CASE: UE 435
WITNESS: Russ Beitzel

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 100

**OPENING TESTIMONY
Overview**

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Russ Beitzel. I am Program Manager of the Rates and
3 Telecommunications Section of the Rates, Safety and Utility Performance
4 Program of the Public Utility Commission of Oregon (OPUC). My business
5 address is 201 High Street SE, Suite 100, Salem, Oregon 97301.

6 **Q. Please describe your educational background and work experience.**

7 A. My witness qualifications statement is found in Exhibit Staff/101.

8 **Q. What is the purpose of your testimony?**

9 A. I introduce Staff-sponsored adjustments and issues regarding Portland General
10 Electric Company's request for a general rate revision, docketed as Docket No.
11 UE 435, and articulate some of Staff's overarching concerns regarding the
12 frequency and aggregate magnitude of the Company's proposed increases.
13 The revenue requirement effect of Staff's proposed adjustments is found in
14 Itayi Chipanera's testimony in Exhibit Staff/300.

15 **Q. What is PGE's proposed rate increase in this docket?**

16 A. PGE is requesting a total revenue increase on base sales to customers of
17 \$294.844 million or 10.9 percent. The proposed increase can be broken down
18 as follows:

- 19 1. A combined base rate and power cost increase of \$232.529 million;
- 20 2. A stipulated revenue requirement reduction adjustment of \$4.463 million
21 from UE 416;
- 22 3. An increase of \$17.325 million for the newly proposed Constable battery
23 facility; and

1 4. An increase of \$49.453 million for the newly proposed Seaside battery
2 facility.

3 The Seaside battery facility is not expected to be on-line until June 30,
4 2025. Accordingly, PGE asks for authority to “track” in the rate increase for its
5 Seaside costs once the battery is operational. Excluding the costs of the
6 Seaside battery from the requested rate increase for January 1 results in a
7 requested Revenue Requirement increase of \$245.391 million on January 1,
8 2025, in this docket. This does not include increases resulting from PGE’s
9 Wildfire Mitigation Mechanism.

10 **Q. What issues would Staff like to highlight?**

11 A. Staff is concerned that the aggregate rate impacts of this general rate case,
12 deferrals, and power costs constitute an unreasonably high energy burden for
13 PGE customers. As pointed in the testimony of the OPUC’s Energy Justice
14 Program Manager, Michelle Scala, if PGE’s filed rate increase is approved, the
15 compounding effects of general rate case filings and power costs, would make
16 2025 monthly residential energy bills 55 to 69 percent higher than what
17 customers would have paid in 2014. At least 40 percent of that increase is
18 attributed to just the last three years.¹

19 Adding to this alarming picture, is that the current count of customers in
20 arrears does appear to have eclipsed pandemic peaks, and in fact, surpassed
21 all reported months since January 2020, when reporting began. Specifically,
22 PGE indicated that as of May 31, 2024, approximately 89,000 customers had

¹ Staff/200, Scala.

1 past due balances of more than 31 days. Regarding disconnections for non-
2 payment, Staff's review of quarterly disconnection reports also revealed a
3 recent spike that exceeds all measured months since 2018, (Figure 8),
4 including over 14 thousand between February 2024 and May 2024.

5 **Q. Is Staff satisfied by PGE's actions in response to the increasing cost**
6 **pressure on ratepayers?**

7 A. No. Staff finds PGE's request for this rate increase so soon after the rate
8 increase on January 1, 2024, and the request to track in a \$49 million revenue
9 requirement increase in July 2025, fail to recognize the real economic
10 consequences of increasing electricity prices for customers. In other words,
11 the timing of this rate case implies PGE's paramount interest is not in
12 managing its costs for the benefit of customers, but in managing regulatory
13 mechanisms for the benefit of the Company.

14 **Q. Does PGE's filing show PGE is actively engaged in controlling costs.**

15 A No. PGE's Test Year forecast for this rate case is built on its 2024 budget.
16 The 2024 budget is built on the revenue requirement resulting from PGE's last
17 rate case. In many cases, PGE's proposed Test Year increase is a modest
18 increase from PGE's 2024 budget. However, in these same cases, the
19 increase from actual costs in 2023, the most recent full calendar year of costs,
20 is significant.

21 PGE's use of its 2024 budget rather than an examination of actual costs
22 suggests a lack of discipline to Staff. Basing the Test Year on a previously

1 established but untested budget appears designed to help PGE meet its
2 “strategic vision” rather than force disciplined spending.

3 Staff testimony highlights the Company’s unwillingness to absorb any
4 regulatory lag for major resource and infrastructure investments. Most
5 significantly in this case, establishing the Company’s proposed IRM and
6 Seaside Battery Storage tracker would exacerbate the Company’s lack of
7 discipline with regard to single issue rate making and regulatory lag.

8 **Q. What could the Commission do to address general rate increases of the**
9 **magnitude proposed by PGE in this general rate case?**

10 A. One solution proposed by Bob Jenks of the Oregon Citizens’ Utility Board
11 (CUB) on that organization’s website is for the Commission to set the utility’s
12 profit margin at the lowest reasonable point.²

13 **Q. Does Staff agree with CUB that this is the Commission’s best option?**

14 A. Staff analyzing Cost of Capital (CoC) in this general rate case would not use
15 terms like “allowable profit margins” interchangeably with allowed Return on
16 Equity (ROE). Staff also think holistically about Cost of Capital considering
17 credit ratings and the financial health of Commission jurisdictional energy
18 utilities and their relative strength in financial markets in comparison to their
19 peer or similarly situated like utilities.

² Posted January 25, 2024, on <https://oregoncub.org/> this proposal within “Is Oregon Utility Regulation Part of the Problem?” by Bob Jenks is reproduced with some small editing changes to fit a written rather than on-screen format at Exhibit Staff/110 Muldoon/37-44 to capture the context in which the suggestion was made. Also see Exhibit Staff/110 Muldoon/53.

1 However, Staff recommends a range of reasonable ROEs for the
2 Commission's consideration, recognizing the importance of the ROE to
3 creating fair and reasonable rates. The Commission could consider any ROE in
4 Staff's range of reasonable ROEs for Commission Authorized ROE in its final
5 order in this general rate case.

6 **Q. Are there other ways that the Commission could look at using ROE to**
7 **mitigate the magnitude and frequency of general rate cases.**

8 A. Yes. The Commission could consider using ROE as a throttle to control the
9 frequency of general rate cases. For example, were a utility to file three
10 general rate case in a five-year period, the Commission might consider that
11 activity sufficient to reduce regulatory lag and reduce financial risk in terms of
12 metrics like ratio of cash flow from operations before changes in working
13 capital (CFO pre-WC) to debt, in a form meaningful to credit rating agencies.

14 **Q. Would that last approach be immediately applicable in this general rate**
15 **case?**

16 A. That is uncertain. Persons concerned about the frequency and aggregate
17 magnitude of energy utility rate increases in Oregon are sharing ideas on
18 possible solutions. Consideration of recommendations raised in this general
19 rate case could give the Commission tools to mitigate the impact of frequent
20 rate cases on jurisdictional utility customers. Staff will continue to monitor
21 suggestions on intervenors in this case and closely review the analysis and
22 justifications provided to support such recommendations to the Commission.

1 The Commission's evaluation of such proposals is consistent with public
2 comments and posting by intervenors asking that the Commission consider
3 impacts on utility customers in its determination of most appropriate just and
4 reasonable outcomes in this case.

5 **Q. PGE suggests one way to minimize general rate cases (GRCs) is to adopt**
6 **PGE's proposed Investment Recovery Mechanism (IRM) to allow PGE to**
7 **recover costs of capital investment without the need for a generate rate**
8 **increase. Do you support PGE's proposed IRM?**

9 A. No. The IRM primarily benefits PGE in that it provides PGE a way to recover
10 costs of certain investments without any examination of offsetting revenues or
11 decreasing costs in other areas. Presumably, if the Company would benefit
12 from a GRC, PGE would file one. Staff assumes that it is only when the
13 Company has no demonstrable cost increases other than routine capital
14 investments that PGE would choose to use the IRM.

15 Staff witness Dr. Bret Stevens notes that IRM could benefit ratepayers
16 and the Company if the IRM specified the Commission would not consider a
17 request for a GRC for a certain number of years after PGE used the IRM.
18 Accordingly, Staff recommends that if the Commission grants PGE's request
19 for the IRM, the Commission specify that it will not consider a request for a
20 GRC for a period of three years following a year in which the RVM is used.

21 **Q. Does PGE make any other proposals to minimize its exposure to**
22 **regulatory lag?**

1 A. Yes. PGE renews, for the fourth time, its request to recover costs of stand-
2 alone batteries through its Renewable Adjustment Clause (RAC). In 2016, the
3 Oregon legislature modified the statute regarding recovery of investments to
4 comply with Oregon’s Renewable Portfolio Standard to include costs of
5 “associated energy storage”.³ If PGE’s request is granted, PGE could recover
6 costs of stand-alone batteries such as the Constable and Seaside projects
7 without filing a GRC. As Staff has done in three previous proceedings, Staff
8 opposes PGE’s request to expand the use of the RAC.

9 Staff witness Dr. Curtis Dlouhy notes that while Staff is not opposed to a
10 holistic investigation into the use of the RAC post House Bill 2021, Staff does
11 oppose incremental changes that benefit only PGE.

12 **Q. Does PGE’s request to modify the RAC to include stand-alone batteries**
13 **fit within a pattern in PGE’s GRC?**

14 A. Yes. PGE’s request to modify the RAC, implement the IRM, and its request for
15 a tracker for its Seaside project reflect that eliminating any regulatory lag for
16 new capital investment is PGE’s paramount concern. PGE filed this GRC six
17 weeks after the increase from its previous GRC became effective and asked
18 the Commission to track into rates a major capital investment coming on line
19 six months after the proposed rate effective date of this rate case. In Staff’s
20 view, a more reasonable alternative would have been to wait at least seven or
21 eight additional months to file a new rate case to ensure the Seaside project
22 would be on-line prior to the rate effective date and any rate change would

³ ORS 469A.120(2).

1 become effective in the shoulder months between the summer cooling season
2 and winter heating season. PGE did not opt to delay the proposed increase
3 until after the Seaside project is on-line, presumably to avoid any delay in
4 recovering costs for its Constable battery and T&D investments while waiting
5 for the Seaside battery to come on-line.

6

7

1 **INTRODUCTION TO OTHER STAFF'S OPENING TESTIMONY**

2 **Q. Please describe the opening testimony submitted by Staff in this rate**
3 **case.**

4 A. The Staff exhibit number, respective Staff witness, and topics published on this
5 date are presented below.

6 In **Exhibit 200, Michelle Scala**, Energy Justice Program Manager, provides an
7 Energy Justice overview for this general rate case, highlighting rate
8 pressure on PGE's customers.

9 In **Exhibit 300, Itayi Chipanera**, Senior Financial Analyst, provides a table
10 showing the revenue requirement of each proposed Staff adjustment and
11 his analysis of Test Year cash working capital included in rate base,
12 escalations, income taxes, Oregon Public Utility Commission (OPUC)
13 fees and unbundled revenue requirement.

14 In **Exhibit 400, Matt Muldoon**, presents his recommendation for PGE's
15 authorized Return on Equity and capital structure.

16 In **Exhibit 500, Rose Pileggi**, Senior Utility Analyst, discusses the Company's
17 cost of Long-Term Debt.

18 In **Exhibit 600, Melissa Nottingham**, Consumer Services Section Manager,
19 presents the 2,333 public comments opposing the proposed rate increase
20 received by the Commission as of July 1, 2024,

21 In **Exhibit 700, Ming Peng**, Senior Economist, analyzes depreciation expense,
22 amortization expense, depreciation reserve, amortization reserve, and
23 Allowance for Funds Used During Construction (AFUDC).

1 In **Exhibit 800, Dustin Ball**, Utility Analyst, discusses his analysis of PGE's
2 proposed transmission and distribution, information technology, and
3 generation capital additions to rate base and Test Year expense for
4 property and casualty insurance.

5 In **Exhibit 900, Dr. Bret Stevens**, Senior Economist, analyzes PGE's Test
6 Year load forecast, marginal cost study, rate spread, the basic charge,
7 rate base calculation, and PGE's proposed Investment Recovery
8 Mechanism.

9 In **Exhibit 1000, Laurel Anderson**, Senior Telecommunications Analyst,
10 reviews PGE's Test Year expense for non-labor generation overhead and
11 maintenance (O&M) and information technology (IT) O&M, retained
12 losses, and accumulated deferred income taxes.

13 In **Exhibit 1100, Nicola Peterson**, Senior Telecommunications Analyst,
14 reviews PGE's Test Year expense for customer accounts, advertising,
15 administrative & general Expenses (A&G), current employee benefits,
16 and PGE's efforts at obtaining grants.

17 In **Exhibit 1200, Steph Yamada**, Senior Utility Analyst, analyzes Test Year
18 inclusions for wages & salaries, full-time equivalents (FTE), incentives,
19 directors and officers' insurance, and the Management Deferred
20 Compensation and Supplemental Executive Retirement Plans.

21 In **Exhibit 1300, Luz Mondragon**, Senior Financial Analyst, analyzes Test
22 Year expense for non-labor transmission and distribution O&M and
23 routine vegetation management.

1 In **Exhibit 1400, Julie Dyck**, Senior Economist, analyzes fuel stock in rate
2 base and the Trojan Nuclear Decommissioning Trust.

3 In **Exhibit 1500, Mitch Moore**, Senior Utility Analyst, analyzes capitalized
4 costs for materials and supplies.

5 In **Exhibit 1600, Madison Bolton**, Senior Energy and Policy Analyst, analyzes
6 PGE's proposed transportation line extension allowance (TLEA) under
7 Schedule 56, PGE's general line extension allowance (LEA) policy for
8 large customers, and the Company's franchise fee unbundling for Direct
9 Access Customers.

10 In **Exhibit 1700, Dr. Curtis Dlouhy**, Senior Economic and Policy Analyst,
11 reviews the Company's proposals regarding the Renewable Resource
12 Automatic Adjustment Clause (RAC), Virtual Power Plant (VPP), Seaside
13 battery project, Constable battery project, and its updated nonresidential
14 Time of Use (TOU) rates.

15 In **Exhibit 1800, Scott Shearer**, Utility Analyst, reviews expense for Amazon
16 Pay and PGE's proposed changes to Schedule 300 charges and PGE's
17 Tariff Rules.

18 In **Exhibit 1900, Kate Ayres**, Energy Justice Analyst, discusses her review of
19 PGE's Income Qualified Bill Discount program and proposed cost
20 recovery for the program as well as other customer protection programs.

21 In **Exhibit 2000, David Abraham**, Senior Economist, discusses PGE's Test
22 Year revenues other than those received from retail rates.

1 In **Exhibit 2100**, **Paul Rossow**, Utility Analyst, reviews PGE's Test Year
2 expense for memberships, dues, meals and entertainment.

3 In **Exhibit 2200**, **Eric Shierman**, Senior Utility Analyst, analyzes PGE's
4 Electric Transformation-related expense and capital investment, the
5 Company's transition to electric fleet vehicles (EVs) and EV-related LEA
6 investment.

7 **Q. Does this conclude your testimony?**

8 A. Yes.

CASE: UE 435
WITNESS: RUSS BEITZEL

WITNESS QUALIFICATIONS STATEMENT

July 15, 2024

WITNESS QUALIFICATIONS STATEMENT

NAME: Russell (Russ) Beitzel

EMPLOYER: Public Utility Commission of Oregon

TITLE: Program Manager
Rates and Telecommunications Section

ADDRESS: 201 High Street SE, Suite 100
Salem, OR 97301

EDUCATION: Bachelor of Science in Accounting, Otterbein University

EXPERIENCE:

I have been employed with the Public Utility Commission of Oregon since 2018. I am currently the Program Manager of the Rates and Telecommunications Section of the Rates, Safety and Utility Performance Program. I have analyzed and addressed numerous issues including tariff changes, property sales, affiliated interest transactions, revenue requirement calculations, deferred tax calculations, rate spread, and rate design. I have also served as case manager on multiple water rate cases, and have provided testimony in UW 185, UW 182, UW 175, UW 177, UE 374, UG 388, UE 416, and UE 426.

Additionally, I worked at Ashland, Inc. for twenty years as a manufacturing and corporate accountant and business analyst for a business unit with approximately one billion dollars in global annual sales. My accountant duties included product cost analysis, general ledger account analysis, SOX compliance, and internal and external audit compliance. My analyst duties included budgeting, forecasting, financial statement analysis, acquisition tracking, and division financial support for a global business unit.

CASE: UE 435
WITNESS: MICHELLE SCALA

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 200

Opening Testimony

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Michelle Scala. I am the Energy Justice Program Manager
3 employed in the Utility Strategy and Integration Division of the Public Utility
4 Commission of Oregon (OPUC). My business address is 201 High Street SE,
5 Suite 100, Salem, Oregon 97301.

6 **Q. Please describe your educational background and work experience.**

7 A. My witness qualifications statement is found in Exhibit Staff/201.

8 **Q. What is the purpose of your testimony?**

9 A. The purpose of Staff’s testimony is to reinforce energy justice considerations
10 as they intersect with the proposals and potential impacts of Portland General
11 Electric’s 2024 general rate case.

12 **Q. Did you prepare any exhibits for this docket?**

13 A. Yes. I prepared Exhibit Staff/201, witness qualifications statement and Exhibit
14 Staff/302, Non-Confidential Data Responses in Support of Opening Testimony.

15 **Q. How is your testimony organized?**

16 A. My testimony is organized as follows:

17	Summary and Staff Recommendations	3
18	Issue 1. Overall Affordability Considerations	11
19	Energy Burden	12
20	Arrearages and Disconnections	24
21	Other Issues	32

1 **Q. Could there be changes or updates to Staff's position and**
2 **recommendations?**

3 A. Yes. My testimony represents issues identified to date. My recommendations
4 and issues may change when informed by new data and after reviewing
5 testimony and analysis by other parties.

1

SUMMARY AND STAFF RECOMMENDATIONS

2

Q. Please summarize Staff's testimony.

3

A. This testimony provides general guidance and elaborates on the role of energy justice in the UE 435 rate case, particularly regarding the human impacts of ratemaking proposals on Portland General Electric (PGE or Company) customers. It will discuss ways in which energy justice can be considered throughout a review of the issues to advance a more equitable distribution of energy costs, access, and system benefits across communities impacted by this case. This testimony also speaks on select components of the Company's UE 435 initial filing through an equity lens focused on the mitigation of disproportionate impacts on low-income and other environmental justice communities. References to specific recommendations made by Staff in other Opening Testimony exhibits are made where relevant.

13

14

Q. Please explain the meaning of "energy justice" for the purposes of Staff's testimony.

15

16

17

18

19

20

A. Staff's definition of "energy justice" is aligned with that used by the United States Department of Energy,¹ as informed by the Initiative for Energy Justice.² Energy justice refers to the goals of achieving equity in both the social and economic participation of the system, while also remediating social, economic, and health burdens on those disproportionately harmed by the energy system.

¹ *How Energy Justice, Presidential Initiatives, and Executive Orders Shape Equity at DOE*, Office of Energy Justice and Equity, US Department of Energy, (January 3, 2022) (available at: <https://www.energy.gov/justice/articles/how-energy-justice-presidential-initiatives-and-executive-orders-shape-equity-doe>).

² See Initiative for Justice (available at: <https://iejusa.org/>).

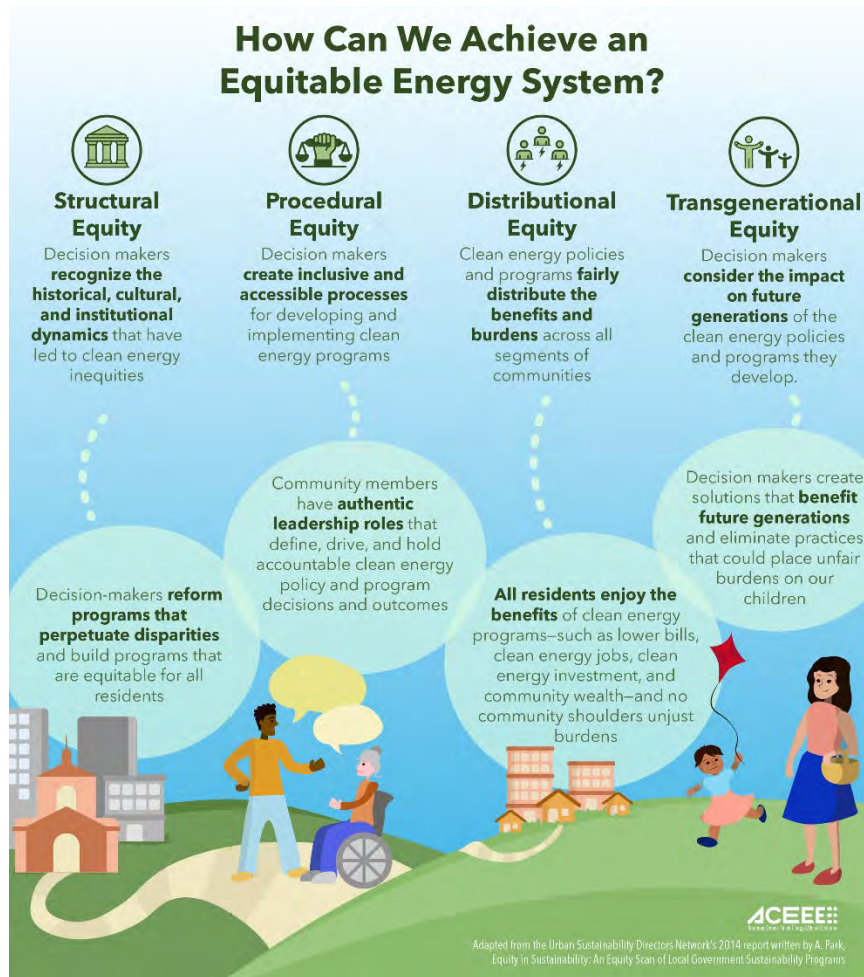

1 Energy justice aims to make energy accessible, affordable, clean, and
2 equitably managed for all communities.

3 Applying energy justice in practice, such as for the purposes of Staff's
4 testimony, often entails the use of an energy equity framework that includes
5 four dimensions of equity: procedural equity, structural equity, distributional
6 equity, and transgenerational equity. This approach allows Staff to assess the
7 extent to which policies, proposals, and programs embed inclusive
8 engagement processes that result in a fair distribution of benefits and burdens
9 and ensure desired outcomes benefit future generations (Figure 1).³

³ American Council for an Energy-Efficient Economy (ACEEE) Energy Equity Topic Page, (available at: <https://www.aceee.org/topic/energy-equity>).

1

Figure 1. ACEE Dimensions of Energy Equity

2

Q. Does the PGE share Staff’s interpretation of energy justice?

3

A. It appears so. In Opening Testimony, the Company stated that it is “committed

4

to integrating energy justice into [its] business at all levels,”⁴ including the

5

components of procedural justice, distributive justice, and restorative justice.

6

Q. Please summarize Staff’s recommendations relative to this Exhibit.

7

A. In general, Staff will refer to other Staff Opening Testimony exhibits for

8

dedicated discussion and proposed adjustments on specific components of

⁴ PGE/100, Pope-Sims/26.

1 PGE's filing; however, the following text will provide a high-level summary of
2 recommendations intended to mitigate Staff's energy justice concerns across a
3 selection⁵ of issues:

4 Overall Affordability Considerations:

5 ***Magnitude of Increase and Cost Drivers***

6 As an affordability matter, Staff is concerned about the impacts of the
7 Company's choice to request this increase immediately following a seventeen
8 percent net increase to residential customer rates that went into effect at the
9 beginning of this year. Across exhibits, Staff's Opening Testimony articulates
10 several concerns with the timing, magnitude, and urgency of PGE's
11 \$202.0 million request and the cost drivers behind it. Specific to this exhibit,
12 Staff provides its energy justice focused analyses and concerns relative to the
13 impacts of this case on PGE's residential monthly bills. Staff's
14 recommendation is to limit the Company's revenue requirement increase in
15 this proceeding to a residential impact of three percent or less and remove
16 proposals that lack urgency at this time. For recommendations and dollar
17 adjustments to specific cost drivers in UE 435, Staff refers to the designated
18 expert witness and Opening Testimony exhibits.

⁵ Staff has endeavored to identify high impact issues within the Company's proposal and Staff recommendations for environmental justice communities. That said, Staff recognizes that areas addressed in this testimony may not be fully comprehensive of all aspects in the case that result in disparate impacts and/or disproportionate burdens faced by these groups. Staff's testimony may evolve to be more inclusive of such issues in subsequent process should additional environmental justice priorities emerge within this proceeding.

1 ***Income-Qualified Bill Discount***

2 Staff is concerned that another material increase to residential rates will
3 void parties' careful work to calibrate the Company's Income Qualified Bill
4 Discount Program (IQBD) to the increases proposed in last year's general rate
5 revision. Staff is further concerned that the Company's filing does not directly
6 acknowledge the need to re-calibrate the program to provide meaningful relief
7 to highly energy burdened households if the proposed increase goes into
8 effect. Staff witness, Ms. Kate Ayres provides detailed analysis and discussion
9 on the IQBD program in Exhibit 1900, with some recommendations for
10 arrears management and outreach. In support of these recommendations
11 and Ms. Ayres' program analysis, this exhibit explores a juxtaposition of recent
12 rate increases with the IQBD discounts and highlights the assistance gaps
13 described in PGE's 2024 Energy Burden Assessment (EBA).

14 ***Arrearages and Disconnections***

15 Staff believes that actions should be taken to address the Company's
16 arrears and disconnection levels alongside reductions to the proposed rate
17 increase. At a minimum, the Company should engage Staff, consumer
18 advocates, Community Action Agency partners, and its CBIAG to discuss
19 disconnection rates, past due balances, struggling active and recently
20 disconnected accounts, and any other factors that can be used to inform a
21 crisis mitigation strategy to be brought before the Commission. This
22 recommendation is made in conjunction with those discussed in Exhibit 1900,

1 including where Staff witness, Ms. Kate Ayres, requests the Company include
2 an arrearage management program proposal in its Reply Testimony.

3 ***Residential Basic Charge***

4 Staff is unsupportive of the PGE's request to increase the residential
5 basic charge. Adopting this proposal would result in a near doubling of the
6 fixed portion of residential customer bills in the last three years. Staff refers to
7 Exhibit 900 for Dr. Bret Stevens' additional analysis and detailed
8 recommendations on PGE's proposed increase to the Residential basic
9 charge. In Exhibit 900, Staff rejects the residential basic charge proposal, in
10 part, on the ground of gradualism and lack of necessity. There and in this
11 exhibit, Staff discusses several of the equity concerns with the significance of
12 this increase and why additional data and customer segment analysis is
13 needed.

14 ***Other Issues***

15 The Company's requests for the Seaside battery tracker and Investment
16 Recovery Mechanism (IRM) have raised some energy justice and affordability
17 concerns regarding the timing and potential risk shifting of these proposals.
18 Regarding the tracker and IRM, Staff recommends the Commission reject
19 these proposals as premature or consider an extended effective date to
20 mitigate overburdening customers.

21 **Rate Spread**

22 Current approaches that establish cost causation and rate spread without
23 sensitivity for social and human impacts are incomplete and may fail to fully

1 integrate measures of energy justice when assigning costs. Staff believes the
2 inclusion of other measures and tools into a rate spread study within or
3 alongside traditional marginal cost studies would be informative to crafting a
4 defensible and pragmatic allocation of costs. As discussed in UE 416, Staff
5 recommends PGE explore how intra-class heterogeneity can be reflected in
6 cost causation assumptions and marginal cost studies to better align with
7 energy justice principles. Lastly, as Staff navigates the pressing residential
8 affordability challenges, it should be noted that taking conclusive positions on
9 rate spread before a more finalized revenue requirement is premature. This
10 process must evolve beyond system centered judgements on cost causation.

11 Until rate spread methodologies can be reformed to reflect social and
12 human considerations, Staff proposes to apply incremental adjustments on top
13 of results of the Company's rate spread analysis while keeping affordability top
14 of mind and leaving the position open to change based on further analysis or
15 adjustments to the revenue requirement and the evolution of issues raised in
16 this case. Staff does not expect this ad hoc approach to be tenable for much
17 longer into the future. Staff refers to specific recommendations and a detailed
18 analysis of the rate spread and associated marginal cost study in Exhibit
19 Staff/900.

20 Procedural Equity:

21 Staff makes recommendations for additional analysis and process to
22 enhance the transparency and accessibility of the case for impacted

1 communities consistent as it has done across PGE's peer utilities. Staff's
2 recommendations include a request for the Company to:

- 3 • Publicly explain in non-confidential Reply Testimony how environmental
4 justice input was solicited and applied in specific decisions relative to its
5 UE 435 proposal;
- 6 • Respond to public comments provided in this proceeding; and
- 7 • Provide an analysis extrapolating the findings of the 2024 EBA relative to
8 estimated rate case impacts on differently burdened residential
9 communities in PGE's service territory.

10 Further, to the extent an energy justice (EJ) workshop is scheduled
11 following the publication of Staff and intervening parties' opening testimonies,
12 Staff recommends the Company encourage and provide for the participation of
13 the Company's Community Benefits and Impacts Advisory Group (CBIAG) and
14 plan to present the requested analysis on differential impacts associated with
15 this case.

16 Staff further recommends that future utility general rate case filings be
17 preceded by an intentionally deformed process that engages frontline
18 communities on planned filings, allows for constructive bi-directional learning
19 and dialogue, and is documented in the ultimate filing.

ISSUE 1. OVERALL RESIDENTIAL AFFORDABILITY CONSIDERATIONS

Q. Please explain how the Company has discussed residential affordability considerations in its UE 435 filing.

A. In Opening Testimony, PGE asserts affordability as a key tenet to their model, alongside safe, clean, and reliable energy. The Company also calls out several activities that reduce energy burden and promote energy access for participating income-qualified customers. These include:

- The IQBD program and 2024 increases to the program's discount tiers in compliance with adopted stipulations in UE 416.
- Planned Quarter 3 2024 updates to the IQBD informed by the then anticipated, now completed, Energy Burden Assessment.
- The availability of the federally and ratepayer funded energy assistance programs, Low-Income Home Energy Assistance Program (LIHEAP) and Oregon Energy Assistance Program (OEAP), respectively.
- The introduction of an income-qualified rate to promote the accessibility and equity of Electric Vehicle (EV) charging in communities the Company serves.
- The availability of no-cost portable nine batteries for income-qualified customers with medical certificates, residing in high fire risk 10 zones.

The Company also stated that its 9.75 percent Return on Equity (ROE) request is based on customer affordability considerations and that its

1 Investment Tax Credit (ITC) amortization proposal provides direct customer
2 benefits offsetting investment costs.^{6,7}

3 More broadly, PGE highlights how its direct and indirect roles in pursuing
4 grant opportunities through the Oregon Bipartisan Infrastructure Law (BIL) and
5 Federal Inflation Reduction Act (IRA). According to the Company, many of
6 these grants target benefits to “disadvantaged communities” and can support
7 investments in “transportation electrification, grid resiliency, climate and wildfire
8 adaptation and resiliency, clean energy, smart grid investment, carbon
9 reduction, hydrogen, expanded and advanced energy efficiency and job
10 creation.”^{8,9}

11 **Q. Can Staff provide some data or analysis explaining the state of**
12 **affordability for PGE customers?**

13 A. Yes. To do this, Staff will share some of the information published in PGE’s
14 recently completed Energy Burden Assessment (Low-Income Needs
15 Assessment; LINA; or EBA) by Empower Dataworks.¹⁰ Staff is very
16 appreciative of PGE’s actions to conduct and share its EBA by June 30, 2024.
17 This has allowed Staff the opportunity to review this analysis and customer
18 segment data in conjunction with its UE 435 review and provides all
19 stakeholders greater visibility and understanding of energy equity across

⁶ PGE/600, Figueroa-Liddle/17.

⁷ PGE/200, Batzler - Ferchland/3.

⁸ PGE/100, Pope-Sims/27.

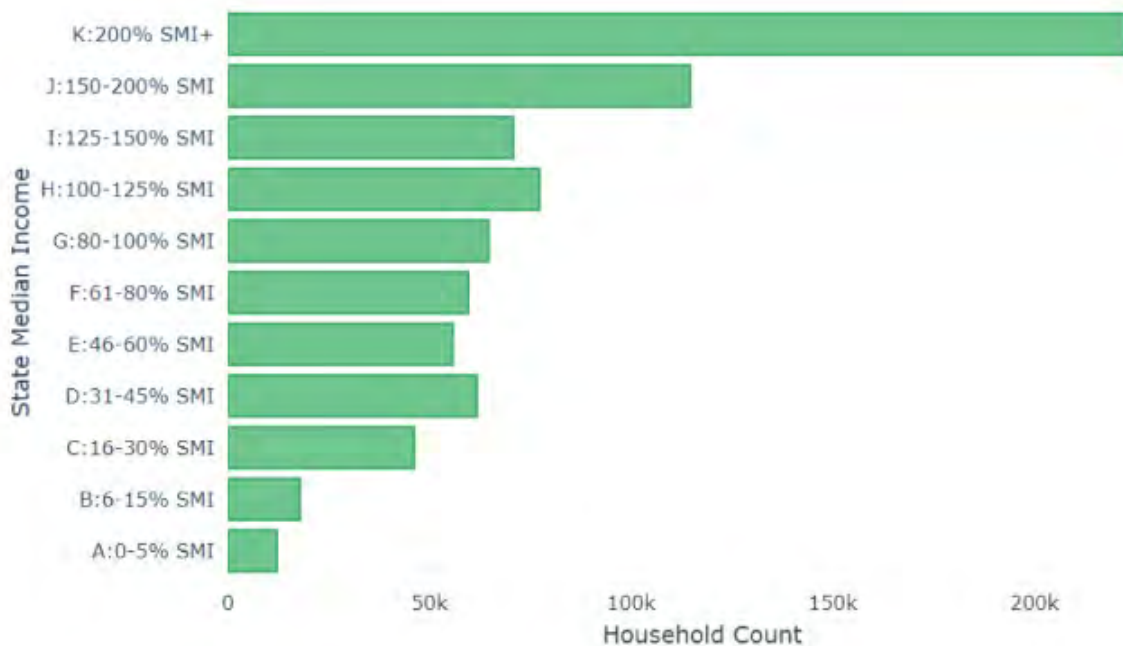

⁹ Staff’s detailed assessment of grant activities and awards is provided in Staff/1100, Peterson/20-23.

¹⁰ Empower Dataworks. (2024). *PGE 2024 Energy Burden Assessment*. Retrieved from:
<https://edocs.puc.state.or.us/efdocs/HAD/ue416had329702054.pdf>.

1 PGE’s service territory. Staff shares the following high-level findings and
2 excerpts to help illustrate the state of affordability and energy burden for PGE
3 customers:

- 4 • According to the EBA results, approximately 24 percent of residents in
5 PGE’s service territory fall under 60 percent of the State Median Income
6 (Figure 2)

7 **Figure 2. Distribution of Households by Household Income as a Percent of**
8 **SMI for PGE Residential Customers**

- 9 • An additional 16 percent of households earn between 60-100 percent of
10 the SMI. These “borderline” customers would be ineligible for almost all
11 energy assistance programs but may still bear a relatively high level of
12 energy burden.

- Of 800,000 identified households, 140,000 were deemed to have a high energy burden, of which an estimated 118,000 would fall under 60 percent SMI, meaning that annual electricity bills exceeded six percent of their income for electrically-heated homes and exceeded four percent of their income for non-electrically heated homes (Figure 3).¹¹

Figure 3. Distribution of Energy Burden Among PGE Customers

- Low-income high-burden customers paid an average of \$2,300 in annual electricity bills compared to an estimated average of \$1,900 for the residential class; the higher bill average reflects their higher likelihood to live in less efficient or older homes.
- High energy use combined with high per kWh charges, appear to be the most significant drivers of high energy burden in the area.

¹¹ Staff notes that while many sources utilize the six percent energy burden threshold to distinguish highly burdened households, this is subjective and does not reflect the national average energy burden for most households which is estimated to be between two and three percent.

- 1 • The total energy assistance needed to get PGE customers below the
2 aforementioned six and four percent energy burden thresholds is
3 approximately \$155 million across all incomes and \$133 million in
4 households that earn under 60 SMI.
- 5 • Key customer segments in PGE's service area that were identified based
6 on having high overall burden or high prevalence of energy burden;
7 having low access to existing programs; and/or as vulnerable through the
8 United States Department of Energy Environmental Justice Screen
9 include:
- 10 ○ Powellhurst-Gilbert;
 - 11 ○ Estacada and its outskirts; and
 - 12 ○ Gervais area

13 **Q. Are there other findings in the EBA that Staff found valuable to its**
14 **review?**

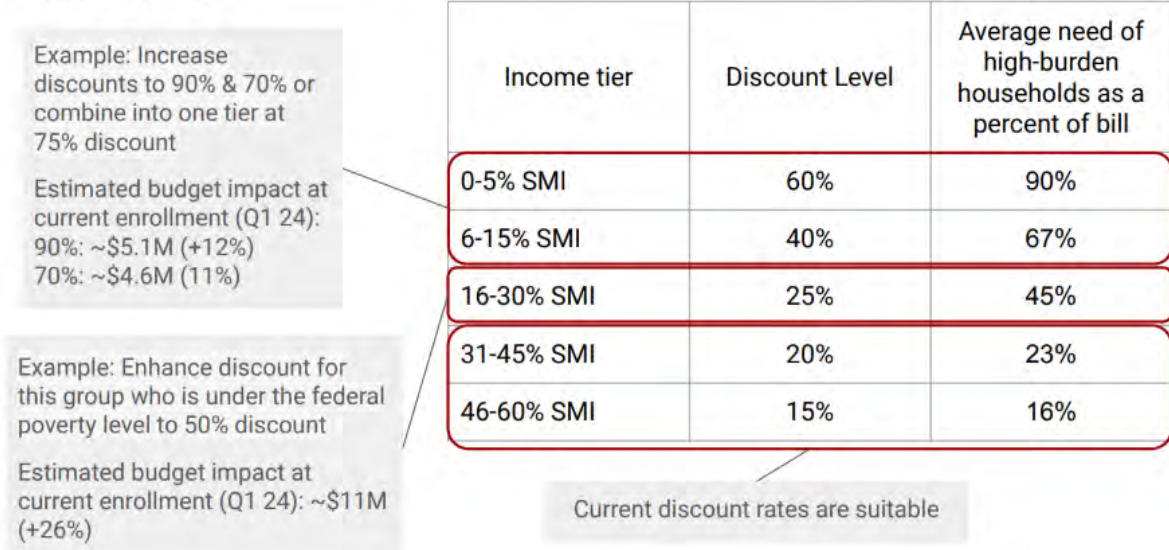

15 A. Yes. The EBA provides targeted analysis and recommendations to address
16 the identified levels and types of need. This includes an analysis of IQBD's
17 discount tiers relative to actual energy burden in the service territory (Figure 4).
18 Several other useful data points and recommendations are provided in the EBA
19 which is publicly available on the UE 416 and UM 2211 eDockets webpages.¹²

Q. Is Staff recommending the Company adopt the discount structure shown in Figure 4 as a part of this proceeding?

A. Not at the time this testimony is being written. PGE’s Opening Testimony stated that the Company would be filing an update to its IQBD discount tiers in Q3 of 2024 reflective of the EBA results. Staff is supportive of this plan as it would like to see this process done in a manner and proceeding more inclusive of voices, communities, and organizations that face barriers to formal intervention in contested case proceedings.

