system peak) will contribute to
4 the fixed generation revenue requirement. Conversely the higher the energy
5 marginal cost relative to the capacity marginal cost, the less impact the
6 peaky use customer will have on overall costs.

7 **Q. Please discuss PGE’s proposed changes to the customer marginal**
8 **cost study compared to UE 416.**

9 A. PGE made several substantial changes to its customer MC study in this
10 case. In total, the Company added 14 departments to the customer MC
11 study. PGE also changed the allocations for four departments already
12 included in the marginal cost study. In UE 416 PGE agreed to incorporate
13 changes to the customer MC study originally proposed by the Alliance of
14 Western Energy Consumers (AWEC).⁴ However, the changes agreed in
15 docket UE 416 are only a subset of the total changes made by the
16 Company.

17 **Q. Does Staff take issue with the rationale of the changes made to the**
18 **customer MC study?**

19 A. No. Staff reviewed the changes made by the Company and the rationale
20 provided in its testimony and found the logic of these changes generally
21 sound. This perspective may change with time however, as many of the

⁴ *In the Matter of Portland General Electric Company Request for a General Rate Revision, UE 116, Order No 23-386.*

1 allocations rely on input from internal subject matter experts. If in this, or a
2 future case, hard data shows that these allocations are materially different
3 from what is presented in the customer MC study, Staff's opinion may
4 change.

5 **Q. What are the impacts of these changes?**

6 A. A comparison of the allocation of the "Other Customer Cost" category
7 between UE 416 and UE 435 is presented below in Table 2.

Table 2. Customer Marginal Cost Study Comparison

	UE 435 Allocation (\$1,000)	UE 416 Allocation (\$1,000)	UE 435 Allocation (%)	UE 416 Allocation (%)
Schedule 7	\$83,725	\$108,543	59.38%	71.10%
Schedule 32	\$18,907	\$14,768	13.41%	9.67%
Schedule 38	\$435	\$49	0.31%	0.03%
Schedule 47	\$612	\$329	0.43%	0.22%
Schedule 49	\$1,581	\$151	1.12%	0.10%
Schedule 83	\$20,892	\$10,313	14.82%	6.76%
Schedule 85 -S	\$9,515	\$12,403	6.75%	8.12%
Schedule 85 - P	\$1,435	\$1,856	1.02%	1.22%
Schedule 89 - P	\$2,077	\$2,417	1.47%	1.58%
Schedule 89 - T	\$283	\$394	0.20%	0.26%
Schedule 90-P	\$1,538	\$1,444	1.09%	0.95%
Total	\$141,000	\$152,667	100.00%	100.00%

8
9 The cumulative effect of the proposed changes is that Schedule 7
10 customers are spread a significant amount less of "Other Customer Costs"
11 while Schedule 32, Schedule 49, and Schedule 83 make up the difference.

12 **Q. Does Staff have any other recommendations regarding PGE's MC**
13 **study at this time?**

1 A. No. However, Staff has made some recommendations regarding
2 affordability and equity in rate spread that do have some overlap with
3 marginal cost studies in general. Please see Staff Exhibit 200 for this
4 discussion.

5 **Issue 3. Rate Spread**

6 **Q. Please describe PGE's proposed rate spread.**

7 A. Table 3 displays PGE's proposed rate spread at its proposed revenue
8 requirement.⁵

Table 3. PGE Proposed Rate Spread

Schedule	Proposed Increase⁶	Ratio to Average Increase
Schedule 7	7.2%	96.5%
Schedule 32	9.4%	127.3%
Irrigation Customers	11.1%	150%
Schedule 83	9.5%	128.4%
Schedule 85	7.2%	97.5%
Schedule 89	7.4%	100%
Schedule 90	4.2%	56.1%
Lighting Customers	5.7%	77.2%
Average	7.4%	100%

9 **Q. Does Staff agree with some aspects of PGE's general rate spread**
10 **methodology?**

11 A. Yes. Staff agrees that the MC study should have an influence on the overall
12 rate spread. While not infallible, the MC study has long been used as a tool
13 in determining rate spread. That said, Staff is not proposing to exclusively

⁵ PGE/1300, Macfarlane-Pleasant/2.

⁶ This represents the January 1, 2025, increase.

1 use the MC study for determining the overall rate spread. Deviations from
2 the MC study can be expected to ensure that no class is disproportionately
3 burdened from a revenue requirement increase.

4 **Q. Is Staff agreeable to the proposed rate spread overall?**

5 A. No. First, as Staff discusses in the following section, Staff is recommending
6 that the Load Following Credit not be updated as the Company proposes.
7 By itself, this adjustment would alter the rate spread significantly. Even after
8 this change, Schedule 38 (Large Nonresidential Optional Time-of-Use
9 Standard Service (Cost of Service)), Schedule 47 (Small Nonresidential
10 Irrigation and Drainage Pumping Standard Service (Cost of Service)), and
11 Schedule 49 (Large Nonresidential Irrigation and Drainage Pumping
12 Standard Service (Cost of Service)), will see outsized increases compared
13 to the average increase. Staff is recommending a cap of 125 percent
14 relative to the average increase. To make this proposal revenue neutral at
15 PGE's proposed revenue requirement, a floor of an 89.4 percent increase
16 would need to be imposed. The cap would only apply to Schedule 38,
17 Schedule 47, and Schedule 49 customers whereas the floor would only
18 apply to Schedule 89 (Large Nonresidential (>4000kW) Standard Service),
19 Schedule 91 (Street and Highway Lighting Standard Service), and Schedule
20 92 (Traffic Signals (No New Service) Standard Service). Staff's proposed
21 rate spread at the Company's revenue requirement excluding the
22 Company's proposed updates to the Load Following Credit is given below in
23 Table 4.

Table 4. Staff's Proposed Rate Spread

Schedule	PGE Proposed Increase	Proposed Increase w/ No Load Following Credit Update	Staff's Proposed Spread
Schedule 7	7.2%	6.8%	6.8%
Schedule 32	9.4%	9.0%	9.0%
Irrigation Customers	11.1%	10.8%	9.3%
Schedule 83	9.5%	9.0%	9.0%
Schedule 85	7.2%	6.5%	6.6%
Schedule 89	7.4%	7.0%	7.0%
Schedule 90	4.2%	8.0%	8.0%
Lighting Customers	5.7%	5.7%	6.6%
Average	7.4%	7.4%	7.4%

1 Staff notes that as the revenue requirement, marginal cost study, and rate
2 design proposals in this rate case change, Staff's proposed caps and floors
3 could change. To summarize, Staff's proposal is to set the floor such that the
4 125 percent cap is maintained, but the floor is uniform for all customer classes
5 where it is binding.

ISSUE 4. BASIC CHARGE

Q. Please describe PGE's proposal basic charge proposals.

A. PGE is proposing to increase the basic charge for nearly all customer classes.

Table 5 below shows the current and proposed basic charge for each major schedule.

Table 5. PGE Basic Charge Proposal

Schedule	Current Basic Charge	Proposed Basic Charge
Schedule 7 – SF	\$13	\$15
Schedule 7 – MF	\$10	\$12
Schedule 32 – 1P	\$22	\$24
Schedule 32 – 3P	\$31	\$33
Schedule 38/83 – 1P	\$40	\$50
Schedule 38/83 – 3P	\$50	\$60
Schedule 49	\$50	\$60
Schedule 85 – S	\$780	\$800
Schedule 85 – P	\$670	\$750
Schedule 89 – P	\$3450	\$4140
Schedule 89 – T	\$4950	\$5860
Schedule 90	\$12,200	\$18,500

Q. Please summarize PGE's argument for increasing the residential basic charge.

A. PGE is proposing to raise the residential basic charge such that the share of the average customer's bill that is recovered through the basic charge remains constant. Since PGE proposes increasing the revenue requirements that make up the volumetric portions of the Schedule 7 bill, the volumetric charge has also increased. Without increasing the basic charge, the relative weight of the basic charge would decrease.

1 **Q. Does this mean that the amount recovered by customers will increase**
2 **as a result of raising the basic charge assuming the load forecast is**
3 **accurate?**

4 A. No. That said, it is useful to frame an understanding of why the proposed basic
5 charge increase does not directly increase revenues, within the context of it
6 being a single component in the overall UE 435 filing. Specifically, as part of
7 the Company's proposal, the projected amount of revenue raised by any class
8 is set at the revenue requirement allocated to that class. Thus, in this
9 proceeding, increases/decreases to the basic charge are offset by
10 decreases/increases to the distribution charge where the revenue requirement
11 is held constant. In this case, if PGE were to have filed its UE 435 proposal
12 *without* an increase the residential basic charge the Company's proposed total
13 volumetric rate would be roughly 0.25 cents/kWh higher to obtain the same
14 level of proposed revenue requirement. Please also see Staff/200 for a
15 discussion of this topic.

16 Changing the relative weight of the basic charge changes the impact
17 usage will have on a customer's bill. Lower basic charges result in lower bills
18 for customers who use less than average, and higher bills for customers who
19 use more than average. If the basic charge remains unchanged, customers
20 who consume less than roughly 1,000 kWhs a month would see a lower bill
21 relative to PGE's proposal. The opposite is true for customers that consume
22 more than 1,000 kWhs a month.

1 **Q. Is the price of the residential basic charge set by cost causation**
2 **principles?**

3 A. Yes, to some extent. PGE calculates the “embedded basic charge” for the
4 entire residential class to be roughly \$30.⁷ The residential embedded basic
5 charge represents the average amount that all residential customers would pay
6 to recover the allocated costs related to transformers, service drops, meters,
7 billing, and other customer related costs if each customer was charged the
8 same amount. As noted in Staff testimony in UE 335, this does not represent
9 the marginal cost of each additional customer, but instead the average cost of
10 each customer including shared costs. The current basic charges are
11 significantly below this amount. In the past, Staff has argued that the basic
12 charge should be set to represent the short-run costs of each customer as
13 opposed to the average of all customer related costs.

14 **Q. Are there equity concerns regarding a higher basic charge?**

15 A. Yes. Nearly all empirical economic studies have identified electricity use as a
16 normal good, meaning that income and energy consumption are positively
17 correlated. There are many papers in economic literature that find, in absolute
18 terms, that lower income customers consume less on average than higher
19 income customers. The cause of this relationship is often linked to lower-
20 income customers having smaller dwelling sizes, fewer electric appliances, and
21 stricter budgets. A lower basic charge allows these customers to better
22 manage their bill and makes essential energy more affordable. However, Staff

⁷ PGE/900, Macfarlane-Pleasant/20.

1 has found in other cases that this relationship may not always hold across all
2 subsets of low-income households and/or within certain Oregon territories.
3 These findings cast some doubt on the assumption that lower basic charges
4 are beneficial for low-income customers as a whole and indicates that the story
5 may be more nuanced. Staff is currently investigating these claims and more
6 rigorous analysis should be done before suggesting a break from precedent.

7 In discovery, Staff requested customer billing data including information
8 on customer Income Qualified Bill Discount (IQBD) participation.⁸ PGE refused
9 to provide this data on customer privacy grounds even though this information
10 was provided in UE 416 and has been provided by other Oregon utilities in
11 Docket Nos. UE 426, UG 490, and UE 433. Without this data, Staff cannot
12 continue to analyze or understand characteristics of customers that enroll in
13 the IQBD or any other trends in energy burdened customer behavior. IQBD
14 and Low Income Home Energy Assistance Program (LIHEAP) participation is
15 one of the few indicators of household income available to both PGE and Staff.
16 The Commission should direct PGE to provide the data requested in future
17 dockets or on an ongoing basis outside of a particular docket, so we
18 understand the Oregon usage profile better through customer usage data.

19 **Q. Does Staff agree with PGE's proposal to increase the residential basic**
20 **charge?**

21 A. No. While Staff agrees that the basic charge should be set in a way that
22 balances the relationship between recovery through fixed and variable

⁸ Staff DR 402.

1 charges, Staff believes that PGE's embedded marginal cost figure represents
2 the upper bound of what could potentially be considered as short-run customer
3 costs. Further, the PGE proposal to further increase the basic charge from last
4 year's general rate case is not in line with gradualism principles. Lastly, not
5 increasing the basic charge constant will not lead to a large mismatch between
6 cost recovery through the basic and volumetric charges.

7 **Q. Please discuss Staff's concerns around the embedded basic charge**
8 **calculation and why PGE's embedded marginal cost figure should be**
9 **considered an upper bound.**

10 A. As stated above, it has been Staff's long-standing position that the basic
11 charge should represent short-run customer costs. These costs are the service
12 drop, meters, billing, and some directly applicable customer service costs.
13 These are categories of costs incurred as new customers are connected to the
14 system. PGE's calculation of the embedded basic charge encompasses all
15 components of the customer marginal cost study. This includes many longer-
16 term programmatic costs and the cost of transformers. While Staff does not
17 currently have any recommendations to the customer marginal cost study, Staff
18 does not agree that the residential basic charge should be set at the allocated
19 customer cost allocation divided by the number of forecasted bills, as implied
20 by PGE. Further, the need for transformers increases not only with change in
21 customers but also changes in demand and energy use.

22 **Q. Does Staff have an alternative embedded basic charge calculation?**

1 A. Not at this time. While Staff does argue that the characterization of the
2 embedded basic charge is too high, this is only a contributing factor to Staff's
3 recommendation as to the appropriate charge.

4 **Q. Please discuss Staff's concerns around gradualism, the basic charge,**
5 **and possible rate shock to low-income low-usage customers.**

6 A. Figure 1 on the following page shows the residential basic charge over the past
7 15 years where the proposed increase is indicated by the dotted line.

Figure 1. PGE Basic Charge

1 Figure 1 displays the gradual change in the basic charge from 2010 to
 2 2022. In UE 416, the Commission granted an unprecedented \$2 increase in
 3 the basic charge. Now, PGE is requesting an additional \$2 increase to take
 4 place one year after the rate effective date of UE 416. As discussed above,
 5 residential customers, particularly low-income low-usage customers, are much
 6 more sensitive to changes in the basic charge. A low basic charge offers
 7 customers a way to mitigate overall rate changes through energy efficiency and
 8 lower and or shifting consumption. Back-to-back increases of the sizes
 9 requested by the Company have, as far as Staff's research shows, never been
 10 approved.

11 **Q. Please discuss Staff's balance between fixed and volumetric cost**
 12 **recovery.**

1 A. As stated above, Staff does agree that the basic charge should be set such
2 that the relationship between fixed and volumetric cost recovery is balanced.
3 By keeping the basic charge at current rates, the distribution charge would
4 increase by 0.25 cents/kWh. This change constitutes an increase/decrease
5 of \$20 million in volumetric/fixed cost recovery out of the residential class's
6 \$1.5 billion revenue requirement. Staff argues that this change will not
7 greatly impact the Company's ability to recover rates or greatly deviate from
8 cost causation principles compared to current rates. Lastly, it will allow
9 customers to adjust to the already large increase in the residential basic
10 charge seen in UE 416.

11 **Q. Is Staff supportive of the Company's proposed basic charge increases**
12 **for Schedule 32 (Small Nonresidential Standard Service), Schedule 38**
13 **(Large Nonresidential Optional Time of Day Standard Service),**
14 **Schedule 49 (Large Nonresidential Irrigation and Drainage Pumping**
15 **Standard Service), and Schedule 83 (Large Nonresidential Standard**
16 **Service)?**

17 A. Staff has reviewed the Company's request regarding these Schedules and
18 generally finds them reasonable. Although Staff has concerns about the
19 Company's embedded basic charge calculation being used as a proxy for
20 what the basic charge should be set at, it is clear that these customer
21 classes are paying below a cost-informed basic charge.

22 A closer adherence to cost-based pricing for these customers is
23 reasonable. Staff does not have the same equity and affordability concerns

1 regarding the basic charge for these Schedules as it does for Schedule 7
2 customers. While electricity is necessary for modern life for residential
3 customers, electricity is an input to create goods and services for the
4 customers in these schedules. Further, Staff is unaware of any study that
5 links electricity consumption to profitability. Customers with low energy
6 usage that benefit from a lower basic charge may be highly profitable – such
7 as a law firm or small retail store. In contrast, customers with higher energy
8 usage may run on thin margins – such as a grocery store. As such, Staff
9 generally takes a more cost focused approach to these customers.

10 **Q. Is Staff supportive of the Company's proposed basic charge increases**
11 **for Schedule 85 (Large Nonresidential Standard Service (201-4000kW)),**
12 **Schedule 89 (Large Nonresidential Standard Service (>4000kW)), and**
13 **Schedule 90 (Large Nonresidential Standard Service (>4000kW and**
14 **Aggregate to >30MWa)).?**

15 A. Yes. These customers pay the entirety of their allocated customer costs
16 through the basic charge. Staff does note that PGE is proposing large
17 changes to the basic charge for Schedule 89 and Schedule 90, in particular.
18 While the basic charge makes up a relatively small portion of these
19 customers' overall bill, a 20 percent increase for Schedule 89 customers
20 and 50 percent increase for Schedule 90 customers is sizable. These
21 changes are almost entirely driven by the changes to the Customer Marginal
22 Cost Study discussed above. While not opposing these changes in this

1 case, Staff does recommend that PGE avoid large pricing changes like
2 these in the future.

ISSUE 5. LOAD FOLLOWING CREDIT**Q. Please describe the Load Following Credit.**

A. The Load Following Credit was created in in PGE's 2013 general rate case (GRC), UE 262, and last updated via Stipulation in PGE's 2017 GRC, UE 319. The Load Following Credit applies to PGE's one Schedule 90 customer for its accounts larger than 250 MWa. The purpose of the credit is to recognize the benefits to PGE's system that large customers with high load factors bring to the system by lowering the need to procure flexible capacity. Other schedules are allocated the cost of the credit.

In UE 262, the Load Following Credit was set at 1.13 mills/kWh. In the UE 262 case, the credit applied only to customers who consumed over 100 MWa. In UE 319, the Load Following Credit was updated in two ways. First, it was expanded to cover 150 MWa instead of 100 MWa. Second, the amount was updated to add an additional surcharge of 0.25 mills/kWh to Schedule 89 customers and to include a surcharge ceiling for Schedule 89 customers of 0.57 mills/kWh. The Load Following Credit has been set at this level since.

Q. Please describe PGE's proposal regarding the Load Following Credit.

A. PGE is proposing to triple the Load Following Credit allocation in this case. Currently, the Load Following Credit is set to 1.26 mills/kWh. In total, this sets a transfer payment of roughly \$5.5 million from non-Schedule 90 customers to the Schedule 90 customer. PGE has recalculated the allocation using the flexibility value of a four-hour battery from Docket LC 80 of \$9.77/kW-yr. Using this measure of flexibility value, PGE is

1 recommending that the total Load Following Credit for the Schedule 90
2 customer be 4.91 mills/kWh for 360 MWa. In total, this would increase the
3 transfer payment to Schedule 90 to \$15.42 million.

4 **Q. Does Staff support this change?**

5 A. No. While Staff is continuing to investigate this issue Staff is not supportive
6 of PGE's proposed update to the Load Following Credit. Staff does not
7 agree that the value provided by Schedule 90's load profile is equivalent to
8 100 percent of the flexibility value of a four-hour battery. At this time, Staff is
9 recommending that the credit remain unchanged. Staff is still determining
10 what the appropriate value, if any, Schedule 90's load profile offers the
11 system beyond what is reflected through the Generation Marginal Cost
12 Study.

ISSUE 5. RATE BASE CALCULATION

Q. Please generally describe how PGE calculates rate base for the purpose of establishing the return component of PGE’s revenue requirement.

A. PGE used what Staff refers to as the Pre-Test Period Snapshot (PTPSS) method. This method calculates PGE’s rate base as of December 31, 2024.⁹ However, PGE treats capital additions in 2024 differently from all other capital additions. Instead of calculating the contribution to rate base directly before the January 1, 2025, rate effective date for these 2024 capital additions, PGE annualizes a depreciation and accumulated depreciation amount and includes that within its December 31, 2024, rate base calculation. This effectively gives 2024 capital additions a full year of depreciation and accumulated depreciation as a reduction to rate base.¹⁰

Q. Does Staff agree with PGE’s use of the PTPSS method?

A. No. As stated in other rate cases, including PGE’s previous rate case UE 416, Staff recommends using the average of monthly averages (AMA) method of rate base calculation for the purpose of calculating required net operating income. Particularly, for the Test Year ending on December 31, 2025, the average of monthly averages rate base is calculated using a 13-month average for the 2025 rate base amounts, without new capital additions that cannot be included in accordance with ORS 757.355(1). This 13-month average is the

⁹ PGE/200, Batzler-Ferchland/14.

¹⁰ *Id.*

1 sum of the monthly balances from December 2024 through December 2025,
2 less one-half of each December balance, divided by 12. This is effectively the
3 same method Staff proposed be used in UE 217, UE 416, UE 426, UE 433,
4 UG 461, and UG 490.

5 **Q. Is the AMA method described above the only way to apply this**
6 **methodology?**

7 A. No. The method Staff describes above, is unique in its handling of capital
8 additions in the Test Year. A common way of applying the AMA method is to
9 include all forecasted Test Year capital additions in the AMA calculation. Staff's
10 proposed version of the AMA method excludes all substantive capital additions
11 as well as those non-customer-growth-related capital additions in the Test Year
12 as to comply with ORS 757.355(1) which states:

13 A public utility may not, directly or indirectly, by any device, charge,
14 demand, collect or receive from any customer rates that include the
15 costs of construction, building, installation or real or personal
16 property not presently used for providing utility service to the
17 customer.

18 **Q. In the absence of ORS 757.355, would Staff recommend that Test Year**
19 **capital additions be included in the AMA rate base calculation.**

20 A. No. For capital additions to be included in rates, a prudence review must be
21 conducted. When plant is not in service by the rate effective date, many
22 portions of a prudence review would be left to speculation, as well as the timing
23 of the in-service date as well. As such, Staff is not supportive of the inclusion of
24 major capital additions that are not online by the rate effective date of a GRC.
25 Regardless, Staff's interpretation of ORS 757.355 bars the inclusion of these

1 capital additions. While Staff agrees that its proposed method does not
2 perfectly reflect the Company's rate base over the Test Year, Staff also argues
3 that the PTPSS method also does not reflect the value of the rate base over
4 the Test Year as, excluding capital additions placed in service in 2024,
5 customers are paying for depreciation expense during the Test Year, but not
6 receiving the benefit of accumulated depreciation over the Test Year.

7 **Q. When Staff proposed PGE adopt this method in UE 416, did the Company**
8 **agree?**

9 A. No. Below, I list PGE's main arguments against adopting Staff's method as
10 described in UE 416:

11 (1) The method that Staff proposed to calculate PGE's rate base in this
12 proceeding "has never been used by any utility in the state of Oregon
13 and unlikely to have been used by any other state commission."¹¹

14 (2) "Staff's method mixes and matches year-end numbers with average
15 numbers, resulting in a very inequitable and unbalanced view of PGE's
16 rate base, which has no historical precedent nor reasonable logic
17 behind it."¹²

18 (3) "Staff's proposal would violate tax normalization rules as defined in
19 Internal Revenue Code, Section 168(i)(9). As we discuss in PGE
20 Exhibit 200, normalization rules require consistency in the calculation

¹¹ PGE/1700, Batzler-Ferchland/13.

¹² *Id.*

1 of book depreciation expense, tax expense, accumulated book
2 depreciation, and accumulated deferred income taxes.”¹³

3 (4) “Internal Revenue Code Section 168(f)(2) states that if a utility does
4 not use a normalization method of accounting, the utility may not take
5 advantage of the benefits of accelerated tax depreciation provided in
6 Section 168. PGE would be required to utilize book depreciation to
7 calculate its income tax expense.”¹⁴

8 (5) Staff’s method would violate Generally Accepted Accounting Principles
9 (GAAP). Specifically, it would violate the principles of periodicity and
10 the principle of consistency.¹⁵

11 (6) Staff’s method would violate Regulation 26 C.F.R. § 1.167(l)-1(h)(6)(i).

12 (7) Staff’s method would inhibit PGE’s ability to earn its authorized return
13 on equity (ROE).¹⁶

14 (8) Staff’s method would signal to investors that PGE is a riskier
15 investment relative to its peers.¹⁷

16 **Q. Do you agree with PGE’s arguments that the method Staff used to**
17 **calculate rate base has never been used?**

18 A. Staff’s proposal is to use a modified version of the AMA calculation that was
19 used by the Commission for many years. The modification Staff made is

¹³ *Id.* at 18.

¹⁴ *Id.*

¹⁵ PGE/3500, Batzler-Ferchland/10.

¹⁶ PGE/3500, Batzler-Ferchland/12-15.

¹⁷ PGE/3500, Batzler-Ferchland/21-22.

1 necessary as it allows for compliance with Staff's interpretation of ORS
2 757.355(1).

3 **Q. What is Staff's response to PGE's argument that Staff's method**
4 **inappropriately mixes average and year-end numbers an**
5 **approximation of depreciation over the 2024 Test Period.**

6 A. Again, Staff's primary goal in its recommendation is to ensure that, for the
7 purposes of establishing the required return in this rate case, the value of
8 PGE's rate base reflects the depreciation of its assets over the course of the
9 Test Year while complying with ORS 757.355.

10 **Q. Do you agree with PGE's argument that Staff's "hybrid" approach to**
11 **the rate base calculation violates IRS tax normalization rules and**
12 **would require PGE to use book depreciation to calculate its income tax**
13 **expense?**

14 A. No. The Commission has followed the statutory prohibition on including Test
15 Year investment in rate base for many years and PGE has not prevailed on
16 an argument that the statute creates a normalization issue for the Company
17 that requires a regulatory change.

18 **Q. Do you agree with PGE that Staff's method would violate the GAAP**
19 **principles of periodicity and consistency?**

20 A. No. Staff's methodology would be narrowly applied to the calculation of the
21 required net operating income in this case.

22 **Q. Do you agree with PGE that using Staff's method would inhibit their**
23 **ability to return its authorized ROE?**

1 A. No, as stated before, it is Staff's position that Staff's proposed AMA
2 methodology better reflects the average rate base value over the Test Year
3 subject to Oregon law. As such, the required net operating income produced
4 by this method would more accurately reflect the return due to PGE's
5 investors. Staff does posit that PGE would, if anything, overearn its return
6 as it is dividing net income by a larger rate base for regulatory purposes
7 than the actual average rate base value.

8 **Q. Do you agree with PGE's assertion that using Staff's method would**
9 **signal to investors that PGE is a riskier investment relative to its**
10 **peers?**

11 A. No. Oregon is generally supportive of regulation using future test years, use
12 of trackers where appropriate, deferred accounting, and automatic
13 adjustment clauses. Staff has suggested that this method be used in all rate
14 cases involving PGE's peer Oregon utilities. Staff is not singling out PGE on
15 this issue.

16 **Q. Please discuss your adjustment as it applies to this specific filing and**
17 **the resulting revenue requirement reduction.**

18 A. At this time, Staff is recommending an estimated revenue requirement
19 reduction between \$17.408 million and \$18.042 million given Staff's range of
20 acceptable ROEs. This adjustment is not final, and Staff is continuing to
21 refine this estimate. Staff notes that the methodology used to produce this
22 estimated adjustment is *not* the methodology Staff is proposing the
23 Company use and this estimate should only be seen as an illustrative

1 example demonstrating the general magnitude of the effect of Staff's
2 proposed methodology. To calculate this estimate, Staff applied one half of
3 PGE's Test Year depreciation value to represent the rough effect of applying
4 an additional half year's worth of accumulated depreciation to the
5 Company's PTPSS rate base.

ISSUE 6. INVESTMENT RECOVERY MECHANISM**Q. Please describe PGE's proposal regarding the Investment Recovery Mechanism (IRM).**

A. PGE is proposing to establish the IRM in this case. The IRM is a mechanism that would allow for recovery outside of a general rate case for investments made to maintain safety, reliability, and resilience of PGE's network. PGE describes this mechanism as a way to avoid annual general rate cases.¹⁸

PGE is proposing to only include investments made by PGE to sustain its current customer base such as investments in its Facilities Inspection and Treatment to the National Electric Safety Code (FITNES) program, investments for environmental compliance, and replacing aging substation assets. PGE proposes that each year in August, PGE would file a tariff reflecting its anticipated capital additions through the end of the calendar year. A review of the projects by the Commission would take place from August to December, and the tariff would have a rate effective date of January 1. PGE proposes a sunset date of December 31, 2030.¹⁹

Q. How does the Company argue that customers will benefit from the IRM?

A. Staff's interpretation of the Company's argument is that the IRM could reduce both rate pressure and rate shock. PGE states that the IRM will benefit customers by avoiding annual rate cases where costs are broadly

¹⁸ PGE/400, Bekkedahl-Felton/16.

¹⁹ *Id.*, Bekkedahl-Felton/17-18.

1 updated. In particular, PGE argues that this mechanism would allow them to
2 recover capital-related costs while managing their O&M costs. This would
3 allow for smaller annual increases and limit the scope of the increase to only
4 include a subset of the Company's capital additions.²⁰

5 **Q. Does Staff support PGE's IRM proposal?**

6 A. No. In its current state, this mechanism only provides a benefit to the Company
7 through reducing regulatory lag. First, it is wholly within PGE's power to file rate
8 cases that only include non-growth-related capital additions. The workload for
9 Staff, and Intervenors would largely be the same as PGE's currently proposed
10 IRM. Compared to the option of a limited scope GRC, the IRM only serves to
11 lessen the time in which Staff, Intervenors, and the Commission must complete
12 the prudence review on these issues – from roughly 9 months to 5 months, and
13 to eliminate any risk that Staff and stakeholders will propose offsetting
14 reductions to other cost categories within PGE's revenue requirement.

15 Second, with no stay-out provision associated with the IRM, the
16 mechanism's only purpose will be to reduce the Company's regulatory lag on
17 capital investments. Under PGE's proposal, PGE would have the option to file
18 a GRC at any time. As such, it is only in years where the Company determines
19 it is not worth filing a fully scoped GRC that the IRM would be utilized. This in
20 effect provides the Company a free option to decide which regulatory tool to
21 use, the IRM or a GRC. As noted above, the IRM removes risk that Staff and
22 stakeholders will identify where PGE is over recovering for certain cost

²⁰ *Id.*, Bekkedahl-Felton/18.

1 categories and propose downward adjustments to PGE's revenue requirement.
2 Absent the IRM, the Company may very well choose to not file for any rate
3 increase at all in a future year. As such, the IRM would only serve to raise rates
4 in years where rates would otherwise not have been raised.

5 **Q. If the IRM were to be approved by the Commission, does Staff have**
6 **any suggested alterations?**

7 A. Yes. Staff's proposed alterations would make the benefits of the IRM more
8 balanced between ratepayers and the Company.

9 **Q. With a stay-out provision could the IRM be beneficial to customers?**

10 A. Potentially, yes. Compared to a setting where PGE is filing yearly rate
11 cases, customers would be better off if the Company decided to invoke the
12 IRM instead of filing a GRC for the reasons the Company described in its
13 opening testimony. However, if PGE was not planning to file a GRC for a
14 number of years customers would only be better off if the stay-out was
15 longer than PGE's planned GRC hiatus.

16 **Q. Does Staff have a proposed stay-out length?**

17 A. Yes. Although Staff notes that because Staff does not know when PGE
18 plans to file its next rate case, determining the appropriate stay-out length is
19 difficult. That said, if the Commission approves PGE's IRM, Staff
20 recommends that PGE be prohibited from receiving a general rate increase
21 for three years following any IRM rate adjustment. If, for example, PGE were
22 to request a rate increase under the IRM with a rate effective date of
23 January 1, 2026, PGE could not receive a general rate increase until

1 January 1, 2029. If PGE sought a rate increase under the IRM in 2026 for
2 January 1, 2027, PGE could receive a general rate increase no sooner than
3 January 1, 2030. Staff chose three years as it strikes a balance between the
4 benefit the Company would receive from reduced regulatory lag on its
5 capital investments and the benefit customers would receive from fewer full
6 GRCs.

7 As PGE did, Staff proposes the IRM have a sunset date. If PGE or any
8 party want the mechanism to extend beyond January 1, 2028, the IRM must be
9 reauthorized.²¹

10 **Q. Does Staff have any additional recommendations to amend PGE's**
11 **proposal?**

12 A. Yes. Staff has two additional recommendations.

13 Under PGE's proposed IRM, any update to rate base can only go one
14 way, up. However, since the utility would be getting recovery for all interim
15 capital additions for an entire class of assets, it is appropriate to update
16 accumulated depreciation for existing rate base for that entire class of
17 assets. This means, if when an asset was installed, it would have been able
18 to be included in the IRM, its accumulated depreciation should be updated
19 through this mechanism. This would result in a reduction of depreciation
20 expense for distribution assets already in rate base along with an increase

²¹ Staff notes that the sunset date would not apply to the stay out provision. The stay-out would extend the full three years.

1 for the new assets. Second, Staff recommends that the IRM be subject to an
2 earnings test.

3 Lastly, Staff is concerned that during the stay-out period, PGE could
4 avoid regulatory lag on O&M by filing deferrals for various unexpected costs.
5 Accordingly, Staff believes Staff and the Commission would have to be
6 vigilant in applying the Commission's criteria for deferral very strictly.

7 **Q. If Staff's recommendations were accepted, would PGE be subject to an**
8 **undue amount of regulatory lag due to large investments coming onto**
9 **the system that fall outside of the IRM?**

10 A. No. Through the Renewable Automatic Adjustment Clause and Wildfire
11 Mitigation Cost Recovery Mechanism, PGE has the ability to recover some
12 capital costs when the Commission finds these changes in the public's
13 interest.

14 Staff reiterates that PGE's choice to use the IRM under Staff's
15 proposed conditions is just that, a choice. Staff's recommendation seeks to
16 balance regulatory lag fairly between shareholders and customers. Should
17 the Company decide that it is in their interest to forgo the use of the IRM
18 with Staff's recommended three-year stay-out clause and instead file annual
19 rate cases, the Company has the ability to do so.

20 **Q. Please summarize Staff's position on the IRM.**

21 A. Staff recommends that the Company's IRM proposal not be adopted.
22 However, if the Commission were to adopt the IRM, Staff recommends the
23 following alterations:

- 1 • Three-year stay-out for general rate increases following the IRM rate
2 increase,
3 • Accumulated depreciation update for the class of eligible assets, and
4 • IRM would be subject to an earnings test.

5 **Q. Does this conclude your testimony?**

6 A. Yes.

WITNESS QUALIFICATIONS STATEMENT

NAME: Bret Stevens

EMPLOYER: Public Utility Commission of Oregon

TITLE: Senior Economist
Rates, Safety, and Utility Performance

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: Ph.D., Agricultural & Resource Economics (2023)
University of California, Davis

M.S., Agricultural & Resource Economics (2017)
University of California, Davis

B.A., Economics/Environmental Studies (2016)
Western Washington University

EXPERIENCE: I have been employed at the Public Utility Commission of Oregon since September of 2022. My primary responsibilities revolve around providing research and analysis on rate spread and rate design. I have been a staff witness in UE 407, UE 410, UE 412, UE 414, UE 416, UE 421, UE 426, UE 433, UG 461, and UG 490. Prior to working for the Commission, I was employed by the University of California, Davis as a graduate student researcher, associate instructor, and teaching assistant. I taught courses on econometrics, finance, and microeconomics.

Staff Data Request 402

Please provide raw anonymized household-level billing data for all Schedule 7 customers for the calendar years 2022 and 2023. Please provide this in an MS Excel file. If necessary, multiple Excel files can be used. Please include any bill for which the billing period or due date starts or ends in calendar year 2022 or 2023. An example as to how the data should generally be structured is shown in Attachment 1 of this DR. If the company does not track any of these data elements, please indicate this in your response and return the rest of the data elements. If you have any questions about this request, please reach out to the Staff Initiator, Bret Stevens, as soon as possible. Please include the following data elements – the preferred data type are in parentheses:

- a. Anonymized customer account ID (string or numeric)
 - i. Anonymized site ID (string or numeric)
 - ii. Please ensure that the anonymized customer ID and anonymized site ID are persistent across different bills.
 - iii. Please ensure that the key linking the anonymous account and site IDs to their respective accounts and sites are retained by the company after anonymization.
- b. Site ID (string or numeric)
- c. Bill start date (string or date variable in Excel)
- d. Bill end date (string or date variable in Excel)
- e. Bill total (numeric)
- f. kWh consumption for billing period (numeric)
- g. Monthly consumption in peak period (kWh) – if available (numeric)
- h. Customer payments made for billing period (numeric)
- i. Customer address (string)
- j. 5-digit ZIP code (numeric or string)
- k. 9-digit ZIP code (numeric or string)
- l. City (string)
- m. Sum of HDD over billing cycle from nearest weather station (numeric)
- n. Sum of CDD over billing cycle from nearest weather station (numeric)
- o. Heating fuel type – if available (binary or string)
- p. Cooking fuel type – if available (binary or string)
- q. Water heater type – if available (binary or string)
- r. Service Initiation Date
- s. Housing type (binary variable or string)
- t. House square footage – if available (numeric)
- u. Enrolled in income qualified bill discount program? (binary or string)
- v. Enrolled in equal time payment plan? (binary or string)
- w. Received weatherization assistance (binary or string)
 - i. If yes, date of most recent assistance (string or date variable in Excel)
- x. Customer has been previously disconnected (binary or string)
 - i. If yes, date of most recent disconnection
- y. Customer account is currently receiving LIHEAP (binary or string)
- z. Customer account is not receiving LIHEAP, but has in the past 5 years (binary or string)

aa. Customer arrears balance for billing period (numeric)

PGE Response to Data Request 402

PGE objects to this request on the basis that it is unduly burdensome, requires new analysis, and seeks proprietary third-party information. PGE does not collect data on fuel types from all customers, home square footage, nor low-income weatherization. Furthermore, the request is not reasonably calculated to lead to the discovery of admissible evidence within this proceeding. Notwithstanding its objections, PGE responds as follows:

Attachment 402-A contains all data provided and consists of a zipped file with the full dataset split across eight .csv files. Data was split for ease of opening, and all data for a single account is contained within a single .csv file.

See also PGE's response to CUB Data Request No. 048, Attachment 048-A.

Data item provided (with column names in parentheses)

- a. Anonymized customer account ID (ANONYMIZED_ACCT_ID)
- b. Anonymized premise ID (ANONYMIZED_PREM_ID)
- c. Bill start date (BSEG_START_DT)
- d. Bill end date (BSEG_END_DT)
- e. Total billed dollars (BILLED_DOLLARS)
- f. Total billed kwh (BILLED_KWH)
- g. Monthly kwh in peak period for customers enrolled in Time of Day (TOD) or Legacy Time of Use (TOU) (ON_PEAK_KWH)
- h. 5-digit zip code of service address (ZIPCODE5)
- i. City of service address (CITY)
- j. Housing type (single family, multifamily or uncertain) (HOUSING_TYPE)
- k. Average temperature (in Fahrenheit) during billing segment window, when available (HDD and CDD values unavailable) (AVG_BILLING_TEMP)
- l. Enrolled in Equal Pay in billing period (IS_EQUAL_PAY)

Data items not provided due to customer privacy and data sharing concerns

- a. Customer address (string)
- b. 9-digit ZIP code (numeric or string)
- c. Service Initiation Date
- d. Customer payments made for billing period
- e. Received an Income Qualified Bill Discount in billing period
- f. Received LIHEAP or OEAP in billing period
- g. Customer has been previously disconnected (date if applicable)
- h. Customer arrears balance for billing period

Data items not collected or maintained from all customers

- a. Primary heating fuel type
- b. Water heating fuel type
- c. Cooking fuel type
- d. House square footage
- e. Received weatherization assistance

WITNESS: LAUREL ANDERSON

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 1000

Opening Testimony

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Laurel Anderson. I am a Senior Telecommunications Analyst
3 employed in the Rates, Safety and Utility Performance Program of the Public
4 Utility Commission of Oregon (OPUC). My business address is 201 High
5 Street SE., Suite 100, Salem, Oregon 97301.

6 **Q. Please describe your educational background and work experience.**

7 A. My witness qualifications statement is found in Exhibit Anderson/1001.

8 **Q. What is the purpose of your testimony?**

9 A. My testimony addresses non-labor generation overhead and maintenance
10 (O&M) expenses (non-labor accounts), Information Technology (IT) O&M (non-
11 labor accounts), retained losses, accumulated deferred income taxes, and
12 investment tax credits ITCs). My recommendations may change based on
13 further review and on testimonies offered by other parties.

14 **Q. Did you prepare any exhibits for this docket?**

15 A. Yes. I prepared Exhibit Staff/1001.

16 **Q. How is your testimony organized?**

17 A. My testimony is organized as follows:

18	Issue 1. Generation Expenses (Non-Labor).....	2
19	Issue 2. IT O&M.....	4
20	Issue 3. Retained Losses.....	6
21	Issue 4. Accumulated Deferred Income Taxes & PTC.....	7

ISSUE 1. GENERATION EXPENSES (NON-LABOR)**Q. Describe PGE's treatment of generation expenses.**

A. Generation non-labor operations and maintenance (O&M) expense reflects the non-labor costs required to perform corrective and preventative maintenance on generation assets, site and equipment management, and health and safety measures. These costs are recorded in FERC Accounts 500 through 557. PGE's 2025 Test Year expense for non-labor generation expenses is \$56.7 million, excluding IT expenses and MMA expenses that are discussed later in my testimony, and environmental expenses. Staff notes that MMA is included above the subtotal line in Table 2 below but is not included in the subtotal amounts because these costs were evaluated separately. The \$56.7 million proposed for 2025 is an increase of \$10.7 million when compared to 2023 actual expense, an increase of 23 percent.¹

Table 2
Generation Non-Labor O&M Changes (\$ millions)**

<u>Operating Area</u>	<u>2023 Actuals</u>	<u>2024 Budget</u>	<u>2025 Test Year</u>	<u>'24-'25 Delta</u>	<u>Annual % Change</u>
Gas-Fired Plants	\$17.6	\$19.2	\$19.4	\$0.2	0.9%
Hydro Plants	\$4.4	\$5.7	\$6.0	\$0.3	5.7%
Wind Plants	\$17.1	\$20.8	\$23.6	\$2.8	13.5%
Major Maintenance Accrual	\$18.6	\$20.9	\$21.7	\$0.8	3.7%
General and Miscellaneous	\$6.9	\$8.1	\$7.6	(\$0.6)	-6.8%
Subtotal*	\$46.0	\$53.9	\$56.7	\$2.8	5.1%
Major Maintenance Accrual	\$18.6	\$20.9	\$21.7	\$0.8	3.7%
Environmental	\$3.5	\$4.3	\$4.3	(\$0.0)	-0.7%
IT Expenses	\$10.2	\$12.1	\$13.0	\$1.0	7.9%
Total*	\$78.2	\$91.2	\$95.7	\$4.5	4.9%

*May not sum due to rounding.

**Please note that historical costs for Boardman & Colstrip are excluded for comparison purposes.

¹ See PGE/500, Felton/9. See also Table 2 of Exhibit PGE/500, Felton/10.

1 **Q. What is driving the changes in non-labor generation O&M expenses?**

2 A. According to the Company, the primary driver for the change is an increase in
3 costs associated with PGE's Clearwater project. Specifically, PGE is obligated
4 to pay \$6 million in Custer County impact fees (\$2 million annually) from 2024
5 to 2026. The 2024 \$2 million fee was capitalized while the subsequent annual
6 \$2 million fee is defined as O&M expense.²

7 **Q. Does Staff propose an adjustment?**

8 A. Staff proposes an adjustment to remove the \$2 million annual fee from revenue
9 requirement. The 2023 actual expenses were \$17.1 million for wind plants,
10 while the budget was \$20.8 million for 2024. Staff suggests that the \$2 million
11 fee can be absorbed into the current budget. Since the obligation is fulfilled by
12 2026, including it in this rate case will mean it is carried forward in rates after
13 the obligation is paid. Removing the \$2 million fee will result in Test Year
14 increase for wind plants of 3.85 percent, which is more in line with the other
15 operating areas.

16 **Q. What is the Major Maintenance Adjustment (MMA)?**

17 A. The MMA is an accrual mechanism that covers major maintenance activities.
18 This mechanism reduces the variation in annual costs as expenses may be
19 larger in some years than others.

20 **Q. What resources use the MMA?**

² PGE/500, Felton/9.

1 A. The Commission authorized PGE to utilize the MMA for Port Westward 1&2,
2 Coyote Springs, Carty, Colstrip, and KB Pipeline. However, Colstrip is
3 accounted for separately in Schedule 146.

4 **Q. What is Staff's conclusion regarding the expense for MMAs in the Test**
5 **Year?**

6 A. The main driver of higher costs in this filing is the inclusion of 2029 into the
7 rolling forecast. Forecasted costs in 2029 are higher, leading to a higher overall
8 cost. Staff believes the Company's request for a slight increase is reasonable
9 and consistent with Staff's recommended method of escalation for this
10 category of cost.

ISSUE 2. IT O&M (NON-LABOR)**Q. Please discuss PGEs Proposal for non-labor IT O&M costs.**

A. PGE forecasts non-labor IT O&M costs to increase by approximately \$8.8 million, from the \$74.2 million in the 2023 Base Year to \$83.0 million in 2025. The Company records its cost into two categories: Direct Charges to Operating Areas and Allocated Charges to Operation areas, as shown in Table 5 below.³

Table 5
Total IT O&M Costs (\$ millions)

<u>Category</u>	<u>2023</u> <u>Actuals</u>	<u>2024</u> <u>Budget</u>	<u>2025</u> <u>Forecast</u>	<u>2023-2025</u> <u>Delta</u>
Direct Charges to Operating Areas	\$29.6	\$23.0	\$27.3	\$4.4
Allocated Charges to Operating Areas	\$44.6	\$50.7	\$55.7	\$5.0
Total IT*	\$74.2	\$73.7	\$83.0	\$8.8

Directly charged costs relate to systems that are specific to a given operation such as transmission, distribution, or customer service. Other IT in the areas of voice, data, network, communications, business recovery, the data center, and office systems apply broadly to all PGE activities and departments. These costs are first charged to a balance sheet account (Account No. 1840004-IT Service Provider) and then allocated to expense accounts for the various operating areas.

Q. How has the Commission treated IT O&M costs in the past?

A. The Commission allows reasonable IT O&M costs as they are necessary for PGE's systems to function and to meet customer needs and expectations.

³ PGE 300, Trpik-Mersereau-Batzler/15.

1 **Q. What did Staff's analysis of non-labor IT O&M costs reveal?**

2 A.

3 The proposed increase would include application support for Enterprise
4 Resource Planning (ERP), IQGeo, Maximo, and mobile support. PGE forecast
5 an approximate \$1.4 million increase to support investment in various
6 applications. An additional \$1.2 million increase is forecast due to escalations
7 in 2025.

8 **Q. Does Staff recommend any adjustment(s) to PGE's Test Year expenses**
9 **recorded as non-labor IT O&M?**

10 A. No. Non-labor IT O&M costs appear reasonable in regard to application
11 support of the various systems required to necessary to provide service to
12 customers.

ISSUE 3. RETAINED LOSSES

Q. Please discuss what PGE includes in retained losses.

A. Retained losses are the portion of any claim falling within PGE's self-insured retentions for its auto liability, general liability, and workers' compensation claims that are frequent and predictable.⁴

Q. Did Staff investigate how PGE forecasts expenditures for retained losses?

A. Yes. PGE budgets for auto and general liability retained losses based on actuarial projections. PGE produced the complete actuarial report prepared by Oliver Wyman on September 25, 2023, in discovery.⁵ The Company also provided a spreadsheet listing workers' compensation claims. Staff reviewed the actuarial report and the workers' compensation claims list and agrees with the methodology used to forecast Test Year amounts for retained losses.

Q. Does Staff recommend any adjustment to PGE's retained losses for the Test Year 2025?

A. No. Based on the analysis done in the Actuarial Report provided by PGE and the Company's list of worker's compensation⁶ claims from prior years, Staff agrees that retained losses are likely to remain flat for the Test Year. No adjustment is recommended.

⁴ PGE 300, Trpik-Mersereau-Batzler/10.

⁵ PGE Response to Staff DR 525, Attachment A.

⁶ PGE Response to Staff DR 524, Attachment A.

1 **ISSUE 4. ACCUMULATED DEFERRED INCOME TAXES AND PTC**

2 **Q. Please discuss what is PGE’s proposed adjustment of Accumulated**
3 **Deferred Income Taxes (ADIT) and Production Tax Credits (PTC).**

4 A. PGE continues to include a downward adjustment of ADIT reducing rate base
5 by approximately \$18.4 million annually.⁷ This amount represents the value of
6 PTCs that would have been used had PGE earned net income. This
7 adjustment is due to the 2020 trading loss event.

8 **Q. Are ADIT and PTC treated appropriately by the Company?**

9 A. Yes. In Order No. 24-106, issued April 19, 2024, the Commission agreed to
10 PGE’s sale of PTCs in 2024 and 2025 and to record any difference in the value
11 as provided to customers and the discounted value (the amount that PGE will
12 receive for the PTCs through sales as they occur).

13 Consistent with the treatment in UE 416 PGE continues to include a
14 downward adjustment of ADIT.

15 **Q. Does this conclude your testimony?**

16 A. Yes.

⁷ PGE 200, Batzler-Ferchland/27.

Opening Testimony

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Nicola Peterson. I am a Senior Telecommunications Analyst
3 employed in the Rates and Telecommunications Section of the Rates, Safety
4 and Utility Performance (RSUP) Program of the Public Utility Commission of
5 Oregon (OPUC). My business address is 201 High Street SE, Suite 100,
6 Salem, Oregon 97301.

7 **Q. Please describe your educational background and work experience.**

8 A. My witness qualifications statement can be found in Exhibit Staff/1101.

9 **Q. What is the purpose of your testimony?**

10 A. The purpose of my testimony is to discuss PGE's (Company) Test Year (TY)
11 expense for Customer Accounts Expenses, Customer Service Expenses,
12 Administrative & General Expenses (A&G), Current Employee Benefits and
13 Grant Efforts.

14 **Q. How is your testimony organized?**

15 A. My testimony is organized as follows:

SUMMARY OF FINDINGS AND RECOMMENDATIONS

Q. Please summarize your findings and recommendations.

A. The following are my initial findings and recommendations. For certain issues, Staff has outstanding data requests it has yet to review.

1. Customer Accounts Expenses: Adjustment \$(2.0m).
2. Customer Service Expenses: Adjustment \$(2.0m).
3. A&G Expenses: Adjustment \$(1.78m).
4. Employee Benefits: Adjustment \$(1.965m).
5. Grant Efforts: Adjustment \$(0.7m).

Q. Could there be changes or updates to Staff's position and recommendations?

A. Yes. My testimony represents issues identified to date. My recommendations and issues may change when informed by new data and after reviewing testimony and analysis by other parties.

ISSUE 1: CUSTOMER ACCOUNTS EXPENSES**Q. What are Customer Accounts Expenses?**

A. Customer Accounts Expenses include amounts in Federal Energy Regulatory Commission (FERC) Accounts 901-905 and are expenses related to maintaining customer accounts such as meter reading expenses, customer records expenses, and collection expenses.

Q. Please summarize the Company's overall request for Customer Account Expenses that you are reviewing.

A. In the Company's filing, PGE is requesting total Customer Account Expenses (inclusive of Labor costs) of \$63.755m.¹ This amount excludes expense for uncollectible accounts recorded in FERC Account 904 that are reviewed by another Staff witness.

FIGURE 1: CUSTOMER ACCOUNT EXPENSES BY FERC ACCOUNT

FERC	FERC Account Detail	2025 Incl. Labor \$000	2025 Excl. Labor \$000
902	Meter Reading Expense	194	0
903	Customer Records & Collections	63,411	30,961
905	Misc. Customer Accounts Expense	150	147
	TOTAL	63,755	31,109

The \$63.755m Customer Accounts Expense Test Year forecast is a 5.78 percent increase from the budgeted amounts for 2024 and a 17.85 percent increase over the actual amounts spent in the Base Year (2023).

¹ PGE Response to SDR 058.

1 Looking at the non-labor element of these accounts shows a 10.19 percent
2 over the 2024 budget and an 18.64 percent increase over the Base Year.

3 **FIGURE 2: CUSTOMER ACCOUNTS EXPENSE NON LABOR**

FERC	FERC Account Detail	TY \$000	2024 Budget \$000	% Change To TY	2023 Actuals \$000	% Change To TY
902	Meter Reading Expense	0	0	0.00%	(193)0	0.00%
903	Customer Records & Collections	30,961	28,086	10.24%	26,379	17.37%
905	Misc. Customers Account Expense	147	146	0.97%	35	317.13%
	TOTAL	31,109	28,232	10.19%	26,221	18.64%

4 **Q. How did Staff analyze Customer Accounts Expenses?**

5 A. Staff reviewed historical actuals for 2020-23 and budgets, calculated three-year
6 averages, and reviewed the transactional details provided, which were for
7 2023. Figure 3 shows the historical trend over five years.

8 **FIGURE 3: NON-LABOR EXPENSES YEAR OVER YEAR PERCENT CHANGE²**

FERC	FERC Account Detail	Test Year	Budget	Base Yr.	Base Yr. -	Base Yr. -
		2025 \$000	2024 \$000	2023 \$000	1 \$000	2 \$000
902	Meter Reading Expense	0	0	(193)	262	183
903	Customer Records & Collections	30,961	28,086	26,379	28,796	31,406
905	Misc. Customer Accounts Expense	147	146	35	95	27
	Total	31,109	28,232	26,221	29,153	31,617
	% inc/(dec) over previous year	10.19%	7.67%	(10.06)%	(7.79)%	

9 PGE's response to SDR 058 details actual expenses for these accounts for
10 2020 through 2023, allowing two three-year averages to be calculated, as shown
11 in Fig. 4 below.

² PGE response to OPUC 058-2 Attach, 1st Revised.

FIGURE 4: CUSTOMER ACCOUNTS EXP THREE-YEAR AVERAGE

FERC	FERC Account Detail	Test Year \$000	2024 Budget. \$000	3-Year Average 2021-2023 \$000	3-Year Average 2020-2022 \$000
902	Meter Reading Expense	0	0	84	152
903	Customer Records & Collections	30,961	28,086	28,860	28,539
905	Misc. Customer Accounts Expense	147	146	52	48
	Total	31,109	28,232	28,997	28,740

Per the Company, they “developed the revenue requirement based on PGE’s 2024 budget that reflects PGE’s 2024 general rate case result as approved in Commission Order No. 23-386. The 2024 budget was escalated for inflation to 2025 and adjusted for known and measurable changes.”³

Staff inquired as to the increase in Account 903, and Figure 5 below details PGE’s response.

FIGURE 5: FERC ACCOUNT 903⁴

	\$000	Comments
2023 Actuals	26,379	
IT Allocations	1,200	
Printing & Automation	0.573	Postage & Outside services
Customer Contact Operations	2.456	Escalations
Electronic Bills & Payments	2,481	Escalations
DSG Amortization	2.200	Incremental Distributed Standby Generation
Net Other department changes	(4,626)	
Other	0.298	
Test Year	30,961	

Q. What are Staff’s conclusions related to the Test Year Customer Accounts Expenses?

³ PGE/200, Batzler-Ferchland/8.

⁴ PGE Response to Staff DR 377.

1 A. FERC Account 902, Meter Reading Expenses were budgeted as zero in 2024
2 and is forecasted to be the same in 2025, even though looking back actual
3 expenses have been incurred. This issue was addressed in UE 416 and there
4 it was noted that this expense has not been budgeted for since 2020. In
5 discovery in Docket No. UE 416, PGE stated that the 902 Account is used to
6 budget known or planned research and development (R&D) projects.⁵ When
7 the account is zero, it is because no projects are planned and the actuals in
8 PGE's historical data reflect unplanned projects.