Dedicated discussion on the IQBD, including discount gaps under the five-tier structure, potential opportunities for outreach, data sharing, and energy efficiency/weatherization partnerships, and Staff’s recommendations on these topics can be found in Exhibit 1900, sponsored by Staff witness Ms. Kate Ayres.

1 **Q. Based on the EBA results, will the affordability features described in**
2 **PGE's UE 435 Opening Testimony, do enough to address the current**
3 **state of affordability and energy burden for PGE customers?**

4 A. No. These actions, including consideration for the appropriate ROE under
5 current circumstances, are positive and worth pursuing. However, most of
6 what the Company describes is shifting or mitigating the scale of harm, not
7 addressing it at its core. Ultimately, Staff finds the Company's choice to make
8 file the UE 435 request at this time, detached from the affordability crisis facing
9 its residential customers. Staff's primary concerns fueling this assertion are as
10 follows:

- 11 • The lack of gradualism in the timing and magnitude of the proposed rate
12 increase immediately following the effective date of PGE's UE 416 rate
13 impacts.
- 14 • The enormity of rate pressure on residential customers as evidenced by
15 the Company's Energy Burden Assessment and level of need analysis.
- 16 • The potential to exacerbate an already elevated state of arrears and
17 non-payment disconnections for PGE's residential customers.
- 18 • PGE's inclusion of proposals that overburden customers; do not appear
19 to benefit customers; and/or and serve primarily to enrich the Company
20 by reducing regulatory lag.¹³

¹³ Regulatory lag is the time between a utility's request for new rates and the approval of rates by the Commission.

1 Regarding the proposed ROE, Staff notes that that PGE's proposed
2 9.75 percent ROE exceeds Staff's range of reasonable ROEs derived from
3 Staff's two separate Three-Stage Discounted-Cash-Flow (DCF) models and
4 detailed in Exhibit 400 by Staff witness Mr. Matthew Muldoon. In this Exhibit
5 Mr. Muldoon explains the intersections of ROE with affordability in Staff's
6 review and describes that while Staff agrees that the Company is under
7 pressure from the credit rating agencies and facing a negative outlook, Staff's
8 reading is that the key driver of rating agencies' concern mirrors some of the
9 concerns raised by those offering public comments: PGE is not being
10 disciplined in their spending and assessment of cost recovery needs during an
11 inflationary period. Staff would expect PGE to respond to these pressures with
12 increased restraint and prioritization of its spending so as not to overburden
13 Oregon utility customers with rates that are growing faster than their incomes
14 or at least some willingness to accept any regulatory lag.

15 Regarding the ITC proposal, the Company testified that it estimates a
16 "year-one credit refund to customers of approximately \$51.5 million" by
17 frontloading the ITC amortization rather than spreading the ITC value over the
18 life of the assets. From Staff's perspective, this proposal does not do enough
19 to offset the ongoing rate pressure that would be expected from the impacts of
20 UE 435 rates on top of the recently implemented UE 416 rates, which together,
21 *increase* PGE's revenue requirement by \$615.5 million to \$3.25 billion, to be
22 worth the long-term tradeoffs. Further, as Staff witness Dr. Curtis Dlouhy

1 explains in Exhibit 1700, the ITC proposal also poses intergenerational¹⁴ equity
2 concerns. Frontloading the ITC amortization shifts a substantial tax benefit to
3 the present generation of ratepayers, thereby burdening future generations
4 with higher costs.

5 Altogether, Staff remains unconvinced that these measures address the
6 core affordability concerns and the associated harms of energy insecurity.

7 **Q. Please expand upon Staff's concern over the lack of gradualism in PGE's**
8 **UE 435 proposal.**

9 A. Staff's concern regarding gradualism is in relation to PGE's recently adopted
10 rate increases, including the last approved change in Docket No UE 416. PGE
11 filed the current case, UE 435 just sixty calendar days after the Company's
12 UE 416 rate increases took effect. In it, the Company asks the Commission to
13 increase PGE's "base business price" by an additional \$202.0 million, or
14 \$224.0 million, including power costs and supplemental schedules. These
15 requests effect an overall price increase across PGE's customer base of
16 7.4 percent, with revenues from residential customers increasing by
17 7.2 percent.

18 Based on data provided by the Company, if UE 435 is approved as filed,
19 the compounding effects of general rate case filings and power costs, would
20 make 2025 monthly residential energy bills 55 to 69 percent higher than what

¹⁴ Also referred to as "transgenerational equity."

1 customers would have paid in 2014. At least 40 percent of that increase is
 2 attributed to just the last three years (Table 1 and Figure 5).¹⁵

3 **Table 1. January - December Average Residential Bills (2014-2025 TY)**

	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC	Monthly Average	Annual

4 **Figure 5. January - December Average Residential Bills (2014-2025 TY)**

¹⁵ PGE's response to OPUC DR 401, Attachment A.

Q. Can the higher monthly bills be more the result of increased residential usage than rate increases?

A. No. Staff compared average residential usage for each month between January 2014 and the Company’s forecasted December 2025 Test Year. This analysis showed generally consistent patterns of seasonality with reductions in average residential usage between three percent and 11 percent (Table 2, Figure 6, and Figure 7).¹⁶ Staff also reviewed the Company’s total gross revenues for the residential class and found that on average, the Company’s per capita collections have increased by approximately \$751 a year.¹⁷

Table 2. January - December Average Residential Usage (2014-2025 TY)

	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC	Monthly Average kWh	Annual kWh

Figure 7. January through December Residential Comparison: Average Usage to Average Bill (2014-2025 TY)

1 **Q. Staff also mentioned concerns with how the UE 435 rate increase might**
2 **impact residential arrears and disconnections; please explain.**

3 A. February 2024 marked a 27-month high for residential past due balances, with
4 PGE reporting just over \$26 million.¹⁸ This spike came just two months after
5 the 18.4 percent increase from PGE's 2023 rate case, UE 416 took effect.
6 Looking at just the last five-months, residential arrears have averaged
7 \$23 million.¹⁹ While these amounts do not rise to the extreme peaks of
8 pandemic-era arrears, they are still more double what the Company reported in
9 past due balances pre-pandemic, pre-disconnection moratorium, and pre-bill
10 discount program.²⁰ The timing and magnitude of these arrearage levels
11 heightens Staff's concerns and lends evidence to public comments²¹ around
12 unaffordable rates.

13 Adding to this alarming picture, is that the current *count* of customers in
14 arrears does appear to have eclipsed pandemic peaks, and in fact, surpassed
15 all reported months since January 2020, when reporting began. Specifically,
16 PGE indicated that as of May 31, 2024, approximately 89,000 customers had
17 past due balances of more than 31 days.²²

18 Regarding disconnections for non-payment, Staff's review of quarterly
19 disconnection reports also revealed a recent spike that exceeds all measured

¹⁸ PGE's response to CUB DR 004, Attachment A, Supplement June.

¹⁹ Id.

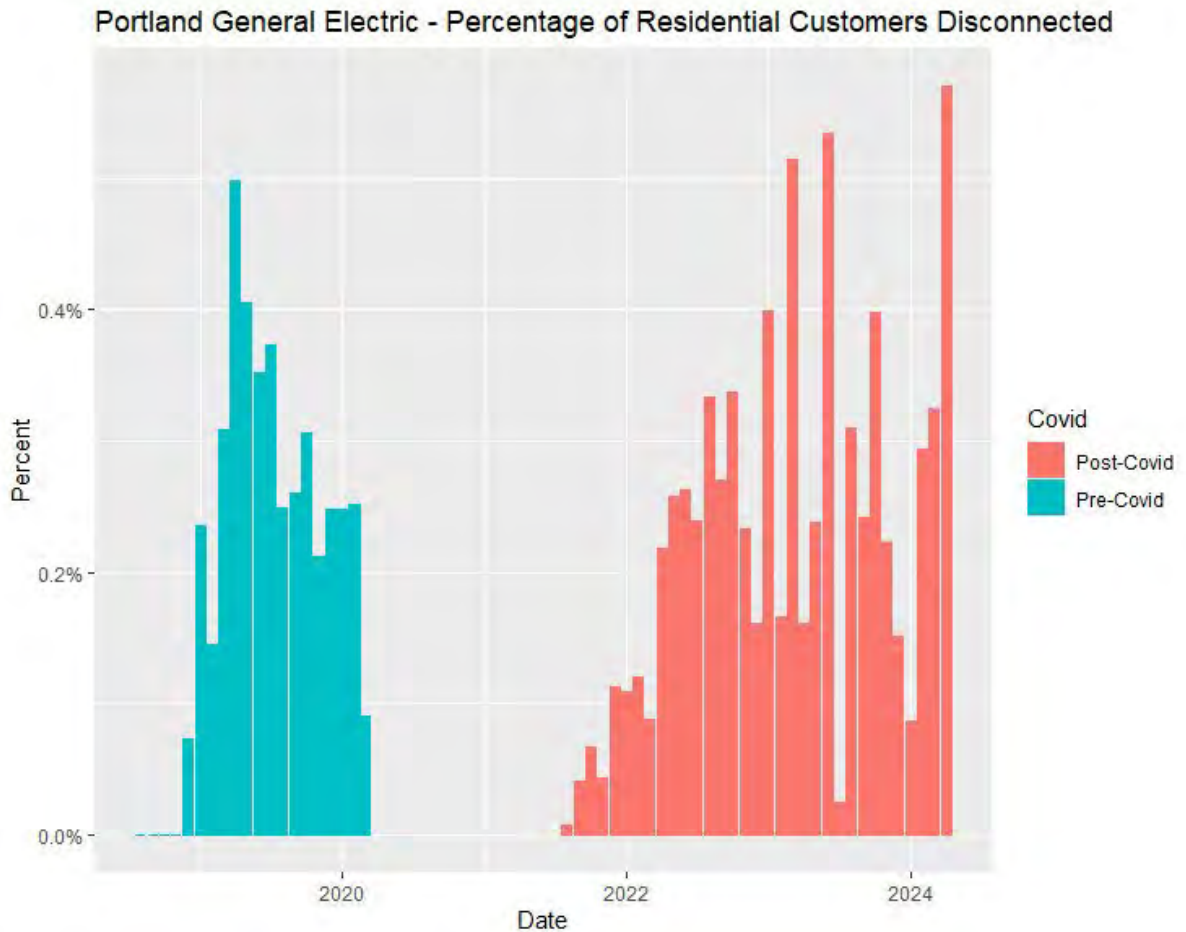

²⁰ See Docket No. RE 188, In the Matter of Portland General Electric Company (PGE) COVID-19 Monthly Report, January 2020 through December 2023.

²¹ Staff/600.

²² PGE's response to CUB DR 004, Attachment A, Supplement June.

1 months since 2018 (Figure 8). Including over 14 thousand between
2 February 2024 and May 2024.²³

3 **Figure 8. PGE Residential Disconnection Rates**

4 Staff recognizes there is context for these trends; for example, many of
5 these customers are reconnected within seven days. Staff is also aware that
6 customer bills are influenced by both prices and usage, and that the latter can
7 fluctuate with seasonality and extreme weather events putting pressure on
8 household energy costs. However, Staff is unconvinced that these

²³ Id.

1 contextualizations fully excuse or explain these concerning rates.
2 Reconnection rates, for example, do not reveal what, if any, sacrifice or
3 additional burden a household took on in order to reconnect. Division 21
4 enhanced low-income protections provide for some relief from reconnection
5 charges for qualifying households, but again receipt of these protections is
6 contingent on identification and/or enrollment in energy assistance. Staff
7 believes it is within the Company's capacity to propose or implement
8 interventions that would reduce disconnection rates and mitigate avoidable
9 harms.

10 Staff is concerned that these measures of energy insecurity will worsen
11 across PGE customers if the Company's UE 435 proposal is approved. Staff
12 has heard anecdotally in public comment and observed empirically in the data,
13 PGE customers are struggling to pay their energy bills.

14 **Q. Are there certain customer segments where these concerns are more**
15 **pronounced?**

16 A. Yes. The EBA's analysis of high burden low-income households illustrates
17 some of the extent to which these groups exist in PGE's service territory. Not
18 only have recent rate increases outpaced direct assistance awards for the
19 majority of enrolled customers, but low-income customer segments are also
20 observed to face more significant challenges managing arrears²⁴ and are more
21 vulnerable to being disconnected from power as a result of nonpayment.
22 Staff's limited arrearage analysis revealed that among the group of

²⁴ Staff/1900, Ayres/31, Table 1.

1 89,000 residential customers in arrears discussed earlier, roughly 22,000, or
2 25 percent are IQBD participants.²⁵ It is likely that an even a greater proportion
3 are low-income customers given that the IQBD program is at less than
4 60 percent saturation of income-eligible households. These proportions of
5 low-income customers in arrears are particularly concerning to reflect upon
6 given that PGE's EBA estimated only about 14.75 percent of the Company's
7 residential customer base is low-income.

8 Staff also cautions against overreliance on the IQBD to resolve energy
9 burden and energy inequities as optional programs like the IQBD rely on
10 participation, meaning they are only effective for those who are able to
11 successfully enroll. This poses inherent limitations as not everyone who is
12 eligible for such programs is aware of them or possess the necessary
13 resources to navigate the enrollment process. For example, according to the
14 EBA, approximately 4,000 disconnected households in 2023 were likely eligible
15 for energy assistance but didn't participate. Staff flags this to emphasize the
16 reality that low-income communities are disproportionately burdened by the
17 energy system and are more likely to struggle with energy insecurity.

18 It is also important to recognize that there are racial inequity implications
19 to this disparity. Black, Indigenous, Hispanic, and Latino communities are
20 more likely to be low-income as a result of structural racism,²⁶ and face

²⁵ See Docket No. RE 195, PGE's Quarterly Schedule 18 Income Qualified Bill Discount Reporting (February 1, 2024 to April 30, 2024).

²⁶ Structural racism refers to "the totality of ways in which societies foster racial discrimination, via mutually reinforcing inequitable systems (e.g., in housing, education, employment, earnings, benefits, credit, media, health care, criminal justice, etc.) that in turn reinforce discriminatory

1 pervasive income gaps (Figure 9 and Table 3) that directly impact household
2 energy burden.

3 **Figure 9. Median Household Income Gap in Oregon**

Median Household Income Gap in Oregon

Percent difference compared to White, Not Hispanic households

Source: Census, IPUMS-USA, Oregon Office of Economic Analysis

beliefs, values, and distribution of resources, reflected in history, culture, and interconnected institutions. Staff believes that the causes and tools to address structural racism are much bigger than the energy system, but believes the disproportionate impacts are important to consider and act upon in energy system regulation.
(<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC9437815/>).

1 **Table 3. Oregon's Earnings Disparity Relative to White Workers²⁷**

Race or Ethnicity	Number of Workers	Share of Workers	Average Weekly Earnings	Earnings per Dollar
White	1,513,589	75.30%	\$1,008.29	\$1.00
Black	40,018	1.99%	\$926.36	\$0.92
Native American/American Indian	17,827	0.89%	\$678.90	\$0.67
Asian-Pacific Islander	106,715	5.31%	\$1,104.37	\$1.10
Hispanic/Latino	268,059	13.34%	\$676.11	\$0.67
Multiracial	63,771	3.17%	\$766.93	\$0.76

2 Staff illustrates these intersections to raise awareness that race is among
3 the strongest indicators for energy insecurity.²⁸ Thus, observed increases in
4 energy insecurity metrics like arrears and disconnections can reasonably be
5 inferred to have disproportionate impacts on Black, Indigenous, and People of
6 Color communities. Staff believes this information to be material as including
7 these types of analysis in decision making aligns with the State's 10 strategy
8 Diversity Equity and Inclusion (DEI) Action Plan, in particular, Strategy 5-
9 Disaggregated Data as a Lever for Change.²⁹

10 Data is an entry point into a larger picture and set of actions.
11 Trust building often must precede our efforts to collect,
12 communicate, and use data. That's why it is so important to be
13 in conversation with communities to interpret data, and not use
14 data to interpret and define people, because data tells us

1 about the systems we are working with. The system is the
2 lever for change to create better opportunities by getting to the
3 right interventions to create the optimal conditions for racial
4 equity to occur.

5 Lastly, while Staff's affordability concerns can be triaged based on need,
6 urgency, and policy objectives, this prioritization does not negate Staff's
7 sensitivity to highly energy burdened customers who do not qualify for
8 assistance programs. As rates and IQBD participation grow, the burden falls
9 more and more on middle-income families who could very well become energy
10 burdened themselves. To this point, Staff reiterates that affordable rates
11 should be among the primary objectives of this proceeding and further
12 discourages against assumptions that separate customer assistance programs
13 will be sufficient accomplish this.

14 **Q. Is Staff making recommendations with regard to arrearages and**
15 **disconnections?**

16 A. Yes. Regarding arrearages, in Exhibit 1900, Staff witness Kate Ayres goes
17 into detail regarding Staff's arrearage concerns and recommends that the
18 Company come forward in Reply Testimony with an Arrearage Management
19 Program (AMP) proposal targeted at the 0-5 percent SMI customer segment.
20 Staff notes that implementing an AMP for income-qualified residential
21 customers is consistent with third-party recommendations in PGE's EBA.

22 Additionally, Staff recommends that in conjunction with the Company's
23 filing to adjust the IQBD in Q3 of this year, PGE provide an analysis of
24 residential customer past due balances, information on disconnections pending
25 or carried out for the same household within a single calendar year, and a

1 proposal that aims to reduce monthly disconnection rates for residential
2 customers and prevent the accumulation of past due balances above a certain
3 amount. Staff recommends that the plan be informed by CAP agency partners,
4 energy advocates, Staff, and other interested parties in at least one workshop
5 to occur before going before the Commission.

6 Staff also recommends that for any IQBD participant with a past-due
7 balance over six times the monthly average bill for the account, the utility halt
8 the accumulation of additional debt and pause any anticipated IQBD account
9 balance referrals to collection agencies in anticipation of relief from the
10 aforementioned proposal, which Staff expects to include features that would
11 address both these issues.

12 Fourth, as a practice going forward, Staff recommends intervention for
13 any residential customer with past due balances greater than six times the
14 monthly average bill for the account and refer the account for internal
15 arrearage management review. Staff believes this approach would increase
16 the pay-off success rate for customers who may enroll in a time payment
17 arrangement with the Company as they would be amortizing no more than six
18 months of debt.

19 **Q. Staff indicated that there were some specific UE 435 proposals it wanted**
20 **to reference as part of framing Staff's overall affordability concerns;**
21 **please explain.**

22 A. Staff wishes to succinctly call out a small selection of proposals its review has
23 found to be particularly ill-timed or unjustified in this proceeding. References to

1 specific Staff exhibits where more detailed discussion on the same topics will
2 be cited. Staff notes this selection is not exhaustive of all proposals that
3 contribute to Staff's affordability concerns. Specifically, in addition to rate
4 spread, this discussion will broach Staff's energy justice driven concerns with:

- 5 • Raising the residential basic charge;
- 6 • The Seaside battery tracker; and
- 7 • The Investment Recovery Mechanism (IRM).

8 **Q. Please start by expanding on Staff's opposition to raising the residential**
9 **basic charge.**

10 A. Staff is cautious of the recent trend in utility GRC proposals of including higher
11 and higher basic charges for customers. The effects of PGE's UE 435
12 proposal basic charge increase in conjunction with the currently implemented
13 basic charge increase in UE 416, would result in a \$4.00 increase to the fixed
14 portion of single family customer monthly electric bills in just one year
15 (Figure 10).

1

Figure 10. PGE Basic Charge

2

Unfettered increases to the basic charge can have near- and long-term

3

affordability implications for customers. The polarity of this impact is

4

dependent on a multitude of intersections, including means to pay, household

5

usage, energy efficiency adoption, and how climate change and

6

decarbonization will influence the daily loads and system needs. Against this

7

ambiguity, changing system landscape, and in the interest of promoting the

8

near-term impacts of household energy efficiency adoption, Staff recommends

9

any changes to the basic charge be more gradual and incremental than

10

proposed. Staff further recommends that any future proposals to increase the

11

residential basic charge be accompanied by robust customer segment analysis

12

that can provide stakeholders and community members greater transparency

13

with regard to customer impacts and disparities. Staff witness, Dr. Bret

14

Stevens, sponsors Staff's detailed testimony on this topic in Exhibit 900.

1 **Q. What affordability or energy justice concerns are triggered by PGE's**
2 **Seaside battery tracker and Investment Recovery Mechanism proposals?**

3 A. As summarized earlier in this exhibit, Staff's concerns with these proposals are
4 driven by the way in which their adoption would place undue burden on
5 ratepayers, particularly the most energy burdened, by effectively eliminating
6 any regulatory lag associated with the Company's asset acquisition and
7 investments. To this end, Staff finds the proposals to be overly one-sided.
8 Staff witnesses Dr. Curtis Dlouhy and Dr. Bret Stevens discuss these concerns
9 in detail within each witness's sponsored exhibit, Staff/1700 and Staff/900,
10 respectively. However, Staff's objective in flagging these issues here is to help
11 establish the connection between unbalanced utility cost recovery expectations
12 with the growing residential affordability crisis.

13 For example, while the Company asserts that the IRM would help reduce
14 the frequency of rate cases PGE files with the Commission, this outcome is
15 entirely at the Company's discretion. If PGE's decision to file UE 435 is any
16 indication of the amount of cost and regulatory lag the Company is willing to
17 absorb, Staff has reason to be skeptical that the IRM would do much to keep
18 the Company out of a rate case. Not only that, but the IRM would allow the
19 Company to increase rates in years rates where a rate case was not filed, and
20 with a more expedited, without full consideration of the Company's need for
21 rate increases to recover the cost. As Dr. Stevens notes in Staff/900, PGE is
22 overusing *automatic* adjustment clauses and Staff remains unsupportive of
23 increasing this use of these mechanisms at this time.

1 Similarly, the Seaside battery tracker is demonstrative of the Company's
2 impatience to secure revenues from its customer base even where resources
3 are not yet online. In fact, Seaside is not expected to be completed until
4 six months after the UE 435 rate effective date of January 1, 2025. Staff again,
5 argues that these proposals seem completely apathetic to how increasing rates
6 impact households. While recovery of these costs is likely warranted at the
7 appropriate time, Staff has not seen sufficient reason as to why that time
8 should be now. That said, Staff would be interested in potentially extending the
9 rate effective date for the GRC as one way to help balance the recovery of
10 appropriate costs with controlling rate pressure for near-term affordability
11 concerns.

12 **Q. Are there any other specific issues Staff would like to raise regarding**
13 **overall affordability considerations?**

14 A. Yes. Staff witness Dr. Bret Stevens is investigating the Company's
15 Schedule 90 Load Following Credit, which provides a direct benefit to PGE's
16 large customers with high load factors in conjunction with the purported system
17 benefits relative to flexible capacity demands. This credit is rate payer funded
18 across PGE's other service schedules. The UE 435 proposal triples the Load
19 Following Credit, resulting in a transfer of roughly \$5.5 million from
20 non-Schedule 90 customers to the Schedule 90 customer. According to the
21 Company, this change was based on recalculating the allocation using the
22 flexibility value of a four-hour battery. Additional discussion and detail are
23 provided in Staff/900. For the purposes of this testimony, Staff would simply

1 like to flag the disproportionate impact and equity concerns with the necessity
2 and appropriateness of this transfer of benefits to PGE's single Schedule 90
3 customer from all other schedules, including residential customers. While Staff
4 has not made a definitive determination of its position on this matter, Staff is
5 interested in understanding more about the reasons why PGE believes this
6 credit warrants both continuation and the requested increase, even when
7 considering all of the aforementioned affordability and energy insecurity
8 challenges facing PGE's residential customers.

ISSUE 2. RATE SPREAD

Q. Please summarize the topics Staff will cover in this section of testimony?

A. Staff will use this section provide a brief discussion on rate spread with a supplemental³⁰ recommendation aimed at improving distributional equity.

Q. What are Staff’s affordability and equity arguments with regard to the Company’s proposed rate spread?

A. Staff’s recommendations provided on this topic in this exhibit are made in conjunction with Staff’s revenue requirement and specific rate spread structure elsewhere in testimony. These recommendations align with Staff’s Opening Testimony provided in peer utility GRC proceedings this year. Specifically, Staff has indicated broad concerns with the unacknowledged human impacts of rate spread decisions. Utility rate increases are becoming more and more challenging for residential households to manage, and disconnections are on the rise for PGE customers. From Staff’s perspective, these realities require more sophistication in the evaluation of what is just, reasonable, and in the public interest in rate setting, including decisions on rate spread. Now is the time to evolve the way these issues are considered and recognize that affordability should always have a role in developing and applying the results of ratemaking models. A rate spread that indirectly pushes customers off the system is untenable. Staff acknowledges that the spread alone won’t achieve this and that the revenue requirement, customer programs, utility operations,

³⁰ Staff’s marginal cost, study based, rate spread proposal is provided in Staff/900.

1 and household situation all play a role; however Staff does not see that
2 complexity as reason to disregard societal impacts in deliberating this issue.

3 **Q. What does Staff recommend?**

4 A. Staff's recommendation here is that a more human-centered and holistic
5 approach be taken with this issue, much like Staff has argued elsewhere in
6 testimony. For example, Staff believes the combined impacts of the
7 Company's proposed revenue requirement and rate spread overburdens
8 residential customers on a practical level and should be revised to more
9 thoughtfully consider affordability and weigh how the spread will impact energy
10 security across different customer groups. In the interest of moving toward this
11 approach Staff recommends that:

- 12 1. The final determination of rate spread in conjunction with revenue
13 requirement ensure that the residential class sees an increase of no more
14 than three percent of revenue requirement; and
- 15 2. Moving forward, the utility will initiate a discussion series with parties to
16 evaluate new and existing rate spread tools, including the marginal cost
17 study, to be more inclusive of affordability, and energy justice
18 considerations. In this same forum, Staff recommends the utility explore
19 the inherent bias built into assumptions of homogeneity within the
20 residential class in marginal cost studies. Staff recommends that
21 customer segment analysis within or in addition to the Company's energy
22 burden assessment should investigate how average customer

1 assumptions may unintentionally harm communities in the tails of various
2 customer distributions.

3 Additionally, Staff witness, Dr. Bret Stevens sponsors Staff's detailed
4 testimony on this topic in Exhibit 900 and proposes a modified rate spread.

ISSUE 3. PROCEDURAL EQUITY

Q. Please describe Staff’s concerns regarding procedural equity in PGE’s UE 435 filing.

A. Procedural equity is a component of social and energy justice that emphasizes the value of who is at the decision-making table and whether those voices are heard. In the context of UE 435, Staff’s main concerns regarding procedural equity is whether the Company’s proposal is sufficiently inclusive of community input and needs. For example, while Staff appreciates how the Company provided its CBIAG members a space to learn and ask questions about the filing, these engagements were informational and did not have the opportunity to materially influence the filing.

Similarly, while PGE highlights positive works including the CBIAG and its internal Community Engagement team, there is little trackable evidence of how these actions had any material impact on the Company’s filed proposals in the interest of energy justice or procedural equity. Staff is interested in seeing rate case specific manifestations of PGE’s stated commitment to energy justice. For example, a defensible demonstration of procedural equity would be if the Company’s Opening Testimony called out specific input and assistance from the Company’s CBIAG, the communities they serve, and/or energy justice advocates on developing specific proposals and managing customers impacts contained in UE 435. Procedural equity is meant to ensure that decision-making processes are inclusive, transparent, and accessible to all stakeholders, particularly underrepresented and heavily impacted communities.

1 There is no question this case, as filed, has significant impacts on PGE's
2 customers. To this end, their input and influence should be foundational to
3 PGE's proposal and, at a minimum, documented for representation at decision-
4 making tables.

5 **Q. The UE 435 parties include advocacy organizations intervening on**
6 **behalf of both residential consumers and environmental justice**
7 **communities in addition to Staff; does that sufficiently cover**
8 **procedural equity as described?**

9 A. No. While it is true progress is and continues to be made in the interest of
10 energy justice and procedural equity in regulatory processes, there are still
11 significant gaps and barriers to participation and procedural equity in the GRC
12 proceedings. Staff continues to work with stakeholders on reducing these
13 barriers and promoting accessibility in the space, but as Staff was informed in a
14 recent rate case "a seat at the table does not automatically equate to
15 procedural justice."³¹ The reality is that our current contested case process for
16 rate revisions and the complexity of the energy system in general limits
17 post-filing engagement even with formal intervenor status. The complexity of
18 this process is exponentially more challenging and exclusionary for
19 communities that lack the resources to formally intervene despite their level of
20 interest and impacts associated with the filing. Further, advocates and

³¹ *In the Matter Of Idaho Power Company, Request for a General Rate Revision*, Docket No. UE 426, General Comments from Non-Intervenor EJ Advocates, with Support from Intervenors, (April 23, 2024) (available at: <https://edocs.puc.state.or.us/efdocs/HAC/um2211hac328060055.pdf>).

1 intervenors, despite best efforts, lack the capacity to fully capture the diversity
2 of perspectives and needs in impacted communities. It is reductive and
3 exploitative to assume that a single energy justice advocate checks the box for
4 all environmental justice communities, especially in a service territory as
5 diverse as PGE.

6 **Q. How does Staff propose to reconcile this issue?**

7 A. Staff finds that under the current timeline and process of UE 435, actions to
8 reconcile procedural equity gaps are somewhat limited. That said, Staff
9 believes there are some measures that may promote components of
10 procedural equity, including accessibility, transparency, and accountability.

11 Specifically, Staff recommends PGE:

- 12 • In Reply Testimony, detail if and how the Company has engaged and
13 applied customer perspectives specific to this case, including the
14 historically underrepresented voices of environmental justice
15 communities.
- 16 • Plan to participate in the tentative Energy Justice Workshop where it
17 should also invite and compensate the Company's CBIAG members to
18 attend and engage as the members are willing to.
- 19 • In Reply Testimony, provide a response to issues raised by members of
20 the public during the UE 435 public comment period.³²

³² A full collection of public comment can be found in Staff/602 and summarized by Staff witness Ms. Melissa Nottingham in Staff/600.

- 1 • In Reply Testimony, provide a reasonable extrapolation of the 2024 EBA
2 findings related to residential energy burden and residential customer
3 segmentation analysis based on the proposed UE 435 prices.
- 4 • In conjunction of a review of the Company's Energy Burden Assessment
5 (EBA) the PGE should work with Staff, stakeholders, and peer utilities to
6 develop a standardized distributional equity assessment to be provided in
7 all future rate case filings that aims to help identify disproportionate
8 impacts on environmental justice communities and other overburdened
9 residential customer segments in the utility's service territory.

10 **Q. Does Staff have any other concerns to express regarding procedural**
11 **equity?**

12 A. Yes. Procedural equity, as intended, is likely to remain aspirational for some
13 time. That said, the long-term horizon does not dissuade or slow Staff's efforts
14 to pursue it in this and other proceedings in earnest. For example, across
15 multiple rate cases, including this one, Staff is piloting in a novel process with
16 stakeholders that engages non-intervenors and intervenors to elevate
17 high-impact and priority energy justice issues and provide for additional and
18 inclusive discussion. This strategy includes the aforementioned energy justice
19 workshops and comments. The objective is to promote accessibility,
20 transparency, and accountability in GRC decision-making to the extent the law
21 allows. Staff remains engaged with advocacy groups and community
22 representatives to continuously evolve and develop spaces and resources in
23 the interest of procedural equity. However, Staff recognizes that meaningful

1 progress requires more time and participants than the GRC procedural
2 schedule allows. Collective and individual change from business-as-usual
3 should involve all general rate case stakeholders, including the utility. To this
4 end, ahead of robust structural changes in rate case procedure, Staff believes
5 the utility can take high-impact, near-term action by engaging communities,
6 advocates, and interested organizations, on planned GRC issues ahead of a
7 formal filing.

8 **Q. Please explain how this would be conducted.**

9 A. Staff believes the structure and cadence of this engagement is likely best
10 informed by community-based organizations, energy justice advocates, and the
11 Company's CBIAG. That said, Staff believes this publicly accessible process
12 should center procedural justice and provide opportunities for impacted
13 communities and/or their advocates can learn about and provide feedback on
14 areas on the utility's planned filing. Issues should be framed from the customer
15 perspective, where proposals result in significant impacts on customers'
16 affordability or accessibility to the energy system. The Company should
17 document the process and input in a manner similar to that in done in
18 Integrated Resource Plan (IRP) processes and CBIAG sessions. This
19 documentation should memorialize the input received in order to both inform
20 and evolve the ultimate filing and be included as part of the Company's
21 Opening Testimony.

22 **Q. Are there any other energy justice considerations Staff would like to**
23 **highlight?**

1 A. Yes. Staff would like to reiterate that energy justice has multiple dimensions,
2 including procedural equity, but also distributional equity, structural equity, and
3 transgenerational equity. Some authors on the topic include other dimensions
4 as well, including recognition justice. The current data landscape available to
5 Staff, even with the 2024 EBA, and the intensive and multi-faceted process of a
6 contested case proceeding, like the UE 435 GRC limit Staff's capacity to
7 aggressively pursue all the various dimensions of energy justice. That said,
8 Staff, the Company, advocacy groups, and other community-based
9 organizations are working proactively together and individually to change those
10 challenges into opportunities and eventually outcomes. PGE's Distribution
11 System Planning efforts, Clean Energy Plan engagements and more are
12 designed to be more inclusive of a diverse set of decision makers
13 representative of community. Staff has initiated Phase 2 of the HB 2475
14 Implementation effort to improve customer data resources and energy equity
15 metrics while simultaneously convening a work group to enhance available
16 assistance programs that can promote distributional equity. None of these
17 solutions will reconcile all of the inequities communities face with the energy
18 system. However, they do represent the industry's shared commitment to
19 energy equity goals. Staff raises this here to flag that there are likely missed
20 opportunities for equity and energy justice within this filing despite efforts made
21 on both sides. The hope is that raising energy justice issues consistently in
22 these types of proceedings will help all parties to take incremental steps
23 forward towards a more just and equitable energy system for Oregonians.

1 **Q. Does this conclude your testimony?**

2 A. Yes.

CASE: UE 435
WITNESS: Michelle Scala

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 201

Witness Qualifications Statement

July 15, 2024

WITNESS QUALIFICATIONS STATEMENT

NAME: Michelle Scala

EMPLOYER: Public Utility Commission of Oregon

TITLE: Energy Justice Program Manager
Strategy and Integration Division

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: *University of Hawaii, Manoa*
Bachelor of Arts Economics
Bachelor of Arts Political Science
Concentration in Public Policy

Southern New Hampshire University
Graduate Certificate in Public Administration

EXPERIENCE: I have been employed by the Public Utility Commission of Oregon since July 2020 as a Senior Utility Analyst. I initially began work at the Commission in the then “Energy Rates, Finance and Audit Division” and transitioned to the Strategy and Integration Division upon its inception. In May of 2022, I was made Energy Justice Program Manager to the Utility Division where I lead energy equity work across utility rate, planning, and policy dockets. I have provided expert testimony as Commission Staff in general rate cases UE 394, UE 416, UE 426, UE 433, UG 433, UG 435, UG 461, UG 490 and have consulted on others. I have over ten years of experience in policy analysis and program evaluation for state and local governments and received a graduate certificate in Public Administration in 2024. My work prior to the Commission included serving as a Senior Fiscal Analyst at the Oregon Department of Human Services and Economist at the Oregon Employment Department. Before coming to Oregon, I was employed at the Hawaii State Legislature as the Senior Budget and Policy Analyst to the Senate Committee on Ways and Means.

Opening Testimony

**Highly Confidential Version is subject to
Protective Order No. 23-132**

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Itayi Chipanera. I am a Senior Financial Analyst employed in the
3 Accounting and Finance Section of the Rates, Safety, and Utility Performance
4 (RSUP) Program of the Public Utility Commission of Oregon (OPUC). My
5 business address is 201 High Street SE, Suite 100, Salem, Oregon 97301.

6 **Q. Please describe your educational background and work experience.**

7 A. My witness qualifications statement is found in Exhibit Staff/201.

8 **Q. What is the purpose of your testimony?**

9 A. I am the summary revenue requirement witness for this docket. I provide a
10 summary of all the adjustments proposed by Staff to Portland General Electric
11 (PGE, or Company) requested Test Year expense, rate base, and the consequent
12 revenue requirement effect. I also discuss my own review of Test Year cash
13 working capital included in rate base, escalations, income taxes, Oregon Public
14 Utility Commission (OPUC) fees and unbundled revenue requirement.

15 **Q. How is your testimony organized?**

16 A. My testimony is organized as follows:

17	Introduction	3
18	Summary Of Revenue Requirement.....	5
19	Issue 1. Cash Working Capital	9
20	Issue 2. Escalations	17
21	Issue 3. Oregon Regulatory Commission Fees.....	19
22	Issue 4. Income Taxes	21
23	Issue 5. Unbundling.....	24
24	Issue 6. Interest Synchronization	24
25	Issue 7. Other Topics Reviewed	28
26	Conclusion	29

27 **Q. Did you prepare other supporting exhibits for this docket?**

1 A. No.

INTRODUCTION

1
2 **Q. What is the revenue requirement increase on base sales to customers**
3 **proposed by PGE for in this case?**

4 A. PGE is requesting a total revenue increase on base sales to customers of
5 \$294.844 million or 10.9 percent.¹ The proposed increase can be broken down as
6 follows:²

- 7 1. A combined base rate and power cost increase of \$232.529 million.
- 8 2. A stipulated revenue requirement reduction adjustment of \$4.463 million from
9 UE 416.
- 10 3. An increase of \$17.325 million for the newly proposed Constable battery
11 facility.
- 12 4. An increase of \$49.453 million for the newly proposed Seaside battery
13 facility.

14 The final impact of power costs on customer rates is unknown at this time;
15 the Company will continue to update power costs through a separate docket
16 during the review process of this case.

17 **Q. What is the base, non-power costs related increase requested by PGE that**
18 **will affect customers on January 1, 2025?**

19 A. PGE is requesting a base increase of \$202 million, which includes the revenue
20 requirement impact of the Constable battery project.³ The Company did not
21 include the revenue requirement impact of Seaside into base rates effective on

1 Calculated from column 10 and column 1 of PGE / 201, Batzler – Ferchland / 3.

2 PGE / 201, Batzler – Ferchland / 3.

3 PGE / 200, Batzler – Ferchland / 2.

1 January 1, 2025, because the Seaside battery project is expected to begin
2 operations further into the Test Year on June 1, 2025, and will not meet the “used
3 and useful” standard on January 1, 2025.