9 FERC Account 903 has increased significantly considering the minimum
10 change in the average costs of these accounts since 2020. Staff notes that in
11 Staff testimony Ball/800, Staff is recommending a substantial adjustment in
12 capital investment for the Distribution Standby Generation (DSG) Program.⁶

13 FERC Account 905 is seeing a large percentage increase from the three-
14 year average. Although the percentage variances in this account are large,
15 because miscellaneous customer accounts make up less than half a percent of
16 the proposed non-labor customer service O&M expenses (\$31M), the dollar
17 amounts are small, and the overall effect is nominal.

18 **Q. Please summarize Staff's proposed adjustment to PGE's Customer**
19 **Accounts Expense.**

20 A. Staff is recommending an adjustment of \$(2.0m) to bring Account 903 down to
21 \$28.961m, which is more in line with the three-year averages.

⁵ PGE Response to Staff DR 490 in UE 416.

⁶ Staff/800, Ball.

1

ISSUE 2: CUSTOMER SERVICE EXPENSES

2

Q. What are Customer Service Expenses?

3

A. Customer Service Expenses include amounts in FERC Accounts 906-917 and are expenses related to supporting customer service. Of these accounts, PGE has only recorded expense in Account 908 (Customer Assistance Expense), which is for “the cost of labor, materials used and expenses incurred in providing instructions or assistance to customers, the object of which is to encourage safe, efficient and economical use of the utility's service[,]” and Account 909 (Advertising).

4

5

6

7

8

9

10

Q. Please summarize the Company’s request for Customer Assistance Expenses recorded in FERC Account 908.

11

12

A. In the Company’s filing, PGE is requesting total Customer Assistance Expenses (inclusive of Labor costs) of \$24.729m.⁷

13

14

FIGURE 6: CUSTOMER ASSISTANCE EXPENSES

FERC	FERC Account Detail	2025 Incl. Labor \$000	2025 Excl. Labor \$000
908	Customer Assistance Expense	24,729	10,583

15

The \$24.729m Customer Assistance Expense requirement is a seven percent reduction from the 2024 budget, but a 26 percent increase over the 2023 base year. Looking at non-labor expenses only sees a 4.9 percent

16

17

⁷ PGE response to SDR 058.

1 reduction from the 2024 Budget and a 30.69 percent increase over the Base
2 Year (see Figure 7).

3 **FIGURE 7: CUSTOMER ASSISTANCE EXPENSE NON LABOR**

FERC	FERC Account Detail	TY \$000	2024 Budget \$000	% Change To TY	2023 Actuals \$000	% Change To TY
908	Customer Assistance Expense	10,583	11,129	(4.90)%	8,098	30.69%

4 **Q. How did Staff analyze Customer Assistance Expenses?**

5 A. Staff reviewed historical actuals and budgets, calculated three-year averages
6 and considering the large increase over 2023, reviewed the 2023 transactional
7 details and looked to Staff’s analysis in UE416 on this subject. Figure 8 shows
8 the historical trend over five years.

9 **FIGURE 8: CUSTOMER SERVICE EXPENSE YEAR OVER YEAR PERCENT**

10 **CHANGES**

FERC	FERC Account Detail	Test Year 2025 \$000	Budget 2024 \$000	Base Yr. 2023 \$000	Base Yr. - 1 \$000	Base Yr. - 2 \$000
908	Customer Assistance Expense	10,583	11,129	8,098	9,319	7,427
	% increase over previous year	(3.24)%	40.64%	(6.43)%	16.55%	

11 Staff sent data requests regarding the increase from the 2023 actuals and was
12 informed that this was due to:

- 13 1. Incorporating Transportation Electrification (TE) deferrals into base rates
14 in 2024;
- 15 2. Incorporating Sch 110 Energy Efficiency Customer Service into base
16 rates; and,

1 3. Two years of escalations.

2 The total increase from 2023 to 2025 is primarily in 2024 vs 2023, with a
3 minimal increase from 2024 budgeted amounts to 2025.

4 PGE's response to SDR 057 details actual expenses for these accounts
5 for 2020 thru 2023, allowing two, three-year averages to be calculated.

6 **FIGURE 9: CUSTOMER SERVICE EXP THREE-YEAR AVERAGE**

FERC	FERC Account Detail	Test Year \$000	2024 Budget \$000	3-Year Average 2021-2023 \$000	3-Year Average 2020-2022 \$000
908	Customer Assistance Expense	10,583	11,129	8,221	7,676

7 **Q. What are Staff's conclusions related to the Customer Assistance**
8 **Expenses?**

9 A. The TE deferrals total \$725,000 and as was noted in Staffs testimony in
10 UE 416 regarding these amounts: "The budgeted TE program amount will be
11 primarily used to fund O&M costs related to the Company's fleet program and
12 workspace charging stations."⁸ PGE has not explained why it is necessary to
13 provide "assistance" to customers regarding electrification of the PGE fleet or
14 why it is appropriate to include expense for materials and supplies related to
15 the program in the customer assistance expense FERC Account. The details of
16 the transformation of PGE's fleet do not count as "instructions or assistance to
17 customers, the object of which is to encourage safe, efficient and economical

⁸ UE 416 Staff/1500, Mondragon/11.

1 use of the utility's service."⁹ Further, the Test Year amount is 30.69 percent
2 higher than the last year of actual amounts (2023), which seems excessive.

3 **Q. Please summarize Staff's proposed adjustment to PGE's Customer**
4 **Assistance Expense.**

5 A. The three-year average of FERC Account 908 expense for 2021-2023 is
6 \$8,221m and the three-year average of FERC Account 908 expense for 2020-
7 2022 is \$7,676m. Staff does not think PGE has justified Test Year expense for
8 customer accounts that exceeds these two different three-year averages by
9 more than \$2 million and almost \$3 million, respectively. Staff recommends an
10 adjustment to bring expense in FERC Account 908 in line with the most recent
11 three-year average of \$8,221m. A reduction of \$2m to FERC Account 908 will
12 reduce these expenses to \$8.5m.

13 **Q. Please describe the Company's Test Year expense for advertising.**

14 A. The Company proposes to include approximately \$2.2 million in Category A, \$0
15 in Category B, and \$303 thousand of Category E advertising in the 2025 Test
16 Year.

17 **Q. How does the Company's advertising expenses compare to historical**
18 **spending?**

19 A. PGE's request for \$2,154,905 budgeted for Category A is an approximate
20 22 percent decrease from the \$2,770,128 in Category A expenses approved by
21 the Commission in the Company's last GRC, Docket No. UE 416.¹⁰

⁹ UE416 Staff/1500, Mondragon/11.

¹⁰ OAR 860-026-0222(3)(a).

1 **Q. Does Staff propose an adjustment to PGE's Test Year expense for**
2 **advertising?**

3 A. No. PGE's Test Year Category A advertising expense is within the level of
4 expense presumed reasonable under OAR 860-026-0222(3)(a), which is
5 twelve and one-half hundredths of one percent (0.125 percent) or less of the
6 gross retail operating revenues determined in that proceeding. The Category E
7 expense in the Test Year will, "be used to inform and market PGE's demand
8 response programs which shift use from peak to non-peak times"¹¹ and
9 appears reasonable.

¹¹ PGE Response to Staff DR 445.

ISSUE 3: A&G EXPENSES**Q. What are A&G Expenses?**

A. PGE explains that A&G expenses are for back-office functions that support PGE's direct operations that deliver safe, reliable, clean, and affordable energy to customers. This includes human resources (HR), accounting and finance, insurance, supply chain, corporate security and business continuity, regulatory affairs, legal services, and information technology (IT). Also included are other costs such as employee benefits and incentives, support services, and regulatory fees that fall within the FERC's definition of A&G.

Q. Please summarize the Company's overall request for A&G Expenses.

A. In the Company's filing, PGE is requesting total A&G expenses (inclusive of labor costs) of \$207m,¹² which represents a \$27.8 million decrease from the 2024 budget and a \$11m reduction from the 2023 Base Year.

FIGURE 10: A&G EXPENSES BY FERC ACCOUNT

FERC	FERC Account Detail	Test Year \$000	2024 Budget \$000	2023 Base Year

6 **Q. How did Staff analyze A&G expenses?**

7 A. Staff reviewed historical actuals and budgets, calculated three-year averages
8 of actual costs, and reviewed the transactional details provided, which were for
9 2023. Figure 12 shows the historical trend over five years.

1

5

Staff sent out numerous data requests asking for explanations and clarification

6

of amounts and movements in various accounts.

7

Q. What are Staff's conclusions related to the A&G FERC accounts?

1 A. Staff's conclusions are noted below by FERC account and detail any proposed
2 adjustments.

3 **Q. What is Staff's conclusion regarding FERC Account 920, A&G**
4 **Salaries?**

5 A. Staff has outstanding data requests¹⁴ regarding this account and continues to
6 analyze this issue. Staff has not yet reached a conclusion regarding this
7 account.

8 **Q. What is Staff's conclusion regarding FERC Account 921, Office**
9 **Supplies?**

10 A. Office Supplies increased by over \$2m, or 12.5 percent, from actual expenses
11 in 2023. The Test Year amount for office supplies is also more than
12 \$2.1 million above the 2024 budgeted amount and three-year average for
13 2021-23 and more than \$2.5 million above the three-year average for 2020-
14 2022. PGE maintains that the reason for the increase to Test Year expense is
15 due to:

- 16 • \$700k of estimated support training and change management expense;¹⁵
- 17 • Escalations and inflationary pressure; and
- 18 • Elimination of a \$500k credit applied in 2023 related to a payment from
19 Avista related to Coyote Springs. This credit was not included in the
20 budget for 2024 as the A&G expense is not PGE's.

¹⁴ PGE Response to OPUC DR 602.

¹⁵ PGE Response to OPUC DR 478.

1 Staff does not believe PGE has adequately explained the significant jump
2 in expense for office supplies in 2025. PGE's office supplies non-labor actual
3 expense in 2020-2023 and PGE's budget for 2024 are all more than \$2 million
4 less than PGE's Test Year expense. Staff recommends an adjustment to of
5 \$(1.78m) to bring this account down to \$17m, which is a more in line with the
6 three-year average for this account.

7 **Q. What is Staff's conclusion regarding FERC Account 922, Admin Exp**
8 **Transferred?**

9 A. This account is a credit account that has decreased by 26 percent over the
10 Base Year, and six percent from 2023 actuals. The decrease in 2025 is mainly
11 due to a nearly \$7m adjustment to corporate incentive allocation. Staff is still
12 analyzing this account and has yet to determine if an adjustment is necessary.

13 **Q. What is Staff's conclusion regarding FERC Accounts 923, 930, 931 and**
14 **935?**

15 A. Staff reviewed these accounts and is not currently recommending any
16 adjustments.

ISSUE 4: EMPLOYEE HEALTH INSURANCE & BENEFITS

Q. Please describe the Company's request regarding medical and health insurance.

A. PGE is requesting a total amount of \$110.511m¹⁶ in Total Benefits. This is 9m over the 2024 budget and \$23m over 2023 actuals. Health and dental insurance, which makes up the majority of health and wellness expense, is forecasted at \$57.0 million for 2025, which is an increase of about 9.4 percent compared to the budgeted amount for 2024 and an increase of 16.8 percent over 2023 actuals.

FIGURE 10: OR ALLOCATED TOTALS**FOR EMPLOYEE & MEDICAL BENEFITS¹⁷**

\$000	Test Year 2025	2024 Budget \$000	% Change To TY	2023 Actuals \$000	% Change To TY
Health & Wellness	56,992	52,080	9.43%	48,796	16.80%
Disability & Life Insurance	2,820	2,610	8.08%	1,408	100.30%
Misc. Benefits	2,807	2,748	2.17%	1,503	86.76%
Benefits Administration	195	193	0.67%	703	(72.32)%
Total Current Employee Benefits	62,814	57,631	8.99%	52,410	19.85%
Post-Retirement	47,697	43,861	8.75%	34,811	42.44%
Total	110,511	101,491	8.89%	87,221	28.66%

FERC Account 926 includes an amount of \$58.045m, which represents the above expenses reduced by various allocation credits.

926	Employee Pension & Benefits	58,045	53,251	42,903

2

Q. Please discuss Staff’s analysis of this issue.

3

A. Staff analyzed the information provided in PGE’s testimony and the five-year

4

trend in Figure 11 above. Staff looked at these costs on a per FTE basis and

5

examined industry inflation expectations. Staff issued data requests asking for

6

reconciliations and clarification of amounts.

\$000	Test Year \$000	2024 Budget \$000	Base Year \$000	Base Year -2 \$000	Base Year -3 \$000
Health & Dental Plan	56,992	52,080	48,482	47,767	44,771
Disability Benefits	1,797	1,635	1,106	1,521	2,518
Group Life Insurance	1023	975	302	1,336	1,399

Total	62,814	57,631	52,411	52,573	49,374

7

Health and Dental Plan costs make up nearly 91 percent of the Employee

8

Benefits and have been forecast to increase by 10 percent over the Base Year.

9

Staff compared these increases to other industry projections.

10

PricewaterhouseCoopers Health Research Institute¹⁹ forecasts health care

11

costs to increase by seven percent in 2024, while the Peterson Center on

¹⁸ PGE Response to SDR No. 058.

¹⁹ <https://www.pwc.com/us/en/industries/health-industries/library/behind-the-numbers.html>.

1 Healthcare and Kaiser Family Foundation²⁰ predict health care costs to rise by
2 five percent in 2024.

3 **Q. Does Staff agree with the Company's proposal?**

4 A. No. Staff's opinion is that increasing medical benefits by ten percent is too
5 high and that the escalation of six percent would be more appropriate, as it
6 consistent with industry trends. Staff's proposed adjustment is \$(1,964,800).

²⁰ Health Cost and Affordability Policy Issues and Trends to Watch in 2024 - Peterson-KFF Health System Tracker.

1

ISSUE 5: GRANT EFFORTS

2

Q. Please summarize the Company's proposal with regards to grants.

3

A. PGE testifies:

4

In 2023, PGE was (directly, or indirectly as a sub-recipient) awarded more than \$300 million in grants. In 2024, PGE continues to apply for funding to maximize the amount of federal dollars coming to Oregon and our service territory. As of January 12, 2024, we have submitted seven concept papers or grant applications totaling \$335 million in requests for Department of Energy (DOE) Grid Resilience and Innovation Partnerships funding where PGE is directly involved, either with in-kind labor or cash that would be partially offset by federal grant dollars, and another \$2.35 billion where PGE is named as a supporting entity in other parties' applications. We also worked with Clackamas County to submit a \$50 million application for the Federal Emergency Management Agency (FEMA) Building Resilient Infrastructure and Communities (BRIC) program that would underground portions of our power lines near Mt. Hood, an area susceptible to multiple severe weather conditions and catastrophic events.²¹

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

Q. How many grants has PGE applied for or intends to apply for?

21

A. According to PGE, four grants have already been received, ten grants have been awarded but have yet to be received, and seven grants have been applied for.

22

23

24

Q. Are any of these grants included in the current rate case?

25

A. Regarding the four grants that have been received, there is no capital related to these grants that would be in-service as of December 31, 2024, and therefore no capital-related 2025 revenue requirement impact. Also, PGE's non-reimbursed cost share portion of O&M costs were not included in the 2025 revenue requirement as they were not yet estimable.

26

27

28

29

²¹ PGE/100, Pope-Sims/27.

1 Regarding the 10 grants that have been awarded, only one grant has
2 related O&M included in the revenue requirement,²² which is the Smart Grid
3 Chip Grant that was awarded in 2023. PGE includes expense of \$600,000 in
4 the Test Year and anticipates it will eventually receive reimbursement from the
5 Smart Chip Grant although the amount of reimbursement is currently unknown.

6 **Q. Does Staff have any concerns regarding the how grant efforts are**
7 **included in the current rate case?**

8 A. Yes. Staff commends PGE for the effort put into applying for grants and
9 believes that PGE's customers will benefit from these projects. Staff
10 understands that no capital amounts regarding the various projects are
11 included in the Base Year and therefore the Test Year, and this in itself has a
12 positive effect on the rate base. However, Staff is concerned that there are
13 financial benefits to the customers that are not reflected in the rate case,
14 specifically the ability to claim reimbursement of indirect costs. When asked
15 about the implications of these grants the reply was:

16 PGE has only applied for grants to address identified projects and
17 needs the Company would expect to undertake to serve customers
18 regardless of whether or not a grant is received. Thus, any grant
19 funding received can reasonably be expected to offset the need for
20 revenues that would otherwise be collected in rates and thus may
21 reduce rate pressure on customers.²³

22 Staff also noted that "PGE is also allowed reimbursement of its Indirect
23 Costs (akin to "Corporate Governance" allocation) that is designed to
24 reimburse for indirect overhead costs that support the grants. The Indirect Rate

²² PGE Response to OPUC DR 466.

²³ PGE Response to OPUC DR 467.

1 is 10 percent of the defined "Base" for each grant, which is typically total Labor
2 plus Labor Loadings, and/or Contractual spend. Each grant may have its own
3 negotiated base for which the 10 percent is applied. Federal reimbursement of
4 Indirect Costs is a reduction to O&M."²⁴

5 Staff asked about the these federally reimbursable costs and was
6 informed that for all grants PGE has elected to apply the 10 percent de minimis
7 indirect rate which will be applied consistently across all grants.²⁵

8 **Q. What is Staff's recommendation?**

9 A. Staff is still working through the data provided by PGE and therefore the
10 recommendation below is a starting point that Staff intends to adjust as they
11 complete their analysis.

12 Staff recommends the removal of the \$600k relating to the Smart Chip
13 Grid Grant.

14 Staff also recommends an adjustment to O&M to reflect the ability to
15 claim reimbursement of indirect costs. Initially, Staff is recommending an
16 adjustment of \$(100k) to reflect 10 percent of the "2025 base" of the four grants
17 that have been received.

18 **Q. Does this conclude your testimony?**

19 A. Yes.
20

²⁴ PGE Response to OPUC DR 228.

²⁵ PGE Response to OPUC DR 468.

CASE: UE 435
WITNESS: NICOLA PETERSON

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 1101

Witness Qualifications Statement

July 15, 2024

WITNESS QUALIFICATIONS STATEMENT

NAME: Nicola Peterson

EMPLOYER: Public Utility Commission of Oregon

TITLE: Senior Telecommunications Analyst
Rates and Telecommunications Section
Rates, Safety and Utility Performance Program

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: BA (Hons) Accounting & Finance
Middlesex University
Associate Chartered Accountant – Institute of Chartered
Accountants of England & Wales

EXPERIENCE: I have been employed with the Public Utility Commission of Oregon since 2014. I am a Senior Telecommunications analyst in the Rates and Telecommunications Section of the Safety and Utility Performance Program. My assignments have mainly involved the administration and organization of the Oregon Universal Service Fund (OUSF). I have been the case manager on several OUSF dockets, managing workshops and stakeholder conferences, as well as chairing the OUSF Advisory Board. My other assignments include analysis of tariff filings, rulemakings, eligible telecommunication carrier certification with the FCC and annual reporting and budgeting.

Prior to the OPUC, I began my career in public practice as a Chartered Accountant and Audit Senior and then moved into the telecommunications industry. I have worked for numerous telecommunication companies (NYNEX, British Telecom, Esat Ireland, Digicel Jamaica) in various finance roles, from Financial Analyst to Financial Controller/ Finance Director.

CASE: UE 435
WITNESS: STEPH YAMADA

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 1200

Opening Testimony

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Steph Yamada. I am a Senior Utility Analyst employed in the
3 Rates and Telecommunications Section of the Rates, Safety and Utility
4 Performance (RSUP) Program of the Public Utility Commission of Oregon
5 (OPUC). My business address is 201 High Street SE, Suite 100, Salem,
6 Oregon 97301.

7 **Q. Please describe your educational background and work experience.**

8 A. My witness qualifications statement is found in Exhibit Staff/1201.

9 **Q. What is the purpose of your testimony?**

10 A. The purpose of my testimony is to provide background, analysis, and
11 recommendations regarding Portland General Electric’s (PGE or Company)
12 Test Year inclusions for Wages & Salaries, Full-Time Equivalent (FTE),
13 Incentives, Directors and Officers insurance, and the Management Deferred
14 Compensation and Supplemental Executive Retirement Plans.

15 **Q. Did you prepare any exhibits for this docket?**

16 A. Yes. In addition to my witness qualifications statement provided in Exhibit
17 Staff/1201, I prepared Exhibit Staff/1202 containing PGE’s non-confidential
18 responses to Staff’s Data Requests (DR) and electronic Exhibit Staff/1203
19 containing Staff’s workpapers.

20 **Q. How is your testimony organized?**

21 A. My testimony is organized as follows:

22	Issue 1. Salaries & Wages.....	3
23	Figure 1: Test Year Salaries, Wages, Overtime	3
24	Figure 2: PGE Actual Straight-Time Costs, 2021-2023	8

16 Figure 12: Summary of Staff’s Adjustments – Oregon 25

17 **Q. Could there be changes or updates to Staff’s position and**
18 **recommendations?**

19 A. Yes. My testimony represents issues identified to date. My recommendations
20 and issues may change when informed by new data and after reviewing
21 testimony and analysis by other parties.

ISSUE 1. SALARIES & WAGES

Q. Please summarize the Company's proposal for salaries and wages in this case.

A. PGE estimates Test Year salaries, wages, and overtime totaling \$416,289,879 in Oregon,¹ as summarized in Figure 1.

FIGURE 1: TEST YEAR SALARIES, WAGES, OVERTIME

Category	Base Salaries & Wages	Overtime	Total
Exempt	259,857,295	1,083,608	260,940,904
Hourly	29,349,111	25,856,894	55,206,005
Officer	5,477,950	N/A	5,477,950
Union	94,665,020	N/A	94,665,020
Total	389,349,376	26,940,503	416,289,879

The Company's Test Year proposal is net of an (\$11.7) million adjustment to account for vacancies and/or unfilled positions,² as well as an adjustment "that shifts \$14.0 million from straight-time labor costs to contract labor costs[.]"³ The \$14 million shift "is based upon the last three years of budget to actual variances that PGE has seen between its straight-time labor and contract labor requirements."⁴

Q. Please provide a summary of the Commission's historical method for determining the amount to include in a utility's revenue requirement for salaries and wages, including overtime.

¹ Staff/1202, PGE's Response to Staff's SDR 92.

² PGE/300, Trpik-Mersereau-Batzler/21 at 2-4.

³ PGE/300, Trpik-Mersereau-Batzler/20 at 10-11.

⁴ PGE/300, Trpik-Mersereau-Batzler/20 at 11-12.

1 A. The Commission generally determines the appropriate level of wages and
2 salaries for employees in the Test Year using Staff's three-year Wage and
3 Salary (W&S) Model to estimate union and non-union payroll levels for energy
4 utilities.^{5,6} The W&S Model calculates an appropriate level of Test Year
5 expense and capital investment for wages and salaries by escalating the
6 Company's actual base year wages and salaries by annual changes to the
7 All-Urban CPI (for non-union labor) or negotiated increases (for union labor).
8 For the purposes of this analysis, the base year is three years prior to the Test
9 Year. If the utility's Test Year proposal exceeds the amount determined by the
10 W&S Model, a sharing mechanism is then applied to the difference. Lastly, the
11 difference between the Company's Test Year proposal and the amount
12 produced by the W&S Model (after sharing, if applicable) is allocated to Oregon
13 and to O&M and capital using the appropriate applicable allocation factors.

14 **Q. Please explain how the W&S Model's sharing mechanism works.**

15 A. The sharing mechanism is applied if the utility's Test Year proposal exceeds
16 the model's calculated amount. The sharing is equal to 50 percent of either
17 a) the difference between the utility's Test year proposal and the model's
18 calculation or b) 10 percent of the utility's Test Year proposal, whichever is
19 lesser. The shared amount is added to the model's Test Year calculation.

⁵ *In the Matter of Northwest Natural*, Docket No. UG 132, Order No. 99-697 at 43 (November 12, 1999), *In the Matter of PacifiCorp*, Docket No. UE 374, Order No. 20-473 at 102 (December 18, 2020).

⁶ See *Pacific Power & Light*, UE 116, Order No. 01-787 at 40; *In the Matter of Northwest Natural*, Docket No. UG 132, Order No. 99-697 at 43 (November 12, 1999); *In the Matter of PGE*, Docket No. UE 102, Order No. 99-033 at 61 (January 27, 1999); *In the Matter of PGE*, Docket No. UE 88, Order No. 95-322 at 10 (March 29, 1995).

1 If the model's calculation exceeds the Company's Test Year proposal, the
2 Company's figure is used, and the difference is not shared. The Commission
3 has previously declined to apply the sharing mechanism to union wages,
4 instead basing the Test Year inclusion on the contracted increases in
5 applicable union agreements.⁷

6 **Q. Why has the Commission used the W&S Model to determine the Test**
7 **Year inclusion for non-union wages and salaries?**

8 A. The Commission has explained its rationale in previous orders. For example,
9 in an order issued in 1999, the Commission explained:

10 The [Three Year] model incorporates actual market-based
11 data by using, as a starting point, actual historic wages. We
12 also agree with Staff's use of the All-Urban CPI index to adjust
13 historic wages and salaries. Adjusting payroll levels by
14 changes in inflation provides the employees the same real
15 level of compensation as in the base year and provides an
16 incentive to companies to minimize labor costs. Contrary to
17 the assertions by NW Natural, local economic conditions are
18 represented in the All-Urban CPI, as the Bureau of Labor
19 Statistics includes prices in Oregon when it conducts its
20 survey. Moreover, Staff's method of sharing the difference
21 between payroll projections equally between ratepayers and
22 shareholders also allows NW Natural some ability to increase
23 wages above the rate of inflation in response to changes in
24 market conditions without allowing unchecked escalation.⁸

25 **Q. Why does PGE propose to shift \$14 million from straight-time labor to**
26 **contract labor?**

27 A. The Company explains that it "has found it increasingly difficult to find qualified
28 candidates...in areas such as data sciences, engineering, energy trading and

⁷ *In the Matter of PacifiCorp*, Docket No. UE 374, Order No. 20-473 at 100 (December 18, 2020).

⁸ *In the Matter of Northwest Natural*, Docket No. UG 132, Order No. 99-697 at 43 (November 12, 1999).

1 pricing, and skilled trade positions.”⁹ Consequently, PGE “has found it
2 increasingly necessary over the last few years to backfill positions that are
3 difficult to fill with contract labor.”¹⁰ While PGE states that “the net impact of
4 this [\$14 million] adjustment is zero,” the Company “believe[s] it is more
5 reflective of [PGE’s] workforce composition.”¹¹

6 **Q. How would the proposed shift from straight time to contract labor**
7 **affect Staff’s standard approach in applying the W&S Model?**

8 A. Since the W&S Model considers only a utility’s in-house labor and does not
9 include contract labor, the Company’s proposal to shift costs from straight-time
10 to contract labor would artificially reduce the Test Year costs subject to the
11 W&S Model adjustment, which would in turn result in a smaller downward
12 adjustment than would otherwise be produced by the W&S Model.

13 **Q. Does Staff agree that PGE’s proposed \$14 million shift from**
14 **straight-time labor to contract labor is appropriate?**

15 A. No. First, PGE’s proposal to shift \$14 million from straight-time to contract
16 labor is based on an argument that the Company has been forced to substitute
17 in-house labor with contract labor in recent years. PGE has neither
18 demonstrated that this is an accurate portrayal of its recent labor costs, nor that
19 such a shift would warrant moving costs out of the W&S Model. As evidence of
20 the shift from straight-time to contract labor, PGE cites the fact that over
21 2021-2023, the Company consistently over-budgeted for straight-time labor

⁹ PGE/300, Trpik-Mersereau-Batzler/19 at 8-12.

¹⁰ PGE/300, Trpik-Mersereau-Batzler/19 at 14-15.

¹¹ PGE/300, Trpik-Mersereau-Batzler/20 at 13-14.

1 and under-budgeted for contract labor.¹² However, Staff notes that PGE is in
2 control of its own budget, and the Company's history of under- or
3 over-budgeting certain costs is not a compelling reason to shift Test Year costs
4 out of the W&S Model. Rather than relying on inaccurate budget forecasts,
5 Staff prefers to examine PGE's recent actual labor costs.

6 Furthermore, the Commission has a longstanding practice of examining
7 in-house labor using the W&S Model, while contract labor is evaluated
8 separately. It is appropriate to continue examining the two categories
9 separately because they are fundamentally different in nature. PGE's proposal
10 to comingle in-house and contract labor for analysis purposes would only serve
11 to obscure the actual cost associated with each category. PGE itself argues
12 that "the net impact of this adjustment is zero,"¹³ in which case, there is no
13 reason to depart from the standard application of the W&S Model.

14 **Q. Do PGE's recent actual labor costs demonstrate that costs have**
15 **generally shifted from in-house labor to contract labor in recent years?**

16 A. No. PGE's recent actual labor costs seem to suggest the opposite—that
17 in-house labor has increased while contract labor has decreased. Over the
18 same 2021-2023 period cited by the Company, the combined cost of
19 straight-time and contract labor has remained relatively steady, totaling
20 \$341.5 million in 2021, \$348.6 million in 2022, and \$344.7 million in 2023.¹⁴

¹² Staff/1202, PGE's Response to Staff's DR 273.

¹³ PGE/300, Trpik-Mersereau-Batzler/20 at 13.

¹⁴ Staff/1202, PGE's Response to Staff's DR 275, and PGE/300, Trpik-Mersereau-Batzler/18, Table 8, April 3, 2024, Errata filing.

1 However, the portion attributable to straight-time labor has increased annually
 2 over this period, while the portion attributable to contract labor has decreased.
 3 Specifically, straight-time labor costs increased by an average of 7.3 percent
 4 per year, as shown in the following table. As shown later in this testimony, the
 5 Company's in-house FTEs increased over this period as well.

6 **FIGURE 2: PGE ACTUAL STRAIGHT-TIME COSTS, 2021-2023**

	2021 ¹⁵	2022 ¹⁶	2023 ¹⁷	
Salaried Straight Time	\$173,896	\$193,479	\$204,136	
Union Straight Time	\$55,318	\$59,576	\$62,436	
Hourly Straight Time	\$17,605	\$17,609	\$17,680	
Total Straight Time	\$246,819	\$270,664	\$284,252	
Change		9.7%	5.0%	7.3% Avg

Dollars in 000's

7 Furthermore, contract labor costs decreased by an average of 20 percent
 8 per year over the same period, as shown in the following table.

9 **FIGURE 3: PGE ACTUAL CONTRACT LABOR COSTS, 2021-2023**

	2021 ¹⁸	2022 ¹⁹	2023 ²⁰	
Contract Labor	\$94,676	\$77,974	\$60,480	
Change		-18%	-22%	-20% Avg

10 The steady increase in straight-time labor and corresponding decrease in
 11 contract labor do not suggest that the Company's costs have generally shifted
 12 from straight-time to contract labor in recent years.

¹⁸ Staff/1202, PGE's Response to Staff's DR 275.

¹⁹ Staff/1202, PGE's Response to Staff's DR 275.

²⁰ PGE/300, Trpik-Mersereau-Batzler/18, Table 8, April 3, 2024, Errata filing.

1 **Q. Does Staff propose to reverse the Company's proposed \$14 million**
2 **shift?**

3 A. Yes. For the purpose of applying the W&S Model, Staff proposes to add
4 \$14 million back to straight-time labor in the Test Year, thereby reversing the
5 Company's proposed shift of straight-time labor onto contract labor. PGE
6 applied the \$14 million adjustment entirely to the Exempt employee category,²¹
7 and Staff did the same in its reversing adjustment, which is summarized in the
8 following table.

9 **FIGURE 4: STAFF'S ADD-BACK OF STRAIGHT-TIME LABOR**

Category	Test Year As Filed	Adjustment	Adjusted Test Year
Exempt	259,857,295	14,000,000	273,857,295
Hourly	29,349,111		29,349,111
Officer	5,477,950		5,477,950
Union	94,665,020		94,665,020
Total	389,349,376	14,000,000	403,349,376

10 **Q. Please explain how Staff used the Three-Year W&S Model to arrive at**
11 **its recommendation for base wage and salary levels for the Test Year.**

12 A. Consistent with the standard W&S Model methodology, Staff began with actual
13 wage information from three years prior to the Test Year.²² With a 2025 Test
14 Year, Staff began with 2022 wage information and escalated it to 2025 using
15 All-Urban CPI rates, which are 4.1 percent for 2023, 3.3 percent for 2024, and
16 2.2 percent for 2025.²³ Staff then applied the sharing principle to Staff's and

²¹ Staff/1202, PGE's Response to Staff's DR 461, Attachment 461-A.

²² Staff/1202, PGE's Response to Staff's DR 92.

²³ Oregon Economic & Revenue Forecast - June 2024 - Volume XLIV, No. 2, Table A.4, page 45.

1 the Company's Test Year proposals for non-union labor, including Staff's
2 \$14 million reversing adjustment discussed previously. The sharing principle,
3 which allows the Company to share 50/50 the lesser of the difference between
4 the Company's and Staff's calculated projections, or a 10 percent band around
5 Staff's calculated projection, results in adjustments to the Officer, Exempt, and
6 Hourly employee categories totaling (\$3,808,938).²⁴ This adjustment is
7 allocated 100 percent to Oregon, and further allocated 59.2 percent to O&M
8 and 40.8 percent to capital.²⁵ Staff did not make any adjustments to union
9 wages.

10 **Q. What is Staff's recommended adjustment for base salaries and wages?**

11 A. Staff recommends a total adjustment of (\$3,808,938) attributable to the
12 Company's base salaries and wages for Oregon, excluding union labor. This
13 amount is allocated (\$2,254,891) to O&M and (\$1,554,047) to capital. The
14 wage effect attributable to Staff's FTE adjustment is handled separately and is
15 discussed later in this testimony.

16 **Q. Did Staff make any adjustments to PGE's Test Year proposal for
17 contract labor?**

18 A. As described previously, Staff reversed the Company's \$14 million shift from
19 straight-time to contract labor, resulting in a decrease from approximately
20 \$54 million to \$40 million. Aside from this, Staff did not make any adjustments
21 to the Company's Test Year proposal for contract labor.

²⁴ See Staff/1203, Staff's Workpapers, "PUC 3-year W&S" Tab.

²⁵ Staff/1202, PGE's Response to Staff's DR 93.

1 **Q. Does Staff recommend further adjustments to union employee wages?**

2 A. Yes. Staff recommends that union wages be updated to reflect actual
3 negotiated union wage increases for the Test Year if those amounts become
4 known during the course of this proceeding. In its opening testimony, the
5 Company stated that the “2025 escalation rate for union labor under [the
6 Company’s] largest contract, Business Unit 1, which serves [PGE’s] field crew,
7 is currently being negotiated.”²⁶ The Company also stated that its “smaller
8 union contract, Business Unit 2...will experience either a 3% escalation or the
9 average rate determined by the Independent Energy Human Resources
10 Associate (IEHRA) annual survey, whichever is greater.”²⁷ Consequently, Staff
11 recommends that Test Year union wages be updated to reflect newer
12 information as it becomes available.

13 **Q. Please explain how Staff used the Three-Year W&S Model to arrive at**
14 **Staff’s overtime recommendation for the Test Year.**

15 A. Staff’s overtime analysis follows the same methodology as was used for base
16 salaries and wages, which was discussed previously. In applying the W&S
17 Model, the overtime adjustment also factors in Staff’s FTE adjustments, which
18 are discussed later in this testimony. As a result of this analysis, Staff
19 recommends no adjustment to overtime.

²⁶ PGE/300, Trpik-Mersereau-Batzler/18-19.

²⁷ PGE/300, Trpik-Mersereau-Batzler/19, lines 1-4.

1

ISSUE 2. FTE

2

Q. Please summarize the Company's FTE proposal.

3

A. PGE proposes 2,903 total FTEs in the Test Year, as summarized in the following table.²⁸

4

5

FIGURE 5: PGE'S FTE PROPOSAL

Employee Type	FTE
Exempt	1,859
Hourly	371
Officer	10
Union	663
Total	2,903

6

This figure includes a 100 FTE reduction related to PGE's \$11.7 million adjustment for vacancies and unfilled positions.²⁹ This figure also reflects the removal of 128 FTEs from the Exempt employee category in conjunction with PGE's proposal to shift costs from straight-time to contract labor, which was discussed previously.³⁰

7

8

9

10

11

Q. What arguments does PGE make regarding the evaluation of FTEs?

12

A. PGE argues that "only evaluating PGE employee straight-time hours (i.e., FTEs) does not accurately reflect the total change in PGE's labor needs and can be misleading," and that "[e]valuating straight-time FTEs in isolation tends to mask overall changes to PGE's labor needs, as neither contractor hours nor overtime hours are factored into the calculation."³¹ To address this, PGE

13

14

15

16

²⁸ Staff/1202, PGE's Response to Staff's DR 92.

²⁹ Staff/1202, PGE's Response to Staff's DR 266.

³⁰ Staff/1202, PGE's Response to Staff's DR 461, Attachment 461-A.

³¹ Staff/1202, PGE's Response to Staff's DR 92.

1 proposes to shift costs from straight-time to contract labor, including a
2 reduction to FTEs associated with straight-time labor, as discussed previously.

3 **Q. Does Staff agree with PGE's arguments regarding the evaluation of**
4 **FTEs?**

5 A. No. Staff's analysis of the Company's in-house labor does not evaluate FTEs
6 "in isolation," but rather incorporates Staff's FTE adjustments into the overall
7 wage adjustments produced by the W&S Model. As discussed previously,
8 those adjustments also incorporate overtime labor and changes in the
9 All-Urban CPI. Furthermore, it is appropriate to evaluate the Company's in-
10 house labor separately from contract labor, as discussed previously. Staff
11 notes that examining in-house FTEs separately from contract labor, as has
12 been done in the past, does not preclude the Company from utilizing contract
13 labor where appropriate or proposing to recover that cost through rates. PGE
14 is free to argue that its present circumstances warrant an increase in contract
15 labor costs in conjunction with a demonstration that such an increase is
16 necessary. However, PGE has not made such an argument in this case,
17 instead citing its own inaccurate budget forecasts as a basis for shifting costs
18 between labor categories. As explained previously, Staff does not find that
19 such a shift is appropriate.

20 **Q. How has the Commission previously determined the appropriate FTE**
21 **level for inclusion in rates?**

22 A. Specific methodologies may vary somewhat on a case-by-case basis.
23 However, the Commission has previously based the FTE inclusion on actual

1 levels at a specified date.³² The Commission has also previously adopted
2 Staff's principle to escalate FTEs using the Company's historical growth rate
3 for FTEs.³³

4 **Q. How is the wage adjustment attributable to FTEs calculated in the W&S**
5 **Model?**

6 A. The W&S Model first calculates the average salary per FTE using Staff's
7 adjusted wage and salary figures (described previously) and the Company's
8 Test Year FTE proposal for each employee category (Officers, Exempt, Hourly,
9 and Union). The model then applies the average salary to Staff's adjusted FTE
10 count to calculate the total allowable Test Year wage attributable to each
11 category. The difference between this result and Staff's adjusted wage and
12 salary figures represents the salary effect attributable to Staff's FTE
13 adjustment.

14 **Q. Did Staff use the Company's Test Year proposal of 2,903 FTEs for the**
15 **purpose of calculating the average salary per FTE in the W&S Model?**

16 A. No. As mentioned previously, the Company subtracted 128 FTEs in
17 conjunction with its shifting of costs from straight-time to contract labor to arrive
18 at its Test Year proposal of 2,903. In applying the W&S Model, Staff reversed
19 this adjustment, using the unadjusted total of 3,030 FTEs as the Company's
20 proposed Test Year figure.

21 **Q. How many FTEs does Staff recommend including in the Test Year?**

³² See Order No. 01-787 at 41-41.

³³ See Order No. 09-020 at 8.

1 A. Staff recommends including a total of 2,817 FTEs in the Test Year. Staff
2 calculated this figure based on PGE's recent historical growth rate for FTEs, as
3 has been done previously. PGE experienced a three-year average annual FTE
4 growth rate of 0.7 percent over 2021 to 2023, as shown in the following table.

5 **FIGURE 6: PGE'S ACTUAL RECENT FTE GROWTH**

Category	Dec-20	Dec-21	Dec-22	Dec-23	
Exempt	1,635	1,675	1,775	1,784	
Hourly	417	404	389	365	
Officer	11	11	10	10	
Union	655	629	641	617	
Total	2,717	2,719	2,816	2,776	
Change (#)	(129)	2	97	(40)	
Change (%)		0.1%	3.6%	-1.4%	0.7% Avg

6 Staff escalated PGE's actual December 2023 FTE count by 0.7 percent
7 for 2024 and 2025, resulting in a projected appropriate staffing level of
8 2,817 FTEs for the Test Year. This equates to a reduction of 213 FTE
9 compared to the Company's Test Year proposal, as summarized in the
10 following table.

11 **FIGURE 7: STAFF'S TOTAL FTE ADJUSTMENT**

2023 Total FTE Count	2,776
3-Year Average Growth Rate	0.7%
2024 FTE Total - Forecast	2,796
2025 FTE Total - Forecast	2,817
Utility Proposed Test Year FTEs	3,030
Staff Proposed Reduction	(213)

12 **Q. How did Staff apply its proposed FTE reduction?**

13 A. Staff spreads this adjustment to Exempt, Hourly, Officer, and Union employees
14 as summarized in the following table.

1

FIGURE 8: ALLOCATION OF STAFF'S FTE ADJUSTMENT

Category	Company Test Year Proposal	Staff Adjustment	Staff Proposal
Exempt	1,987	(139)	1,849
Hourly	371	(27)	343
Officer	10	(1)	9
Union	663	(47)	616
Total	3,030	(213)	2,817

2

As discussed in the testimony of Staff witness Luz Mondragon, Staff is recommending the exclusion of four Senior Forester FTEs. Since the job postings for these positions indicate that they are salaried and unrepresented,³⁴ Staff applied this four FTE reduction directly to the Exempt category. Staff's remaining reduction of 209 FTEs is spread across all employee categories in the same proportions as reflected in 2023 actuals.

3

4

5

6

7

8

Q. What wage adjustment does Staff recommend in accordance with its FTE proposal?

9

10

A. Staff recommends a total adjustment of (\$28,057,324) in association with its FTE proposal.³⁵ This amount is allocated to O&M and capital in the same manner as base salaries and wages, as described previously.

11

12

13

Q. Please summarize Staff's total recommended wage adjustments, including those attributable to Base Salaries & Wages, FTEs, and the reversal of the straight time/contract labor shift.

14

15

³⁴ Staff/1202, PGE's Response to Staff's DR 351, Attachment 351-A.

³⁵ See Staff/1203, Staff's Workpapers, "PUC FTE" Tab.

- 1 A. Staff recommends a total wage adjustment of (\$31,866,262), as summarized in
2 the following table.

3 **FIGURE 9: STAFF'S TOTAL WAGE ADJUSTMENTS**

Category	Base Salary	Overtime	Contract Labor	Total
PGE Proposed Total	389,349,376	26,940,503	54,082,608	470,372,487
Shift Reversal	14,000,000	-	(14,000,000)	-
Subtotal	403,349,376	26,940,503	40,082,608	470,372,487
Staff Adjustment - CPI	(3,808,938)	-	-	(3,808,938)
Staff Adjustment - FTEs	(28,057,324)			(28,057,324)
Staff Proposed Total	371,483,114	26,940,503	40,082,608	438,506,225
Net Staff Adjustment	(17,866,262)	-	(14,000,000)	(31,866,262)

ISSUE 3. INCENTIVES

Q. Please summarize the Company's proposal for incentives in this case.

A. The Company proposes to include incentives totaling \$17,936,907 in the Test Year, as summarized in the following table.³⁶

FIGURE 10: COMPANY PROPOSED INCENTIVES

	2023 Actual	2024 Budget	2025 Forecast Unadjusted	2025 Forecast Adjustment	2025 Forecast Adjusted
Exempt	29,534,050	32,848,858	33,951,678	(16,975,860)	16,975,818
Hourly	1,407,444	1,861,454	1,922,180	(961,091)	961,089
Officer	13,888,428	13,829,885	14,796,981	(14,796,981)	
Union	n/a	n/a	n/a	n/a	n/a
Total	44,829,922	48,540,197	50,670,838	(32,733,931)	17,936,907

The Company's proposal reflects the removal of 50 percent of the cost of non-officer incentives and 100 percent of officer incentives.³⁷

Q. Please provide a summary of the Commission's historical method for determining the amount to include in a utility's revenue requirement for incentives.

A. To determine the appropriate amount to include in revenue requirement for incentives paid to employees, the Commission's policy is to disallow 100 percent of officers' incentives because they depend upon meeting shareholder expectations.³⁸ It is also Commission policy to disallow 75 percent of performance-based incentives because they are generally focused on increased earnings and therefore bring more benefit to shareholders.³⁹ The

³⁶ Staff/1202, PGE's Response to Staff's DR 92.

³⁷ PGE/300, Trpik-Mersereau-Batzler/21-22.

³⁸ See In the Matter of PacifiCorp, dba Pacific Power, Request for a General Rate Revision, UE 374, Order No. 20-473 at 104 (December 18, 2020).

³⁹ *Id.*, at 104.

1 Commission disallows 50 percent of merit-based incentives because they
2 equally benefit shareholders and ratepayers.⁴⁰ The Commission has defined
3 “performance-based programs” as those “reflecting benefits to shareholders
4 from improved financial performance,” and “merit-based programs” as those
5 “reflecting benefits to both customers and shareholders through lower costs of
6 service.”⁴¹

7 **Q. Does Staff propose changes to the Company’s proposal for**
8 **incentives?**

9 A. Yes. Although the Company appropriately excluded 100 percent of officer
10 incentives and 50 percent of non-officer incentives, its starting figure for
11 non-officer incentives is high. PGE’s 2025 Test Year forecast for non-officer
12 incentives (prior to adjustments) represents an increase of 16 percent over
13 2023 actuals. Over the prior two years, from 2021 to 2023, PGE’s non-officer
14 incentives decreased by nine percent.⁴² Staff averaged the actual amounts of
15 incentives paid to non-officer and non-union employees in the three most
16 recent years for which actuals are available (2021 through 2023) and halved
17 the result. The resulting adjustment of (\$1,796,270) is summarized in the
18 following table.

⁴⁰ *Id.*

⁴¹ *Id.*

⁴² Staff/1202, PGE’s Response to Staff’s DR 92.

1 **FIGURE 11: STAFF’S RECOMMENDED INCENTIVES ADJUSTMENT**

2021-2023 Average	32,281,273
50% of Actuals	16,140,637
PGE's TY Non-Officer Incentives	17,936,907
Staff Adjustment	(1,796,270)

2 Staff’s adjustment is allocated to O&M and capital in the same manner as
3 Salaries & Wages.

4 **Q. Does Staff recommend any other adjustments related to incentives?**

5 A. Yes. Staff recommends an additional adjustment related to capitalized
6 incentives. Staff asked PGE to identify “any incentives capitalized and
7 included in the Company’s Test Year rate base[.]”⁴³ In response, PGE
8 identified that its “proposed rate base includes \$3,744,103 in incentives
9 incurred and allocated to capital projects closing to plant in 2024,” and stated
10 that the “only incentives eligible for capitalization are non-officer, non-financial
11 (i.e., merit) based incentives.”⁴⁴ Since merit-based incentives are subject to
12 50 percent exclusion, Staff proposes an adjustment of (\$1,872,052) to remove
13 half of the capitalized incentives.

14 **Q. What is Staff’s recommended adjustment for incentives?**

15 A. Staff’s incentives adjustment of (\$1,796,270) is allocated (\$1,063,392) to O&M
16 and (\$732,878) to capital. The capitalized incentives adjustment of
17 (\$1,872,052) is allocated entirely to capital.

ISSUE 4. DIRECTORS AND OFFICERS INSURANCE

Q. What does the Company propose to include for Directors and Officers insurance?

A. PGE proposes to include \$1,005,333 attributable to Directors and Officers (D&O) insurance, which reflects the removal of 50 percent of these costs.⁴⁵

Q. What is the Commission’s historical treatment for D&O insurance?

A. The Commission typically disallows 50 percent of this cost.

Q. Does Staff recommend an additional adjustment?

A. Yes. Staff recommends an additional adjustment to align the included amount with recent actuals. Prior to the 50 percent reduction, PGE’s Test Year forecast represents a 21 percent increase over the actual 2023 cost of \$1,655,307.⁴⁶ While PGE appropriately excluded 50 percent of the Test Year cost, its starting figure is high.

Q. Did PGE provide justification for its proposed 21 percent increase over 2023 actuals?

A. No. When asked to provide justification for the increase, PGE responded only by stating that its “Test Year forecast was developed based on forward looking insurance market data and conversations with its broker.”⁴⁷

Q. What is Staff’s proposed inclusion for D&O insurance?

⁴⁵ Staff/1202, PGE’s Response to Staff’s DR 276.
⁴⁶ Staff/1202, PGE’s Response to Staff’s DR 276.
⁴⁷ Staff/1202, PGE’s Response to Staff’s DR 464.

1 A. Staff proposes to include 50 percent of the average cost over the three most
2 recent years of available actuals, or \$785,860.⁴⁸

3 **Q. What is Staff's proposed adjustment for D&O insurance?**

4 A. Staff's proposed inclusion results in an adjustment of (\$219,473) compared to
5 the Company's Test Year proposal.

⁴⁸ Staff/1202, PGE's Response to Staff's DR 464, Attachment 464-A.

- 1 A. The Oregon-allocated adjustments reflected in my testimony are summarized
2 in Figure 12, as follows.

3 **FIGURE 12: SUMMARY OF STAFF'S ADJUSTMENTS – OREGON**

Description	O&M	Capital	Total
Salaries & Wages	(\$2,254,891)	(\$1,554,047)	(\$3,808,938)
Overtime	\$0	\$0	\$0
FTE Adjustment	(\$16,609,936)	(\$11,447,388)	(\$28,057,324)
Incentives	(\$1,063,392)	(\$732,878)	(\$1,796,270)
Capitalized Incentives		(\$1,872,052)	(\$1,872,052)
D&O Insurance	(\$219,473)	\$0	(\$219,473)
Depreciation Expense	(\$445,705)	\$0	(\$445,705)
Payroll Taxes	(\$1,769,978)	\$0	(\$1,769,978)
Total	(\$22,363,376)	(\$15,606,365)	(\$37,969,741)

- 4 **Q. Does this conclude your testimony?**

- 5 A. Yes.

July 15, 2024

WITNESS QUALIFICATIONS STATEMENT

NAME: Steph Yamada

EMPLOYER: Public Utility Commission of Oregon

TITLE: Senior Utility Analyst
Rates and Telecommunications Section
Rates, Safety and Utility Performance Program

ADDRESS: 201 High St SE, Suite 100, Salem, OR, 97301

EDUCATION: Master of Business Administration
Western Governors University

Bachelor of Science in Accounting
University of Oregon

EXPERIENCE: I have been employed with the Public Utility Commission of Oregon since 2013. I am currently a Senior Utility Analyst in the Rates and Telecommunications Section of the Rates, Safety and Utility Performance Program. My responsibilities include leading research and providing technical support on a wide range of technical and policy issues for water and telecommunications companies. I have analyzed and addressed numerous telecommunications issues including special contracts, promotional concessions, tariff changes, price listings, numbering issues, service abandonment, property sales, and price plans, and provided testimony in UM 1895. With regard to water, I have analyzed and addressed numerous issues including tariff changes, property sales, affiliated interest transactions, financing requests, revenue requirement calculations, cost of service, rate spread, and rate design. I have also served as case manager and provided testimony in UW 163, UW 166, UW 173, UP 384, UW 176, UW 181, UW 189, UW 191, UW 192, UW 195, UW 196, and UW 197. With regard to energy, I have provided testimony in UE 426, UG 490, and UE 433.

Portland General Electric Company
UE 435
PGE *Revised* Response to OPUC Standard Data Request 092
Dated March 10, 2015

Request:

For the Test Year and the preceding 4 calendar years, please provide (on a Total Company basis), a summary table (using the categories and format shown below) that includes the number of FTE’s (exclude FTE’s created by overtime hours) and the actual paid cash compensation broken down between base wages or salaries, overtime, and incentives or bonuses. For any calendar year included in this request for which actual data is not available for the entire calendar year, please create a calendar year using the available actual data combined with the forecast applicable to the rest of the year. Please note which months and figures are associated with both the actual and forecast data.

Year: 2XXX	Actual (Unadjusted) Paid Cash Compensation				
Category	Total Company FTE*	Base Wages or Salaries	Overtime	Incentive or Bonus	Total
Officers					
Exempt					
Nonexempt					
Union					
Total					
*Please Exclude Full-Time Equivalent Created by Overtime					

Response:

Attachment 092-A provides the requested information as follows. The “FTEs and W&S” tab provides PGE FTEs, and base wages and salaries. Actuals are provided for 2021 through 2023, while 2024 and 2025 are budgeted and forecasted, respectively. For 2024 and 2025, the FTE and dollar amounts associated with PGE’s pre-filing adjustments have been apportioned to the appropriate employee categories based on both the specific forecasted reductions (for pre-filing reductions) and PGE’s 2024-2025 employee category percentages (for PGE’s “unfilled position” reduction).

UE 435

PGE's Response to OPUC SDR 092

March 11, 2024

Page 2

As PGE discuss in PGE Exhibit 300, please note that only evaluating PGE employee straight-time hours (i.e., FTEs) does not accurately reflect the total change in PGE's labor needs and can be misleading. Evaluating straight-time FTEs in isolation tends to mask overall changes to PGE's labor needs, as neither contractor hours nor overtime hours are factored into the calculation. To reflect the challenges PGE has faced in recent years with finding qualified candidates, which leads to the utilization of contract labor to fill temporary gaps in our workforce, we have made an adjustment that shifts \$14.0 million from straight-time labor costs to contract labor costs within our 2025 test year forecast, which is reflected in Attachment 092-A.

The "Incentives" tab provides incentive costs for 2021 through 2025. Incentive costs for 2021 through 2023 are actuals, while incentive costs for 2024 and 2025 are budgeted and forecasted, respectively. Additionally reported are the unadjusted total incentives as well as the adjustments. PGE tracks paid incentive amounts by employee on a cash basis, while PGE's revenue requirement (including our incentive request) is provided on an accrual basis. In order to segregate PGE's incentive programs by employee category (union, exempt, non-exempt, officer), we apportioned the program cost by employee category *pro rata*, using the total base salaries for employees included within the respective incentive programs.

The "Overtime" tab provides overtime costs for 2021 - 2023 (actuals) and 2024-2025 (budgeted and forecasted, respectively).

**PGE's Attachment 092-A
provided in response to Staff's DR 92

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 273
Dated April 19, 2024

Request:

In PGE/300, Trpik-Mersereau-Batzler/20, the Company states, “to reflect the challenges PGE has faced in recent years with finding qualified candidates, which leads to the utilization of contract labor to fill temporary gaps in our workforce, we have made an adjustment that shifts \$14.0 million from straight-time labor costs to contract labor costs within our 2025 test year forecast.” Please show how this adjustment was calculated and applied to arrive at the Company’s proposed Test Year inclusions for both straight-time labor and contract labor.

Response:

As noted in testimony, this adjustment is based upon the last three years of budget to actual variances that PGE has seen between its straight-time labor and contract labor requirements. On average over the period, PGE budgeted \$14.5 million above actuals for straight-time O&M labor and budgeted \$24.5 million below actuals for contract labor.

Attachment 273-A provides the underlying data and calculation for this adjustment.

**PGE's Attachment 273-A
provided in response to Staff's DR 273

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 266
Dated April 19, 2024

Request:

In response to SDR 92, the Company provided a spreadsheet showing FTE counts by employee category for 2021-2025. Regarding these figures:

- a. Please indicate whether these FTE counts include vacant positions and provide the number of FTEs attributable to vacant positions in each category for 2021-2025.
- b. Please indicate whether these FTE counts include positions attributable to unregulated activities and provide the number of FTEs attributable to unregulated activities in each category for 2021-2025.
- c. The columns showing FTE counts at December 2024 and December 2025 are labeled "FTE Actuals." Staff assumes this to be a typo since actual FTE counts at those dates would not currently be known. Please clarify which FTE counts represent actuals, and which represent forecasted figures.

Response:

- a. FTE counts in the years 2021-2023 do not include vacant positions. FTE counts in the years 2024 and 2025 are budget and forecast respectively. As such, PGE cannot speculate if those positions will remain vacant, however this figure is net of unfilled positions adjustment of \$11.7 million, which amounts to approximately 100 FTEs.
- b. All FTE provided in PGE's response to Standard Data Request No. 092, Attachment 092-A are attributable to PGE's regulated activities.
- c. PGE's response to Standard Data Request No. 092, Attachment 092-A provides 2021-2023 actuals, 2024 budget, and 2025 forecast figures and FTEs.

Senior Forester

Job Requisition R5517 Senior Forester (Filled)
Job Family Vegetation Management
Start Date 01/24/2024
End Date 03/11/2024
Primary Posting Description No

At PGE, our work involves dreaming about, planning for, and realizing a smarter, cleaner, more enduring Oregon neighborhood. Its core to our DNA and we haven't stopped since we started in 1888. We energize lives, strengthen communities and drive advancements in energy that promote social, economic and environmental progress. We're always on the lookout for people passionate about leading and being a part of teams that are advancing innovative clean energy solutions that are also affordable and accessible to all.

Senior Forester

Location: Wilsonville, OR or Portland, OR

Non-traveling

Manage vegetation in proximity to electrical facilities to promote resiliency of transmission services.

Key Job Information

Job Title/Code: Forester/6275

Grade/Exemption: Grade 7/EX

Career Level: P3

Individuals at this level requires in-depth knowledge and experience. They use best practices and knowledge of internal or external business issues to improve products or services. They solve complex problems, taking a new perspective using existing solutions. They work independently, receiving minimal guidance. They act as a resource for colleagues with less experience.

Key Responsibilities:

Scoping:

- Performs safety and contractor performance audits (Quality Assurance/Quality Control)
- Conducts scoping
- Work layout(s)
- Notifies customers and all stakeholders of impending work and helps to manage and review work processes.
- Analyzes risks and prioritizes jobs according to urgency and location.

Scheduling:

- Plan and coordinate vegetation clearance activities.
- Prioritizes work in accordance with the company and department strategy.
- Schedule contracting vegetation crews.
- Schedules work assignments and contract crews based on manager/supervisor priorities.
- Helps to organize and maintain tasks and the ability to track progress throughout multiple projects.

Vendor Management:

- Ensures contract crew performance meets PGE standards and specifications.
- Continually analyzes and monitors crew productivity to ensure PGE is receiving benefits for vegetation clearance expenditures relative to statement of work.
- Reviews and corrects as needed tree pruning practices to ensure conformance to PGE's vegetation clearance policy.
- Adapts tree pruning practices as needed to optimize resource use.

Consultation:

- Advises region engineering with capital job vegetation clearance needs and problems.

- Represents PGE's Forestry department to contractors impacted by/impacting company operations.
- Serves as subject matter expert on projects.
- Proactively analyzes issues and resolves complex problems in collaboration with stakeholders.
- Works with PGE transmission forester to coordinate herbicide applications in assigned area.

Coordination:

- Coordinates vegetation clearance with line restoration crews during emergency periods.
- Collaborates with regional line operations to determine and schedule maintenance and construction vegetation clearance needs.
- Coordinates vegetation clearance and selective herbicide applications with city, county and state agencies.

Compliance:

- Reviews new standards, regulations and agreements and analyzes work processes to ensure compliance.
- Adapts work direction as needed to meet changing standards.

Education/Experience/Certifications:

Education: Requires a bachelor's degree in earth science, horticulture, geology, forestry, natural resources or similar field or equivalent experience.

Experience: Typically five or more years in utility tree trimming, private tree trimming, arborist work, nursery work or related field including vendor management and project management. Preferred: 3-years to 5-years Utility vegetation wildfire experience on Distribution and Transmission circuits. Role requires expertise in developing and implementing vegetation management practices in high-risk fire zones.

Certifications, Licenses and Training: Valid driver's license and ISA Arborist Certification required. ISA Utility Specialist credential and Valid Oregon State Pesticide Consultant license preferred and required within six months of obtaining position. ISA TRAQ preferred.

Knowledge, Skills, Abilities

- Expert knowledge of utility forestry processes and procedures.
- Thorough knowledge of forestry best practices and procedures.
- Thorough knowledge of proper arboriculture pruning practices and herbicide/pesticide applications.
- Intermediate Knowledge of Pacific Northwest vegetation species, growth rates, insects/disease problems, and failure risk potentials.
- Thorough knowledge of regulations impacting vegetation management
- Thorough knowledge of vendor management principles
- Intermediate skills in critical thinking, including analysis and problem solving
- Working skills in using database and documentation tools
- Intermediate decision-making skills
- Working skills in critical thinking, including analysis, problem solving and prioritization
- Intermediate Interpersonal Skills
- Intermediate written and oral communication skills
- Intermediate presentation skills
- Intermediate organizational awareness

Physical and Cognitive Demands:

- Cognitive Level Substantial: Consistent use of logic or scientific thinking to define problems, collect information, establish facts, and draw valid conclusions (for example, engineer, HR director, plant manager, etc.).
- Ability to adhere to set response times, deadlines, and time-sensitive tasks
- Ability to follow accuracy standards

- Ability to follow through on decision-making tasks
- Ability to interact effectively and collaboratively within a team environment
- Ability to communicate and problem solve when under stress
- Ability to respond and adapt to frequent change
- Ability to accept and demonstrate self-awareness when provided constructive feedback
- Ability to discern feedback and acknowledge ownership of areas of improvement
- Ability to avoid future mistakes by applying reasonable skills to new but similar work situations or tasks
- Ability to successfully collaborate with peers, supervisors, managers and others within the organization
- Demonstrates sound memory
- Ability to process new information to be applied consistently to work tasks

Schedule/Attendance:

- Ability to work long hours
- Ability to report to work and perform work during periods of severe inclement weather Ability to consistently meet attendance standards for regular, reliable, predictable, full-time attendance
- Ability to work shift schedule
- Must be able to serve on call at all times

Physical Capabilities

- This position requires a valid driver's license and a history of safe driving practices.
- Daily Driving/travel/commute within the service territory
- Occasional Overnight inside/outside the service territory
- Computer use (use computer regularly for entire work shift)
- Lifting/pushing/pulling/carrying up to 50 lb
- Walking on unstable surfaces requiring balance
- Elevated areas (i.e., catwalks, roofs and high buildings)
- Walking distances and surfaces (long distances and over rough, uneven or rocky surfaces)
- Stairs (over 10 steps)

Environment - Indoor/Outdoor: Office, Field

PGE supports hybrid flexible work arrangements; and will have a combination of in-the-office and working offsite. However, these arrangements may change due to business needs or changes in responsibility.

#LI-CD1, #LI-Hybrid, #LI-Onsite

Compensation Range:

\$85,500.00 - \$142,500.00

In addition, this position is eligible for a performance-based incentive bonus. Actual total compensation is commensurate with experience, skills, and education

PGE believes in rewarding dedicated performance. We provide a total rewards package that is designed to reward your contributions to the company, and, at the same time, support your well-being and professional development, both now and into the future. To find out more, click [here](#).

Join us today and power your potential!

Assisting with storms or other Company emergencies is a part of all positions at Portland General Electric.

PGE is committed to diversity and inclusion in the workplace and is an equal opportunity employer. PGE will not discriminate against any employee or applicant for employment based on race, color, national

origin, gender, gender identity, sexual orientation, age, religion, disability, protected veteran status, or other characteristics protected by law.

PGE does not discriminate on the basis of disability. We recognize individuals have a variety of abilities to offer and we believe there is much to value and celebrate by incorporating different abilities into the work we do. One very important way we live this out is in our application and interview process. We work hard to support individuals who may need an accommodation to fully participate in these processes. If you feel you may need an accommodation, or would like to request one, please notify the Talent Acquisition Specialist (Recruiter) associated with the job posting. You may also make this request by contacting talentacquisition@pgn.com or by calling 503-464-7250. The Recruiter will provide information and next steps for the accommodation process. Our Diversity, Equity & Inclusion (DEI) team is also available for support. You can contact them at dei@pgn.com.

To be considered for this position, please complete the following employment application by the posting close date. Posting closes at midnight (Pacific Time) on the closing date below. If no date is listed, job is open until filled.

PGE Response to OPUC Data Request 265
Dated April 19, 2024

Request:

Are there any incentives capitalized and included in the Company's Test Year rate base? If so, please identify such amounts, whether they are officer or non-officer, merit-based or performance-based, and whether they have previously been adjusted in accordance with standard Commission practices.

Response:

Yes. PGE's proposed rate base includes \$3,744,103 in incentives incurred and allocated to capital projects closing to plant in 2024. PGE does not capitalize any officer or financial performance-based incentives consistent with Commission Order No. 14-422. The only incentives eligible for capitalization are non-officer, non-financial (i.e., merit) based incentives.

UE 435
PGE Response to OPUC Data Request 276
Dated April 19, 2024

Request:

In PGE/200, Batzler-Ferchland/6, the Company stated that it removed 50% of all layers of Directors and Officers liability insurance costs. Regarding such costs, please:

- a. Provide the actual 2023 amount,
- b. Identify any adjustments performed to arrive at the Test Year amount (prior to the 50% reduction), and
- c. Identify the total amount included in the Company's Test Year proposal.

Response:

- a. Director and officer liability insurance costs accrued in 2023 actuals were \$1,655,307.
- b. There were no adjustments prior to the 50% reduction in the 2025 test year.
- c. The total amount included in the test year for accrual of Directors and Officers liability insurance costs is \$1,005,333, which reflects our removal of 50% of these costs.

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 464
Dated May 15, 2024

Request:

As described in response to Staff's DR 276, after removing 50 percent, PGE proposes to include \$1,005,333 in Director and Officer Liability Insurance costs in its Test Year.

- a. The Company's Test Year figure of \$2,010,666 (prior to the 50 percent removal) represents a 21 percent increase over the actual 2023 amount of \$1,655,307. Please provide justification for this increase.
- b. In response to DR 255, the Company stated that the Directors and Officers Liability Insurance policy would renew on May 1, 2024, at a total cost of \$1,772,209. Did the Company use this amount in calculating its Test Year proposal? If yes, please provide the calculation. If no, please indicate how this figure impacts the amount that should be included in the Test Year.
- c. Please provide actual Director and Officer Liability Insurance costs for each year from 2019-2022.

Response:

- a. PGE's Test Year forecast was developed based on forward looking insurance market data and conversations with its broker.
- b. No, PGE did not use this figure in calculating our Test Year proposal. As noted in part a, PGE's Test Year Proposal was based on a forward look at the greater insurance market. As such, a change in 2024 D&O insurance premium does not necessarily impact PGE's 2025 forecast.
- c. Attachment 464-A provides actual Director and Officer Liability Insurance for the calendar years 2019-2022. PGE notes that this response includes calendar year actuals that represent a blend of premiums due to insurance premium years differing from calendar years. Currently, PGE's D&O insurance premium year begins on May 1.

ISSUE 1. TRANSMISSION AND DISTRIBUTION O&M NL

Q. Please explain Portland General Electric’s (PGE) proposal regarding Transmission and Distribution O&M, Non-Labor expenses.

A. PGE is proposing to increase T&D O&M (NL) to \$116 million¹ for the Test Year using its 2024 Budget as its base period. This is an increase of 10 percent from the base period and a 17 percent increase from UE 416 rates which were effective January 1, 2024. This excludes Wildfire Mitigation expenses which are reviewed and recovered through the Wildfire Mitigation Automatic Adjustment Clause (WMP AAC).

Figure 1: T&D (NL) Expenses Compared

	Amount	Change	
		\$\$	%
2025 Test Year	116.2		
2024 Budget	105.3	10.9	10%
UE 416	98.9	17.3	17%
3YR average	76.9	39.3	51%

11
12
13
14

Q. How did PGE Determine its Test Year estimate?
A. PGE developed the revenue requirement based on PGE’s 2024 budget that, according to PGE, “reflects PGE’s 2024 general rate case result as approved in Commission Order No. 23-386.” They then escalated the 2024 budget

¹ PGE/400, Bekkedahl-Fenton/7, Table 2.

1 escalated for inflation to 2025 and adjusted for known and measurable
2 changes.²

3 **Q. Please describe how T&D O&M (NL) Expenses are broken out.**

4 A. Transmission O&M expenses are tracked in FERC Accounts 560 through 576.
5 The total Oregon-allocated Test Year amount for transmission O&M NL are
6 \$8.2 million, or 7.1 percent of total T&D expenses. The biggest contributor to
7 transmission expense is Rents, recorded in FERC Account 567, at \$3.4 million.

8 Distribution O&M expenses are tracked in FERC Accounts 580-589. The
9 total Oregon-allocated Test year amount is \$108 million or 93 percent of total
10 T&D expenses. The biggest contributor in this category is outside services
11 recorded in maintenance of overhead lines (FERC Account 593) at
12 \$78 million.³

13 The major drivers behind 2025 non-labor O&M are the routine vegetation
14 management (RVM), utility asset management (UAM), and the Virtual Power
15 Plant (VPP). Staff Exhibit 1700 Dlouhy assesses VPP. I assess RVM in
16 Issue 2, UAM in Issue 3, and will discuss my analysis of the “other” T&D O&M
17 here. The figure on the following page breaks down T&D expenses.

² PGE/200, Batzler-Ferchland/8.

³ PGE 2025 GRC T&D O&M Workpapers.

1

Figure 2: Transmission & Distribution O&M (NL) Test Year Breakdown

2

Q. Please describe Staff's review and analysis of Other T&D O&M

3

Expenses.

4

A. Other T&D O&M Expenses in the Test Year total \$35.6 million or 31 percent.

5

Staff arrived at this amount by taking the \$116.2 million Test Year amount for

6

Non-Labor T&D, the subtracting RVM, UAM, and VPP from that figure. The

7

figure on the following page demonstrates the calculation.

1

Figure 3: T&D Other Calculation

T&D O&M NL		
Labor/Non	Non-Labor	
Sum of Dec - 2025		
116,208,332	Total	
55,006,662	RVM	47%
24,130,178	UAM	21%
1,505,729	VPP	1%
35,565,764	Other	31%

2

Distribution related expenses make up the majority of Other T&D costs.

3

These costs are due to general operations work such as admin, service

4

restorations, storm collections deferrals, locates, non-outage repairs, and

5

apprentice training. Figure 5 shows the top six expense categories included in

6

Other T&D Test Year.⁴

Figure 5: Top Other T&D by ACCT WO

By ACCT WO	
Row Labels	Sum of Dec - 2025
3000003096: T&D: Admin & Other	7,877,453
3000002512: T&D: Service Restoration - O&M	6,539,531
3000003411: AED: Admin & Other	6,467,634
7000010758: CUSTOMER STORM COLLECTION	6,372,358
3000000661: T&D: Locates, PGE Facilities	2,640,094
3000002526: Non Outage Repairs OH/UG	1,922,912

7

Staff used historical information to analyze PGE’s proposal. The Test

8

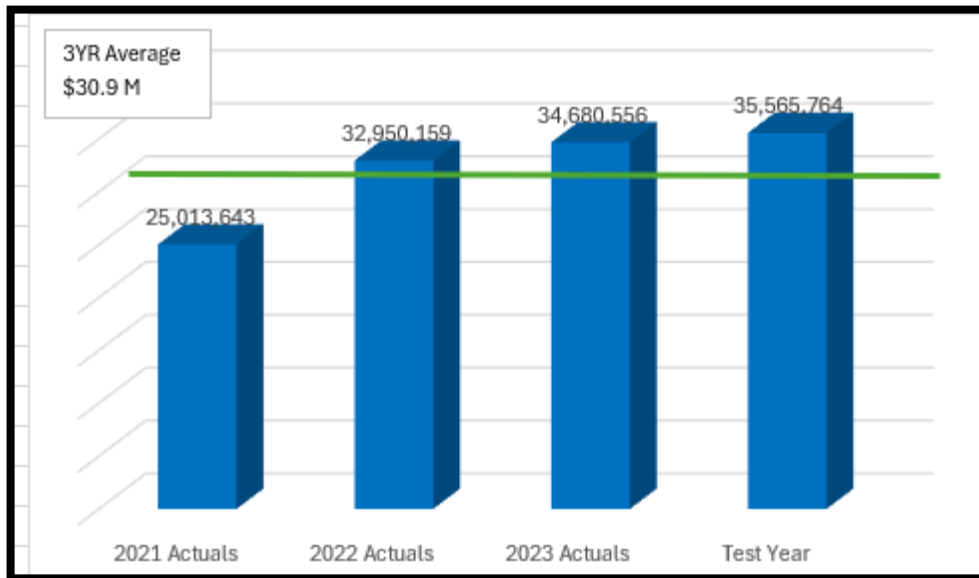

Year in Other T&D is approximately three percent more than the 2023 actuals

9

and 15 percent more than the three-year average.

⁴ PGE 2025 GRC T&D O&M Workpaper.

1

Figure 6: Comparison of Actuals to Test Year

2 **Q. Does the Company's Test Year amount seem appropriate?**

3 A. Yes. Staff found that although "Other" T&D projects seem to be generic and
4 routine without major factors driving an increase of such projects and no real
5 methodology behind how these miscellaneous projects are forecasted, the
6 increase over 2023 actuals is only three percent, and there is an upward trend
7 in actuals over the years. Staff used the 2023 actuals and the three-year
8 average, escalated for inflation, to determine if O&M expenses seem
9 reasonable. Staff feels comfortable with the Company's proposal.

10 **Q. Does Staff recommend an adjustment?**

11 A. No.

ISSUE 2. ROUTINE VEGETATION MANAGEMENT

Q. Please explain PGE’s proposal regarding routine vegetation management (RVM).

A. PGE is proposing to increase the RVM amount from \$51.9 million approved in UE 416 to \$58.1 million.⁵ This is an increase of \$6.2 million, or 12 percent, from the current rates that became effective on January 1, 2024. The Company states the increase is driven primarily by the increased cost of contract labor to remove vegetation and four additional full-time employees.

PGE budgeted to spend a total of \$53.2 in 2024, then increased that amount by 9.1 percent to arrive at the forecast for the Test Period ending December 31, 2025.⁶ Staff notes that all wildfire mitigation vegetation costs have been removed from base rates and will be recovered through the Schedule 151, WMP AAC recovery mechanism.

Figure 8: Routine Vegetation Management Trend

	2023 Actual	Approved UE 416	2024 Budget Base Period	UE 435 Test Year	Increase over UE 416
RVM	\$ 29.9	\$ 51.9	\$ 53.2	\$ 58.1	
\$\$ Change		\$ 22.0	\$ 1.3	\$ 4.9	\$ 6.2
% Change		74%	3%	9%	12%

Q. Can you put these most recent increases into a broader historical perspective?

⁵ PGE/400, Bekkedahl-Felton/8.
⁶ PGE/400, Bekkedahl-Felton/8.

1 A. Yes. UE 416 increased routine vegetation management substantially over
 2 the historic records. As shown in Figure 9 and in Staff Exhibit 1303, the
 3 longstanding trend in the relationship of budgeted to actual spend has flipped
 4 and budgeted expenses now exceed actual spend by a material amount.

5 **Figure 9. PGE Vegetation Spend History**

Q. Are there concerns about this substantial proposed increase?

6 A. Most certainly. First, in UE 416 Staff recommended the establishment of a
 7 balancing account to ensure that budgeted vegetation management work was
 8 being delivered, recognizing the importance of this work for safety and
 9 reliability. Second, Staff advocated for the establishment of performance
 10 metrics related to this work, to which PGE agreed. Those measures have not
 11 been established as yet, and PGE has been unable to produce any proposed
 12 measures, when asked by Staff. Recognizing the step-change in spend in

1 UE 416 it seems risky and burdensome to customers to further increase the
2 funding without understanding the relationship of the spending increase to
3 performance or having performance measures in place to protect customers.
4 At this time it is unclear what the current level of funding is producing to benefit
5 customers, let alone any further proposed increases.

6 **Q. Please describe PGE's RVM program.**

7 A. PGE states that "vegetation management is critical to ensuring a safe,
8 reliable and resilient system."⁷ The RVM program inspects the entire
9 system on a cyclical basis and consists of three primary functions:

- 10 1. Line Clearance Compliance: Driven by Division 24 Safety Standards, the
11 Company strives to trim one-third of trees in their system each year.
- 12 2. Construction Support: Vegetation management work is performed when
13 construction, maintenance or repair work is performed.
- 14 3. Outage/Storm Response: Vegetation management work is performed
15 during and after a wind, ice, snowstorm, or other major outage event.⁸

16 **Q. Please describe how RVM costs are handled and the historical**
17 **treatment.**

18 A. In all previous rate cases, prior to UE 416, funds for Wildfire Mitigation
19 Vegetation Management (WMVM) were grouped in with all other RVM costs.
20 With all Wildfire Mitigation expenditures being removed from base rates and
21 solely tracked and recovered through docket UE 412, costs are now

⁷ PGE/400, Bekkedahl-Felton/8.

⁸ PGE/400, Bekkedahl-Felton/8-9.

1 disaggregated. RVM consists more of traditional utility vegetation
2 management costs. While vegetation may still pose a contact risk outside of
3 the High Risk Fire Zones (HRFZ), the focus of this type of work is targeted
4 toward system safety and reliability.

5 During the last General Rate Case (GRC) the Commission approved the
6 establishment of a balancing account for RVM expenses with a baseline value
7 set at the amount included in rates. The Stipulation also included agreements
8 to establish metrics applicable to RVM spending as well as a sunset date of
9 December 31, 2026.⁹

10 **Q. Have metrics applicable to RVM spending been established?**

11 A. No. Because the balancing account just came into effect on January 1, 2024,
12 and a full year of vegetation management has not yet passed, Staff and PGE
13 are still working on developing possible RVM metrics on the annual under-over
14 collection. A workshop will be scheduled to discussion once proposals are
15 prepared.

16 **Q. Please describe PGE's cost forecast for RVM.**

17 A. Per PGE, the 2025 test year was largely based on the 2024 forecast amount
18 but was updated based on escalating vendor contract rates for the second year
19 of the contract and used an equal breakdown of crew compliments and line
20 mile targets between 2024 and 2025. For context, the 2024 Test Year
21 (UE 416) RVM forecast was calculated using: historic Cost Per Line Mile data,

⁹ UE 416 In the Matter of PORTLAND GENERAL ELECTRIC COMPANY, Request for a General Rate Revision; and 2024 Annual Power Cost Update. _Sixth Partial Stipulation_Order 23-386.

1 a balanced three-year cycle trim, regional cost differences, and specialized
2 crew work forecasts based on 2022 and 2023 actuals.¹⁰

3 **Q. How did Staff analyze PGE's proposal?**

4 A. Staff reviewed the Company's testimony, RVM workpapers, and information
5 provided in discovery. Additionally, Staff used 2023 transactional data for
6 Department 341: Forestry to analyze and compare the Company's proposal, as
7 the 2023 actuals are proven and historical.

8 **Q. How does routine vegetation management in this GRC compare to**
9 **other years?**

10 A. Routine vegetation management expenses are recorded in Department 341.¹¹
11 The Test Year is an increase of \$28.2 million from the last full year of historical,
12 provable data from calendar year 2023. It also consists of an increase of
13 \$6.2 million from the rates that just took effect on January 1, 2024. Figure 8
14 below displays the increases.

¹⁰ Staff/1302, Company's response to DR 339.

¹¹ Staff/1302, Company's response to DR 346.

1

Figure 9: RVM Expenses Compared

2

Of the Test Year RVM expenses, 90 percent of costs are for outside services, while eight percent make up labor and labor loadings. The largest contributor to the increases in expenses are the Outside Services, as the Company mentioned, increasing by \$26.1 million from 2023 actuals.¹²

3

4

5

6

7

8

9

Staff also inquired about the additional positions the Company is requesting. The Company is currently working to fill the positions, however the Company acknowledged that these positions were already included in UE 416 rates.¹³ Staff Exhibit Yamada will discuss this further in her testimony.

10

Q. Please describe the Company's calculation of outsource crews and

11

how they compare to the prior GRCs.

¹² Staff/1302, Company's response to DR 390.

¹³ Staff/1302, Company's response to DR 351.

1 A. PGE forecasts labor contract costs based on union labor negotiations between
2 the International Brotherhood of Electrical Workers (IBEW) Local 125 and PGE
3 vendors, PGE’s expertise on regional labor resource levels, and labor market
4 trends.¹⁴ During the UE 416 GRC, the Company was still negotiating contracts
5 and estimated the crew rates, along with other information, to arrive at its
6 forecast for 2024. For this current GRC, the Company has extended their
7 contract through December 31, 2025, and effective rate schedules are now
8 known for 2024 through 2026.¹⁵

9 Staff reviewed calculations on costs associated with outsource crews.

13 [REDACTED] [END CONFIDENTIAL].

14 **Q. What is Staff's analysis of the outsource crew expenses in the Test**
15 **Year?**

16 A. Staff reviewed PGE's contracts with Asplundh Tree Expert Company, a
17 Company that provides PGE vegetation management services. The effective
18 increase from 2024 contract rates to the 2025 rates vary by worker type but on
19 average it's [BEGIN CONFIDENTIAL] [REDACTED]
20 [REDACTED]
21 [REDACTED] [END CONFIDENTIAL].

22 **Q. What is Staff's analysis of all other aspects of the RVM?**

1 A. As mentioned previously, Staff used 2023 actuals as a comparison to the RVM
2 Base and Test Year. In 2023, RVM expenses totaled \$29.9 million. Of this
3 amount, \$3.6 million are not contract services related.¹⁹ Staff escalated the
4 2023 actuals using the most recent All Urban CPI forecasts for 2024 and 2025.
5 Using a compounded factor of 5.6 percent, the 2025 Test Year forecast for all
6 non-contract services should be \$3.8 million.

7 When added to the outsource crew Test Year calculated by Staff, the total
8 RVM Test Year should be approximately **[BEGIN CONFIDENTIAL]**
9 **[REDACTED]** **[END**
10 **CONFIDENTIAL]**.

11 **Q. Does Staff recommend adjustments?**

12 A. Yes. Staff proposes a reduction of \$6.2 million to the Test Year.

¹⁹ Staff/1302, Company's response to DR 390.

ISSUE 3. UTILITY ASSET MANAGEMENT

Q. Please explain PGE’s proposal regarding utility asset management (UAM).

A. PGE is proposing for utility asset management a Test Year amount of \$31.8 million based on its 2024 budgeted amount of \$26.1 million. PGE states that the increase is driven by additional FITNES costs expected in 2025 due to an increase in labor costs and an aging infrastructure.²⁰ The figure below demonstrates the increase the Company is proposing over the 2024 budget, UE 416 Test Year, and the 2023 Actuals.

Figure 11: UAM Compared

	Test Year	2024 Budget	UE 416 TY	2023 Actuals
364: Utility Asset Management	31,816,682	25,990,771	25,930,199	24,300,722
\$\$ Increase		5,825,912	5,886,483	7,515,960
% Increase		22%	23%	31%

Q. What was Staff’s analysis of the UAM Program?

A. Staff analyzed PGE’s testimony in UE 416 and UE 435 regarding UAM. Staff found the FITNES program makes up 64 percent of UAM costs. 61 percent of expenses are outside services and non-PGE labor.

The UE 435 Test Year forecast for the FITNES program is a 34 percent increase over UE 416 and a 43 percent increase over 2023 actuals. Figure 12 demonstrates the growth in actual and forecasted expenses for the FITNES program.

²⁰ PGE/400, Bekkedahl-Felton/9.

1

Figure 11: FITNES Program

2

The UE 435 Test Year amount for outside services and non-PGE labor is

3

a 33 percent increase over the 2024 budget and a 37 percent increase over

4

2023 actuals.

5

Figure 12: Outside Services/Non-PGE Labor

6

Q. Please summarize PGE's FITNES program.

1 A. There are two aspects of PGE's FITNES program, Inspections and
2 Corrections. The Company is currently in their seventh year of their 10-year
3 regulatory inspection cycle. Within their inspection cycle, they have a program
4 to inspect underground units and overhead units. PGE states they need to
5 inspect 10,200 underground units and 32,000 poles or overhead units per
6 year.²¹

7 PGE is on the fifth year of their 10-year cycle of national electrical
8 code-required corrections. This part of the FITNES program corrects
9 inspection identified conditions that could result in future harm or damage.
10 PGE identifies the following work to be completed:

- 11 • Tape and Shape program: On average completes 40,000 corrections.
- 12 • FITNES O&M Work Orders: 4,000 correction work orders to complete in
13 2024
- 14 • Customer-side correction: Correction quantities were not provided.

15 Additionally, customers bear the bulk of these costs.²²

16 **Q. From Staff's analysis does the Company's Test Year forecast seem**
17 **appropriate?**

18 A. No. Although PGE states that the FITNES program and cost of labor are
19 driving the increase, no evidence was provided to support this assertion. PGE
20 mentions an escalating rate of inspection but provides no reasoning for it. No
21 evidence was provided on how PGE arrived at any of their other UAM program

²¹ PGE/400, Bekkedahl-Felton/10.

²² PGE/400, Bekkedahl-Felton/11-12.

1 numbers. The cost of non-PGE labor and outside services are not supported
2 by any escalation factor or calculation of how they arrived at Test Year amount.
3 Without this Staff cannot determine if the Company proposed amounts are
4 reasonable or prudent.

5 **Q. What does Staff propose is a prudent method to forecast UAM Test**
6 **Year amounts, in the absence of other reasonable methodologies?**

7 A. Staff proposes to use a similar methodology as it used in for the RVM forecast.
8 Staff proposes to use the 2023 actuals as the baseline, as they are proven and
9 historical, and escalate to the 2025 Test Year amount using 2024 and 2025
10 CPI factors. The 2023 actuals for UAM were \$24.3 million,²³ and using a
11 compounded CPI of 5.6 percent, we arrive at \$25.7 million. It is worth noting
12 that PGE's proposed UE 416 Test Year amount for UAM was \$25.9 million,²⁴
13 which is higher than the result of Staff's proposed calculation.

14 **Q. Does Staff recommend an adjustment?**

15 A. Yes. Staff proposes a reduction of the UAM Test Year amount of \$5.9 million
16 from \$31.8 million to \$25.9 million.

²³ PGE 2025 GRC T&D O&M Workpapers.

²⁴ PGE T&D Workpapers_FINAL_UE 416.

1

SUMMARY

2

Q. Please summarize your recommendations, identifying any adjustments you propose.

3

4

A. Staff recommends the following adjustments:

5

- Decrease Test Year amount for RVM by \$6.2 million

6

- Decrease Test Year amount for UAM by \$5.9 million

7

Q. Does this conclude your testimony?

8

A. Yes.

Description

At PGE, our work involves dreaming about, planning for, and realizing a smarter, cleaner, more enduring Oregon neighborhood. Its core to our DNA and we haven't stopped since we started in 1888. We energize lives, strengthen communities and drive advancements in energy that promote social, economic and environmental progress. We're always on the lookout for people passionate about leading and being a part of teams that are advancing innovative clean energy solutions that are also affordable and accessible to all.

Senior Forester

Location: Wilsonville, OR or Portland, OR

Non-traveling

Manage vegetation in proximity to electrical facilities to promote resiliency of transmission services.

Key Job Information

Job Title/Code: Forester/6275

Grade/Exemption: Grade 7/EX

Career Level: P3

Individuals at this level requires in-depth knowledge and experience. They use best practices and knowledge of internal or external business issues to improve products or services. They solve complex problems, taking a new perspective using existing solutions. They work independently, receiving minimal guidance. They act as a resource for colleagues with less experience.

Key Responsibilities:

Scoping:

- Performs safety and contractor performance audits (Quality Assurance/Quality Control)
- Conducts scoping
- Work layout(s)
- Notifies customers and all stakeholders of impending work and helps to manage and review work processes.
- Analyzes risks and prioritizes jobs according to urgency and location.

Scheduling:

- Plan and coordinate vegetation clearance activities.
- Prioritizes work in accordance with the company and department strategy.
- Schedule contracting vegetation crews.
- Schedules work assignments and contract crews based on manager/supervisor priorities.
- Helps to organize and maintain tasks and the ability to track progress throughout multiple projects.

Vendor Management:

- Ensures contract crew performance meets PGE standards and specifications.
- Continually analyzes and monitors crew productivity to ensure PGE is receiving benefits for vegetation clearance expenditures relative to statement of work.
- Reviews and corrects as needed tree pruning practices to ensure conformance to PGE's vegetation clearance policy.
- Adapts tree pruning practices as needed to optimize resource use.

Consultation:

- Advises region engineering with capital job vegetation clearance needs and problems.

06:52 PM
05/08/2024
Page 2 of 4

- Represents PGE's Forestry department to contractors impacted by/impacting company operations.
- Serves as subject matter expert on projects.
- Proactively analyzes issues and resolves complex problems in collaboration with stakeholders.
- Works with PGE transmission forester to coordinate herbicide applications in assigned area.

Coordination:

- Coordinates vegetation clearance with line restoration crews during emergency periods.
- Collaborates with regional line operations to determine and schedule maintenance and construction vegetation clearance needs.
- Coordinates vegetation clearance and selective herbicide applications with city, county and state agencies.

Compliance:

- Reviews new standards, regulations and agreements and analyzes work processes to ensure compliance.
- Adapts work direction as needed to meet changing standards.

Education/Experience/Certifications:

Education: Requires a bachelor's degree in earth science, horticulture, geology, forestry, natural resources or similar field or equivalent experience.

Experience: Typically five or more years in utility tree trimming, private tree trimming, arborist work, nursery work or related field including vendor management and project management. Preferred: 3-years to 5-years Utility vegetation wildfire experience on Distribution and Transmission circuits. Role requires expertise in developing and implementing vegetation management practices in high-risk fire zones.

Certifications, Licenses and Training: Valid driver's license and ISA Arborist Certification required. ISA Utility Specialist credential and Valid Oregon State Pesticide Consultant license preferred and required within six months of obtaining position. ISA TRAQ preferred.

Knowledge Skills Abilities

- Expert knowledge of utility forestry processes and procedures.
- Thorough knowledge of forestry best practices and procedures.
- Thorough knowledge of proper arboriculture pruning practices and herbicide/pesticide applications.
- Intermediate Knowledge of Pacific Northwest vegetation species, growth rates, insects/disease problems, and failure risk potentials.
- Thorough knowledge of regulations impacting vegetation management
- Thorough knowledge of vendor management principles
- Intermediate skills in critical thinking, including analysis and problem solving
- Working skills in using database and documentation tools
- Intermediate decision-making skills
- Working skills in critical thinking, including analysis, problem solving and prioritization
- Intermediate Interpersonal Skills
- Intermediate written and oral communication skills
- Intermediate presentation skills
- Intermediate organizational awareness

Physical and Cognitive Demands:

- Cognitive Level Substantial: Consistent use of logic or scientific thinking to define problems, collect information, establish facts, and draw valid conclusions (for example, engineer, HR director, plant manager, etc.).
- Ability to adhere to set response times, deadlines, and time-sensitive tasks
- Ability to follow accuracy standards

UE 435
PGE Response to OPUC Data Request 390
Dated May 9, 2024

Request:

For each of the years 2019 through 2023 inclusive, please provide the following regarding vegetation management (non-wildfire) expense:

- a. Amount the Company budgeted for Oregon vegetation management.
- b. Amount the Company spent/allocated (actuals) for Oregon vegetation management.
- c. Amount of actuals which was incremental to rate base.

Response:

- a. Attachment 390-A provides budgeted routine vegetation management amounts by cost element for 2019-2023.
- b. Attachment 390-A provides actual spent for routine vegetation management amounts by cost element for 2019-2023.
- c. This number cannot be calculated. See PGE's response to OPUC Data Request No. 389 for the amount of routine vegetation management (RVM) filed in our Rate Case Filings in the last ten years. Actual vegetation management expenses are included in Attachment 390-A.

PGE Response to OPUC Data Request 391
Dated May 9, 2024

Request:

Please provide a detailed description of how PGE developed the current vegetation management budget and how it identifies where and how the money will be spent.

Response:

The 2024 vegetation management budget is consistent with the 2024 forecast that was developed and filed as part of the UE 416 General Rate Case. Confidential Attachment 391-A provides the work paper identifying how the budget was developed. This work paper matches what was provided in the UE 416 docket.

Attachment 391-A contains protected information and is subject to General Protective Order No. 23-132.

From: Jaki Ferchland
Manager, Revenue Requirement

Portland General Electric Company
UE 416
PGE Response to OPUC Data Request 497
Dated April 6, 2023

Request:

Please explain how PGE forecasted its labor contract costs. Please include a narrative explanation.

Response:

PGE forecasts labor contract costs based on International Brotherhood of Electrical Workers (IBEW) Local 125 union labor negotiations between IBEW local 125 and PGE vendors, PGE expertise on regional labor resource levels, and labor market trends. Both PGE and PGE vendors have experienced elevated levels of inflation. This is seen most directly in labor-related work bids from new and existing vendors. These labor-related work bids have shown significant increases and often include higher per diem costs due to the lack of skilled workers in the region and the overall high cost of living in the Portland metropolitan area. The increased costs for normal job functions are also impacted by fuel, equipment, insurance, and housing rates, which all result in significant increases for labor costs for 2024.

Docket No: UE 435

Staff/1400
Dyck/2

ISSUE 1. FUEL STOCK**Q. How does PGE define Fuel Stock?¹**

A. PGE follows the FERC Uniform System of Accounts definition for the recording of fuel stock.² In addition to the price of the inventory of fuel kept on hand, PGE includes transportation charges, excise taxes, O&M expenses on utility-owned transportation equipment used to transport fuel, and lease or rental costs of transportation equipment. Inventories include coal, natural gas, and oil. PGE also includes FERC 158.1 CO2 allowance inventory.³ The purpose of fuel stock is to allow immediate availability of fuels needed to run PGE's generating plants to meet load demand.⁴ As fuel stock is included in rate base, the Company earns a return on its fuel stock.

PGE asserts that they maintain adequate fuel stock levels for the primary purpose of helping to facilitate the reliable operations of PGE's generation fleet. A secondary purpose, which pertains to PGE's gas inventories at North Mist, is to facilitate the most economic dispatch of PGE's Port Westward 1, Port Westward 2, and Beaver plants (Westside Thermal Plants).⁵ Please see Table 1 below for a description of PGE's thermal plants that rely on PGE's fuel stock and note that CO2 allowances are not included in the table as they are not

¹ PGE/201, Batzler-Ferchland/2 and Exhibit/208.

² Specifically, see <https://www.ecfr.gov/current/title-18/chapter-I/subchapter-C/part-101> for FERC account 151 and 152 definitions.

³ Staff/1402, PGE Response to DR 152 (pdf).

⁴ Staff/1402, PGE Response to DR 155 (pdf).

⁵ Staff/1402, PGE Response to DR 156 (pdf).

1 assigned to a specific generator but are in fact included in the total fuel stock
2 request by the Company in UE 435.

3 **TABLE 1: PGE'S THERMAL PLANTS⁶**

	Natural Gas	Coal	Oil
Port Westward I	✓		
Port Westward II	✓		
Beaver	✓		✓
Colstrip		✓	✓

4

5 **Q. Please summarize the Commission's historical treatment of fuel stock.**

6 A. The Commission typically authorizes utilities to include fuel stock in rate base.

7 In previous rate cases, Staff has used a range of historical data to perform
8 trend analysis as well as analyzing the prices used to value the fuel to verify
9 whether the utility's proposed rate base amounts for fuel stock are reasonable.

10 For plants nearing end of life, fuel stock management should change to take
11 into account the cost of having unused fuel remaining at the plant.

12 **Q. How much of fuel stock is within the Company's control?**

13 A. The gas reserves at North Mist (for westside thermal resources), oil stock at
14 Beaver (which have historically been retained for contingency events), and
15 CO2 allowances (which are offsets to CO2 emissions associated with thermal
16 generation) are almost entirely within the Company's control.⁷

⁶ Staff/1402, PGE Responses to 158 Supp 1 (pdf) and DR 201 (pdf).

⁷ Staff/1402, PGE Response to DR 154 (pdf).

1 However, for Colstrip, coal stock is held at Rosebud Coal Mine by
2 Westmoreland with limited quantities held on site and managed by Talen, the
3 Colstrip plant operator. Oil stock is also held onsite at the plant and managed
4 by Talen. As PGE does not control a majority interest in Colstrip and PGE
5 neither operates the plant nor manages the day-to-day operations, it has
6 limited control over the level of fuel stock held.⁸

7 **Q. According to the Company, how do they determine the optimal inventory**
8 **of natural gas?**

9 A. While the Company does not have any internal policies, it does provide
10 guidance to how they decide the adequate amount of fuel stock.⁹ It describes
11 how their sole gas storage location, North Mist, which has a capacity of
12 4,100,00 dekatherms (dth), is used to operate the westside plants at full
13 capacity. The storage coupled with 111,805 dth of daily Northwest Pipeline
14 transport is used to meet the combined daily demand of approximately 220,000
15 dth. The Company says that they have used current price curve information
16 and reliability needs to say that the storage is intended to be full June 30 and
17 November 30. Inventory is maintained at 1,200,000 dth to ensure the Port
18 Westward thermal plant can be dispatched for seven days exclusively on
19 storage gas should a gas pipeline disruption occur.¹⁰ The Company asserts
20 that, “[i]f a structural change occurs to the current forward price curve the

⁸ As I discuss in the pages following, oil and coal for Colstrip are not included in the fuel stock request for UE 435.

⁹ Staff/1402, PGE Response to DR 156 (pdf).

¹⁰ Ibid.

1 storage optimization will be adjusted, resulting in a different North Mist
2 inventory level throughout the year.”¹¹

3 **Q. According to the Company, how do they derive the optimal inventory of**
4 **oil?**

5 A. “Oil inventory levels are based on the amount required to fuel PGE’s Beaver
6 Plant operations at full load for approximately four to five days during heavy
7 load hours. Oil (diesel) is used at Colstrip to start the units. Typically, Colstrip
8 will store sufficient diesel on site to support three to five starts per year for each
9 unit.”¹² The oil included in the Test Year is for Beaver only as Colstrip coal and
10 oil are not included in this GRC.

11 **Q. According to the Company, how do they determine the optimal inventory**
12 **of coal?**

13 A. Coal is used for Colstrip Units 3 and 4, which PGE is a co-owner of. The other
14 coal owners have a coal supply agreement (CSA) with Westmorland, covering
15 the period of January 1, 2020 through December 31, 2025. The Company
16 states that, “[t]he terms of the agreement have a minimum take provision for
17 tons of coal annually and tiered pricing. Coal is delivered directly from the mine
18 to the plant for immediate consumption.

19 Due to the proximity of the plant to the mine, a minimum amount of coal is
20 on site at the plant to manage any issues that may arise. The company says
21 that the amount of coal on hand can vary from a few days’ supply up to several

¹¹ Staff/1402, PGE Response to DR 156 (pdf).

¹² Ibid.

1 days' supply for both units 3 and 4 at full operation. The Company does clarify
2 however in two separate instances that, "All costs associated with Colstrip
3 have been placed in a separate schedule (Schedule 146) and are not included
4 in this general rate case (GRC)."¹³ Therefore, although coal stock is described,
5 it is not included in the fuel stock request in this GRC.

6 **Q. In general, how are the total forecasts for fuel stock developed?**

7 A. PGE forecasts oil and gas inventories as one amount and coal and CO2
8 allowance inventories as one amount and these amounts of fuel stock are
9 forecast based on value and not on quantity.

10 **Q. Explain why CO2 allowances and coal are lumped together despite the
11 Company requesting recovery of CO2 allowances but not coal.**

12 A. Some internal forecasting combines the two together but the financial forecast
13 model responsible for this is not used in the creation of this rate case, as it only
14 provides a high-level forecast. The total fuel stock included in a DR response
15 includes a separate line item for CO2 allowances and coal is not lumped into
16 that value.¹⁴

17 **Q. What fuel stock is included in PGE's Test Year forecast?**

¹³ Staff/1402, PGE Responses to DR 156 (pdf) and DR 495 (pdf).

¹⁴ Staff/1402, PGE Response to DR 496 (pdf).

1 A. The value of fuel stock included in PGE's filing is \$24,173,421.¹⁵ This is a part
2 of the total \$103.7 million in Operating Materials and Fuel Stock included in the
3 Company's rate base workpapers.¹⁶

4 **Q. How did PGE calculate the \$24,173,421?**

5 A. See Highly Confidential Figure 1 below for those balances forecasted over the
6 Test Year. Please note that while the Test Year is 2025, the Company used
7 2024 data to arrive at their Test Year fuel stock forecast. PGE used the starting
8 point of actual December 2023 ending balances.

- 9 • For gas inventories, this starting point is adjusted on a monthly basis
10 using (i) a forecast % change in inventory multiplied against (ii) a
11 forecast weighted average cost of gas to adjust the monthly balance.
- 12 • For oil and CO2 inventories, PGE made no adjustments to December
13 31, 2023 balances.¹⁷

14 **HIGHLY CONFIDENTIAL FIGURE 1: PGE'S FORECASTED TEST YEAR FUEL**

15 **BALANCES**¹⁸

16 **[BEGIN HIGHLY CONFIDENTIAL]**

¹⁵ Staff/1402, PGE Response to DR 153 (pdf). This is included as part of PGE's Operating Materials & Fuel balance, as provided in PGE Exhibit 200. This amount can be isolated in the PGE Exhibit 200 work paper, "Unbundled ROO_Base," tab "Unbundled" by filtering on account 1510001. Staff is also aware that fuel stock is found in account 1510008. See UE 416, Staff/2700, Ankum-Fischer/49. However, there are no expenses associated with account 1510008 in this rate case, UE 435.

¹⁶ PGE/207, Batzler – Ferchland/1.

¹⁷ Staff/1402, PGE Response to DR 206 (pdf).

¹⁸ Staff/1404, PGE Highly Confidential Response to PGE's Response to AWEC DR 048, Attachment 048-A.

1

2

[END HIGHLY CONFIDENTIAL]

3

Q. What is the composition of PGE's fuel stock in this case?

4

A. North Mist Gas storage accounts for \$14.5 million, Oil accounts for \$7.5 million, and CO2 accounts for \$2.1 million. See Figure 2 below, which provides a percentage breakdown of fuel stock included in the UE 435 request.¹⁹

5

6

7

FIGURE 2: TEST YEAR FUEL STOCK COMPOSITION²⁰

8

¹⁹ Staff/1402, PGE Response to DR 497 (pdf).

²⁰ Staff/1402, PGE Response to DR 497 (pdf).

1 **Q. Has PGE performed a financial analysis that weighs the costs of**
2 **permanently maintaining fuel stocks against alternative means of**
3 **accommodating its electricity demand?**

4 A. "No."²¹

5 **Q. Does Staff have an additional comment before explaining its analysis?**

6 A. Yes. In this GRC, PGE reclassified the calculation of its fuel stock as highly
7 confidential and re-characterized some components of its fuel stock as
8 compared to UE 416, which made the replication of some analysis more
9 difficult.

10 **Q. Do you consider all of PGE's fuel stock investments to be prudent?**

11 A. No. Staff explains why in each of the subsections below.

²¹ Staff/1402, PGE Response to DR 505 (pdf).

NATURAL GAS**Q. What types of gas are included in the natural gas fuel stock request?**

A. In response to data requests, PGE does not distinguish between the different types of gas held at North Mist. Instead, they state, "PGE holds one, homogenous gas supply."²²

Q. Does Staff agree with this assessment?

A. No. Based on past analysis completed in UE 416, Staff is of the understanding that there are different types of gas that in fact serve different purposes for the Company.

1. Fixed: This supports gas pressure in underground reservoirs, keeps out lower quality gas, water, etc. The pressure in the reservoir also determines the amount of gas that can be stored as well as the rate at which it can be withdrawn. It provides a buffer between the stored gas and the walls of the storage reservoir. It helps to protect the reservoir from damage and prevents the stored gas from escaping into the surrounding rock. On an incidental basis, it can be used in the event of an emergency to balance the supply and demand for gas.²³
2. Semi-Fixed: This is for backup to cover possible interruptions of North Mist's access to the Northwest Pipeline, the sole gas supply for North Mist. This is a fixed amount to remain constant.²⁴

²² Staff/1402, PGE Response to DR 502 (pdf).

²³ UE 416 Staff/2700, Ankum-Fischer/57. Staff in the last GRC uses cushion gas and base gas interchangeably. [Modified PG&E Total Gas in Storage \(pge.com\)](#)

²⁴ Staff in the last GRC uses the terms "contingency gas" and "semi-fixed gas" interchangeably.

1 3. Variable: Gas for PGE's Westside Thermal facilities (gas turbines)²⁵

2 **Q. Has the Company differentiated between the different types of gas used**
3 **in any of the DR responses provided to Staff?**

4 A. No. As a result of this, Staff cannot replicate past analysis that used different
5 treatment methods depending on the type of gas that was stored, its purpose,
6 and the way its stock was calculated. Therefore, Staff's analysis for natural gas
7 looks at natural gas holistically.

8 **Q. In general, how is the natural gas fuel stock forecast developed?**

9 A. The Company states that the weighted average cost method is the
10 predominant method for calculating fuel stock. More specifically, existing
11 natural gas volumes at the North Mist storage facility are used to forecast the
12 January 2025 storage volume and weighted average cost of gas (WACOG)
13 based on anticipated gas injections and withdrawals at North Mist.

14 **Q. How has PGE's natural gas stock changed over time?**

15 A. The request for the Test Year (2025)²⁶ natural gas fuel stock is the first
16 decrease in fuel stock value seen since 2017²⁷, where at the time the
17 Company was only operating Mist as North Mist was not yet operational. See
18 Figure 3 which shows how both the dekatherms and dollar value have changed
19 over time. While the dollar value for 2024 (2025 Test Year) is non-confidential,
20 the dekatherms value was only found in the Highly Confidential Response to

²⁵ UE 416 Staff/2700, Ankum-Fischer/51.

²⁶ PGE/200 Batzler-Ferchland/2. For the 2025 Test Year, data from 2024 was provided by the Company and used as the basis for the Test Year forecast.

²⁷ As stated above, the Test Year balances are derived started with December 31, 2023 actuals and then forecasting for 2024.

1 Staff and is not included in the chart below. **[BEGIN HIGHLY CONFIDENTIAL]**

2 [REDACTED]

3 [REDACTED] **[END HIGHLY CONFIDENTIAL]**

4 **FIGURE 3: HISTORICAL NATURAL GAS FUEL STOCK²⁹**

5
6 **Q. Does Staff find it a prudent business practice to value fuel stock at the**
7 **year-end balance rather than an average of all forecasted months for the**
8 **Test Year?**

9 A. No.

10 **Q. Why not?**

²⁸ Staff/1402, PGE Response to 502 (pdf). This states: "The storage balance is shown in cell N41 in PGE's response to AWEC Data Request No. 048, Highly Confidential Attachment 048-A. The maximum capacity is 4.1 BCF. Regarding the minimum capacity, PGE can utilize the entirety of its gas reserves should it be in the best interests of prudently serving load."

²⁹ DR 158 asked the Company to provide its historic fuel stock from 2015 to 2023. 158-A provides forecasted values that are used internally and not applicable to this rate case. 158-B provides actual year-end quantity and values. 158-C was a revised response that provides corrected 2021-2023 values for natural gas and comes directly from and is aligned with PGE's general ledger. 158-C was used to create the chart above and is seen in Exhibit Staff/1402.

1 A. As you can see from the Highly Confidential Figure 4 below, the Company's
2 year-end balance is much higher than the average value in the Test Year. As a
3 result, investors are overearning as they are not investing the same value in all
4 months of the year. By the Company assuming the fuel stock included in rate
5 base should be a year-end balance rather than an average of the year, they
6 are overstating the amount for which investors should earn a return on. In
7 addition, the Company noted, as I mentioned earlier, that they aim to have full
8 storage at North Mist during the months of June and November. Having
9 storage full in November is the beginning storage balance for December, which
10 results in a higher ending balance for the end of the year. Thus, the December
11 value should not be representative of the Test Year investment.

Recommendation #1

Q. What does Staff recommend instead for the total fuel stock balance?

A. Staff recommends using the average balance of natural gas forecasted for the Test Year. As stated previously, the balance for the Test Year is the same as the balance forecasted for 2024. This would bring their Test Year forecast for Natural Gas down from \$14,544,422 to **[BEGIN HIGHLY CONFIDENTIAL]**
[REDACTED] **[END HIGHLY CONFIDENTIAL]**

Q. Does Staff find that the volume (total dekatherms) held at North Mist is prudent?

A. No. Staff believes that the dekatherms held at North Mist Exceeds the amount that is prudent, because,

1. The Company has the ability to earn a return on this value, and is therefore incentivized to over forecast fuel stock,
2. The Company has not performed a financial analysis to see whether it is more prudent to hold more natural gas in storage than it is to buy it on the market, which the Company has the option to do.
3. There have been no historical instances in recent years that warrant an emergency or a gas pipeline disruption where the seven days of gas storage that would be needed to fuel Port Westward have come close to being used.³⁰

³⁰ Staff/1402, PGE Response to DR 156 (pdf).

1 **Q. What are the different options available to the Company for acquiring gas**
2 **needed to power the generating units besides holding a permanent**
3 **stock/storage of natural gas?**

4 A. Gas can be acquired via the gas pipelines connected to PGE's facilities, which
5 include the KBPL which is connected to Williams Northwest Pipeline and the
6 GTN pipeline.³¹³²

7 ***Recommendation #2***

8 **Q. What is Staff's recommendation to the dekatherms of natural gas held?**

9 A. Staff recommends that the Company perform a financial analysis that shows
10 that having the minimum storage level being set at 1.2 million dth, to fuel Port
11 Westward for seven days, is a prudent business practice as opposed to having
12 a lower volume of storage and relying on market purchases or other ways of
13 acquiring gas.

14 **Q. Why does Staff believe that the volume of gas held at North Mist is over**
15 **forecasted and requires a financial analysis to support?**

16 A. As the Company stated, this storage, coupled with 111,805 dth of daily
17 Northwest Pipeline transport, is used to meet the combined daily demand of
18 approximately 220,000 dth. Holding a minimum of 1,200,000 dth gives the
19 Company more than enough adequate supply to meet its goal of funding Port
20 Westward for seven days, especially given that **[BEGIN HIGHLY**

21 **CONFIDENTIAL]** 

³¹ Staff/1402, PGE's Response to DR 506 (pdf).

³² UE 416 Staff/2700, Ankum-Fischer 75.

1 [REDACTED] [END HIGHLY CONFIDENTIAL]. The Company has
2 not demonstrated however why seven days is the number of days needed in
3 order to have adequate natural gas storage.

4 Second, as Staff pointed out in the last GRC, the Company was unable to
5 list a single instance of a significant outage that over a sustained period
6 affected the Northwest Pipeline.³³ North Mist is well stocked and can deal with
7 this.