4 **Q. What is the adjustment in revenue requirement recommended by Staff?**

5 A. Staff proposes to reduce the Company’s requested revenue requirement increase
6 based on a range of return on equity (ROE) values. Staff proposes to reduce the
7 Company’s requested \$202.0 million base rate increase to **[BEGIN HIGHLY**
8 **CONFIDENTIAL]:**

- 9 • [REDACTED]
- 10 [REDACTED]
- 11 • [REDACTED]
- 12 [REDACTED] **[END HIGHLY CONFIDENTIAL].**

13 **Q. What adjustments are you proposing to the Company’s revenue**
14 **requirement?**

15 A. I am proposing to adjust the Company’s Test Year amounts for Oregon Public
16 Utility Commission (OPUC) fees and cash working capital.

17 **Q. Are additional adjustments for the rest of the issues proposed by other**
18 **Staff?**

19 A. Yes. The Company’s filing is complex, and a thorough review involves multiple
20 Staff members looking at different issues. Individual Staff are reviewing additions
21 to different categories of utility plant, operating expenses, and revenues.

1 **SUMMARY OF REVENUE REQUIREMENT**

2 **Q. What is the total base revenue requirement requested by the Company for in**
3 **this case?**

4 A. Including Constable and Seaside battery facilities, the Company is requesting
5 \$2.994 billion⁴ in base sales to customers in the Test Year, compared to the
6 \$2.705 billion approved in UE 416.

7 **Q. What factors did PGE identify in its initial filing as the drivers of the**
8 **requested base rate increase?**

9 A. The Company cited new capital investments and highlighted capital expenditures
10 in battery storage as well as investments in new and upgraded transmission and
11 distribution infrastructure.⁵

12 **Q. When was the Company's last general rate case in Oregon?**

13 A. The Company's last rate case, UE 416, was filed in February 2023 with rates
14 going into effect on January 1, 2024.

15 **Q. According to the Company, how has the Company's Oregon jurisdictional**
16 **rate base changed since its last filing?**

17 A. The Company's Oregon jurisdictional rate base has increased from \$6.183 billion
18 as approved in UE 416 to \$7.864 billion⁶ in this case, an increase of \$1.680 billion.
19 The increase in rate base includes the impact of the Constable and Seaside
20 battery projects as well as the Clearwater wind project.

4 PGE / 201, Batzler – Ferchland / 1.

5 PGE/100, Pope – Sims / 6.

6 PGE / 201, Batzler – Ferchland / 4.

1 **Q. According to the Company, how has the Company's Oregon jurisdictional**
2 **base total operating expenses changed since its last filing?**

3 A. In the Company's UE 416 general rate case the Commission approved
4 \$2.323 billion in total operating expenses. In the current general rate case, the
5 Company filed to recover \$2.479 billion, an increase of \$185.038 million, or
6 5.4 percent.⁷

7 **Q. What is the Company's proposed cost of capital?**

8 A. The Company's filing proposes a rate of return of 7.189 percent with a capital
9 structure of 50 percent equity and 50 percent debt; a 4.628 percent cost of debt;
10 and 9.75 percent return on equity.

11 **Q. Did you review the Company's cost of capital proposal?**

12 A. No. The Company's Cost of Capital (CoC) proposal is reviewed by Staff witness
13 Matt Muldoon in Staff/400 and Rose Pileggi in Staff/500.

14 **Q. Please provide background on how the Commission reviews a utility's**
15 **general rate case filing.**

16 A. The rates charged by a utility are based on the utility's "revenue requirement." To
17 determine a utility's revenue requirement, the Commission determines for a
18 specified Test Year:

- 19 1. The utility's forecasted gross revenues;
- 20 2. The utility's operating expenses to provide utility service;
- 21 3. The rate base on which a return should be earned; and
- 22 4. The rate of return to be applied to the rate base.⁸

Total Staff Adjustments (199,065)

Staff-Calculated Revenue Requirements Change: (17,421)

ISSUE 1. CASH WORKING CAPITAL**Q. What is cash working capital?**

A. Cash working capital is the amount of investor supplied capital required by a utility to fund its day-to-day operations to provide service to customers prior to receipt of payment from customers. Cash working capital is included as part of the utility's rate base.

Q. Please provide a summary of the Commission's historical treatment of cash working capital.

A. The Commission has generally required a utility's request for cash working capital to be supported by a current lead/lag study.

Q. Did the Company support its cash working capital request with a lead/lag study?

A. Yes. The Company filed a lead lag study that is based on calendar year 2021 data.⁹ Staff notes that calendar year 2021 data is not the most recent available data the Company could have relied on to conduct its lead/lag study. The Company had calendar year 2022 data available at the time of the filing but chose to carry over a lead/lag study from its prior rate case, UE 416 without refreshing the underlying data.

Q. What is the Company's proposal regarding cash working capital in this filing?

A. The Company is proposing to include \$103.697million of cash working capital in rate base for the Test Year.

⁹ Workpaper: Lead-Lag_Working Cash Factor 2024.

Q. How did the Company calculate its cash working capital?

A. The Company used calendar year 2021 data to calculate a revenue lag and an expense lag. The revenue lag and expense lag were used to determine the net lag. The net lag was then divided by the 365 days in a year to calculate a calendar year 2021 working cash factor of 4.22 percent. The cash working factor was then multiplied with Test Year annual expenses to calculate cash working capital. The Company's cash working capital can be summarized as follows:

$$1. \quad \text{Cash Working Capital} = \text{Working Cash Factor} * \text{Annual Expense}$$

$$\text{Working Cash Factor} = \frac{\text{Net Lag Days}}{365}$$

$$\text{Net Lag Days} = \text{Revenue Lag} - \text{Expense Lag}$$

$$\text{Revenue Lag} = \text{Service Lag} + \text{Billing Lag} + \text{Collection Lag}$$

$$\text{Service Lag} = \text{Meter Read Date}$$

$$- \text{Mid Point of Customers Usage Period}$$

$$\text{Billing Lag} = 1^{10}$$

$$\text{Collection Lag} = \frac{\text{End of Period Accounts Receivable}}{\text{Revenues for the same period}}$$

Q. How did Staff evaluate the Company's cash working capital calculation for reasonableness?

A. The breakdown of the cash working capital calculation into a series of equations shown above is useful for Staff to analyze the critical drivers of the requested cash working capital amount. Staff analyzed each of the components of the cash working capital calculation separately, paying special attention to the

¹⁰ PGE response to Staff data request 438.

1 appropriateness of the underlying data. In addition to reviewing the components
2 that make up the net lag days, Staff also reviewed the Company's annual Test
3 Year expense used to calculate cash working capital to make sure only
4 appropriate cash expenses are included.

5 **Q. What is the revenue lag and how did the Company calculate its revenue**
6 **lag?**

7 A. The revenue lag represents the days between the receipt of services by customers
8 and the eventual payment for those services. The Company calculated its
9 revenue lag by summing up the service lag, the billing lag, and the collection lag.

10 **Q. How did the Company calculate its service lag?**

11 A. The Company calculated the service lag by "taking the average of the meter read
12 days for 2024".¹¹ The Company calculated a service lag of 15.25 days.

13 **Q. Does Staff has any concerns with how the Company calculated its service**
14 **lag?**

15 A. Yes. Staff views service lag as the time from the midpoint of a customer's usage
16 period to the meter read date. The Company bills all customers monthly and,
17 therefore, the average service lag equates to approximately half of a month or
18 about 15.2 days as calculated in the table below.

¹¹ PGE response to Staff data request 437.

1

Figure 2

First Day	Last Day	Midpoint Date	Midpoint Day
1/1/2021	1/31/2021	1/16/2021	15.5
2/1/2021	2/28/2021	2/14/2021	14.0
3/1/2021	3/31/2021	3/16/2021	15.5
4/1/2021	4/30/2021	4/15/2021	15.0
5/1/2021	5/31/2021	5/16/2021	15.5
6/1/2021	6/30/2021	6/15/2021	15.0
7/1/2021	7/31/2021	7/16/2021	15.5
8/1/2021	8/31/2021	8/16/2021	15.5
9/1/2021	9/30/2021	9/15/2021	15.0
10/1/2021	10/31/2021	10/16/2021	15.5
11/1/2021	11/30/2021	11/15/2021	15.0
12/1/2021	12/31/2021	12/16/2021	15.5
Average service lag			15.2

2

Q. What is the impact of reducing the service lag to 15.2 days?

3

A. Reducing the service lag to 15.2 days reduces the cash working factor to

4

4.208 percent.

5

Q. What is the collection lag and how did the Company calculate its collection lag?

6

7

A. The collection lag is the interval from the invoice date to the date until the

8

customer pays for service. The Company calculated its collection lag by dividing

9

account receivable balances by corresponding revenues for a particular period.

10

The Company estimated a collection lag of 25.2 days.

11

Q. Does Staff have any concerns with how the Company estimated the collection lag?

12

13

A. No.

14

Q. What is the billing lag and how did the Company estimate its billing lag?

1 A. The billing lag is the interval from when the meter is read and when the company
2 processes an invoice in its billing system. The Company says its billing lag is
3 embedded in its collection lag calculation and is estimated to be one day.¹² On
4 average, the Company bills its customers one day after meters are read.

5 **Q. Does Staff have any concerns with the Company's calculated billing lag?**

6 A. No.

7 **Q. Summarize the annual expenses used by the Company in the calculation
8 of its cash working capital.**

9 A. The expense categories included by the Company and the resulting requested
10 cash working capital are displayed below.

11 Figure 3

	Excluding Constable	Constable Project	Total
Total Operating & Maintenance	\$ 1,628,133	\$ (8,348)	\$ 1,619,785
Depreciation	\$ 389,862	\$ 8,269	\$ 398,131
Amortization	\$ 87,049		\$ 87,049
Taxes	\$ 344,314	\$ 6,876	\$ 351,190
Total Operating Expenses & Taxes	\$ 2,449,358	\$ 6,797	\$ 2,456,155
Cash Working Factor	4.222%	4.222%	4.222%
Requested Cash Working Capital	\$ 103,410	\$ 287	\$ 103,697

12 **Q. What is the Company's explanation for including depreciation and
13 amortization, expenses which require no cash disbursement during the
14 Test Year in its cash working capital calculation?**

15 A. The Company states:

16 Depreciation and amortization are included in the calculation of
17 cash working capital because they are expenses representing a
18 prior cash outlay (i.e., when the investment was made). Investors
19 are not fully compensated for their expenditures until customers

¹² PGE response to Staff data request 438.

1 pay for the depreciation and amortization expense through their
2 bills. By including depreciation and amortization expense within
3 the calculation of PGE's working cash requirements, which are
4 included within rate base, it ensures that the investment in plant is
5 adequately compensated from the time cash is expended until the
6 time cash is recovered from customers. This approach
7 acknowledges the need to provide compensation for the
8 investment during the entire lifecycle of an asset.¹³

9 **Q. Does Staff agree with the inclusion of depreciation and amortization**
10 **expenses in the cash working capital calculation?**

11 A. No. Staff does not agree with the Company's inclusion of depreciation and
12 amortization expenses as relevant expenses for calculating cash working capital.
13 In Staff's view, cash working capital is a financial planning tool, a cash reserve the
14 Company needs to meet reasonable future expected cash disbursements in a Test
15 Year due to gaps in the revenue and expense cycle. Viewing cash working capital
16 as the product of net lag days and the average daily cost of service, Staff does not
17 agree with the Company's assertion that it has a daily need for a cash cushion to
18 cover depreciation and amortization expenses. The Company does not have a
19 short-term liquidity need to fund depreciation and amortization expenses in the
20 Test Year.

21 **Q. How did the Company calculate its expense lag?**

22 A. The Company studied payment lag for the following expense categories,
23 1. Coal,
24 2. Natural Gas,
25 3. Purchased Power,
26 4. Salary,

¹³ PGE Response to Staff data request 436.

- 1 5. Incentives,

- 4 8. Rent,
- 5 9. Franchise Fees, and
- 6 10. Income Taxes.

7 The expense lag for materials received was generally calculated by
8 comparing the invoice date with the payment date. The expense lag for services
9 received by the Company and for taxes paid by the Company were calculated by
10 comparing the midpoint of a service period with the payment date.

11 **Q. Does Staff has any concerns with how the Company calculated expense**
12 **lead/lag days for any of the expense categories?**

13 A. No.

14 **Q. What is the impact of Staff's proposed adjustments to the revenue lag and**
15 **annual expenses on Test Year cash working capital?**

16 A. Staff's proposal to reduce the revenue lag through a reduction to the Company's
17 service lag reduces the Company's cash working factor from 4.222 percent to
18 4.208 percent. Staff proposes to remove depreciation and amortization expenses
19 from the cash working capital calculation. Cash working capital is directly
20 proportional to Test Year annual expenses, therefore, Staff is proposing to align
21 the annual Test Year expense used in the cash working capital calculation to
22 Staff's overall adjusted expense levels reflected in Figure 1 of this testimony. The
23 combined impact of Staff's proposals to cash working capital are presented in

1 Figure 4 below. Staff proposes to reduce the Company's cash working capital by
2 \$23.212 million.

3 Figure 4.

Total Operating & Maintenance as filed	\$ 1,619,785
Taxes as filed	\$ 351,191
Staff proposed Adjustments*	\$ (58,301)
Adjusted Total Operating Expenses & Taxes	\$ 1,912,675
Staff Adjusted Cash Working Factor	4.208%
Staff proposed Cash Working Capital	\$ 80,485
Cash Working Capital as filed	\$ 103,697
Proposed Cash Working Capital Adjustment	\$ (23,212)

*From Staff Table of adjustments

ISSUE 2. ESCALATIONS

1
2 **Q. Please provide a summary of the Commission’s historical treatment of**
3 **expense escalations.**

4 A. It is Staff policy to use the Consumer Price Index – All Urban Consumers for the
5 U.S. (CPI, Urban U.S.) as published by the State of Oregon Office of Economic
6 Analysis (OEA) for year over year escalation. The All-Urban CPI measures price
7 changes in a fixed market basket of goods and services in categories, generally
8 including housing, apparel, transportation, medical care, recreation, education,
9 and others to urban consumers.

10 **Q. Why is it necessary to evaluate the escalation factors applied by the**
11 **Company?**

12 A. Comparison of the Company’s 2024 budget and Test Year expenses shows that
13 \$14.25 million or 2.6 percent of the proposed increase in expenses is due to
14 escalations.¹⁴ The selection of escalation factors and how they are applied to
15 develop Test Year expenses has a real impact on the prices paid by customers.

16 **Q. What is the source of the escalation factors applied by the Company?**

17 A. Except for wages, which relied on a separate forecast, the Company used
18 escalation rates from the Q3 2023 IHS-Markit Long Term Forecast.¹⁵

19 **Q. How did the Company apply the IHS-Markit Long Term Forecast inflation**
20 **factors to forecast its Test Year expenses?**

21 A. The Company applied the IHS-Markit inflation forecasts by expense groupings
22 which it described as “cost elements.” The Company applied seven distinct

¹⁴ PGE response to Staff data request 432.

¹⁵ PGE / 200, Batzler – Ferchland / 10.

1 escalation factors across twenty-five costs elements.¹⁶ The escalation values
2 applied range from one percent to six percent. The weighted overall escalation
3 factor across all cost elements applied by the Company is 2.6 percent.

4 **Q. What is Staff's recommendation regarding escalations?**

5 A. Staff recommends the Commission to use the All-Urban CPI forecast as published
6 by the Oregon Office of Economic Analysis for the Company's cost escalations. In
7 its June 2024 publication, the Oregon Office of Economic analysis is forecasting
8 2025 inflation to be 2.2 percent which is 0.4 percent lower than the rate applied by
9 the Company.

10 **Q. What does Staff continue to recommend the All-Urban CPI?**

11 A. Staff has consistently found the All-Urban CPI is a reliable, publicly available and
12 appropriate source for escalation and believes consistently using this methodology
13 eliminates "forum shopping" for the most favorable inflation escalator on a
14 case-by-case basis.

15 **Q. Are you recommending any adjustments based on Staff's CPI
16 recommendation?**

17 A. No. Different parts of the Company's filing have been assigned to various Staff
18 and they will apply Staff's recommended escalation factors in their individual
19 reviews.

¹⁶ PGE response to Staff data request 432.

1 **ISSUE 3. OREGON REGULATORY COMMISSION FEES**

2 **Q. What is the Oregon regulatory commission fee in this docket?**

3 A. The OPUC fee is a customer-funded fee whose purpose is to cover operating
4 expenses of the Oregon Public Utility Commission. The Commission approves a
5 rate used to collect OPUC fees and the rate is applied to a utility's revenues.

6 **Q. What is the OPUC fee rate that was in effect at the time of the Company's**
7 **filing?**

8 A. The OPUC fee rate that was in effect at the time of the Company's filing was 0.43
9 percent.¹⁷

10 **Q. How much is the Company requesting for the OPUC fees in the 2025 Test**
11 **Year, and how was it calculated?**

12 A. The Company's is requesting \$14.492 million in OPUC fees for the Test Year
13 compared to a base amount of \$13.046 million, a requested increase of \$1.208
14 million.

15 **Q. How was the Test Year OPUC fees amount calculated?**

16 A. The Company used the OPUC fee rate of 0.43 percent which was the effective
17 rate at the time of the filing. The OPUC fee is a revenue sensitive item an the
18 requested Test Year amount reflects the level of the Company's requested
19 revenue requirement increase.

20 **Q. Has the OPUC fee rate changed since the Company's filing?**

¹⁷ *In the Matter of The Imposition of Annual Regulatory Fees upon Public Utilities Operating within the State of Oregon, Docket No. UM 1012, [Order No. 23-057](#).*

1 A. Yes. The Commission approved a new rate of 0.45 percent in Order No. 24-054,
2 entered on February 22, 2024.¹⁸ The Company acknowledges that it is aware of
3 the increase in the OPUC fee rate and writes that it “will refresh this rate within a
4 future revenue requirement update during the pendency of this proceeding.”¹⁹

5 **Q. What is Staff’s proposed adjustment to OPUC fees?**

6 A. Staff proposes to adjust the base amount of OPUC fees by applying the current
7 effective rate of 0.45 percent resulting in an increase of \$606.4 thousand. As a
8 revenue sensitive item, the final Test Year OPUC fees are further affected by
9 Staff’s overall proposed revenue requirement increase.

¹⁸ In the Matter of The Imposition of Annual Regulatory Fees upon Public Utilities Operating within the State of Oregon, Docket No. UM 1012, Order No. 24-054.

¹⁹ PGE / 200, Batzler – Ferchland / 11.

ISSUE 4. INCOME TAXES

1
2 **Q. What are the requirements of Oregon law regarding the inclusion of income**
3 **taxes in utility rates?**

4 A. Income taxes in utility rates are subject to the requirements of ORS 757.269:

5 **757.269 Setting of rates based upon income taxes paid by**
6 **utility; limitation on use of tax information; rules.**

7 (1) When establishing schedules and rates under ORS 757.210
8 for an electricity or natural gas utility, the Public Utility Commission
9 shall act to balance the interests of the customers of the utility and
10 the utility's investors by setting fair, just and reasonable rates that
11 include amounts for income taxes. Subject to subsections (2) and
12 (3) of this section, amounts for income taxes included in rates are
13 fair, just and reasonable if the rates include current and deferred
14 income taxes and other related tax items that are based on
15 estimated revenues derived from the regulated operations of the
16 utility.

17 (2) During ratemaking proceedings conducted pursuant to ORS
18 757.210, the Public Utility Commission must ensure that the
19 income taxes included in the electricity or natural gas utility's
20 rates:

- 21 (a) Include all expected current and deferred tax balances and
22 tax credits made in providing regulated utility service to the
23 utility's customers in this state;
- 24 (b) Include only the current provision for deferred income taxes,
25 accumulated deferred income taxes and other tax related
26 items that are based on revenues, expenses and the rate
27 base included in rates and on the same basis as included in
28 rates;
- 29 (c) Reflect all known changes to tax and accounting laws or
30 policy that would affect the calculated taxes;
- 31 (d) Are reduced by tax benefits generated by expenditures
32 made in providing regulated utility service to the utility's
33 customers in this state, regardless of whether the taxes are
34 paid by the utility or an affiliated group;
- 35 (e) Contain all adjustments necessary in order to ensure
36 compliance with the normalization requirements of federal
37 tax law; and
- 38 (f) Reflect other considerations the commission deems relevant
39 to protect the public interest.

40 (3) During a ratemaking proceeding conducted under ORS
41 757.210 for an electricity or natural gas utility that pays taxes as

1 part of an affiliated group, the Public Utility Commission may
2 adjust the utility's estimated income tax expense based upon:

- 3 (a) Whether the utility's affiliated group has a history of paying
4 federal or state income taxes that are less than the federal or
5 state income taxes the utility would pay to units of
6 government if it were an Oregon-only regulated utility
7 operation;
8 (b) Whether the corporate structure under which the utility is
9 held affects the taxes paid by the affiliated group; or
10 (c) Any other considerations the commission deems relevant to
11 protect the public interest.

12 (4)(a) Because tax information of unregulated nonutility business
13 in an electricity or natural gas utility's affiliated group is
14 commercially sensitive, and public disclosure of such information
15 could provide a commercial advantage to other businesses, the
16 Public Utility Commission may not use the tax information
17 obtained under this section for any purpose other than those
18 described in this section, in ORS 757.511 and as necessary for
19 the implementation and administration of this section and ORS
20 757.511.

21 (b) The commission shall adopt rules to implement paragraph
22 (a) of this subsection that:

- 23 (A) Identify all documents and tax information that an
24 electricity or natural gas utility must file in its initial filing
25 in a proceeding to change rates that include amounts
26 for income taxes, recognizing that any party may object
27 to providing such documents on the grounds that they
28 are not relevant; and
29 (B) Determine the procedures under which intervenors in
30 such proceedings may obtain and use documents and
31 tax information to fully participate in the proceeding.

32 (5) As used in this section, "affiliated group" means a group of
33 corporations of which the public utility is a member and that files a
34 consolidated federal income tax return. [2011 c.137 §1]

35 **Q. Please summarize the Company's filing related to state income taxes.**

36 A. The Company calculated \$27.828 million of Oregon state income taxes for the
37 Test Year.²⁰ The Test Year state income taxes were calculated on estimated Test
38 Year revenues, which is consistent with Oregon law. Staff reviewed the

²⁰ PGE / 201, Batzler – Ferchland / 4.

1 Company's testimony, workpapers, and the tax rates applied by the Company and
2 finds no issues with how the Company calculated state income taxes.

Q. Please summarize the Company's filing related to federal income taxes.

3 A. The Company calculated \$72.680 million in federal income taxes. The Company
4 made additional adjustments for deferred taxes, excess deferred income tax
5 reversal and excess cost of removal.²¹ Staff reviewed the Company's testimony,
6 workpapers, tax credits, and the tax rates applied by the Company and finds no
7 issues.

8 **Q. Is Staff proposing adjustments to income tax expense other than those**
9 **necessary to finalize the Company's revenue requirement?**

10 A. No.

²¹ PGE / 200, Batzler – Ferchland / 21.

ISSUE 5. UNBUNDLING

Q. What is the law in Oregon that requires an electric utility to unbundle costs?

A. The requirement to unbundle costs is specified by ORS 757.642:

ORS 757.642 Unbundling electricity assets

(1) Not later than March 1, 2002, an electric company shall unbundle the costs of electricity services into power generation, transmission, distribution and retail services.

(2) Every electric company shall maintain separate accounting records for each component of electricity service provided by the electric company to retail electricity consumers. Accounts shall be maintained according to regulations issued by the Federal Energy Regulatory Commission.

(3) Unless required to provide a different accounting under federal requirements, each electric company shall, to a reasonable level of detail, separately identify and account for its costs of:

- (a) Generation;
- (b) Transmission services;
- (c) Distribution services;
- (d) Ancillary services;
- (e) Consumer service charges levied on retail electricity consumers, including but not limited to metering and billing;
- (f) Investment in public purposes; and
- (g) State and local taxes paid by retail electricity consumers.

Q. Did the Company present unbundled results in this filing?

A. Yes. The Company provided unbundled results for base costs and power costs, it additionally presented separated unbundled results for the Constable and Seaside battery projects.

Q. How reasonable are the Company's cost allocations to the functional categories specified in ORS 757.642?

A. Staff reviewed the Company's functional allocations in this rate case by comparing them to allocations the Company presented in prior rate filings. In Staff's view the

1 functional allocations the Company presented in this rate case are consistent with
2 allocations that it presented in UE 394 and UE 416.

3 Figure 5

4 **Q. Summarize the Company’s unbundled results for the Constable and**
5 **Seaside battery projects.**

6 A. The Company filed a revenue requirement for Constable of \$17.325 million and
7 allocated 95 percent of it to production, 2 percent to transmission and 3 percent to
8 distribution.²² Similarly the Company provided an unbundled presentation of the
9 \$49.453 million revenue requirement for the Seaside battery project. The
10 Company allocated 96 percent of the Seaside revenue requirement to production,
11 1 percent to transmission, and 3 percent to distribution.

12
²² Calculated with data presented on PGE / 212, Batzler – Ferchland / 1.

ISSUE 6. INTEREST SYNCHRONIZATION**Q. Describe Staff's interest synchronization adjustment.**

A. Staff computes the interest synchronization adjustment by comparing the Company interest expense at the Company's filed rate base and cost of debt to the interest expense that reflects Staff's adjustments to the Company's filed rate base and cost of debt. The tax effect of the difference in the interest expense ensures that the revenue requirement reflects the change in interest.

Q. What is the Commission's policy and historical treatment of Interest synchronization?

A. Long-standing Commission policy has routinely synchronized interest expense for rate making purposes to reflect changes to the regulated utility's cost of capital as initially filed in a general rate case. Interest expense must be coordinated or synchronized to determine the related adjustment for the income tax calculation.

Q. What is the Company proposing in rate base and weighted cost of debt in this rate case and how do they compare to Staff's proposed changes?

A. The Company is proposing rate base of \$7.494 billion and 2.314 percent in weighted cost of debt implying an interest expense of \$173.408 million. Staff is proposing a rate base of \$6.973 billion and a weighted cost of debt of 2.321 percent implying an interest expense of \$161.804 million, a decrease of \$11.604 million.

Q. What is the tax impact of the reduction in interest expense?

A. The tax impact of the reduction in interest expense is an increase in income taxes of \$4.419 million. The revenue requirement impact of the noted increase in

1 income taxes is displayed as issue, S-1, in Staff's revenue requirement summary
2 table, Figure 1.

3

1
2
3
4
5
6
7

ISSUE 7. OTHER TOPICS REVIEWED

Q. Please summarize Staff’s review of any other topics that were not explicitly discussed in this testimony.

A. Staff reviewed the Company’s Test Year amounts for franchise fees and property taxes. Through reviewing the Company’s workpapers, testimony and issuing data requests, Staff concluded the amounts included in the Test Year for these items are reasonable.

CONCLUSION

1
2 **Q. Restate Staff's overall proposed adjustment and summarize your proposed**
3 **adjustments.**

4 A. Staff is proposing to reduce the Company's overall revenue requirement by a
5 range of values based on varying the return on equity in a range of reasonable
6 estimates. A reduction of **[BEGIN HIGHLY CONFIDENTIAL]** [REDACTED]
7 **[END HIGHLY CONFIDENTIAL]** is based on a return on equity of 9.41 percent
8 and a reduction of **[BEGIN HIGHLY CONFIDENTIAL]** [REDACTED] **[END**
9 **HIGHLY CONFIDENTIAL]** is based on a return on equity of 8.96 percent.

10 Included with Staff's overall adjustments are my proposed adjustments, I am
11 proposing to reduce the Company's cash working capital by \$23.212 million and
12 increase the Company's OPUC fees to reflect the new OPUC rate.

13 **Q. Does this conclude your testimony?**

14 A. Yes.

CASE: UE 435
WITNESS: ITAYI CHIPANERA

Witness Qualifications Statement

July 15, 2024

WITNESS QUALIFICATIONS STATEMENT

NAME: Itayi Chipanera

EMPLOYER: Public Utility Commission of Oregon

TITLE: Senior Financial Analyst
Accounting and Finance Section

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: B.S., Economics
Idaho State University

M.S., Mathematics
University of Nevada – Reno

M.S., Accounting
Indiana University – Bloomington

EXPERIENCE: I have been employed by the OPUC in the Safety, Rates and Utility Performance Program since April of 2023. Prior to my employment with the OPUC I was employed in various finance roles in the insurance and banking industries including Advantis Credit Union where I was employed as a Senior Risk and Financial Analyst; City of Salem, Oregon, where I was a Finance Management Analyst; and SAIF Corporation where I was an Actuarial Research Analyst. I have worked as a revenue requirement summary witness on the following cases PGE UE 416, AVA UG 461, IPC UE 426, and UE 433.

CASE: UE 435
WITNESS: ITAYI CHIPANERA

**Company Response to:
Data Requests (DR)**

July 15, 2024

Portland General Electric
UE 435
Idaho Power Response to OPUC Data
Request 432

Request:

Regarding "PGE Response to AWEC Data Request 006", please provide the Base Year and Test Year amounts as well as the escalation factor applied to each cost element listed.

Response:

PGE objects to this request on the basis that it requires new analysis. Subject to and without waiving this objection, PGE responds as follows:

Escalations are generated within PGE's budgeting system based on defined cost elements and escalators. Attachment 432-A provides the requested information through manual calculations.

Portland General Electric
UE 435
Idaho Power Response to OPUC Data
Request 436

Request:

Regarding Exhibit UE 435/PGE/201 Batzler Ferchland/1, please explain why PGE applied the 4.222% cash working capital factor to operating and maintenance expense balance that includes non-cash items of depreciation and amortization.

Response:

Depreciation and amortization are included in the calculation of cash working capital because they are expenses representing a prior cash outlay (i.e., when the investment was made). Investors are not fully compensated for their expenditures until customers pay for the depreciation and amortization expense through their bills. By including depreciation and amortization expense within the calculation of PGE's working cash requirements, which are included within rate base, it ensures that the investment in plant is adequately compensated from the time cash is expended until the time cash is recovered from customers. This approach acknowledges the need to provide compensation for the investment during the entire lifecycle of an asset.

Portland General Electric
UE 435
Idaho Power Response to OPUC Data
Request 437

Request:

Regarding workpaper Lead-Lag Working Cash Factor 2024, please explain and provide support of how the Company calculated the Meter Cycle days of 15.25.

Response:

The meter cycle days of 15.25 is calculated by taking the average of the meter read days for 2024. Attachment 437-A provides support for the calculation.

Portland General Electric
UE 435
Idaho Power Response to OPUC Data
Request 438

Request:

Regarding workpaper Lead-Lag Working Cash Factor 2024, please identify the billing lag assumed in this analysis.

Response:

The billing lag days are calculated based on the Company's bill processing schedule. Billing occurs one business day following the meter reading, resulting in the processing, and mailing of the bill on average 1 day after the customers' meters are read.

STAFF EXHIBIT 400

**OPENING TESTIMONY
Overall Rate of Return (ROR),
Return on Equity (ROE),
Capital Structure, and
Pension and Post Retirement Medical Expense**

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Matt Muldoon. I am a manager employed in the Accounting and
3 Finance Section of the Rates, Safety and Utility Performance Program (RSUP)
4 of the Public Utility Commission of Oregon (OPUC). My business address is
5 201 High Street SE, Suite 100, Salem, Oregon 97301.

6 **Q. Please describe your educational background and work experience.**

7 A. My witness qualifications statement is found in Exhibit Staff/401.

8 **Q. What is the purpose of your testimony?**

9 A. I analyze the Portland Electric Company (PGE or Company) Rate of Return
10 (ROR), going into greater detail regarding Return on Common Equity (ROE)
11 and Capital Structure. I then review PGE’s Pension and Post Retirement
12 Medical Expenses.

13 Further detail on Cost of Long-Term (LT) Debt is found in Rose Pileggi’s
14 testimony in Exhibit Staff/500.

15 **Q. How is your testimony organized?**

16 A. My testimony is organized as follows:

17	1. Overall Rate of Return (ROR)	3
18	2. Capital Structure and Cost of Long-Term Debt	5
19	3. Return on Equity (ROE)	7
20	4. Pensions and Post Retirement Medical Expense.....	37
21	5. Conclusion.....	38

22 **Q. Did you prepare exhibits for this docket?**

23 A. Yes. In addition to my witness qualifications statement, I prepared the
24 following exhibits:

Other Supporting Exhibits

- 1 Exhibit Staff/402 .. ROE – Peer Screen, Dividends, EPS, Hamada Adjustments
- 2 Exhibit Staff/403 ROE - Three Stage DCF Modeling
- 3 Exhibit Staff/404 ROE - Three Stage DCF Modeling Results
- 4 Exhibit Staff/405 ROE – Capital Asset Pricing Model (CAPM)
- 5 Exhibit Staff/406 ROE – Gordon Growth, Single Stage DCF
- 6 Exhibit Staff/407 ROE – US BEA Historical GDP Growth
- 7 Exhibit Staff/408 ROE – TIPS Implies Inflation
- 8 Exhibit Staff/409 Value Line (VL) Electric Utilities
- 9 Exhibit Staff/410 Financial News Investors Are Seeing

10 **Q. Could there be changes or updates to Staff’s position and**

11 **recommendations?**

12 A. Yes. My testimony represents issues identified to date. My recommendations
13 and issues may change when informed by new data and after reviewing
14 testimony and analysis by other parties.

1

1. OVERALL RATE OF RETURN (ROR)

2

Q. What is PGE’s proposal for its overall Rate of Return?

3

A. The Company proposes a rate of return (ROR) of 7.189 percent, with a capital structure comprised of 50 percent equity and 50 percent long-term debt, a 4.628 percent cost of long-term debt, and a 9.75 percent return on equity.

4

5

6

Q. Did you prepare tables showing PGE’s current Commission-authorized, Company-proposed, and Staff-calculated RORs?

7

8

A. Yes. The following three tables provide that information.

9

TABLE 4

PGE Current OPUC Authorized (UE 416 Order No. 23-386)			PGE
Component	Percent of Total	Stipulated or Implied Cost	Weighted Average
Long-Term Debt	50%	4.485%	2.243%
Preferred Stock	0%	0.00%	0.000%
Common Stock	50%	9.50%	4.750%
100%		ROR	6.993%

Common Stock	50%	9.20%	4.600%	
100%		ROR	6.921%	

2

2. CAPITAL STRUCTURE

1
2 **Q. Has the Commission recently considered a preferred target capital**
3 **structure?**

4 A. Yes. In PacifiCorp's 2020 GRC, the Commission adopted a notional
5 50 percent equity capital structure. The Commission noted that "[w]e consider
6 all components to the company's cost of capital that will result in a fair and
7 reasonable rate of return, 'to strike a balance between the interests of
8 ratepayers and the interests of investors [,]" and that 50/50 capital structure
9 was an optimal structure for ratemaking.²

10 **Q. What capital structure did the Commission just authorize in Order**
11 **No. 23-186 in Docket No. UE 416 for rates effective January 1, 2024?**

12 A. The commission authorized a 50 percent equity layer capital structure.

13 **Q. Does PGE request a notional 50 percent Common Equity / 50 percent**
14 **LT Debt capital structure in this general rate case?**

15 A. Yes.³ In the near term, PGE may be relying more heavily on debt financing.
16 However, the Company represents that it targets a 50 percent capital structure
17 over the long-run, and Staff expects PGE to arrange new equity offerings to
18 bring capital structure toward a 50 percent equity layer. Equity offers can be
19 costly to organize and therefore less frequent than debt issuances. Staff will
20 continue to monitor the Company's actual capital structure going forward.

² *In the Matter of PacifiCorp, dba Pacific Power, Request for a General Rate Revision, UE 374, Order No. 20-473, p. 24 (December 18, 2020).*

11

Cost of Long-Term Debt

Q. Did Staff analyze the Company's Cost of Long-Term Debt?

A. Yes. See Exhibit Staff/500 for Staff Senior Utility Analyst Rose Pileggi's analysis of the Company's outstanding and planned proforma debt issuances, and her recommendations for the Commission of a 4.641 percent Cost of Long-Term Debt.

Q. Isn't Staff's recommended Cost of LT Debt higher than PGE's?

A. Yes. Staff bases its financial analysis on best information and proven analytical methods. In this case the Commission should see the difference as one of timing where Staff's Opening Testimony is able to draw on more recent market information than the Company's Direct Testimony.

1

3. RETURN ON EQUITY (ROE)

2

Q. What range of reasonable ROEs does Staff recommend, and within that range, what point ROE?

3

4

A. Staff observes a range of reasonable ROEs of 8.96 percent to 9.41 percent, with a mean ROE of 9.2 percent, derived from Staff's two separate Three-Stage Discounted-Cash-Flow (DCF) models. Staff does not have a recommended point ROE estimate in this case, which is a departure from its typical practice.

5

6

7

8

9

Q. Did you perform a check on the results of Staff's Three-Stage DCF models?

10

11

A. Yes. Staff employed two simpler models to check the reasonableness of its findings:

12

13

1. A Single-Stage DCF or Gordon Growth Model; and,

14

2. A Capital Asset Pricing Model (CAPM).

15

Q. What results did these models generate?

16

A. The Gordon Growth Model generated a mean ROE of 8.7 percent using Staff's peer electric utilities and 8.4 percent with the Company's peer electric utilities. If Staff sensitivity screening permitting a wider range of capital structure than PGE's is used, Staff's results would be increased by 10 basis points (bps) to 8.8 percent. This model points to the lower end of Staff's three-stage discounted cash flow results.

17

18

19

20

21

22

The CAPM using Staff's usual inputs and methodology generated a mean

23

ROE of 8.7 percent using Staff's peer electric utilities and 8.6 percent with the

1 Company's peer electric utilities. If Staff sensitivity screening permitting a
2 wider range or capital structure than PGE's is used, Staff's results would be
3 decreased by 10 basis points (bps) to 8.6 percent.

4 Based on these checks, Staff utilizes the midpoint estimate of 9.2 percent
5 for ROE in Table 6 above. However, any point within Staff's range of
6 reasonable ROEs from 8.96 percent to 9.41 percent would be supportive of a
7 just and reasonable decision by the Commission regarding ROE.

8 **Q. Does your recommended ROE meet appropriate standards?**

9 A. Yes. The range of reasonable ROEs Staff recommends is appropriate for
10 overall rates that are reflective of forward looking conditions in conjunction with
11 Staff's adjustments and meets the *Hope* and *Bluefield* standards, as well as the
12 requirements of Oregon Revised Statute (ORS) 756.040.⁴ Staff
13 recommendations are consistent with establishing "fair and reasonable rates",
14 that are both, "commensurate with the return on investments in other
15 enterprises having corresponding risks" and, "sufficient to ensure confidence in
16 the financial integrity of the utility, allowing the utility to maintain its credit and
17 attract capital."⁵ However, a higher point within Staff's range would be more
18 supportive of current PGE credit ratings and financial market expectations.

⁴ See *Federal Power Commission v. Hope Natural Electric Co.*, 320 U.S. 591 (1944) and *Bluefield Water Works & Improvement Co. v. Public Service Commission of West Virginia*, 262 U.S. 679 (1923).

⁵ See ORS 756.040(1)(a) and (b).

1

PEER SCREEN

2

Q. How did you select comparable companies (peers) to estimate PGE's

3

ROE?