8 Lastly, there is a trade-off between the permanent cost of maintaining a
9 stock of contingency gas and the possibility that at some point in the future the
10 Company may have to purchase power at high prices during a sustained
11 interruption of gas supplies. Indeed, for almost half of its Westside Thermal
12 Facilities, PGE already relies on possible power purchases in the event of a
13 pipeline interruption. But this does not prove the prudence of PGE's investment
14 in gas.

15 **Q. Does Staff have any additional comments?**

16 A. Staff is currently continuing to review the prices and volumes used to value the
17 natural gas. Staff also generally supports last year's recommendation that
18 natural gas stock should be valued at the price that it was purchased and in
19 stock not valued at any forward prices.³⁴ For the gas that is bought and
20 injected during the Test Year, Staff understands that this would need to be
21 valued at forward prices as it was not purchased in the past. At this time, Staff

³³ UE 416 Staff/2700, Ankum-Fischer/76-77.

³⁴ Staff/2700, Ankum-Fischer/59

1 does not have a further dollar value adjustment to natural gas related to the
2 prices used or volume held.

1

OIL

2

Q. How is the oil fuel stock forecast developed?

3

A. The Company states that the weighted average cost method is the

4

predominant method for calculating fuel stock. More specifically, PGE's oil

5

stock is valued at the lower of cost or market (LCM).

6

Q. What is the purpose of PGE's oil stock?

7

A. It is contingency fuel for PGE's Beaver generation facility. According to PGE,

8

the purpose of its oil stock is as follows: "Oil inventory levels are based on the

9

amount required to fuel PGE's Beaver Plant operations at full load for

10

approximately *four to five days during heavy load hours.*"³⁵

11

Q. How has oil stock changed over time?

12

A. Oil Stock has remained relatively constant since 2018, see Figure 5.

³⁵ UE 416 Staff/2704, PGE Response to Staff DR No. 341, Dated March 16, 2023.

1

FIGURE 5: BEAVER OIL STOCK VALUE OVER TIME³⁶

2

3

Q. What prices does the Company use to value the barrels of oil in stock?

4

A. Staff found that the Company has been valuing their oil at the same price per barrel, within a dollar of \$105 since at least 2015. However, the price of barrel used for oil has fluctuated tremendously during that time. See Figure 6, which represents the price of oil during different time periods and the price used by the Company. The Company has consistently overvalued the oil fuel stock and over earned on said fuel stock for years.

5

6

7

8

9

³⁶ Staff/1402, PGE response to 158-C (excel).

1

FIGURE 6: PGE'S OVERFORECAST OF OIL PRICES PER BARREL³⁷

2

3 **Q. Does Staff find this reasonable?**4 A. No. Thus, the total request of \$7,520,647 to be included in rate base for fuel
5 stock, is also unreasonable.6 **Q. Does Staff have any recommendations in light of this unreasonable Test
7 Year request?**8 A. Staff recommends that contingency oil be priced at EIA forecasted lower prices
9 as the Company does state that it should be valued at the lower of cost or
10 market, which they have not appeared to do in any of its previous years. The
11 Company values oil stock at \$105 a barrel but the EIA values it at \$82 for 2023
12 and \$84 for 2024. Therefore, the resulting adjustment would be to price oil at
13 \$83 a barrel for the Test Year. Recognizing that some oil was purchased in

³⁷ [Spot Prices for Crude Oil and Petroleum Products \(eia.gov\). Short-Term Energy Outlook - U.S. Energy Information Administration \(EIA\)](#). Staff/1402, PGE Response to DR 158-C (excel) which was used to divide the dollar values by the number of barrels to arrive at the price per barrel for each of the years below.

1 2023 and some will be purchased in 2024, I used an average of the two prices.
2 Also, the company states it should be valued at the lower of cost or market.

3 ***Recommendation #3***

4 **Q. What is the updated value of recommended oil stock from Staff?**

5 A. Using \$83 per barrel to value 71,422 barrels for the Test Year instead of \$105
6 results in a reduction from \$7,520,647 of fuel stock to \$5,928,039, an
7 adjustment of \$(1,592,608).

8 **Q. Does Staff have additional comments beyond the recommendation
9 above?**

10 A. Yes. Oil stock is overvalued but the bigger problem is that any oil stock at all is
11 included in rate base. Beaver was supposed to be converted to a single source
12 facility and the Company says that oil will be phased out in 2026. As such, it
13 should be adjusted down to reflect that it will be phased out as Beaver is
14 converted to a single-source gas only.

15 **Q. Is PGE phasing out the use of oil at Beaver?**

16 A. Yes. The Company claims that this should not impact the fuel stock total in rate
17 base, as this oil will still be used and useful through 2025.”³⁸ However, in its
18 internal document, the following is stated, **[BEGIN CONFIDENTIAL]** [REDACTED]

19 [REDACTED]

20 [REDACTED]

21 [REDACTED]

22 [REDACTED]

15

[REDACTED]

[REDACTED] [END CONFIDENTIAL]³⁹

Given this, Staff does not understand how all of the oil held for Beaver would be used and useful. This is especially true given that the value of oil stock has not decreased, as shown above in Figure 5, despite a decrease in need from units.

Recommendation #4

Q. What is your recommendation to the total oil stock?

A. In addition to the updated price recommendation for oil, Staff recommends a 50% disallowance, which results in the oil stock value above of \$5,928,039, being halved, which would leave a final oil stock value of \$2,964,020 million and an adjustment of the same value. This reflects that not all of PGE's oil will continue to be used and useful-if any of it is used and useful at all. Despite the usefulness of this oil going down, as you see in figure 5, the value in rate base has appeared constant.

³⁹ Staff/1403, PGE CONF Response to DR 231-Attachment (pdf) P36836 BR Beaver Modernization.

CO2 ALLOWANCES**Q. What are CO2 allowances?**

A. CO2 allowances in fuel stock are associated with California's Cap and Trade Program and are typically permits issued by a government entity.⁴⁰ They are related to certain PGE power sales and the associated greenhouse gas (GHG) emissions. Allowances can be allocated freely by the governing program, be purchased when auctions are held, or be purchased from other entities that have excess.

Recommendation #5**Q. What is Staff's recommendation?**

A. Staff recommends here and has also recommended in PGE's two previous rate cases, UE 394 and UE 416, that CO2 allowances not be included in rate base as they are not used and useful. As Staff reached settlement before further litigation on this issue in both cases, the Commission has not weighed in on Staff's specific recommendation. Applying this recommendation in this rate case result in a \$2.1 million disallowance.

Q. Do CO2 allowances meet the criteria of being used and useful?

A. No, and Staff is not aware of any other utility that includes CO2 allowances in their fuel stock in rate base and recommends disallowing them for the following reasons.

One, CO2 allowances are retired in portions the November after the compliance year ends. PGE actually collects the revenue required to purchase

⁴⁰ Staff/1402, PGE Response to DR 508 (pdf).

1 the CO2 allowances long before the compliance obligation is due. As they are
2 retired, the Company has ample opportunity to purchase the allowances on the
3 open market or at quarterly auctions. Therefore, the benefit of holding stock,
4 which exists for natural gas and oil, does not exist for CO2 allowances.⁴¹

5 Two, the value of CO2 allowances includes some CO2 allowances that
6 belong to a past period and are already retired, therefore the CO2 allowances
7 forecasted in fuel stock are not representative of what would be held during the
8 test year.

9 Three, even if budgeting of CO2 allowances provides an opportunity
10 for PGE to purchase at advantageous prices, the price of CO2 allowances
11 passed through to customers in rates reflects the forecasted market price and
12 therefore PGE's customers do not benefit from a lower purchased price.

13 Four, some of these allowances are presumably associated with
14 Colstrip emissions. However, because CO2 allowances are not assigned to
15 individual plants, Staff is unable to parse apart what percentage this entails.
16 However, they are also not included in PGE's Sch. 146 revenue
17 requirement.⁴² Is Staff to presume that no CO2 allowances are needed for
18 Colstrip?

19 **Q. Has the Company provided evidence that the CO2 allowances should be**
20 **viewed as used and useful in the rate case and are able to be included in**
21 **the rate base, where the Company earns a return?**

⁴¹ UE 394 Staff/1000, Enright/8.

⁴² Staff/1402, PGE's Response to DR 501 (pdf).

1 A. No. However, when asked this question directly in the last rate case, the
2 Company responded as follows,

3 PGE has a compliance obligation under California's cap and trade
4 program for GHG emissions associated with imported electricity
5 into the state of California, which means we anticipate GHG
6 obligations and must maintain a stock of CO2 Allowances.
7 Imported electricity into the state of California results in sales
8 benefits in PGE's net variable power costs from both a forecast
9 perspective within MONET (e.g., EIM benefit methodology) and an
10 actuals perspective as ultimately reflected within customer prices
11 via PGE's PCAM. Should PGE only purchase compliance
12 instruments at the point in which PGE is required to retire
13 allowances to meet a compliance obligation, PGE and customers
14 would be subject to the current prevailing market price, with no
15 alternative. However, if PGE creates or maintains an inventory
16 balance due to purchases throughout a compliance period (i.e., not
17 just the end of a period) PGE maintains some flexibility in
18 procurement decisions as it monitors obligation balances and
19 prevailing market prices for allowances. This provides a monetary
20 benefit to customers.⁴³

21 **Q. Please Summarize Staff's total Recommendations on Fuel Stock.**

22 A. Staff recommends a total adjustment of **[BEGIN HIGHLY CONFIDENTIAL]**
23 **[REDACTED]** **[END HIGHLY CONFIDENTIAL]**, which is comprised of
24 adjustments of **[BEGIN HIGHLY CONFIDENTIAL]** **[REDACTED]** **[END**
25 **HIGHLY CONFIDENTIAL]** as a result of using the average balance for the
26 Test Year, \$(1,592,608) as a result of using the market price of oil,
27 \$(2,964,020) as a result of fewer barrels of oil being used and useful during this
28 time of Beaver conversion, and \$(2.1) million as a result of removing CO2
29 allowances entirely from the fuel stock request. Lastly, Staff recommends that

⁴³ Staff/1402, PGE's Response to DR 509 (pdf).

1 the Company perform a financial analysis showing the volume of natural gas
2 held is a prudent business decision, given that shareholders earn a return on
3 this value.

ISSUE 2. TROJAN NUCLEAR DECOMMISSIONING TRUST (NDT)**Q. What is the Trojan Nuclear Decommissioning Trust (NDT)?⁴⁴**

A. The Trojan Nuclear Decommissioning Trust (NDT) in its current iteration was funded for the first time in 1991.⁴⁵ This trust has appeared in many dockets over the past 30-plus years, including most general rate cases.⁴⁶ PGE is required to maintain a financial assurance mechanism for decommissioning obligations for the Trojan nuclear generating unit, consistent with federal Nuclear Regulatory Commission (NRC) requirements.⁴⁷ The Trojan NDT was established as an external sinking fund to be separate from PGE's assets and outside PGE's administrative control. PGE collects funds at an annual accrual rate that is sufficient to pay for radiological decommissioning costs. NRC Regulation 10 CFR 50.75(e)(1)(ii) includes the requirements for the management of an external sinking fund, stating:

An external sinking fund is a fund established and maintained by setting funds aside periodically in an account segregated from licensee assets and outside the administrative control of the licensee and its subsidiaries or affiliates in which the total amount of funds would be sufficient to pay decommissioning costs at the time permanent termination of operations is expected. An external sinking fund may be in the form of a trust, escrow account, or Government fund, with payment by certificate of deposit, deposit of Government or other securities, or other method acceptable to the NRC. This trust, escrow account, Government fund, or other type of agreement shall be established in writing and maintained at all times in the United States with an entity that is an appropriate State

⁴⁴ PGE/200, Batzler-Ferchland/17-18.

⁴⁵ See e.g., Order No. 91-186.

⁴⁶ Staff/1402, PGE Response to DR 160 (pdf).

⁴⁷ UE 416 Staff/1002, Bolton/1, PGE Response to Staff DR No. 311. Much of this text is a reiteration of what was stated in Staff testimony in PGE's last GRC, UE 416.

1 or Federal government agency, or an entity whose operations in
2 which the external linking fund is managed are regulated and
3 examined by a Federal or State agency.

4 **Q. What types of decommissioning costs does the Trojan NDT pay for?**

5 A. The Trojan NDT pays for some non-radiological decommissioning costs such
6 as building demolition and site restoration after the spent nuclear fuel is
7 transferred away from the site. The trust also pays for radiological
8 decommissioning expenses in Independent Spent Fuel Storage Installation
9 (ISFSI) Construction. These include:

- 10 • Costs for infrastructure to enable the transfer of spent fuel via rail cars to a
11 United States Department of Energy (DOE) facility.
- 12 • Costs for the long-term storage of the spent fuel until it is transferred to a
13 DOE facility.
- 14 • A contingency amount in case of unexpected variation in future estimated
15 costs.⁴⁸

16 **Q. What expenses has the Company proposed to amortize related to the**
17 **Trojan NDT?**

18 A. PGE has requested that the \$1.9 million annual collection rate be maintained
19 for the Trojan NDT. This same accrual rate was allowed in UE 416 and UE 394
20 and was agreed upon by parties in the second stipulation in UE 335.⁴⁹ For the
21 current case, PGE performed an analysis of the annual accrual, updated for

⁴⁸ UE 416 Staff/1002, Bolton/2, PGE Response to Staff DR No. 313.

⁴⁹ *In the Matter of Portland General Electric Company, Request for a General Rate Revision*, UE 335, Order No. 18-464 at 6.

1 the latest Trojan NDT balances, expected rate of return on trust assets, cost
2 estimates, expected Department of Energy (DOE) reimbursements, and other
3 parameters, which did not indicate that any change to the accrual rate was
4 necessary.⁵⁰

5 **Q. What is Staff's recommendation for the amortization of Trojan NDT**
6 **expenses?**

7 A. Staff does not propose any adjustments at this time but may alter this
8 recommendation after reviewing other parties' testimony.

9 **Q. Does this conclude your testimony?**

10 A. Yes.

⁵⁰ Staff/1403, Confidential Attachment 161-A provides PGE's most recent Trojan accrual analysis. This version is newer than the Trojan accrual analysis used to support PGE Exhibit 200 testimony regarding the Trojan NDT. However, the conclusion that no change in the collection rate is needed remains the same. Also, Staff reviewed CONF DR 510 Attachment A to ensure PGE was contributing to the Trust. Staff/1402, DR 161 and DR 161 supplemental.

NAME: Julie Dyck

EMPLOYER: Public Utility Commission of Oregon

TITLE: Senior Utility Analyst
Rates, Safety and Utility Performance Program

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: I have a Bachelor of Science from Berea College in Political Science. I also hold a Masters of Integral Economic Development Policy specializing in the public sector and econometrics. I have completed rate school with NARUC, a data analytics course with Google, and am currently a NABE Frank Schott Scholar working towards becoming a Certified Business Economist.

EXPERIENCE: I was employed as a Junior Utility Analyst by the Oregon Public Utility Commission starting in June 2021 in the Telecommunications and Water division. I transitioned to the ERFA/RSUP Division in July of 2022 as a senior economist. Within this division, I currently perform a range of financial analysis duties related to natural gas and electric utilities, with a focus on Power Cost filings. In addition, I assist with Purchased Gas Adjustments, Annual Power Cost filings, and General Rate Cases. Rate case experience include: UG 435, UE 399, UE 416, and UG 461. I was previously employed as an adjunct professor of Econometrics at the Catholic University of America and as a Junior Analyst in the Office of Management and Budget (OMB) within the Executive Office of the President (EOP), where I worked as part of a team on higher education funding. Prior to EOP, I was an Economic Consultant for the U.S. Conference of Catholic Bishops.

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request
152 Dated March 25, 2024

Request:

Define the term/expense fuel stock as it is used in this filing or any other filings.

Response:

PGE objects to this request as it is overly broad and calls for speculation. Without waiving this objection, PGE responds as follows:

PGE follows the FERC Uniform System of Accounts definition for the recording of fuel stock. Specifically, see <https://www.ecfr.gov/current/title-18/chapter-I/subchapter-C/part-101> for FERC account 151 and 152 definitions. Also included as a component of PGE's plant materials and operating supplies and related to fuel stock are FERC 158.1 CO2 allowance inventory.

To: Bryan Conway
Public Utility Commission of Oregon

From: Jaki Ferchland
Manager, Revenue Requirement

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request
155 Dated March 25, 2024

Request:

Regarding the Company's fuel stock:

- a. Please provide a narrative explanation of the purpose of fuel stock.
- b. Please provide a narrative explanation of how existing fuel stock is valued in the Company's filing.
- c. If fuel stock is not valued at the lower of average cost or net realizable value in this filing, please explain.
- d. If the calculation of fuel stock as included in the Company's filing differs from the calculation of fuel stock recorded on the Company's FERC Form 1 filing, please provide a narrative explanation of this difference.
- e. Please specify the value of fuel stock that the Company's has included in rate base in US dollars for purposes of this rate case. Include a reference to where this value is reflected in the Company's work papers and indicate whether and when this value will be updated during the course of this filing.

Response:

- a. The purpose of fuel stock is to allow immediate availability of fuels needed to run PGE's generating plants to meet load demand.
- b. For the MONET model, existing natural gas volumes at the North Mist storage facility are used to forecast the January 2025 storage volume and weighted average cost of gas (WACOG) based on anticipated gas injections and withdrawals at North Mist. The value of stored gas is based on the forecasted WACOG for the month that PGE anticipates the stored fuel will be burned. PGE's oil stock is valued at the lower of cost or market (LCM). PGE calculates the value of coal purchased that Talen reports, using the weighted average cost method.
- c. Regarding natural gas, North Mist stored gas is valued at the WACOG. There is no physical access from North Mist to the Williams NW Pipeline due to the uni-directional nature of the Kelso-Beaver pipeline, and thus, there is no realizable value for stored gas as it can only be used to fuel Port Westward, Port Westward II, and Beaver 1-7.
- d. The calculation of PGE's actual fuel stock does not differ.

UE 435
PGE's Response to OPUC DR 155
April 8, 2024
Page 2

- e. The value of fuel stock included in PGE's filing is \$24,173,421. This is included as part of PGE's Operating Materials & Fuel balance, as provided in PGE Exhibit 200. This amount can be isolated in the PGE Exhibit 200 work paper, "Unbundled ROO_Base," tab "Unbundled" by filtering on account 1510001.

April 8, 2024

To: Bryan Conway
Public Utility Commission of Oregon

From: Jaki Ferchland
Manager, Revenue Requirement

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request
156 Dated March 25, 2024

Request:

Please provide a narrative explanation of how the Company determines the most efficient and effective inventory levels for fuel stock. In addition to this response, please provide the following information:

- a) References to any relevant internal policies in response to the question above.
- b) A copy of any relevant internal policies with this response, and whether the Company is in compliance with its policies. Please explain.
- c) Indicate whether the optimal inventory levels depend on the price of the fuel. If yes, please provide an explanation of this.
- d) Explain how the Company accounts for potential supply disruptions when planning its fuel stock.

Response:

PGE maintains adequate fuel stock levels for the primary purpose of helping to facilitate the reliable operations of PGE's generation fleet. A secondary purpose, which pertains to PGE's gas inventories at North Mist, is to facilitate the most economic dispatch of PGE's Port Westward 1, Port Westward 2, and Beaver plants (Westside Thermal Plants).

North Mist, PGE's sole source of gas storage, coupled with 111,805 dekatherms (dth) of daily Northwest Pipeline transport is the portfolio solution for fueling PGE's Westside Thermal Plants. With a total combined daily demand of approximately 220,000 dth, PGE must rely on stored gas to operate these plants at full capacity.

Based on current forward price curve information and to meet reliability needs during heavier usage seasons, North Mist, which has approximately 4,100,000 dth of capacity, is intended to be full June 30th and November 30th. If a structural change occurs to the current forward price curve the storage optimization will be adjusted, resulting in a different North Mist inventory level throughout the year. For reliability purposes, North Mist inventory is maintained at a minimum storage level of 1,200,000 dth.

UE 435
PGE's Response to OPUC DR 156
April 8, 2024
Page 2

As it pertains to PGE's coal supply for its ownership share in Colstrip Units 3 and 4, the co-owners of the Colstrip plant have a coal supply agreement with Westmorland, covering the period of January 1, 2020 through December 31, 2025. The terms of the agreement have a minimum take provision for tons of coal annually and tiered pricing. Coal is delivered directly from the mine to the plant for immediate consumption. Due to the proximity of the plant to the mine, a minimum amount of coal is on site at the plant. To determine the annual quantity of coal that will be utilized, the price of the delivered coal is used to determine the dispatch cost for the plant. Please note that all costs associated with Colstrip have been placed in a separate schedule (Schedule 146) and are not included in this general rate case.

- a. Not applicable.
- b. Not applicable.
- c. Optimal inventory levels do not depend on the price of fuel. For gas at North Mist, it depends on the value derived from PGE's gas storage modeling in MONET, coupled with maintaining approximately 1.2 billion cubic feet (BCF), to ensure the Port Westward thermal plant can be dispatched for seven days exclusively on storage gas should a gas pipeline disruption occur.

Colstrip is a mine mouth plant.¹ On site, a small quantity of coal is on hand to help regulate the volume of coal entering the plant and to manage issues that arise at the plant or the mine. For example, the plant may go off-line for a few hours or few days and coal from the mine would be held on site to be burned when the plant resumes operation. Conversely if there is an issue with the mine, the coal on hand could be utilized to keep the plant running while the mine issues are resolved. In addition, the on-site coal can be blended with coal coming directly from the mine to ensure that quality meets the standard needed for the units. The coal on hand at the plant can vary from a few days' supply up to several days' supply for both units 3 and 4 at full operation. Oil inventory levels are based on the amount required to fuel PGE's Beaver Plant operations at full load for approximately four to five days during heavy load hours. Oil (diesel) is used at Colstrip to start the units. Typically, Colstrip will store sufficient diesel on site to support three to five starts per year for each unit.

- d. See PGE's response to part (c).

¹ Colstrip is located directly next to a coal mine.

Portland General Electric Company
UE 435
PGE First Supplemental Response to OPUC Data Request
158 Dated March 25, 2024

Request:

With regard to the Company's historic "fuel stock":

- a. Please provide the forecasted value of the Company's fuel stock in each year from 2015 to 2025 at the time a forecast was made for that respective year for Company operating purposes.
- b. Please provide the actual value the Company fuel stock in each year from 2015 to 2023.
- c. Please provide a breakdown of the value provided in response to section "a," showing each fuel type separately, providing both the US dollar value of the fuel stock, and its quantity and unit of measure (e.g. gallons or other).
- d. Please provide a narrative explanation of how the values provided in response to sections "a" and "b" were calculated. Include a copy of the Company's calculation with this response in electronic workbook format, with all cells and formulas intact.
- e. Where fuel stock has been assigned to a specific generator, please provide" a breakdown showing:
 - i. The fuel types assigned to each generator.
 - ii. The quantity of each fuel type (including the unit of measurement) assigned to each generator.
 - iii. The US dollar value of each fuel type assigned to each generator.

Initial Response (dated 4/8/24):

- a. PGE objects to this request on the basis that it is vague, unduly burdensome, and requires new analysis. Without waiving and notwithstanding this objection, PGE responds as follows:
Attachment 158-A provides forecasted values that pull from PGE's UI Financial Model data. Forecasted values exist starting with 2016.
- b. Attachment 158-B provides actual year-end quantity and value of PGE's fuel stock for 2015 to 2023.
- c. PGE forecasts oil and gas inventories as one amount and coal and CO2 allowance

UE 435
PGE's Response to OPUC DR 158
May 17, 2024
Page 2

- inventories as one amount and these amounts of fuel stock are forecast based on value and not on quantity.
- d. PGE objects to this request on the basis that it is unduly burdensome and requires new analysis. Without waiving and notwithstanding this objection, PGE responds as follows: Values for part (a.) come from PGE's UI Planner Financial Model. Attachment 158-A provides the UI calculation used to arrive at these values, on the "Data sourcemethodology" tab. On this tab, the calculation is described with a step-by-step formula for January 2024, as an example of how a forecast value gets created. Values for part (b.) come from PGE's accounting records. Inventory values are calculated based on ending balances and the weighted average cost of the commodity at that point in time.
 - e. All current gas inventories are stored at North Mist, which is used to fuel PGE's Port Westward 1, Port Westward 2, and Beaver plants. All current coal inventory is for Colstrip. Oil inventories are currently used for Colstrip and Beaver. CO2 allowance inventories are not assigned to a specific generator. Attachment 158-B provides the historical breakout of these amounts.

Supplemental Response:

Attachment 158-B Supp 1 provides updated values for 2021-2023 for the value of PGE's natural gas fuel stock, which were slightly different from the previously filed Attachment 158-B. The difference came down to pulling numbers from PGE's general ledger, which was more accurate and is being submitted currently, versus the previously submitted numbers from a journal entry.

PGE Response to OPUC Data Request
154 Dated March 25, 2024

Request:

Please describe to what extent are fuel stock costs within the Company's control?

Response:

PGE has coal and oil stock for Colstrip. Coal stock is held at the Rosebud Coal Mine as pit inventory by Westmoreland with limited coal stockpiles held on Colstrip plant site managed by Talen, the Colstrip plant operator, based on daily real time fuel needs. Oil stock is also held onsite at the plant and managed by Talen. As PGE does not control a majority interest in Colstrip and PGE neither operates the plant nor manages the day-to-day operations, it has limited control over the level of fuel stock held.

PGE holds gas reserves at North Mist, which are used to fuel PGE's westside thermal resources. Injections and withdrawals at North Mist are fully managed by and under PGE's control. PGE seeks to optimize the North Mist facility from a price and reliability perspective.

PGE holds oil stock at its Beaver facility, which is both 100% owned and operated by PGE. This stock is fully managed by and under PGE's control. PGE's oil stock has historically been retained for contingency events, leveraging Beaver's dual fuel capabilities. PGE does, however, recognize that this ultimately will change in future years, though PGE will continue to have the ability to rely on this reserve for contingency events during 2025.

Finally, PGE holds CO2 allowances, which are recognized within fuel stock balances as these instruments are used to offset CO2 emissions associated with thermal generation. The inventory of these allowances is also under PGE's control.

The weighted average cost method, which is the predominant method for reflecting fuel commodity reserves, is used to value all the above stock.

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 496
Dated May 20, 2024

Request:

Explain why CO2 allowances and coal are lumped together despite the Company requesting recovery of CO2 allowances and not coal.

Response:

Please see PGE's response to AWEC Data Request 048 to see how forecasted values for fuel stock are actually included in UE 435. The \$24,173,420 total for fuel stock includes a separate line item for CO2 allowances, and coal is not lumped into that value. CO2 Allowances and coal stock have separate FERC accounts.

Some internal forecasting at PGE combines coal stock and CO2 allowances together, but the financial forecasting model responsible for this is not used in the creation of this rate case, as it only provides a high-level forecast.

PGE Response to OPUC Data Request
153 Dated March 25, 2024

Request:

Identify all places in testimony and in workpapers where fuel stock is referenced or discussed.

Response:

PGE objects to this request on the basis that it is overly broad and unduly burdensome. Notwithstanding its objection, PGE responds as follows:

PGE has located the following places where fuel stock is referenced or discussed within the UE 435 filing:

1. Fuel stock is discussed in PGE Exhibit 200 on pages 25 and 34.
2. Fuel stock is referenced in PGE Exhibit 207 – Rate Base.
3. Fuel stock is referenced in PGE Exhibit 208 – Rate Base Delta.
4. Fuel stock is referenced in PGE Exhibit 212.
5. Fuel stock is referenced in PGE Exhibit 213.
6. Fuel stock is referenced in PGE Workpaper “Exhibit Support_2025,” tab “Ex 207 Rate Base.”
7. Fuel stock is referenced in PGE Workpaper “Exhibit Support_2025,” tab “Ex 208 Rate Base Delta.”
8. Fuel stock is referenced in PGE Workpaper “Exhibit Support_2025,” tab “Summary of Approved Results.”
9. Fuel stock is referenced in PGE Workpaper “Exhibit Support_2025,” tab “Rev Req Base.”
10. Fuel stock is referenced in PGE Workpaper “Exhibit Support_2025,” tab “Rev Req All.”
11. Fuel stock is referenced in PGE Workpaper “Exhibit Support_2025,” tab “Rev Req All (2).”
12. Fuel stock is referenced in PGE Workpaper “Exhibit Support_2025,” tab “Rate Base Data.”
13. Fuel stock is referenced in PGE Workpaper “Exhibit Support_2025,” tab “Retail RevReq.”
14. Fuel stock is referenced in PGE Workpaper “Unbundled ROO_Base,” tab “Exhibit 210.”

15. Fuel stock is referenced in PGE Workpaper "Unbundled ROO_Base," tab "Unbundled."

16. Fuel stock is referenced in PGE Workpaper "Unbundled ROO_Base," tab "Production ROO."

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 206
Dated April 12, 2024

Request:

In PGE Response to OPUC Data Request 155, PGE states: "The value of fuel stock included in PGE's filing is \$24,173,421. This is included as part of PGE's Operating Materials & Fuel balance, as provided in PGE Exhibit 200. This amount can be isolated in the PGE Exhibit 200 work paper, "2024 Unbundled ROO," tab "Unbundled" by filtering on account 1510001." With respect to this fuel hardcoded stock figure of \$24,173,421 in said work paper, please answer the following questions:

- a. Please provide a full explanation for how \$24,173,421 is derived/calculated, including all assumptions and calculations. Please also provide all supporting workpapers.
- b. Please identify how much of \$24,173,421 is associated with each fuel stock by plant as well as CO2 allowances. Please indicate where this information is found in the work papers and provide all workpapers and supporting calculations.

Response:

- a. PGE's response to AWEC Data Request No. 048, Highly Confidential Attachment 048-A provides the workpaper that supports the \$24,173,421 of fuel stock included in this rate case. Fuel oil and CO2 are both forecasted using a carryforward of 2023 year end balances. Natural gas is forecast by taking the month end storage balance and multiplying it by the Weighted Average Cost of Gas (WACOG). A full breakdown of this process can be found in the attachment referenced above.
- b. The referenced workpaper breaks down the forecasted costs of each fuel stock type. PGE's response to OPUC Data Request No. 201 provides a chart of fuel stock type usage by plant.

UE 435
PGE Response to OPUC Data Request 497
Dated May 20, 2024

Request:

Please identify how much of \$24,173,421 is associated with each fuel stock by plant as well as CO2 allowances.

- a. Please indicate where this information is found in the work papers and provide all workpapers and supporting calculations.

Response:

Fuel stock is not necessarily associated with individual plants. North Mist gas storage accounts for \$14,544,422, and is used to serve Beaver, Port Westward I, and Port Westward II. CO2 accounts for \$2,108,351, and is not allocated to individual plants. Oil accounts for \$7,520,647 and is allocated to Beaver.

This information can be found in PGE's response to AWEC Data Request No. 048, Attachment 048-A.

PGE Response to OPUC Data Request 505
Dated May 20, 2024

Request:

Has the Company performed a financial analysis that balances/weights the costs of permanently maintaining fuel stocks against alternative means of accommodating its electricity demand?

Response:

No. PGE's fuel stock is not driven only by financial considerations.

June 3, 2024

To: Bryan Conway
Public Utility Commission of Oregon

From: Jaki Ferchland
Senior Manager, Revenue Requirement

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 502
Dated May 20, 2024

Request:

Please identify the different types of gas that are included as part of the natural gas totals (base gas/cushion, contingency, and variable).

- a. Also identify the methods for forecasting the quantity and price used for each as well as the percentage that they are of the total gas.
- b. Confirm the balance included in rate base, what the maximum capacity is, and what the minimum capacity is.

Response:

PGE does not own cushion gas and none of the gas balances PGE has presented in this case contain "Cushion Gas." Any actual cushion gas at North Mist was injected and owned by Northwest Natural and is in excess of PGE's 4.1 BCF of contractual rights. While PGE aims to maintain a certain portion of gas at North Mist as it impacts PGE's rate of withdrawal, PGE, if necessary, is able to utilize its full 4.1 BCF capacity of no-notice storage. PGE does seek to maintain a certain level of gas reserves as it both affects PGE's withdrawal rates and serves a reliability function. However, PGE can utilize the entirety of its gas reserves should it be in the best interests of prudently serving load. In summary, PGE holds one, homogeneous gas supply.

- a. See response above. For information on how PGE forecasts gas, please see PGE's response to OPUC Data Request No. 206.
- b. The storage balance is shown in cell N41 in PGE's response to AWEC Data Request No. 048, Highly Confidential Attachment 048-A. The maximum capacity is 4.1 BCF. Regarding the minimum capacity, PGE can utilize the entirety of its gas reserves should it be in the best interests of prudently serving load.

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 506
Dated May 20, 2024

Request:

Please identify the different options available to the Company for acquiring gas needed to power the generating units.

Response:

Outside of storage, gas can be acquired via the gas pipelines connected to PGE's facilities and is limited by the interconnection to those pipelines. PW1, PW2, and Beaver are supplied by KBPL. KBPL is connected to Williams Northwest Pipeline, which accesses gas production in British Columbia, Alberta, Colorado, Utah, Wyoming and New Mexico. Carty and Coyote are supplied by laterals that are part of TC Energy's GTN pipeline, which has access primarily to gas production in Alberta, and to a lesser extent British Columbia.

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 507
Dated May 20, 2024

Request:

Is PGE phasing out the use of oil for use at Beaver?

- a. If so, provide details of the plan and how this will impact the oil that is included in the fuel stock total in rate base.
- b. Does the Company plan to resell the oil at Beaver? If so, will the amount be credited to customers?

Response:

Yes, oil will be phased out in 2026.

- a. Details for the Beaver Modernization Program can be found in PGE's response to OPUC Data Request No. 231, Confidential Attachment A, in the file titled "P36836 BR Beaver Modernization." This will not impact the oil that is included in the fuel stock total in rate base, as this oil will still be used and useful through 2025.
- b. PGE is currently evaluating options for Beaver oil and expects to either burn Beaver oil for power generation or sell the oil. Should PGE determine to sell the oil and PGE still has the ability to update its net variable power cost forecast within the annual update tariff process, PGE would include any net cost or benefit within its forecast power costs.

Public Utility Commission of Oregon

From: Jaki Ferchland
Senior Manager, Revenue Requirement

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 509
Dated May 20, 2024

Request:

Please provide evidence that the CO2 allowances should be viewed as used and useful in the rate case and are able to be included in the rate base, where the Company earns a return.

Response:

PGE has a compliance obligation under California's cap and trade program for GHG emissions associated with imported electricity into the state of California, which means we anticipate GHG obligations and must maintain a stock of CO2 Allowances. Imported electricity into the state of California results in sales benefits in PGE's net variable power costs from both a forecast perspective within MONET (e.g., EIM benefit methodology) and an actuals perspective as ultimately reflected within customer prices via PGE's PCAM.

Should PGE only purchase compliance instruments at the point in which PGE is required to retire allowances to meet a compliance obligation, PGE and customers would be subject to the current prevailing market price, with no alternative. However, if PGE creates or maintains an inventory balance due to purchases throughout a compliance period (i.e., not just the end of a period) PGE maintains some flexibility in procurement decisions as it monitors obligation balances and prevailing market prices for allowances. This provides a monetary benefit to customers.

MATERIALS AND SUPPLIES

- Q. Please summarize PGE’s proposal for non-fuel materials and supplies.**
- A. PGE proposes an average Test Year balance for materials and supplies in rate base of \$78,695,000.¹ The Company forecasts monthly balances of non-fuel materials and supplies for the Test Year. PGE’s forecast represents a 13.5 percent increase over the 2023 monthly average balance and a 44.5 percent increase over the 2022 monthly average balance.
- Q. Please summarize the Commission’s historical treatment of non-fuel materials and supplies in rate base.**
- A. The Commission typically authorizes utilities to include an allowance for non-fuel materials and supplies in rate base.
- Q Please describe Staff’s analysis of this issue.**
- A. Through the discovery process Staff was able to review Test Year forecast and historical materials and supplies balances, and to see the trajectory of growth over time. Staff reviewed the historical average monthly balances for the years 2019-2023 and compared the average balances for each year with the average of monthly average forecast for 2024. Staff believes that using an average of monthly balances for rate-based items provides an accurate picture of yearly rate-based components that earn a rate of return. Staff generally uses a three-year historical average of monthly balances to forecast a reasonable material and supplies inventory.

¹ This figure is derived from the average of Test Year forecast monthly balances. The Company includes fuel stock in its general filing, and Staff breaks out non-fuel materials and supplies for this analysis. See Exhibit Staff/1502, Moore/1-3 – Company Response to Staff DR No. 84.

1 Using an average of monthly balances for the years 2021, 2022, and
2 2023,² and then escalating that average balance by the All-Urban CPI index for
3 2024 results in a Test Year forecast of \$58,884,172.

4 **Q. Does Staff propose an adjustment?**

5 A. Yes. Staff believes PGE has overestimated the non-fuel materials and supplies
6 balance by \$19.81 million, and therefore recommends a downward adjustment
7 to rate base by this amount.

8 **Q. Does this conclude your testimony?**

9 A. Yes.

10

11

12

² Values for 2021 and 2022 escalated by CPI inflation index to 2023 dollars.

Witness Qualifications Statement

July 15, 2024

WITNESS QUALIFICATIONS STATEMENT

NAME: Mitchell Moore

EMPLOYER: Public Utility Commission of Oregon

TITLE: Senior Utility Analyst
Energy Rates, Finance and Audit Division

ADDRESS: 201 High Street SE. Suite 100
Salem Oregon 97301-3612

EDUCATION: Bachelor of Arts, Journalism and Political Science
University of Hawaii at Manoa (1992)

EXPERIENCE: I have been employed by the Public Utility Commission of Oregon since 2009, with my current position being a Senior Utility Analyst in the utility program's Energy Rates, Finance and Audit division. I have provided expert witness testimony on a number of general rate case dockets, including: UE 294, UE 319, UE 335, UE 374, UE 394, UE 399, UE 416, UE 426, UG 288, UG 305, UG 325, UG 344, UG 347, UG 366, UG 388, UG 390, UG 461, and UG 490.

My prior position at the Commission was as a Senior Telecommunications Analyst, where my assignments included reviewing carrier interconnection agreements, wholesale service quality, and resolution of carrier-to-carrier complaints.

Prior to my utility regulatory career, I worked with AT&T as a loop electronics coordinator, designing and implementing high-speed broadband and fiber optic services in Los Angeles. I have also worked as an outside plant design engineer with Qwest Corporation, and I spent several years as a newspaper reporter with the Honolulu Star-Bulletin.

22	Issue 2. Large Customer LEAs	8
23	Issue 3. Unbundling Direct Access Franchise Fees.....	11

1 **ISSUE 1. SCHEDULE 56 TRANSPORTATION LINE EXTENSION ALLOWANCE**

2 **Q. What is PGE's Schedule 56?**

3 A. Schedule 56 is PGE's Commercial Electric Vehicle (EV) Make-Ready Pilot. The
4 pilot currently provides an incentive for the upfront costs of installing EV
5 charging infrastructure for both fleet and non-fleet commercial customers.

6 Approved in 2021¹, the program will remain open until December 2025 or until
7 available funds have been fully reserved. Fleet participants are eligible if
8 installing at least 70 kilowatts (kW) of EV charging equipment, while non-fleet
9 participants must install at least eight Level 2 charging ports that are intended
10 for residential customers' EV use. A participating fleet customer must ensure
11 the charging equipment is operational for 10 years and adhere to a minimum
12 energy usage agreement.

13 As a transportation electrification (TE) pilot, Schedule 56 is limited in cost
14 and duration, which minimizes costs and risks to other system customers while
15 providing an opportunity to monitor the performance of the program. PGE
16 states that the pilot has produced opportunities to partner with customers' fleet
17 electrification efforts that advance TE and support future load management.

18 With the pilot's funds forecasted to be fully reserved by August 2025², PGE is
19 proposing a permanent fleet transportation line extension allowance (TLEA) in
20 Schedule 56 to continue offering the TE incentives and ensure that fleet
21 service and operations expectations can be met as demand grows.

¹ ADV 1261, Staff Report recommending approval of Advice No. 21-09.

² Staff/1602, Bolton/1, PGE response to OPUC DR 353.

1 **Q. Please describe PGE's TLEA proposal.**

2 A. After the fleet incentives are fully reserved in the pilot, a new participant with a
3 minimum 10-year energy commitment of 400,000 kilowatt-hours (kWh) may
4 apply for the TLEA. The customer's incentive would be the lower of the
5 following amounts:

- 6 • Committed 10-year total kWh, multiplied by the service schedule LEA,
7 multiplied by 1.4.
- 8 • The participant's line extension cost plus the Make-Ready Cost for the
9 charger equipment and installation.
- 10 • \$450,000.

11 The incentive is calculated similarly to the current fleet incentive in the pilot,
12 but PGE has altered the committed kWh in the calculation to encompass the
13 entire 10-year estimate instead of using a snapshot of the year-5 kWh usage.
14 This change ensures that a customer who installs a larger portion of the Make-
15 Ready equipment past year 5 of their subscribed term will receive an incentive
16 commensurate with their expected usage. PGE also increased the third limiter
17 in the TLEA cap to \$450,000 from \$400,000 to account for the participant
18 foregoing its typical Schedule 38 LEA.

19 **Q. What are the typical benefits of offering line extension allowances?**

20 A. LEAs incentivize the customer to connect to the utility's system, stimulating
21 incremental growth in electricity consumption. Growing customer base and
22 demand can lower rates for all customers if the revenue to serve the customer
23 is greater than the costs of providing the LEA. The general concept is that a

1 new customer adds revenue, so a portion of that revenue is given to the
2 customer to offset some of the upfront construction costs of connecting to the
3 system.

4 However, when the customer's revenues do not exceed the costs incurred
5 to connect and provide service, an LEA does not provide the correct price
6 signal and shifts the LEA costs to all other customers with little to no
7 corresponding benefit.

8 **Q. How did Staff analyze PGE's proposal?**

9 A. Staff examined two main factors to determine if the spreading the TLEA costs to
10 rate base is fair, just, and reasonable. First, Staff examined a cost/benefit
11 model for the TLEA that PGE provided. Second, Staff compared marginal cost-
12 of-service to the proposed revenues for a Schedule 38 customer.

13 **Q. Please describe the methodology and results of the cost/benefit**
14 **analysis.**

15 A. PGE's cost/benefit model calculated a net present value (NPV) for each cost or
16 benefit associated with the TLEA based on historical data from 20 existing fleet
17 customers and two forecast scenarios. The 'committed energy' scenario uses a
18 more conservative estimate based on existing pilot participants and their 10-
19 year minimum energy agreement. The 'forecasted energy' scenario is less
20 conservative and exceeds the 10-year minimum commitment, assuming the
21 customer remains for 20 years. After factoring in the administrative costs,
22 capital expenditures, increased supply costs, and revenue from increased
23 sales, the model produces a benefits/cost ratio (BCR) to determine if the

1 benefits are equal to or greater than the total costs over the forecast period. If
 2 the BCR is below one, the TLEA is effectively subsidized by other customers
 3 and does not produce a free cash flow.

4 The committed energy scenario in PGE’s model produced a BCR of 0.97,
 5 while the forecasted scenario was above one. According to PGE’s analysis, the
 6 TLEA benefits would cover almost all of the associated program costs.

7 **Q. Does Staff agree with all of the Company’s assumptions in the**
 8 **cost/benefit analysis?**

9 A. No. Staff does not agree with multiple assumptions in the model. PGE included
 10 a \$144 per kW-year cost for avoided generation capacity that Staff finds too
 11 low compared to recent avoided cost data. This does not align with the \$228
 12 per kW-year generation capacity credit that PGE recently included in avoided
 13 cost submissions.³

14 Staff also found that the average hourly power costs that PGE used in the
 15 model are unreasonably low compared to AURORA modeling outputs Staff has
 16 recently reviewed. Below is a comparison of the BCRs in PGE’s analysis
 17 versus Staff’s analysis with an updated cost of capacity and different hourly
 18 average power costs.⁴⁵

	PGE Committed Energy	PGE Forecasted Energy	Staff Revised Committed	Staff Revised Forecasted
B/C Ratio	0.97	1.27	0.86	1.09
Benefits - \$000s	8,772	12,897	8,772	12,897
Costs - \$000s	9,074	10,152	10,187	11,785

³ Docket No. UM 1893, Staff Report, page 10, April 22, 2024.

⁴ Staff/1603, Bolton/1, PGE Response to OPUC DR 367, Attachment A: TLEA Cost/Benefit Analysis.

⁵ Staff /1604, Bolton/1, Updated TLEA Cost/Benefit Analysis Workpaper.

1 With Staff's updated assumptions, the BCR is well below one in the
2 committed energy case and only at 1.09 in the less conservative forecasted
3 case. Staff is not confident that the TLEA would generate a net free cash
4 flow based on this analysis.

5 Even when examining the less conservative scenario, a BCR of 1.09 is
6 not congruent with Staff's previous recommendations for other electric utility
7 TLEA offerings. For example, PacifiCorp's TLEA option reserves one-third of
8 the revenue benefit for existing customers, which would equate to a BCR of
9 1.33 based on the calculation's breakeven point and allowance of two years'
10 of revenue.⁶ With a BCR below 1.33, Staff is concerned that there is not a
11 sufficient buffer for other customers against cost shifts and potentially
12 stranded asset risk.

13 **Q. What did Staff find regarding the marginal cost to serve Schedule 38**
14 **customers?**

15 A. A Schedule 38 customer eligible for the proposed TLEA receives service at a
16 parity ratio of 0.97, meaning marginal allocated revenues are below the
17 marginal cost to serve.⁷ In addition to a TLEA, this ratio indicates a
18 Schedule 38 customer would be subsidized by other customers in two ways: a
19 tariff energy price lower than the cost to serve the customer, and the TLEA that
20 does not generate enough benefit to cover the costs of the program.

⁶ Docket No. ADV 1148, Staff Report, page 5, November 9, 2020.

⁷ Staff /1605, Bolton/1, Schedule 38 marginal cost compared to revenues.

1 **Q. What is Staff's recommendation on PGE's TLEA proposal?**

2 A. Staff does not believe the TLEA proposal in its current form is appropriate. The
3 subsidization via Schedule 38 rates does not warrant a specialized TLEA for a
4 Schedule 38 customer, especially when the TLEA benefits are not equal to or
5 above its costs. Additionally, a traditional LEA per PGE's Schedule 300 is
6 already available for Schedule 38 customers.

7 Staff recommends that PGE can continue to propose Schedule 56 Make-
8 Ready Pilot budgets in the Company's TE plan in three-year increments for
9 Commission approval. This avenue allows PGE to continue advancing TE
10 investment while still providing enough safeguards and regulatory review to
11 ensure other customers are not unfairly exposed to cost shifts.

12 Another option is for PGE to revise the TLEA calculation to account for the
13 subsidization in Schedule 38 rates as well as raise the BCR to a reasonable
14 value above one. Similar to PacifiCorp's TLEA that was approved in Docket
15 No. ADV 1148, PGE could determine the breakeven point at which time all the
16 costs associated with the TLEA have been fully covered by the generated
17 revenue and benefits. Finding the optimal breakeven point and designing the
18 allowance as a portion of revenue generated over that time period reduces cost
19 shifting and helps enable the TLEA to benefit all customers in the long term.
20 While Staff's recommended approach to a TLEA may not be as generous an
21 incentive as PGE's current proposal, it is necessary to prevent excessive
22 subsidization and risk to other customers. Staff may revisit any of its
23 recommendations after reviewing other parties' testimony.

ISSUE 2. LARGE CUSTOMER LINE EXTENSION ALLOWANCES

1 **ISSUE 2. LARGE CUSTOMER LINE EXTENSION ALLOWANCES**
2 **Q. Have any of PGE's LEA calculations for large customer schedules**
3 **changed in this rate case?**

4 A. Not fundamentally. The LEA multiplier and calculation methodologies are the
5 same as UE 416; the only changes in value are a result of the updated Basic
6 and Distribution Charge revenues that are used in the calculation. LEA
7 calculations are located in PGE's Schedule 300, which Staff Witness Scott
8 Shearer addresses in Staff Exhibit 1800.

9 **Q. Are you making any recommendations on large customer LEAs in this**
10 **section of testimony?**

11 A. Not at this time. However, I do review Staff's concerns regarding new large
12 customer connections identified in PGE's previous rate case. These topics will
13 be addressed in Docket No. UE 430, and I provide a status update on that
14 investigation on the following page.

15 In Staff Exhibit 1800, Mr. Shearer recommends that the Commission
16 approve the charges and updates in Schedule 300 but specifies that PGE
17 should perform a full cost analysis of each requested item and provide an
18 update after the conclusion of UE 435.⁸

19 **Q. What are Staff's concerns regarding PGE's line extension allowances**
20 **for nonresidential customers?**

21 A. In PGE's previous rate case, Docket No. UM 416, Staff raised concerns over
22 specific transmission and distribution projects that appeared to mainly benefit a

⁸ Exhibit Staff/1800, Shearer/5, at 12-18.

1 small number of large nonresidential customers.⁹ However, the upfront costs
2 for these special contracts were spread across all customer classes, creating
3 unmitigated risk for other customers and significant cross-subsidization. Staff
4 initially recommended that a revised line extension allowance policy should
5 apply to these customers, limiting the scale of the upfront investment that other
6 customers bear for such large projects.

7 Ultimately, to address these risks, the Commission opened an investigation
8 into PGE's new large load connection costs for large customers under UE 430.
9 Staff and PGE agreed that the Company would file an interim letter that
10 ensured any new large load connections would not shift costs or risk to other
11 customers while PGE worked on an updated tariff for new connection costs
12 and a customer agreement standard.¹⁰ In initial UE 435 testimony, PGE
13 anticipates providing an updated tariff, a new large load connection customer
14 agreement, and clarity on how demand capacity may be limited and allotted
15 based on transmission constraints.¹¹

16 **Q. Has PGE filed an updated tariff or proposal?**

17 A. Not yet. PGE was granted an extension until October 31, 2024, to provide an
18 updated tariff and customer agreement on new large load connections. Staff
19 intends to request a workshop in UE 430 to get a preliminary understanding of
20 what PGE will propose.

⁹ *In the Matter of Portland General Electric Company, Request for a General Rate Revision; and 2024 Annual Power Cost Update*, Docket No. UE 416, Staff/4100, Bolton-Stevens/1-6.

¹⁰ *In the Matter of Portland General Electric Company, Investigation into New Load Connection Costs*. PGE's Letter *RE: Risk Mitigation Measures*. January 18, 2024.

¹¹ PGE/100, Pope-Sims/8, at 1-7.

1 **Q. Are there any additional updates regarding the issues in the scope of**
2 **UE 430?**

3 A. Not at this time. Staff will continue to work with the Company and stakeholders
4 in UE 430 to prevent new large load connections from imposing undue costs
5 and risks on other customers. Staff may revisit any related or adjacent topics to
6 new large load customer connections after reviewing other parties' testimony in
7 this case.

ISSUE 3. UNBUNDLING DIRECT ACCESS FRANCHISE FEES**Q. Please describe the Company's unbundling requirements.**

A. The Commission's rules for unbundling and franchise fees are located in Oregon Administrative Rules (OAR) Division 38, which pertain to Oregon's direct access program. More specifically, OAR 860-038-0200 requires the revenue requirement be unbundled into functional categories. The rules also specify allocation methodology including direct assignment of costs to the functional areas when possible. Franchise fees are applied to the distribution category as directed by OAR 860-038-0200(9)(c)(B)(i)(IV).

Q. Please summarize the differences between franchise fees in UE 416 and this case.

A. In PGE's previous rate case under Docket No. UE 416, approximately \$68 million in franchise fees were included in the test year. Franchise fees have increased to about \$75 million in PGE's current general rate case.

The franchise fee rate based on city revenues is the same between UE 416 and UE 435, but total franchise fees are a function of PGE's revenue requirement. Therefore, since the franchise fee rate has not changed, the increase in total franchise fees is tied solely to the overall increase in revenue requirement in this case.

For direct access schedules specifically, franchise fee revenues decreased from about \$7.4 million to \$6.8 million compared to UE 416 due to fewer forecasted megawatt-hours of consumption.

1 **Q. Please describe how franchise fees are calculated.**

2 A. Pursuant to OAR 860-038-0200, franchise fees are calculated as a percentage
3 of applicable city revenues based on three years of historical data. Staff
4 verified the accuracy of the Company's calculation for both the franchise fee
5 rate and the total franchise fee amount included in the Company's results of
6 operations (ROO). Staff also verified the allocation of franchise fees by
7 schedule in PGE's rate spread analysis.

8 **Q. Is the Company's unbundling methodology for franchise fees in**
9 **accordance with OAR 860-038-0200 and OAR 860-038-**
10 **0200(9)(C)(B)(I)(IV)?**

11 A. After reviewing the work papers and verifying the Company's calculations, it
12 appears that the Company has met the unbundling requirements for franchise
13 fees in the Division 38 rules.

14 **Q. What is your recommendation on this issue?**

15 A. Staff does not propose an adjustment to the Company's franchise fee
16 unbundling methodology at this time. However, Staff may change any of its
17 recommendations after reviewing other parties' testimony.

18 **Q. Does this conclude your testimony?**

19 A. Yes.

CASE: UE 435
WITNESS: MADISON BOLTON

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 1601

Witness Qualifications Statement

July 15, 2024

WITNESS QUALIFICATIONS STATEMENT

NAME: Madison Bolton

EMPLOYER: Public Utility Commission of Oregon

TITLE: Senior Economic and Policy Analyst
Utility Strategy & Integration Division

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: B.A. Carroll College, Helena, Montana
Major: Biology, 2017

M.ENV. University of Colorado, Boulder, Colorado
Specialization: Renewable and Sustainable Energy, 2020

EXPERIENCE: Since September 2021, I have been employed by the Oregon Public Utility Commission. I currently hold the position of Utility Analyst 3 in the Utility Strategy and Integration Division, where I've evaluated utility voluntary renewable energy products and direct access issues.

I have provided witness testimony on multiple general rate case and power cost dockets, including UE 399, UE 400, UE 402, UE 416, UE 420, UE 433, UE 434, UG 433, and UG 435.

From 2019 to 2020 I worked as a graduate research analyst at E Source where I conducted research for utility clientele on large non-residential energy consumers.

Additionally, in 2020 I assisted Camus Energy in researching the feasibility of electric grid management software.

WITNESS: CURTIS DLOUHY

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 1700

**REDACTED
Opening Testimony**

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Curtis Dlouhy. I am a Senior Economic and Policy Analyst
3 employed in the Utility Strategy and Integration Division of the Public Utility
4 Commission of Oregon (OPUC). My business address is 201 High Street SE.,
5 Suite 100, Salem, Oregon 97301.

6 **Q. Please describe your educational background and work experience.**

7 A. My witness qualifications statement is found in Exhibit Staff/x1701.

8 **Q. What is the purpose of your testimony?**

9 A. The purpose of my testimony is to address the Company's proposals regarding
10 the Renewable Resource Automatic Adjustment Clause (RAC), Virtual Power
11 Plant (VPP), Seaside battery project, Constable battery project, and its updated
12 nonresidential Time of Use (TOU) rates.