4

A. Staff used companies that met the following criteria as peer utilities to the

5

regulated electric utility activities of PGE:

6

1. Covered by Value Line (VL) as an electric utility;

7

2. Having a VL Beta of 1 or less;⁶

8

3. Forecasted by VL to have positive dividend growth;

9

4. LT Issuer Credit Rating from A1 to Baa2 inclusive from Moody's and from

10

A to BBB- inclusive from S&P;

11

5. No decline in annual dividend in last five years based on VL;

12

6. Has heavily regulated electric utility revenue;

13

7. Has LT Debt from 45 percent to 55 percent inclusive in VL Capital

14

Structure; and⁷

15

8. Has no recent merger and acquisition activity.⁸

16

Q. What peer groups of electric utilities did Staff and Company ROE

17

modeling primarily depend on, and were there similarities?

18

A. The Company and Staff recommended regulated electric utility peer groups

19

both drew from pertinent electric utilities covered by VL. In Staff Exhibit 402,

20

Staff flags electric utilities not selected as it shows how each element of its

⁶ A beta of one would indicate a stock has the volatility of referent markets. Typically utilities are less volatile than other stocks in general. In contrast, high tech companies often have a beta of over one, reflecting more volatility in stock price that typical in referent markets.

⁷ Staff also performs sensitivity analysis looking at a peer screen of 40 percent to 60 percent long-term debt in capital structure. Sensitivity analysis does not impact Staff's modeling results but does answer questions looking at alternative inputs and scenarios.

⁸ See Staff/410, Muldoon/74, 76, 81, and 108 for examples of financial news on mergers, acquisitions, and divestitures monitored by Staff.

1 screening was applied.⁹ Table 7 shows a fair amount of overlap between
2 PGE's and Staff's peer groups.

3 **Q. Did the Company apply some different criteria?**

4 A. Yes. However, there was much overlap between PGE's and Staff's screening
5 criteria.

6

¹⁰ See Exhibit Staff 402, Muldoon/2 for the full peer screening table.

1 A comparison of the peer groups used by Staff and PGE are set forth in
2 Table 7 above. Staff excluded some of the companies used by PGE based on
3 the Staff screening criteria described above. PGE also excludes some of the
4 companies used by Staff. Thirteen of Staff's fourteen peer utilities were also
5 used by the Company in its ROE modeling.

6 MODEL RESULTS

7 Q. What are the results of your multistage DCF models?

8 A. See Table 8 below for the results from Staff's Three-Stage DCF modeling.

9 **TABLE 8 – RESULTS OF STAFF'S 3-STAGE DCF MODELING¹¹**

Staff Range of Reasonable ROEs:	8.96%	to	9.41%	ROE
	Midpoint	9.2%	ROE	Testimony

10 Supporting Exhibit Staff/404, Muldoon/1 shows step-by-step how Staff's
11 Hamada adjusted¹² Three-Stage DCF modeling, using Staff peers and growth
12 rates, generates a higher recommended ROE than using PGE's peer electric
13 utility group. Note that Staff rounds upward to generate a illustrative midpoint
14 of 9.2 percent.

15 Q. Does Staff agree with PGE's assertion that the Company's requested 16 ROE of 9.75 percent is reasonable?

17 A. No. PGE comes up with a range of 10.25 percent to 11.25 percent with a
18 midpoint of 10.75 percent. PGE then reduces this midpoint by 100 basis
19 points (bps) due to the Company's customer affordability considerations,

¹¹ See Exhibit Staff/404, Muldoon/1 for the results of Staff three-stage DCF modeling.

¹² As Staff explains in more detail below, Staff applies the Hamada equation to better compare companies with different capital structures.

1 recommended point estimate of 9.75 percent.¹³ Staff however finds that
2 PGE’s modeling outputs are based in part on excessive inputs.

3 **Q. Is affordability a key concern that the Commission may want to take**
4 **into account at this time?**

5 A. Yes. While many persons providing public comments have discussed the
6 impact of persistent large general rate increase on the very most energy
7 burdened and disadvantaged person, an even broader swath of Oregonians
8 are also facing difficult times. Food costs have risen sharply.¹⁴ The cost of
9 owning a car, never mind an electric vehicle (EV) have spiked.¹⁵ And Oregon
10 opportunities for family wage employment are challenging.¹⁶

11 **Q. Please provide an example of an extreme input used in the Company’s**
12 **modeling.**

13 A. Example 1 below shows how important inputs are to ROE modeling. Looking
14 at the difference between PGE and Staff inputs, one can see how use of an
15 inflated market return can skew results upward.

16 **Example 1 – NOT a Staff Recommendation:**

6 Staff usually relies on a U.S. Treasury (UST) thirty-year bond as reported
 7 by the Wall Street Journal (WSJ) and 30-year monthly geometric returns for the
 8 Standard and Poor’s (S&P) 500 index as a proxy for market returns. If one
 9 instead uses an extreme arithmetic market return, one can inflate the results

1 of a CAPM model with few inputs.¹⁷ One can also boost results by using a
2 starting point for data collection in the Great Depression and then including
3 World War II era boom times unlikely to be repeated in the U.S. economy.

4 **Q. Is calculation of a market risk premium calculated from 1926-2003 a**
5 **good predictor of future U.S. stock returns?**

6 A. No. Since returns over the last thirty years are lower than those experienced
7 earlier in the Country's history, which includes post-World-War II economic
8 expansion in the U.S., expectations should mirror the recent 30 years' returns.
9 According to Ibbotson, reliance on a date range like that above would overstate
10 likely future market returns.¹⁸ The combination of a 20-year UST as a risk-free
11 rate and a very long (almost 100-year) arithmetic market return can also inflate
12 results in CAPM models.

13 **Q. Is Staff suggesting that CAPM is not a good model to check results of**
14 **other modeling Staff performs, as advised by the Commission?**

15 A. No. Rather, Staff shows why the Commission accepts CAPM only as a check
16 on ROE modeling and demonstrates how one can abuse the model. If one
17 eliminates unreasonable modeling inputs, selects only peer electric utilities
18 most like PGE using Staff's standard screening methods, and eliminates
19 unreasonable inputs, you arrive at a result equal to Staff's ROE
20 recommendations.¹⁹

¹⁷ See Staff/405, Muldoon/1 for this CAPM modeling example.

¹⁸ See "The Equity Risk Premium" by William N. Goetzmann and Roger G. Ibbotson available on Amazon.com.

¹⁹ Exhibits Staff/402-406 show how Staff's recommendations are generated.

STAFF MODELS

Q. Describe the two three-stage DCF models on which you primarily rely.

A. Staff's first model is a conventional three-stage discounted dividend model, which Staff denotes as a "30-year Three-stage Discounted Dividend Model with Terminal Valuation based on Growing Perpetuity" (referred to as "Model X"). This model captures the thinking of a money manager at a pension fund or insurance company, or other institutional investor, who expects to keep the Company's stock indefinitely and use the dividend cash flow to meet future obligations.

Staff's second model is the "30-year Three-stage Discounted Dividend Model with Terminal Valuation Based on P/E Ratio" (referred to as "Model Y"). This model best fits the investor who has a goal they are working toward. In addition to the income stream from dividends, this investor intends to sell the stock as the goal is reached.

Both models require, for each proxy company analyzed by Staff, a "current" market price per share of common stock, estimates of dividends per share to be received over the next five years calculated from information provided by Value Line, and a long-term growth rate applicable to dividends 10- to 30-years out. On this last point, Staff always recommends the Commission be particularly vigilant for any substitution of a short-term growth rate for a long-term 20- to 30-year growth rate. Some growth rates labeled "long" may be supported by information looking at the next ten years or less into the future.

1 For a smooth transition, Staff steps the rate of dividend growth between
2 the near-term (the next five years) and that of long-run expectations.

3 **Q. How does Model X calculate the terminal value of dividends as a**
4 **perpetual cash flow into the future?**

5 A. Model X includes a terminal value calculation, in which Staff assumes
6 dividends per share grow indefinitely at the rate of growth in Stage 3 (“growing
7 perpetuity”). In contrast, Model Y terminates in a sale of stock where the price
8 is determined by our escalated price/earnings (P/E) ratio.

9 **Q. Why is thirty years the primary horizon for financial decision-making?**

10 A. Investors focus on the 30-year U.S. Treasury (UST) Bond against alternate
11 investment opportunities. Thirty years is a generally accepted period for
12 economists to ascribe to one generation. It is a common length of time for
13 mortgages of plants, equipment, and homes. Many institutional holders of
14 utility securities match the cash flows from utility dividends to future obligations,
15 such as the payout of life insurance, preparing to meet future pension and
16 post-retirement obligations, and interest service for borrowing. Individuals plan
17 for the education of their children, ownership of their home, and provision for
18 their retirement on this same multi-decade timeframe.

19 Staff uses five years for Stage One, as that is the timeframe for which
20 Value Line estimates of future dividends are available. This is as far as Value
21 Line projects near-future trends. Staff also uses five years for Stage Two as a
22 reasonable length of time for individual company’s dividend growth rates that
23 are materially different from the growth rate used in Stage Three (and common

1 to all companies) to converge to a LT dividend growth rate more representative
2 of all electric utilities.

3 **Q. How do you address dividend timing?²⁰**

4 A. Each model uses two sets of calculations that differ in the assumed timing of
5 dividend receipt. One set of calculations is based on the standard assumption
6 that the investor receives dividends at the end of each period.

7 The second set of calculations assumes the investor receives dividends
8 at the beginning of each period. Each model averages the unadjusted ROE
9 values to generate an Internal Rate of Return (IRR) produced with each set of
10 calculations for each peer utility. This approach accounts for the time value of
11 money, closely replicating actual quarterly receipt of dividends by investors.

12 **Q. What price do you use for each peer utility's stock?**

13 A. Staff used the average of closing prices for each utility from the first trading day
14 in December 2023, January 2024, and February 2024, to represent a
15 reasonable snapshot of utility stock prices.

²⁰ See Exhibit Staff/409 for Value Line (VL) information relied on in this testimony regarding publicly traded electric utilities.

GROWTH RATES USED IN THIRD STAGE OF DCF MODELS^{21,22}

Q. What long-term growth rates did you use in Staff's two three-stage DCF models?^{23,24}

A. Staff used three different long-term growth rates, with different methods employed in developing each.

The first method uses the U.S. Social Security Administration (SSA) 4.39 percent nominal 20-year GDP growth rate estimate.

Staff's second method uses the U.S. Congressional Budget Office's (CBO) 4.46 percent nominal 20-year GDP growth rate estimate.

Staff's third Composite Growth Rate applies a 20 percent weight to each of the following referent entities long-term growth rates: EIA, Organization for Economic Co-operation and Development (OECD), the U.S. Social Security Administration (SSA), the Congressional Budget Office's (CBO), with the remaining 20 percent as the average annual historical real GDP growth rate, established using regression analysis of U.S. Bureau of Economic Analysis (BEA) Nominal Historical, 1980 Q1 – 2022 Q4, for the period 1980 through 2021, to which we apply a TIPS implied inflation forecast. These growth rates are shown below in Table 10.

²¹ See Exhibit Staff/406, Muldoon1 for BEA historical GDP growth rates.

²² See Exhibit Staff/407, Muldoon1 for TIPS implied long-run inflation rates.

²³ Methods used here related to GDP-based growth rates are similar, if not identical to methods Staff has used in past proceedings. See, as an example, Staff's discussion of these methods and, to a limited extent, their conceptual underpinnings in Docket No. UE 233, Exhibit Staff/800, Storm/46 – 52. Growth rates relied upon by Staff are also shown in Exhibit Staff/104, Muldoon/1

²⁴ See Three-Stage DCF models X and Y in Exhibit Staff/403.

TABLE 10
GROWTH RATES STAFF RELIED UPON

Stage 3 – Long-Term Annual Dividend and EPS Growth Rates					
Component	Real Rate	TIPS Inflation Forecast	20-Yr Nominal Rate	Weight	Weighted Rate
Energy Information Administration (EIA)	2.24%	2.39%	4.69%	20.0%	0.94%
Organization for Economic Co-operation and Development (OECD)	1.81%	2.39%	4.24%	20.0%	0.85%
Social Security Administration (SSA)	1.95%	2.39%	4.39%	20.0%	0.88%
Congressional Budget Office (CBO)	2.02%	2.39%	4.46%	20.0%	0.89%
BEA Nominal Historical, 1980 Q1 – 2023 Q4	2.65%	2.39%	5.10%	20.0%	1.02%
Composite				100%	4.58%
Congressional Budget Office (CBO) Long-Term 20-Year Budget Outlook			4.46%	100.0%	4.46%
Social Security Administration (SSA)	1.95%	2.39%	4.39%	100.0%	4.39%

Q. Did your analysis reflect a synthetic forward curve?

A. Yes. Staff utilized synthetic forward curve using UST Treasury Inflation Protected Securities (TIPS) break-even points. This reflects implied market-based inflationary expectations. Staff's recommendations are consistent with market activity indicating investor expectations of future inflation.

Staff assumes for purposes of its three-stage DCF modeling that LDC utility growth is bounded by the growth of the U.S. economy, and more specifically impacted by challenges regarding U.S. population, workforce participation, and productivity in the long-run (20-year) modeling period.

Q. How do your methods employed in this case differ from those utilized by Staff in recent general rate cases?

A. Staff's methods and modeling parallel those employed by Staff in recent electric utility general rate cases. Staff continues to look primarily to referent federal sources for long-term GDP growth rates which weight long-run population, workforce participation, and productivity higher than current

1 financial market events and global events with shorter if not transitory effects.
2 Nevertheless, Staff monitors current financial news, and this testimony is
3 informed by such.²⁵

4 **Q. Do you capture both the perspective of a buy and hold investor and an**
5 **investor who plans to sell in the future?**

6 A. Yes. Staff's recommended 8.96 to 9.41 percent range of reasonable ROEs is
7 consistent with findings modeling the perspectives of both types of investors
8 through Staff's two different three-stage DCF models.

9 **Q. Does this approach capture a reasonable set of investor expectations**
10 **similar to Staff's analysis in other recent general rate cases?**

11 A. Yes.

12 **Q. Is it appropriate to use estimates of long-term GDP growth rates to**
13 **estimate future dividends for electric utilities?**

14 A. Yes. In many of the Company's prior rate cases, Staff has shared plots of U.S.
15 electric demand growth since 1950 on a three-year moving average. This
16 downward trending consumption curve allows GDP growth to be a
17 conservative proxy for both electric utility sales and dividend growth rates.

18 **Q. Can relying on a long-term GDP growth rate overstate required ROE?**

19 A. Yes. It is possible that Staff modeling anticipates greater growth than may be
20 realized and so overstates required ROE to attract investors. Our highest
21 growth rate presumes return to near historical U.S. GDP growth rates.

²⁵ See Exhibit Staff/410 for news that investors in electric utilities are seeing.

1 **Q. Is it important to distinguish between long-run 20- to 30-year rates and**
2 **rates over the next five years?**

3 A. Yes. Over-extrapolating a snapshot of short-term data undermines confidence
4 in modeling results. For example, Value Line, Blue Chip, and a variety of other
5 financial resources focus primarily on the next five years. The next five years
6 may be affected by recent events. Over the long run, population and
7 productivity are the key drivers of economic growth. This is of concern with
8 declines in the rate of growth of America's population.²⁶

9 **Q. In Staff's two different three-stage DCF models, Staff is looking for**
10 **growth rates for a period between 10 and 30 years in the future, or an**
11 **average of 20-years out. Why not just use a five- or ten-year**
12 **projection?**

13 A. Staff could use a five- or ten-year projection, but there is better information
14 available. If a primary concern is whether enough Americans are both working
15 and highly productive to support a robustly growing economy 30 years from
16 now, 10-year data will not be the most useful. This is because 10-year data is
17 not yet impacted by retirement of persons born in 1960 or persons not
18 immigrating and not being born to U.S. families now. A better solution is to use
19 data that is projected with those difficulties in mind, i.e., 30-year data.

²⁶ See Exhibit Staff/410, Muldoon/102, 118, and 134 for concerns about Oregon population growth.

HAMADA EQUATION

1
2 **Q. Your application of the Hamada Equation to un-lever peer utility capital**
3 **structures and to re-lever at PGE's target capital structure increases**
4 **required ROE. Why is this adjustment reasonable?**

5 A. Staff employs the Hamada Equation to better compare companies with
6 different capital structures driven by differing amounts of outstanding debt. As
7 earlier discussed, Staff applied screening criteria already identify peers that
8 have a very close capital structure to the Company. Use of the Hamada-
9 adjusted results helps ensure that Staff has captured all material risk in our
10 analysis because it captures additional risk associated with varying capital
11 structure.

12 Within the confines of Staff's testimony, one can see the steps to un-lever
13 and re-lever a peer company's capital structure as the equivalent of removing
14 debt of peer companies with varying capital structures, and then adding
15 enough debt back to equal the Company's balanced target capital structure in
16 this general rate case.

17 **Q. What accounts for differences in peer capital structures?**

18 A. Each of the two models employs the Hamada equation²⁷ to calculate an
19 adjustment for differences in capital structure between each peer utility and the
20 Staff-proposed capital structure for the Company. When few peer utilities are

²⁷ Dr. Robert Hamada's Equation as used in Staff/404 separates the financial risk of a levered firm, represented by its mix of common stock, preferred stock, and debt, from its fundamental business risk. Staff corrects its ROE modeling for divergent amounts of debt, also referred to as leverage, between the Company and its peers.

1 available, the Hamada equation ensures Staff's analysis addresses differences
2 in peer utility capital structures.

3 **Q. Why is it important to consider capital structure when modeling ROE?**

4 A. Different amounts of debt financing along with different tax rates result in
5 disparate risk profiles among peer utilities used in ROE modeling to
6 approximate the unknown appropriate ROE for the utility examined. All else
7 equal, with more debt in a capital structure, investors require higher
8 expected equity returns to compensate for the increased risk. Debt has a
9 higher call on the company's available cash, and so less cash is available
10 for equity holders. Staff uses the Hamada's equation, named after Robert
11 Hamada, to separate the financial risk of a levered firm from its business
12 risk, and adjust the results of peer utilities to have results as though they
13 had the same capital structure as the utility for whom an appropriate ROE is
14 sought.

15 **Q. Did Staff consider what modeling outcomes would result from using a**
16 **larger peer capital structure screen with a sensitivity peer group with**
17 **40 percent to 60 percent debt, carrying more interest rate risk than**
18 **PGE?**

19 A. Yes. Inclusive of Hamada adjustments, the higher debt sensitivity peer group
20 would decrease Staff's recommended ROE by 24 basis points. While the
21 Hamada equation addresses the capital structure itself to a certain degree,
22 companies taking on more debt may also be taking on more risk in other areas

1 than finance. In general, Staff screens to select companies most like the utility
2 it seeks to identify a best range of reasonable ROEs and point ROE for.

3 **Q. Did Staff use robust and proven analytical methodologies?**

4 A. Yes. Staff's methods are robust, proven, and parallel Staff's work for many
5 years. The Commission, for example, expressly relies on the multi-stage DCF
6 to determine the range of ROEs and relies on CAPM and risk premium models
7 to check the reasonableness of results. This can be seen in Order No. 22-129
8 in Portland General Electric Company's GRC (Docket No. UE 394) as well as
9 in Order No. 20-473 in PacifiCorp's GRC (Docket No. UE 374).

10 **Q. Describe how you performed your analysis.**

11 A. Using the cohort of proxy companies that met our screens, Staff ran each of
12 Staff's two three-stage DCF models three times, each time using a different
13 long-term growth rate.

14 **Q. Was your analysis consistent with a range of reasonable ROEs from
15 8.96 percent to 9.41 percent?**

16 A. Yes.

17 **Balanced Approach to ROE**

18 **Q. Is picking a best-fit ROE within Staff's suggested range of reasonable
19 ROE's an easy decision for the Commission?**

20 A. No. On the one hand, a lower ROE would reduce the impact of this general
21 rate increase on PGE's utility customers in Oregon. This thought is likely
22 foremost for CUB members and employees based on the earlier cited
23 statement by Director Bob Jenks.

1 On the other hand, a higher ROE is more supportive of the Company's
2 credit ratings, which are under pressure based on financial metrics and to a
3 lesser extent the Western U.S. challenge of wildfire risks.²⁸

4 Balancing these and other considerations is necessary for the
5 Commission to make decisions consistent with the Hope and Bluefield legal
6 decisions mentioned earlier.

7 **Q. Are we in a rising interest rate environment that compels higher**
8 **ROEs?**

9 A. No. The U.S. Federal Reserve expects to lower interest rates in the next
10 year.²⁹ Further interest rates and ROEs are both declining when looked at
11 over a 30-year time frame. The downward glide path for ROE in Figure 1
12 below is not linear and may fluctuate through these uncertainties, but long-run
13 GDP growth rates are mostly determined by the long future U.S. working age
14 population and its productivity. These are downward pressures on GDP
15 growth.

²⁸ See Staff/410, Muldoon/156.

²⁹ See Staff/410, Muldoon/78, 89, 92, 109, 144, 147, and 149.

1

FIGURE 1 – Downward Glide Path of Utility ROES³⁰

Average electric and gas authorized ROEs and number of rate cases decided

Data compiled Jan. 26, 2022.
Source: Regulatory Research Associates, a group within S&P Global Market Intelligence

2 **Q. What trend is Staff seeing?**

3 A. Since 1990, according to Regulatory Research Associates (RRA), Electric and
4 Electric Utility authorized ROEs have declined as the 30-year US Treasury
5 (UST) has also declined. While the Fed recently raised interest rates, the Fed
6 now anticipates loosening money supply soon.

7 **Q. Is the above trend still informative today?**

8 A. Yes. Notice that the 30-year UST yields were approximately nine percent in
9 1990, much higher than today. Moreover, the Fed, though delayed, still
10 expects to lower rates over the next two years. Further the European Central

³⁰ Published by Regulatory Research Associates (RRA), an affiliate of S&P Global Market Intelligence on Feb. 10, 2022. Also see Staff/110, Muldoon/1, and 13.

1 Bank, Bank of England, and Canada have all started to lower interest rates
2 already.

3 Now markets expect interest rates to fall again after an uncertain lag, but
4 possibly no longer than the end of the year when rates in this general rate case
5 would become effective. Were the Commission to act with great urgency to
6 raise authorized ROEs now, the Commission would likely not see utilities call
7 for the same urgency to reduce authorized ROE as the Fed starts cutting
8 interest rates.

9 **GORDON GROWTH MODEL – As Check on ROE Findings**

10 **Q. What is the Gordon Growth model?**

11 A. The Gordon Growth model (or Single Stage DCF model), similarly to the
12 Three-Stage DCF model, is based on the principle that a company's value is
13 equal to the net present value (NPV) of all its future cash flows and the
14 company's current stock price. The Single-Stage DCF uses simpler
15 assumptions than other models however, with dividend payments
16 representing the only cash flow, and an assumption that growth will remain
17 constant in perpetuity.³¹

18 **Q. What are the positive aspects and potential shortfalls of the DCF**
19 **model?**

20 A. The most positive aspect of the Single-Stage model is its simplicity. An
21 analyst can use this model to calculate a rudimentary cost of equity

³¹ See Docket No. UG 347, Staff/1300, Muldoon Watson/31 – 39, for further discussion of the Single-Stage DCF model, and the Commission's historical treatment of its results.

1 valuations without needing complex inputs or analysis, beyond selecting a
2 trusted source for the next quarter's expected dividends. In fact, after some
3 algebraic simplification, the return can be expressed by:

$$4 \quad R = \frac{D_1}{P_0} + g$$

5 Where R is estimated ROE, D_1 is the first dividend paid after stock
6 purchase, P_0 is the stock price, and g is the growth rate.

7 Caution and discretion must be used when sourcing inputs to the
8 model; for example, growth rates should be based on well vetted and
9 reliable sources, as opposed to sell-side marketing information used by
10 investment advisors to entice new investors. This is important to bear in
11 mind when considering the results of any Single-Stage model, as reliance
12 on overly optimistic inputs or use of outboard after-the-fact adjustments can
13 have a large impact on the model output.

14 The Single-Stage model is based on simple principles and serves as a
15 rough estimation of investor required ROE. It cannot incorporate known,
16 measurable, and material information about the future usually built into
17 Three-Stage DCF analysis. For this reason, Staff, consistent with
18 Commission precedent, has traditionally only relied on it as a sensitivity
19 check when rate making.

20 **Q. How does Staff determine the dividend flow and growth rate for the**
21 **single-stage DCF?**

1 A. Much like Staff's Multi-Stage DCF, Staff sources its expected dividends from
2 Value Line. We calculate the average dividend growth rate by comparing
3 the expected dividend by Value Line and actual dividend for each for each
4 company in the peer screen.

5 **Q. What inputs does Staff use to build Staff's single-stage DCF model?**

6 A. Staff uses the same representative draw of stock prices to build its single-
7 stage DCF model as it uses in the three-stage DCF model. Current
8 dividends and anticipated dividend growth are sourced from Value Line.

9 **Q. What are the results of Staff's Gordon Growth model?**

10 A. Using Staff's peer utility screen, the average required ROE under Staff's
11 Gordon Growth model is 8.7 percent.

1

TABLE 11³²

Staff's Representative Single Stage (Gordon Growth) Discounted Cash Flow (DCF) Model

Presumes the Peer Utility will pay its dividend as a fixed multiple of growth into the future as it is now.

The results would be true only if the utility stock's dividends were to grow at a constant rate forever.

Value of Stock (P₀) = D₁ / (k - g)

Stock Price Now = Next Year's Dividend / (Required Stock Return - Growth in Dividends)

k = (D₁ / P₀) + g

Required Rate of Return on Utility Equity = (Next Year's VL Dividend / Recent Stock Price) - Perpetual Growth

This Model Implies: Points toward Lower End of Staff's 3-Stage DCF Modeling Results

The average required ROE increased to 8.7 percent if the Company's larger peer screen is used. Staff's sensitivity peer group allowing for debt up to 60 percent of capital structure increases the modeling result to 8.8 percent. Findings in Table 11 above support selection in the lower end of Staff's range of reasonable ROEs.

³² See Exhibit Staff/406, Muldoon/1 for Staff's full Gordon Growth Model.

1 **CAPM – As Check on ROE Findings**

2 **Q. What is the Capital Asset Pricing Model (CAPM)?**

3 A. The CAPM assumes that a stock's return on equity is a function of a risk-free
4 return and a risk premium and that the risk premium should be augmented by a
5 company's level of risk relative to the market, which is captured by Beta or β .

6 All told, CAPM takes the form:

7
$$\text{Required Return} = r_f + \beta(r_m - r_f)$$

8 Where r_f is the risk-free rate and r_m is the market return. Generally, the risk-
9 free rate is assumed to be the rate of return on bonds. Taking cues from long-
10 standing financial modelling, Staff calculates its CAPM using the yield on 30-
11 year and 10-year US Treasury bonds as stand-ins the risk-free rate.

12 **Q. Should the Commission scrutinize CAPM carefully?**

13 A. Yes. CAPM only relies on a few inputs. In this case, there are three inputs:
14 the risk-free rate, the market return, and the choice of Beta. Although it is
15 generally agreed that the rate of return on US Treasury bonds is the proper
16 choice for the risk-free rate, there is much discussion about what maturity
17 should be used for Beta and the market return.

18 There are a variety of sources to find or calculate both Beta and the
19 market return. Because there are so many sources for two inputs into this
20 simple model, an uninformed or malicious investigator could use
21 unrepresentative values to motivate abnormal required returns. It is therefore
22 of the utmost importance to be thoughtful and consistent in choosing CAPM
23 parameters. In Commission activities, we have standardized on Value Line

1 (VL) Betas that are broadly used to give apples-to-apples modeling output
2 comparisons. Staff has used CAPM for validation rather than rate setting in
3 past cases.

4 **Q. Where do you find information on companies' Beta estimates?**

5 A. Estimates of Beta can be found from many sources including Bloomberg,
6 Yahoo Finance, and VL. Traditionally, the Commission has relied on Value
7 Line's Beta estimates to conduct analysis to maintain consistency in regulation
8 between rate cases. The perils of switching between Beta estimates, known
9 as "Beta shopping," are avoided by the Commission standardizing on Value
10 Line data where practicable.

11 **Q. Where do you find information on market returns?**

12 A. Market returns can also be found or calculated from a variety of places. Two
13 common sources for market returns are historical returns on stock market
14 indices and projections for future growth. As earlier discussed, care should be
15 taken in selecting a market return due to the volatile nature of the stock market.

16 **Q. What issues can arise from an improper market return selection?**

17 A. For any company with a positive Beta, a higher market return translates directly
18 into a higher required return according to the CAPM formula. Overstating
19 market returns, a required return estimate can vary by up to three percent for a
20 typical regulated utility.

21 **Q. How does Staff recommend that market returns be calculated?**

22 A. Staff recommends that market returns be calculated based off the historic long-
23 run growth rates of stocks and an up-to-date measure of the risk-free rate. By

1 using historical averages, a modeler does not run the risk of a large shock in
2 one period unnecessarily augmenting estimated returns, much like the large
3 negative shock caused by the COVID-19 pandemic, the roaring economic
4 recovery post-pandemic, or the ongoing conflict in Ukraine.

5 As has been done in past rate cases, Staff uses the market risk premium
6 calculated by Ibbotson and the implied market risk premium from Morningstar's
7 Stocks, Bonds, Bills, and Inflation 2015 Classic Yearbook, which measures
8 average returns since 1926. These two sources imply that the risk premium
9 would be 4.5 percent and 6.0 percent, respectively. Staff also calculates
10 market risk premiums as described herein using annualized monthly data for
11 30 years of geometric S&P 500 returns paired with current 30-year UST yields.

12 **Q. What recommendations do you have for the maximum authorized ROE**
13 **according to CAPM?**

14 A. As stated previously, Staff only uses CAPM for validation rather than rate
15 setting due to its historic unreliability. Within Staff's peer utility screen, the
16 estimated ROEs from Staff's CAPM under Staff assumptions average
17 8.7 percent. Using the Company's peer screen and Staff's methods, the
18 average estimated ROE observed is 8.6 percent. If one uses a nearly 100-
19 year arithmetic return combined with a 20-year UST risk free rate, one can
20 boost results to 10.0 percent similar to that found in PGE's testimony.

21 **Q. Has the Commission determined that CAPM should not be relied upon**
22 **as a stand-alone modeling method?**

1 A. Yes. The Commission made this determination in two general rate cases in
2 2001 with the issuance of Order No. 01-777 and Order No. 01-787, but still
3 permits use of the CAPM as a check on other modeling methods employed.³³

4 **GENERAL CONSIDERATIONS**

5 **Q. Does Staff have any observations that may provide the Commission**
6 **additional context in making its decision regarding ROE?**

7 A. Yes. Staff has additional thoughts regarding interest rates, direction of long-
8 term growth rates in ROE modeling, and PGE's credit rating outlook.

9 **Q. Does Staff know exactly when the U.S. Federal Reserve (Fed) will lower**
10 **rates over the next several years?**

11 A. No. While the Fed may raise or lower rates over time, there is an old adage,
12 "Don't bet against the Fed". A recent Wall Street Journal (WSJ) article
13 captures Fed Chair Powel walking through his expectations that the Fed will
14 reduce interest rates by a quarter point by the end of this calendar year, and
15 reductions totaling one percent per calendar year for each of the next two
16 years.³⁴ While the Fed can be wrong, its statements, particularly when so
17 clearly stated, strongly influence investor expectations.

18 **Q. What trend does Staff see for long-term U.S. Gross Domestic Product**
19 **(GDP) growth rates used to estimate future dividends for electric**
20 **utilities in ROE modeling?**

³³ *In the Matter of Portland General Electric*, Docket No. UE 115, Order No. 01-777 at 32; *In the Matter of PGE*, Docket No. UE 116, Order No. 01-787 at 21 (September 7, 2001).

³⁴ Exhibit Staff/410, Muldoon/69, 124, 128, and 152.

1 A. Staff will update its long-term growth rates used in the third stage of its three-
2 stage discounted cash flow modeling for Staff's Rebuttal Testimony, informed
3 by GDP growth rates. This information is not yet fully available, but Staff now
4 provides the Congressional Budget Office (CBO) Long-Term Budget Outlook
5 (2024-2054) lower projections of GDP growth rates.³⁵ This may be in the
6 words of Howard Cosell, "An augury of things to come."³⁶

7 **Q. What is Staff's perspective on PGE's negative credit outlook?**

8 A. Staff observes that PGE is likely an attractive stock for investors based on the
9 Company's presentations, and financial news regarding U.S. electric utilities
10 with exposure to possible opportunities to expand rate base to construct wind
11 plants including offshore wind generators; new transmission and
12 interconnections for renewables, storage and artificial intelligence (AI) data
13 centers, not to mention increased service to recipients of funds from the U.S.
14 Chips and Science Act and Oregon support for microchip manufacturers.³⁷
15 Indeed this is an exciting time for the Company in terms of likely opportunities.

16 However, PGE's Oregon utility customers cannot afford all-of-the-above –
17 all-at-once.³⁸ Staff believes that is the primary concern of credit rating
18 agencies. Just as an Oregon family with maxed out credit cards must say no
19 to some costly new opportunities to spend, however exciting, PGE is going to
20 have to prioritize and carefully consider the timing of new spending to reflect

³⁵ See Exhibit Staff/410, Muldoon/61, 104, and 177.

³⁶ Howard Cosell was an American sportscaster who covered Mohammed Ali's boxing matches, and television's Monday Night Football.

³⁷ See Exhibit Staff/410, Muldoon/25, 97, 141, 162, 166, and 174.

³⁸ See Exhibit Staff/410, Muldoon/61.

1 the finite resources of its utility customers. Affordability and impact on Oregon
2 utility customers (in Staff's opinion) should be prominent in PGE's executive
3 thinking. That may be the key to remedying credit rating agency outlooks.

1 **4. PENSIONS AND POST RETIREMENT MEDICAL EXPENSE**

2 **Q. Does Staff recommend an adjustment to the Company's pensions and**
3 **post-retirement medical expense in this general rate case?**

4 A. No.

5 **Q. Did Staff carefully analyze the Expected Return on Assets for each of**
6 **the Company's pensions and post-retirement medical expense?**

7 A. Yes. Staff performed its usual robust analysis, and issued data requests, the
8 responses to which corroborated Staff's findings. Staff also found the
9 Company's actuarial work consistent with the Company's benchmarks inclusive
10 of EROA for Oregon Public Employee Retirement System (PERS), CA PERS,
11 and California State Teachers' Retirement System.

12 **Q. Did Staff carefully analyze the discount rate assumptions for each of**
13 **the Company's pensions and post-retirement medical expense?**

14 A. Yes. Staff also calibrated the revenue requirement impact of each of the above
15 factors and confirmed that in aggregate the Company's work in this area was
16 reasonable and no adjustment is required in this general rate case.

5. CONCLUSION**Q. What is Staff's recommendation regarding ROE?**

A. Staff recommends that the Commission select a point ROE from within Staff's range of reasonable ROEs from 8.96 percent to 9.41 percent. This is a difficult decision balancing financial market criteria and credit ratings on the one hand, against reducing energy burden for Oregon customers of PGE on the other.

Q. What Rate of Return (ROR) is generated by the Staff's aggregated Cost of Capital recommendations on Capital Structure, ROE, and Cost of Long-Term Debt?

A. Staff provides an illustrative 6.921 percent Overall Rate of Return (ROR), based on the midpoint of Staff's range of reasonable ROEs of 9.2 percent, a 50 percent equity layer Capital Structure and a 4.641 percent Cost of Long-Term Debt.

Q. What recommendation does Staff have regarding a point estimate within Staff's range of reasonable ROEs.

A. Staff finds that recommending a range is appropriate rather than any single point estimate. The range is from 8.96 percent to 9.41 percent. The range provides values from which the Commission can use to balance the interests of shareholders and energy affordability for Oregon utility customers and still meet statutory requirements to provide for a fair return on equity.

Q. Does Staff recommend an adjustment to pensions and post-retirement expense in this general rate case?

1 A. No. Staff's usual robust analysis found the Company's work on these issues to
2 be reasonable and in aggregate consistent with Staff's benchmarks.

3 **Q. Does that conclude your testimony?**

4 A. Yes.

CASE: UE 435
WITNESS: MATT MULDOON

**PUBLIC UTILITY COMMISSION
OF
OREGON**

STAFF EXHIBIT 401

**Witness Qualifications Statement
Staff: Muldoon**

July 15, 2024

WITNESS QUALIFICATION STATEMENT

NAME: Matthew (Matt) J. Muldoon

EMPLOYER: PUBLIC UTILITY COMMISSION OF OREGON

TITLE: Manager, Accounting and Finance Section of the Rates, Safety and Utility Performance Program (RSUP) of the Public Utility Commission of Oregon (OPUC)

ADDRESS: 201 High Street SE, Suite 100, Salem, OR 97301

EDUCATION: In 1981, I received a Bachelor of Arts Degree in Political Science from the University of Chicago. In 2007, I received a Masters of Business Administration (MBA) from Portland State University with a certificate in Finance.

EXPERIENCE: From April of 2008 to the present, I have been employed by the OPUC. My current responsibilities include financial analysis with an emphasis on Cost of Capital (CoC). I have worked on CoC in the following general rate case dockets: AVA UG 186; UG 201, UG 246, UG 284, UG 288, UG 325, UG 366, UG 389, UG 433 and UG 461; CNG UG 287, UG 305, UG 347, and UG 390; IPC current UE 426; NWN UG 221, UG 344, UG 388, UG 435, and current UG 490; PAC UE 246, UE 263, UG 374, UE 399, and current UE 433; and PGE UE 262, UE 283, UE 294, UE 319, UE 335, UE 394, UE 416 and current UE 435.

From 2002 to 2008, I was Executive Director of the Acceleration Transportation Rate Bureau, Inc. where I developed new rate structures for surface transportation and created metrics to ensure program success within regulated processes.

I was the Vice President of Operations for Willamette Traffic Bureau, Inc. from 1993 to 2002. There I managed tariff rate compilation and analysis. I also developed new information systems and did sensitivity analysis for rate modeling.

OTHER: I have prepared and defended formal testimony in contested hearings before the OPUC, ICC, STB, WUTC and ODOT. I have also prepared OPUC Staff testimony in BPA rate cases.

CASE: UE 435
WITNESS: MATT MULDOON

Gordon Growth – Single Stage DCF**

July 15, 2024

Gordon Growth
Single Stage DCF Model

Staff's Representative Single Stage (Gordon Growth) Discounted Cash Flow (DCF) Model

Presumes the Peer Utility will pay its dividend as a fixed multiple of growth into the future as it is now.

The results would be true only if the utility stock's dividends were to grow at a constant rate forever.

Value of Stock (P₀) = D₁ / (k- g) Stock Price Now = Next Year's Dividend / (Required Stock Return - Growth in Dividends)

k = (D₁ / P₀) + g

Required Rate of Return on Utility Equity = (Next Year's VL Dividend / Recent Stock Price) - Perpetual Growth

This Model Implies: Points toward Lower End of Staff's 3-Stage DCF Modeling Results

**Value Line (VL)
Electric Utilities**

July 15, 2024

INDUSTRY TIMELINESS: 71 (of 93)

All major electric utilities located in the eastern region of the United States are reviewed in this Issue; western-based electrics, in Issue 11; and the remaining industry participants, in Issue 5. Since our last review of the Electric Utility (East) group three months ago, electric utility stocks covered in The Value Line Investment Survey fell 12.8% in value on average, compared to the 9.2% decline in the S&P 500.

On a 12-month basis, the Value Line Utility Index has fallen 19.8% versus a 1.9% drop in the Value Line Arithmetic Index. This underperformance is in stark contrast to the first two-thirds of last year when the defensive nature of utilities was sought after. The sharp rise in interest rates over the past several months, with the 10-year Treasury yield recently tagging 5.0%, a level not seen since August of 2007, has really pressured rate-sensitive equities. This is because Treasuries provide a competitive investment vehicle for income-oriented investors and compare favorably to the 4.3% median dividend on electric utility stocks. A rebound in this group ought to be in play when recession fears resurface and investors start to anticipate lower interest rates.

Total annual return prospects through 2026-2028 for electrics is near the high end of the range witnessed over the past year. The median level for the industry is presently about 11% after we began reducing our Target Price Range for most of these stocks in order to better reflect the evolving interest rate environment. Although there is a generally reduced risk level in owning utilities, given that they are regulated monopolies, we typically look for at least 10%-11% long-term total annual return potential before recommending a specific equity to utility investors. That level is in line with the broader market's returns over the long haul.

Utility Portfolio Considerations

Given that utilities have significantly sold off of late, one might ask if this group is undervalued on a longer-term basis as opposed to simply being oversold. We'd conclude that electrics are indeed undervalued if we were confident the 10-year Treasury yield would remain in the 2002 to 2022 range of about 0.5% to 5.5%. Looking further back in time, however, and considering a higher range of interest rates might be in play going forward, we'd arrive at a much different answer.

In the 1990s, the 10-year yield was 8.0% at mid-decade and as high as 9.1% early on. The floor for the 10-year yield over the course of the 1990s was 4.3%. While the higher end of that range certainly does not appear to be in our immediate future, the long-term interest rate chart is no longer characterized by a series of lower highs and lower lows. The breakout above 3.2% that took place in September of 2022, and the substantial ground gained since, are indicative of a change in the declining secular trend.

Our conclusion on valuations is that electric utilities have a good chance for a strong rally on the anticipation of a cyclical decline in rates over the intermediate term. But over the long haul, we expect relative valuations to fall. Only in recent years have utility stocks regularly traded above a market price-to-earnings (P/E) ratio. As a point of reference, *Consolidated Edison*, a long-term

industry bellwether, sported an average annual relative P/E that ranged between .60 and .80 during the 1990s. During the 2002-2022 stretch, the range was .73 to 1.18, with a market multiple averaged over the past seven full years (2016-2022). Interest rates are certainly not the only factor determining valuations, but it is a significant driving force.

Utility investors can help their cause by being disciplined buyers. Sticking to purchase candidates that possess regulatory environments rated average or better would be ideal. Those with near real-time pricing adjustments that minimize regulatory lag should be sought. A decent or improving balance sheet ought to be a consideration, as well. Solid local economic strength and population growth in a utility's service area is also a big plus.

Conclusion

The recent macroeconomic backdrop is a significant challenge for most electrics. The main difficulties are wage inflation, a rising cost of capital due to higher interest rates, and stubbornly elevated commodity energy and raw material prices. These issues have been magnified for companies attempting to raise funds for expensive and complicated renewables projects, particularly in offshore wind generation.

Due to how regulatory mechanisms work in this industry, some of these higher expenses can rapidly be passed on to customers, but it varies widely by state. Many costs must instead go through a filed rate case to be reviewed by a regulatory panel, which can be an onerous and lengthy process. This "regulatory lag" can accumulate over time, causing some utilities to perennially under-earn their authorized return on equity. This is a prescription for below-average (relative to the industry median) earnings and dividend growth.

While this industry appears homogeneous, individual electrics vary widely. Regulatory climate and the overall health of the underlying regional and local economies within a utility's service area are big difference-makers. States committing to aggressive clean energy transitions will generate a lot of invested capital opportunities for utilities in those territories. This should also be a key difference maker. As always, utility investors need to be highly selective.

December 8, 2023

ELECTRIC UTILITY (CENTRAL) INDUSTRY

901

All major Electric Utilities located in the Central region of the United States reported third-quarter 2023 financial results and are reviewed in this Issue.

Electric Utility (Central) stocks covered in *The Value Line Investment Survey* stayed relatively flat in price on average, versus a slight increase in the S&P 500 since our last review three months ago.

Utilities have continued to underperform the broader market averages as of late largely due to the challenging operating backdrop, including the rise in interest rates over the past year. However, a rebound may be in play as the recent U.S. inflation data report, which was better-than-expected, raised the likelihood that the Federal Reserve will put an end to its rate hikes. Total return prospects through 2026-2028 for many of these stocks is near the high-end of the 2023 range, and a number of the electrics remain trading at double-digit discounts to historical valuations.

Interest Rates' Effect On Potential Rebound

Many equities covered in the Utility (Central) Industry increased considerably in value after the Consumer Price Index for October came in flat, which led to the 10-year Treasury yield falling below 4.5%. Note, the rise in interest rates over the past year sent the 10-year Treasury yield above 5% in October, a level not seen since 2007. Investors seem to be enthused with the inflation data and anticipation of lower interest rates is growing. Indeed, the share-price performance of utility stocks has an inverse relationship with the interest rate environment, and we think a rebound in this group is likely to occur when the Fed puts an end to its aggressive rate hikes. As always, investors should keep an eye out for future rate-setting meetings by the central bank.

The Challenging Macroeconomic Environment

Most electrics face elevated energy and raw material prices, wage inflation, and rising interest rates. Inflationary pressure continues to negatively impact energy and raw material prices, operating and maintenance costs, as well as fuel and wage prices. Too, the interest rate environment is increasing borrowing costs, which is especially significant for utilities as they usually have low returns on total capital and rely on heavy debt borrowings. While regulatory mechanisms should help pass some of these higher expenses to customers, the regulatory process can take a long time, and lead to a utility to under-earn its return on equity (ROE).

High Quality, Disciplined Investors

We recommend investors look for utilities with a solid regulatory environment, balance sheet strength, and stable top- and bottom-line growth among other factors. Indeed, stocks with pending rate cases nearing approval, and real-time pricing adjustments are ideal to minimize regulatory lag. Regulatory lag can be detrimental to a utility's earnings and dividend growth as it causes them to under earn their ROE. Due to the challenging macroeconomic backdrop, investors need to be more selective and disciplined than usual. Accordingly, accounts should consider purchasing equities with strong Financial Strength grades and improving balance sheets. We also recommend specific utility stocks with more than 10% long-term annual total return potential. Including the

INDUSTRY TIMELINESS: 51 (of 93)

reduced risk of electrics, this growth is about in-line with the broader market average. Electrics may be undervalued in the intermediate-term as there is a high probability of a decline in rates over that interim. While interest rates are a significant factor in our valuations, there are a number of other forces, as mentioned, that investors should look for in order to be high quality, disciplined buyers.

Dividend Hikes

The dividend remains the most notable feature for many electrics, making it very suitable for income-oriented accounts. The industry-wide yield average of 3.6% sits far above The Value Line median. Too, a number of utilities have a proven track record of commitment and many continue to raise their payouts. Indeed, *Fortis* increased its quarterly disbursement by \$0.025 a share (4.4%), which is the 50th consecutive year of dividend hikes for the company. *WEC Energy* is also expected to raise its quarterly dividend by \$0.053 a share (6%), marking 21 consecutive years of dividend hikes.

Conclusion

The rising interest rate climate and challenging macroeconomic environment continues to negatively impact utilities and the group's stock performance. However, the recent decrease in the 10-year Treasury yield has improved the sector's prospects and investor hopes that the Federal Reserve will put an end to rate hikes.

While short- and long-term capital appreciation potential for most electric stocks is not especially appealing, we recommend looking for equities with at least 10% long-term annual return potential. We use this above-industry-average, and not the broader *Value Line* median measure due to the reduced risk of utilities. Meanwhile, the dividend yield remains the standout feature of this group. Regulatory mechanisms tend to also improve prospects for many utilities as they help pass on higher expenses to customers, but regulatory lag is still a hurdle for most electrics.

Zachary J. Hodgkinson

All major electric utilities located in the western region of the United States are reviewed in this Issue; eastern-based electrics, in Issue 1; and the remaining industry participants, in Issue 5. Since our last review of the Electric Utility (West) group three months ago, electric utility stocks covered in the *Value Line Investment Survey* dropped 12.8% in value on average, compared to a 1.7% decline in the S&P 500.

On a 12-month basis, the *Value Line Utility Index* has fallen 9.2% versus a 12.1% rise in the *Value Line Arithmetic Index*. This underperformance is in stark contrast to the first two-thirds of 2022 when the defensive nature of utilities was sought after. The sharp rise in interest rates, over the past several months with the 10-year Treasury yield recently surpassing 4.8%, a level not seen since August of 2007, has really hurt these stocks, as Treasuries provide a competitive investment vehicle for income-oriented investors and compare favorably to the recent 4.4% median dividend yield for electric utilities. A sharp turnaround in these stocks should be in play when recession fears resurface and/or the Federal Reserve begins to cut rates.

Total annual return prospects through 2026-2028 for electrics look as high as we've seen them over the past year. The median level for the group is presently 10.8% after we began reducing our Target Price Range on most of these stocks to better reflect the evolving interest rate environment. Although there is a generally reduced risk level in owning utilities, given that they're regulated monopolies, we like to see at least 10%-11% long-term total annual return potential before recommending a specific equity to utility investors. That level is in line with historical returns for the broader market.

Utility Portfolio Considerations

Given that this group has really sold off strongly of late, one might wonder if the sector could be termed "undervalued" on a long-term basis. Our answer would be yes if we were confident the 10-year Treasury yield would remain in the 2002 to 2022 range of about 0.5% to 5.5%. If we look back further in history, however, and consider a higher range of interest rates might be in play going forward, than we'd arrive at a very different answer.

In the 1990s, the 10-year yield was as high as 9.1% early on in the decade and 8.0% at mid-decade, while the floor for that yield over the course of the 1990s was 4.3%. While the higher end of the range for that decade certainly does not appear to be in our immediate future, the long-term interest rate chart is no longer characterized by a series of lower highs and lower lows. The breakout above 3.2% that took place in September of 2022, and the ground gained since then, is certainly indicative of a change in the long-term trend.

Our conclusion on valuations is that the group has a good chance of a strong rally on a cyclical decline in rates associated with economic weakness over the intermediate term. But longer term, relative valuations will likely fall. Only in recent years have utility stocks traded above a market price-to-earnings (P/E) ratio.

We think utility investors can help their cause by being disciplined buyers. The midpoint of the annual total return projections based on the 3- to 5-year Target

INDUSTRY TIMELINESS: 92 (of 93)

Price Range should generally be at about 11% or better. It would also be a good practice to emphasize utilities with higher-than-average dividend growth prospects. We'd put the industry median at about 4.5% for that metric.

Topical Considerations

The main challenges electrics are facing include higher interest rates and upward trending wages, materials, fuel, and purchased power. Due to how the regulatory mechanisms work in this industry, some costs can rapidly be passed on to consumers, such as natural gas prices. Many cannot be and must go through a filed-rate-case process with regulators. The regulatory lag before recoupment may be as short as one year, but in some instances can drag on for a few years. Some companies are fortunate to have a very minimal lag on a reasonable percentage of outlays, as a result of the approved use of nearly real-time pricing adjustments.

High purchased power costs during peak load periods out West have been exacerbated by the shuttering of reliable and inexpensive coal generation. The impact is at times problematic because those open market purchases are not necessarily an automatic and quick pass through to consumers. This situation is also an opportunity, as it increasingly makes sense for renewable generating capacity to be utility owned.

Finally, with *PG&E Corp.* back within our regular coverage, and *Edison Int'l* facing some new wildfire lawsuits, a discussion on bankruptcy risk in California from wildfires is appropriate. (Regarding the wildfire lawsuits impacting *Hawaiian Electric*, and to a lesser degree, *Xcel Energy*, we'd refer subscribers to the respective company reports.) The California Wildfire Fund was established in 2019 as a form of insurance for the state's three major electric utilities (subsidiaries *PG&E*, *Edison Int'l*, and *Sempra Energy*), funded by the companies and their customer base up to \$21 billion. The fund doesn't cover claims on fires that took place prior to its formation, while individual claims are paid out over and above the first \$1 billion a company incurs. The fund is meant to cover catastrophic losses. With this extra layer of protection above regular insurance carried, bankruptcy risk for the aforementioned California utilities is likely very low.

2020 .59 .98 1.47 .46 3.50 2021 .91 .80 1.65 .48 3.84 2022 .97 .80 1.74 .63 4.14 2023 1.00 .90 1.87 .63 4.40 2024 1.03 .90 2.00 .77 4.70						Amern posted solid results for the September quarter. Earnings per share of \$1.87 were \$0.04 higher than our estimate and \$0.13 above the year-ago tally. Most of the outperformance was due to increased investments in infrastructure across all business segments and lower tax expenses. Too, earnings at Ameren Missouri, the largest segment, continue to benefit from higher electric service rates, and we look for this to remain a main catalyst to the bottom line in the next couple of years.																
Cal-endar QUARTERLY DIVIDENDS PAID ^B Full Year Mar.31 Jun.30 Sep.30 Dec.31						The utility's guidance has improved a bit. Due to the aforementioned tailwinds and strong bottom-line performances of late, management narrowed its 2023 earnings estimate to a range of \$4.30 to \$4.45 per share. This compares to the initial guidance range of \$4.25 to \$4.45 per share. The company also updated its five-year plan, which includes a 6% to 8% compounded annual growth rate for earnings from 2023 through 2027. Our 2023 and 2024 bottom-line projections are staying put at \$4.40 and \$4.70 per share, respectively. Profit growth should be primarily driven by increased infrastructure invest-

<p>Business: American Electric Power Company Inc. (AEP), through 10 operating utilities, serves 5.5 million customers in Arkansas, Kentucky, Indiana, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia, & West Virginia. Has a transmission subsidiary. Electric revenue breakdown: residential, 43%; commercial, 23%; industrial, 18%; wholesale, 10%; other, 6%. Sold commercial</p> <p>We think that American Electric Power will likely post solid earnings growth in 2023 and 2024. The company should continue to benefit from rate relief, increased investment in its transmission business, and volume growth over the next few years, despite challenging economic conditions which have led to usage decline of late. Third-quarter earnings per share came in at \$1.77, above Wall Street's and our expectations due to rate increases, load growth, and higher transmission revenue. As a result, management narrowed its 2023 bottom-line outlook to a range of \$5.24-\$5.34 per share, and reaffirmed a long-term annual earnings growth target of 6%-7%. We are sticking with our 2023 and 2024 EPS estimates of \$5.25 and \$5.60, respectively.</p> <p>The company remains active on the regulatory front. Units in Indiana and Michigan requested hikes in the third quarter, based on a 10.5% return on equity (ROE). The utility expects new rates to go into effect by next year. In Ohio, AEP reached an agreement with the Public Utilities Commission of Ohio to invest more than \$1.5 billion in the electric grid</p> <p>over the next five years. If approved, the average residential customer would see an average annual increase of about \$1.50 per month through 2028. Kentucky Power is also making progress in its June 2023 rate base application, which asks for a 9.9% ROE and a request for the securitization of \$471 million of regulatory assets. A final order is expected by the end of this year, and interim rates will likely go into effect in January 2024.</p> <p>The board of directors raised the dividend, effective with the December payment. This is the typical timing of hikes for AEP. The increase was \$0.05 a share (6%) quarterly, in line with the company's 6%-7% operating earnings growth range and within the utility's target for a payout ratio of 60%-70%.</p> <p>These shares are ranked 3 (Average) for Timeliness. Nonetheless, this stock is best suited for risk-averse income-oriented investors. Indeed, the above average dividend yield of 4.5% remains this issue's most notable feature. Meanwhile, total return potential over the 18-month and 3- to 5-year time frames is solid for a utility.</p> <p><i>Zachary J. Hodgkinson December 8, 2023</i></p>

AVANGRID, Inc. was formed through a merger between Iberdrola USA, Inc. and UIL Holdings Corporation in December of 2015. Iberdrola S.A., a worldwide leader in the energy industry, owns 81.5% of AVANGRID. The predecessor company was founded in 1852 and is headquartered in New Gloucester, Maine. It was incorporated in 1997 in New York under the name NGE Resources, Inc. AVANGRID began trading on the NYSE on December 17, 2015.	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	© VALUE LINE PUB. LLC	26-28

BUSINESS: AVANGRID, Inc. (formerly Iberdrola USA, Inc.), is a diversified energy and utility company that serves 2.3 million electric customers in New York, Connecticut, and Maine and 1 million gas customers in New York, Connecticut, Massachusetts & Maine. Has a nonregulated generating subsidiary focused on wind and solar power generation, with 9.2 GW of capacity and 1.7 GW under construction. Renewables segment accounted for about 17% of net profits for trailing 12 months. Power/fuel costs: 31% of rev. '22 reported depr. rate: 2.6%. Iberdrola owns 81.5% of stock. Employees 7,579. Board Chair: Ignacio Sanchez Galan. CEO: Pedro Azagra Blazquez. Inc.: New York. Address: 180 Marsh Hill Road, Orange, CT 06477. Tel.: 207-629-1200. Web: www.avangrid.com.

AVANGRID received a constructive outcome in two electric rate cases. In New York, the company's rate base (i.e., the dollar value of assets a utility is allowed to earn an economic return on) has been approved to expand by nearly 40%, from \$6.6 billion in 2022 to \$9.2 billion in 2026. The rise reflects investments needed to increase reliability/resiliency and accelerate the state's clean energy initiatives. Higher prices will be based on a 9.2% allowable return on equity (ROE), up from 8.8% previously. New delivery rates will be collected from November 1st, but will reflect the higher level back to May 1st. Fourth-quarter profits are thus expected to be outsized due to eight months worth of the price increase and from a mitigation of past uncollectibles. In Maine, the utility commission approved a safety, reliability and resiliency plan that will lift the state rate base by over \$380 million over the next two years, to nearly \$1.3 billion. Our understanding is that the ROE in Maine is unchanged at 9.25%. **The company is appealing an unfavorable Connecticut rate decision.** AVANGRID had asked for an 8% hike over

three years, with an increase of \$91 million to cover rising operating costs in the first year of the schedule. In August, the company was granted an increase of \$16.8 million for year one. If AVANGRID cannot get relief through Connecticut's court system, it will be saddled with an 8.63% ROE in that state (one of the lowest levels in the U.S.), down from 9.1% previously. **Concluding the acquisition of PNM Resources is a priority.** AVANGRID agreed to purchase the parent of electric utilities in New Mexico and Texas for \$4.3 billion. The merger was blocked by regulators in New Mexico. The decision was appealed to that state's supreme court, which has been slow to make a decision. **AVANGRID has significantly underperformed our utility index in 2023.** The market has turned sour on electric utilities in general, and the added finance and project risks associated with renewable energy (particularly offshore wind generation) has come under additional scrutiny. AGR's 6.0% yield may make a purchase here worth the risk for well diversified utility investors. *Anthony J. Glennon November 10, 2023*

BUSINESS: Avista Corporation (formerly The Washington Water Power Company) supplies electricity & gas in eastern Washington & northern Idaho. Supplies electricity to part of Alaska & gas to part of Oregon. Customers: 411,000 electric, 377,000 gas. Acq'd Alaska Electric Light and Power 7/14. Sold Ecova energy-management sub. 6/14. Electric rev. breakdown: residential, 38%; commercial, 30%; industrial, 10%; wholesale, 17%; other, 5%. Generating sources: gas & coal, 31%; hydro, 31%; purch., 38%. Fuel costs: 35% of revs. '22 reported depr. rate (Avista Utilities): 3.6%. Has 1,767 employees. Chairman: Scott L. Morris. Pres. & CEO: Dennis Vermillion. Inc.: WA. Address: 1411 E. Mission Ave., Spokane, WA 99202-2600. Tel.: 509-489-0500. Internet: www.avistacorp.com.						Avista's earnings target for 2023 remains at \$2.30 a share. As always, when dealing with utility stocks, we caution our subscribers to look at the full-year numbers and not get caught up in the sequential figures. These businesses post choppy quarterly results and AVA is no different. That said, leadership has stated it looks for annual gains in the range of 5% to 7%, and our current outlook is just above that spread. This year, tax credits tied to earlier rate cases are being returned to customers. With that, we anticipate lower showings in the second and third quarters, with roughly 50% of annual utility earnings recognized in the final stanza of the year. Too, costs under the Energy Recovery Mechanism in Washington are apt to be higher than expected in 2023 due to poor hydro conditions.										community looking for riskier propositions. And, all of this is happening at a time when the Maui wildfires have everyone asking questions about the legal liabilities of utility companies.													
Quarterly Revenues (\$ mill.)						Avista has some positives going for it. Pertaining to electric and natural gas general rate cases, the company received approval from the Idaho Public Utilities Commission for the multiparty settlement agreement filed in mid-June. Annual base electric revenues increased 8% on September 1, 2023. On the natural gas side of the coin, a boost of 2.7% kicked in on the same day. The settlement includes a 9.4% return on equity with a common equity ratio of 50% and a rate of return on the rate base of 7.19%. Clean energy moves should also pay off. A wind generation pact in Montana is promising, and hydro agreements will lift AVA's generating capabilities from non-emitting resources.										At north of 5.5%, this timely utility's yield exceeds the industry average. Too, the recent downturn in the quotation has enhanced capital appreciation potential out to 2026-28.													
Earnings per Share ^A						The pressure points on utility stocks in general are mounting. AVA shares have fallen about 15% in price since our late July coverage. For starters, higher interest rates make the yield on these selections less attractive. Additionally, each media report that states a recession can be avoided sends members of the investment										Erik M. Manning

Avg. Indust. Use (MWH)						BUSINESS: Black Hills Corporation is a holding company for Black Hills Energy, which serves 220,431 electric customers in CO, SD, WY and MT, and 1.1 million gas customers in NE, IA, KS, CO, WY, and AR. Has coal mining sub. Acq'd utility ops. from Aquila 7/08; SourceGas 2/16. Discontinued gas marketing in '11; gas & oil E&P in '17. Electric rev. breakdown: residential, 35%; commercial, 39%; industrial, 23%; other, 3%. Generating sources: coal, 35%; gas, 19%; wind, 11%; purchased, 35%. Fuel costs: 38% of revs. '22 deprec. rate: 3.2%. Has 2,982 employees. Chairman: Steven R. Mills. President & CEO: Linn Evans. Inc.: SD. Address: 7001 Mount Rushmore Rd., P.O. Box 1400, Rapid City, SD 57709-1400. Telephone: 605-721-1700. Internet: www.blackhillscorp.com.																
Avg. Indust. Revs. per KWH (c)						Black Hills' stock price has continued to slide deeper into negative territory this year. The shares are down 31% in 2023, versus the 17% average decline for all electric utilities covered by Value Line. While many interest-rate sensitive issues are suffering as the 10-year Treasury yield continues to press higher, BKH's troubles extend back to the third quarter of last year, which marked the start of four-consecutive weak quarterly year-to-year comparisons. The stock's decline picked up momentum in February when leadership broke the news to investors that it was cutting its long-term earnings growth projections, to 4%-6% from 5%-7%. Inflation has been cited as the root cause. Some electrics are better able to deal with today's difficult macro environment of elevated commodity/labor costs and higher interest rates without suffering from extreme regulatory lag. It depends largely on what pricing mechanisms a utility has at its disposal to pass on higher costs to consumers in a timely fashion. Black Hills is suffering from regulatory lag and has either recently filed rate cases or is preparing to do so in its various service areas.																
Capacity at Yearend (Mw)						The company is focused on adding renewable power sources in its electric grid territories. Colorado has initiatives in place requiring that 80% of the state's electricity comes from non-emitting sources within seven years. Accordingly, Black Hills is investing in a combination of solar cells, wind power, and battery storage totalling 520 megawatts by 2030. Half will be utility owned, with the remainder under long-term supply agreements to the company. South Dakota and Wyoming are less aggressive in their energy transitions. Still, Black Hills has received the green light to expand renewables by 120 mw through 2026 in those states. These investments should provide an economic rate of return to the company. This equity is untimely. That can be said for the stocks of most of Black Hills' peers. The rise in Treasury rates to levels not seen since 2007 has the group reeling. This issue may be less speculative now than it may seem. It's already cut its outlook to realistic levels while many peers may have to. BKH's 5.3% yield is a percentage point above its industry median.

BUSINESS: CenterPoint Energy, Inc. is a holding company for Houston Electric, which serves 2.7 million customers in Houston and environs, Indiana Electric, which serves 151,000 customers, and gas utilities with 4.27 million customers in Texas, Minnesota, Louisiana, Mississippi, Indiana, and Ohio. Acquired Vectren 2/19. Sold nonutility operations in '20. Sold its stake in Energy Transfer LP in '21 and '22. Electric revenue breakdown not available. Fuel costs: 33% of revenues. '22 depreciation rate: 3.8%. Has 8,986 employees. Chairman: Martin H. Nesbitt. President & CEO: David J. Lesar. Incorporated: Texas. Address: 1111 Louisiana, P.O. Box 4567, Houston, Texas 77210-4567. Telephone: 713-207-1111. Internet: www.centerpointenergy.com.

CenterPoint had a mixed third quarter. The top line declined 2% year over year, to \$1.86 billion. However, the bottom line rose 33% over the previous-year tally, to \$0.40 per share thanks to ongoing cost controls.

Share earnings for 2023 and 2024 will likely increase at an upper-single-digit pace. The company has been controlling operation and maintenance expenses, as evidenced by the third quarter per-share profit. Additionally, benefits from rate relief and new customer wins should further support the bottom line. All things considered, we estimate 2023 share earnings will rise about 9% year over year, to \$1.73. Meanwhile, we look for 2024 per-share profit to grow around 8%, to \$1.87.

The utility company is making progress on four different rate cases. The Texas gas rate case was expected to be filed by November 1st, with a proposed 9.64% return on equity (ROE). Minnesota Gas based on a 9.39% ROE, and Indiana Electric, with a proposed 10.4% ROE, are on track for filings in November and December, respectively. Finally, the Houston Electric rate case filing is scheduled for the second quarter of 2024, based on a 9.4% ROE and a 42.5% equity ratio.

The 10-year capital plan was increased by another \$500 million to \$43.9 billion. The program started in 2021 and is about 10% higher than the original \$40 billion target. The board of directors raised the quarterly dividend by a cent per share or 5.3%, effective with the December payment. The company has been consistent with dividend hikes after a cut in 2020 amid the pandemic. CenterPoint Energy will soon have a new chief executive officer (CEO). David J. Lesar is to be succeeded by Jason P. Wells. Upon succession on January 5, 2024, Mr. Wells will assume the President and CEO roles. Shares of CenterPoint are ranked 2 (Above Average) for relative year ahead price performance. The equity also has about-average capital gains prospects over the next 18 months. Also, the stock has subpar long-term capital appreciation potential. The dividend yield is low for a utility, as well.

BUSINESS: CMS Energy Corporation is a holding company for Consumers Energy, which supplies electricity and gas to lower Michigan (excluding Detroit). Has 1.9 million electric, 1.8 million gas customers. Has 1,836 megawatts of nonregulated generating capacity. Sold EnerBank in '21. Electric revenue breakdown: residential, 46%; commercial, 32%; industrial, 15%; other, 7%. Generating

CMS Energy registered mixed third-quarter results. The top line plummeted 17% year over year, to \$1.67 billion. Still, the bottom line rose 7% over the year-ago period, to \$0.60 per share thanks to lower operating expenses. Management reaffirmed the 2023 full-year adjusted share-earnings forecast range of \$3.06-\$3.12. Plus, CMS initiated its full-year 2024 projection at \$3.27 to \$3.33 per share.

Regarding the Consumers subsidiary, electric rate case considerations are ongoing. To recall, the unit filed an application with the Michigan Public Service Commission (MPSC) seeking a rate increase of \$216 million, but revised in September to \$169 million due to the deferment of some capital expenditures. Still, the company has maintained its position for a 10.25% return on equity (ROE) and a 51.5% equity ratio.

Meanwhile, gas rate proceedings made progress. In August, the commission approved a previously filed settlement agreement asking for a \$95 million increase based on a 9.9% ROE. The rate was effective on October 1st. The company is planning to pursue the next gas rate case

sources: coal, 29%; gas, 19%; renewables, 6%; purchased, 47%. Fuel costs: 34% of revenues. '22 depreciation rates: 3.7% electric, 2.9% gas, 8.9% other. Has 8,560 full-time employees. Chairman: John G. Russell. President & CEO: Garrick Rochow. Inc.: Michigan. Address: One Energy Plaza, Jackson, Michigan 49201. Telephone: 517-788-0550. Internet: www.cmsenergy.com.

in December. **The company has an electric reliability roadmap, which should form the basis for future electric rate cases.** The utility has identified about \$3 billion of additional investment opportunities for the next five years, on top of the prior \$4 billion plan (\$7 billion in total). Some actions include doubling investment in vegetation management to shorten trim cycles, requesting approval of up to 400 miles of annual undergrounding beginning in 2027, replacing more than 20,000 poles annually, and automating grids. If the MPSC agrees with these capital investments, the Consumers division will have an easier time negotiating its future electric rate cases. We note that utilities do not operate like regular businesses. These companies are incentivized to invest in capital infrastructures, allowing them to seek rate increases. **CMS shares, though untimely, have good 18-month capital gains potential.** Still, the stock lacks investment appeal over the 3- to 5-year period. The dividend yield is subpar by utility standards. *Emma Jalees* December 8, 2023

BUSINESS:				DTE Energy Company is a holding company for DTE Electric (formerly Detroit Edison), which supplies electricity in Detroit and a 7,600-square-mile area in southeastern Michigan, and DTE Gas (formerly Michigan Consolidated Gas). Customers: 2.2 mill. electric, 1.3 mill. gas. Has various nonutility operations. Electric revenue breakdown: residential, 50%; commercial, 33%; industrial, 11%; other, 6%. Generating sources: coal, 67%; nuclear, 17%; gas, 1%; purchased, 15%. Fuel costs: 62% of revenues. '22 reported deprec. rates: 4.2% electric, 2.9% gas. Has 10,600 employees. Chairman, President & CEO: Jerry Norcia. Incorporated: Michigan. Address: One Energy Plaza, Detroit, Michigan 48226-1279. Tel.: 313-235-4000. Internet: www.dteenergy.com.															
DTE Energy's electric utility subsidiary has a general rate case pending.				DTE Electric is seeking an increase of \$622 million, nearly 60% larger than its initial 2022 request of which Michigan regulators approved less than 10% of. We continue to think the Michigan Public Service Commission will likely give the utility an unfavorable ruling, given the aforementioned rate case decision in November 2022. An order was expected when this report went to press, and DTE awaits a decision in hopes of getting a better understanding of its financial potential in 2024.															
DTE Energy faced various challenges in the third quarter.				September-period sales plunged 45% over the year-ago period, to \$2,888 billion, as DTE has faced \$370 million of unprecedented headwinds this year, including unfavorable weather, low rate orders, and storm activity. Earnings of \$1.44 per share came in well shy of our \$2.15 forecast. Accordingly, management lowered its full-year 2024 earnings guidance midpoint from \$6.25 per share to \$5.75. We shaved \$0.35 from our EPS call, to \$5.75, to reflect unprecedented headwinds and worse-than-expected financial															
performances of late.				Top- and bottom-line growth should get back on track next year. While the unprecedented headwinds of unfavorable weather, low rate orders, and storm activity will likely continue in 2024, DTE has offset \$270 million of challenges so far this year and is in a better position to deal with these obstacles in the long term. The utility should also be able to get some rate relief, but we await the final order from Michigan regulators before reflecting the rate increase in our presentation. As a result, we are maintaining our 2024 top- and bottom-line estimates of \$18.5 billion and \$6.70 a share, respectively. We look for solid results over the next few years, as DTE Energy is well-positioned for the long term and should be able to pass on the higher costs associated with the challenging macroeconomic environment to the consumer, through rate cases and infrastructure mechanisms.															
This equity has a dividend yield that is about average, by utility standards.				Meanwhile, the Timeliness rank resides at 5 (Lowest). Zachary J. Hodgkinson December 8, 2023

Cal-endar Mar.31 Jun.30 Sep.30 Dec.31 Full Year						EDISON INTERNATIONAL IS ON TARGET FOR A SOLID 2023 CAMPAIGN AND OPERATIONAL MOMENTUM THROUGH NEXT YEAR. The utility posted good first-half profit comparisons that should enable it to surpass the midpoint of this year's internal share-earnings projection of \$4.55 to \$4.85. The escalation mechanism set forth in the 2021 General Rate Case (GRC) decision that allows the company to bill for certain types of expenses, thereby circumventing regulatory lag, is a big plus. Higher interest expense remains problematic, but there are enough tailwinds to more than offset the challenging rate environment. Load growth in California is brisk at around 3% due in part to the ongoing shift to electric vehicles and heavy equipment. Leadership remains confident in its expectation of 5%-7% profit growth through at least 2025, with a path to \$7 per share by 2028. The state's aggressive green energy initiatives and ongoing fire mitigation work should deliver economic returns on invested capital. As always, rate relief by way of the regulatory umbrella will be a key factor. In that vein, the company filed its latest GRC a few months ago.																			
2019 .6125 .6125 .6125 .6125 2.45 2020 .6375 .6375 .6375 .6375 2.55 2021 .6625 .6625 .6625 .6625 2.65 2022 .70 .70 .70 .70 2.80 2023 .7375 .7375 .7375						Although Edison has worked to lower its wildfire risks, they're still problematic. Orange County recently filed a lawsuit alleging EIX's utility, SoCal Edison, acted negligently in maintaining and operating its equipment, causing two wildfires that burned thousands of acres. The blazes in question took place in October, 2020 and May, 2022. Dollar amounts sought weren't given. In recent years, EIX has paid out billions of dollars in lawsuit settlements associated with the role its power lines played in the disastrous late 2017 to 2018 forest fires in the Golden State. While we now exclude the charges from our earnings presentation (beginning from 2019), to better highlight the progress that EIX is making in its core operations, one can see the impact on the balance sheet via the rising debt as a percentage of total capital in the financial array. These shares are neutrally ranked for year-ahead relative performance. Despite the many good things taking place in EIX's service area, wildfire risks, though likely less catastrophic now than in the past, are still financially material.

BUSINESS: Eversource Energy (formerly Northeast Utilities) is the parent of 12 regulated utilities with 4.4 million electric, natural gas, and water customers. Supplies power to most of Connecticut and gas to part of CT; supplies power to 3/4 of New Hampshire's population; supplies power to western Massachusetts and parts of eastern MA & gas to central & eastern MA; supplies water to CT, MA, & NH. Acq'd NSTAR 4/12; Aquarion 12/17; Columbia Gas 10/20. Electric rev. breakdown: residential, 53%; commercial/indus'l/other, 47%. Fuel costs: 41% of revs. '22 reported depr. rate: 3.6%. Employs 9,626. Chrmn.: James J. Judge. Pres. & CEO: Joseph R. Nolan, Jr. Inc.: MA. Addr.: 300 Cadwell Drive, Springfield, MA 01104. Telephone: 413-785-5871. Internet: www.eversource.com.		Eversource Energy stock has been among the worst performers in the electric utilities space, largely due to its involvement in offshore wind generation. The shares are down about 36% in value this year, 20 percentage points worse than the peer-group median. The company concluded a strategic review and decided to invest its risky offshore wind assets, which on paper no longer look as profitable as they once did (due to rising financing and development costs). In September, Eversource sold its stake in undeveloped offshore leased areas to its joint-venture partner Orsted for \$625 million. The three projects under development will continue to receive funding as the company negotiates the details of a sale with multiple parties. A \$331 million nonrecurring impairment charge was booked in the second quarter to account for a likely loss on the exit of these assets. The company's total offshore wind investment after accounting for the impairment charge is approximately \$2.1 billion as of mid-year 2023. Investors are fearful of more bad news such as further impairment charges. Eversource looks poised for solid intermediate-term earnings gains. In Massachusetts, higher electric delivery charges went into effect at the start of this year, with \$64 million to be phased in through the end of this year, and additional increases based on inflation, maintenance, and transmission & distribution (T&D) project spending in place thereafter. Although the company's authorized return on equity (ROE) for its electric rate base was cut to 9.8% from 10% in Massachusetts, the nearly real-time formulaic pricing adjustments received ought to go a long way towards reducing regulatory lag and delivering a reliable stream of revenue growth. This equity is trading at an appealing valuation relative to peers. ES stock's underperformance versus the industry median translates to \$6 billion of market capitalization lost, whereas the entire offshore wind investment was \$2.4 billion at mid-year with \$625 million recouped from the leased area sale. Further impairment charges may be on the way, implying a poor sales price for remaining wind assets, but Eversource's plunge looks overdone. Anthony J. Glennon November 10, 2023

BUSINESS: Hawaiian Electric Industries, Inc. is the parent company of Hawaiian Electric Company, Inc. (HECO), American Savings Bank (ASB), and Pacific Current. HECO & its subs., Maui Electric Co. (MECO) & Hawaii Electric Light Co. (HELCO), supply electricity to 469,668 customers on Oahu, Maui, Molokai, Lanai, & Hawaii. Operating companies' systems are not interconnected. Elec. rev. breakdown: residential, 44%; commercial, 19%; industrial, 37%; other, less than 1%. Generating sources: oil, 52%; purchased, 48%. Fuel costs: 50%+ of revs. '22 reported deprec. rate: 3.3%. Has 3,756 employees. Chairman: Tom Fargo. Pres. & CEO: Scott Seu, Inc.: HI. Address: 1001 Bishop St., Suite 2900, Honolulu, HI 96808-0730. Telephone: 808-543-5662. Internet: www.hei.com.