13 **Q. Did you prepare any exhibits for this docket?**

14 A. Yes. I prepared the following exhibits:

- 15 • Staff/1701 – Witness Qualifications Statement
- 16 • Staff/1702 – Non-Confidential Responses to Data Requests
- 17 • Staff/1703 –Confidential Responses to Data Requests
- 18 • Staff/1704 – Highly-Confidential Responses to Data Requests
- 19 • Staff/1705 – Excerpts from the 2021 RFP Final Draft

20 **Q. How is your testimony organized?**

21 A. My testimony is organized as follows:

22	Issue 1. RAC Modification.....	4
23	Issue 2. Virtual Power Plant.....	9
24	Issue 3. Constable Battery.....	16

1 Issue 4. Seaside Battery 23
2 Issue 5. Constable and Seaside ITC Amortization..... 34
3 Issue 6. Nonresidential Time of Use Rates..... 38
4 Issue 7. Clearwater RAC Deferral..... 49

5 **Q. Please summarize Staff’s position on issues addressed in your**
6 **testimony.**

7 A. Staff recommends that the Commission reject the Company’s definition of
8 “associated energy storage” at this time and only consider changes to the
9 Commission’s interpretation in a standalone docket.

10 Staff recommends that the Commission reject the Company’s requested \$4.0
11 million increase in O&M expenses associated with the VPP on the basis that
12 the Company has not shown substantial progress in scaling up the VPP.

13 Staff recommends that the Commission accept the Company’s proposed
14 tracking mechanism for the Constable battery subject to conditions. Staff
15 further recommends that the Commission assume that the rate base
16 associated with Constable be the lower of \$143 million or actual gross plant for
17 ratemaking purposes.

18 Staff recommends that the Commission reject the Company’s proposed
19 tracking mechanism for Seaside. However, if the Commission chooses to
20 approve the tracking mechanism, Staff recommends that the Commission
21 assume that the rate base associated with Seaside be the reduced by \$44
22 million.

1 Staff also recommends that the Commission reject the Company's proposal
2 to frontload the amortization of ITCs associated with Constable and Seaside
3 and instead amortize the ITCs over the life of the assets.

4 Staff recommends changes to the Company's proposed non-residential TOU
5 rates and further recommends that these rates also be applied to Schedule 90.

6 Finally, Staff recommends that the Company amortize the deferral associated
7 with the Clearwater wind facility over an amortization period of one year
8 beginning on January 1, 2025.

1

ISSUE 1. RAC MODIFICATION

2

Q. Please describe the Renewable Resource Automatic Adjustment

3

Clause (RAC).

4

A. The RAC is contained in PGE's Schedule 122 and was put into place in response to SB 838 in 2007, which established the State's renewable portfolio standard (RPS) and required the Commission to establish an automatic adjustment clause (AAC) or other mechanism that allows timely recovery of costs prudently incurred by an electric company for acquiring renewable energy resources and for associated transmission.¹ In 2016, SB 1547 raised the State RPS requirements and modified the AAC language to allow associated storage to be included.

5

6

7

8

9

10

11

12

Q. Please describe the Company's proposal to modify the RAC.

13

A. PGE asks that the Commission clarify that standalone storage connected at the transmission voltage level is "associated energy storage" and therefore qualifies as an asset whose costs can be recovered in the RAC.² In its opening testimony, PGE states that it believes an on-system energy storage facility provides system benefits by firming and integrating renewables.

14

15

16

17

18

Q. Has PGE asked for similar treatment in previous dockets?

19

A. Yes. This is now the fourth proceeding where PGE has proposed that the Commission clarify that "associated storage" include some form of standalone storage in the RAC. The Company had previously made these

20

21

¹ ORS 469A.120(2).

² PGE/500, Felton/35.

1 recommendations in UM 1856, UE 335, and UE 416. In UM 1856 and UE 416,
2 Staff expressed its opposition to the proposed changes for a variety of reasons.

3 **Q. Why have Staff and stakeholders opposed the inclusion of stand-alone**
4 **batteries in the RAC in previous proceedings?**

5 A. In UM 1856, AWEC expressed concerns that stand-alone batteries may not
6 necessarily be related to any particular renewable energy project, as was the
7 intent of the RAC.³ This sentiment was echoed by Staff and Renewable
8 Northwest.^{4,5} CUB expressed concerns that approving the Company's request
9 would make the RAC the default approach for energy storage cost recovery.⁶
10 Staff ultimately recommended that the costs associated with the Energy
11 Storage System (ESS) pilots in that proceeding be recovered through a typical
12 rate case.⁷

13 The Company's proposal was re-evaluated in UE 416 with a post- HB
14 2021 lens. Staff recommended against accepting the Company's definition of
15 "associated storage."⁸ Staff also recommended the Commission not exercise
16 any discretion it might have to expand the use of the RAC to recover costs of
17 non-RPS compliant resources given overall rate pressure, the ease with which
18 the Company complies with RPS, and the Company's significant reliance on
19 AACs. Staff also noted that to the extent the Commission was interested in

³ UM 1856, ICNU-NIPPC/100, Fitch-Fleischmann/14.

⁴ UM 1856, RNW/100, Yourkowski/11.

⁵ UM 1856, Staff/100, Wiggins/42.

⁶ UM 1856, CUB/100, Jenks/7.

⁷ UM 1856, Staff/100, Wiggins/42.

1 exploring whether to modify the RAC to include stand-alone battery costs as a
2 matter of discretion even though it is not legally required to do so, the
3 Commission should not do so in a vacuum and should examine this policy
4 question a wholistic examination of the RAC after HB 2021 so that other
5 stakeholders and PacifiCorp may also participate.⁹

6 **Q. Has the Company presented any new arguments in this docket as to**
7 **why their preferred definition of “associated storage” should be used**
8 **for the RAC?**

9 A. No. Once again, the Company claims that it can be inferred that the legislative
10 intent of SB 1547 was to allow standalone storage into the RAC based on how
11 long it took for a utility-scale co-located resource to be acquired in Oregon.¹⁰
12 Much like in UE 416, Staff is unconvinced by the Company’s argument about
13 legislative intent.¹¹ The Company also agrees with the Staff’s previous
14 assessment that RPS obligations aren’t driving incremental resource
15 additions.¹²

16 **Q. Does Staff believe that any of its concerns expressed in UE 416 remain**
17 **relevant in this docket?**

18 A. Yes. Staff believes that the concerns about rate pressure and an over-reliance
19 on AACs by the Company are even more relevant now than they were in UE
20 416. As described in the testimony of Staff Witnesses Michelle Scala and Bret

⁹ Id.

¹⁰ PGE/500, Felton/33.

¹¹ UE 416, Staff/3400, Dlouhy/5.

¹² PGE/500, Felton/34.

1 Stevens, the Company's bold and unnecessary strategy to file a new rate case
2 mere weeks after a double-digit percentage rate increase became effective,
3 while asking for *two* trackers and a mechanism to recover investment costs in
4 non-rate case years eliminates any illusion of regulatory lag or consideration of
5 customer impacts. Staff believes that accepting the Company's proposal to
6 modify the RAC to include stand-alone storage only adds to the rate pressure
7 at a time where rate pressure is one of the highest priority issues facing
8 Oregon utility customers.

9 **Q. Are there other reasons the Company's recommended interpretation**
10 **has not yet been addressed before the Commission?**

11 A. Yes. In both UM 1856 and UE 416, the Company's RAC proposal was
12 dropped as part of settlement where many issues were being considered. Staff
13 believes that the Company could much more easily get its desired clarity on the
14 issue if it would be proposed as part of a standalone docket where it will not be
15 obscured by other concerns.

16 **Q. What does Staff recommend regarding the Company's "associated**
17 **storage" proposal in this docket?**

18 A. Staff reasserts versions of its two main recommendation in UE 416, namely:
19 1. Clarify that "associated storage" does not include standalone storage,
20 and;
21 2. Recommend that the utility may only propose changes to the RAC in
22 a standalone docket where Staff and stakeholders can consider how to
23 optimally use the RAC post-HB 2021.

1 To address the Company's concerns about clarity, Staff also recommends that
2 the Commission only consider PGE's proposed interpretation of "standalone
3 storage" in a standalone docket. This would ensure that the utilities, Staff, and
4 stakeholders be given a space where there are no outside incentives to settle.

1

ISSUE 2. VIRTUAL POWER PLANT

2

Q. What is a Virtual Power Plant (VPP) and what is the Commission history regarding the Company's past VPP expenditures?

3

4

A. A VPP is a collection of distributed energy resources (DER) and flexible load programs that are collectively treated as a single, dispatchable resource. A fully developed VPP has the potential to use a large number of existing, small-scale resources to provide reliability benefits and respond to load shifts in the same way that utility-scale peaker plants have traditionally done. These resources may be either customer-owned or Company-owned, meaning that customer-owned solar resources, storage resources, or the investment into Community-Based Renewable Energy (CBRE) resources required by HB 2021 could potentially feed into the VPP.

5

6

7

8

9

10

11

12

13

The Commission has largely been supportive of the Company's past VPP expenditures. While Staff raised concerns about whether further cost recovery was warranted given that the Company's VPP was not part of an acknowledged IRP, Staff agreed to recommend the Commission allow the Company's proposed \$3.4 million in O&M costs into rates through settlement in UE 416.¹³ It is worth mentioning however, that Staff raised concerns about whether the Company's VPP would be fully operational by the rate effective date of UE 416.¹⁴

14

15

16

17

18

19

20

21

Q. Please describe the Company's VPP proposal in this rate case.

¹³ Order No. 23-386.

¹⁴ UE 416, Staff/1100, Dlouhy/7.

1 A. The Company proposes to recover an additional \$4.0 million in incremental
2 O&M costs in this rate cases. The Company states in its testimony that this is
3 driven by hiring new staff, program development, and training and
4 development.¹⁵

5 **Q. Does Staff believe that the VPP is a valuable utility asset that is worth**
6 **pursuing?**

7 A. Yes. In the Company's acknowledged 2023 IRP, the Company states that the
8 VPP will allow it to orchestrate a growing suite of DERs. Staff believes that
9 DERs and the VPP have the potential to lessen the need for scarce
10 transmission resources while providing value to customers and communities
11 that own DERs. Staff is supportive of providing proper incentives to the
12 Company to enhance its DER capabilities through the VPP if it is clear the
13 Company needs the funding and the VPP is providing customer benefits.

14 **Q. Does Staff have any concerns with the Company's requested**
15 **incremental \$4.0 million related to the VPP in this rate case?**

16 A. Yes. While Staff still believes that VPPs have a critical role in the future of
17 Oregon's power system in a post-HB 2021 regulatory environment, Staff again
18 worries that the Company hasn't made significant enough progress since the
19 conclusion of UE 416 to warrant additional cost recovery. Further, Staff
20 believes that the Company's communication to the Commission about the VPP
21 has been sporadic and unclear, and recommends that a regular reporting
22 framework be created.

¹⁵ PGE/400, Bekkedahl – Felton/14.

1 **Q. What has Staff done to investigate the incremental \$4.0 million in VPP-**
2 **related costs?**

3 A. Staff has issued a series of data requests asking for a breakdown of the \$4.0
4 million in O&M costs, the current resource makeup of the VPP, and the
5 Company's ability to scale up the program given the Company's current
6 resources and VPP strategy.

7 **Q. What did Staff learn about the makeup of the \$4.0 million in**
8 **incremental VPP O&M?**

9 A. The \$4.0 million in incremental VPP O&M is comprised of a mix of one-time
10 costs and ongoing costs, with one-time costs accounting for approximately
11 **[BEGIN CONFIDENTIAL]** [REDACTED] **[END CONFIDENTIAL]** of the
12 requested increase.¹⁶ Even if all these costs were determined to be prudent,
13 Staff believes it to believes it is improper to include one-time costs in base
14 rates.

15 Further, Staff notes that the Company's breakdown of the \$4.0 million
16 includes a variety of line-item expenses that are attributed to **[BEGIN**
17 **CONFIDENTIAL]** [REDACTED]

[REDACTED]
[REDACTED]
[REDACTED] **[END CONFIDENTIAL]**

21 In addition to the cost concerns raised above, Staff notes that the
22 Company's VPP has made essentially no progress since the Company filed its

¹⁶ Staff/1703, Dlouhy/1, PGE response to Staff DR 221 Confidential Attachment A.

1 last rate case to integrate resources or expand even though it appears well
2 situated to do so.

3 **Q. Why does Staff believe that the Company has made essentially no**
4 **progress on its VPP between the last rate case and now?**

5 A. Staff notes that in UE 416, the Company stated that the VPP consisted of 230
6 MW of resources consisting of customer-sited diesel generators, batteries,
7 flexible load, and demand response programs.¹⁷ Staff issued a data request
8 asking the Company to provide the current makeup of resources in the VPP.
9 As of the Company's response on May 1, 2024, the Company's VPP still only
10 contains 140.85 MW of dispatchable resources.¹⁸ This is an increase of a
11 mere 0.35 MW from over a year ago.¹⁹

12 The remainder of the Company's VPP is comprised of customer programs,
13 such as demand response (DR) or electric vehicle (EV) charging programs.
14 Between 2022 and June 2024, the Company's summer flexible capacity has
15 increased from only 93 MW to 101 MW. Worryingly, the Company's winter
16 flexible capacity has *decreased* from 63 MW to 54 MW in the same interval.²⁰

17 **Q. Why does Staff believe that the Company is not currently constrained**
18 **by its current VPP resources?**

¹⁷ UE 416, PGE/700, Bekkedahl – Jenkins/22.

¹⁸ Staff/1702, Dlouhy/4, PGE Response to Staff DR 222.

¹⁹ Staff/1702, Dlouhy/1, PGE Response to Staff DR 425 in UE 416.

²⁰ Staff/1702, Dlouhy/6, PGE Response to Staff DR 596.

1 A. Staff asked whether the Company is limited in its VPP expansion for any
2 reason. Based on the Company's response, the Company does not face any
3 constraints that would limit future growth of the VPP.²¹

4 **Q. Based on the Company's current ability to expand the VPP, lack of**
5 **progress, and questionable need for VPP funding, do you believe that**
6 **the Company should be allowed to recover incremental O&M costs for**
7 **the VPP?**

8 A. No. While Staff believes that the VPPs can serve as a vitally important piece of
9 the decarbonization and reliability puzzle, Staff remains unconvinced that the
10 Company has demonstrated any incremental value of the VPP from the
11 Company's prior rate case.

12 **Q. Does Staff believe that the Company's communication about its VPP**
13 **strategy has been effective to date?**

14 A. No. In UE 416, Staff expressed its frustration that the Company's VPP strategy
15 appeared as part of a myriad of different dockets without a clear summary of
16 the overall approach.²² Staff also notes that the VPP appears to have some
17 clear overlaps with other Company technology initiatives that have not been
18 clearly articulated, such as the Advanced Distribution Management System
19 (ADMS) or the DER Management System (DERMS). Staff is concerned about
20 the potential for future double recovery of costs shared between these systems
21 or redundant investment and believes that there would be clear benefits to the

²¹ Staff/1702, Dlouhy/5, PGE Response to Staff DR 225.

²² UE 416, Staff/1100, Dlouhy/4.

1 Company, Staff, and stakeholders if the Company provided a periodic update
2 of the VPP on a more regular cadence.

3 **Q. Why does Staff believe that a periodic update on the VPP would be**
4 **beneficial?**

5 A. Staff notes that the VPP is only loosely discussed in the IRP and the DSP but
6 has been discussed as a holistic part of the Company's Flexible Load Multi-
7 Year Plan. Given the infrequency with which the Flexible Load Multi-Year Plan
8 is filed and the variety of other issues that are discussed, Staff believes that a
9 targeted filing focusing on the current state of the VPP, its costs, its size, and
10 its timelines would provide much needed clarity for planning and ratemaking
11 purposes. Staff believes that this should be filed annually as a standalone,
12 informational docket.

13 **Q. Does Staff believe that other actions should be taken to fill in the**
14 **current information gap about the VPP?**

15 A. Yes. As discussed previously, Staff believes that there is some
16 uncommunicated overlap between the VPP, ADMS, and DERMS that warrants
17 discussion. Staff recommends that the Company hold an informational
18 workshop with Staff and stakeholders that describes how the ADMS and the
19 DERMS functions may overlap or complement the role of the VPP and the
20 costs associated with each of these.

21 **Q. What is Staff's recommendation regarding the Company's VPP?**

22 A. Staff recommends that the Commission reject the \$4.0 million in requested
23 incremental VPP O&M expenses. Staff makes this recommendation after its

1 investigation revealed that the Company is well-situated to expand the VPP but
2 hasn't made any progress to do so since its last rate case, the Company's
3 reporting on the VPP has been lacking, and the Company **[BEGIN**

4 **CONFIDENTIAL]** [REDACTED]

5 [REDACTED] **[END CONFIDENTIAL]**

6 Further, Staff recommends that the Company take two actions to better
7 communicate and be held accountable for making tangible progress with the
8 VPP. First, Staff recommends the Company hold a workshop with Staff and
9 stakeholders to discuss how the ADMS, DERMS, VPP all work together and
10 how the Company proposes to separately identify or fairly allocate costs
11 between these three assets. Second, Staff recommends that the Company be
12 required to provide annual updates in a standalone reporting docket. These
13 updates would serve to fill in the gap between the Company's Flex Load Plan
14 filings and should include the following information:

- 15 • The size in MW of the VPP and the current resource makeup,
- 16 • A summary of actual incurred O&M costs and capital costs to date to
17 operate the VPP outside of costs to operate customer pilots and
18 programs recovered elsewhere,
- 19 • A summary of the customer-sited resources that are part of the VPP,
- 20 • A summary of the demand response or other customer programs that
21 have been integrated into the VP, and
- 22 • A list of the programs that are planned to be incorporated into the VPP
23 in the next year with an expected timeline.

1

ISSUE 3. CONSTABLE BATTERY

2

Q. Please describe the Constable battery project.

3

A. The Constable battery (formerly known as Evergreen) is a 75 MW battery

4

energy storage system (BESS) with 300 MWh of discharge. Constable is

5

being constructed using a Build-Deliver Agreement (BDA) with Mortensen.²³

6

The Company explains that the BDA is structured as a fixed-price contract to

7

hedge against possible schedule delays or cost overruns.²⁴ The Company

8

expects that Constable will be operational by December 31, 2024, but requests

9

the use of a tracker in case the battery experiences construction delays.²⁵ The

10

Company expects the battery to have an Effective Load Carrying Capability

11

(ELCC) of 44 MW, which is approximately 59 percent of Constable's 75 MW

12

nameplate capacity.

13

Q. What are the costs associated with Constable?

14

A. Constable's gross plant is approximately \$157.1 million.²⁶ The Company

15

expects Constable to incur approximately \$1 million in transmission and

16

distribution O&M expenses, \$0.1 million in insurance and A&G expenses, \$2.4

17

million in property taxes, \$8.3 million in depreciation expenses, and a \$2.6

18

million benefit in accumulated deferred income taxes (ADIT). In addition to

19

these base rates amounts, the Company forecasts an annual benefit of \$9.6

²³ PGE/500, Felton/21.

²⁴ PGE/500, Felton/23.

²⁵ PGE/200, Batzler – Ferchland/2.

²⁶ PGE/500, Felton/24.

1 million in net variable power costs (NVPC) benefits. The NVPC benefits are
2 addressed in docket UE 436.

3 Excluding the Company's proposed Investment Tax Credit (ITC)
4 amortization proposal, the Company's total expected revenue requirement for
5 Constable is \$17.3 million.²⁷ The Company proposes an ITC amortization
6 mechanism for both its Constable and Seaside batteries that Staff will address
7 in a later section.

8 **Q. What items did Staff examine to determine whether the Constable**
9 **battery should be considered prudent?**

10 A. Staff examined the 2021 RFP process that led to the eventual selection of
11 Constable as a dispatchable resource, the expected capital costs of Constable
12 in this docket relative to the project's bid, and the Company's proposed cost
13 recovery mechanism for Constable. While Staff holds concerns about the
14 choice of parameters used to model the dispatch of Constable, these concerns
15 are addressed in Staff's testimony in UE 436.²⁸

16 **Q. Please summarize the 2021 RFP and the circumstances that led to the**
17 **procurement of Constable.**

18 A. The Company's 2021 RFP sought to fill an identified capacity need of 511 MW
19 by 2025.²⁹ In this RFP, docketed as UM 2166, the Company sought to procure
20 both renewable and non-emitting dispatchable resources. At the end of the
21 RFP process, the Company faced a different regulatory regime under Oregon

²⁷ PGE/500, Felton/25.

²⁸ UE 436, Staff/400, Drennan/9.

²⁹ PGE/500, Felton/14.

1 House Bill 2021 and identified a final shortlist that contained projects with
2 cumulative MWs significantly in excess of the RFP targets, as noted by the
3 Independent Evaluator.³⁰ As a result, the Commission ultimately adopted
4 Staff's recommendation in UM 2166 to retain the IE to oversee the contract
5 negotiations following the acknowledgement of the final shortlist. Ultimately,
6 the 2021 RFP resulted in the Company's benchmark bids for the Clearwater
7 wind project, the Constable battery, and the Seaside battery being selected
8 and built.

9 **Q. Has Staff expressed concerns with the 2021 RFP in other proceedings?**

10 A. Yes. Staff expressed concerns about possible anticompetitive action by PGE
11 in the 2021 RFP related to PGE's adherence to its own RFP criteria and
12 treatment of other bids.³¹ Many stakeholders have also raised concerns about
13 PGE's RFP actions. Although this concern was expressed in regard to the
14 Clearwater project, which was subject to a different set of scoring criteria than
15 the non-emitting dispatchable projects, Staff was concerned that PGE's actions
16 in the 2021 RFP and possibly prior RFPs led to a less than competitive
17 procurement process.

18 **Q. How would PGE's actions in past RFPs influence the competitiveness**
19 **in the 2021 RFP?**

20 A. As has been pointed out by stakeholders in other proceedings, PGE has a
21 history of dominating its own RFP selections.³² Given the significant time,

³⁰ See Docket No. UM 2166, Staff Report filed June 29, 2022.

³¹ See UE 427, Staff/200.

³² UE 427, NewSun/100, Stephens/31.

1 resource, and financial costs to even submit a bid into an RFP, Staff worries
2 that this past history may dissuade bidders from participating in a future RFP.
3 Staff and the Commission raised this concern in UE 427 as well.³³ To see
4 whether this was the case, Staff requested the Company list the quantity of
5 bidders, proposals, benchmark proposals, counterparties that made the final
6 shortlist, proposals on the final shortlist, and benchmark proposals on the final
7 shortlist over the previous five RFPs.

8 **Q. What did Staff learn while analyzing this data request?**

9 A. Nothing. The Company refused to answer the data request, claiming that it
10 was overly broad and unduly burdensome.³⁴ Staff struggles to understand why
11 compiling summary statistics, available within the Company's internal records,
12 would pose such challenges.

13 **Q. What does Staff recommend given the Company's failure to answer the**
14 **data request about past RFP outcomes?**

15 A. Staff recommends a disallowance of \$5.0 million to the Company's overall rate
16 base. PGE's refusal to respond to Staff's data request hinders Staff's ability to
17 confirm that the competitiveness of PGE's RFPs is not declining in response to
18 continued own-resource selections by PGE. Staff does not think the absence
19 of information in this circumstance should weigh against Staff, but instead,
20 should weigh against PGE. In other words, PGE should not be allowed to

³³ See Order No. 24-091.

³⁴ Staff/1702, Dlouhy/3, PGE Response to DR 180.

1 avoid scrutiny and a possible disallowance by refusing to answer Staff data
2 requests.

3 **Q. How did Staff determine that an additional \$5 million reduction to rate**
4 **base is fair?**

5 A. Staff chose an amount that seemed to capture approximately a one percent of
6 the total gross plant for Constable and Seaside. Staff feels that this amount is
7 not overly punitive and welcomes the Company to bring forward the evidence
8 that is needed to address Staff and other stakeholder's concerns about
9 diminished RFP competitiveness in the next round of testimony.

10 **Q. How do the filed capital costs for the Constable battery compared to**
11 **the capital costs presented in the 2021 RFP?**

12 A. **[BEGIN HIGHLY CONFIDENTIAL]** [REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED] **[END HIGHLY CONFIDENTIAL]**

19 **Q. Has Staff done anything else to investigate the capital costs**
20 **associated with Constable?**

21 A. Yes. In addition to the analysis presented above, Staff investigated the
22 Company's workpapers to calculate Constable's revenue requirement.

23 **[BEGIN CONFIDENTIAL]** [REDACTED]

█ [REDACTED]
█ [REDACTED]
█ [REDACTED] [END CONFIDENTIAL] [BEGIN HIGHLY CONFIDENTIAL] [REDACTED]
█ [REDACTED]
█ [REDACTED] [END HIGHLY CONFIDENTIAL]

6 **Q. Based on Staff’s analysis, does Staff believe that changes should be**
7 **made to Constable in order for it to be viewed as a prudent**
8 **investment?**

9 A. Yes. In addition to the \$5 million disallowance discussed above, Staff
10 recommends that Constable’s gross plant be reduced by \$14 million to \$143
11 million.

12 **Q. What is the Company’s proposed ratemaking treatment for the**
13 **Constable battery?**

14 A. The Company proposes to incorporate the Constable battery into rates through
15 what Staff refers to as a “tracker,” which is a tariff to recover the costs of
16 Constable that would become effective upon the on-line date of the battery.³⁵
17 The Company proposes the same treatment for the Seaside battery as well.

18 **Q. Does Staff believe that the use of a tracker is appropriate for the**
19 **Constable battery?**

20 A. Yes. Although the Company expects the Constable battery to be done before
21 the rate effective date, Staff understands that construction delays may result in
22 small delays to Constable’s commercial online date. Staff believes that it is

³⁵ PGE/200, Batzler – Ferchland/3.

1 reasonable to give some time allowance for the Company to incorporate
2 Constable into rates if it becomes used and useful shortly after the rate
3 effective date. Staff, however, recommends certain conditions be put on the
4 tracker to protect customers from potential plant delays or cost overruns.

5 **Q. What conditions does Staff believe should be put into place on the**
6 **Constable tracker?**

7 A. Staff recommends that similar conditions be placed on the Constable tracker
8 that were placed on the Carty tariff rider approved in Commission Order No.
9 15-356. In particular, Staff recommends the following:

- 10 • PGE must file an attestation when Constable is put into service.
- 11 • If Constable is not operational by January 31, 2025, then PGE must file
12 a new ratemaking request to include Constable in rates.
- 13 • For ratemaking purposes in this docket, the gross plant will be the lesser
14 of the \$143 filed by PGE in this docket or actual gross plant. Staff
15 makes this recommendation to balance the flexibility given to PGE by a
16 tracker with customer protection from cost overruns. This
17 recommendation is not intended to foreclose the Company from
18 updating the gross plant in a future proceeding, provided that any
19 additional capital costs are deemed prudent.

1

ISSUE 4. SEASIDE BATTERY

2

Q. Please describe the Seaside battery project.

3

A. The Seaside battery is a 200 MW BESS with 800 MWh of discharge. Seaside is being constructed using a Build-Transfer Agreement (BTA) with Eolian.³⁶

4

5

Much like the BDA associated with Constable, the Company explains that the

6

BTA is structured as a fixed-price contract to hedge against possible schedule

7

delays or cost overruns.³⁷ The Company expects that Seaside will be

8

operational approximately six months after the rate effective date of this

9

proceeding, but requests the use of a tracker.³⁸ The Company expects the

10

battery to have an Effective Load Carrying Capability (ELCC) of 107 MW,

11

which is approximately 54 percent of Constable's 200 MW nameplate

12

capacity.³⁹ It is also worth noting that Seaside was bid into the 2021 RFP as

13

75 MW and 125 MW options but was increased to a 200 MW option following

14

the filing of the final shortlist after the seller acquired more land adjacent to the

15

project.⁴⁰

16

Q. What are the costs associated with Seaside?

17

A. Seaside's gross plant is approximately \$396 million.⁴¹ The Company expects

18

Seaside to incur approximately \$3 million in transmission and distribution O&M

19

expenses, \$6.6 million in property taxes, \$20.9 million in depreciation

³⁶ PGE/500, Felton/26.

³⁷ PGE/500, Felton/27.

³⁸ PGE/200, Batzler – Ferchland/2.

³⁹ PGE/500, Felton/26.

⁴⁰ PGE/500, Felton/20.

⁴¹ PGE/500, Felton/28.

1 expenses, and a \$6.6 million benefit in accumulated deferred income taxes
2 (ADIT). In addition to these base rates amounts, the Company forecasts an
3 annual benefit of \$20.7 million in net variable power costs (NVPC) benefits.
4 The NVPC benefits are addressed in docket UE 436.

5 Excluding the Company's proposed Investment Tax Credit (ITC)
6 amortization proposal, the Company's total expected revenue requirement for
7 Seaside is \$49.5 million.⁴² The Company proposes an ITC amortization
8 mechanism for both its Constable and Seaside batteries that Staff will address
9 in a later section.

10 **Q. What items did Staff examine to determine whether the Seaside battery**
11 **should be considered prudent?**

12 A. Staff examined the 2021 RFP process that led to the eventual selection of
13 Constable and Seaside as dispatchable resources, the circumstances
14 surrounding the increase in the Seaside capacity from 125 MW to 200 MW,
15 the expected capital costs of Seaside in this docket relative to the project's bid,
16 and the Company's proposed cost recovery mechanism for Seaside.

17 **Q. Do many of Staff's concerns regarding the 2021 RFP process overlap**
18 **with the concerns expressed regarding Seaside?**

19 A. Yes. Staff's concerns about the competitiveness of the 2021 RFP and PGE's
20 failure to address Staff's data request to understand the competitiveness at a
21 high level remain relevant. Staff's recommended \$5 million disallowance in the
22 previous section is meant to be a total disallowance for both Constable and

⁴² PGE/500, Felton/25.

1 Seaside. In addition to this disallowance, Staff initially held concerns about the
2 process that eventually led to Seaside increasing its capacity from 125 MW to
3 200 MW.

4 **Q. What concerns did Staff have about the decision to increase Seaside's**
5 **capacity from 125 MW to 200 MW?**

6 A. Staff has previously expressed concerns about the 2021 RFP process and
7 potential perception of anticompetitive outcomes. The large increase in the
8 project's size *after* the conclusion of the RFP process raised concerns about
9 whether Seaside should have been bid in with a 200 MW option into the 2021
10 RFP, when PGE became aware of the 200 MW option, and how the 75 MW
11 capacity increase changes the system value of Seaside.

12 **Q. Why does Staff think that Seaside should have bid into the 2021 RFP?**

13 A. Staff notes that a bidder was allowed to submit multiple versions of the same
14 project to bid into the 2021 RFP. [BEGIN HIGHLY CONFIDENTIAL] ██████████

██████████ ██████████ [END HIGHLY CONFIDENTIAL] ⁴³ Upon further investigation, Staff
17 noted that some parts of the RFP design may have dissuaded PGE from
18 submitting a 200 MW option into the 2021 RFP.

19 **Q. What parts of the 2021 RFP design would have dissuaded PGE from**
20 **submitting a 200 MW option for Seaside into the 2021 RFP?**

21 A. Staff notes that the minimum bidding requirements state that a bidder must
22 demonstrate dependable site control by possessing a title to the site, an

⁴³ Staff/1704, Dlouhy/1, PGE Response to Staff DR 171, HC Attachment C.

1 executed lease agreement, an executed easement, or an executed option
2 agreement applicable to a minimum of 80 percent of the project site.⁴⁴ If PGE
3 or Eolian did not have rights to the land that was eventually acquired, then they
4 may not believe that it would be worth submitting a 200 MW bid option into the
5 2021 RFP.

6 **Q. Does this necessarily preclude PGE and Eolian from submitting a 200**
7 **MW option into the 2021 RFP as an option?**

8 A. No. Staff notes that non-conforming bids are a fairly common occurrence in
9 the RFP process. In fact, PGE's Clearwater facility was bid into the 2021 RFP
10 and eventually selected despite not meeting the transmission minimum bidding
11 requirements.⁴⁵ Staff believes that if PGE and its counterparty had sufficient
12 notice that it was planning to acquire the adjacent land before or during the
13 2021 RFP process, then a non-conforming bid could have been submitted.

14 **Q. When did the Commission acknowledge the 2021 RFP final shortlist**
15 **and when did the Company become informed of Eolian's plans to build**
16 **a 200 MW battery?**

17 A. The final shortlist was submitted on May 5, 2022, and acknowledged in Order
18 No. 22-315 following the Special Public Meeting on July 14, 2022. According
19 to the Company's response to Staff DR 175, the Company was made aware of
20 Eolian's decision to move forward with a 200 MW project on March 2, 2023.⁴⁶

21 **[BEGIN HIGHLY CONFIDENTIAL]** [REDACTED]

⁴⁴ Staff/1705, Dlouhy/19, Excerpt from 2021 RFP (Page 16).

14 Q. Based on this finding, does Staff believe that PGE acted improperly by
15 not submitting a 200 MW bid into the 2021 RFP

16 A. [BEGIN CONFIDENTIAL] [REDACTED]

[REDACTED] [END
18 CONFIDENTIAL] Staff does not believe that it would be reasonable for the
19 Company and Eolian to submit a 200 MW benchmark option for the Seaside
20 bid. According to the Company's response to Staff DR 603, Eolian acquired
21 the deed to the additional land used to build the 200 MW option for Seaside on

⁴⁷ Staff/1704, Dlouhy/2, HI CONF Attachment to PGE Response to Staff DR 174.

1 June 1, 2023.⁴⁸ The final shortlist in the 2021 RFP was submitted on May 5,
2 2022, and benchmark bids were due on January 4, 2021, meaning that it would
3 be impracticable for the Company and Eolian to submit a 200 MW option of
4 their benchmark bid on the 2021 RFP timeline.

5 **Q. How did the decision to pursue a 200 MW battery instead of a 125 MW**
6 **battery affect the cost of Seaside?**

7 A. The Company describes in its opening testimony that the 200 MW battery has
8 the same cost on a per kW basis as the 125 MW option.⁴⁹ [BEGIN HIGHLY
9 CONFIDENTIAL] [REDACTED]

10 [REDACTED] [END HIGHLY

11 CONFIDENTIAL] Staff review of the Company's workpapers and DR
12 responses confirm that this is the case in the context of the RFP modeling.

13 **Q. Do the costs modeled in the RFP and agreed to in the BTA contract**
14 **match the costs that the Company seeks to recover in this docket?**

15 A. No. Staff investigated the RFP costs and the final contract costs and found
16 that they do not align with the gross plant costs modeled in the revenue
17 requirement workpapers. [BEGIN HIGHLY CONFIDENTIAL] [REDACTED]

[END CONFIDENTIAL]

Q. Based on this finding, do you recommend that an adjustment be made to Seaside's gross capital in this rate case?

A. If the Commission were to adopt the Company's proposed tracker for Seaside, Staff would recommend that the rate base for Seaside be reduced by \$44 million. However, Staff recommends that the Commission reject PGE's Seaside tracker, and if the Commission does so, Staff's recommended gross plant adjustment becomes irrelevant.

Q. Why does Staff oppose the inclusion of the tracker for Seaside?

A. Staff opposes the tracker for two main reasons. First, Staff notes that the Company is potentially requesting a tracker for *two* resources. Staff is unaware of a rate case where a Company has requested that two utility-scale resources be incorporated into rates via a tariff rider and believes that the Company could have easily better timed their rate case to avoid asking for a tracker.

Second, although the Commission has approved trackers up to six months beyond the rate effective date of a rate case in the past, the current environment of rate pressure and increasingly bold utility cost recovery filings lead Staff to believe that a tracker so far removed from the rate effective date is unwarranted.

Q. What concerns does Staff have with trackers?

1 A. Traditionally, utilities were expected to absorb some level of regulatory lag in
2 the time between when an asset is put into service and when the utility could
3 update its rates to recover costs associated with those assets. There have
4 always been mechanisms that create exceptions to this rule, such as deferrals,
5 automatic adjustment clauses, and tariff riders such as the ones that the
6 Company proposes. Apart from mechanisms covered by statute, it is up to the
7 Commission's discretion whether or how to balance the administrative
8 efficiency of using these mechanisms with the risk sharing and fair
9 expectations of regulatory lag.

10 Staff notes that a tracker for a resource that may or may not be online by
11 the rate effective date already shifts cost risk from the Company to the
12 customer. Staff was agreeable to this shift for Constable given the nearness of
13 Constable's commercial online date to the rate effective date. However, to ask
14 for a tracker for a second, unrelated resource further shifts this risk onto
15 customers in a way that is not properly balanced between the Company and its
16 customers.

17 Additionally, Staff notes that Seaside is not expected to be completed until
18 June 2025, meaning that the Company's second proposed tracker is for a
19 resource that comes online approximately six months after the rate effective
20 date of this case. Apart from the administrative inefficiency of dealing with two
21 separate trackers with effective dates in the months following the rate effective
22 date, Staff notes that this eliminates *all* possible regulatory lag associated with
23 Seaside and Constable even though their commercial online dates are

1 approximately six months apart, effectively shifting any cost recovery risk onto
2 customers.

3 **Q. Could the Company have found a way to recover these two resources**
4 **through traditional means while minimizing regulatory lag?**

5 A. Yes. The Company could have waited to file a rate case by approximately six
6 months and targeted a rate effective date of July 1, 2025. This would have
7 incurred approximately six months of regulatory lag on the Constable battery
8 and at most mere days' worth of regulatory lag on the Seaside battery if there
9 were no construction delays. Based on the Company's filed revenue
10 requirement for Constable of \$17.3 million, the six month gap between the in-
11 service and rate effective dates for Constable would have amounted to less
12 than \$10 million in regulatory lag out of two assets whose filed gross plant
13 exceeds half a billion dollars.

14 **Q. When has the Commission approved a tracker for a resource six**
15 **months after the rate effective date?**

16 A. The Commission approved a tracker for PGE's Carty plant in Order No. 15-
17 356, which approved the parties' stipulations in PGE's 2016 rate case, UE 294.
18 As proposed, the tracker allowed PGE to incorporate Carty into rates up to
19 approximately seven months after the rate effective date of UE 294.⁵⁰
20 However, as Staff has stated before, Staff believes that the circumstances in
21 this rate case are substantially different than in UE 294 and do not merit the
22 same treatment.

⁵⁰ Order No. 15-356, page 6.

1 **Q. Why does Staff believe that the circumstances are different in this rate**
2 **case than in UE 294?**

3 A. Staff notes that rate pressure concerns are much more severe now than they
4 were in 2016. As an example, UE 294 had a stipulated one percent increase
5 to revenue requirement.⁵¹ PGE's rate case from the previous year, UE 283,
6 had a stipulated increase of 2.56 percent.⁵²

7 Those increases are trivial relative to the Company's exceptionally high
8 asks in its last rate case and this rate case. In UE 416, parties reached
9 stipulations that led to an overall rate increase of 18 percent due to both the
10 rate case and power costs.⁵³ In this proceeding, PGE is requesting an
11 additional 7.4 percent inclusive of power costs.⁵⁴

12 It is the Commission's duty to set fair, just, and reasonable rates for
13 investor-owned utilities. Staff believes that it is inherently unfair to customers
14 to allow PGE to use a tracker to incorporate a plant into rates six months after
15 the rate effective date in light of recent rate pressure and the Company's
16 unwillingness to accept any form of regulatory lag. The Company's proposal
17 applies added rate pressure to customers in a time where customers are
18 already experiencing perceived unjust and unreasonable rate pressure.

⁵¹ Order No. 15-356, page 1.

⁵² Order No. 14-422, page 1.

⁵³ See PGE's Advice No. 23-40.

⁵⁴ PGE/200, Batzler – Ferchland/3.

1 **Q. The Company discusses its ITC proposal as a way to mitigate rate**
2 **pressure. Does Staff believe that the Company's ITC proposal is a**
3 **proper way to address rate pressure?**

4 A. No. Staff's opposition to the Company's ITC proposal and disagreements with
5 the Company's advertised values of the ITC proposal will be discussed in the
6 next section.

7 **Q. Please summarize Staff's recommendation regarding the Seaside**
8 **battery and the Company's proposed tracker.**

9 A. Staff recommends that the Commission reject PGE's proposed tracker for
10 Seaside as it will not be used and useful by the rate effective date and the
11 current environment of back-to-back rate cases and overall rate pressure do
12 not support use of this extraordinary rate mechanism.

13 If the Commission were to approve the tracker, Staff recommends that the
14 gross plant for Seaside be reduced by \$44 million. Staff also recommends that
15 any recovery under a tracker be limited to lower of PGE's actual costs or the
16 adjusted amount recommended in this testimony.

ISSUE 5. CONSTABLE AND SEASIDE ITC AMORTIZATION

1
2 **Q. What is the Company's ITC amortization proposal and how large are**
3 **the ITCs?**

4 A. The Company intends to amortize the ITCs associated with the Constable and
5 Seaside batteries through a separate schedule outside of base rates over the
6 course of five years. In year one, the Company would amortize 35 percent of
7 the full value of the ITCs, and then subsequently reduce the amount amortized
8 each year until the ITCs are fully amortized after five years.⁵⁵

9 Both Constable and Seaside are eligible for ITCs equal to at least 30
10 percent of the projects' eligible capital costs. Constable is expected to
11 generate \$41.9 million in ITCs while Seaside is expected to generate \$105.3
12 million in ITCs. In addition to these amounts, the Company states that it is
13 exploring whether Seaside would qualify for an Energy Community benefit that
14 would add an additional 10 percent ITC benefit on top of the existing 30
15 percent benefit. Between Seaside's and Constable's ITCs, PGE's frontloaded
16 proposal would return \$51.5 million to customers in 2025.

17 **Q. Does Staff have concerns about the Company's decision to frontload**
18 **the ITC amortization over the course of five years?**

19 A. Yes. While the Company presents its proposal as a proactive measure to
20 mitigate near term rate pressure, the steep drop off in benefits after five years
21 will place greater burden on customers in the long run. Staff is concerned that
22 the near-term benefits of the Company's proposal does not provide enough

⁵⁵ PGE/500, Felton/31.

1 mitigation for the drivers of near-term rate pressure and creates
2 intergenerational equity concerns.

3 **Q. Why does Staff believe that frontloading the amortization of the ITCs**
4 **associated with Constable and Seaside does not address near-term**
5 **rate pressure?**

6 A. Staff believes that the greatest driver of rate pressure at the moment is the
7 Company's lack of willingness to absorb even the slightest bit of regulatory lag.
8 This can be seen in every facet of the Company's current rate case filing,
9 including the *two* separate tracker proposals, the Company's investment
10 recovery mechanism, and disregard for the impacts to customers coming to
11 grips with a large increase following the conclusion of UE 416. While
12 amortizing some ITC benefits in the near term may take some of the sting out
13 of a second large rate increase in less than a year, Staff believes that it fails to
14 offset the Company's myriad of unbalanced proposals to avoid any regulatory
15 lag in this rate case. Even if a front-loaded ITC amortization schedule does
16 mitigate some near-term rate impact, Staff has serious concerns about the
17 balance of those benefits with the intergenerational equity issues created by
18 eliminating any ITC benefits after five years.

19 **Q. What does Staff mean by intergenerational equity?**

20 A. While exact definitions and applications may vary, intergenerational equity can
21 be summarized as fairness or equity across time or between generations. As it
22 applies to electricity regulation, this means requires balancing of
23 considerations. First, whether a decision enacted today for the sake of current

1 customers does has any unfair, unjust, or unreasonable impacts to future
2 customers. Second whether customers today are paying too much for benefits
3 that will accrue in the future. Front-loading and back-loading ITCs have
4 intergenerational equity concerns, but amortizing over the life of the asset
5 provides a balanced approach of near and long-term rate pressure.

6 **Q. Why does Staff believe that the Company's ITC amortization proposal**
7 **causes intergenerational equity concerns?**

8 A. It is common practice to spread the depreciation or amortization costs of an
9 asset over the life of the asset in order to ensure that every cohort of
10 customers that benefits from the asset pays their fair share of operational and
11 capital costs associated with the asset. The Company expects the Constable
12 and Seaside batteries to operate for far longer than five years, but the ITCs
13 would be fully amortized after five years. This means that a customer that is
14 new to PGE's system in year six of the batteries' operational lives will be
15 subsidizing customers who were on PGE's system earlier.

16 While there may be policy reasons to create this intergenerational cost
17 shift, Staff worries that the utility's investment to comply with HB 2021 could
18 create steep increases in future costs in addition to the costs that are being
19 incurred today. Staff worries about a scenario in which a new large swath of
20 costs that arrive in 2030 is exacerbated by the completion of the Company's
21 proposed ITC amortization.

22 **Q. How does Staff propose that the Company treat the ITCs for the**
23 **purpose of ratemaking?**

1 A. Staff proposes that the Company amortize the ITCs over the life of the
2 Constable and Seaside batteries. This effectively treats the ITCs as a
3 reduction of the total rate base of the Constable and Seaside batteries prior to
4 amortization. Staff notes that this is a common regulatory practice that spreads
5 the benefit of the ITCs across the life of the asset. While this results in a lower
6 near-term benefit, this eliminates the intergenerational equity concern Staff
7 raised above.

ISSUE 6. NONRESIDENTIAL TIME OF USE RATES**Q. What are Time of Use (TOU) rates?**

A. TOU is a loose term for a volumetric rate structure that varies with the time of day, day of week, season, or some combination of those time frames. At a high level, this rate structure can allow a utility to better align volumetric rates with periods where electricity tends to be more expensive and send signals to customers about when it would be valuable reduce or shift their load.

Q. Why is the Company coming forward with a new non-residential TOU proposal in this rate case?

A. As described in the Company's opening testimony, the Fourth Partial Stipulation in UE 416 approved in Order No. 23-386 directed the Company to hold a workshop regarding its TOU pricing for large non-residential customers and either justify why the current time structures are appropriate or come forward with a new proposal.⁵⁶ This direction applied to Schedules 83, 85, 89, and 90.

Q. Has PGE responded to the direction given in Order No. 23-386?

A. Yes. The Company provides a new structure for the on-peak windows and rates for Schedules 38, 83, 85, and 89, and proposes no change to Schedule 90 based on its load factor.

Q. Please describe how the Company has updated the on-peak window for Schedules 38,83, 85, and 89.

⁵⁶ PGE/900, Macfarlane – Pleasant/5.

1 A. The Company currently only has an on-peak and an off-peak window for these
2 schedules. For Schedule 38, the on-peak window is currently 7 a.m. through 8
3 p.m. Mondays through Fridays. For Schedules 83, 85, and 89, the on-peak
4 window is 6 a.m. to 10 p.m. on Mondays through Saturdays.⁵⁷

5 The Company's updated proposal creates a common on-peak, a mid-
6 peak, and an off-peak window for all four of these schedules. Under this new
7 proposal:

- 8 • The on-peak window runs 4 p.m. to 10 p.m. on Mondays through
9 Fridays.
- 10 • The mid-peak window runs 6 a.m. to 4 p.m. on Mondays through
11 Fridays, and 6 a.m. to 10 p.m. on Saturdays.
- 12 • The off-peak window runs 10 p.m. to 6 a.m. on Mondays through
13 Saturdays and all hours on Sundays.⁵⁸

14 The Company states that the mid-peak and on-peak windows were structured
15 to align with the North American Electricity Reliability Corporation's (NERC)
16 designation of heavy-load hours and light-load hours.⁵⁹ The Company chose
17 to delineate between the on- and mid-peak hours based on the historical Mid-
18 Columbia (Mid-C) market prices, hourly load values, and hourly loss of load
19 probability (LOLP) analysis.⁶⁰

⁵⁷ PGE/900, Macfarlane – Pleasant/6.

⁵⁸ Id.

⁵⁹ PGE/900, Macfarlane – Pleasant/8.

⁶⁰ PGE/900, Macfarlane – Pleasant/7.

1 **Q. Does Staff agree with the Company’s decision to create three TOU**
2 **windows instead of two for these large, non-residential customers?**

3 A. Yes. While Staff has expressed concerns about overcomplicating the TOU
4 structure for residential customers, which may cause inaction rather than price
5 responsiveness, Staff is less concerned about that for large, non-residential
6 customers. It is Staff’s assumption that these large customers are generally
7 savvier and more able to respond to nuanced price signal than the typical
8 residential customer that may face greater time or bandwidth constraints.

9 **Q. Does Staff believe that the Company’s choice in on-, mid-, and off-peak**
10 **windows aligns with the findings of the Company’s most recent LOLP**
11 **assessment?**

12 A. Yes. Highly Confidential Figure 1 contains PGE’s Weekday LOLP analysis
13 from its most recent IRP, LC 80.

14 **Highly Confidential Figure 1: PGE’s Weekday LOLP Analysis**

11

Q. Please describe how the Company has chosen to determine the on-peak, mid-peak, and off-peak rates.

12

13

A. At a high level, the Company's rate calculation proposal allocates the total

14

energy costs for each of the schedules according to the proportional costs to

1 serve the customer class during each window. In particular, the Company
 2 computes the average hourly forecasted Mid-C price within each window and
 3 multiplies that amount by the proportion of the customer class's forecasted
 4 kWh consumed in that window. The Company refers to this value as the
 5 proportional marginal energy cost.⁶¹ The total energy costs for the customer
 6 class are then divided according to the ratio of the proportional marginal energy
 7 costs for each window. The total energy cost is then divided by the total
 8 forecasted kWh for each window to arrive at the designed price for each
 9 window. Based on Staff's investigation of the Company's workpapers, it
 10 appears that the Company applied some small changes to the calculated price
 11 differential when setting the actual TOU rate.

12 **Q. In effect, what is the price differential for the on-, mid-, and off-peak**
 13 **volumetric rates for each of these four schedules?**

14 A. Table 1 below contains the price differential relative to the on-peak rate for
 15 each of the four schedules.

16 **Table 1: PGE's Proposed TOU Differentials Relative to the On-Peak Rate**

Rate	Schedule 38	Schedule 83	Schedule 85	Schedule 89
On-Peak	-	-	-	-
Mid-Peak	-1.0 ¢/kWh	-0.8 ¢/kWh	-0.8 ¢/kWh	-0.8 ¢/kWh
Off-Peak	-3.0 ¢/kWh	-2.0 ¢/kWh	-2.0 ¢/kWh	-2.0 ¢/kWh

17
 18 **Q. What did Staff do to investigate the Company's proposed rate**
 19 **calculation for these four schedules?**

⁶¹ PGE/900, Macfarlane – Pleasant/9.

1 A. Staff began by investigating the Company's workpapers to verify that the
2 methods the Company describes aligned with the rate calculations. This
3 investigation raised questions about the Company's chosen deviations from the
4 calculated rate differential as prescribed by their methodology.

5 Given that transactions at the Western Energy Imbalance Market (EIM)
6 are used as the marginal cost resource by other utilities and in other use
7 cases, Staff also investigated whether using historical price data from the
8 Western EIM would result in substantially different on-, mid-, and off-peak
9 prices than the Company's forecasted Mid-C prices.

10 **Q. What did Staff learn upon investigating the Company's workpapers to**
11 **calculate the TOU price differentials?**

12 A. Staff found that the Company applied some form of rounding to the calculated
13 price differentials in a way that has neither a significant effect or clear reason.
14 In particular, Staff notes that the Company's methodology indicates that the
15 Schedule 38 On-Peak to Mid-Peak differential should be 1.3 cents/kWh instead
16 of 1.0 cents/kWh. While one might assume that this was done to create a
17 clean whole-cent difference between the on-, mid-, and off-peak prices, Staff
18 notes that the price differentials for the other three schedules are not whole
19 numbers on a cents/kWh basis. Even though the difference in forecasted
20 revenue is small, this results in the Company forecasting a small under-
21 collection of Schedule 38 revenues. Staff does not believe this difference
22 would be material if the Company's methodology were implemented, but Staff
23 finds the Company's adjustment to its rate calculation puzzling.

1 **Q. What average hourly Mid-C prices did the Company use for each of the**
2 **three TOU windows?**

3 A. Figure 2 from PGE/900 contains the average forecasted hourly Mid-C prices
4 for the three TOU windows and is reproduced below.

5 **PGE Figure 2 from PGE/900**

Schedule 83 Example of Marginal Cost Allocations

Window	Average Hourly Forecasted Mid-C Price	Proportional kWh	Proportional Marginal Energy Costs
On-peak	98.14	19.1%	23.0%
Mid-peak	85.22	45.5%	47.5%
Off-peak	67.99	35.4%	29.5%

6
7 Of note, PGE's calculated average hourly prices denote a proportionally
8 smaller change between the on-peak and the mid-peak than the mid-peak and
9 the off-peak. When it comes to calculating the TOU differentials, this would
10 result in a relatively larger price difference between the mid- and off-peak than
11 between the on- and mid-peak.

12 **Q. What did Staff learn from its investigation into historical EIM and Mid-C**
13 **prices?**

14 A. Staff requested historical hourly price data from Mid-C and the EIM dating back
15 to 2018. Even though Staff requested data dating back to 2018, Staff felt that it
16 would be more appropriate to compare the Company's forecasted hourly Mid-C
17 prices to historical hourly prices from 2022 and 2023. Staff made this choice
18 because 2022 represents the first year of relative normalcy following the
19 pandemic and is more likely to capture the effects of recent extreme weather
20 and grid tightness on power prices than earlier data.

1 Throughout this investigation, Staff found that whether the historical Mid-C
 2 prices or EIM prices were considered, the difference between the on-peak and
 3 mid-peak was substantially larger than the price differential between the mid-
 4 peak and off-peak. Table 2 below shows the comparison of average hourly
 5 prices for each window as filed by the Company and when historical EIM and
 6 Mid-C prices are considered. Evidently, when both the historical Mid-C prices
 7 and EIM prices are considered, the historical difference in the spot market price
 8 of electricity appears to be much more stark between the on- and mid-peak
 9 windows than between the mid- and off-peak windows compared to the values
 10 the Company used when creating its TOU rates.

11 **Table 2: Average Hourly TOU Window Prices (\$/MW)**

	As Filed	Diff		22/23 EIM	Diff
On-Peak	\$98.14			\$81.15	
Mid-Peak	\$85.22	-12.92		\$60.51	-20.64
Off-Peak	\$67.99	-17.23		\$57.70	-2.81

12
 13 **Q. In all three instances, it still appears that the on-peak is more**
 14 **expensive than the mid-peak, and the mid-peak is more expensive than**
 15 **the off-peak. Why would this relative difference matter when designing**
 16 **rates?**

17 A. This relative difference means that from a cost causation perspective, the on-
 18 peak period is substantially more expensive than the other two periods while
 19 the difference between the mid- and off-peak windows is much smaller,
 20 meaning that the prices should reflect the relative system costs of each of
 21 these windows. Further, one of the goals of TOU rates is to shift consumption

1 onto less expensive or stressed hours of the day. Staff believes that a wider
 2 spread between the on-peak and mid-peak rate may provide a stronger
 3 incentive for customers to shift their load from the highest-cost and highest
 4 congestion hours than the rates currently proposed by the Company.

5 **Q. Given the observed difference between the historical and forecasted**
 6 **Mid-C prices and the Company's modeling choices, does Staff**
 7 **recommend that changes be made to the non-residential TOU rate**
 8 **calculation methodology?**

9 A. Yes. Staff recommends the Company calculate the TOU rates for Schedules
 10 38, 83, 85, and 89 using the historical Mid-C prices from 2022 and 2023. Staff
 11 has included the workpapers to calculate the effect of this change and the
 12 calculations to arrive at the historical Mid-C prices as electronic exhibits.