Hawaiian Electric Industries' (HEI) share price has cratered due to its role in the Maui wildfires. On August 8th, winds associated with Hurricane Dora downed power lines that started an early morning fire near the town of Lahaina. According to HEI, fire officials who responded to the scene declared that particular fire "one hundred percent contained and extinguished," and then left. HEI has also stated that the fires that began hours later, resulting in at least 115 deaths and a few billion dollars of property damage, must be from a different source than its equipment because the utility deenergized its system after the initial downed wires. Meanwhile, Maui County filed a lawsuit against HEI, claiming the utility acted negligently by not preemptively cutting power despite a warning from the National Weather Service of high winds. The suit alleges HEI's failure to maintain its system led to energized, downed power lines causing the fires. HEI has also been hit with a class action suit on the behalf of shareholders, alleging that negligence led to the stock's woes. **HEI suspended its dividend to con-**

serve cash due to the financial constraints associated with its upcoming legal issues. The company has also drawn down most of its \$375 million revolving credit facility. S&P Global Ratings downgraded HEI and all of its rated subsidiaries to B- (junk status), citing the company's likely inconsistent access to capital in the aftermath of the Maui blaze. **Our projections are based on a likely drawn-out legal process that eventually leads to a settlement.** While it's possible HEI can have its day in court and emerge victorious, we doubt that outcome is realistic. Even if the company's version of events is true, downed poles later that day likely contributed to failed evacuation attempts. We've priced in settlement figures of about \$200 million annually starting sometime after 2024. It's an amount the company can stay viable at in terms of maintaining the power grid. This assumption leaves nothing worthwhile for shareholders here. **The Timeliness rank for this issue has been suspended, as the news cycle is the dominant factor driving the stock.**

IDACORP's string of annual earnings gains could be in jeopardy. Customer growth fueled impressive showings in the first half of this year, and favorable adjustments tied to grid modernization and expansion pitched in, as well. Leadership has repeated its earnings outlook of \$4.95 to \$5.15 per share, and stated that Idaho Power will use approximately \$15 million of additional tax credits available under its Idaho earnings support regulatory mechanism in 2023. As far as our estimate, we are holding tight at \$5.15 a share, which would represent earnings growth of about three-quarters of a percentage point. Of course, this would extend the annual growth streak to 16 years, but we do have some concerns. Most notably, a rising debt burden that has been facilitating both clean-energy maneuvers and huge infrastructure buildouts. The added interest expense could chip away at the small margin of growth we foresee right now. **Our \$5.40-a-share earnings estimate for 2024 factors in some higher rates.** The company's last filing of a general rate case was just over 12 years ago (in 2011). All the while, the population in its service

area has jumped considerably, and customer growth has been the byproduct of this wave. Idaho, in particular, is past due for an increase in electric delivery rates. Management is poised to follow suit in the state of Oregon, though little information on the timing front has been provided as this report heads to press. The \$5.40 figure represents 5% year-over-year growth, roughly in line with in-house expectations. **IDACORP's top-quality stock is not all that appealing at this juncture.** Despite a 10% drop in price over the last 90 days, IDA's stock is an untimely choice (4: Below Average). Also, capital appreciation potential three to five years hence is below the Value Line median. The lower price has pumped up the yield a bit, and a 5% increase to \$0.83 a quarter starting with the November payout was a welcome sign, but there are better options available within our utilities coverage. Make no mistake, the company's impressive finances and track record warrant the stock a premium valuation versus its peers. We simply think our subscribers should await a more favorable entry point. *Erik M. Manning* *October 20, 2023*

(FP&L), which provides electricity to roughly 5.8 million customers in eastern, southern, & northwestern Florida. NextEra Energy Resources is a nonregulated power generator with nuclear, gas, & renewables. Has 54% stake in NextEra Energy Partners. Acquired Gulf Power 1/19; Florida City Gas 7/18. Revenue: residential, about 55%; commercial/industrial/other, 45%. Generating sources: gas, 71%; nuclear, 21%; solar/other, 7%; purchased, 1%. Fuel costs: 30.5% of revenues. '22 depreciation rate: 3.4%. Employs 15,300. Chairman, President and CEO: John W. Ketchum, Inc.: Florida. Address: 700 Universe Blvd., Juno Beach, FL 33408. Tel.: 561-694-4000. Internet: www.nexteraenergy.com.	
MARKET CAP: \$116 billion (Large Cap)		NextEra Energy shares have been among the worst performers within the electric utility group. NEE stock is down about double the nearly 16% year-to-date median decline of its industry. In recent years, this company has been valued at a significant premium, in terms of a higher-than-average price-to-earnings (P/E) multiple and low dividend yield, to its peers. The top valuation within the group was justified given the double-digit rate of growth for earnings and dividends over the past five years. Lately, however, it has been the stocks of companies in the electric utility industry with the strongest ties to renewable energy, and growth that's fueled by consistently expanding the capital base via debt and equity injections, which have suffered the most. It didn't help that the NEE's 54%-owned subsidiary, NextEra Energy Partners, cut its distribution growth targets in half, citing higher interest rates and a lower equity valuation as a limiting factor to the renewables projects it can pursue. Logically, investors questioned what a higher cost of capital meant for the parent company. Management remains confident in		NextEra's ability to achieve the upper end of its targeted earnings growth range of 6%-8% to late decade. We still think that this is feasible given the company's solid balance sheet, interest rate hedges over the next few years, superior fundamentals at Florida Power & Light (FP&L), and NextEra's renewable-energy expertise. Florida's population gains, at triple the national average, low unemployment, and high labor participation rate lead to plenty of transmission & distribution work. This, along with reliability and hardiness projects in the hurricane-susceptible state, should keep load growth and regulatory capital (the rate base) rising at healthy levels. FP&L also has the okay from regulators to expand solar capacity within the rate base from 5% of power generation to 35% in years to come. We've reduced our 3- to 5-year Target Price Range by about \$25 at the midpoint. This isn't because we doubt the company's ability to grow at the pace it has targeted. In the face of higher interest rates, it's doubtful utilities will regularly trade much above a market P/E multiple. <i>Anthony J. Glennon November 10, 2023</i>

REGULATORS ARE DRAGGING THEIR FEET ON APPROVING NORTHWESTERN'S SETTLEMENT AGREEMENT FOR NEW ELECTRIC AND NATURAL GAS RATES. To recap: in early April, the utility worked out an acceptable consensus with the Montana Consumer Counsel, the Montana Large Customer Group, and Walmart, Inc. The settlement has been submitted to the Montana Public Service Commission (MPSC) for the regulatory body's consideration. The MPSC has already granted interim rate hikes, starting from last October, to allow the company to begin the recoupment of some elevated spending. The agreed to base rates would increase annual electric and natural gas revenues by \$67.4 million and \$14.1 million, respectively. Those levels are predicated on the same authorized returns on equity, namely 9.65% for electric and 9.55% for gas, that were last agreed upon in 2015 and 2017. If the MPSC signs off on the agreement, the utility will have gotten about two-thirds of what it originally filed for in its general rate case. Importantly, NorthWestern would also receive pricing mechanisms geared towards reducing regulatory lag.																					
RATE-BASE EXPANSION SHOULD DRIVE GROWTH. (The rate base is the dollar value of assets for which a utility is allowed to earn a regulated return on.) In June, NorthWestern completed an \$83 million, 58-megawatt gas-fired power plant in South Dakota, with the potential for added capacity later. A \$275 million, 175-mw gas generation facility in Montana was due to be operational later this year, but was delayed due to environmental permitting troubles. Now cleared, it is expected to come on line in 2024. The company may also add 220 mw of coal-fired generation, assuming it can get regulatory body approval, by doubling its stake in an existing plant at very favorable terms. NorthWestern stock, however, is an untimely selection for year-ahead relative price performance. Rapidly rising yields on Treasury securities has pressured this equity and the stock's of most of the company's peers. We've scaled back our 3- to 5-year Target Price Range for the shares of many utilities, including NWE, on the prospect that the rise in interest rates is more than just a cyclical increase. <i>Anthony J. Glennon</i> <i>October 20, 2023</i>

BUSINESS: OGE Energy Corp. is a holding company for Oklahoma Gas and Electric Company (OG&E), which supplies electricity to 879,000 customers in Oklahoma (84% of electric revenues) and western Arkansas (8%); wholesale is (8%). Owns 3% of Energy Transfer's limited partnership units. Electric revenue breakdown: residential, 44%; commercial, 25%; industrial, 11%; oilfield, 10%;																		
OGE Energy's utility subsidiary reached an uncontested settlement to replace two aging power generation units at the Horseshoe Lake Power Plant, and is awaiting the final order from the Oklahoma Corporation Commission. The Horseshoe Lake Project, which will replace the oldest units in the utility's generation fleet, is expected to cost approximately \$331 million and increase the average residential customer's bill by \$2.20 per month. The hike will likely go into effect in late 2026. The company also plans to file a rate review in Oklahoma by the end of the year, and expects a constructive regulatory outcome.																		
We have raised our 2023 earnings estimate by \$0.05 a share. The company is benefiting from its transformation to a fully focused electric utility, as well as rate relief. As a result of the strong performances of late, OGE raised and narrowed its full-year 2023 profit guidance range to \$2.02-\$2.07 a share from the previous range of \$1.93-\$2.07 per share. The company looks for earnings growth to continue through 2024 and beyond as tailwinds at the electric company should help it to sur-																		
pass long-term interest cost increases. We think OGE is well-positioned for the next few years due to rate relief, and the company's improved prospects as a pure play electric utility. The Inflation Reduction Act should also provide assistance to the bottom line through an otherwise challenging macroeconomic environment over that interim. Our 2024 earnings estimate is staying put at \$2.15 a share.																		
The board of directors has raised the dividend, effective with the October payment. The increase was modest, at \$0.0041 a share quarterly (1% higher). This issue offers a very attractive dividend, and the yield of 4.8% now sits comfortably above the utility average, which is one of the highest dividend-paying industries in the market.																		
This stock was recently upgraded one notch in our Timeliness Ranking System to 2 (Above Average). These shares should also appeal to income-oriented investors as the dividend remains this issue's most notable feature. Meanwhile, total return potential is unspectacular for the 18-month and 3- to 5-year time spans.																		
Zachary J. Hodgkinson December 8, 2023

Avg. Indust. Use (MWH)				BUSINESS: Otter Tail Corporation is the parent of Otter Tail Power Company, which supplies electricity to 133,000 customers in Minnesota (52% of retail electric revenues), North Dakota (38%), and South Dakota (10%). Electric rev. breakdown: residential, 32%; commercial & farms, 36%; industrial, 30%; other, 2%. Generating sources: coal, 38%; wind & other, 18%; purchased, 44%. Fuel costs: 10% of revenues. Also has operations in manufacturing and plastics (72% of '22 operating income). '22 deprec. rate: 3.0%. Has 2,500 employees. Chairman: Nathan I. Partain. President & CEO: Charles S. MacFarlane. Inc.: Minnesota. Address: 215 South Cascade St., P.O. Box 496, Fergus Falls, Minnesota 56538-0496. Tel.: 866-410-8780. Internet: www.ottertail.com.																
Capacity at Peak (Mw)				Otter Tail Corporation has raised its 2023 earnings guidance for the second-consecutive quarter. The company is benefiting from strong financial performances within the Manufacturing and Plastics segments, as well as from updated PVC pipe pricing expectations and a reduction in corporate costs. Accordingly, the utility raised its 2023 profit guidance upon reporting September-period results. Earnings of \$2.19 per share were far above our call of \$1.40. Management now looks for the bottom line to be in a range of \$6.76-\$6.96 per share, up from the previous guidance range of \$5.70-\$6.00 a share. The Plastics segment is largely responsible for management's updated outlook as the prices and margins of PVC pipe are receding at a slower rate than previously expected. Meanwhile, the company now looks for its Electric division to produce profit growth of 6% compared to the 2022 tally, and is increasing the Manufacturing segment earnings forecast due to higher sales volumes and margin improvement in the third quarter. We have raised our 2023 earnings estimate by \$0.70, to \$6.40 a share, and boosted our 2024 estimate by \$0.50, to \$4.00 per share. The utility's improved prospects, along with elevated PVC pipe pricing, which remains higher-than-anticipated, will likely boost the company's earning power over the next few years. Rate relief should also improve the bottom line in that interim.																
Peak Load, Winter (Mw)				Otter Tail Power filed a rate case in North Dakota. The utility requested a hike of approximately \$17 million (8.4%), based on a return on equity of 10.6% and a common-equity ratio of 53.5%. This was Otter Tail's first rate case in the state of North Dakota since 2016, and is driven by operating cost increases. An order is expected in late 2024, while interim rates are set to be implemented at the start of the new year.																
Annual Load Factor (%)				The stock's dividend yield is below average for a utility. Meanwhile, capital appreciation potential over the intermediate- and long-term time frames is unattractive. Indeed, the current quotation remains within and above our 18-month and 3- to 5-year Target Price Ranges, respectively. <i>Zachary J. Hodgkinson December 8, 2023</i>

Portland General Electric's annual share earnings should be up nicely in 2024 following this year's flat to down result. For full-year 2023, leadership is still targeting profits of \$2.60 to \$2.75 per share. Weather extremes helped lift 2022's electric usage up 3.4% in the utility's service area, making for a difficult comparison this year, and purchased power costs were unusually high in the second quarter. Moreover, major investments in generating capacity and battery storage are driving up financing costs. Capital expenditures will likely rise from \$766 million in 2022 to \$1.23 billion this year and \$1.1 billion in 2024. Rate relief should lift earnings next year. The utility filed for a 14% price increase with its Oregon regulators, in part to recoup higher purchased power costs. The request also addresses reliability and resiliency work, capital investments, and rising operating and financing costs. Our estimates assume a reasonably good outcome with higher electric rates in place on January 1st. Leadership called the progress made in negotiations "constructive and collaborative," thus far.

Oregon's aggressive "green" energy initiatives should drive bottom-line growth. PGE will add at least 375 to 500 megawatts of nonemitting annual power generation in the intermediate term, plus significant battery storage capacity. The company is partnering with NextEra Energy (NEE) to construct a 311-mw wind energy facility. PGE will own two-thirds of the venture and is to receive NEE's share of the power generation via a long-term purchase agreement. Project completion is targeted for December. Regulatory backing for the pursuit of more of these types of renewable generation projects should expand the rate base (the dollar value of assets a utility is allowed to earn an economic return on) for many years to come. This, plus load growth from a vibrant tech-based local economy, should enable PGE to achieve its long-term 5%-7% earnings and dividend growth targets. **These shares, however, are untimely.** Similar to other interest-rate sensitive issues, POR's stock price has been under pressure of late. Annual total return prospects are higher than the industry median. *Anthony J. Glennon October 20, 2023*

Pinnacle West should see a resumption of annual earnings growth in 2024. After a weak start to this year due to higher operating and maintenance expense and mild weather, a heat wave took hold in July and the company benefited from a court ruling that allowed for the inclusion within its rate base of money spent to clean up emissions at a coal plant. The judiciary appeal win resulted in a surcharge on customers bills beginning July 1st. Higher electric demand from the heat wave, plus the surcharge, prompted management to raise this year's earnings projection from \$3.95-\$4.15 per share to \$4.10-\$4.30. Relative to last year, this year's bottom line is suffering from higher retirement contributions, prompted by last year's decline in equity and bond markets, and higher interest expense. Full-year profits should be up next year given the likelihood of higher electric rates.

A pending general rate case could help restore some of the earnings power lost last year. Rate relief is due at the start of 2024, but how much? From early 2022, the company has been operating under revised regulatory parameters

that cut its allowed return on equity (ROE) from 10% to a nationwide low of 8.7%. The change effectively reduced the utility's annual earning power by about \$1.00 per share. Pinnacle is requesting its ROE be restored near the former level. The company is also seeking an expansion in the use of automatic pricing mechanisms to cut regulatory lag in the recoupment of investments it's planning to make in support of Arizona's clean-energy objectives. A decision from a revamped state regulatory authority commission, which has a few new members and a different chairperson because of term limits, is due by year's end. A March appeals court decision has restored some of the company's former ROE, now at 8.9%, as the bench ruled that the regulatory commission overstepped its bounds by penalizing the utility for "poor customer service."

These shares, however, are untimely. PNW is down 11% over the past three months, in concert with its industry peers and other interest rate sensitive stocks. The dividend yield, 45 basis points above the industry median, may be a draw.

The buyout of PNM Resources continues to drag on. AVANGRID and PNM remain committed to a deal and have extended their agreement through the end of this year with an option for a three-month extension. To recap, shareholders are to receive \$50.30 per share in an all-cash deal. The New Mexico Public Regulation Commission (NMPRC) voted against the merger in late 2021, citing concerns over AVANGRID's track record as a utility in the Northeast, a legal investigation of its parent company, Iberdrola of Spain, and potentially higher electric rates. Of these charges, we suspect it was the latter one that was the main stumbling block. In March, the companies and the agency that was the main obstacle to the deal agreed to negotiate a conclusion, but the courts are also involved. The NMPRC, with newly appointed members, has agreed to a "rehearing and reconsideration to be made in a timely fashion," indicating its willingness to renegotiate the terms of a merger deal. But a joint motion filed with the New Mexico Supreme Court to dismiss a judiciary appeal the companies had made early last

year and remand the case back to the NMPRC was denied in May. That decision was appealed and the justices heard oral arguments in mid-September on why they should move the decision back to the regulatory commission. The bench's decision on the latest appeal is expected by year's end. **This issue's Timeliness rank is suspended, given that the buyout continues to be the dominant factor.** PNM shares were pricing in high odds the deal would go through earlier this year when it seemed likely the revamped NMPRC would reconsider the case. The court proceedings and appeal process has muddied the waters, however. At the recent price, there is 16% upside (including dividends) to the \$50.30 buyout level and probably 10%-20% downside now that the peer group is trading at a much higher dividend yield than it had been earlier this year. These targets are on a 6-month basis. Existing shareholders should ride the process out. Odds slightly favor the merger gets done, but new commitments would be fairly speculative given roughly equal upside potential and downside risk. *Anthony J. Glennon October 20, 2023*

Business: PPL Corporation (formerly PP&L Resources, Inc.) is a holding company for PPL Electric Utilities, which distributes electricity to 1.4 mill. customers in eastern & central Pennsylvania. Acquired Kentucky Utilities and Louisville Gas and Electric (1.3 mill. customers) 11/10. Acq'd Narragansett Electric (770,000 customers, renamed Rhode Island Energy) 5/22. Spun off power-generating sub. in '15. Sold electric distribution sub. in U.K. in '21. Electric rev. breakdown: res'l, 46%; comm'l, 21%; ind'l, 10%; other, 23%. Fuel costs: 33% of revs. '22 reported deprec. rate: 3.2%. Has 6,527 employees. Chairman: William H. Spence. President & CEO: Vincent Sorgi. Inc.: PA. Address: Two North Ninth St., Allentown, PA 18101-1179. Tel.: 800-345-3085. Internet: www.pplweb.com.

We have lowered our 2023 share-earnings estimate for PPL Corp. by a nickel. At \$1.55, our new call represents an increase of roughly 10% over the adjusted \$1.41 that the Pennsylvania-based electric and gas utility tallied in 2022. Previously, we thought earnings would rise closer to 13% on the year.

Our less positive near-term stance partly reflects lower-assumed revenue within PPL's legacy footprint (excluding any contribution from Narragansett Electric, which was acquired in May, 2022). Notably, the total number of degree days—a key indicator of underlying heating and cooling demand—were down by more than 20% in Kentucky during the June quarter and off in excess of 35% in Pennsylvania over the same span. What's more, extended periods of rainy summer weather across the Northeast and South suggest that comparisons remained unfavorable in the third quarter. **PPL was recently ahead of schedule in its cost-cutting efforts.** Indeed, as of June 30th, the utility was reportedly further along in its plan to cut operating and maintenance (O&M) expense by between

\$50 million and \$60 million this year. The news is particularly encouraging, given a spike in storm events that probably limited the window for network upgrades. **Management recently affirmed its positive intermediate-term outlook.** If leadership has it right, both earnings and dividends will increase 6%–8% annually through at least 2026. An expanded rate base ought to help. So, too, should \$115 million to \$125 million in additional O&M spending cuts. **Kentucky regulators were slated to weigh in on PPL's CPCN (Certificate of Public Convenience and Necessity) filing shortly after we went to press.** As we understand it, a favorable ruling will clear the way for PPL's KU and LG&E subsidiaries to replace four coal-fired power plants with clean-burning natural gas units and solar arrays backed up by battery storage. **Shares of PPL are ranked 3 (Average) for relative year-ahead price performance.** At the recent quotation, we think that buy-and-hold investors seeking utility exposure will do pretty well here.

Avg. Indust. Use (MWH)				BUSINESS: Public Service Enterprise Group Inc. is a holding company for Public Service Electric and Gas Company (PSE&G), which serves 2.3 million electric and 1.9 million gas customers in NJ, and PSEG Power LLC, a nonregulated power generator with nuclear plants in the Northeast (sold its fossil-fuel generation, 2/22). In mid-2022, announced intent to divest offshore wind assets. Percentage of electric sales: Commercial (57%); Residential (34%); Industrial (9%). Fuel costs: 41% of revenues. '22 reported depreciation rates (utility): 1.9%-2.6%. Has 12,525 employees. Executive Chair: Dr. Ralph Izzo. Chair, Pres. & CEO: Ralph A. LaRossa. Inc.: New Jersey. Address: 80 Park Plaza, P.O. Box 1171, Newark, New Jersey 07101-1171. Tel.: 973-430-7000. Internet: www.pseg.com.															
Avg. Indust. Revs. per KWH(c)				Public Service Enterprise Group (PSEG) will likely see a small profit gain this year. Despite better-than-expected third-quarter earnings, leadership reaffirmed its bottom-line target for full-year 2023 of \$3.40-\$3.50 per share. The completion of certain maintenance work often shifts from quarter to quarter, so utilities, especially the larger ones, can manage earnings to a degree. In aggregate, PSEG's 2023 campaign is benefiting from growth in transmission and distribution margins resulting from ongoing investment in infrastructure replacement and clean energy programs. Still, milder-than-typical weather, rising interest expense and higher retirement contributions are weighing on the bottom line. Earnings are likely to exhibit a more-pronounced upwards trajectory in 2024. Utility revenue is rising due to regulatory pricing mechanisms that allow for near-contemporaneous returns on capital used for certain grid improvements. This year's mild weather sets up easier comparisons in 2024. Plus, interest expense and pension contributions may moderate. New Jersey's "green" energy initiatives ought to keep profits on the rise through late decade. Last year's Inflation Reduction Act, to a large degree a backdoor clean-energy bill, is also supportive, providing years of subsidies for nuclear power, deemed a "nonemitting" energy source. This played out well for PSEG's hand, with the company deciding to hold onto its five-unit nuclear generating fleet. Those assets provide a steady stream of cash flow that will help fund rising investments needed to meet New Jersey's aggressive carbon-free goals. PSEG's \$15 billion to \$18 billion five-year capital spending program should expand the company's rate base at a 6% to 7.5% clip per annum on average. Through regulatory pricing mechanisms, based on a 9.6% allowable return on equity, the aforementioned level of investment ought to translate to 5%-7% long-term profit growth. This top-quality equity, however, does not stand out at the recent quotation. Total return prospects to 2026-2028 are below the electric utility median of 11%. PSEG's 3.9% dividend yield is below the peer-group median of 4.3%. Anthony J. Glennon November 10, 2023

Sempra Energy's earnings should resume a growth trajectory in 2024 after this year's likely decline. Leadership affirmed its respective share-earnings targets of \$4.30-\$4.60 and \$4.55-\$4.90 for 2023 and 2024. Quarterly comparisons will be difficult through the end of this year, as 2022's heat wave in southern California drove electricity usage up 2.8%. Regulatory lag is a key issue for this year in particular. Significant investments in grid modernization and the related financing costs await recoupment. While Sempra received a favorable regulatory outcome, based on a 9.7% allowable return on equity, at its 80%-owned transmission and distribution subsidiary in Texas a few months ago, the company is overdue for rate relief in California. A regulatory decision is expected in the second quarter of next year for San Diego Gas & Electric and SoCalGas. Higher rates should be retroactive to the start of 2024. **Leadership's projected 6%-8% long-term earnings growth target is feasible.** Load growth in southern California has been running at about 3% annually, driven by economic activity and shifts to

vehicles and the like that are recharged from the grid. Meanwhile, Sempra's service area in Texas is among the fastest growing in terms of transmission and distribution work, due to the rapid pace of the state's population growth and healthy economic activity. Lastly, the economics of the liquefied natural gas (LNG) export operation looks attractive. Sempra Infrastructure (SI) has put together a project that will export 13 million tonnes per annum of LNG from Texas to Europe and Asia starting in 2027. We estimate a bump in Sempra's annual earnings power by \$0.25-\$0.50 per share, with an opportunity to replicate the gains through additional project phases. Notably, SI has comparable LNG expansions taking place at its Baja California site in Mexico. **This equity, however, is untimely.** The rise in the 10-year Treasury yield to levels not seen since 2007 has pressured the stock prices of rate-sensitive industries and prompted us to reduce our 2026-2028 Target Price Ranges for Sempra and most utility peers. The jump in rates looks as if it's more than just cyclical in nature. *Anthony J. Glennon October 20, 2023*

Southern Company's Georgia Power subsidiary continues to face challenges in its nuclear construction project. Indeed, Georgia Power agreed to pay \$413 million to resolve a legal dispute regarding a cost-sharing agreement with Oglethorpe Power over Plant Vogtle units 3 and 4. The utility expects to record a \$114 million after-tax charge in the third quarter due to the settlement. Meanwhile, Georgia Power recently found a motor fault in one of its reactor coolant pumps at the site of Vogtle unit 4. The company is currently in the process of replacing the pump, and now expects unit 4 to be in-service by the first quarter of 2024. Once again, additional project delays and cost increases are likely to occur, and construction timing will greatly impact our full-year estimates. We remain optimistic that the project, once completed, will benefit the company's transition towards cleaner energy, as well as improve its long-term dividend and earnings growth prospects.

2023	.68 .70 .70 .70	

We have lowered our 2023 EPS estimate by \$0.05. At \$3.60, our new call represents a slight decline from the \$3.61 a share that the utility earned last year due to worse-than-expected second quarter financials and construction delays. (Third-period results were expected to be released shortly after this Issue went to press.) While the Vogtle nuclear station continues to experience delays, we think Southern should benefit from rate relief, higher retail pricing, and increased usage of electricity throughout the next couple of years. As a result, our 2024 bottom-line estimate is staying put at \$4.00 per share, in-line with management's long-term annual earnings-per-share growth target of 5%-7%.

Shares of Southern Company have declined 10% in value since our August report, along with many of its peers. Utility stocks have been among the worst-performing sectors of late due to rising Treasury yields. Indeed, the S&P Utility Index (XLU) is down more than 15% over the past 12 months, marking the sector's largest annual loss on record. **Income-oriented accounts may be drawn to this untimely issue.** Indeed, the stock's dividend yield of 4.2% remains its most notable feature.

WEC Energy Group is about to finish another year of solid performance. The company has posted consistent earnings growth over the past few years, and this will likely happen again in 2023 and beyond. The utility continues to benefit from increases in electric and gas volume, as well as rate relief. Indeed, WEC has made substantial headway on the rate-case front of late, and rate base growth contributed \$0.13 a share to September-period profits. The Michigan Public Service Commission recently approved a 9.1% overall rate increase for 2024 for Michigan Gas Utilities. Too, the Minnesota Commission approved a settlement to grant Minnesota Energy Resources a 7.1% increase in base rates. The company is also making progress in its pending rate case in Illinois for Peoples Gas and North Shore Gas, and expected a favorable ruling by the end of November (as we went to press). **We are maintaining our 2024 earnings-per-share estimate of \$4.90.** This would represent 6.5% earnings growth, within WEC Energy's annual goal of 6%-7%. The same factors that should help boost profits this year should remain

present in 2024. The company will also likely benefit from the aforementioned recently approved and pending rate cases. **We expect a dividend increase in early 2024.** We estimate the board of directors will raise the quarterly disbursement by \$0.053 a share (7%). The company likely announced a dividend hike in December, shortly after this Issue went to press. This would mark 21 consecutive years of increases. WEC Energy is targeting a payout ratio of 65%-70% of earnings, and expects dividend growth will continue to be in line with share-earnings growth. **WEC Energy shares may appeal to conservative, income-oriented investors.** This untimely stock holds strong Price Stability and Earnings Predictability scores, as well as a top notch Safety rank. The dividend yield of 3.8% sits above the utility average, which is one of the highest yielding industries under our coverage. Too, total return potential for the next 18-months and 3- to 5-years is attractive compared to most of its peers. However, the stock is ranked to trail the broader market averages in the year ahead. *Zachary J. Hodgkinson December 8, 2023*

Int.: www.xcelenergy.com. </td> </tr> <tr> <td colspan="6">Peak Load, Summer (Mw)</td> <td colspan="13"> Xcel Energy should achieve this year's profit objectives. During the first half of 2023, the company's share earnings were \$0.02 below the prior year's \$1.30. Mild second-quarter weather in the northern region was a factor, as was higher operating and maintenance (O&M) expense and interest charges. There was also less incremental regulatory recovery to offset rising costs than previously expected, given a disappointing conclusion to the company's general rate case (GRC) in Minnesota (see below). Xcel has put a belt-tightening plan in place to reduce O&M costs by 3%, which should enable it to reach its 2023 profit target of \$3.30-\$3.40 a share. </td> </tr> <tr> <td colspan="6">Annual Load Factor (%)</td> <td colspan="13"> The company is appealing the low return on equity (ROE) handed down by Minnesota regulators. As part of Xcel's GRC, commissioners heard testimony from the Minnesota Department of Commerce, which found that Xcel had been "flourishing" at its prior 9.06% ROE, but an increase to 9.25% was merited. Commissioners voted to set the rate at 9.25%, despite the conclusion of a state administrative law judge (ALJ) that a 9.87% ROE would be "reasonable" for Xcel, given the sharp rise in the cost of capital lately. Xcel has requested reconsideration. The case would go to an appeals court if regulators dismiss the appeal. </td> </tr> <tr> <td colspan="6">% Change Customers (yr-end)</td> <td colspan="13"> Xcel has submitted a \$15-billion resource plan consistent with the "green" energy transition of Colorado. If approved, the investments the company will be making in renewables for that state will go a long ways towards supporting the company's long-term 5%-7% earnings growth goals. Clean energy plans in other state territories are also supportive. </td> </tr> <tr> <td colspan="6">Fixed Charge Cov. (%)</td> <td colspan="13"> The company provided an update on the Colorado wildfire lawsuits it's been hit with. (We covered this issue at great length in our July 21st review.) Notably, the investigation report, which concluded that sparks from an Xcel power line was the most likely source of ignition 80-110 feet away, also mentioned an underground coal fire could not be ruled out. </td> </tr> <tr> <td colspan="6">ANNUAL RATES Past 10 Yrs. Past 5 Yrs. Est'd '20-'22</td> <td colspan="13"> Xcel stock is untimely. Though tort law in Colorado is less onerous to defendants than California law, the aforementioned legal woes, plus headline risk, will likely drag on as an overhang to XEL shares. </td> </tr> <tr> <td colspan="6">Revenues</td> <td colspan="13"> <i>Anthony J. Customers: 3.8 mill. electric, 2.1 mill. gas. Electric revenues: resid'l, 29%; comm'l & ind'l, 48%; other, 23%. Purchases 33% of power, owns 67%. Total electric mix: wind, 33%; gas, 24%; coal, 23%, nuclear, 13%, solar/other, 7%. Fuel costs: 45% of revenues. '22 deprec. rate: 3.7%. Employs 11,982. President, CEO and Chrmn.: Robert Frenzel. Inc.: MN. Addr.: 414 Nicollet Mall, Minneapolis, MN 55401. Tel.: 612-330-5500. Int.: www.xcelenergy.com.													Peak Load, Summer (Mw)						Xcel Energy should achieve this year's profit objectives. During the first half of 2023, the company's share earnings were \$0.02 below the prior year's \$1.30. Mild second-quarter weather in the northern region was a factor, as was higher operating and maintenance (O&M) expense and interest charges. There was also less incremental regulatory recovery to offset rising costs than previously expected, given a disappointing conclusion to the company's general rate case (GRC) in Minnesota (see below). Xcel has put a belt-tightening plan in place to reduce O&M costs by 3%, which should enable it to reach its 2023 profit target of \$3.30-\$3.40 a share.													Annual Load Factor (%)						The company is appealing the low return on equity (ROE) handed down by Minnesota regulators. As part of Xcel's GRC, commissioners heard testimony from the Minnesota Department of Commerce, which found that Xcel had been "flourishing" at its prior 9.06% ROE, but an increase to 9.25% was merited. Commissioners voted to set the rate at 9.25%, despite the conclusion of a state administrative law judge (ALJ) that a 9.87% ROE would be "reasonable" for Xcel, given the sharp rise in the cost of capital lately. Xcel has requested reconsideration. The case would go to an appeals court if regulators dismiss the appeal.													% Change Customers (yr-end)						Xcel has submitted a \$15-billion resource plan consistent with the "green" energy transition of Colorado. If approved, the investments the company will be making in renewables for that state will go a long ways towards supporting the company's long-term 5%-7% earnings growth goals. Clean energy plans in other state territories are also supportive.													Fixed Charge Cov. (%)						The company provided an update on the Colorado wildfire lawsuits it's been hit with. (We covered this issue at great length in our July 21st review.) Notably, the investigation report, which concluded that sparks from an Xcel power line was the most likely source of ignition 80-110 feet away, also mentioned an underground coal fire could not be ruled out.													ANNUAL RATES Past 10 Yrs. Past 5 Yrs. Est'd '20-'22						Xcel stock is untimely. Though tort law in Colorado is less onerous to defendants than California law, the aforementioned legal woes, plus headline risk, will likely drag on as an overhang to XEL shares. Capacity at Peak (Mw)						BUSINESS: Xcel Energy Inc. is the parent of Northern States Power Company (NSP), which supplies electricity to MN, WI, ND, SD & MI & gas to MN, WI, ND & MI; Public Service Company of Colorado (PSCO), which supplies electricity & gas to CO; & Southwestern Public Service Company (SPS), which supplies electricity to TX and NM. Customers: 3.8 mill. electric, 2.1 mill. gas. Electric revenues: resid'l, 29%; comm'l & ind'l, 48%; other, 23%. Purchases 33% of power, owns 67%. Total electric mix: wind, 33%; gas, 24%; coal, 23%, nuclear, 13%, solar/other, 7%. Fuel costs: 45% of revenues. '22 deprec. rate: 3.7%. Employs 11,982. President, CEO and Chrmn.: Robert Frenzel. Inc.: MN. Addr.: 414 Nicollet Mall, Minneapolis, MN 55401. Tel.: 612-330-5500. Int.: www.xcelenergy.com.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																						
Peak Load, Summer (Mw)						Xcel Energy should achieve this year's profit objectives. During the first half of 2023, the company's share earnings were \$0.02 below the prior year's \$1.30. Mild second-quarter weather in the northern region was a factor, as was higher operating and maintenance (O&M) expense and interest charges. There was also less incremental regulatory recovery to offset rising costs than previously expected, given a disappointing conclusion to the company's general rate case (GRC) in Minnesota (see below). Xcel has put a belt-tightening plan in place to reduce O&M costs by 3%, which should enable it to reach its 2023 profit target of \$3.30-\$3.40 a share.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																						
Annual Load Factor (%)						The company is appealing the low return on equity (ROE) handed down by Minnesota regulators. As part of Xcel's GRC, commissioners heard testimony from the Minnesota Department of Commerce, which found that Xcel had been "flourishing" at its prior 9.06% ROE, but an increase to 9.25% was merited. Commissioners voted to set the rate at 9.25%, despite the conclusion of a state administrative law judge (ALJ) that a 9.87% ROE would be "reasonable" for Xcel, given the sharp rise in the cost of capital lately. Xcel has requested reconsideration. The case would go to an appeals court if regulators dismiss the appeal.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																						
% Change Customers (yr-end)						Xcel has submitted a \$15-billion resource plan consistent with the "green" energy transition of Colorado. If approved, the investments the company will be making in renewables for that state will go a long ways towards supporting the company's long-term 5%-7% earnings growth goals. Clean energy plans in other state territories are also supportive.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																						
Fixed Charge Cov. (%)						The company provided an update on the Colorado wildfire lawsuits it's been hit with. (We covered this issue at great length in our July 21st review.) Notably, the investigation report, which concluded that sparks from an Xcel power line was the most likely source of ignition 80-110 feet away, also mentioned an underground coal fire could not be ruled out.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																						
ANNUAL RATES Past 10 Yrs. Past 5 Yrs. Est'd '20-'22						Xcel stock is untimely. Though tort law in Colorado is less onerous to defendants than California law, the aforementioned legal woes, plus headline risk, will likely drag on as an overhang to XEL shares.

Executive Summary

Introduction

Energy authorized returns on equity rose in 2023 as the pace of rate case activity reached record-high levels.

As per calculations from Regulatory Research Associates, the average authorized return on equity (ROE) for electric utilities in cases decided during 2023 was 9.60%, compared to the 9.54% average for cases decided in 2022. There were 63 electric ROE determinations reflected in the calculations for 2023 versus 53 in 2022.

Despite the rise in 2023, the average authorized ROE for electric utilities in 2023 remains near historic lows and was the sixth-lowest annual average over the more than 40 years RRA has tracked rate case activity.

The average ROE authorized for gas utilities was 9.64% for cases decided during 2023 versus the 9.53% average observed in 2022. RRA's calculations relied on 43 gas rate case decisions that included an ROE determination during 2023 versus 33 in 2022. For gas utilities, the average authorized ROE in 2023 was the seventh-lowest annual average on record.

Rate case activity reached record-high levels in 2023, with nearly 165 decisions issued by state public utility commissions, including 106 electric or gas equity return determinations.

While the reasons for a rate case filing are numerous, the main driver continues to be the recovery of capital expenditures. Energy utilities are investing in infrastructure to modernize transmission and distribution systems, build new natural gas, solar and wind generation, and deploy new technologies to accommodate the expansion of electric vehicles, battery storage and advanced metering infrastructure that facilitate the transition toward decarbonization. Other reasons for rate filings include rising expenses, revised cost-of-capital parameters, the impact of broader economic and sector-wide forces on operations, the need to address rate treatment to be accorded generation facilities being retired prior to the end of their planned service lives due to the energy transition, recovery of storm and severe-weather related costs, and regulatory approval for alternative regulatory mechanisms.

About this report

This quarterly report offers a detailed overview of electric and gas rate case decisions issued in the US during 2023 and select aggregated historical data. The information presented in this report utilizes the data compiled by Regulatory Research Associates for its rate case database, which is available on the S&P Capital IQ Pro platform. RRA endeavors to follow all "major" rate cases for investor-owned utilities nationwide, with "major" defined as a case in which the utility's request would result in a rate change of at least \$5 million or in which the commission approves a rate change of at least \$3 million. In addition to base rate cases, the rate case history database includes details regarding certain limited-issue rider proceedings, primarily those involving significant rate base additions recognized outside of a general rate case. In some of these cases, the rate change coverage criteria may not apply. Historical data in this report may not match earlier data provided in previous reports due to differences in presentation, including the treatment of withdrawn or dismissed cases and the addition of cases not previously included in RRA's coverage.

Average authorized ROE (%)

The Take

The average authorized returns in 2023 edged modestly higher than the annual levels observed in 2022 as higher interest rates began to impact authorized ROEs. The effect of interest rate increases on authorized returns will likely be limited, however, given that regulators are slower to adjust ROEs upward than downward, and affordability concerns persist as regulators contend with customer rate increases stemming from significant but necessary capital investment in the energy transition during a period of high inflation.

In recent years, rate case activity for investor-owned electric and gas utilities in the US has been elevated, with state public utility commissions issuing almost 165 decisions in 2023. With higher interest rates, higher inflation and accelerating capital spending to address public policy goals, particularly the energy transition, RRA anticipates rate case filings will remain robust.

Overview of electric and gas authorizations

The average electric and gas authorized returns on equity inched gently higher per averages calculated for 2023.

The average ROE authorized for electric utilities rose to 9.60% for rate cases decided in 2023 from the 9.54% average observed in 2022. There were 63 electric ROE determinations reflected in the calculations for 2023 versus 53 in full year 2022.

The average ROE authorized for gas utilities was 9.64% for cases decided in 2023, above the 9.53% average observed in 2022. There were 43 gas rate case decisions decided in 2023 versus 33 in full year 2022.

The electric data set includes several limited-issue rider cases. Historically, the ROEs authorized in limited-issue rider cases were meaningfully higher than those approved in general rate cases, driven primarily by incentives allowed in Virginia for certain types of generation investment. These premiums have largely expired. Excluding rider cases, the average authorized ROE for electric cases was 9.66% in 2023 versus 9.58% in full year 2022.

Excluding the six rider cases, the average authorized ROE for gas cases was 9.60% in 2023. There were no rider cases with a gas-authorized ROE in 2022. For the most part, limited-issue riders have a limited impact on average ROEs in the gas sector, as most of the gas riders rely on ROEs approved in a previous base rate case.

In 2023, the median ROE authorized in all electric utility rate cases was 9.50%, equal to that observed in 2022; for gas utilities, the metric was 9.64% in 2023 and 9.53% in full year 2022.

Historically, authorized returns have generally tracked the overall direction of interest rates, albeit with two important caveats to keep in mind — the magnitude of the change in authorized ROEs may not be as dramatic as that observed in interest rates, and changes in authorized ROEs may lag changes in interest rates, especially in the upward direction.

Interest rates — as measured by the 30-year US Treasury bond yield — fell almost steadily between 1990 and 2020, placing downward pressure on authorized ROEs. Between 1990 and 2020, Treasury yields fell more than 700 basis points, to 1.56% from 8.61%, while average authorized ROEs for electric and gas utilities combined fell less than 325 basis points, to 9.45% from 12.69%. The average authorized ROEs did not fall below 10% until 2011 for gas utilities and until 2014 for electric utilities. The calendar-year averages fell below 9.50% for the first time in 2020.

Average electric, gas authorized ROEs; number of rate cases decided

Data compiled Jan. 26, 2024.
 ROE = return on equity.

 © 2024 S&P Global.

The decline in authorized ROEs has coincided with an upswing in rate case activity, with 100 or more cases adjudicated in 12 of the last 15 calendar years. This count includes electric and gas cases where no ROEs were specified, but it does not include withdrawn cases. At almost 165 cases decided, rate case activity in 2023 was the most robust observed in any year during the 1990–2023 period, with authorized increases totaling about \$12 billion.

With interest rates and authorized ROEs declining at different rates between 1990 and 2020, the spread between authorized ROEs and the average yield on 30-year US Treasuries somewhat widened over this period — from a little over 400 basis points in 1990 to peaking at just under 800 basis points in 2020.

This occurrence is attributable primarily to the regulators’ often-unstated understanding that the drop in interest rates caused by the Fed intervention was unusual. Consequently, regulators did not necessarily fully reflect the interest rate drop in newly authorized ROEs in some instances; in others, regulators acknowledged that the changing dynamics of the industry and instability in the overall economy presented increased risks for investors, justifying a higher premium over interest rates.

However, with the uptick in interest rates since 2020, the spread has begun to narrow, falling to around 550 basis points in 2023.

With the myriad factors putting upward pressure on customer bills, the spread may continue to narrow as regulators may become more reluctant to raise authorized returns.

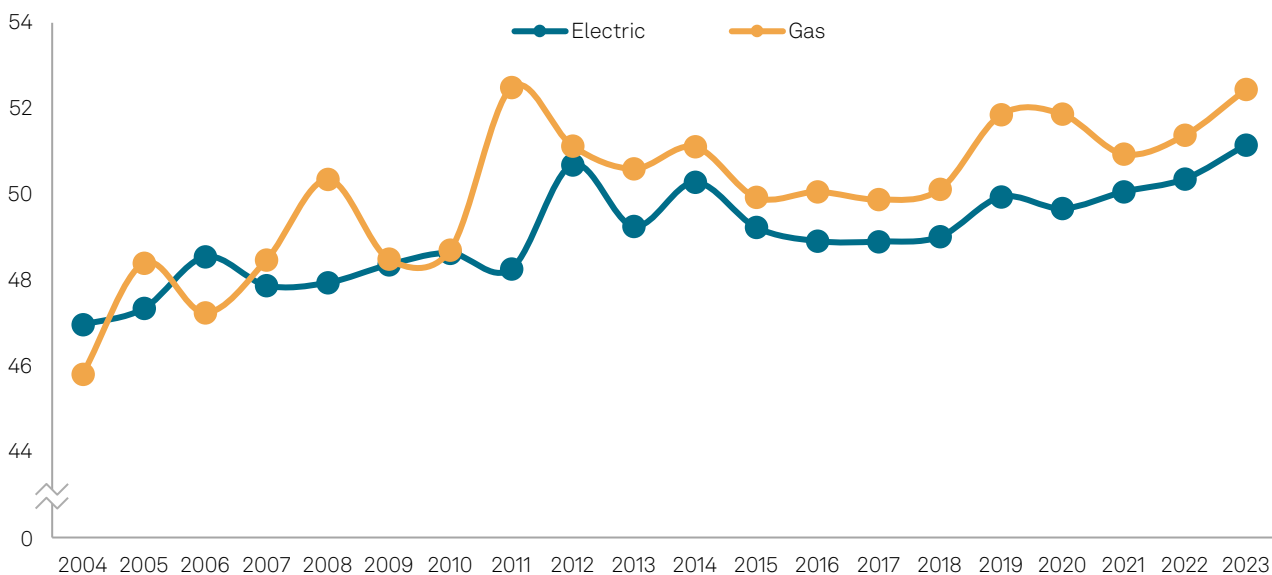

Capital structure trends

The negative cash flow impact of federal tax changes that took effect in 2018 raised concerns regarding utility liquidity and credit metrics. In response, many utilities sought higher common equity ratios, and the average authorized equity ratios adopted by utility commissions in 2019 were modestly higher than those observed in 2018 and 2017.

For full years 2023, 2022, 2021, 2020, and 2019, the average equity ratios authorized in electric utility cases were 51.15%, 50.36%, 50.06%, 49.67% and 49.94%, respectively. The average equity ratios authorized gas utilities for these years were 52.45%, 51.38%, 50.94%, 51.87% and 51.86%, respectively.

From a longer-term perspective, equity ratios have generally increased over the last several years — the average equity ratio approved in electric rate cases decided during 2004 was 46.96%, while the average for gas utilities was 45.81%. Many commissions began approving more equity-rich capital structures in the wake of the 2008 financial crisis. For the bulk of the period since 2004, allowed equity ratios for gas utilities have been above those authorized for electric utilities.

A more granular look at ROE trends

Thus far, the discussion has looked broadly at trends in authorized ROEs; the following sections provide a more granular view.

RRA has observed that there can be significant differences between average ROEs based on the types of proceedings/decisions in which these ROEs were established.

As a result of the electric industry restructuring, certain states unbundled electric rates and implemented retail competition for generation. Commissions in those states now have jurisdiction only over the revenue requirement and return parameters for distribution operations.

RRA finds that the annual average authorized ROEs in **vertically integrated** cases involving generation have been about 30–65 basis points higher than in distribution-only cases, arguably reflecting the increased risk associated with the **ownership and operation of generation assets.**

The industry **average ROE** for vertically integrated electric utilities was **9.80%** in **2023** versus the **9.75%** average in 2022. For **electric distribution-only cases**, the industry **average ROE** was **9.24%** in **2023** versus the 9.11% average in 2022.

Settlements have frequently been used to resolve rate cases over the last several years, and in many cases, these settlements are “black box” in nature and do not specify the ROE and other typical rate case parameters underlying the stipulated rate change. Some states, however, preclude this type of treatment, and settlements must specify these values, if not the specific adjustments from which these values were derived.

For both electric and gas cases, RRA has found no discernible pattern in the average authorized ROEs in cases that were settled versus those that were fully litigated. In some years, the average authorized ROE was higher for fully litigated cases, while in others, it was higher for settled cases.

The following discussion focuses on the corresponding tables available [here](#).

Table 1 shows the average ROE authorized in major electric and gas rate decisions annually since 1990 and quarterly since 2019, followed by the number of observations in each period. **Table 2** indicates the composite electric and gas industry data for all major cases, summarized annually since 2004 and quarterly since 2021.

Tables 3 and 4 provide comparisons since 2009 of average authorized ROEs for settled versus fully litigated cases, general rate cases versus limited-issue rider proceedings and vertically integrated cases versus delivery-only cases for electric and gas utilities, respectively.

The individual electric and gas cases decided in 2023 are listed in **Table 5**, with the decision date shown first, followed by the company name, the abbreviation for the state issuing the decision, the authorized rate of return, the ROE and the percentage of common equity in the adopted capital structure. Next, RRA indicates the month and year in which the adopted test year ended, whether the commission utilized an average or a year-end rate base and the amount of the permanent rate change authorized. The dollar amounts represent the permanent rate change ordered at the time the decisions were rendered. This study does not reflect fuel adjustment clause rate changes.

The simple mean is utilized for the return averages. In addition, the average equity returns indicated in this report reflect the ROEs approved in cases decided during the specified time periods and are not necessarily representative of the average currently authorized ROEs for utilities industrywide or the returns earned by the utilities.

Table 6 and the graph below track the combined average and median equity return authorized for all electric and gas rate cases since 1990. As the table indicates, since 1990, authorized ROEs have generally trended downward, reflecting the significant decline in interest rates and capital costs over this time frame.

Executive Summary

Introduction

The average authorized return on equity for electric utilities approved in cases decided during 2022 rebounded from 2021, which was the lowest annual average in RRA's rate case database comprising all major rate cases decided since 1980. Despite the rise, however, the average authorized ROE for electric utilities in 2022 remained near historic lows and was the third-lowest annual average on record.

For gas utilities, the average authorized ROE in 2022 fell to the second-lowest annual average on record.

The average ROE authorized for electric utilities was 9.54% for rate cases decided in 2022 as compared to the 9.38% average for cases decided in 2021. There were 53 electric ROE determinations reflected in the calculations for 2022 versus 55 in 2021.

The average ROE authorized for gas utilities was 9.53% for cases decided during 2022 versus the 9.56% average observed in 2021. RRA's calculations relied on 33 gas rate case decisions that included an ROE determination during 2022 versus 43 in 2021.

Rate case activity remained elevated with about 136 decisions issued by state public utility commissions in 2022. This level of activity, however, is down from 2021 — a record year with 151 decisions rendered in electric and gas rate cases across the U.S.

While the reasons for a rate case filing are numerous, the main driver continues to be recovery of capital expenditures. Energy utilities are investing in infrastructure to modernize transmission and distribution systems; build new natural gas, solar and wind generation; and deploy new technologies to accommodate the expansion of electric vehicles, battery storage and advanced metering infrastructure that facilitate the transition toward decarbonization.

Other reasons for rate filings include rising expenses, revised cost of capital parameters, the impact of broader economic and sector-wide forces on operations, the need to address rate treatment to be accorded generation facilities that are being retired prior to the end of their planned service lives due to the energy transition, recovery of storm and severe-weather related costs and regulatory approval for alternative regulatory mechanisms.

Average authorized ROE (%)

	2021	2022

About this report

This quarterly report offers a detailed overview of electric and gas rate case decisions issued in the U.S. during 2022 and select aggregated historical data. The information presented in this report utilizes the data compiled by Regulatory Research Associates for its rate case database, available on the S&P Capital IQ Pro platform. RRA endeavors to follow all “major” rate cases for investor-owned utilities nationwide, with “major” defined as a case in which the utility’s request would result in a rate change of at least \$5 million or in which the commission approves a rate change of at least \$3 million. In addition to base rate cases, the rate case history database includes details regarding certain limited-issue rider proceedings, primarily those that involve significant rate base additions that are recognized outside of a general rate case. In some of these cases, the rate change coverage criteria may not apply. In an effort to align data presented in this report with data available in S&P Capital IQ Pro’s online database, earlier historical data provided in previous reports may not match historical data in this report due to certain differences in presentation, including the treatment of cases that were withdrawn or dismissed, as well as the addition of cases that were not included previously as part of RRA’s coverage.

The Take

Averages calculated for 2022 show electric and gas authorized returns on equity remain near historic lows. Rate case activity for investor-owned electric and gas utilities in the U.S. remained elevated with about 136 decisions issued by state public utility commissions in 2022. This level of activity, however, is down from 2021, which was a record year with 151 decisions rendered in electric and gas rate cases across the U.S. With interest rates on the rise, RRA anticipates rate case filings will remain robust.

Authorized returns may edge slightly higher in 2023, as elevated levels of inflation have prompted the U.S. Federal Reserve to aggressively raise interest rates. The effect of interest rate increases on authorized returns is unlikely to be dramatic, however, as authorized returns tend to be stickier on the upside than on the downside.

In addition, affordability remains a concern, as regulators grapple with rate increases stemming from the recovery of pandemic-related costs and energy transition related expenses in the recent inflationary environment.

Overview of electric and gas authorizations

Despite an increase in the average authorized ROE for electric utilities, authorized returns remain near all-time lows.

The average ROE authorized for electric utilities rose to 9.54% for rate cases decided in 2022 from the 9.38% average for cases decided in 2021. There were 53 electric ROE determinations reflected in the calculations for 2022 versus 55 in 2021.

The average ROE authorized for gas utilities was 9.53% for cases decided in 2022, slightly lower than the 9.56% average observed in 2021. There were 33 gas rate case decisions that included an ROE determination during 2022 versus 43 in 2021.

The electric data set includes several limited-issue rider cases. Historically, the ROEs authorized in limited-issue rider cases were meaningfully higher than those approved in general rate cases, driven primarily by incentives allowed in Virginia for certain types of generation investment. These premiums have largely expired, however, resulting in narrowing the gap between the average ROE in the rider cases and general rate cases. Excluding rider cases, the average authorized ROE for electric cases was 9.52% in 2022 versus 9.39% in 2021. By contrast, limited issue riders have not had much impact on average ROEs in the gas sector, as most of the gas riders rely on ROEs approved in a previous base rate case.

In 2022, the median ROE authorized in all electric utility rate cases was 9.50% versus 9.38% in 2021; for gas utilities, the metric was 9.60% in both 2022 and 2021.

The ROE averages are near the lowest levels ever witnessed in the industry. The electric ROE average in 2022 and 2021 were weighed down by ROE determinations in Illinois and Vermont that were calculated utilizing a formulaic approach tied to U.S. Treasury bond yields. Excluding these ROE determinations, the average return authorized for electric utilities was 9.63% in 2022 and 9.48% in 2021.

Average electric, gas authorized ROEs; number of rate cases decided

Looking longer-term, interest rates — as measured by the 30-year U.S. Treasury bond yield — fell almost steadily between 1990 and 2020, placing downward pressure on authorized ROEs, however, the decline in authorized ROEs was much less dramatic than that for Treasury yields. Between 1990 and 2020, Treasury yields fell more than 700 basis points, to 1.56% from 8.61%, while average authorized ROEs for electric and gas utilities combined fell less than 325 basis points, to 9.45% from 12.69%. The average authorized ROEs did not fall below 10% until 2011 for gas utilities and until 2014 for electric utilities. The calendar-year averages fell below 9.50% for the first time in 2020.

The decline in authorized ROEs has coincided with an upswing in rate case activity, with 100 or more cases adjudicated in 10 of the last 12 calendar years. This count includes electric and gas cases where no ROEs were specified but does not include withdrawn cases. At over 150 cases, rate case activity in 2021 was the most robust observed in any year during the 1990-2022 period. In 2022, 136 cases were decided.

Absent the pandemic, increased costs associated with environmental compliance, generation and delivery infrastructure upgrades and expansion, renewable generation mandates, storm and disaster recovery, cybersecurity, early plant retirement and employee benefits have contributed to an active rate case agenda over the last decade.

Due to the COVID-19 pandemic and the challenging economic landscape, many utilities and state commissions sought to limit the immediate impact of rate hikes during 2020 by pushing rate changes into a future period or agreeing to forgo rate hikes and using accounting mechanisms, such as the accelerated recovery of excess accumulated deferred tax liabilities, to mitigate requested increases.

Amid the current high inflationary environment and ongoing economic uncertainties, however, the pace of rate case activity in the U.S. is robust, with about 90 electric and gas rate cases currently pending.

With interest rates and authorized ROEs declining at different rates between 1990 and 2020, the gap between authorized ROEs and interest rates somewhat widened over this period — from a little over 400 basis points in 1990 to a little under 800 basis points in 2020.

This phenomenon is largely attributable to the regulators' often-unstated understanding that the drop in interest rates caused by the Fed intervention was unusual. Consequently, regulators did not necessarily fully reflect the interest rate drop in newly authorized ROEs in some instances; in others, regulators acknowledged that the changing dynamics of the industry and instability in the overall economy presented increased risks for investors, justifying a higher premium over interest rates.

With authorized ROEs flatlining in the past couple of years, the margin between Treasury yields has narrowed to below 650 basis points. Nevertheless, allowed returns may begin to edge slightly higher going forward, as the Fed continues to raise interest rates as part of an aggressive effort to combat multi-decade high inflation rates. The effect of interest rate increases on authorized returns is unlikely to be dramatic, however, as authorized returns tend to be stickier on the upside than on the downside.

In addition, affordability concerns are likely to continue, as regulators grapple with rate increases stemming from the recovery of pandemic-related costs and stranded costs related to the energy transition. These considerations will be further complicated by the overall state of the economy, higher natural gas prices and the significant level of planned capital spending expected in the industry, particularly to fund the energy transition.

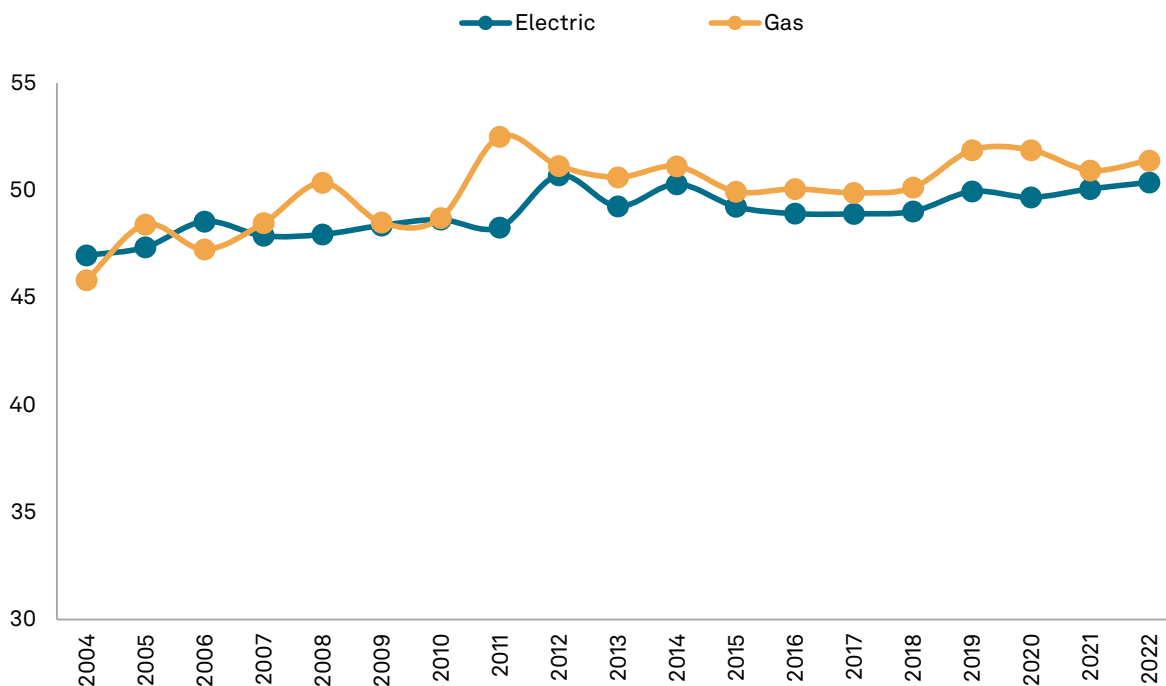

Capital structure trends

The negative cash flow impact of federal tax changes that took effect in 2018 raised concerns regarding utility liquidity and credit metrics. In response, many utilities sought higher common equity ratios, and the average authorized equity ratios adopted by utility commissions in 2019 were modestly higher than the levels observed in 2018 and 2017.

For 2022, 2021, 2020, 2019, 2018 and 2017, the average equity ratios authorized in electric utility cases were 50.36%, 50.06%, 49.67%, 49.94%, 49.02% and 48.90%, respectively. The average equity ratios authorized gas utilities were 51.38%, 50.92%, 51.87%, 51.86%, 50.12% and 49.88%, respectively.

Taking a longer-term view, equity ratios have generally increased over the last several years — the average equity ratio approved in electric rate cases decided during 2004 was 46.96%, while the average for gas utilities was 45.81%. Many commissions began approving more equity-rich capital structures in the wake of the 2008 financial crisis. For the bulk of the period since 2004, allowed equity ratios for gas utilities have been above those authorized for electric utilities.

A more granular look at ROE trends

The discussion thus far has looked broadly at trends in authorized ROEs; the sections that follow provide a more granular view.

RRA has observed that there can be significant differences between average ROEs based upon the types of proceedings/decisions in which these ROEs were established.

As a result of electric industry restructuring, certain states unbundled electric rates and implemented retail competition for generation. Commissions in those states now have jurisdiction only over the revenue requirement and return parameters for distribution operations.

RRA finds that the annual average authorized ROEs in vertically integrated cases involving generation have been about 30 to 65 basis points higher than in distribution-only cases, arguably reflecting the increased risk associated with ownership and operation of generation assets.

The industry average ROE for vertically integrated electric utilities was 9.69% in cases decided in 2022 versus the 9.53% average in 2021. For electric distribution-only cases, the industry average ROE was 9.11% in 2022 versus 9.04% in 2021.

Average authorized electric ROEs (%)

Settlements have frequently been used to resolve rate cases over the last several years, and in many cases, these settlements are “black box” in nature and do not specify the ROE and other typical rate case parameters underlying the stipulated rate change. Some states, however, preclude this type of treatment, and settlements must specify these values if not the specific adjustments from which these values were derived.

For both electric and gas cases, RRA has found no discernible pattern in the average authorized ROEs in cases that were settled versus those that were fully litigated. In some years, the average authorized ROE was higher for fully litigated cases, while in others, it was higher for settled cases.

Average authorized electric ROEs: settled vs. fully litigated cases

The following discussion focuses on the corresponding tables available [here](#).

Table 1 shows the average ROE authorized in major electric and gas rate decisions annually since 1990 and by quarter since 2017, followed by the number of observations in each period. **Table 2** indicates the composite electric and gas industry data for all major cases, summarized annually since 2004 and by quarter since 2020.

Tables 3 and 4 provide comparisons since 2007 of average authorized ROEs for settled versus fully litigated cases, general rate cases versus limited-issue rider proceedings and vertically integrated cases versus delivery-only cases for electric and gas utilities, respectively.

The individual electric and gas cases decided in 2022 are listed in **Table 5**, with the decision date shown first, followed by the company name, the abbreviation for the state issuing the decision, the authorized rate of return, the ROE and the percentage of common equity in the adopted capital structure. Next, RRA indicates the month and year in which the adopted test year ended, whether the commission utilized an average or a year-end rate base and the amount of the permanent rate change authorized. The dollar amounts represent the permanent rate change ordered at the time the decisions were rendered. Fuel adjustment clause rate changes are not reflected in this study.

The simple mean is utilized for the return averages. In addition, the average equity returns indicated in this report reflect the ROEs approved in cases decided during the specified time periods and are not necessarily representative of either the average currently authorized ROEs for utilities industrywide or the returns actually earned by the utilities.

Table 6 and the graph below track the combined average and median equity return authorized for all electric and gas rate cases since 1990. As the table indicates, since 1990, authorized ROEs have generally trended downward, reflecting the significant decline in interest rates and capital costs that has occurred over this time frame.

Composite electric, gas average authorized ROEs; total number of rate cases

Data compiled Jan. 27, 2023.

Investor Presentation

PORTLAND GENERAL ELECTRIC

June 17, 2024

Cautionary statement

Information Current as of April 26, 2024

Except as expressly noted, the information in this presentation is current as of April 26, 2024 - the date on which PGE filed its Quarterly Report on Form 10-Q for the quarter ended March 31, 2024 - and should not be relied upon as being current as of any subsequent date. PGE undertakes no duty to update this presentation, except as may be required by law.

Forward-Looking Statements

This presentation contains forward-looking statements withing the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements are based on assumptions about the future, involve risks and uncertainties, and are not guarantees. Future results may differ materially from those expressed or implied in any forward-looking statement. These forward-looking statements represent our estimates and assumptions only as of the date set above. The company assumes no obligation to update or revise any forward-looking statement as a result of new information, future events or otherwise.

Forward-looking statements include statements regarding the Company's full-year earnings guidance (including assumptions and expectations regarding annual retail deliveries, average hydro conditions, wind generation, normal thermal plant operations, operating and maintenance expense and depreciation and amortization expense) as well as other statements containing words such as "anticipates," "assumptions," "based on," "believes," "conditioned upon," "considers," "could," "estimates," "expects," "forecast," "goals," "intends," "needs," "plans," "predicts," "projects," "promises," "seeks," "should," "subject to," "targets," "will continue," "will likely result," or similar expressions.

Investors are cautioned that any such forward-looking statements are subject to risks and uncertainties, including, without limitation: the timing or outcome of various legal and regulatory actions; changing customer expectations and choices that may reduce demand for electricity; the sale of excess energy during periods of low demand or low wholesale market prices; operational risks relating to the Company's generation and battery storage facilities, including hydro conditions, wind conditions, disruption of transmission and distribution, disruption of fuel supply, and unscheduled plant outages, which may result in unanticipated operating, maintenance and repair costs, as well as replacement power costs; delays in the supply chain and increased supply costs (including application of tariffs impacting solar module imports), failure to complete capital projects on schedule or within budget, failure of counterparties to perform under agreement, or the abandonment of capital projects, which could result in the Company's inability to recover project costs, or impact our competitive position, market share, revenues and project margins in material ways; default or nonperformance of counterparties from whom PGE purchases capacity or energy, which require the purchase of replacement power and renewable attributes at increased costs; complications arising from PGE's jointly-owned plant, including ownership changes, regulatory outcomes or operational failures; the costs of compliance with environmental laws and regulations, including those that govern emissions from thermal power plants; changes in weather, hydroelectric and energy market conditions, which could affect the availability, cost and required collateral for purchased power and fuel; changes in capital and credit market conditions, including volatility of equity markets, reductions in demand for investment-grade commercial paper or interest rates, which could affect the access to and availability or cost of capital and result in delay or cancellation of capital projects or execution of the Company's strategic plan as currently envisioned; general economic and financial market conditions, including inflation; the effects of climate change, whether global or local in nature; unseasonable or severe weather conditions, wildfires, and other natural phenomena and natural disasters that could result in operational disruptions, unanticipated restoration costs, third party liability or that may affect energy costs or consumption; the effectiveness of PGE's risk management policies and procedures; PGE's ability to effectively implement Public Safety Power Shutoffs (PSPS) and de-energize its system in the event of heightened wildfire risk; cyber security attacks, data security breaches, physical attacks and security breaches, or other malicious acts, which could disrupt operations, require significant expenditures, or result in claims against the Company; employee workforce factors, including potential strikes, work stoppages, transitions in senior management, and the ability to recruit and retain key employees and other talent and turnover due to macroeconomic trends; widespread health emergencies or outbreaks of infectious diseases such as COVID-19, which may affect our financial position, results of operations and cash flows; failure to achieve the Company's greenhouse gas emission goals or being perceived to have either failed to act responsibly with respect to the environment or effectively responded to legislative requirements concerning greenhouse gas emission reductions; social attitudes regarding the electric utility and power industries; political and economic conditions; acts of war or terrorism; changes in financial or regulatory accounting principles or policies imposed by governing bodies; changes in effective tax rate; and risks and uncertainties related to All-Source RFP projects, including, but not limited to, regulatory processes, transmission capabilities, system interconnections, permitting and construction delays, legislative uncertainty, inflationary impacts, supply costs and supply chain constraints. As a result, actual results may differ materially from those projected in the forward-looking statements.

Risks and uncertainties to which the Company are subject are further discussed in the reports that the Company has filed with the United States Securities and Exchange Commission (SEC). These reports are available through the EDGAR system free-of-charge on the SEC's website, www.sec.gov and on the Company's website, investors.portlandgeneral.com. Investors should not rely unduly on any forward-looking statements.

Portland, OR 97204

The Company

PGE at a glance

Quick facts

- Vertically integrated energy company that generates, transmits and distributes electricity
- Approximately 934,000 retail customers within a service area of approximately 1.9 million residents⁽¹⁾
- Roughly half of Oregon’s population lives within PGE service area, encompassing 51 incorporated cities entirely within the State of Oregon
- Roughly two-thirds of Oregon’s commercial and industrial activity occurs in PGE service area

Leading the way to a clean energy future for Oregon

- Our goals align with the 100% clean energy by 2040 framework. The targets to reduce baseline greenhouse gas emissions from power served to Oregon retail customers are:
 - 80% reduction in greenhouse gas emissions by 2030
 - 90% reduction in greenhouse gas emissions by 2035
 - 100% reduction in greenhouse gas emissions by 2040

(1) As of December 31, 2023

(2) In 2023, GAAP net income was \$228 million, or \$2.33 per diluted share. After adjusting for the impacts of Boardman revenue requirement settlement charge, non-GAAP net income was \$233 million, or \$2.38 per diluted share. The net effect of the deferral release was \$0.05 per diluted share (see appendix for important information about non-GAAP measures, guidance, and reconciliations)

3,500+ MWs of Generation

Financial snapshot

- 2023 revenue: \$2.9 billion
- 2023 diluted earnings per share: \$2.33 GAAP, \$2.38 adjusted non-GAAP⁽²⁾
- Net utility plant assets: \$8.6 billion⁽¹⁾

Investment thesis

Investing in a reliable and clean energy future

- Adopting 100% clean energy by 2040 framework
- Entered into agreements for 475 MW of battery storage and 500 MW of hydro contracts; 2,700 to 3,700 MW of additional non-emitting resources remain to be procured through multi-stage RFP processes through 2030

High-growth service area

- Urban service territory with strong growth in semiconductor and data center demand
- Growing number of customer connects and 2% long-term load growth, through 2027

Building a smarter more resilient grid

- Investing in our system to maintain and increase resiliency to mitigate against extreme weather and wildfires
- Modernizing our grid with a community-centered distribution system to advance environmental justice, accelerate distributed energy resources and maximize grid benefits

Constructive regulatory framework

- Regulatory mechanisms to recover costs and add renewables, including a Renewable Adjustment Clause, Wildfire Mitigation Automatic Adjustment Clause and forward test year
- Vertically integrated, regulated utility

Focusing on operational effectiveness and efficiency

- 5% to 7% long-term EPS growth⁽¹⁾ and dividend growth guidance⁽²⁾
- Improved key safety and reliability metrics
- Continuing to implement efficiencies and manage costs through technology

Prioritizing customer service and experience

- No. 1 ranked renewable power program in the United States for 14 years⁽³⁾
- Ranked as a Top 5 Utility in the United States for Customer Experience according to Forrester's The US Customer Experience Index for 2021, 2022 and 2023⁽⁴⁾

(1) Long-term EPS growth base year is 2022 adjusted results

(2) The amount and timing of dividends payable and the dividend policy are at the sole discretion of the Portland General Electric Board of Directors and, if declared and paid, dividends may be in amounts that are materially less than projected. EPS estimates and projections are based on assumptions and there can be no assurance regarding the amount of future earnings consistent with earnings guidance

(3) National Renewables Energy Laboratory. NREL did not release rankings in 2011

(4) Forrester's The US Utilities Customer Experience Index Rankings, 2021-2023. Annual rankings are issued retrospectively for each calendar year

Diverse, growing service area

- Growing **core urban service area** with strong population growth supporting services (government, education, restaurants, healthcare, and other services)
- **I-5 corridor** and port access provide opportunity for transportation and warehousing and market access for traditional manufacturing (wood products, food, metals)
- **'Silicon Forest' high tech cluster** includes R&D and component manufacturing. Hillsboro fiber infrastructure provides unique opportunity for continued growth connected to AI expansion, including data center and high-tech development. Companies with operations in PGE's service territory include Intel, Lam Research, Analog Devices, Microchip Technologies, Qorvo, Adobe, DRT, QTS and others
- Residential customers accounted for 37% of retail deliveries in 2023, commercial 34%, industrial 29%
- Strong industrial load growth, 7.5% CAGR from 2018-2023
- Forecast energy deliveries growth of 2% per year through 2027 driven by high-tech industrial customers and stable residential and commercial segments

Established Data Center Market Ranking

A recent study ⁽⁴⁾ ranked Oregon as the **5th largest** data center market nationally

(1) As of December 31, 2023

(2) Includes energy deliveries to commercial and industrial customers that purchase their energy from ESSs

(3) Oregon HB 2009 and Oregon CHIPS Act (SB 4)

(4) Cushman and Wakefield 2024 Global Data Center Market Comparison

Reliability and resiliency investments

Capital expenditures forecast⁽¹⁾

Note: Dollar values in millions. Capital expenditures exclude allowance for funds used during construction. These are projections based on assumptions of future investment. Actual amounts expended will depend on various factors and may differ materially from the amounts reflected in this capital expenditure forecast

(1) Values presented do not include incremental potential investments for future RFP cycles

Clean energy transition

Advancing toward a clean energy future

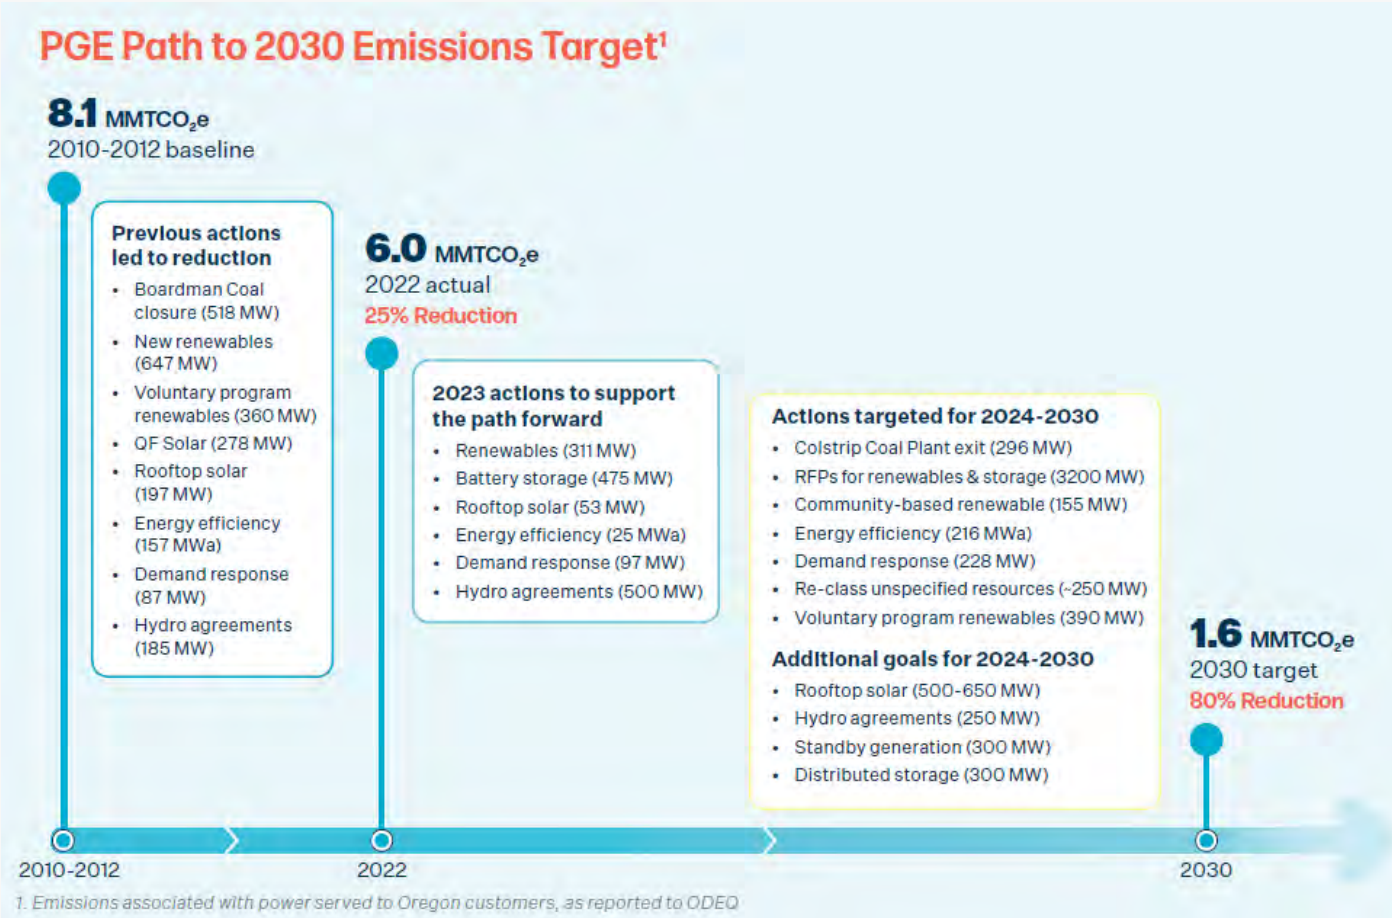

PGE has made significant progress toward decarbonization in the past decade

Meaningful steps underway to meet 2030 emissions targets:

- Removing coal from our portfolio to meet our legislative requirement
- Clearwater Wind Development placed in service in January 2024, bringing online 311 MW of non-emitting energy, and entered into agreements for 475 MW of battery storage and 500 MW of hydro contracts
- 2,700 to 3,700 MW of additional non-emitting resources remain to be procured through multi-stage RFP processes through 2030

Our decarbonization strategy is multi-faceted to support reliable and affordable power:

- Clean energy
- Customer-sited solutions
- Technology and innovation
- Regional solutions to resource adequacy

Resource planning and procurement

2023 IRP Action Plan

Customer Actions

- Increased energy efficiency, distributed energy resources and incorporation of customer demand response

Community-Based Renewable Energy (CBRE) Action

- RFPs for qualifying CBRE resources, 66 MW in service by 2026, 155 MW in service by 2030

Energy Action

- Renewable RFPs, target acquiring 261 MWa per year

Capacity Action

- Capacity RFPs to acquire sufficient capacity to meet forecasted needs

Transmission Actions

- Pursue options to alleviate congestion and upgrade key transmission resources

2023 RFP Timeline

- ✓ **May 2023** Draft RFP submitted to OPUC for approval
- ✓ **February 2024** Final RFP issuance
- ✓ **April 2024** Bid submissions due
- ☐ **Q3 2024*** Submit request for acknowledgement of final shortlist to OPUC and shortlist publication
- ☐ **Q3/Q4 2024*** Execution of final contracts with winning bidders

*Subject to change depending on the quantity and complexity of bids received and should circumstances require