13 **Q. After implementing this change, what is the effect on the TOU price**
 14 **differential for the four schedules?**

15 A. Table 3 contains Staff's proposed differentials for Schedules 38, 83, 85, and
 16 89.

17 **Table 3: Staff's Proposed TOU Differentials Relative to the On-Peak Rate**

Rate	Schedule 38	Schedule 83	Schedule 85	Schedule 89
On-Peak	-	-	-	-
Mid-Peak	-2.4 ¢/kWh	-1.6 ¢/kWh	-1.6 ¢/kWh	-1.6 ¢/kWh
Off-Peak	-3.5 ¢/kWh	-2.3 ¢/kWh	-2.3 ¢/kWh	-2.3 ¢/kWh

18
 19 **Q. Does Staff have any other recommendations regarding the non-**
 20 **residential TOU rate proposal?**

1 A. Yes. Staff believes that a non-residential TOU rate should also be applied to
2 Schedule 90 customers. While the Company explained that Schedule 90
3 customers have a flat load when justifying its decision to not apply a TOU rate
4 to Schedule 90,⁶² Staff is not persuaded by the Company's argument.

5 **Q. Why isn't Staff persuaded by the Company's reasoning that a TOU rate**
6 **should not be applied to Schedule 90?**

7 A. Staff is not persuaded for three reasons. First, the Company statement that
8 the average Schedule load shapes are relatively flat compared to other
9 customers does not necessarily mean that a Schedule customer is *unable* to
10 shift its load, just that it has chosen not to. As Staff has expressed about the
11 other four customer classes, Staff expects that a Schedule 90 customer is
12 large and savvy enough to respond to some level of price signals.

13 Second, as stated previously, one of the goals of TOU rates is to align
14 costs with rates. A customer with a flat load shape is still causing the
15 Company to incur higher costs in high-demand periods and should be charged
16 accordingly.

17 Finally, even if a Schedule 90 customer is unable to shift its load, Staff
18 expects that this proposal will be revenue neutral to the Company and cost
19 neutral to Schedule 90. The Company's methodology of proportionally
20 allocating costs is designed to be cost neutral across the entire customer class.
21 As has been pointed out in previous proceedings, Schedule 90 contains only a

⁶² PGE/900, Macfarlane – Pleasant/8.

1 single customer that owns multiple sites.⁶³ Therefore, if the single customer
2 does nothing to respond to the new price signals created by TOU rates, the
3 customer should expect no change to its overall bills across its site.

4 **Q. Has Staff been able to calculate the on-, mid-, and off-peak rates for**
5 **Schedule 90 if PGE's methodology and Staff's prices are applied?**

6 A. Not yet. Staff has issued discovery to obtain the necessary data to calculate a
7 TOU rate for Schedule 90 using the Company's methodology and Staff's
8 recommended historical Mid-C prices. Staff intends to present its
9 recommended Schedule 90 TOU rates in rebuttal testimony, but also
10 welcomes the Company to perform this calculation in its reply testimony if it so
11 chooses.

⁶³ UE 416, AWEC/900, Kaufman/7.

ISSUE 7. CLEARWATER RAC DEFERRAL**Q. What is Clearwater and why is it relevant to this rate case?**

A. Clearwater is a 300 MW wind facility that began operation in early 2024. The Company has proposed that the plant be incorporated into rates using its RAC, Schedule 122, in Docket No. UE 427. While the docket is still ongoing and has an expected rate effective date of October 1, 2024, Staff notes that a feature of the RAC is that the Company may defer and track any costs or benefits of the new plant in the time between the in-service date and the rate effective date of a new, RPS-eligible plant that is incorporated into rates through the RAC.

Q. Does Staff have any issues with fully incorporating Clearwater into base rates in this rate case?

A. No. While UE 427 is still ongoing, Staff has conducted its prudence review of Clearwater in UE 427 and expects that a Commission order to determine prudence will be issued before the conclusion of this rate case. Staff is supportive of incorporating the revenue requirement determined to be prudent in UE 427 into the Company's overall base rates.

Q. How large does Staff expect the deferral to be?

A. Although the docket is ongoing, Staff expects that the deferred portion of Clearwater's revenue requirement to be approximately a \$21 million refund to customers. Staff determined this by noting that the Company's updated Clearwater revenue requirement for the 2024 calendar year was approximately

1 \$28 million and that the deferral will have tracked costs for approximately 9
2 months.⁶⁴

3 **Q. How does Staff propose that this deferral be amortized?**

4 A. Staff proposes that this deferral be amortized over the course of one year
5 beginning on the rate effective date of this general rate case, January 1, 2025.
6 Staff further recommends that the rate spread on an equal percentage of
7 generation revenue basis, which is consistent with Schedule 122's current rate
8 spread.

9 **Q. Does this conclude Staff's testimony?**

10 A. Yes.

⁶⁴ See PGE's December 8, 2023 filing in UE 427.

Witness Qualifications Statement

July 15, 2024

WITNESS QUALIFICATION STATEMENT

NAME: Curtis Dlouhy

EMPLOYER: Public Utility Commission of Oregon

TITLE: Senior Economic and Policy Analyst, Strategy and Integration Division

ADDRESS: 201 High St. SE, Ste. 100
Salem, OR 97301-3612

EDUCATION: PhD, Economics
University of Oregon,
Eugene, OR

Master of Science, Economics
University of Oregon,
Eugene, OR

Bachelor of Arts, Economics & Math
Nebraska Wesleyan
University, Lincoln, NE

EXPERIENCE: I have been employed by the Oregon Public Utility Commission (OPUC) in the Strategy and Integration Division since April 2022 and previously worked in the Rates, Finance, and Audit Division beginning June 2020. My responsibilities include providing research, analysis, and recommendations on a range of regulatory issues. I have provided analysis and expert testimony in various contested cases including UG 388, UG 389, UG 390, UE 374, UE 390, UE 391, UE 394, UG 433, UG 435, UE 399, UE 400, UE 402, UE 416, UE 420, UE 427, UG 490, UE 433, UE 434, and UE 435.

Prior to working for the Commission, I was employed by the University of Oregon as a graduate fellow where I taught classes in Microeconomics, Industrial Organization, and Antitrust Economics. My PhD dissertation won an award from the Transportation and Public Utility Working Group and covered topics in fossil fuel markets ranging from coal mine closure, dispatchable electricity choices under carbon taxes, and coal railroad transport. While completing my PhD, I provided economic analysis for the Graduate Teaching Fellows Federation during contract negotiations.

Excerpts from the 2021 RFP Final Draft

July 15, 2024

October 15, 2021

Dear Chair Decker and Commissioners Tawney and Thompson,

As Oregonians, we share the urgent need to reduce greenhouse gas (GHG) emissions and deliver a clean energy future for our customers. With the passage of HB 2021 and our own climate goals set last year, we are fully committed to reducing GHG emissions from the power served to customers by at least 80% by 2030, 90% by 2035, and achieving zero GHG emissions by 2040.

We are making three filings today in service to achieving those goals, while also continuing to focus on delivering safe, reliable and affordable electric service that benefits all PGE customers:

1. initiating our request for proposals (RFP) from our 2019 IRP Action Plan to procure renewables and non-emitting capacity resources;
2. part one of our inaugural Distribution System Plan (DSP) laying out our vision for building the equitable two-way grid of the future in partnership with our customers; and
3. a waiver requesting an extension of our 2022 Integrated Resource Plan (IRP) to 2023 in order to more fully bring to life the vision of HB 2021.

We are taking the opportunity with these three filings to more clearly articulate what it will take to meet our 2030 emissions reduction target and our plans to get there. Specifically, we are advancing plans to add more renewables and non-emitting resources - partnering with our customers and communities to build a clean, equitable, upgraded grid.

We know we need more clean and renewable resources, faster. We agree with the comments your staff shared in response to our draft RFP this summer: we must move thoughtfully, and with intention, to procure the approximately 1,500 - 2,000 MW of clean and renewable resources we estimate we will need between now and 2030 to meet our target. We also estimate we will need approximately 800 MW of non-emitting capacity resources by 2030 to help ensure continued reliable service is available for all. To make necessary progress to meet the 2030 GHG reduction target and the clean energy expectations of our customers, we are seeking through our RFP approximately 400 - 500 MW of clean and renewable resources, approximately 375 MW of non-emitting capacity resources and an additional 100 MW of clean and renewable resources to meet customer demand in support of PGE's Green Tariff Phase 2 PSO option. We hear our customers clearly: they want cleaner, greener and affordable energy as quickly as possible. If beneficial to customers and in balance with affordability and reliability, we will work with the Commission to evaluate the opportunity to procure additional resources through this RFP, with a potential target of getting up to 1/3 of the clean resources needed to meet the 2030 emissions reduction target. We will work with the Independent Evaluator, Staff and stakeholders in examining paths forward to ensure our system remains reliable and affordable as we decarbonize.

We also know the future grid looks different and involves all of us. We thank you for setting expectations for a human-centered planning approach to the DSP because building a reliable, affordable and equitable clean energy future requires us to partner with customers on how we re-think the electric grid of the future. We are proud to announce our Community Engagement Plan that we co-developed with community-based organizations (CBOs) through our DSP process. Meeting our 2030 goal means partnering with our customers in new and exciting ways, as we estimate that as much as

25% of the flexibility we need to achieve the decarbonized future could come from customers and distributed energy resources (DERs). PGE plans to make strategic investments in its distribution system to enable this transition to a more decentralized, two-way power grid. Key improvements include interconnection process improvement and making the necessary investments in protective equipment and digital sensing devices that can monitor the state of the grid to maintain visibility, security and operational control in a high-DER future. For example, we evolved our net-metering map to our new Distributed Generation Evaluation Map, which integrates U.S. Census demographic data & PGE DER readiness data. This provides greater transparency and visibility to customers who wish to interconnect clean energy technologies to the grid.

Further thoughtful planning and robust engagement is needed to reach the 2030 target. We value the planning process and the ongoing collaboration with the Commission, OPUC staff, customers and key stakeholders as we bring HB 2021 to life. We requested the extension of our IRP to March 2023 in order to make HB 2021-related updates, including formation of the Community Benefits and Impacts Advisory Group, which will help inform development and equitable implementation of our inaugural Clean Energy Plan. We took a critical step toward social and environmental justice in our DSP filing, working with key community groups to ensure that we address and acknowledge disparities and impacts within all the communities we serve. We look forward to expanding this work with the Community Benefits and Impacts Advisory Committee in the months ahead.

We appreciate your and your staff's leadership as we make progress towards the affordable, reliable and equitable clean energy future that we all want.

Sincerely,

Brett Sims

Re: UM 2166 – In the Matter of Portland General Electric Company, Application for Approval of an Independent Evaluator for 2021 All-Source Request for Proposals

Dear Filing Center:

Enclosed for filing today in the above-referenced docket is Portland General Electric Company's ("PGE") 2021 All-Source RFP – Final Draft. This document is being filed by electronic mail with the Filing Center.

PGE worked with Staff and stakeholders to develop and adopt the remaining schedule in this proceeding. The adopted schedule was developed to allow for final shortlist acknowledgement by mid-June which would be key for projects to have an opportunity to take advantage of the Production Tax Credit (PTC). Pursuant to OAR 860-089-0250(6) PGE requests that Commission approve PGE's filing on an expedited basis that recognizes the progress made to date in UM 2166 following the approval of PGE's Scoring and Methodology application.

Thank you in advance for your assistance.

Sincerely,

A handwritten signature in black ink that reads "Loretta Mabinton". The signature is written in a cursive, flowing style.

Loretta Mabinton
Managing Assistant General Counsel

Purpose and Scope

PGE has issued a 2021 All-Source RFP to make an important step in decarbonizing Oregon's grid. In accordance with the 2019 IRP Action plan and updated according to the Oregon Public Utility Commission's (OPUC) Order No. 21-320, this RFP will look to procure renewable energy and non-emitting dispatchable resources to meet identified 2025 capacity needs. The recent passage of HB 2021 by the Oregon State Legislature mandates and reinforces PGE's commitment to further decarbonize PGE's portfolio. PGE is committed to reduce our emissions by 80% by 2030 and procurements resulting from this 2021 All-Source RFP will provide necessary progress to meet this imperative.

Procurement Targets

PGE is conducting this RFP to contract for resources to meet its long-term energy and capacity needs identified in the 2019 IRP and recently updated. To meet PGE's long-term energy and capacity resource needs PGE will look to procure approximately 150 MWa of qualifying renewable energy resources and sufficient dispatchable capacity resources to meet the remainder of PGE's 375 MW capacity need. PGE will consider procuring more renewable resources to ensure necessary progress in achieving HB 2021 requirements. Specifically, PGE will explore procuring approximately 65 MWa of additional renewable resources beyond the 150 MWa target, positioning PGE to have procured approximately one third of its forecasted renewable needs to achieve the HB 2021 2030 goal. Following renewable resource procurement on behalf of PGE's cost of service customers, PGE will look to procure 100 MW of renewable resources in support of PGE's Green Energy Affinity Rider (GEAR) program's PGE supply option.

PGE's 2021 All-Source RFP will differentiate between renewable resources and non-emitting dispatchable resources. Renewable resources must be RPS eligible and qualify for the federal Production Tax Credit (PTC) or the federal Investment Tax Credit (ITC). Non-emitting dispatchable resources must be able to be called upon by PGE to dispatch at controlled times. Non-emitting dispatchable resources include energy storage facilities such as battery storage and pumped hydro. Hybrid resources that combine storage and a renewable resource will be considered renewable resources. All resources (dispatchable or renewable) must be online by the end of 2024, with the exception of long-lead-time pumped hydro resources.

The timing of the 2021 All-Source RFP promotes affordable outcomes through the capture of available federal energy tax credits while allowing PGE to manage and respond to a challenging planning environment. Notably, PGE's RFP schedule allows bidders to take advantage of the Internal Revenue Service's (IRS) construction timeline extension for the 80% Production Tax Credit (PTC). The availability of federal energy tax credits including the PTC affords PGE the opportunity to decarbonize affordably and reliably. In addition, the case for resource procurement has further solidified as uncertainties regarding the COVID-19 pandemic clear, the likelihood of extreme weather increases, and the retirement of regional capacity resources continues.

About PGE

Headquartered in Portland, Oregon, PGE serves just over 900 thousand retail customers in 51 incorporated cities (see territory in Figure 1).

PGE owns generation assets including five gas-fired thermal plants, the Biglow Canyon, Tucannon River and Wheatridge I wind farms, and joint ownership in two units at Colstrip, a Montana based coal plant. PGE also holds long-term contracts for energy from the Mid-Columbia hydroelectric projects on the Columbia River as well as several wind and solar facilities, and regularly enters into short and mid-term wholesale power supply contracts.

Figure 1: PGE's Service Territory

For more information, see PGE's website: www.portlandgeneral.com.

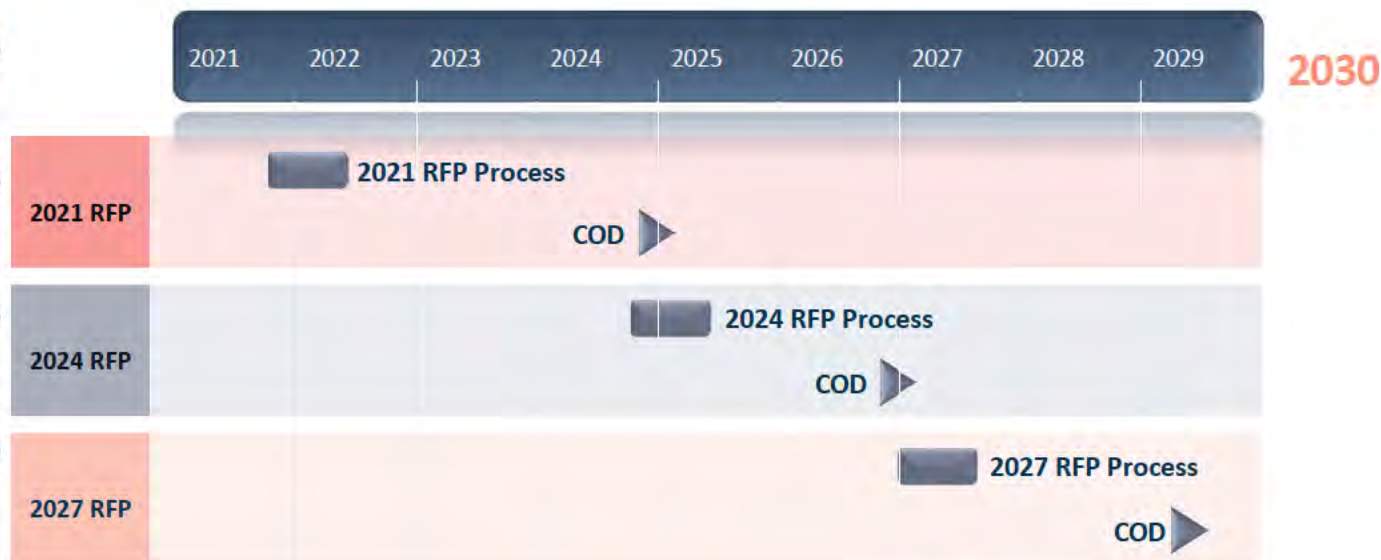

Resource Needs

PGE currently forecasts a shortfall of capacity and non-emitting energy necessary to meet forecasted capacity needs and emission reduction requirements. Current estimates forecast a 372 MW capacity need by 2025 to meet planned capacity adequacy standards. In addition, the passage of Oregon HB 2021 requires PGE to reduce greenhouse gas emissions by 80% relative to baseline levels by 2030. Initial estimates indicate a need for at least 650 MWa of renewable resources and an additional 800 MW of non-emitting capacity resources incremental to PGE's current portfolio. For more information on PGE's resource needs, refer to Appendix Q.

PGE has requested a waiver to file PGE's subsequent Integrated Resource Plan in 2023 inclusive of PGE's HB 2021 compliance plan. If acknowledged, any competitive solicitation arising from that future Action Plan filing is likely not to commence before 2024. As such, it remains important for PGE to make direct and meaningful progress toward HB 2021's 2030 compliance mandate through resource procurement performed in this 2021 All-Source RFP. For this reason, PGE will target procuring approximately 150 MWa of renewable resources in this solicitation and will consider procuring more renewable

resources if warranted to further progress toward PGE’s 2030 compliance requirement. Figure 1, displays a feasible procurement timeline that could allow PGE to procure sufficient resources to meet PGE’s approaching compliance and capacity needs.

Figure 1: Feasible Procurement Pathway Timeline

Independent Evaluator

The Oregon Public Utility Commission has selected Bates White as the independent, third-party evaluator (IE), to help ensure the RFP is conducted in accordance with the OPUC Competitive Bidding Rules and that all bids are evaluated consistently and impartially. The IE will report to the OPUC. During the remaining portions of the RFP process Bates White will:

- Review PGE’s 2021 All-Source RFP screening for bidder eligibility.
- Participate in any pre-bid conferences and workshops and present on the role of the IE in the competitive solicitation.
- Monitor all aspects of the solicitation process for the final short-list of bids, including the following:
 - 2021 All-Source RFP(s) screening
 - Communications between bidders and PGE before and after proposals are due
 - Any requested bidder updates
 - Any amendments to the 2021 All-Source RFP issued by PGE
 - Evaluation and ranking of responses
 - Selection of the initial short-list of bids
 - Evaluation of capacity factor verification report (to be provided by independent third-party expert) for variable energy resource bids
 - Selection of the final short-list of bids
- Audit the bid evaluation process and validate that evaluation criteria, methods, models, and other solicitation processes have been applied consistently and appropriately to all bids. Verify assumptions, inputs, and results are appropriate and reasonable.

- Provide supplemental reports, scores, and evaluations for the following:
 - An assessment of the reasonableness of the score(s) for PGE's benchmark resources.
 - An independent score of PGE benchmark resource(s) and all or a sample of bids to determine whether the selections for the initial and final short-lists are reasonable.
 - An evaluation of the unique risks and advantages associated with available ownership structures (including the benchmark resource(s)) as well as third party bids where applicable.
 - An assessment of the design and results of sensitivity analyses of bid rankings performed by PGE and final short list sensitivities.
 - An assessment of consistency with PGE's acknowledged IRP.
- Compare the IE's and PGE's scoring and evaluation of the competing bids and attempt to reconcile and resolve any scoring differences.
- In consultation with OPUC Staff, participate in additional meetings and/or workshops with parties, hosted by Staff, related to final short-list selection and request for acknowledgment of final short-list.
- Identify and communicate conflicts of interest between bidders, the IE, and the Company as soon as they are identified. The IE shall summarize all known conflicts in its closing report.
- Participate in OPUC proceedings on acknowledgment of the final short-list of bids. Participation would include written comments filed with the OPUC and oral comments at an OPUC public meeting or hearing. This could include a formal presentation.
- Issue a Closing Report assessing the company's selection of the final short-list of bids, including all aspects of the solicitation process and the IE's involvement, observations, conclusions, and recommendations.
- Maintain involvement through negotiation process if required by Commission at the request of Staff.

Staffing Principles

In accordance with OAR 860-089-0300 PGE has ensured that any individual participating in the development of the RFP or the evaluation of bids was not involved with the preparation of a benchmark or affiliate bid and was screened from that process. PGE has designated individuals with the appropriate levels of expertise and technical knowledge to RFP and bid development teams that do not interact on RFP related matters.

In addition, as a transmission provider, PGE complies with the Standards of Conduct adopted by the Federal Energy Regulatory Commission (FERC) which govern interactions between PGE's Transmission Function Employees (TFEs) and PGE's Marketing Function Employees (MFEs) and requires these employees to function independently of each other. Also, employees who are neither MFEs nor TFEs cannot share transmission information with MFEs under FERC's "no-conduit rule."

PGE's senior leadership team will continue to provide oversight and guidance but will not directly participate in either the development of the Benchmark Resource(s) or the RFP.

RFP Schedule

In partnership with OPUC Staff and Stakeholders PGE has developed the following schedule. The RFP schedule is designed to make timely progress toward PGE's capacity and HB 2021 compliance requirements. PGE will also monitor any change to federal tax policy and will consider their impacts on the timing of PGE's solicitation.

- April 28, 2021 - PGE initiates IE selection process
- June 15, 2021 - PGE requests approval of RFP Scoring and Methodology Proposal
- July 13, 2021 - Commission selects IE
- October 5, 2021 - Commission approves RFP Scoring and Methodology Proposal
- October 15, 2021 - PGE submits final draft Renewable RFP to OPUC for approval.
- December 6, 2021 - PGE issues Final RFP.
- December 10, 2021 - Post-issuance bidder conference.
- January 4, 2021 - Benchmark bid due.
- January 17, 2022 - RFP proposals from Bidders due.
- February 11, 2022 - Initial short list identified.*
- February 18, 2022 - Best and final price update.*
- April 5, 2022 - PGE submits request for acknowledgment of short list to OPUC.*
- June 2022 - Final contracts executed with winning Bidders as applicable.*

*These dates are subject to change depending on the quantity and complexity of bids received and should circumstances require.

Guidelines for Submitting Proposals

This section describes the guidelines that parties submitting bids (Bidders) under this RFP must follow when submitting proposals.

Registration on PGE's RFP Website

PGE's RFP website is the platform for communication and bid materials exchanges between Bidders and PGE. The Independent Evaluator has full access to and control of this site. All prospective Bidders, stakeholders, and other interested parties may register on PGE's RFP website at www.PortlandGeneralRFP2021.com. The website is secure and password protected so that confidential information can be posted on and exchanged via the site.

Other features of the site include:

- The ability to download all public RFP documents, including copies of this document and all related contracts, term sheets and appendices.
- An announcement board for posting of information for the public and Bidders.
- The capability for Bidders to anonymously post questions and comments that can be seen by all users.
- Confidential bid folders for each bid, for the retention and exchange of bid-specific data.

- Confidential evaluation folders for bid evaluation and retention of data for use during regulatory proceedings.

Procedural and Commercial Questions

All correspondence regarding procedural questions, bid submissions and questions related to product characteristics, terms and conditions should be submitted to PGE's RFP website at www.PortlandGeneralRFP2021.com. PGE, in consultation with the IE, as appropriate, will post answers to questions from Bidders, stakeholders, and other interested parties on the site.

Submitting Bids

Bidders may submit one or more bids responding to the requested energy product(s). All bids must be submitted online no later than 12:00 p.m. Pacific Time on January 17, 2022, using the bid form that PGE will provide on the RFP website www.PortlandGeneralRFP2021.com. The bid form will require Bidders to submit information in support of their bids, including but not limited to project description, transaction type and price, project development criteria and developer experience, interconnection and scheduling services, tax benefits, permitting, project resource characteristics, operating costs, credit and financial, etc. Bidders may edit their online bid form until the bid submission deadline at 12:00 p.m. Pacific Time on January 17, 2022 at which time bid forms will be closed to edits, and will be considered to be final submissions.

PGE's Benchmark Bid must be submitted no later than 12:00 p.m. Pacific Time on January 4, 2022, and will be evaluated, scored, and delivered to the IE prior to the receipt of third party bids.

All Bidders with bids on the initial short list will be invited to provide best and final price updates no later than February 18, 2022. Best and final price updates will only be accepted if the offer's total price is reduced relative to the initial offer.

Bid Fee

To help defray the costs of the IE and encourage high quality proposals and qualified Bidders, each Bidder in this RFP must pay a non-refundable bid fee of \$10,000. A bid may consist of one base proposal in addition to two alternatives for the same bid fee. The alternatives may consist of a different technology, volume, contract term, in-service date, and/or pricing structure for the same resource at the same location.

A proposal for a different bid at a different site will be considered a separate proposal and will be subject to a separate bid fee.

Fees are to be remitted via electronic funds transfer to PGE. For purposes of assessing bid fees, the IE, in consultation with PGE, shall confirm whether a Bidder's submission constitutes one or more proposals based on the criteria described above.

Submitting a Confidentiality and Non-Disclosure Agreement

The Confidentiality and Non-Disclosure Agreement is available for completion at www.PortlandGeneralRFP2021.com (and is included as Appendix L to this RFP). Bidders are required to complete and sign the confidentiality agreement prior to the bid submission deadline. The confidentiality agreement is to be submitted to PGE through the RFP website. Due to the need to

ensure uniform treatment of all confidential information, PGE will not accept changes to the Confidentiality and Non-Disclosure Agreement.

PGE will treat any proprietary and confidential information contained in a bid, in a manner consistent with the terms of the Confidentiality and Nondisclosure Agreement and any Protective Orders issued by the OPUC, provided that such information is clearly identified by the Bidder on each confidential page as “Confidential” or “Confidential Information.” Each Bidder must execute and deliver a copy of the Confidentiality and Nondisclosure Agreement, as soon as possible, but no later than the time of the submission of its bid or bids. Any Confidentiality and Non-Disclosure Agreement received by PGE prior to December 13th, 2021 will be countersigned and returned to the bidder before January 4th, 2022. It is the Bidder’s responsibility to indicate clearly in its proposal what materials and what pages it deems to be “confidential” and subject to the Confidentiality and Nondisclosure Agreement.

Validity of Price and Offer

By submitting a bid, the Bidder acknowledges and agrees that the terms of its proposal shall remain irrevocable for the earlier of 250 days after the bid responses are due or when PGE issues a written release of the bid at or before the time the initial or final, as applicable, short list is issued. Pricing may be conditional on a commercial contingency, but all commercial contingencies must be satisfied or waived to remain a candidate bid on the final short-list. Pricing may not be contingent on another offtake agreement for a portion of a facility to guarantee pricing. For Bidders that are participating in the 2022 BPA Cluster Study Process, PGE requests that such Bidders incorporate estimated costs associated with those upgrades in their bids. PGE will not accept revisions to the price based on study results.

Bid Evaluation Criteria

Bids will be assessed by PGE and the IE on the project’s economic competitiveness, project specific commercial and performance risks, and portfolio economic risk. All bids will be evaluated within an individual offer analysis to assign a bid price and non-price score. PGE’s price score comprises 70 percent of our evaluation criteria, reflecting PGE’s desire and commitment to obtain the best possible value for our customers. Non-price factors comprise the other 30 percent and reflect commercial and performance risks in addition to operational attributes of the bid proposals. Additional description of the bid evaluation criteria is provided in the Bid Evaluation Process section below and in Appendix N.

Reservation of Rights

This RFP is not, and shall not be construed to be, an offer by PGE. PGE is not bound to enter into negotiations or execute an agreement with, or purchase any products from, any Bidder as a result of this RFP. No rights shall be vested in any Bidder, individual or entity by virtue of its preparation to participate in, or its participation in, this RFP. No binding commitment shall arise on the part of PGE to any Bidder under this RFP until and unless the parties execute definitive agreements that become effective in accordance with their terms.

Each Bidder shall be solely responsible for all costs it incurs in preparing to participate in, participating in, or responding to this RFP.

The bids received will be evaluated and selected based on the information supplied by each Bidder pursuant to this RFP. PGE reserves the right to modify or withdraw from this RFP process, or modify the schedule and any provisions contained herein, for any reason. PGE also reserves the right, consistent

with the Competitive Bidding Rules, to make purchase commitments at any time to suppliers not participating in this RFP process.

PGE reserves to itself:

- The selection of final short-listed bids and the awarding of contracts, if any, in the exercise of its sole discretion.
- The right to include projects on the final shortlist with energy and nameplate capacity amounts in excess of its target to ensure sufficient back-up proposals are available should some bidder(s) materially depart from their bid(s) during the negotiation phase.
- The right to reject any and all bids, and any portion of a specific bid for any reason.
- The right to waive any immaterial non-conformity in any bid received.
- The right to prioritize negotiating with bids on the final shortlist most likely to overcome, in PGE's discretion, remaining development and delivery risk.
- The right to award a contract to a Bidder based on a combination of price and non-price factors, a quantitative and qualitative assessment of portfolio fit, and post-bid negotiations.

Document Retention

All bids and exhibits supplied to PGE during the RFP process will become the property of PGE. PGE will retain all bid materials supplied to it and pertinent information generated internally by it in connection with the RFP process in accordance with PGE's document retention policies.

Requested Products

Through this RFP, PGE is looking to meet its identified 2025 capacity need of approximately 375 MWs with new renewable and non-emitting capacity resources. All resources participating in this solicitation must be online by 12/31/2024 with the exception of pumped hydro resources that must be online by 12/31/2027.¹ Bidders may propose additional phases for development, but PGE will only evaluate those phases proposed to be online by 12/31/2024.

Renewable resources must qualify for Oregon's RPS, and they must include all environmental attributes, including Renewable Energy Certificates (RECs). Bidders will be responsible for ensuring RECs from projects are bundled as defined in ORS 469A.005, and that they are established through Western Renewable Energy Generation Information System (WREGIS) consistent with OAR 330-160-0020. Consistent with the 2019 IRP Action Plan PGE anticipates procuring approximately 150 MWa of renewable resources for all cost-of-service customers, and per Order No. 21-091² PGE may procure up to 100 MWs of renewable resources for the PGE supplied option of the GEAR. In compliance with Order

¹ PGE will also consider other long-lead time technologies that satisfy the remainder of PGE's eligibility requirements, have been commercially proven, and can be shown to require additional construction time beyond what is possible by 2024.

² Order No. 21-091 Available at: <https://apps.puc.state.or.us/orders/2021ords/21-091.pdf>

No. 21-320³, PGE will also specifically evaluate procuring an additional 65 MWa of renewable resources beyond those above listed volumes.⁴

Non-emitting dispatchable resources must have the capability to dispatch at specified times when called upon by PGE. Examples of these resources include pumped hydro, lithium ion battery storage, and geothermal resources. PGE will utilize portfolio analysis to identify the optimal combination of non-emitting dispatchable resources and renewable resources to procure.

For renewable resources and non-emitting dispatchable resources PGE will consider both physical purchases through a Power Purchase Agreement (PPA) as well as ownership positions through structures including the acquisition of development rights, joint ownership, and build-own-transfer agreements. PGE will also consider a combination of these agreement types.

PGE reserves the right to vary from the procurement sized targets based on its evaluation of the price and risk of the bids. This could include not procuring any resources as part of this RFP.

Table 1

Product	Minimum Size	Target Size	Commercial Online Date	Minimum Agreement Term	Maximum Agreement Term
Renewable Resource	3 MW for solar resources and 10 MW for all other resources	150 MWa ⁵ for all Cost of Service Customers and 100MW for the Green Future Impact program	12/31/2024	PPA: 15 years	PPA: 30 years
Non-Emitting Dispatchable Resource	10 MW for all storage resources	PGE's remaining capacity need after renewables acquisitions	12/31/2024, but pumped storage can come online by 12/31/2027	PPA: 15 years	PPA: 30 years

³ Order No. 21-320 Available at: <https://apps.puc.state.or.us/orders/2021ords/21-320.pdf>

⁴ Order No. 21-320 Appendix A Page 13.

PGE forecasts 650 MWa of additional renewable resources by 2030. 65 MWa approximately is one third of 650MWa less 150 MWa.

⁵ PGE will separately consider a target procurement volume of 215 MWa and the 100 MW GFI volume.

Minimum Requirements

As part of the RFP PGE has the following requirements for participating resources. For additional discussion of these requirements please see Appendix N, PGE's approved scoring and modeling methodology.

Entity

As applicable, entities must be authorized under the law to sell power, and able to schedule power and operate under industry standards established by the Federal Energy Regulatory Commission (FERC), Western Electricity Coordinating Council (WECC), and the North American Energy Reliability Council (NERC), or other applicable regulatory body or government agency.

Financing

As applicable, Bidders must provide a reasonable plan to obtain project financing. Those Bidders who are unable to internally or balance sheet finance the proposed project (supported by appropriate financial statements) must provide evidence of a good faith commitment from a financial institution or lender prior to placement on PGE's final short list.

Technology

PGE will accept bids for resource core technologies that are commercially proven and deployed at large scales within the North American utility industry. Renewable resources bid into the solicitation must be RPS eligible. Dispatchable resources must be non-emitting technologies that can dispatch when called upon.

Bidders are responsible for ensuring and demonstrating that solar panels associated with any bid are not sourced from listed entities on the Department of Commerce - Bureau of Industry and Security's Entity List to ensure that projects do not include polysilicon produced with forced labor.

For energy storage facilities, Bidders must provide a list of major US installations of this storage technology. Storage medium, chemistry and power conversion systems of these installations must be of like kind to what is being proposed. Such installations must be in proved commercial operation beyond R&D demonstrations.

Online Date

All components of resources must be online no later than the end of 2024. For example, in the instance of a solar & storage resource, both the solar and storage components need to be online by 12/31/2024. PGE has made an exception for pumped hydro resources that have long lead times due to the unique

value that they offer.⁶ PGE is prepared to accept bids for those resources participating as long as all components of those resources come online by the end of 2027.

Qualifying Product

PGE shall be the sole offtake for all output from the facility or portion of the facility bid into this RFP. Projects must include all power attributes including associated renewable energy credits, environmental attributes, energy benefits, and capacity benefits.

Bidders with renewable resource bids will be responsible for ensuring RECs from renewable resources are bundled as defined in ORS 469A.005, and that they are established through Western Renewable Energy Generation Information System consistent with OAR 330-160-0020.

Nameplate Size

Resources that are bid into this RFP must be large enough to qualify for contracting under PGE's Schedule 202 for qualifying facilities.⁷ Solar resources must be larger than 3 MW and all other facilities must be larger than 10 MW. If a Bidder has an existing Schedule 202 contract with PGE, PGE does not make any commitments to allow the Bidder to exit the existing agreement.

Term Length

For bids that include a power purchase agreement structure, PGE requests that bids have term lengths that are no shorter than 15 years and no longer than 30 years.

Tax Credits

Renewable resources must be eligible for the federal PTC or ITC and all renewable resource bids must demonstrate achievable qualification qualities and plan to establish how the project will obtain the tax credits.

Credit

Bidders must meet PGE's credit eligibility thresholds. For investment grade Bidders, their long-term, senior unsecured debt must be rated BBB- or higher by Standard & Poor's and Fitch, BBB (low) or higher by DBRS, or Baa3 or higher by Moody's Investor Services, Inc. For non-investment grade Bidders, they must demonstrate, prior to final short list, that a qualified institution will secure the Bidder's performance obligations through a letter of credit and guaranty, in a form acceptable to PGE.

Additional detail on PGE's credit requirements is included in Appendix K.

⁶ PGE will also consider other long-lead time technologies that satisfy the remainder of PGE's eligibility requirements, have been commercially proven, and can be shown to require additional construction time beyond what is possible by 2024.

⁷ This requirement is consistent with OAR 860-089-0250(4).

Site Control

Bidders must support the bid by demonstrating dependable site control, for both the location of the resource and any gen-tie path that is required. At the time of bid submission, Bidders must possess at least one of the following:

- title to the site
- an executed lease agreement
- an executed easement
- an executed option agreement applicable to a minimum of 80% of the project site

The site control documents should reflect the resource type bid into this RFP.

Prior to placement on PGE's final short list, bidders will be required to demonstrate site control for 100% of the project site.

Permitting

Please see Exhibit A in the Scoring and Modeling Methodology document included as Appendix N to this larger RFP document. The chart in Appendix N lists environmental permits and surveys commonly required for construction and operation of an energy project. For each permit and survey, the chart illustrates when the permit must be obtained, or survey must be completed - by bid, final shortlist, or construction - for different technologies. "By bid" requirements necessitate that the project receives the permit from the authorizing agency or the survey has been completed by the time of bid submission. "By final shortlist" requirements necessitate that the project receives the permit from the authorizing agency by the time PGE announces the final shortlist. "By construction" requirements necessitate that the project receives the permit from the authorizing agency before construction begins.

In the event a specific permit is not required at all or during the RFP process for the resources that are bid into this RFP, the Bidder may provide a narrative explanation on the bid form regarding why it is not applicable.

Delivery points

PGE will accept delivery within PGE's balancing authority area and at BPAT.PGE. PGE will not accept delivery at Pelton Round Butte or at PacifiCorp West.

The BPAT.PGE Point of Delivery (POD) is associated with the following substations or "sinks":

- PGE Contiguous
- Pearl 230 kV (Sherwood)
- McLoughlin 230 kV
- Keeler 230 kV (St. Marys)
- Rivergate 230 kV

- Bethel 230 kV⁸
- Troutdale 230 kV (Blue Lake)

Interconnection

For a bid to qualify for the initial short list it must have the following:

- An active generation interconnection request in the transmission provider's interconnection queue
- A completed system impact study
- If interconnection involves a 3rd party other than the transmission provider, the bid must also include an interconnection request to the 3rd party and all associated studies.

To qualify for the final short list, the Bidder must have a completed facilities study.

Bidders proposing to interconnect a resource within PGE's Balancing Authority Area will need to include all incremental costs to deliver, or sink, energy from the resource to PGE's load. Bidders can determine these costs by requesting Network Resource Interconnection Service and Network Integration Transmission Service under PGE's Open Access Transmission Tariff (OATT) from PGE's Transmission and Reliability Services Department (T&RS) or Bidders can request Energy Resource Interconnection Service and Point-to-Point Transmission Service under PGE's OATT from T&RS. Either process will enable T&RS to study whether any system upgrades are needed to accommodate transmission service for the bid. Questions concerning the various types of Interconnection and Transmission Service available under PGE's OATT should be directed to T&RS.

Transmission - Renewable Resources

To qualify for this RFP as a renewable resource, a Bidder must have an achievable plan for long-term transmission service for 80% of the interconnection limit of the facility. Short term firm services may be used for the remaining 20% of the facility's interconnection limit. Eligible long-term transmission services include long-term firm, long-term conditional firm bridge, or long-term conditional firm reassessment. For long-term transmission services, Bidders relying on BPA for transmission service are required to have either previously been granted eligible transmission service or have an eligible and active OASIS status Transmission Service Request (TSR) participating in the BPA TSR Study and Expansion Process (TSEP)⁹. The eligible transmission service must originate at the resource POR/POI and provide delivery to one of the acceptable Points of Delivery, listed above, prior to the project's Commercial Operation Date (COD). Long-term rights must match the duration of the contract term or include rollover rights.

⁸ At this time the Bethel 230 kV POD has been determined to have insufficient available capacity and is unavailable for new transmission service requests. However, Bidders that have already been granted long-term service at this POD may use this POD.

⁹ See BPA TSR Study and Expansion Process Business Practice, dated 4/2/2021, available at: <https://www.bpa.gov/transmission/Doing%20Business/bp/tbp/TSR-Study-Expansion-Process-BP.pdf>

PGE's evaluation process will determine if there are additional costs or risks to deliver the resource to PGE load.

If a Bidder has a TSR that utilizes Newpoint as the Point of Receipt (POR), the TSR must reference the specific Generation Interconnection Request number for the resource in the comments field.

Transmission -Dispatchable Resources

To qualify for this RFP as a dispatchable resource, a bidder must have Long-Term Firm transmission service for 100 percent of the facility's interconnection limit. Bidders relying on BPA for transmission service are required to have either previously been granted eligible transmission service or have an eligible and active OASIS status Transmission Service Request (TSR) participating in the BPA TSR Study and Expansion Process¹⁰. The transmission service must originate at the resource point of receipt (POR)/point of interconnection (POI) and provide delivery to one of the acceptable Points of Delivery, defined below, prior to project COD. Long-term rights must match the duration of the contract term or include rollover rights.

PGE's evaluation process will determine if there are additional costs or risks to deliver the resource to PGE load.

If a Bidder has a TSR that utilizes Newpoint as the POR, the TSR must reference the specific Generation Interconnection Request number for the resource in the comments field.

Integration

For projects located outside of PGE's Balancing Authority Area, Bidder will procure, and PGE will reimburse Bidder for all integration services from an entity, mutually agreed upon by the parties, that may be required to ensure delivery of energy as scheduled to the Delivery Point. Integration Services include, but are not limited to, generation imbalance, variable energy resource balancing service and any EIM costs associated with interconnection. Integration Services do not include ancillary service costs associated with the transmission provider's provision of firm transmission service.

Labor

Union labor must be utilized for major construction activities related to the resource and must include a Project Labor Agreement (PLA) requirement in any related executed Engineering, Procurement and Construction Agreements.

PGE requires that the labor group has policies in place that are designed to limit or prevent workplace harassment and discrimination.

¹⁰ See BPA TSR Study and Expansion Process Business Practice, dated 4/2/2021, available at: <https://www.bpa.gov/transmission/Doing%20Business/bp/tbp/TSR-Study-Expansion-Process-BP.pdf>

PGE will be asking that the labor group has policies in place that are designed to promote workplace diversity, equity and inclusion of communities who have been traditionally underrepresented in the energy sector including, but not limited to, women, veterans and Black, Indigenous and People of Color, with an aspirational goal of having at least 15 percent of the total work hours performed by individuals from those communities.

PGE requires that Bidders recognize this requirement upon bidding and affirm their commitment to meet the requirement. However, PGE does not expect a Bidder to have secured a PLA prior to contract execution with PGE as it is customary to negotiate such labor agreements closer to construction activities.

Equipment manufacturer

For agreement structures that contemplate utility ownership, all major equipment manufacturers must be PGE preferred vendors. A list of PGE's preferred vendors is supplied in Appendix M, PGE's technical specifications.

Technical specifications

For agreement structures that contemplate utility ownership, concurrent with supplying the best and final offer the Bidder must supply redlines to PGE's technical specifications.

Service agreement

For resources that contemplate a utility ownership structure, bids must include quoted vendor costs for long-term service agreements (LTSA) for a minimum of five years. For battery-energy storage resources, LTSAs must include commitments to maintain the capacity performance through augmentation or alternative mechanisms.

Usable Energy Storage Bidding

Bidders are required to bid energy storage resources on a contract capacity basis and must account separately for minimum and maximum system state of charge. PGE will only accept bids that express cost and performance on a usable state of charge basis that allows PGE to dispatch the project from a 0%-100% state of charge without commercial or performance consequence.

Contract Terms and Conditions

Utility Owned Commercial Structures

PGE invites Bidders to submit proposals for various types of asset sale and ownership transfer or service agreements. Form Asset Purchase Agreement (APA) and Engineering Procure Construction (EPC) term sheets are included in Appendix D. Form APA and EPC Agreements are included in Appendix H and Appendix I. AT THE TIME OF BID SUBMISSION, BIDDERS ARE REQUIRED TO IDENTIFY, THROUGH REDLINES, EXCEPTIONS TO ANY TERM OR CONDITION IN THE TERM SHEET. For terms the Bidder does not intend to accept, the Bidder is required to propose alternative terms and conditions in redline format to the form term sheets. Should proposed revisions to highlighted terms and conditions increase

PGE's exposure to risks related to project schedule, performance or cost then PGE will adjust the bid's non-price score consistent with Appendix N. PGE will evaluate all proposed revisions, but is under no obligation to accept any revisions or adopt any changes.

Bidders are not required to mark form agreements, which are included for reference to further characterize the terms and conditions that PGE expects to initiate its negotiations preceding contract execution.

Ownership proposals may include (but are not limited to) sales of existing assets, acquisition of project development rights, APA & EPC agreements, BTA agreements or joint ownership. PGE asks that for Build Transfer Agreements (BTA) proposals Bidder should mark both APA and EPC term sheets in addition to adding additional principal terms to describe the requested structure. PGE will also consider hybrid structures that include both an ownership component and a power purchase agreement (e.g., the sale of a phase or portion of a project with an off-take agreement for the balance or a PPA with purchase option or obligation). In addition, PGE will consider affiliate ownership opportunities delivered to PGE customers through a power purchase agreement.

Lastly, bids for new, utility ownership resources are expected to be procured and constructed in accordance with PGE's established technical requirements. Appendix M details PGE's technical requirements for the purchase of new wind, solar, storage, and hybrid facilities in addition to general specifications applicable to all new generation technologies. Bidders submitting ownership bids must review the technical specifications to ensure that the bid and associated price reflects PGE's identified requirements. Should a Bidder wish to offer a product different than that suggested by the technical specifications, the Bidder is required to identify through a template exception log which specifications the Bidder takes exception to and identify a cost estimate necessary to align the Bid with the technical specifications. PGE will consider whether the proposed exception is acceptable before applying any owner's cost adjustment necessary to align the Bid with the technical specifications.

Third Party Owned Commercial Structures

PGE invites Bidders to submit proposals for various types of power purchase agreement. The form Renewable PPA Term Sheet is included in Appendix A. The form Storage Capacity Agreement Term Sheet is included in Appendix B. The form Renewable and Storage PPA Term Sheet is included in Appendix C. Form Renewable PPA and Storage Capacity Agreements are included in Appendix E and Appendix F. Bidders must review the Form PPA term sheet for their resource type included in this RFP. AT THE TIME OF BID SUBMISSION, BIDDERS ARE REQUIRED TO IDENTIFY, THROUGH REDLINES, EXCEPTIONS TO ANY TERM OR CONDITION IN THE TERM SHEET. For terms the Bidder does not intend to accept, the Bidder is required to propose alternative terms and conditions in redline format to the form term sheets. Should proposed revisions to highlighted terms and conditions increase PGE's exposure to risks related to project schedule, performance or cost then PGE will adjust the bid's non-price score consistent with Appendix N. PGE will evaluate all proposed revisions, but is under no obligation to accept any revisions or adopt any changes.

Bidders are not required to mark form agreements, which are included for reference to further characterize the terms and conditions that PGE expects to initiate its negotiations preceding contract execution.

PGE recognizes that alternative firm energy sale structures may be available and Bidders proposing such alternatives must offer revisions to the term sheet or propose a new term sheet.

Bid Evaluation Process

Overall Process

Bid Submission (described Above)

As described above in the guidelines for submitting proposals, bids will be submitted via PGE's RFP website at www.PortlandGeneralRFP2021.com. Bids for benchmark resources are due on January 4th, 2022 and bids for all other resources are due on January 17th, 2022. To have the resource evaluated Bidders must provide PGE with all data requested in the bid evaluation form. PGE will score the benchmark resources first before scoring any other resources. In the instance that PGE has a question regarding a submission, PGE will issue a question to the Bidder and require a response from the Bidder within three business days. In the instance that PGE does not receive a response, the bid may not pass the bid screening or might be subject to a scoring adjustment due to lack of pertinent information.

Initial Bid Screening

PGE will screen each bid based on the minimum qualification criteria described above. Bids that do not sufficiently meet PGE's minimum qualification criteria will not receive a price and non-price score and will not be considered for the initial shortlist. Bidders should note that there are different minimum criteria for the initial shortlist and the final shortlist as it pertains to credit, site control, permitting, interconnection and transmission.

Initial Shortlist Determination

After PGE determines that a bid meets the minimum qualification criteria to be considered for the initial shortlist the bid will be evaluated to determine a price and non-price score in accordance with the scoring and modeling methodology included in Appendix N. At this stage each bid will be evaluated individually and will receive a score that is specific to that bid. Price and non-price scores for renewable resources will be determined separately from the scores for non-emitting dispatchable capacity resources.

Initial Shortlist Notification & Additional Actions

Once PGE has determined which resources are on the initial shortlist it will notify bidders and ask for additional documentation or updates regarding letters of credit for non-investment grade bidders, site control, permitting, the completed facilities study for interconnection and any updates on the transmission plan of service and/or the BPA TSR Study and Expansion Process. Bidders must provide these updates to be considered for the final shortlist. For a Bidder that is including utility owned resources PGE will also require that the Bidder supplies reasonable redlines to the technical specifications to be on the final shortlist. PGE plans to reach out to Bidders on the Initial Shortlist on February 11, 2022 and requires that Bidders reply by February 18, 2022. Please note that PGE has

already provided its technical specifications within this RFP and recommends that Bidders including a utility owned structure for all of or a portion of their bid start to look at the technical specifications so that they can provide necessary redlines when requested.

Final Shortlist Bid Screening

Once PGE receives the requested information from the Bidder with project(s) on the initial shortlist PGE will examine the information to determine if the resource still meets the minimum qualification criteria for the RFP. If the criteria are still met, PGE will include the bid in its portfolio analysis.

Final Shortlist Determination

PGE will use portfolio analysis to develop updated price scores that look at combinations of bids and will update the non-price scores accordingly to reflect the combination of those resources. The final shortlist will be selected based on the portfolios of resources that perform the best. PGE will include projects on the final shortlist that are in excess of its target procurement amounts to ensure sufficient back-up proposals are available should some bidder(s) materially depart from their bid(s) during the negotiation phase.

Notification and Negotiation

Once the final shortlist has been determined PGE will notify Bidders if their bids are selected. PGE will then proceed with negotiations with top performing bids. PGE reserves its discretion to end negotiations and move on to remaining Bidders if entities are unable to guarantee the bid price, have unresolved commercial contingencies, or are otherwise unable to reach agreement with PGE.

Bidder Feedback

Upon request, PGE will offer feedback to unsuccessful Bidders on the competitiveness of their proposals. PGE will make available this feedback after executing all agreements with successful Bidders, or after announcing the termination of the solicitation. PGE will not disclose any third-party confidential information through this voluntary feedback process. PGE will identify the relative performance of their bid by identifying a bid's quartile performance in price, non-price and total score. Furthermore, as appropriate, PGE will identify all minimum thresholds the bid did not achieve.

WITNESS: SCOTT SHEARER

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 1800

Opening Testimony

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Scott Shearer. I am a Utility Analyst employed in the Rates and
3 Telecommunications Section of the Public Utility Commission of Oregon
4 (OPUC). My business address is 201 High Street SE., Suite 100, Salem,
5 Oregon 97301.

6 **Q. Please describe your educational background and work experience.**

7 A. My witness qualifications statement is found in Exhibit Staff/1801.

8 **Q. What is the purpose of your testimony?**

9 A. To discuss issues related to Amazon Pay, charges in Schedule No. 300, and
10 changes to tariff rules and regulations.

11 **Q. How is your testimony organized?**

12 A. My testimony is organized as follows:

13	Issue 1. Amazon Pay	2
14	Issue 2. Schedule No. 300 Charges	4
15	Issue 3. Changes to Tariff Rules and Regulations	6

ISSUE 1. AMAZON PAY

Q. What is PGE requesting with regard to Amazon Pay?

A. Per its Application, “PGE has included \$25,500 within this case for expected Amazon Pay transaction costs.”¹

Q. What analysis did Staff complete regarding Amazon Pay?

A. Staff reviewed the Application filing and made several data requests regarding the program.

Q. Did PGE provide sufficient information for Staff to complete its analysis?

A. In part, yes. PGE responded with most of the requested information related to program costs and details around the usage of the service. However, PGE was either unable or unwilling to provide a copy of the Amazon Pay vendor contract.

Q. What was PGE’s response to Staff’s request for Amazon Pay Contract?

A. Per its response to Staff’s data request “PGE is not authorized to produce the contract, which is subject to a non-disclosure agreement.”²

Q. Does Staff agree with PGE’s stance?

A. No. PGE is not a newly regulated utility and has a long history with Commission requirements and expectations. PGE should have foreseen the need for the Commission to review contract provisions for items that would

¹ PGE / 200 Batzler - Ferchland / 7-8.
² PGE Response to Staff DR 191.

1 ultimately be paid for by ratepayers and should have ensured contract non-
2 disclosure provisions did not include regulatory review.

3 **Q. What is Staff's proposed treatment for Amazon Pay Transaction**

4 **Costs?**

5 A. Based on its restricted ability to properly review the contract provisions, Staff
6 believes the proper treatment is to deny recovery of the full \$25,500 requested
7 by PGE for Amazon Pay transaction costs.

1

ISSUE 2. SCHEDULE NO. 300 CHARGES

2

Q. What is PGE requesting for increases to Schedule No. 300 charges?

3

A. PGE proposes the increases listed in Table A.

Table A

	<i>Current Charge</i>	<i>2025 Estimated Cost</i>	<i>Proposed Charge</i>
<i>Metered Temporary Services</i>			
Non Permanent	\$1,146.00	\$1,225.27	\$1,225.00
Existing	\$870.00	\$929.57	\$930.00
Over Head Permanent	\$670.00	\$725.48	\$725.00
Underground Permanent	\$672.00	\$733.07	\$733.00
Enhanced Unmetered Fixed Feed	\$963.00	\$1,068.51	\$1,069.00
<i>Per 6-Month Renewal</i>	\$415.00		\$479.00
<i>Other Metering Charges</i>			
Special/Non-Network Meter Read	\$25.00	\$58.61	\$30.00
Meter Test Charge	\$140.00	\$158.81	\$158.00
Field Visit Charge	\$50.00	\$54.19	\$54.00
Pulse Output Metering 1-2 outputs	\$350.00	\$576.43	\$575.00
Pulse Output Metering 1-4 outputs	\$1,300.00	\$1,526.43	\$1,525.00
Wasted Trip Charge	\$180.00	\$203.48	\$203.00

4

5

Q. What is PGE's reasoning for the increases?

6

A. PGE states these increases are tied to PGE's 2025 forecasted labor costs.

7

Q. What is Staff's position on these proposed costs?

8

A. Staff reviewed the costs, and all are in line with the estimated labor costs PGE

9

outlined in its application. However, Staff is concerned that PGE has not

10

completed a full costs analysis for each of these individual charges in some

11

time. When Staff asked about the cost analysis for these items, PGE

12

responded that these costs were simply labor escalations to the existing rates.

1 Additionally, as noted in Staff Witness Madison Bolton's testimony
2 related to Line Extension Allowances (LEA),³ Docket No. UM 430 was
3 opened to ensure large customer LEA's do not shift costs to other customer
4 classes. Staff will continue to work with the Company and stakeholders in UE
5 430 to prevent new large load connections from imposing undue costs and
6 risks on other customers. Staff may revisit any related or adjacent topics to
7 new large customer connections after reviewing other parties' testimony in
8 this case.

9 **Q. What is Staff's recommendation on these costs?**

10 A. Staff believes the costs are reasonable and the Commission should approve
11 these costs as stated.

12 **Q. Does Staff have any other recommendations?**

13 A. Yes. Staff recommends the Commission require PGE to perform a full cost
14 analysis for each of these items and either:

- 15 a) File a compliance report with the Commission no later than 12
16 months after a final order in this Docket, showing the analysis and any
17 difference in the amounts charged to the actual costs; or
18 b) Require PGE to provide cost analysis for each of these services in
19 its next rate filing.

³ Staff 1600, Bolton/9-11.

1 **ISSUE 3. CHANGES TO TARIFF RULES AND REGULATIONS**

2 **Q. What changes is PGE proposing for is Tariff rules and regulations?**

3 A. PGE proposes to include contractors employed by PGE in its limitations of
4 liability in Rule C Section C of its tariff. PGE is requesting to update the
5 language to (change in **bold**):

6 *The Company **and its authorized contractors are** not liable to Customers, ESSs or
7 any other person or entity for any interruption, suspension, curtailment or fluctuation
8 in Electricity Service, or for any loss or damage caused thereby, resulting from:*

- 9
10 1) *Causes beyond the Company's reasonable control;*
11 2) *Repair, maintenance, improvement, renewal, or replacement of Facilities,
12 or any discontinuance of service that the Company determines is necessary
13 to permit repairs or changes to its Facilities or to eliminate the possibility of
14 injuries to persons or damage to the Company's property or property of
15 others. To the extent practical, such work will be done in a manner that will
16 minimize inconvenience to the Customer, and whenever practical and
17 applicable, the Customer will be given reasonable notice of such work,
18 repairs, or changes;*
19 3) *An ESS's failure to abide by the terms of the ESS Service Agreement or
20 the Tariff; Automatic or manual actions taken by the Company, including but
21 not limited to Emergency Curtailments, that in its opinion, are necessary or
22 prudent to protect the performance, integrity, reliability, or stability of the
23 Company's electrical system or any electrical system with which it is
24 interconnected; and*
25 4) *Actions taken by the Company to curtail Electricity use at times of
26 anticipated resource deficiency in accordance with the applicable provisions
27 of this Tariff.*

28 **Q. What is PGE's vetting process for contractors?**

29 A. Per PGE's response to Staff Data Request 196, "Supply Chain's Third-Party
30 Risk Management (TPRM) Program serves to identify, capture, assess,
31 document, manage, and mitigate the various risks that arise during PGE's
32 engagement with third parties. Supplier Risk Management is responsible for
33 the collection, documentation, maintenance, dissemination, and oversight of
34 risk information related to third parties under the Supply Chain purview as

1 identified in the Agreements and Supply Chain policies. The Third-Party
2 Management Lifecycle begins during the planning and development of go-
3 to-market strategies that leverage third-party resources and continues
4 through the sourcing, contracting, onboarding, day-to-day management, and
5 offboarding cycles to identify risks that arise during each of these lifecycle
6 phases and mitigate those risks. Once a third party has satisfied all the
7 required documentation and evidence in the TPRM process, they will be set
8 up in our procurement system. At this point engagements with suppliers can
9 commence.”

10 **Q. What costs would PGE incur related liability for contractors?**

11 A. In response to Staff’s inquiry about possible insurance costs PGE may have
12 to pay for contractors’ liability coverage, PGE responded that they require
13 contractors to carry their own liability insurance as PGE’s insurance only
14 covers its own personnel. As such, no additional or duplicate coverage is in
15 place.⁴

16 **Q. What is Staff’s recommendation for the proposed language?**

17 A. Staff believes the proposed language is reasonable and should be adopted
18 by the Commission.

19 **Q. Does this conclude your testimony?**

20 A. Yes.

⁴ PGE Response to Staff DR 521.

Witness Qualification Statement

July 15, 2024

WITNESS QUALIFICATIONS STATEMENT

NAME: Scott Shearer

EMPLOYER: Public Utility Commission of Oregon

TITLE: Utility Analyst
Rates, Safety, and Utility Performance Program

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: Corban University Salem, Oregon
Bachelor of Science in Business, Organizational Leadership

EXPERIENCE: 2014 - Current - Heritage Grove Credit Union
Board of Directors/Chairman of the Board
Provide strategic direction for a credit union with assets of 150 million dollars.
Reviewing and approving monetary expenditures and budget.

2007 - Current - Oregon Public Utility Commission
Utility Analyst
Research and analysis of utility company filings; including rulemaking, affiliated interests, utility purchase and sale, jurisdiction, and rate case dockets.
Telecommunications Specialist/Consumer Specialist/Senior Compliance Specialist
Reviewing and applying Oregon Administrative Rules to tariffs in relation to consumer complaints.

2006 - 2007 - Oregon Department of Justice/Division of Child Support, Administrative Specialist
Researching responsible parties in Child Support orders

1999 - 2006 - EPIQ Systems/Poorman Douglas Corp.
Claims Analyst/Senior Claims Analyst
Reviewing and implementing orders and settlements for the largest Class Action Lawsuit administrator in the United States. Auditing and processing class action lawsuits with payouts from two-hundred thousand to over one billion dollars to claimants.

CASE: UE 435
WITNESS: Kate Ayres

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 1900

Opening Testimony

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Kate Ayres. I am an Energy Justice Analyst employed in the Utility
3 Strategy and Integration Division of the Public Utility Commission of Oregon
4 (OPUC). My business address is 201 High Street SE., Suite 100, Salem,
5 Oregon 97301.

6 **Q. Please describe your educational background and work experience.**

7 A. My witness qualifications statement is found in Exhibit Staff/1901.

8 **Q. What is the purpose of your testimony?**

9 A. The following testimony provides background, analysis, and recommendations
10 regarding the Portland General Electric’s (PGE or Company) Income Qualified
11 Bill Discount (IQBD or Program) program and the Program’s cost recovery,
12 along with a discussion on customer programs.

13 **Q. Did you prepare any exhibits for this docket?**

14 A. Yes. I prepared Exhibit Staff/1902, Non-Confidential Responses to Staff Data
15 Requests.

16 **Q. How is your testimony organized?**

17 A. My testimony is organized as follows:

18	Summary and Staff Recommendations	3
19	Issue 1. Income Qualified Bill Discount Program	7
20	Issue 2. Arrearage Management	29
21	Issue 3. Customer Programs	34
22	Issue 4. Income Qualified Bill Discount Cost Recovery	42
23		

Q. Could there be changes or updates to Staff’s position and recommendations?

- 1 A. Yes. My testimony represents issues identified to date. My recommendations
- 2 and issues may change when informed by new data and after reviewing
- 3 testimony and analysis by other parties.

1

SUMMARY AND STAFF RECOMMENDATIONS

2

Q. Please summarize Staff's testimony.

3

A. This testimony provides an evaluation of PGE's IQBD, Schedule 18. This testimony will detail Staff's concerns with the proposed rate increase affecting affordability following recent updates to the IQBD program that were based off previous rate case data. Staff also includes its analysis of the Company's customer programs and lays out its analysis of inter- and intra-class equity concerns with the Program's cost recovery mechanism, Schedule 118, making recommendations to address these concerns by adjusting the cost recovery mechanism.

10

11

Q. Please summarize Staff's approach to these issues.

12

A. Staff is focused on making near-term improvements to alleviate the needs of those most at risk while establishing a framework that allows for flexibility and is informed by the Company's recently filed Energy Burden Assessment (EBA) and resulting stakeholder input.

13

14

15

16

Q. Please summarize Staff's recommendations.

17

A. Staff has the following recommendations:

18

- Regarding Schedule 18, the Income Qualified Bill Discount Program,
 - The Company should propose a master meter customer component to the Company's IQBD program.
 - Including a reasonable discount to be passed onto Oregon residents housed in master metered dwellings within PGE's service territory that would otherwise qualify for the IQBD.

19

20

21

22

23

- 1 ▪ Following the adoption of this component, the Company
2 should work with Oregon Housing and Community Services
3 (OHCS) to identify low-income affordable housing units and
4 reach out to landlords to offer discount information.
- 5 ○ The Company should engage with its Community Benefit and
6 Impacts Advisory Group (CBIAG) and Community Action Agency
7 Partners (CAAs or CAP agencies) on additional outreach techniques
8 for reaching IQBD eligible customers.
- 9 ▪ This should include, at a minimum, a discussion on additional
10 inserts timed strategically with the higher energy demands of
11 heating and cooling season. Such inserts may be helpful to
12 increase interest and enrollments in the program.
- 13 ○ The Company should engage CAP agency partners in the presence
14 of Staff to discuss program adjustment opportunities that optimize
15 low barrier and timely enrollment for customers.
- 16 ○ The Company should monitor, track, and report to the Commission a
17 list of IQBD customers with a monthly usage of 2,000 kWh or more.
- 18 ▪ The Company should refer customers with high usage to CAP
19 agencies, Energy Trust of Oregon (ETO), and any other
20 known partner agencies administering low-income energy
21 efficiency or weatherization services to environmental justice
22 communities in the Company's service territory.

- 1
- 2
- 3
- 4
- 5
- 6
- 7
- 8
- 9
- 10
- 11
- 12
- 13
- 14
- 15
- 16
- 17
- 18
- 19
- 20
- 21
- 22
- Following referral, the Company should follow-up with the customers to ensure they are being connected with services and/or help the customer connect with services if they are facing long wait times or ineligibility.
 - Additionally, the Company should monitor customers to ensure their usage is going down through intervention of assistance and/or efficiency measures.
 - Following the Company's EBA filing, the Company should,
 - Convene Staff and stakeholders to discuss:
 - The Company's IQBD structure and discount levels,
 - An Arrearage Management and/or forgiveness program for IQBD customers,
 - Adjustments to the definition of high usage customers for energy efficiency and weatherization reporting,
 - Additional opportunities for refinement identified by the Company or by stakeholders and Staff following review of the EBA findings.
 - Regarding an Arrearage Management Program (AMP) component,
 - The Company's Reply Testimony should include an Arrearage Management component to the IQBD for, at a minimum, participants reporting household income at or below five percent State Median Income (SMI), adjusted for household size.

- 1 ▪ The Company should include the cost impacts for ratepayers
- 2 across all service schedules, including the rate spread of total
- 3 program costs.
- 4 • Regarding Customer Programs,
- 5 ○ The Company should begin sharing data with ETO on IQBD
- 6 participant heating type and should include IQBD enrollment data
- 7 with ETO as part of their currently monthly data sharing process.
- 8 • Regarding Schedule 118, the IQBD Cost Recovery Mechanism,
- 9 ○ The Company should provide analysis on a revised cost recovery
- 10 mechanism based on a percentage of bill.
- 11 ▪ The Company should analyze and provide the cost recovery
- 12 work papers under a percentage of bill recovery structure at 2,
- 13 2.5, 3, and 3.5 percent.
- 14 ▪ The analysis of the percentage of bill scenarios should also
- 15 include the total program costs and average per customer
- 16 cost, by service schedule for Non-Residential customers,
- 17 removing the kWh cap while maintaining a fixed charge for
- 18 residential customers.

ISSUE 1. INCOME QUALIFIED BILL DISCOUNT PROGRAM**Q. Please provide background information on investor-owned utility bill discount programs in Oregon.**

A. Oregon's Energy Affordability Act, House Bill (HB) 2475, became effective on January 1, 2022. ORS 757.695, which codifies HB 2475's Section (7)(1), provides that the Commission may address the mitigation of energy burden through bill reduction measures or programs that may include, but need not be limited to, demand response or weatherization.

HB 2475 implementation at the Commission is docketed under UM 2211 and has currently been focused on interim action that provides customers with near-term relief under the new authority. Since the bills effective date, Staff has engaged with community stakeholders and each of Oregon's six investor-owned utilities to implement interim programs that provide monthly percentage of bill discounts as means to mitigate energy burden for low-income communities. This will be followed by a longer-term investigation that will more comprehensively explore and establish Commission policies for differential rate and program design and administration.

Q. Please provide additional detail on the UM 2211 process and the relevance of the bill discount programs to the UE 435 proceeding.

A. The Commission's implementation of HB 2475, Docket No. UM 2211, opened December 2021. Prior to opening the docket, Staff conducted outreach to collect feedback from environmental justice (EJ) and community advocates and the utilities to inform interim actions. Staff's initial filing in the docket outlined

1 the implementation process for utilities to submit proposals for interim
2 programs. Staff directed utilities to engage with stakeholders and PUC Staff on
3 the program design prior to filing.¹ Staff included in the filing a baseline
4 criterion to guide interim programs while striking the balance of swift action
5 from utilities with ensuring programs were designed in a way that was
6 meaningful to customers.

7 The 2022 Baseline Evaluation Criteria highlighted key areas for utilities
8 to prioritize when creating their bill discount programs. This included eligibility
9 and enrollment criteria, tracking and accounting of enrollment, bundling of the
10 programs with other assistance, transparent and informative outreach and
11 engagement, and the programs level of relief.²

12 In April 2024, Staff released the UM 2211 Phase 2 update.³ The
13 update stated that the refinement of utility interim rate programs would occur in
14 general rate cases while Staff addressed additional implementation processes
15 through the UM 2211 docket process, focusing near term on evaluating current
16 energy assistance and weatherization programs available across the state.
17 Staff identifies UE 435 as an appropriate venue to evaluate the Company's
18 current IQBD program and the opportunities for any adjustments based on
19 currently available data and stakeholder engagement.

¹ *In the Matter of: Implementation of HB 2475*, Docket UM 2211, Staff's letter to stakeholders providing implementation strategy update (December 22, 2021).

² Docket UM 2211, Staff Interim Proposal. Available at: [um2211hac17313.pdf \(state.or.us\)](#)

³ Docket UM 2211, Phase 2 Survey Synthesis and Updates. Available at:
[um2211hah327921024.pdf \(state.or.us\)](#)

1 **Q. Please provide a summary of the Commission's activities regarding bill**
2 **discount programs.**

3 A. The Commission has approved interim bill discount programs for Oregon
4 investor-owned utilities in the following dockets:

- 5 • [ADV 1365](#) – Portland General Electric,
- 6 • [ADV 1412](#) – PacifiCorp,
- 7 • [ADV 1390](#) – Northwest Natural,
- 8 • [ADV 1409](#) – Cascade, and
- 9 • [ADV 1410](#) – Avista

10 In the general rate case, Staff is focused on bill discount program
11 refinements to ensure programs reflect the best available data on energy
12 burden needs and stakeholder input. In Docket No. UM 2211, phase two,
13 Staff's focus is on optimizing the impact of existing customer assistance
14 programs and better integrating them with the overall HB 2475
15 implementation strategy. Specifically, Staff plans to leverage the established
16 community engagement and public awareness around existing low-income
17 energy programs with newer opportunities such as low-barrier enrollment
18 practices, targeted relief, program referrals, categorical eligibility, and data
19 sharing between partner organizations to increase participation rates and
20 reduce energy burden. Given the availability of direct assistance via the
21 interim discounts to reduce customer rates, Staff hopes to be able to dedicate
22 this phase more specifically to low-income energy efficiency and

1 weatherization programs, which can provide more long-term, sustainable
2 relief for many households.

3 **Q. Please summarize the Company's current bill discount program.**

4 A. In 2022, the Commission approved Portland General Electric's interim bill
5 discount program under Schedule 18 with an effective date of April 15, 2022.
6 The Company's IQBD is an income qualified percentage of bill discount
7 program available to residential customers whose adjusted household income
8 is at or below 60 percent SMI. Customers may be automatically enrolled into
9 the program based on having received Low-Income Home Energy Assistance
10 Program (LIHEAP) or Oregon Energy Assistance Program (OEAP) funds in the
11 last 12 months or may enroll by either self-attestation or providing
12 documentation evidencing their income eligibility.⁴

13 The Company adjusted the originally filed IQBD program following its
14 last rate case in 2023, UE 416. As of January 1, 2023, the Company's IQBD
15 began offering a five-tier discount structure, shown in Table 1 below, where
16 customers may access up to a 60 percent monthly discount on applicable
17 charges on their PGE bill. The revised structure was one outcome of
18 settlement negotiations held within the UE 416 proceeding and expanded the
19 program to include two deeper discounts for customers in the 6-15 percent and
20 0-5 percent SMI income tiers. For reference, the Company's originally

⁴ Self-attestation allows customers to self-certify their household income and number of household residents for program enrollment with customer service representatives or through the online or paper enrollment forms. Self-attestation reduces barriers for customers enrolling by allowing customers to identify their income without requiring bank statements or pay stubs.

1 approved bill discount offered a three-tier structure with a maximum discount of
2 25 percent for eligible customers.

Table 1

	Adjusted Household Income	Discount
Tier A	0-5% SMI	60%
Tier B	6-15% SMI	40%
Tier C	16-30% SMI	25%
Tier D	31-45% SMI	20%
Tier E	46-60% SMI	15%

4 **Q. Please summarize the current participation in the Company's Income**
5 **Qualified Bill Discount Program.**

6 A. The Company details that as of April 30, 2024, there are approximately 83,000
7 active enrollments, with active enrollment being defined as having received a
8 discount on their most recent bill.⁵ This accounts for approximately nine
9 percent of all residential customers. Census estimates and poverty statistics
10 generally show Oregon poverty levels between 12 to 20 percent with higher
11 concentrations of persistent poverty in the Portland area. Thus, it is
12 reasonable to infer that anywhere between 27,400 and 101,000 Portland
13 General Electric customers are eligible for the Company's IQBD but not
14 enrolled and thus expected to face even high disproportionate energy burdens
15 under the Company's proposal as filed. Even with the Company anticipating
16 an increase in enrollment to 100,000 active participants by the end of 2024, the
17 Company states that the total estimated eligible IQBD participants is

⁵ Exhibit Staff/1902, PGE Response to OPUC Data Request 311.

1 approximately 167,000 in 2025.⁶ With these numbers in mind, Staff is
2 concerned that many customers who are already facing disproportionate
3 burdens as utility customers will see these disparities exacerbated by the
4 proposed rate increase.

5 **Q. Please describe any changes to the Income Qualified Bill Discount**
6 **program proposed in the Company's opening testimony.**

7 A. The Company did not propose any adjustments to the IQBD program as part of
8 its initial filing in UE 435. PGE does not specifically discuss the Company's
9 reason for not proposing any further adjustments to the bill discount program to
10 accompany the 2025 rate increase, only that the aforementioned 2024 IQBD
11 changes in conjunction with the 2024 UE 416 rate increase took effect. The
12 Company also indicated that results from the 2024 energy burden assessment
13 (EBA) are expected to inform future program adjustments, potentially as "part
14 of a more holistic discussion of energy policy more generally."⁷ The Company
15 filed its EBA at the end of June 2024

16 **Q. Does Staff believe a Q3 2024 filing is a reasonable plan for timely**
17 **changes to the IQBD?**

18 A. Possibly. Staff believes that if the Q3 filing includes data and stakeholder
19 informed improvements to the program with an effective date on or before
20 January 1, 2025, then the Q3 2024 filing is reasonable. However, if this timing
21 does not allow for programmatic changes to take effect at the same time as

⁶ Exhibit Staff/1902, PGE Response to OPUC Data Request 310.

⁷ PGE/100, Pope – Sims/25.

1 anticipated UE 435 rate increases, then Staff recommends the Company
2 propose some form of rate mitigation to take effect on or before January 1,
3 2025 for IQBD customers to offset UE 435 increases in advance of the
4 anticipated effective date for IQBD changes.

5 **Q. Please describe Staff's concerns related to the Company's Income**
6 **Qualified Bill Discount program remaining the same.**

7 A. Staff appreciates the Company's interest in continuing to work towards
8 addressing energy burden through the IQBD program with the understanding
9 that further energy assistance policy could result from additional data and
10 learnings.⁸ Staff is concerned, however, that the magnitude of cumulative rate
11 increases attributable to the back to back filings of UE 416 and UE 435
12 significantly diminish the intended impacts of the recent revisions to the IQBD.
13 Staff notes that UE 416 adjustments to the IQBD discount tiers were agreed
14 upon based, in part, on the expected 2024 rates and planned refinements
15 following the Company's EBA and Staff UM 2211 investigation. While Staff
16 recognizes that the UE 435 January 1, 2025 effective date may still allow
17 sufficient time for the EBA and UM 2211 investigation to inform timely changes
18 to the IQBD, Staff harbors some concerns that the UE 435 proposal may
19 render the 2024 EBA stale leading to an underestimation of actual need.

20 Additionally, Staff highlights an overall concern around PGE's
21 cognizance, or lack thereof, for the state of affordability among the Company's
22 low-income customers. Further detailing can be found in Ms. Michelle Scala's

⁸ *Id.*

1 Exhibit 200 detailing the current state of affordability and energy burden for
2 PGE's customers. PGE customers are just beginning to feel the monthly bill
3 impacts of the UE 416 rate increases and what their new energy burden means
4 for their household. For many struggling households, conditions can be
5 expected to worsen as we rapidly approach some of the hottest months of the
6 year. While it is important that some low-income households have access to
7 deeper discounts in the IQBD that may help to offset the increase, there will still
8 be many who continue to face energy burden issues with this increased
9 assistance level. This is especially important when we look at the number of
10 customers described above that may be eligible for the program that are not
11 currently enrolled. These customers are weathering rate increases without an
12 offset to help maintain levels of affordability, and it can be inferred that a subset
13 may be falling into steeper levels of energy burden. This level of increase
14 following a recent rate effective date has a disproportionate impact on low-
15 income and energy burdened customers.

16 To highlight this concern, Staff has compiled energy burden estimates in
17 Table 2, which illustrates energy burden across the 0-15 percent SMI
18 segments. Staff used the Company's 2023 net residential average monthly bill
19 to calculate an average annual residential bill of \$1,588.67 to calculate energy
20 burden.⁹ Staff includes the Company's current bill discount structure of a 60
21 percent discount for the 0-5 percent SMI category, and 40 percent discount for
22 6-15 percent SMI.

⁹ Exhibit Staff/1902, PGE Response to OPUC Data Request 401.

1

Table 2

Energy Burden Impacts				
% SMI	HH Income	HH Energy Burden		
		Before Discount	After Current 60% Discount	After Current 40% Discount
0.15	\$ 14,061.50	11%		7%
0.14	\$ 13,124.07	12%		7%
0.13	\$ 12,186.63	13%		8%
0.12	\$ 11,249.20	14%		8%
0.11	\$10,311.77	15%		9%
0.10	\$ 9,374.33	17%		10%
0.09	\$ 8,436.90	19%		11%
0.08	\$ 7,499.47	21%		13%
0.07	\$ 6,562.03	24%		14%
0.06	\$ 5,624.60	28%		17%
0.05	\$ 4,687.17	34%	14%	
0.04	\$ 3,749.73	42%	17%	
0.03	\$ 2,812.30	56%	23%	
0.02	\$1,874.87	85%	34%	
0.01	\$ 937.43	169%	68%

7

8

9

10

11

12

As shown in Table 2, the Company’s current discount structure does help to lower household energy burden, but when household income is lowered, energy burden remains high. It should be noted that Staff used the 2023 bill data for a more complete look at the yearly impact, which does not include the increased rates after the UE 416 rate increase. As such, we can infer that these customers have a slightly higher energy burden than what is illustrated in the table. Staff is concerned about the highly energy burdened customers within the Company’s service territory that are facing disproportionate impacts of not only the January 1, 2024, effective rate increase, but the proposed increase outlined in UE 435. Additionally, Staff raises that while we see a reduction of customers energy burden as we near 15

1 percent SMI, when compared to the national average of 2-3 percent energy
2 burden, these customers remain above the national average when faced with a
3 7 percent energy burden.¹⁰ As such, Staff sees opportunity available in
4 targeting customers within these low-income SMI categories with additional
5 outreach and assistance to help mitigate the energy burden that remains for
6 customers currently enrolled in the program, and to help provide energy burden
7 relief to eligible households that are currently unenrolled.

8 Finally, Staff highlights the concerns we heard from PGE customers
9 during the public comment hearing on May 16, 2024. Specifically, Staff would
10 like to acknowledge the stories from customers facing hardship associated with
11 the increasing expenses of housing, energy, and other necessities. Additional
12 detail and transcriptions are available in Ms. Nottingham's testimony in
13 Staff/600. Staff is committed to ensuring that the customer perspective does
14 not get lost as Staff works through the rate case proceeding and makes
15 recommendations to the Commission. While Table 2 focuses on customers at
16 15 percent SMI and below, energy burden and hardships in paying energy bills
17 is not limited to those within that category. In fact, while the percentage of bill
18 structure does allow for some movement in the dollar amount of discount
19 received by customers as rates increase, it is important to consider that
20 increases in rates and other household expenses do not result in an adjustment
21 to the household income for the purposes of eligibility. Thus, participating

¹⁰ U.S. Department of Energy, Office of State and Community Energy Programs. Low-Income Energy Affordability Data (LEAD) Tool and Community Energy Solutions. [Low-Income Energy Affordability Data \(LEAD\) Tool and Community Energy Solutions | Department of Energy](#)

1 IQBD customers are relegated to whichever SMI tier their household income
2 allows, regardless of whether rate increases outpace the percentage of
3 discount offered. Additionally, other forms of energy assistance are often
4 limited in how often a customer can receive it, and how many customers can
5 access funds. For example, the Company outlines that of its enrolled IQBD
6 participants, approximately 18 percent of those customers received OEAP
7 assistance.¹¹ Staff highlights this to ensure that as we look at affordability for
8 low-income and disproportionately impacted customers it is understood that
9 additional forms of assistance are not always available or guaranteed to offset
10 monthly costs.

11 **Q. Is Staff recommending that the Company offer deeper discounts at this**
12 **time?**

13 A. Not at this time. Staff acknowledges that adjustments to the program went into
14 effect January 2024, and that the Company has recently filed its EBA. While
15 Staff does not currently have a recommendation for additional changes to the
16 bill discount program, Staff expects the Company to convene stakeholders and
17 Staff on the EBA results and present possible adjustments to the Company's
18 IQBD after filing the EBA. Following this engagement, the Company should
19 implement changes to the discount structure concurrent with the rate effective
20 date, allowing customers to see deeper discounts starting on January 1, 2025.

21 **Q. Does Staff see additional components that could be connected to the**
22 **Company's IQBD?**

¹¹ Exhibit Staff/1902, PGE Response to OPUC Data Request 424.

1 A. Yes. Staff is interested in addressing potential gaps in enrolling eligible
2 customers. An opportunity that may be missing with the Company's current
3 IQBD program is a component for residential customers living in master
4 metered buildings. Additionally, Staff is interested in identifying opportunities
5 for program enhancement through additional outreach and discussions with
6 CAP agencies that are often the main resource for customers when receiving
7 energy assistance. Finally, Staff highlights the importance of refining the
8 Company's current post-enrollment verification process.

9 **Q. You mention master metered customers, please elaborate.**

10 A. Mastered metering measures the usage of electric, gas, or water for multiple
11 tenants with the same meter. Typically, these are multi-unit housing
12 complexes where the utility service is put in the landlord or property owner's
13 name and the tenant is billed for their energy charge by the property
14 management, through a fixed rent charge. For example, there are some state
15 low-income housing buildings that are master metered, where the landlord
16 receives one bill and pays for the tenant's electricity or natural gas by billing the
17 tenant through the monthly rent cost. OHCS funds affordable housing
18 developments across the state where most properties offer at least a part of
19 their units to tenants at or below 60 percent SMI. For these tenants, they do
20 not receive an electric bill or have an account under their name but are still
21 paying their landlord for utility costs. As such, it is difficult for these households
22 that would otherwise be eligible for energy assistance to access benefits as
23 they are not technically the customer of the company. Staff is interested in

1 ensuring that these energy burdened households receiving power through PGE
2 service still have access to the benefits of the IQBD program. Pacific Power
3 currently offers a master meter component to the Low-Income Discount (LID),
4 special condition 10 of Pacific Power's Schedule 7 tariff, offering a 30 percent
5 discount for tenants residing in master meter buildings. With a similar discount
6 offering for PGE's master meter customers, tenants could see a reduction on
7 their housing costs if a component to the IQBD is created and the discount
8 benefits are appropriately passed on from the landlord/property owner to the
9 tenant. While tenants would not necessarily see the discount reflected on a
10 utility bill, an agreement between the master meter account holder and PGE
11 could effectively allow for the discount to be passed through to qualifying
12 tenants.

13 **Q. Does Staff recommend the Company include a master meter customer**
14 **component to the IQBD?**

15 A. Yes. Staff would like the Company to evaluate a reasonable discount amount
16 for customers living in master metered buildings. Staff would like to see a
17 proposal and discussion of such a program within the Company's reply
18 testimony. When administering this component of the program, Staff believes
19 the Company should coordinate with OHCS to identify affordable housing units
20 within their service territory that are master metered and recorded to have a
21 certain percentage of low-income occupants. Following the identification of
22 eligible units, the Company should reach out to the landlords to offer the
23 program and encourage them to get in touch with the Company if they are

1 interested in the discount program for their residents. When setting up this
2 program with the landlords, an agreement should be made between the
3 Company and the landlord that the landlord will apply a separate discount to
4 the eligible resident and that discount should be passed on.¹²

5 **Q. Please describe Staff's analysis of the Company's outreach associated**
6 **with the IQBD program.**

7 A. When evaluating the IQBD program, Staff finds it important to evaluate the
8 outreach associated with the IQBD and additional programs available to
9 eligible participants. Staff appreciates the outreach the Company conducts to
10 inform customers of the IQBD program, including inserts in November
11 advertising the program, and mentions on inserts about energy assistance and
12 no-cost weatherization. Additionally, Staff finds it important that the Company
13 is connecting within the community through joining community events. That
14 said, Staff has concerns that the only changes documented in the Company's
15 outreach strategy of the IQBD since program implementation is an intake form
16 where organizations can request materials or a PGE representative to speak at
17 their event and the creation of an IQBD dedicated email address.¹³ While Staff
18 believes this is a good addition to the Company's outreach, Staff is concerned
19 that additional outreach opportunities have not been implemented, especially
20 after the recent rate increase.

¹² The discount may be passed on through a reduction of the overall payment a customer makes to the landlord per month. This can be an efficient model to pass on benefits to customers when a landlord is responsible for paying a customer's utility bill.

¹³ Exhibit Staff/1902, PGE Response to OPUC Data Request 305.

1 **Q. Does Staff have a recommendation to address these potential gaps in**
2 **outreach?**

3 A. Yes. Staff sees an opportunity to increase outreach that targets eligible
4 customers for the IQBD program and connects customers with all available
5 assistance opportunities. While sending an insert on the IQBD program in
6 November is a useful practice that should be continued, Staff believes
7 additional inserts timed strategically with the higher energy demands of heating
8 and cooling seasons may be helpful to increase interest and enrollments with
9 the program. While Staff does not have the necessary information to propose
10 additional mailer times, Staff believes CAP agencies and Community-Based
11 Organizations (CBOs) are well situated to help inform outreach opportunities
12 that can reach target populations. Additionally, Staff points out that the
13 Company's Community Benefits & Impacts Advisory Group (CBIAG) is likely a
14 key avenue for collecting additional input around environmental justice and
15 community outreach for the IQBD, weatherization, energy efficiency, and other
16 assistance programs. CBIAG members work closely with community and have
17 important insight to ways that the Company can navigate reaching community
18 members that may be more difficult to connect with. Staff expects that not all
19 eligible customers will sign up for assistance based on a bill insert alone and
20 believes that additional discussions with CBIAG members, CBOs, and CAP
21 agencies are important resources to help enhance outreach efforts to and
22 connect with more communities.

1 **Q. Are there other issues around outreach for IQBD participants Staff would**
2 **like to raise?**

3 A. Yes. The Company recently sent out communications about the Community
4 Solar Low-Income Program to approximately 36,000 IQBD customers who had
5 received energy assistance (LIHEAP or OEAP) in the past 12 months.¹⁴ Staff
6 appreciates the Company working with Community Energy Project (CEP), the
7 low-income community solar facilitator, to develop this outreach plan.¹⁵ Staff is
8 sensitive to the concern outlined by the Company of communication
9 overfatigue for IQBD participants, but is interested in ensuring IQBD
10 participants that have not received energy assistance have the opportunity to
11 sign-up for the Community Solar or other assistance programs. Staff urges the
12 Company to continue engaging with CEP and/or other organizations to
13 navigate the best steps to distributing sign-up information to the approximately
14 47,000 IQBD participants that did not receive this information in the first round
15 of outreach.

16 **Q. Please describe recommendations around program enhancements**
17 **through CAP agency coordination.**

18 A. Staff believes additional consideration should be given to IQBD program
19 enhancements that optimize the partnership between the Company and local
20 CAP agencies. Staff recommends the Company engage CAP agencies in the
21 presence of Staff to identify and pursue opportunities that optimize low barrier

¹⁴ Exhibit Staff/1902, PGE Response to OPUC Data Request 484.

¹⁵ Exhibit Staff/1902, PGE Response to OPUC Data Request 306.

1 and timely enrollment for customers. Staff also see opportunities in assisting
2 with best practices around enrollment for customers or additional enrollment
3 avenues, along with opportunities for enhancing referral processes for IQBD
4 customers eligible for weatherization and energy efficiency programs.

5 **Q. Please describe the Company's current monitoring process for high**
6 **usage customers.**

7 A. When a customer is signing up for energy assistance, they have the
8 opportunity to consent to have their account information shared between the
9 CAP agencies to the state and federal government, and utilities. If a
10 customer that has provided consent for this sharing alert's the Company's
11 system as having a monthly usage at or above 2,000 kWh, the customer will
12 be added to a list that is shared with CAP agencies annually for the purpose
13 of no-cost weatherization marketing.¹⁶ It is unclear if the Company conducts
14 any outreach to these customers with a referral for weatherization services or
15 if the Company has received the effectiveness of this annual list and
16 customers being connected to weatherization programs.

17 Additionally, the Company recently connected Program Participation
18 Information (PPI) received from Energy Trust with PGE customer data. This
19 allows the Company to see which Energy Trust customers are enrolled or not
20 enrolled in the IQBD and potentially the type of HVAC system(s) in the
21 customer's home. Connecting this information will help Energy Trust and/or
22 the Company to better target IQBD outreach to those with likely high energy

¹⁶ Exhibit Staff/1902, PGE Response to OPUC Data Request 306.

1 burden that are not currently enrolled in the program or may be good
2 candidates for efficiency programs.¹⁷

3 While both measures are positive steps towards connecting eligible
4 customers to programs, Staff believes more can be done to connect energy
5 burdened customers to programs that can help resolve sources of inefficiency
6 in the home. It is currently unclear to Staff if the Company includes IQBD
7 participants in the annual list sent to CAP agencies if they have not signed up
8 for additional energy assistance, and thus signed the consent for account
9 information sharing. Staff believes that evaluating mechanisms for monitoring
10 and connecting IQBD customers with no-cost weatherization services will
11 help to ensure that energy burdened customers are connected to these
12 programs. Staff has concerns that if sharing high usage customers with CAP
13 agencies is limited only to those who have received other assistance, there
14 may be additional customers within the IQBD with high usage or inefficient
15 HVAC system(s) that will not connect with these no-cost weatherization
16 services.

17 **Q. Please describe your recommendations to improve monitoring and**
18 **referral practices for high usage IQBD customers.**

19 A. Staff's recommendations are based, in part, on our near-term targeted energy
20 burden mitigation goals which include optimizing energy efficiency and
21 weatherization participation among low-income and environmental justice
22 communities. When looking at energy burden, an important consideration in

¹⁷ *Id.*

1 lowering a household's burden is increasing its efficiency to effectively lower
2 the amount of energy needed to heat or cool a home. In order to more
3 effectively track customers that would benefit from energy efficiency and
4 weatherization, the Company should monitor, track, and report to the
5 Commission, IQBD participants with high usage. To align with the program
6 described above, Staff recommends the Company initially track participants
7 with a monthly usage of 2,000 kWh or more. Staff would like the Company to
8 evaluate the results from the 2024 EBA to arrive at a more accurate definition
9 of high usage for the purposes of an energy burden mitigation monitoring
10 strategy. The Company should utilize the reports to refer identified participants
11 to CAP agencies, Energy Trust, and any other known partner agencies
12 administering low-income energy efficiency or weatherization services to
13 environmental justice communities in the Company's service territory.
14 Additionally, the Company should follow up with customers after the referral
15 process to explore additional resources as needed to help customers that face
16 barriers to program connection, including long wait times or customers who
17 have been deemed ineligible. Staff would also like to see the Company
18 monitor these customers to ensure they are seeing a reduction in bills through
19 efficiency interventions or additional assistance opportunities.

20 While Staff understands concerns around data sharing that are
21 alleviated through the current process by agreements conducted through
22 OHCS, Staff believes similar agreements can be put in place with protection of

1 personal identifiable information to alleviate concerns while ensuring these
2 customers are not left behind.

3 **Q. Please describe the Company's current post-enrollment verification**
4 **(PEV) process for the IQBD program.**

5 A. The Company is working with Oregon Energy Fund (OEF), a nonprofit
6 community-based organization (CBO) to facilitate the PEV process that began
7 in May 2024.¹⁸ The PEV will look to verify the income of a random selection of
8 three percent of customers enrolled in the program that were not auto enrolled
9 through LIHEAP or OEAP. Traditional income verification requires households
10 to submit documentation that provides proof of income. This can include pay
11 stubs, social security proof of income letter, wage and tax statements, tax
12 returns, unemployment or workers' compensation letters, bank statements, or
13 annual tax returns, among other verified documents.

14 PGE states that an initial letter will be sent out by the Company to
15 three percent of enrolled customers, excluding those that were auto-enrolled
16 based on having received Energy Assistance, notifying the customer that they
17 need to provide income information to OEF. OEF will send a follow-up letter
18 within 30 days to customers that did not respond, followed by two phone calls
19 within 60 days of the initial PGE communication.

20 **Q. Please describe Staff's analysis of the Company's PEV process.**

21 A. Staff appreciates the Company connecting with OEF to help conduct the post
22 enrollment verification for IQBD customers. When looking at verification of

¹⁸ Exhibit Staff/1902, PGE Response to OPUC Data Request 313.

1 customers enrolled in the program, Staff is interested in ensuring that outreach
2 to participants is accessible, in both language and cultural accessibility, and
3 that customers have ample opportunity to provide documentation or reach out
4 to request additional time to collect and submit necessary documents.¹⁹ Staff
5 understands concerns presented by stakeholders in IQBD discussion spaces
6 highlighting the burden that traditional income verification processes can have
7 on customers that may not have immediate access to the documentation
8 required of them. As such, Staff is interested in understanding results of the
9 PEV process and how the process conducted by the Company may inform
10 future PEV processes. Additionally, the Company should meet with Staff prior
11 to any unenrollment's taking place because of the PEV.

12 Staff highlights that when looking at the verification process, the goal of
13 the bill discount program is to provide low barrier, meaningful relief to energy
14 burdened households. At this stage, Staff is not interested in seeing PEV
15 processes expand to include a larger than 3 percent sample of self-attested
16 enrollments (i.e. sample excludes participants auto-enrolled based on having
17 received energy assistance).

18 Staff's review of enrollment types in the Company's program showed that
19 approximately 18 percent of IQBD participants have received OEAP.²⁰ Thus
20 approximately 18 percent of participants are verified as income eligible through

¹⁹ Cultural accessibility looks at accessibility of projects, information, communications, etc. with added filters including how things like language, traditions, and meeting places play a factor in how people access different types of information and how that information is presented in a way that connects with diverse populations.

²⁰ Exhibit Staff/1902, PGE Response to OPUC Data Request 424.

1 OEAP, and potentially more if this amount does not fully capture participants
2 auto enrolled through LIHEAP. It is also worth noting that several of the
3 ultimately categorically eligible participants were originally enrolled as self-
4 attestation eligible participants. All to say that the 18 percent + verified rate
5 and a conservative sample of self-attested enrollments for the planned PEV,
6 provides more than sufficient program integrity assurances for Staff to focus
7 less on the auditing of incomes, and more on prioritizing targeted enrollments
8 in the IQBD. At the same time, Staff looks forward to continued conversations
9 on how a broader future PEV can evolve to be more informed and responsive
10 to household needs and program goals.

ISSUE 2. ARREARAGE MANAGEMENT

1
2 **Q. Please describe the Company's current process for customers in**
3 **arrears.**

4 A. The Company indicated that it offers a variety of tools and options to help
5 customers manage and prevent a past due balance.²¹ The Company offers
6 disconnection notices, and time payment plans along with additional past due
7 email and text notifications, bill due reminders, preferred due date, budget
8 billing plans, and payment extensions for these customers. Along with this, the
9 Company provides tips and tools to help customers reduce their usage and will
10 alert customers to energy assistance resources as part of the past due
11 notification which can sometimes include making referrals on the customer's
12 behalf. The Company also works with CAP agencies to help customers in
13 arrears find bill assistance that can offset or fully mitigate the customer's past-
14 due balance.²² The Company states that customers with a past due balance
15 greater than \$100 are sent past due notifications.²³

16 **Q. Please describe any additional components for low-income customers or**
17 **customers participating in in the IQBD program.**

18 A. PGE does not currently have a unique process for IQBD participants that fall
19 into arrears outside of the options listed above.²⁴ The Company stated that

²¹ Exhibit Staff/1902, PGE Response to OPUC Data Request 316.

²² Exhibit Staff/1902, PGE Response to OPUC Data Request 317.

²³ Exhibit Staff/1902, PGE Response to OPUC Data Request 315.

²⁴ Exhibit Staff/1902, PGE Response to OPUC Data Request 316.

1 they currently have no plans to incorporate a unique arrearage management
2 component into the IQBD program.²⁵

3 **Q. Please describe Staff's concerns with the Company's arrearage levels.**

4 A. As Ms. Michelle Scala details in Staff/200, Staff is concerned about the overall
5 affordability for residential customers, and specifically for low-income
6 customers. As has been discussed earlier in this testimony, the proposed
7 increase in rates will lead to disproportionate impacts for low-income
8 customers that are already facing higher energy burdens. Staff is looking at all
9 areas of affordability and energy burden, and is concerned with the Company's
10 arrearage levels, especially for low-income customers enrolled in the IQBD
11 program. Staff is also concerned with the level of disconnections the Company
12 is reporting and how to effectively manage or help provide relief for customers
13 before they reach the point of disconnection.

14 Arrearages exacerbate energy burden issues by compounding monthly
15 bill impacts. The Company's offerings for customers to manage bills described
16 above are not comprehensive enough for many households to offset the level
17 of utility debt they are facing. Customers already struggling to pay will fall
18 deeper into arrears, regardless of the level of discount offered when faced with
19 a rise in overall rates that outpaces their capacity to pay.

20 **Q. Staff mentions specifically low-income customer arrears, please**
21 **elaborate.**

²⁵ Exhibit Staff/1902, PGE Response to OPUC Data Request 317.

1 A. As mentioned above, arrearages can exacerbate energy burden issues—a key
 2 concern for low-income customers who are disproportionately facing higher
 3 energy burdens. The Company reports that as of April 30, 2024, there were
 4 21,556 IQBD participants with active arrearage balances greater than 30 days
 5 past their bill due date.²⁶ Looking at IQBD participants with a history of
 6 arrearages, as of April 30, 2024, there were 56,381 distinct accounts that had
 7 arrearage balances greater than 30 days past their bill due date during the
 8 same month they received an IQBD discount.²⁷

9 To highlight the concern for IQBD customers with arrears, Staff
 10 includes Table 1 below comparing IQBD customers in arrears with all
 11 residential customers in arrears advancing from 30-60 days and from 60-90
 12 days.²⁸

Table 1

Year	(a) From 30-60 days to higher bucket		(b) From 60-90 days to higher bucket	
	<i>All arrearage customers</i>	<i>IQBD participants</i>	<i>All arrearage customers</i>	<i>IQBD participants</i>
2022*	1.58%	4.98%	0.58%	2.09%
2023	1.64%	5.94%	0.57%	2.35%
2024	1.57%	5.42%	0.55%	2.21%

*Data from January-March 2022 was not included for IQBD participants as this was prior to the start of IQBD.

14 When looking at the table, we can see IQBD participants are
 15 disproportionately moving to higher buckets when compared to all residential
 16 customers in arrears. Staff is concerned that without additional support offered

²⁶ Exhibit Staff/1902, PGE Response to OPUC Data Request 315.

²⁷ *Id.*

²⁸ Table 1 combines Exhibit Staff/1902, PGE Response to OPUC Data Requests 489 and 490.

1 to these customers we will continue to see higher percentages of low-income
2 customers with longer arrear balances, and thus larger energy burden
3 concerns. Additionally, Staff is concerned with high arrears balances that
4 could impact low-income customers' energy burden. The Company highlights
5 that of the 21,556 IQBD customers described earlier with an active arrearage
6 balance greater than 30 days past their bill due date, the average 31+ balance
7 is \$228 with a maximum 31+ balance of \$19,821.²⁹ While this maximum
8 balance may be an outlier, it is concerning that a low-income customer can
9 accrue such a balance that they presumably may never be able to fully pay off.
10 Even when looking at the minimum balance, \$228 can be an unattainable
11 amount for a low-income customer to pay off without additional support. If a
12 customer is able to receive LIHEAP or OEAP to help with the balance, they
13 would then be utilizing the assistance to pay off arrears instead of helping them
14 with affordability of their monthly bills during a winter or summer heating
15 season. Unfortunately, this leaves a customer in an endless cycle of energy
16 costs being unaffordable, whether that is unaffordable balances on their
17 accounts, or an unaffordable monthly bill.

18 **Q. Is Staff recommending the Company pursue an arrearage management**
19 **program (AMP) component to its IQBD in this proceeding?**

20 A. Possibly. Staff does not have the full extent of data needed to put forward a
21 firm proposal for an AMP program, but by highlighting the need above Staff is
22 interested in the Company proposing an AMP within this proceeding. Staff

²⁹ Exhibit Staff/1902, PGE Response to OPUC Data Request 315.

1 would like to see a more detailed proposal in Reply Testimony from the
2 Company and suggests the Company focus its initial proposal on assisting
3 customers at or below 5 percent SMI. Staff would like the Company to include
4 the cost impacts and with the proposal. Additionally, Staff highlights and
5 reiterates the importance of the engagement recommendation outlined in Ms.
6 Scala's testimony, Exhibit 200.

7 Staff acknowledges that the Company has recently finalized its EBA
8 which provides additional information that should be helpful to informing
9 adjustments to the IQBD program in general and an AMP program, specifically.
10 While Staff would like to see movement towards an AMP component occur
11 within this proceeding, we are also considering that additional discussion
12 inclusive of a broader group of stakeholders with the ability to reference the
13 EBA results is probably needed to inform this strategy.

ISSUE 3. CUSTOMER PROGRAMS

Q. Please describe the importance of evaluating the Company's customer programs and how they relate to the IQBD.

A. The Company offers a number of programs for customers. For the purposes of this testimony, Staff focuses on residential programs for PGE customers that are supported in part or entirely by ratepayer funds. When looking at addressing affordability and energy justice concerns within the Company's operations, it is important to evaluate the programs that are currently available, and the participation rates of customers we know are low-income (IQBD customers). PGE states in its opening testimony that it is working to deliver programs and services more equitably to members of under-resourced communities, which should be evaluated by not only its IQBD program, but the Company's other offerings to customers.³⁰

Q. Please describe Staff's analysis of the Company's customer programs related to IQBD participants.

A. Staff included the following programs in its analysis:

- Residential Demand Response – Peak Time Rebates (Schedule 7 option)
- Residential Demand Response – Residential Direct Load Control Pilot (Schedule 5)
- ETO Renewable & Conservation
- ETO Energy Efficiency

³⁰ PGE/100, Pope – Sims 25.

- 1 • Smart Grid Test Bed Pilot – EV Charging (Schedule 13)
- 2 • Smart Grid Test Bed Pilot – Smart Solar (Schedule 13)
- 3 • Residential EV Charging Pilot (Schedule 8)
- 4 • Residential Energy Storage Pilot (Schedule 14)
- 5 • Community Solar (Schedule 17)
- 6 • Net Metering (Schedule 203)
- 7 • Solar Payment Option (Schedule 215)
- 8 • Income Qualified Bill Discount (Schedule 18)

9 When evaluating the Company’s programs from a low-income
10 perspective, it should be noted that several of the programs listed above have
11 additional barriers that prevent adoption. For example, a customer wanting to
12 participate in the Smart Grid Test Bed Pilot – Smart Solar or Net Metering
13 would need to have access to solar. Solar is often not an affordable or easily
14 accessible option for a low-income customer as they may not be able to
15 afford the upfront costs, and often have structural barriers in their home that
16 would need to be addressed before solar installation. A similar argument
17 could be made for the programs related to EV Charging—a customer would
18 need to have an electric vehicle which can often be cost prohibitive.

19 As such, Staff focused its analysis on programs that may have higher
20 accessibility or lower barriers for low-income customers. Namely, the
21 Company’s demand response programs and Energy Trust’s offerings. When
22 looking at the Company’s programs, an issue that is flagged is that IQBD
23 participants often have a lower adoption rate when compared to all residential

1 customers. For example, when looking at the Company's Residential
2 Demand Response programs, we see that only two percent of IQBD
3 participants are enrolled in the Residential Direct Load Control Pilot as
4 compared to six percent of residential customers overall.³¹ Additionally, Staff
5 has concerns that just over one percent of IQBD participants have received
6 ETO Renewable & Conservation or Energy Efficiency measures compared to
7 three percent of non-IQBD residential customers.³² While Staff is sensitive to
8 barriers present to low-income customers accessing some of the offerings
9 through Energy Trust of Oregon, including but not limited to up-front costs,
10 Staff was of the understanding that changes were being implemented to
11 reduce these barriers and improve low-income customers' access to ETO
12 programs. The initial data from the Company on program participation by
13 IQBD participants leads Staff to believe that there are opportunities available
14 for further outreach strategies, monitoring, and data sharing to help target
15 eligible customers.

16 **Q. Please expand on Staff's analysis on energy efficiency and weatherization**
17 **programs.**

18 A. To analyze the need for energy efficiency and weatherization offerings within
19 the Company's service territory, Staff presents Figure 1 below pulled from the
20 Oregon Department of Energy's Heat Vulnerability Index completed as part of
21 their Oregon Cooling Needs Study. The study conducted by ODOE in 2023

³¹ Exhibit Staff/1902, PGE Response to OPUC Data Request 424.

³² *Id.*

1 found two counties in PGE’s service territory (Multnomah and Marion counties)
2 to be in the top five counties with the highest heat vulnerability index score.³³
3 The heat vulnerability index combines three different indexes: exposure,
4 sensitivity, and adaptive capacity. The indexes consider how sensitive people
5 are to heat-related illnesses, how much they are exposed to extreme heat, and
6 how well they can adapt and recover from heat exposure.³⁴

7 Figure 1

8
9 Additionally, ODOE compiled information on the distribution of
10 manufactured and mobile homes across the state. As part of the study, ODOE

³³ Oregon Department of Energy, Oregon Cooling Needs Study. December 2023. [2023-Oregon-Cooling-Needs-Study.pdf](#)

³⁴ *Id.*

1 found that manufactured and mobile homes across the state tend to be of older
 2 housing stock, and had significant cooling needs, with 15 percent having
 3 immediate cooling needs and 35 percent with long-term cooling needs.³⁵ Staff
 4 includes Figure 2 below to highlight the areas of increased mobile and
 5 manufactured housing units. As shown in the figure, a large number of mobile
 6 and manufactured housing units are located within the Company’s service area
 7 and could represent an important group to target with efficiency measures.

8 Figure 2.

Manufactured/Mobile Home Distribution Statewide

- Larger bubbles indicate larger concentration

- Red circles indicate family parks and blue circles indicate 55+ parks

9
 10 In general, Staff found that there is an opportunity for the Company to
 11 initiate more robust data collection practices regarding energy efficiency that

³⁵ *Id.* Page 13.

1 can be used to inform their program and customer coordination with ETO and
2 other known partner agencies administering low-income energy efficiency and
3 weatherization services. As mentioned previously, approximately one percent
4 of IQBD participants are recorded as having accessed ETO's renewable and
5 conservation or energy efficiency measures. While Staff is aware of the
6 Company using promotional advertising, business and residential outreach, and
7 overall website content to increase the customer enrollment of energy efficiency
8 programming, it is unclear that PGE is tracking energy efficiency spending or
9 the effectiveness of this outreach at a granular level. The materials PGE
10 distributes appear helpful, informative, and accessible in terms of simple
11 language and language options, and Staff is aware that PGE continues to work
12 with ETO and external community action agencies to increase customers'
13 awareness and participation in energy efficiency programs through marketing
14 and outreach activities.

15 However, as noted earlier, data on the efficacy of these measures is
16 either not collected or not analyzed. Additionally, as noted, participation rates
17 in ETO offerings are approximately three percent for all residential customers,
18 and roughly one percent for IQBD participants.³⁶ To this end, Staff points out
19 that there seem to be issues with enrollment and distributional equity³⁷ within
20 energy efficiency programs. These matters may be served by more intentional

³⁶ Exhibit Staff/1902, PGE Response to OPUC Data Request 424.

³⁷ Distributional equity in ETO programs is currently being addressed as a result of HB 3141, where the Commission was charged with implementing equity metrics to "assess, address and create accountability for environmental justice."
<https://olis.oregonlegislature.gov/liz/2021R1/Downloads/MeasureDocument/HB3141>.

1 data collection around outreach and customer engagement in energy efficiency,
2 along with additional data sharing.

3 **Q. You mention data sharing, please elaborate.**

4 A. Staff sees opportunity in targeting IQBD customers that may also be eligible for
5 additional programs. Staff is aware that PGE, through its Distribution System
6 Management work, has identified homes and apartments with inefficient electric
7 heaters. These residencies could be targeted for efficiency measures.³⁸ IQBD
8 participants with electric resistant heat is low-hanging fruit for targeted
9 assistance. It is concerning from Staff's perspective that there currently is no
10 data-sharing to enable directed outreach to these customers who may also be
11 living in highly inefficient homes and have high usage. Additionally, the
12 Company should share IQBD enrollment data with ETO as part of their monthly
13 data sharing. Sharing the IQBD marker with the monthly data would allow ETO
14 to cross-reference IQBD participants with other data such the aforementioned
15 heating type data, or additional data points that could highlight customers that
16 ETO's CBOs and trade allies could target for heat pump programs and other
17 energy efficiency offerings. Staff believes that the Company is already
18 obligated to share participation in Schedule 18 (IQBD) as it is a rate schedule
19 identifier, which must be shared with Energy Trust under 860-086-0030(2)(i).
20 The Company sharing both of these data sets with ETO could lead to action
21 that greatly reduces bills, effectively reducing a households overall energy

³⁸ LC 80 Information Response 60

1 burden, and increase efficiency for those facing high energy costs and/or high
2 usage in a cost-effective manner.

3 **Q. Please describe Staff's recommendations for the Company's customer**
4 **programs.**

5 A. Staff does not currently propose any modifications or adjustments to PGE's
6 overall energy efficiency programming. However, the Company should begin
7 sharing data with ETO on IQBD participant heating type and should include
8 IQBD enrollment data with ETO as part of their monthly data sharing.
9 Additionally, Staff plans to utilize the UM 2211 investigation to explore
10 enrollment, participation rates, program design, and utility-ETO partnerships
11 more deeply. Staff is interested in taking a more strategic approach to
12 evaluating energy efficiency to improve these areas, particularly in the interest
13 of energy justice.

ISSUE 4. INCOME QUALIFIED BILL DISCOUNT COST RECOVERY

Q. Please describe the Company's cost recovery mechanism for the Income Qualified Bill Discount program.

A. The Company's current cost recovery, Schedule 118, is implemented as an automatic adjustment clause (AAC). The cost recovery is applicable to all bills for electric service calculated under all tariffs and contracts. The Company's initial cost-recovery mechanism was approved in ADV 1447 with a \$1,000 per month cap per Site for Non-Residential Schedules. The Company's current cost-recovery mechanism, seen in the table below, went into effect on January 1, 2024, with adjustments following the UE 416 settlement. The rate for non-Residential schedules is applied to the first 20,000,000 kWh per month per Site.

Schedules	Adjustment Rate
7	\$1.88 per bill
Non-Residential Schedules	0.236 cents per kWh

Q. Please provide background information on the cost recovery for bill discount programs.

A. ORS 757.695, codifying HB 2475's Section (7)(1), provides that the Commission may address the mitigation of energy burden through bill reduction measures or programs that may include, but not limited to, demand response or weatherization. HB 2475(7)(1) must be collected in rates of an electric company through charges paid by all retail electricity consumers, such

1 that retail electricity consumers that purchase electricity from electricity
2 suppliers pay the same amount to address the mitigation of energy burdens as
3 retail electricity consumers that are not served by electricity service suppliers.

4 Staff is cognizant that the IQBD can only be accessed by qualifying
5 residential households while costs are shared by non-residential households.
6 The statute listed above states that the cost must be collected by all retail
7 electricity consumers. To this end, and further reinforced by other residential
8 program cost-recovery proceedings with the Commission, it is appropriate for
9 all utility customers to contribute to the costs of reducing residential energy
10 burden. Unlike the Public Purpose Charge (PPC) there is no statutory limit on
11 the recovery of costs from non-residential customers.³⁹

12 In order to ensure environmentally just policy, it is imperative that
13 recovery is distributed equitably across all utility customers as opposed to just
14 those that can access the program. While the Company's cost recovery
15 mechanism was evaluated and adjusted within the UE 416 proceeding, Staff is
16 interested in continuing to analyze additional mechanisms that may result in a
17 more equitable distribution of costs.

18 **Q. Please describe Staff's analysis of the Company's current cost recovery**
19 **mechanism.**

20 A. While Staff supported and signed onto adjustments made in the UE 416
21 proceeding toward a more equitable cost recovery structure when compared to
22 the original tariff allowed, Staff remains interested in continuous review of the

³⁹ COVID-19 Residential Bill Assistance cost-recovery

1 necessity of a cap in the interest of equity if and as program costs rise. Staff
2 recommended a percentage of bill concept within the UE 416 proceeding and
3 is interested in further evaluating the option in this proceeding.

4 **Q. Please summarize Staff's recommendation regarding the Company's cost**
5 **recovery mechanism.**

6 A. Staff is interested in exploring both the removal of a cost recovery cap and the
7 possibility of a percentage of bill cost recovery structure that reflects current
8 rate spread models. As Staff mentioned previously, it is important to look
9 towards an equitable distribution for all customers paying into the bill discount
10 program. Under a percentage of bill approach, the issue of applicable kWh cap
11 is removed. Staff calculates the percentage of residential bills as a comparison
12 and as a reasonable starting point for evaluation. To do this, Staff uses the
13 \$1.88 residential monthly rate to calculate a yearly contribution of \$22.56. To
14 find the percentage, we divide this by the 2023 net average annual residential
15 bill of \$1588.67 which leaves us with approximately 1.4 percent for residential
16 customers.⁴⁰

17 Staff would like to see the Company provide analyses in Reply
18 Testimony on how the costs would shift with 1) the removal of the cost
19 recovery cap and 2) a percentage of bill for Non-Residential customers.
20 Regarding the latter, Staff is interested in a percentage of bill that sufficiently
21 covers the cost of the program with no cap and without the fixed residential
22 rate exceeding a reasonable cost to residential customers. Staff would like the

⁴⁰ Exhibit Staff/1902, PGE Response to OPUC Data Request 401.

1 Company to provide analysis that evaluates what costs would look like at the
2 following percentages: 2, 2.5, 3, and 3.5. Lastly, Staff is interested in the
3 Company including analysis that evaluates reasonable program growth and the
4 proposed rate increase to fully evaluate the cost impacts.

5 **Q. Does this conclude your testimony?**

6 A. Yes.

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 305
Dated April 25, 2024

Request:

Please describe any changes to PGE's outreach strategy since program implementation. If inspired by EJ or equity group engagement or the like, please indicate as such.

Response:

In 2024, we created an intake form where organizations can request materials or a PGE representative to speak at their event, available at portlandgeneral.com/billdiscount. We also created an IQBD dedicated mailbox that can be reached at IQBD@pgn.com. We've shared this information at several Energy Justice and/or equity group forums.

May 9, 2024

Public Utility Commission of Oregon

From: Jaki Ferchland
Manager, Revenue Requirement

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 306
Dated April 25, 2024

Request:

Please describe any measures PGE takes to monitor usage among IQBD participants and what, if any outreach the Company does to extend weatherization and/or energy efficiency options to the customer.

Response:

Annually, PGE provides Community Action Partnership agencies in our service area with a list of customers who have received Energy Assistance and have monthly usage of 2,000 kWh or more for the purpose of no-cost weatherization marketing. Customer consent for sharing their information with CAP agencies is collected via Oregon Housing and Community Service, as part of the Energy Assistance process.

PGE is planning a customer communication effort later this year focused on the Community Solar Program, and specifically the income qualified portion that can help customers save 10% or more on their annual bill. Communications will target customers who have received Energy Assistance. PGE plans to include a communications tool kit in 13 languages, which has previously been shared with Community-Based Organizations in our service area. This specific communication plan will be similar to one conducted by PGE in 2021.

Lastly, PGE recently connected the Program Participation Information (PPI) we get from the Energy Trust of Oregon (ETO) to PGE customer data and update the information monthly. This allows PGE to see which ETO-participating customers are enrolled (or not) in IQBD and potentially what type of HVAC system(s) they have to better target IQBD outreach to those with likely high energy burden.

PGE Response to OPUC Data Request 311
Dated April 25, 2024

Request:

Assuming an IQBD program structure of

State Median Income	Discount
0-5	80%
6-15	60%
16-30	30%
31-45	20%
46-60	15%

Please provide,

- a. Enrolled customer counts, by tier, using current enrollments;
- b. Estimated direct assistance costs, by tier, using current enrollments;
- c. Estimated cost recovery in dollars and as a percentage of total costs, by service schedule;
- d. Estimated average per customer cost, by service schedule

Response:

- a) See the table below. Current active enrollment is as of April 30, 2024, where active enrollment is defined as having received a discount on your most recent bill.
- b) Estimated annual direct costs are based on 2024 observed and forecasted average IQBD bill amounts and reflect static enrollment month over month using counts reported in (a).

State Median Income	Discount	(a) Current Enrollment	(b) Estimated Direct Assistance (\$ millions)
0-5	80%	10,200	\$13
6-15	60%	7,900	\$10
16-30	30%	25,400	\$14
31-45	20%	22,900	\$9
46-60	15%	16,600	\$5
IQBD Total		83,000	\$51

- c) Cost recovery allocations are based on PGE's 2025 forecasted customer counts and energy deliveries, as shown in the "2025 Ratespread - January Prices FINAL.xlsx" workpaper filed with Exhibit 900 of PGE's opening testimony.
- d) Estimated average cost per customer values reflect the average cost per Service Point except Schedule 90, which is based on the average cost per Site. Schedule 90 has seven Service Points that collapse to five Sites for the application of PGE's IQBD cost recovery schedule.

Rate Schedule	(c) Estimated Cost Recovery Allocation (\$ millions)	(d) Estimated Cost Recovery Allocation (% of total)	(e) Estimated Average Cost per Customer*
7	\$20.6	40%	\$2
32	\$4.0	8%	\$4

Manager, Revenue Requirement

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 315
Dated April 25, 2024

Request:

Please provide the number of IQBD participants that:

- a. Have active arrearage balances greater than 30 days past due;
- b. Have a history of arrearages greater than 30 days past due at any time following enrollment in the IQBD;
- c. Average, max and min arrearage balances.
- d. Have been unenrolled as a result of a past-due balance.

Response:

- a. As of April 30, 2024, there were 21,556 IQBD participants with active arrearage balances greater than 30 days past their bill due date. Only customers with a past due balance greater than \$100 are sent past due notifications, approximately one-third of the total count.
- b. As of April 30, 2024, there were 56,381 distinct accounts that had arrearage balances greater than 30 days past their bill due date during the same month they received an IQBD discount.
- c. For the 21,556 IQBD participants with active arrearage balances greater than 30 days past their bill due date, the requested statistics are:

Average 31+ Balances	\$228
Maximum 31+ Balances	\$19,821
Minimum 31+ Balances	< \$1
- d. None. PGE has not unenrolled any customers from IQBD as a result of carrying a past due balance.

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 316
Dated April 25, 2024

Request:

What is PGE's process for addressing IQBD participants that fall into arrears at:

- a. 30 days past due;
- b. 60 days past due;
- c. 90+ days past due.

Response:

a.-c. PGE offers residential customers a variety of tools and options to help prevent and manage a past due balance. In addition to disconnection notices and time payment plans, PGE offers additional past due email and text notifications, bill due reminders, Preferred Due Date, budget billing plans, and payment extensions. PGE provides tips and tools to help customers reduce their usage, such as Energy Tracker. PGE also alerts customers to energy assistance resources as part of the past due notification and makes referrals on the customer's behalf, when possible. PGE does not have a unique process for already-enrolled IQBD participants that fall into arrears.

UE 435
PGE Response to OPUC Data Request 424
Dated May 10, 2024

Request:

Please identify and list all residential customer programs available to PGE customers that are supported in part or entirely by ratepayer funds. Please include discrete programs with operational tariffs (e.g. pilots, IQBD, Community Solar, etc.) as well as programs that provide services to residential customers recovered through rates (e.g. fee free bank card payment options).

Response:

PGE objects to this request on the basis that it is vague and unduly burdensome. Staff's use of "programs that provide services" is unclear and the provided example of "fee free bank card payment options" suggests standard, embedded business operations could be characterized as a program. Subject to and without waiving its objection, PGE responds as follows:

Attachment 424-A (Summary tab) includes a list of residential customer programs and offerings supported in part or entirely by PGE customer funds. This list is not exhaustive of beneficial services and protections afforded to residential customers that are considered part of normal operations. For example, residential customers can obtain a medical certification that indicates their reliance on electricity for medically necessary equipment. These customers are given increased programmatic benefits, such as increased discounts in PGE's Income Qualified Bill Discount program and added disconnection protections and notifications under OAR Division 21 rules.

UE 435
PGE Response to OPUC Data Request 484
Dated May 17, 2024

Request:

Please describe how PGE is planning to connect IQBD participants with the community solar program. Please also include organizations PGE has talked with to inform its outreach strategy including input the Company received and how it was implemented into strategy changes.

Response:

In June 2024, PGE will send out communications about the Community Solar Low-Income Program to approximately 36,000 IQBD participants. PGE collaborated with Community Energy Project on this communication strategy, deciding to focus outreach on those that received energy assistance (Low-Income Home Energy Assistance Program or Oregon Energy Assistance Program) in the past 12 months to help mitigate communication fatigue among other subsets of IQBD participants.

In August 2024, PGE will include an insert in all residential customer bills about the Community Solar Program. This insert will contain information about increased benefits for those that are income qualified.

From: Erin Apperson
Assistant General Counsel III

Portland General Electric Company
LC 80
PGE Response to OPUC Data Request 060
Dated May 26, 2023

Request:

Customer asset inventory:

- a. Does PGE use assets from the customer asset inventory to monitor for new electrical loads that can inform the building electrification forecast? If yes, please provide relevant data (# of equipment by type, # of buildings, or total aMW load) on new loads that came online at the time the initial BE forecasting was conducted.
- b. PGE stated in UM 1796 that they hired a third-party party to create a customer asset inventory. Please explain to what extent the third-party analysis supports the BE forecasts presented in the IRP/CEP? Please share the results of any third-party analysis that PGE used to develop BE forecasts.

Response:

PGE objects to this request on the basis that it seeks information that is not relevant to the decisions to be made in this proceeding and is relevant to the Distribution System Plan. Subject to and without waiving its objection, PGE responds as follows:

- a. Yes, the customer asset inventory contains information on customer primary and secondary heating fuel type, heating equipment, and cooling equipment, which PGE includes in our AdopDER model to inform the building electrification (BE) forecast. PGE uses a snapshot of this database to calibrate our base year of the AdopDER model with existing fuel and equipment types. A spreadsheet with the equipment counts by type of heating and cooling equipment is included as Attachment 060-A.
- b. The customer asset inventory described as part of the Customer Engagement Transformation (CET) in UM 1796 and related testimony includes databases containing customer information such as primary and secondary heating fuel type and equipment types. PGE leverages this database, called the Customer Research Database (CRDB) to inform BE forecasts presented in the CEP/IRP. PGE did not rely explicitly on any third-party studies conducted under UM 1796 in the development of the BE forecasts, other than the extent to which any such third-party recommendations were reflected in the database results provided under Attachment 060-A.

CASE: UE 435
WITNESS: DAVID ABRAHAM

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 2000

**OPENING TESTIMONY
Miscellaneous Operating Revenue**

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is David Abraham. I am a Senior Economist employed in the Energy
3 Cost Section of the Rates, Safety and Utility Performance Program of the
4 Public Utility Commission of Oregon (OPUC or Commission). My business
5 address is 201 High Street SE, Suite 100, Salem, Oregon 97301.

6 **Q. Please describe your educational background and work experience.**

7 A. My education and work experience are found in my witness qualifications
8 statement, Exhibit Staff/2001.

9 **Q. What is the purpose of your testimony?**

10 A. The purpose of my testimony is to address Portland General Electric's (PGE or
11 the Company) proposal regarding Other Operating Revenues. My
12 recommendations may change based on further review and based on the
13 testimonies offered by other parties.

14 **Q. Did you prepare any exhibits for this docket?**

15 A. Yes. I prepared the following supporting exhibits:
16 • Staff Exhibit 2001 – Witness Qualifications Statement
17 • Staff Exhibit 2002 – PGE Responses to Staff Data Requests
18

19 **Q. How is your testimony organized?**

20 A. My testimony is organized as follows:

21 Issue 1. Other Operating Revenue 2
22 (Wheeling, Pole Rent, and Steam Sales)

1

ISSUE 1. OTHER OPERATING REVENUE

2

Q. Please summarize this issue.

3

A. PGE forecasts revenue for the Test Year in various categories as a component of a General Rate Case (GRC). For this GRC, Other Operating Revenue includes several categories of revenue, including rents from leasing Company property (including for pole attachments), steam sales, and revenues from the use of transmission facilities; all classified under FERC Accounts 450-456.

4

5

6

7

8

9

10

11

12

Other Operating Revenue comprises a substantive component of a rate case due to its treatment as an offset to expenses, thereby serving to reduce the overall revenue requirement. In this case, PGE proposes Other Operating Revenue of \$46.3 million for the Test Year, which represents a decrease of \$5.0 million, or 9.7 percent, compared to the booked actuals for 2023.

13

Q. Was Staff able to determine what contributed to the reduced estimate for Test Year revenue compared to 2023 actuals?

14

15

A. Yes. Staff identified two line-items in Other Revenue that contributed to almost all of the decrease in estimated revenue for the Test Year:

16

17

1. A reduction to joint pole rent revenue of (\$2.92 million).

18

2. A reduction to steam sales revenue of (\$2.06 million).

19

Q. How does PGE explain the reduction in joint pole revenue compared to 2023 actuals?

20

21

A. In response to Staff DR 300, the Company describes a reduction in pole rent revenue due primarily to a greater than normal amount of "sanctions" revenue in 2023, which are based on pole occupants' non-compliance. PGE describes

22

23

1 the revenue generated from non-compliance as unpredictable and requests a
2 Test Year estimate that returns to pre-2023 levels.

3 **Q. Does Staff agree with PGE’s explanation for the reduction in joint pole**
4 **revenue?**

5 A. No. Staff analyzed historical pole rent revenue and agrees that 2023 was
6 higher than the average compared to the previous two years, as displayed in
7 Figure 1. However, Staff does not agree with the Company’s decision to back
8 out almost all the non-compliance revenue booked in 2023. Staff believes non-
9 compliance revenue is still probable for the Test Year and the best option for
10 estimating Test Year pole rent revenue is to apply a three-year average of
11 revenue (2021-2023), which would produce a Test Year estimate of
12 \$15.333 Million, or an increase of \$732,010, compared to the Company’s Test
13 Year request of \$14.601 Million.

1 **Q. How does PGE explain the reduction in steam sales revenue compared**
 2 **to 2023 actuals?**

3 A. In response to Staff DR 301, the Company explains that Test Year steam sales
 4 are based on information derived from steam sale customers. The Company
 5 describes steam sales in 2023 as larger than the historical average and greater
 6 than expectations communicated to PGE from steam customers. PGE also
 7 describes it's proposed Test Year steam sales estimate of \$2.3 Million as being
 8 slightly higher than the historical average; however, the historical average that
 9 PGE is comparing to is comprised of sales covering 2018 to 2021.

10 **Q. Does Staff agree with PGE's explanations for the reduction in steam**
 11 **sales?**

12 A. No. Staff analyzed actual historical steam sales for the years 2018 to 2023, as
 13 well as the Company's estimate for the previous rate case (UE 416) and the
 14 2025 Test Year estimate for this rate case, displayed in Figure 2.

1 Figure 2 indicates that PGE estimated revenue from steam sales to be
2 \$2.3 million in 2023 for the Company's previous rate case UE 416.¹ However,
3 actual revenue for steam sales came in approximately \$2 million above the
4 Company's estimate. Staff believes that the Company is once again
5 underestimating steam sales revenue for the Test Year in this filing. The
6 Company attempts to validate the Test Year estimate of \$2.3 million by
7 comparing it to the average from the years 2018 to 2021. Staff does not agree
8 with the historical period that the Company is using as a comparison for the
9 Test Year. Staff believes the best representation for a future year is derived
10 from observations obtained from the most recent known actuals. Therefore,
11 Staff recommends a Test Year estimate of \$3.9 million for steam sales, which
12 represents the average from 2021 to 2023 and increases the Company's
13 request by \$1.6 million.

14 **Q. What does Staff conclude from its review of PGE's historical forecasts**
15 **of Other Revenues?**

16 A. PGE has consistently underestimated its forecast of Other Revenues in
17 previous GRC's that Staff has reviewed. For example, PGE estimated Other
18 Revenue for 2023 to be \$40.9 million in its 2023 GRC (UE 416). Actual Other
19 Revenue was booked at \$51.2 million, which represents an underestimation of
20 \$10.3 million. Another example would be PGE's estimate of Other Revenue of
21 \$29.3 million in its 2022 GRC (UE 394). Actual Other Revenue for 2022 was
22 booked at \$42.1 million, which represents an underestimation of \$12.8 million.

¹ UE 416 PGE/202, Batzler-Ferchland/1.

1 **Q. Does Staff recommend an adjustment to the Company's Test Year**
2 **request for Other Revenue?**

3 A. Yes. Staff is recommending the application of the most recent actual three-
4 year average of revenue for both pole rent and steam sales revenue. Staff
5 believes applying a three-year average is a more reliable predictor of future
6 revenue based on PGE's historical performance of underestimating Other
7 Revenue. Staff recommends an adjustment that would increase Other
8 Revenue by \$2.4 million, from PGE's Test Year request of \$46.2 million, to
9 Staff's recommendation of \$48.6 million.

10 **Q. Does this conclude your testimony?**

11 A. Yes.

WITNESS QUALIFICATION STATEMENT

NAME: David Abraham

EMPLOYER: Public Utility Commission of Oregon

TITLE: Energy Costs Section Economist
Rates, Safety and Utility Performance Program

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: Master of Science, Economics (2013)
University of Texas,
El Paso, TX

Bachelor of Arts, Business Administration
(2005)
University of Texas,
El Paso, TX

EXPERIENCE: I have been employed by the Oregon Public Utility Commission as a senior economist in the Energy Costs Section since November 2023. Prior to working for the Commission, I worked for an Investor-Owned Regulated Electric Utility in Texas beginning in 2009. I started with the utility as a real-time energy trader and transitioned into the Investor Relations Department as a Financial Analyst in 2012. I moved to a position as an energy and demand forecaster in the Regulatory and Resource Planning Department in 2019 and was named Lead-Forecaster in May of 2021. I attended an electric utility ratemaking course offered through New Mexico State University and the Center for Public Utilities in 2019 and I also attended the National Association of Regulatory Utility Commission (NARUC) Rate School in 2024.

Portland General Electric Company UE 435
PGE Response to OPUC Data Request 300
Dated April 23, 2024

Request:

Referencing PGE Exhibit 202, pg. 2, please provide explanation for decrease in Test Year estimate compared to 2023 actuals Line No. 6 Pole Rent.

Response:

2023 pole rent revenues were higher than average due primarily to a greater than normal amount of "sanctions" revenue, which are based on pole occupants' non-compliance and are unpredictable.

May 7, 2024

To: Bryan Conway
Public Utility Commission of Oregon

From: Jaki Ferchland
Manager, Revenue Requirement

Portland General Electric Company
UE 435
PGE Response to OPUC Data Request 301
Dated April 23, 2024

Request:

Referencing PGE Exhibit 202, pg. 2, please provide explanation for decrease in Test Year estimate compared to 2023 actuals Line No. 11 Steam Sales.

Response:

PGE based its 2024 and 2025 budget/forecast on information communicated from steam customers, coupled with prior experience. However, actual usage can be variable and 2022 and 2023 usage was greater than historical averages and greater than expectations communicated to PGE from steam customers. In particular, 2022 data was influenced by one customer, who suffered a mechanical failure to their on-site boiler in 2022, which resulted in greater than normal 2022 steam sales revenue until the steam customer’s boiler was returned to service in the fall of 2022. In fact, the four years prior to 2022, average approximately \$300 thousand below PGE’s 2025 forecast of \$2,300,000.

Year	2018	2019	2020	2021	Average
4560012	2,160,358	1,874,091	1,419,239	2,562,812	2,004,125

As such, PGE’s forecast of \$2,300,000 is slightly higher than historic use and in line near-term expectations from steam customers.

3 and Finance Section of the Rates, Safety and Utility Performance Program of
4 the Public Utility Commission of Oregon (OPUC). My business address is 201
5 High Street SE., Suite 100, Salem, Oregon 97301.

6 **Q. Please describe your educational background and work experience.**

7 A. My witness qualifications statement is found in Exhibit Staff/2301.

8 **Q. What is the purpose of your testimony?**

9 A. I will discuss my review of several categories of Portland General Electric
10 Company (PGE or Company) Test Year Operations and Maintenance (O&M)
11 non-payroll expenses, including expenses for charitable contributions, meals
12 and entertainment, and memberships.

13 **Q. Did you prepare any exhibits for this docket?**

14 A. Yes. I prepared the following support exhibits.
15 Exhibit Staff/2101. Witness Qualifications Statement
16 Exhibit Staff/2102. Meals and Entertainment Workpaper (Confidential)
17 Exhibit Staff/2103. Memberships Workpaper (Non-Confidential)

18 **Q. How is your testimony organized?**

19 A. My testimony is organized as follows:
20 Summary Findings and Recommendations 2
21 Issue 1. Charitable Contributions 3
22 Issue 2. Meals and Entertainment..... 4
23 Issue 3. Memberships..... 6

1
2
3
4
5
6
7
8

SUMMARY FINDINGS AND RECOMMENDATIONS

Q. Please summarize your findings and recommendations.

A. Staff's recommendations are as follows:

- Issue 1 (Charitable Contributions) – PGE is not seeking rate recovery;
- Issue 2 (Meals and Entertainment) – A total adjustment of (\$142,608) is proposed to the Oregon Test Year expense; and
- Issue 3 (Memberships) – A total adjustment of (\$301,984) is proposed to the Oregon Test Year expense.

1
2
3
4
5
6
7
8
9

ISSUE 1. CHARITABLE CONTRIBUTIONS

Q. Does the Commission have a standard means of determining how charitable contributions are treated?

A. The Commission does not allow regulated utilities to recover charitable contributions.

Q. Is PGE seeking rate recovery for charitable contributions in this general rate case?

A. No. The Company removed the entire \$2.4 million from this general rate case request.¹

¹ See PGE's Response to OPUC Data Request No. 293.

1

ISSUE 2. MEALS AND ENTERTAINMENT

2

Q. Please explain the Commission's historical treatment of O&M

3

non-labor discretionary expenses.

4

A. O&M non-labor discretionary expenses include expenses for items such as

5

awards, food, gifts, meals, and entertainment. In Docket No. UE 197, the

6

Commission clarified its policy that expenses for meals and entertainment,

7

office refreshments, catering, gifts, and awards are discretionary and should be

8

shared equally by customers and shareholders.² Accordingly, a 50 percent

9

sharing of such expenses between customers and shareholders is routinely

10

recommended by Staff. In addition, Staff recommends disallowance of O&M

11

non-payroll expenses that are imprudent or excessive or do not benefit Oregon

12

regulated utility operations at a transactional level.

13

Q. Did the Company propose an adjustment to its Test Year to remove

14

meals and entertainment expenses?

15

A. Yes. Based on the Commission's historical treatment, PGE determined a

16

50 percent removal of its meals and entertainment costs comprising of

17

Business Meals & Entertainment (Cost Element 2404) and Union Meals &

18

Incidental Expense (Cost Element 2405) from its Test Year expense. PGE

19

removed \$775,000.³

20

Q. Would you please explain your adjustment?

² See *In the Matter of Portland General Electric Company Request for a Rate Revision*, Docket No. UE 197, Order No. 09-020, p. 16 (January 22, 2009).

³ See PGE Response to OPUC Data Request No. 481.

1 A. Staff has identified expense for a trip taken by PGE executive officers to the
2 United Arab Emeritus that appears to be included in Base Year expense used
3 to forecast Test Year expense. Staff does not believe this is an expense that
4 should be borne by rate payers. Staff has also identified some employee
5 award, recognition, and miscellaneous discretionary costs that were not split
6 50/50 in PGE's filed case and applied an All-Urban CPI inflation factor of
7 2.2 percent to the Base Year amount. These adjustments are not large, but
8 Staff believes it is important to remove these costs as a matter of policy. The
9 total adjustment removing the UAE and additional discretionary costs is
10 (\$142,608).

1

ISSUE 3. MEMBERSHIPS

2

Q. Please explain the Commission's historical treatment of memberships, dues, and donations.

3

4

A. The Commission has determined that some expense associated with memberships, dues, and donations to some organizations is not appropriately included in a utility's revenue requirement, primarily because some or all the organizational activities are:⁴

5

6

7

8

- Not necessary for utility service,

9

- Primarily to promote the company within the community,

10

- Not to benefit ratepayers, or

11

- Not recoverable in rates if done by the utility itself.

12

Additionally, Commission policy does not require ratepayers to pay for causes that they do not necessarily support.⁵

13

14

To limit the amount of ratepayer funding of activities that fall within the categories listed above, Commission practice is to exclude membership expenses related to economic development and civic organizations and to exclude 25 percent of membership costs for trade organizations. With respect to other organizations, Staff follows Commission precedent by disallowing all memberships or dues unless the utility can present a convincing argument that the membership is necessary for utility service or otherwise to benefit ratepayers.

15

16

17

18

19

20

21

⁴ See Order No. 87-406.

⁵ See OPUC Order No. 87-406 at 40-41, Order No. 91-186 at 16, and Order No. 09-020 at 20-21.

1 **Q. Did PGE propose an adjustment to its Test Year to remove**
2 **memberships, dues, and donations?**

3 A. No.

4 **Q. Please explain your analysis for the memberships, adjustment.**

5 A. Staff's adjustment utilizes PGE's response to OPUC Data Request No. 288,
6 which reveals approximately \$2.8 million for memberships and dues. By
7 removing membership expenses related to but not limited to trade
8 organizations, economic development and civic organizations, unidentifiable
9 acronyms, or insufficient descriptions, which reveals an Oregon allocated Base
10 Year removal amount of (\$295,484). Next, Staff applied an All-Urban CPI
11 inflation factor of 2.2 percent to the Base Year amount, resulting in an Oregon
12 escalated 2025 Test Year proposed adjustment of (\$301,984).

13 **Q. What was the result of Staff's analysis for memberships?**

14 A. Staff's analysis results in a Test Year disallowance to membership costs of
15 (\$301,984).

16 **Q. Could there be changes or updates to Staff's position and**
17 **recommendations?**

18 A. Yes. My testimony addresses issues identified to date. My recommendations
19 and issues may change when informed by new data and after reviewing
20 testimony and analysis by other parties.

21 **Q. Does this conclude your testimony?**

22 A. Yes.

SUMMARY OF RECOMMENDATIONS

Q. Please summarize the recommendations included in your opening testimony.

A. Staff recommends the Commission:

1. Permanently remove \$1.9 million from the rate base for imprudent capital expenditures on TE.¹
2. Remove \$151 thousand from the rate base for stranded charging infrastructure.
3. Reduce the operating expense budget for TE by **[BEGIN CONFIDENTIAL]** [REDACTED] **[END CONFIDENTIAL]**.
4. Permanently remove \$23.2 million from the rate base for imprudent capital expenditures on PGE's fleet of motor vehicles.
5. Remove \$5.3 million from the rate base for premature replacement of serviceable vehicles in PGE's fleet.
6. Reduce the operating expense budget for electric vehicle (EV) field operations by \$993 thousand.
7. Permanently remove \$1.1 million from the rate base for imprudent line extension allowances.

¹ All dollar figures in this testimony are rounded. The exact values can be found in the supporting exhibits.

ISSUE 1. TRANSPORTATION ELECTRIFICATION PROGRAM

Q. Does Staff have any adjustments to PGE’s new capital expenditures for TE for this proceeding?

A. No.

Q. Has PGE included TE program capital expenditures in the rate base in this proceeding that Staff has previously opined were imprudent or should be disallowed?

A. Yes, the following capital expenditures were included in PGE’s rate base in PGE’s initial filing in previous rate cases. Staff recommended the costs be removed from rate base. Ultimately, the parties stipulated to PGE’s revenue requirement without resolving the prudence or recoverability of the expenditures.

UE 394

- \$367 thousand for Electric Avenue (a network of public chargers) and TriMet.
- \$1.58 million for Electric Island, which is a joint venture heavy-duty vehicle public charging site on Swan Island.²

UE 416

- \$367 thousand for Electric Avenue (a network of public chargers) and TriMet.

² See Docket No. UE 394, Staff/1700, Shierman/24 (October 25, 2021).

- 1 • \$1.58 million for Electric Island, which is a joint venture heavy-duty
- 2 vehicle public charging site on Swan Island.³
- 3 • \$125,000 for a TE database.⁴

4 **Q. Why did Staff recommend an adjustment of (\$367 thousand) in capital**
 5 **expenditures on Electric Avenue and TriMet in UE 394 and UE 416?**

6 A. Commission Order No. 19-385 established maximum spending levels on these
 7 pilots.⁵

Table 1: Maximum Allowable Costs by Program (\$000's)

	Maximum Allowable Costs		
	O&M	Overnight Capital Cost	Total
Outreach and Technical Assistance	480	-	480
TriMet Pilot	-	625	625
Electric Avenue Network*	2,787	2,400	5,187
Residential Home Charger Pilot	-	-	-
Pilot Evaluation	580	-	580
Total	3,847	3,025	6,872

* If federal tax credits are available, allowable decrease based on federal tax credits received.

8
 9 PGE exceeded those budget caps by approximately \$367 thousand, which is
 10 shown in Staff Exhibit 2402.

11 **Q. Why did Staff recommend an adjustment of (\$1.58) million in capital**
 12 **expenditures on Electric Island?**

³ See Docket No. UE 394, Staff/1700, Shierman/24 (October 25, 2021).

⁴ See Docket No. UE 416, Staff/1900, Shierman/3 (June 13, 2023).

⁵ See Docket No. UM 1811, OPUC, Order No. 19-385, November 7, 2021, p 9.

1 A. The subsidies that PGE paid into this project were not authorized by the
2 Commission nor did they incentivize an incremental increase in charging
3 infrastructure.

4 **Q. Why wasn't PGE's capital expenditure on Electric Island authorized**
5 **under Schedule 53, PGE's Nonresidential Heavy-Duty Electric Vehicle**
6 **Charging Program?**

7 A. PGE executed a contract with an EV manufacturer on September 15, 2020,
8 committing the Company to make these expenditures before the
9 Commission approved Schedule 53 nine months later on June 15, 2021.
10 Tariffs cannot apply retroactively to a subsidy the utility already provided.⁶
11 Therefore, Schedule 53 does not apply to the expenditures PGE made on
12 Electric Island prior to the approval of Schedule 53.

13 **Q. What are the prudence implications of providing services without a**
14 **tariff?**

15 A. It is inherently imprudent. A main tenet of the utility regulatory process in
16 Oregon is that utilities are subject to rate regulation and required to file
17 tariffs and schedules with the Commission for all services they provide.⁷
18 This tenet is a statutory requirement in ORS 757.205(1). This transparency
19 can help prohibit public utilities from entering into discriminatory deals and
20 preferential treatment for one customer over another.⁸

⁶ ORS 757.210.

⁷ See Northwest Climate Conditioning Ass'n v. Lobdell, 79 Or. App. 560 (1986) at p. 565.

⁸ See Docket No. ADV 1239, OPUC Staff, Staff Report, March 1, 2021, p 4-7.

1 **Q. Beyond the inherent imprudence of providing subsidies without a**
2 **tariff, how prudent was PGE's capital expenditure on Electric Island**
3 **from an investment perspective?**

4 A. Staff concluded PGE's subsidy of the construction of Electric Island was not
5 a prudent investment, on the merits. Staff's prudence analysis on the
6 reasonableness of the investment in UE 394 looked at whether this was an
7 investment a reasonable person would make. Staff concluded a reasonable
8 person would not provide such a large incentive to meet objectives that are
9 expected to occur without the subsidy.

10 **Q. Were any of the expenditures PGE made on Electric Island prudent?**

11 A. Yes. PGE provided technical assistance to this project, a previously
12 approved TE activity under the Company's Outreach and Technical
13 Assistance Pilot.⁹ Those operations and maintenance (O&M) costs were
14 trivial in size compared to the capitalization of the construction costs for
15 building the site.

16 **Q. What did Staff recommend in UE 394?**

17 A. Staff recommended the Commission allow PGE to recover, through the
18 Company's UM 1938 deferral, the full cost in operating expenses the
19 Company incurred in 2020 for providing technical assistance to the Electric
20 Island project.¹⁰ The sole incremental benefits to ratepayers from this
21 project stem from that expenditure.

⁹ See Docket No. UM 1811, OPUC, Order No. 19-385, November 7, 2019, p 11.

¹⁰ See Docket No. UE 394, PGE, response to OPUC DR 419, August 25, 2021, Attachment A, cell C3.

1 **Q. What is Staff's combined adjustment to the rate base in this proceeding**
2 **for these prior UE 394 adjustments to PGE's rate base?**

3 A. \$(1.8 million) after adjusting for depreciation.¹¹

4 **Q. Is there any other plant that PGE agreed to remove from rate base that**
5 **PGE has included in rate base in this proceeding?**

6 A. Yes. In UE 416, Staff recommended the Commission permanently remove
7 \$125 thousand for a TE database and parties stipulated that this amount would
8 be removed from rate base. PGE has included this asset's test year value in
9 rate base in this proceeding.¹²

10 **Q. Why did Staff recommend the Commission disallow the capitalization of**
11 **PGE's TE database in UE 416?**

12 A. PGE was unable to provide workpapers showing this investment will benefit
13 ratepayers.¹³ Any need or justification for a capital expenditure to avoid
14 using separate databases for some TE data was never approved by the
15 Commission or communicated to Staff before this investment was
16 uncovered through discovery in UE 416. PGE claimed this integration will
17 save labor in TE reporting. PGE has not provided evidence that the
18 difference in labor cost is greater than the cost of the capital expenditure.

19 **Q. What does Staff recommend for the TE database in this proceeding?**

20 A. Staff recommends this plant be permanently removed from the rate base
21 because PGE has not provided sufficient evidence to show it was a prudent

¹¹ See Docket No. UE 435, PGE, Response to OPUC DR 628, July 5, 2024, Attachment A.

¹² See Docket No. UE 416 Staff/1900, Shierman/3 (June 13, 2023).

¹³ See Docket No. UE 394, PGE, Response to OPUC DR 810, June 5, 2023, p 1.

1 investment. The cost of the TE database in this proceeding is now
2 approximately 41 percent higher than it was projected to be in UE 416.¹⁴
3 Staff recommends an adjustment of \$(177 thousand) to PGE's rate base.

4 **Q. Why has PGE included these previously removed investments in rate**
5 **base in this case?**

6 A. The investments were removed from the rate base UE 394 and UE 416 as part
7 of black box settlements. The stipulating parties did not stipulate the
8 adjustments would be on a permanent basis.

9 **Q. Is Staff bringing these prior adjustments forward into this proceeding?**

10 A. Yes.

11 **Q. What is the combined adjustment to the rate base in this proceeding for**
12 **these UE 394 and UE 416 adjustments?**

13 A. \$(1.9 million).

14 **Q. Does PGE have any charging infrastructure that is no longer used and**
15 **useful since the last rate case?**

16 A. Yes. The Salem Electric Avenue site is no longer operational.

17 **Q. What does Staff recommend?**

18 A. Staff recommends the Commission remove the \$151 thousand asset value of
19 the Salem Electric Avenue site from the rate base.

20 **Q. Does Staff have any adjustments to PGE's Test Year TE-related operating**
21 **expenses?**

¹⁴ See Docket No. UE 435, PGE, Response to OPUC DR 628, July 5, 2024, Attachment A.

1 A. Yes. Staff has reduced PGE's proposed \$2.7 million TE operating expense to
2 the amount included in the budget in PGE's 2023-2025 TE Plan approved by
3 the Commission in UM 2033, which is approximately **[BEGIN CONFIDENTIAL]**
4 **[REDACTED]** **[END CONFIDENTIAL]**.¹⁵

5 **Q. What is Staff's recommendation?**

6 A. Staff recommends the Commission reduce PGE's operating expenses by
7 **[BEGIN CONFIDENTIAL]** **[REDACTED]** **[END CONFIDENTIAL]**.¹⁶

¹⁵ See Docket No. UM 2033, PGE 2023-2025 TE Plan, August 25, 2023, Table 34, pp 150, 151; Order No. 23-380 (October 20, 2023).

ISSUE 2. PGE’S FLEET OF MOTOR VEHICLES

Q. What issues related to prudence has Staff found with PGE’s recovery of costs for purchasing and maintaining the Company’s fleet of motor vehicles?

A. Staff finds imprudence in three areas: 1) the Company’s electrification of its own vehicles, 2) excessive cost from configuration choices, and 3) the Company’s purchasing of replacement vehicles in the absence of evidence that the existing vehicles were no longer serviceable.

Q. How does Staff assess the prudence of PGE’s adoption of electricity as a motor fuel for the Company’s own fleet?

A. Staff looks at the purchase of EVs and the construction of private charging stations from a business perspective.

Q. Why doesn’t Staff assess the prudence of PGE’s fleet electrification considering the criteria in ORS 757.357(5)?¹⁷

A. The Company’s acquisition of electric vehicles was not part of a program under ORS 757.357. The Commission has given electric companies the option to include the electrification of their owns fleets in their TE Plans as a TE program within the TE Budget.¹⁸ PGE did not include electrification of the Company’s fleet in its TE Plan and has thus not followed that transparent public review

¹⁷ ORS 757.357(5) states, “[t]he commission may allow an electric company to recover costs from retail electricity consumers for prudent infrastructure measures to support transportation electrification if the infrastructure measures are consistent with and meet the requirements of subsection (5) of this section.”

¹⁸ See Docket No. UM 2165, OPUC, Order No. 22-314, August 26, 2022, Attachment A, p 17.

1 process in purchasing its own EVs and constructing its own private charging
2 stations.

3 **Q. What capital expenditures on fleet electrification did PGE seek to**
4 **recover in UE 394?**

5 A. In addition to the cost of the EVs, PGE sought recovery for approximately
6 \$6.9 million in capital expenditures for construction of private fleet charging
7 stations.

8 **Q. What was Staff's recommendation?**

9 A. Staff recommended the Commission permanently remove \$6.9 million in
10 capital expenditures on new fleet charging sites from the rate base.

11 **Q. How was this issue ultimately resolved in UE 394?**

12 A. Black box settlements reduced PGE's proposed revenue requirement by an
13 amount greater than \$6.9 million in capital expenditures, but the prudence or
14 recoverability of the investment was not resolved.

15 **Q. How did Staff evaluate the net benefit of electrifying the Company's**
16 **fleet?**

17 A. Staff asked PGE to share all research in the Company's possession on EV
18 total cost of ownership (TCO) and all planning workpapers for the
19 procurement of EVs for PGE's fleet.¹⁹ Of the documents PGE shared, two
20 included net assessments of the electrification of the Company's fleet.

¹⁹ See Docket No. UE 394, OPUC Staff, Staff/1706, October 25, 2021, Shierman/111.
See Docket No. UE 394, OPUC Staff, Staff/1705, October 25, 2021, Shierman E32 in the sheet
titled "TCO".

15
16
17
18
19
20

- Q. Are any of PGE’s EV purchases put at issue in UE 394 expected to give ratepayers net long-term savings?**
- A. No. The EV models could roughly breakeven were the Company to only use existing workplace chargers for refueling, but the construction of dedicated fleet charging ports led to a net loss. Staff performed a TCO analysis on the EVs PGE purchased in comparison to their equivalent internal combustion engine (ICE) vehicle.

²⁰ Staff/2204, Shierman/2.
²¹ Staff/2204, Shierman/15.
²² Staff/2205, Shierman/S4 in the sheet titled “Assump”.

1 **Q. What type of adjustment does Staff recommend for this proceeding?**

2 A. Staff recommends the Commission make a permanent adjustment to
3 remove the \$6.9 million from the rate base.

4 **Q. What fleet electrification costs did PGE seek to recover in UE 416?**

5 A. PGE sought recovery of approximately \$12.5 million in capital costs from the
6 procurement of 133 more EVs, including ICE vehicles with electrified Altec
7 Job Energy Management System (JEMS).²³

8 PGE also sought recovery of \$9.8 million in capital costs from the
9 construction of private fleet charging stations.²⁴

10 **Q. Did Staff recommend the removal of the entire cost premium of EVs
11 from PGE's rate base in UE 416?**

12 A. No. Staff's analysis in that docket's Exhibit 1905 identified the net cost
13 premium by crediting PGE's rate base with the EVs' fuel savings,
14 maintenance savings, federal subsidies, state subsidies, and Oregon Clean
15 Fuels Program (CFP) credit revenue. Staff considers the net number to be
16 the more appropriate cost premium figure, representing the remaining
17 excessive cost these vehicles impose on ratepayers after consideration of
18 the TCO of the ICE alternatives.

²³ See Docket No. UE 416, OPUC Staff, Staff/1905, Shierman F135 in the sheet titled "EV".

²⁴ See Docket No. UE 416, OPUC Staff, Staff/1904, Shierman F33 in the sheet titled "TE Charging Plant Adds UE 416".

1 **Q. What was the net cost premium from just comparing the TCO of EVs**
2 **with their ICE alternatives in UE 416 before considering the added cost**
3 **of fleet charging infrastructure?**

4 A. The EVs at issue in UE 416 cost approximately \$2.4 million more than their
5 ICE alternatives after taking the O&M savings of the EVs into account.²⁵ This
6 contrasts with Staff's adjustment in UE 394 where the TCO essentially broke
7 even with a few thousand dollars' worth of savings on a net present value basis
8 before the cost of private charging stations was added. This declining TCO
9 value is due to PGE procuring heavier EVs.

10 **Q. How were these capital expenditures handled in UE 416?**

11 A. Like in UE 394, the capital expenditures on fleet electrification in UE 416
12 were temporarily settled through a black box agreement.

13 **Q. What adjustment does Staff recommend in this proceeding for the net**
14 **cost premium of EVs procured in UE 416?**

15 A. Staff recommends that \$2.4 million be permanently removed from the rate
16 base from the imprudent net premium of the purchase of EVs and \$9.8 million
17 be permanently removed from the rate base for the imprudent construction of
18 private fleet charging stations.

19 **Q. What EV procurement is incremental to this proceeding?**

²⁵ See Docket No. UE 416, Staff/1905, Shierman O115 in the sheet titled "EV Comparison".

1 A. PGE seeks to recover approximately \$1.9 million from the purchase of 30 EVs.
2 This has a \$685 thousand gross premium over the equivalent price of vehicles
3 with combustion engines.

4 **Q. What adjustment does Staff recommend?**

5 A. Following Staff's past practice, I have identified the net EV premium after
6 crediting the fuel savings, O&M savings, and CFP credits. That remaining
7 premium is approximately \$325 thousand as documented in Staff Exhibit 2206.
8 Staff recommends the Commission permanently remove \$325 thousand from
9 the rate base for imprudent purchases of EVs.

10 **Q. What capital expenditures on private fleet charging stations are**
11 **incremental to this proceeding?**

12 A. PGE seeks to recover approximately \$4 million in new capital expenditures on
13 private fleet charging stations.

14 **Q. What does Staff recommend for this new construction?**

15 A. Staff recommends the Commission permanently remove this \$4 million from
16 PGE's rate base because this costly build adds to the already excessive
17 spending on EVs.

18 **Q. Beyond the procurement of EVs and private charging stations, did Staff**
19 **find imprudent expenditures on other vehicles?**

20 A. Yes. Staff found excessive spending on the configuration of three ICE trucks.
21 PGE purchased configurations that were more expensive than the standard
22 alternative price that could have met PGE's use case. Also, Staff found 76

1 vehicles were purchased in the absence of evidence the purchase was
2 necessary within the time frame of the test year.²⁶

3 **Q. For the imprudent configurations, what is the total premium from these**
4 **three trucks?**

5 A. Approximately \$120 thousand.

6 **Q. For the premature purchases of replacement vehicles, what is the total**
7 **cost of purchases that may have been delayed past the end of the test**
8 **year?**

9 A. \$5.3 million.²⁷

10 **Q. What then is the total adjustment Staff recommends for new capital**
11 **expenditures on PGE's fleet?**

12 A. \$(5.8 million).

13 **Q. Does Staff have any adjustments to PGE's budget of O&M for the**
14 **Company's fleet?**

15 A. Yes.

16 **Q. What excessive spending on fleet O&M has Staff found?**

17 A. PGE seeks the recovery of \$993 thousand to maintain the Company's private
18 chargers dedicated to fueling fleet EVs.²⁸ This is a premium cost above what is
19 required to maintain ICE vehicles.

20

²⁶ Staff Exhibit 2207.

²⁷ Ibid.

²⁸ See Docket No. UE 435, PGE, Response to OPUC DR 621, July 5, 2024, p 1.

1 **Q. What does Staff recommend?**

2 A. Staff recommends the Commission reduce PGE's budget for operating
3 expenses by \$993 thousand.

1 **ISSUE 3. CAPITAL EXPENDITURES ON EV-RELATED LINE EXTENSION**

2 **ALLOWANCES**

3 **Q. What issues of prudence does Staff have with PGE’s recovery of costs**
4 **from EV-related line extension allowances?**

5 A. Staff finds excessive levels of capital expenditures on line extension allowances
6 due to unreasonably optimistic site load forecasts.

7 **Q. What is a line extension allowance?**

8 A. When a customer requests service, the Company may be required to add
9 facilities to reach the customer’s location.²⁹ Each electric company is
10 authorized to provide customers a line extension allowance that covers a
11 portion of the costs associated with the extension. Costs for new
12 connections that are equal to or less than the line extension allowance are
13 treated as the utility’s costs and recovered through general rates. If the line
14 extension allowance does not cover all the costs incurred to add facilities to
15 the customer’s location, the remaining portion of the cost is paid for by the
16 customer seeking to connect.

17 **Q. What costs for customer line extensions on TE projects did PGE seek**
18 **to recover in UE 394?**

19 A. Approximately \$605 thousand in capital expenditures.
20

²⁹ OAR 860-021-0045(1).

1 **Q. Were all these expenditures reasonable?**

2 A. No. Staff engaged in analysis and concluded that PGE used unreasonably
3 high load forecasts for some projects in determining the line extension
4 allowance.

5 **Q. Was the forecasting methodology used by PGE in UE 394 to forecast load**
6 **of TE customers reasonable?**

7 A. Yes. PGE used two methodologies to forecast a site's load in UE 394.³⁰ One
8 method estimated the number of hours in a year the site could be used to
9 recharge electric vehicles and multiplied this estimate by the combined factor
10 (CF) of the load during those hours (Limited Hours Method). The other method
11 multiplied the site's electric vehicle charger nameplate demand capacity by the
12 8,760 hours in a year and multiplies this amount by the CF of the site for the
13 entire year (All Hours Method).

14 **Q. What is a CF and how does PGE use it in its methodology?**

15 A. A CF is the percentage of maximum potential load (kWh) the customer is
16 expected to use during a certain time period. Though PGE uses a different
17 word for the letter C, the CF in this context is synonymous with what is
18 otherwise known as a capacity factor. In PGE's load forecasting for line
19 extension allowances, the time period is either a limited number of hours in a
20 year (Limited Hours Method) or all the hours in a year (All Hours Method),

³⁰ See Docket No. UE 394, PGE, Response to OPUC DR 738.

1 depending on which of the two methods is chosen, but the principal behind the
2 CF remains the same for both methods.

3 **Q. How reasonably did PGE apply the Limited Hours Method in its site**
4 **forecasts for EV related line extension allowances in UE 394?**

5 A. PGE's use of the Limited Hours Method was mostly reasonable, except for one
6 site. In that one problematic instance, PGE used an estimate of the hours of
7 use that was unreasonably high. So, Staff adjusted the forecast with a more
8 reasonable parameter of charging hours for a commercial fleet customer.

9 **Q. How did you know it was unreasonably high?**

10 A. In a previous docket concerning line extensions for TE customers (ADV 1149),
11 PGE's assumption about the hours of use for this kind of customer was based
12 on observations of this specific customer receiving the allowance. Staff
13 substituted PGE's assumption of operation hours with the observed hours from
14 ADV 1149 which reduced the load forecast and therefore reduced the size of
15 the line extension allowance.³¹

16 **Q. How reasonably did PGE apply the All Hours Method in its analysis?**

17 A. Every time PGE used the All Hours Method for a TE project, the Company
18 used an unreasonably high CF.

19 **Q. What did Staff consider to be a reasonable CF for the All Hours Method in**
20 **UE 394?**

³¹ Staff/1708, Shierman Cells M466:M489 in the sheet titled "Assump".
Staff/1702, Shierman Cell M13 in the sheet titled "M2668959".

1 A. At that time, Staff used 0.08 (8 percent). However, even this factor tends to be
2 high compared to observed charging data Staff has analyzed in the years since
3 UE 394. At the time of UE 394, Staff derived that CF from 2018 data from
4 PGE's Electric Avenue World Trade Center (WTC) site.

5 **Q. Why not use an average from multiple sites?**

6 A. That would have been preferable, but PGE was unable to provide nameplate
7 capacity data for public charging sites in the Company's service territory back
8 then.³²

9 **Q. How did Staff adjust the allowance for these projects where PGE used an**
10 **unreasonably high All Hours Method CF?**

11 A. Staff changed the CF PGE used to 0.08, which correspondingly reduced the
12 amount of the line extension allowance.

13 **Q. Did Staff make any additional adjustments?**

14 A. Yes. PGE had lost documentation of three sites' load forecasts. Staff applied
15 the same percentage adjustment to these three sites as Staff applied to the site
16 with the highest All Hours Method CF.³³

17 **Q. What was Staff's recommendation on line extension allowances for TE**
18 **projects in UE 394?**

19 A. Staff recommended the Commission permanently remove approximately
20 \$212 thousand in capital expenditures from the rate base.

21 **Q. How did UE 394 resolve this issue?**

³² Staff/1706, Shierman 5, (PGE Response to OPUC DR 737).

³³ Staff/1702, Shierman Cells E7, E19, and E21 in the sheet titled "Summary Table".

1 A. The revenue requirement from the \$212 thousand in excess capital
2 expenditures Staff found in reviewing PGE's site load forecasts was
3 excluded from rates by inclusion in the black box settlement. PGE included
4 these expenditures in UE 416's proposed rate base as well. Staff raised the
5 issue again and these expenditures were again temporarily resolved in a
6 black box settlement for purposes of setting rates in that case. However,
7 PGE has included the capital expenditure in rate base for this rate
8 proceeding.

9 **Q. What adjustment does Staff recommend in this proceeding?**

10 A. Permanently remove \$212 thousand from the rate base.

11 **Q. Did Staff have a similar recommendation for capital investments
12 between UE 394 and UE 416?**

13 A. Yes. Staff followed the same method of review. However, we used a lower
14 CF based on PGE's research. In 2022, PGE performed an empirical review
15 of the Company's assumed CF for EV-related customers and adopted a CF
16 of 0.04 or 4 percent.

17 **Q. Did Staff find that CF assumption reasonable?**

18 A. Yes. Staff used also used 4 percent CF in our review.

19 **Q. Didn't PGE consistently use a 4 percent CF as well?**

20 A. No.

21 **Q. If PGE consistently used a CF of 4 percent, how much lower would the
22 total line extension allowances for nonresidential EV charging sites be?**

23 A. Approximately \$743 thousand.

1 **Q. What did Staff recommend?**

2 A. Staff recommended the Commission remove \$743 thousand from the rate
3 base, and again this was temporarily resolved in a black box settlement.

4 **Q. What does Staff recommend in this proceeding?**

5 A. Staff recommends the Commission permanently remove \$743 thousand
6 from the rate base for imprudent line extension allowances in UE 416 that
7 PGE has included in the Company's rate base in this proceeding.

8 **Q. Does Staff find any issues with the new line extension allowances PGE
9 seeks to recover in this proceeding?**

10 A. Yes. Though PGE mostly used a CF of 4 percent since UE 416, Staff found
11 several instances where the assumption was considerably higher. Staff's
12 review used a consistent 4 percent CF.

13 **Q. What were the results?**

14 A. Staff concludes \$176 thousand of the Company's line extension allowances for
15 TE sites are excess capital expenditures. Staff recommends the Commission
16 permanently reduce PGE's rate base by \$176 thousand.

CONCLUSION

Q. Please conclude with an itemized summary of your recommendations.

A. Staff recommends the Commission:

1. Permanently remove \$367 thousand from the rate base for exceeding the UM 1811 budget for Electric Avenue and TriMet.
2. Permanently remove \$1.4 million from the rate base for imprudent capital expenditures on Electric Island.
3. Permanently remove \$125 thousand from the rate base for imprudent capital expenditures on a TE database.
4. Permanently remove \$151 thousand from the rate base for the Salem Electric Avenue site no longer being used and useful.
5. Reduce the operating expense budget for TE by **[BEGIN CONFIDENTIAL]** [REDACTED] **[END CONFIDENTIAL]**.
6. Permanently remove \$6.9 million from the rate base for imprudent capital expenditures on private fleet EV charging stations identified in UE 394.
7. Permanently remove \$2.4 million from the rate base for imprudent capital expenditures on EVs identified in UE 416.
8. Permanently remove \$9.8 million from the rate base for imprudent new capital expenditures on private fleet EV charging stations identified in UE 416.
9. Permanently remove \$4 million from the rate base for imprudent new capital expenditures on private fleet EV charging stations.
10. Permanently remove \$120 thousand from the rate base for imprudent configurations of trucks.
11. Remove \$5.3 million from the rate base for the premature replacement of serviceable fleet vehicles.
12. Reduce the operation expense budget for EV field operations by \$993 thousand.
13. Permanently remove \$212 thousand from the rate base for imprudent line extension allowances identified in UE 394.
14. Permanently remove \$743 thousand from the rate base for imprudent line extension allowances identified in UE 416.
15. Permanently remove \$536 thousand from the rate base for imprudent new line extension allowances.

Q. Does this conclude your testimony?

A. Yes.