Illustrative rate base growth

- PGE’s five-year base capital expenditure forecast of \$6.2 billion drives 8% average rate base growth, from 2022 base year
- Illustrative incremental RFP opportunities⁽²⁾ potentially increase average rate base growth to 10%, from 2022 base year

Note: Amounts presented are for illustrative purposes and represent potential values based on the assumptions outlined below. Amounts do not represent guidance and actual amounts may differ materially

(1) 2022 rate base value based on UE 394 2022 GRC Rate Base amount, inclusive of Colstrip

(2) 2024 beginning rate base is assumed consistent with the stipulated 2024 GRC value (\$6.2B) plus capex of \$424M for the Clearwater wind project

(3) Base scenario illustrates the potential impact of the following assumptions: a) 2024 beginning earnings power rate base is assumed consistent with the stipulated 2024 GRC value (\$6.2B) plus capex of \$424M for the Clearwater wind project; b) annual capital expenditures from 2024-2028 consistent with current capital expenditures forecast on slide 8; c) 2024 depreciation and amortization of \$500M (mid-point of 2024 earnings guidance assumption); d) multi-year closing of transmission capex to rate-base, and; e) 25-year useful life for new asset additions thereafter

(4) The base capital + incremental opportunity from RFPs illustrates the potential impact of the following assumptions: a) a total remaining IRP opportunity of 3,200 MW (mid-point of remaining resource need of 2,700 to 3,700 MW, including both energy and capacity resources); b) 25% ownership of the midpoint 3,200 MW opportunity; c) \$1,900 installed cost per KW (based on indicative values for 2021 RFP PGE-Owned Resources); d) RFP projects procured in serial cycles and with evenly spread project spend through year-end 2029 (Note: This is illustrative and actual RFP opportunity spend may be unevenly distributed); and e) 25-year useful life for RFP asset additions

2025 General rate case

Rate Case Key Terms - UE 435	
Rate Base	\$7.5 billion
Rate Base Increase	\$878 million, 13%
ROE	9.75%
Capital Structure	50/50
Cost of Debt	4.628%
Cost of Capital	7.189%
Revenue Requirement Increase	\$225 million, including \$37 million for power costs
Other Key Terms	<ul style="list-style-type: none"> • Recovery of Constable and Seaside BESS projects • Redefining definition of "associated storage" within the Renewable Automatic Adjustment Clause mechanism to include standalone energy storage • Proposed investment recovery mechanism for reliability and resiliency assets • Proposed refund of monetized Investment Tax Credits to customers over 5-year period

Management cannot predict the outcome of the rate case and all items are subject to OPUC approval

(2) NREL did not release rankings in 2011

(3) Amount enrolled as of December 31, 2023

Clean energy and transmission investment

Building a smarter, stronger, more flexible grid to deliver the power customers need today and into the future

Advancing the clean energy transition

Clearwater Wind Facility

- **311** MW of emissions-free generation for PGE customers
 - PGE owns **208** MW of the project, a \$424 million investment
 - PGE entered into a PPA with a subsidiary of NextEra Energy Resources for the remaining **103** MW
- This facility is eligible for recovery under the Renewable Resource Automatic Adjustment Clause (RAAC)

Upgrading infrastructure to enable growth

Transmission Projects

Multi-phase projects that support customers and improve reliability for the region

- **Tonquin Project**
 - 115kV transmission lines and substation upgrade
- **Hillsboro Reliability Project**
 - 230kV transmission lines and substation upgrade
- Additional substation upgrades throughout the service territory to enable load growth, led by high-tech and digital customers

Long-term financial performance

Long-term 5% to 7%⁽⁴⁾ earnings growth from 2022 adjusted base year

(1) In 2020 GAAP net income was \$155 million, or \$1.72 per diluted share. After adjusting for the impacts of the Energy Trading Losses, non-GAAP net income was \$247 million, or \$2.75 per diluted share. The net effect of the energy trading losses was \$1.03 per diluted share (see appendix for important information about non-GAAP measures, guidance, and reconciliations)

(2) In 2022, GAAP net income was \$233 million, or \$2.60 per diluted share. After adjusting for the impacts of released deferrals related to 2020, non-GAAP net income was \$245 million, or \$2.74 per diluted share. The net effect of the deferral release was \$0.14 per diluted share (see appendix for important information about non-GAAP measures, guidance, and reconciliations)

(3) In 2023, GAAP net income was \$228 million, or \$2.33 per diluted share. After adjusting for the impacts of Boardman revenue requirement settlement charge, non-GAAP net income was \$233 million, or \$2.38 per diluted share. The net effect of the deferral release was \$0.05 per diluted share (see appendix for important information about non-GAAP measures, guidance, and reconciliations)

(4) Estimates and projections are based on assumptions and there can be no assurance regarding the amount of future earnings consistent with earnings guidance and earnings growth guidance

(5) 2024E Accounting ROE calculated based on adjusted earnings guidance range of \$2.98 to \$3.18 (see appendix for important information about non-GAAP measures, guidance, and reconciliations)

(6) Return on average equity

(7) See appendix for important information about non-GAAP measures, guidance, and reconciliations

Proven dividend growth

(1) Compound Annual Growth Rate from 2015 through 2024E
 (2) Compound Annual Growth Rate from 2020 through 2024E
 (3) Represents annual dividends declared per common share
 (4) Estimates and projections are based on assumptions and there can be no assurance regarding the amount of future dividends. The amount and timing of dividends payable and the dividend policy are the sole discretion of the Portland General Electric Board of Directions, and if declared and paid, dividend may be in amounts that are less than projected
 (5) 2024E estimated dividends declared based on annualization of quarterly dividend declared in April 2024. 2024E dividend payout ratio is calculated using the midpoint of adjusted earnings guidance of \$2.98 to \$3.18

Liquidity and financing

Total Liquidity: \$1,115 million

as of March 31, 2024 (dollars in millions)

Long-term debt	\$450		\$160	\$140

Equity financings (dollars in millions)	Total facility	Settled to-date
At-The-Market Offering Program ⁽¹⁾	\$300	\$78

(1) PGE entered into an at-the-market offering program in the second quarter of 2023. In March 2024, pursuant to the terms of the equity distribution agreement, PGE issued 1,714,972 shares and received net proceeds of \$78 million, settling all forward sale agreements in place. Any proceeds from the issuances of common stock will be used for general corporate purposes and investments in renewables and non-emitting dispatchable capacity

Environmental, Social and Governance

Environmental, social, & governance highlights

Decarbonize

Electrify

Perform

 <p>GHG Emissions Targets</p>	<p>In 2023, PGE’s total system load was comprised of 35% specified, non-emitting energy sources. PGE continued to make steady progress, reducing emissions from unspecified sources¹⁾, procuring clean energy resources and investing in the tools that will support driving emissions toward target levels in future years</p>
 <p>Clean Energy Investment</p>	<p>Completed construction of the new Clearwater 311 MW wind energy facility in January 2024 and procured 475 MW of battery energy storage systems to begin serving customers in 2024 and 2025</p>
 <p>Green Financing Framework</p>	<p>Executed an additional \$500 million in green bonds in 2023 to continue supporting clean energy investments under our Green Financing Framework</p>
 <p>Diversity, Equity and Inclusion</p>	<p>Amidst tight labor market conditions, PGE continued to attract and retain a diverse workforce, with women accounting for over 35% and Black, Indigenous and People of Color (BIPOC) employees more than a fourth, of the leadership at PGE</p>

Our [2023 Environmental, Social & Governance Report](#) highlights key initiatives and achievements that support PGE’s **commitment to decarbonization and advancing well-being for customers, employees, communities and the environment**

1) Unspecified sources consist of purchased power for which a specific generating resource is not defined, and could be any of the generation types (e.g., wind, hydro, gas)

Clean energy commitment

PGE's clean energy and emissions goals have always been rooted in our customers' preferences, who are some of the most sophisticated renewable energy buyers in the world

PGE's goals go above and beyond required emission reduction targets and PGE was the first utility in the U.S. to sign The Climate Pledge

- Commitment to reach net-zero carbon emissions by 2040, which will require reducing Scope 1, 2 and 3 emissions

PGE has made significant progress towards decarbonization in the past decade, with meaningful steps in place to meet future goals

- By 2030, PGE will no longer generate electricity with coal to serve Oregon customers
- 2,700 to 3,700 MW of additional non-emitting resources to be procured through 2030
- Commitments to reduce environmental impacts from other areas of the business, including goals set to electrify PGE's vehicle fleet

Scope 1

6.84 million metric tons of CO₂e

Scope 1 emissions includes all of PGE's direct emissions, made up of fuel burned by thermal generating resources, fuel burned by PGE's vehicle fleet and natural gas used at PGE's office facilities.

Scope 2

0.04 million metric tons of CO₂e

Scope 2 emissions are emissions related to Transmission and Distribution line loss and emissions associated with power purchased from a third party that is consumed by PGE.

Scope 3

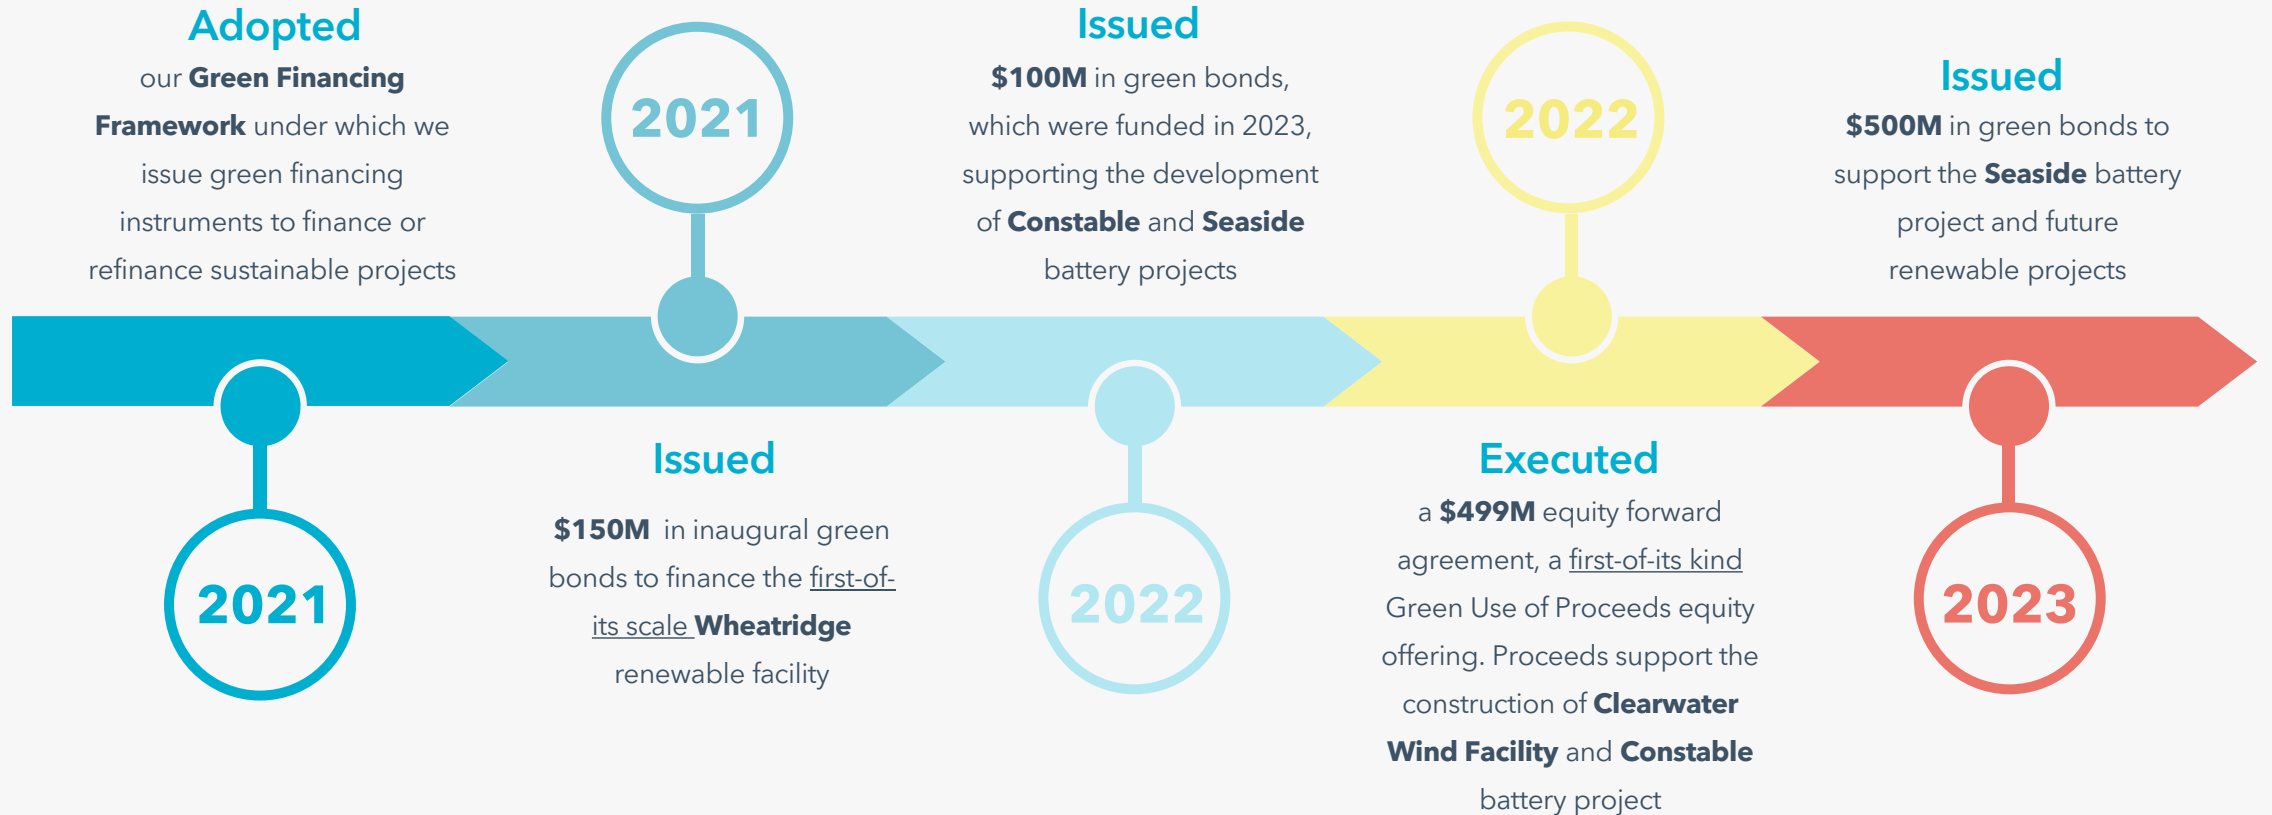

2.29 million metric tons of CO₂e

Scope 3 emissions include the generation of purchased electricity then sold to end users. Reporting and data collection capabilities are still being developed for other Scope 3 sources of emissions.

1. Percentages above represent 2023 resource mix from PGE's total system load, inclusive of wholesale volumes.
 2. Represents utility-scale solar, does not include customer rooftop solar resources.
 3. Hydro amounts include purchases from Bonneville Power Administration, which may have an immaterial amount of emissions associated with them, per ODEQ rules.
 4. Unspecified is purchased power for which a specific generating resource is not defined and could be any of the generation types (e.g., wind, hydro, gas).

Green financing framework

Community and employee engagement

\$197M spent with diverse suppliers in 2023, 18% of total spend for 2023

20,000+ volunteer hours completed by employees and retirees

67% employee participation in charitable giving and/or volunteering

\$4.6M in total charitable giving

Established **Community Benefits and Impact Advisory Group**, working to develop more equitable strategies for the clean energy future

Developed a **Strategic Tribal Engagement Plan (STEP)**, enhancing engagement with the 7 area Tribes that PGE works with

27%

Black, Indigenous and People of Color make up over **one-fourth** of leadership

35%

Women make up over **one-third** of leadership, including our CEO

Multiple **leadership development programs** offered to employees to cultivate high performing and diverse leaders

100% rating as a Best Place to Work for LGBTQ Equality for **10 years** in a row

Recognized globally in the 2023 Bloomberg Gender Equality Index

Diversity, equity, and inclusion

Committed to DEI across our business

- **Partners and suppliers:** Increased our supplier diversity to 18% of total supplier spending in 2023, up from 14% in 2022
- **Awareness, education, and training:** Racial equity education for our board, leadership and employees
- **Recruitment and development:** Development opportunities for underrepresented, high-potential employees interested in leadership
- **Awards and recognition:** Perfect score on the Human Rights Corporate Equality Index for 10 years in a row and inclusion in the Gender-Equality Index for 5 years in a row
- **Competitive pay and benefits:** Diversity metrics included in incentive programs. PGE employees in the same role, with comparable work experience, at the same location earn a near-perfect dollar-for-dollar pay
- **Policies and purpose:** Human Rights Policy Statement established, promoting our commitment to our employees, communities, suppliers and partners

Appendix

Wildfire regulatory framework

WMP

Annually, PGE files a Wildfire Mitigation Plan with the OPUC which summarizes our approach to addressing wildfire risk. The 2024 [Wildfire Mitigation Plan](#) (Docket UM 2208) was submitted in December 2023

AAC

PGE's Wildfire Automatic Adjustment Clause (AAC) is designed to enable timely recovery of wildfire mitigation costs, including O&M and capital expenditures

PGE works closely with key stakeholders to plan and coordinate on wildfire prevention and response, including

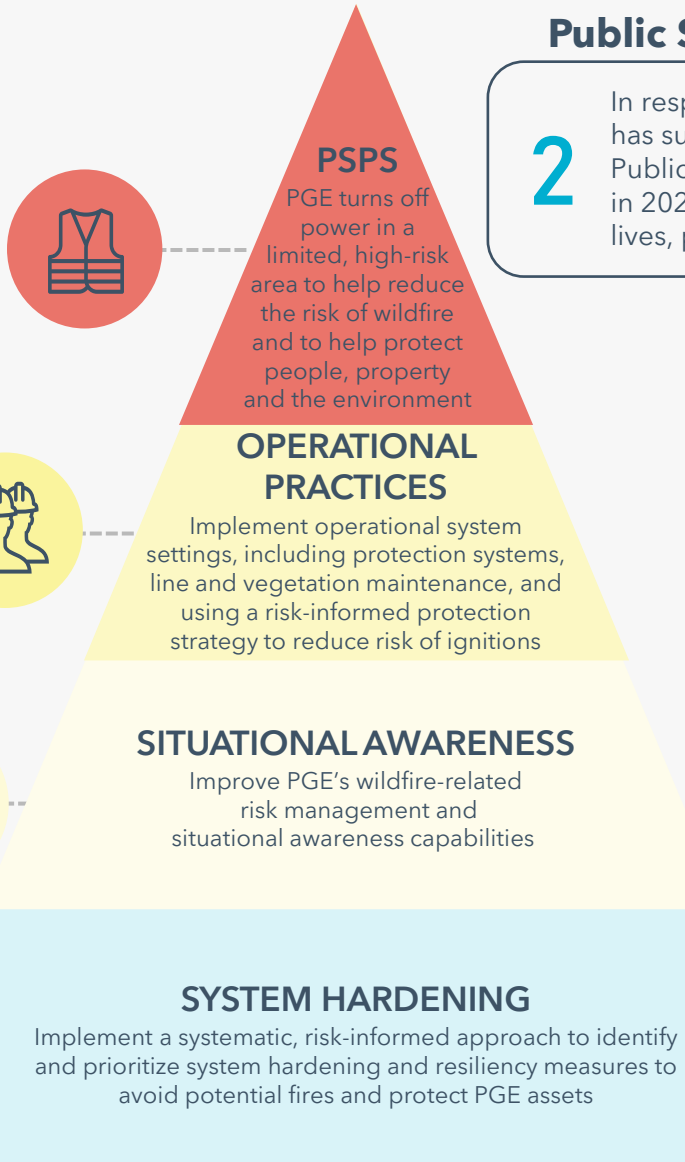

- Peer utilities
- State, Tribal and local fire agencies
- Fire management officers
- District foresters
- Oregon Department of Forestry
- Oregon Joint Use Association
- Private landowners
- Electric Power Research Institute
- Western Energy Institute
- Edison Electric Institute
- US DOE
- Federal fire agencies
- International Wildfire Risk Mitigation Consortium

PANO AI cameras detect fires and notify PGE and local agencies instantaneously

PGE's wildfire risk mitigation hierarchy

Public Safety Power Shutoff

2

In response to extreme conditions, PGE has successfully implemented two Public Safety Power Shutoffs (PSPS), one in 2020 and one in 2022 to protect lives, property and public spaces

Operational Practices

11

Defined high risk fire zones (HFRZs) within PGE's service territory

2.4%

Percent of PGE customers within HFRZs

9%

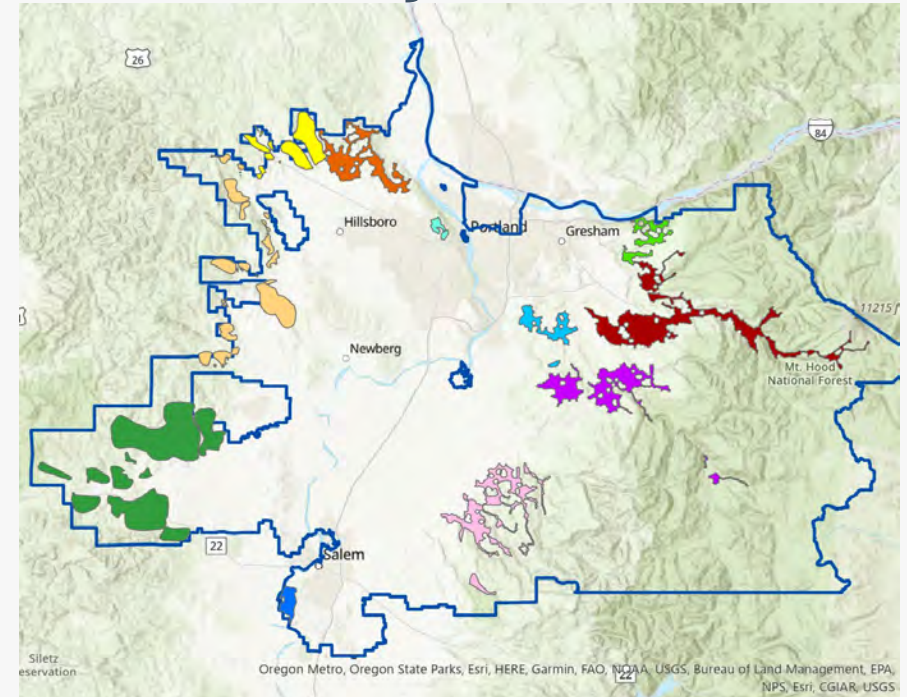

Percent of PGE service territory identified as HFRZ

4%

Percent of PGE's overhead system located within a HFRZ

78

Reclosers throughout HFRZs, enabling operational readiness and protection during fire season

High Fire Risk Zones (brightly shaded) within PGE's service territory (outlined)

System Hardening And Situational Awareness

\$91M

Forecasted 2024 Wildfire Mitigation spend¹

50%

Percent of distribution lines that are undergrounded in PGE's service territory

100%

HFRZ camera detection and weather station coverage

1) Per PGE's 2024 Wildfire Mitigation Plan. Amount calculated using the midpoint of the \$43 - \$49.2 forecasted capital costs

Public safety power shutoff (PSPS)

Temporarily turning off power during extreme weather conditions to reduce wildfire risk

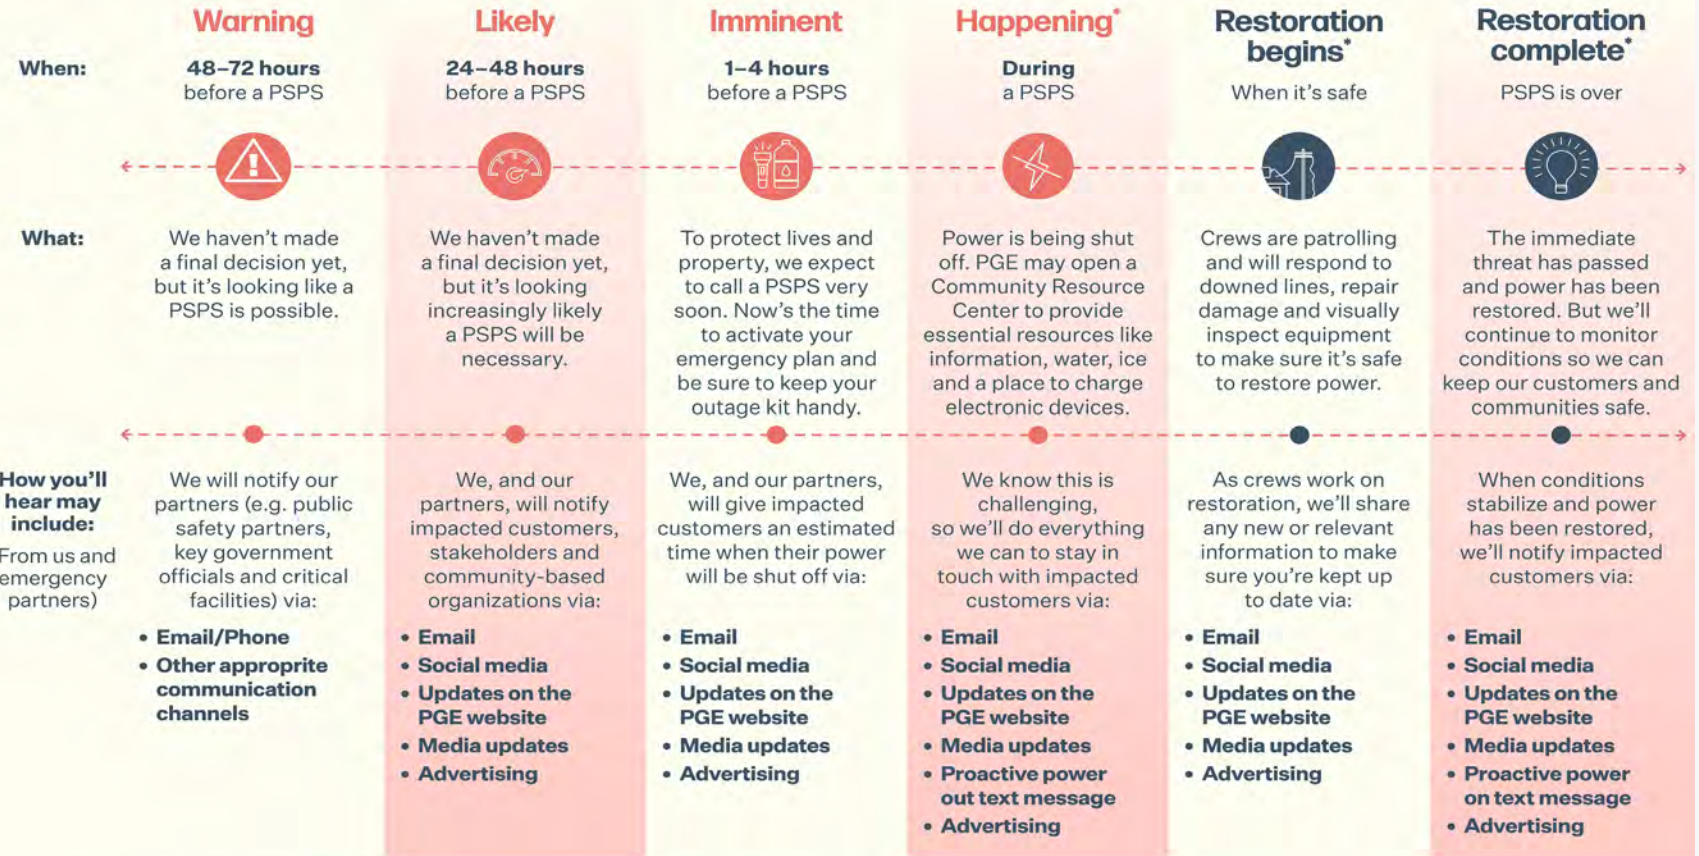

Factors we consider before calling a Public Safety Power Shutoff (PSPS)

These may include but aren't limited to:

	High winds		Real-time observations from the field
	Dry vegetation		Red Flag Warning
	Temperature		Collaboration with local, state and regional agencies
	Low humidity levels		

PSPS notifications to partners, customers and other stakeholders

*PGE will provide status updates at least every 24 hours

Constructive regulatory / policy framework

Oregon	Federal
<ul style="list-style-type: none"> • Oregon legislation requires 100% clean energy by 2040 • Oregon Public Utility Commission <ul style="list-style-type: none"> • Governor-appointed 3-member commission with staggered 4-year terms • Commission has consistently approved investments in renewables, going back to Biglow Canyon Wind Farm, which went online 15 years ago • Regulatory dynamics support PGE and the transition to clean energy <ul style="list-style-type: none"> • Renewable Portfolio standard (adopted in 2007; increased in 2016) • Renewable Adjustment Clause • Forward test years • Integrated resource planning framework • Accelerated depreciation of Colstrip to 2025 • History of reasonable settlements in rate cases • Regulatory support for recovery of storm response and wildfire mitigation costs 	<ul style="list-style-type: none"> • The Inflation Reduction Act (IRA), which was signed into law in August 2022, is expected to further enhance PGE's already strong prospects for renewables-based growth • Better positions renewables to be owned and operated by regulated utilities like PGE and makes renewables more affordable for PGE customers <ul style="list-style-type: none"> • Allows for solar projects to elect ITC or PTC • Allows for the transfer of tax credits after 2022 • Standalone storage can earn tax credits • Makes tax credits available for renewable energy through the later of 2032 or when annual greenhouse gas emission in the U.S. electric sector falls 75% from 2022 levels <ul style="list-style-type: none"> • Effectively increases the competitiveness of renewables relative to conventional generation, bolstering long-term deployment • Improves the economics for repowering existing renewables as they age

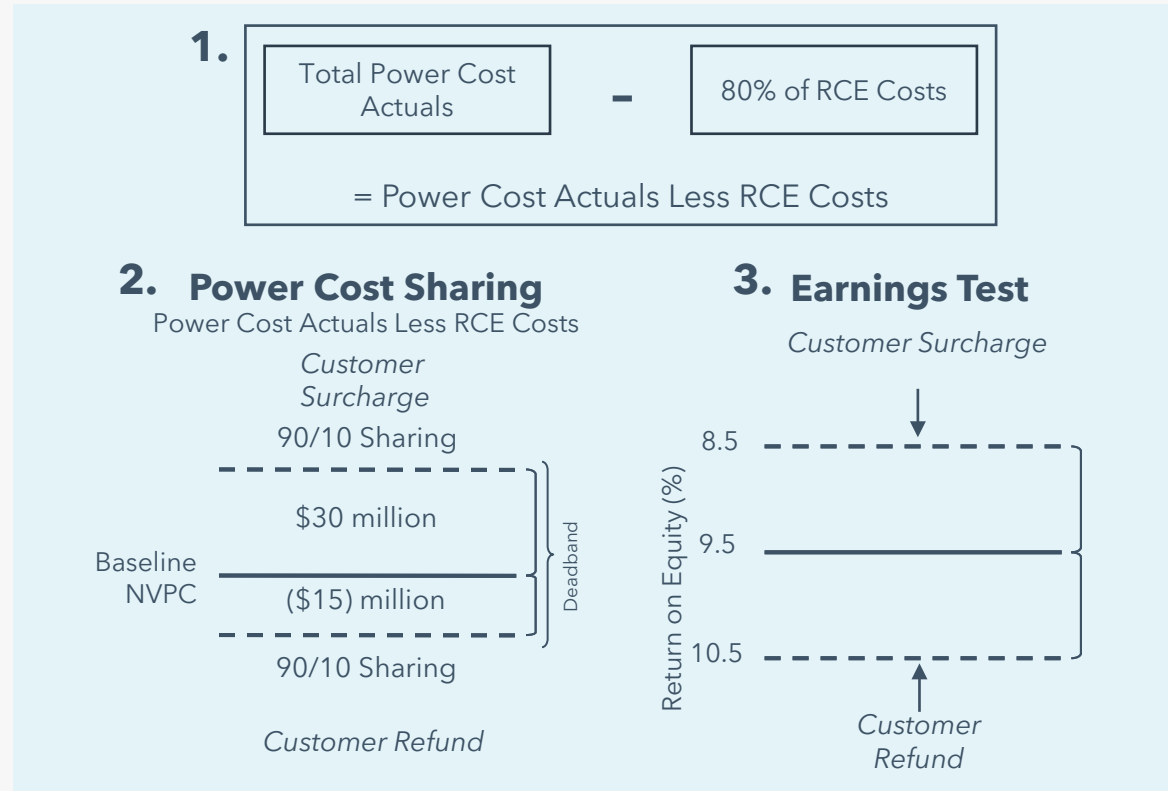

PGE's regulatory framework in Oregon, along with the recently-signed IRA, position the company to play an important role in the decarbonization of Oregon

Recovery of power costs

Annual power cost update tariff

- Annual reset of prices based on forecast of net variable power costs (NVPC) for the coming year
- Subject to OPUC prudence review and approval, new prices go into effect on or around January 1 of the following year

- PGE can recover 80% of power costs prudently incurred during Reliability Contingency Events (RCEs) subject to the following criteria:
 - Day-Ahead Mid-C index prices exceed \$150/MWh
 - PGE is eligible to request or acquire RA assistance through a regional RA program in which it participates
 - A neighboring Balancing Authority has publicly declared an event that indicates potential supply or actual supply constraints
- PGE absorbs power costs/benefits, excluding the 80% RCE Cost recovery, within the deadband range. Amounts outside the deadband are shared 90% with customers and 10% with PGE, subject to an earnings test applied using the regulated ROE as a threshold
- Customer surcharge occurs if PGE’s actual regulated ROE is below 8.5% (ROE will not exceed 8.5% with surcharge); Customer refund occurs if PGE’s actual regulated return is above 10.5% (regulated return will not decrease below 10.5% with refund)

Detriment / (Benefit) PCAM Baseline at Year End ⁽²⁾ :										
	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
Over / (Under)	(\$7)	(\$3)	(\$10)	\$15	(\$3)	\$5	\$ (13)	\$30 ⁽³⁾	\$23	\$5

(1) Costs estimated based on framework approved within the 2024 GRC (UE 416). Future RCE costs could vary significantly based on market pricing, duration or other event specific factors

(2) Dollar values in millions

(3) Represents variance to baseline net of 90% of the excess variance to be collected from customers

(2) Assumes interest rate impact for full year on outstanding debt issuances and expected debt financings in 2024

Non-GAAP financial measures

This press release contains certain non-GAAP measures, such as adjusted earnings, adjusted EPS and adjusted earnings guidance. These non-GAAP financial measures exclude significant items that are generally not related to our ongoing business activities, are infrequent in nature, or both. PGE believes that excluding the effects of these items provides a meaningful representation of the Company's comparative earnings per share and enables investors to evaluate the Company's ongoing operating financial performance. Management utilizes non-GAAP measures to assess the Company's current and forecasted performance, and for communications with shareholders, analysts and investors. Non-GAAP financial measures are supplementary information that should be considered in addition to, but not as a substitute for, the information prepared in accordance with GAAP.

Items in the periods presented, which PGE believes impact the comparability of comparative earnings and do not represent ongoing operating financial performance, include the following:

- 2020: Certain energy trading losses
- 2022: Non-cash Wildfire and COVID deferral reversal charge associated with the year ended 2020, resulting from the OPUC's 2022 GRC Final Order earnings test
- 2023: Boardman revenue requirement settlement charge associated with the year ended 2020, resulting from the OPUC's 2022 GRC Final Order

Due to the forward-looking nature of PGE's non-GAAP adjusted earnings guidance, and the inherently unpredictable nature of items and events which could lead to the recognition of non-GAAP adjustments (such as, but not limited to, regulatory disallowances or extreme weather events), management is unable to estimate the occurrence or value of specific items requiring adjustment for future periods, which could potentially impact the Company's GAAP earnings. Therefore, management cannot provide a reconciliation of non-GAAP adjusted earnings per share guidance to the most comparable GAAP financial measure without unreasonable effort. For the same reasons, management is unable to address the probable significance of unavailable information.

PGE's reconciliation of non-GAAP earnings for the years ended December 31, 2020, December 31, 2022, and December 31, 2023 are on the following slide.

Non-GAAP financial measures

Non-GAAP Earnings Reconciliation for the year ended December 31, 2020		
(Dollars in millions, except EPS)	Net Income	Diluted EPS
GAAP as reported for the year ended December 31, 2020	\$155	\$1.72
Exclusion of certain trading losses	127	1.42
Tax effect ⁽¹⁾	(35)	(0.39)
Non-GAAP as reported for the year ended December 31, 2020	\$247	\$2.75

Non-GAAP Earnings Reconciliation for the year ended December 31, 2022		
(Dollars in millions, except EPS)	Net Income	Diluted EPS
GAAP as reported for the year ended December 31, 2022	\$233	\$2.60
Exclusion of 2020 Wildfire and COVID deferral reversal	17	0.19
Tax effect ⁽¹⁾	(5)	(0.05)
Non-GAAP as reported for the year ended December 31, 2022	\$245	\$2.74

Non-GAAP Earnings Reconciliation for the year ended December 31, 2023		
(Dollars in millions, except EPS)	Net Income	Diluted EPS
GAAP as reported for the year ended December 31, 2023	\$228	\$2.33
Exclusion of Boardman revenue requirement settlement charge	7	0.07
Tax effect ⁽¹⁾	(2)	(0.02)
Non-GAAP as reported for the year ended December 31, 2023	\$233	\$2.38

(1) Tax effects were determined based on the Company's full-year blended federal and state statutory tax rate

The Citizens' Utility Board Asked the Oregon Public Utility Commission to Dismiss Portland General Electric's Rate Request for 2025

by Pete Danko – Portland Business Journal – Mar. 15, 2024

In what it called an "unprecedented appeal" to regulators, **Oregon's residential ratepayer advocate** on Thursday formally **asked** the **Public Utility Commission** to **dismiss** **Portland General Electric's latest proposed rate increase**.

PGE late last month requested a 7.4% overall average rate increase in 2025, 7.2% for the residential customers that the Citizens' Utility

Board represents. It would come on the heels of an 18% overall increase that hit PGE residential customers in January, with a smaller but not yet set rate boost for wildfire mitigation costs still due to kick in this April.

Rates also rose in 2023, and the new PGE request would push PGE prices some 40% above where they stood in 2022, according to CUB.

Something 'never done before'.

"We're asking the Commission to do something they have never done before," **Bob Jenks**, **CUB's** executive director, **said** in a news release. "We are seeing historically high bills for many PGE customers, and we **need regulators** to **do something bold and unprecedented**. Now is the time to flip the script and show our utilities that consumer protections come before profits."

A PGE representative, responding to a request for comment, emailed that "PGE is and will continue to be fully engaged in the public Rate Review process administered by the Oregon Public Utility Commission."

If not a dismissal, CUB asked the PUC to "**segregate**" **several issues from PGE's request, including PGE's ask for an increase** in its **return on equity** — its profit margin, in essence — **from 9.5% to 9.75%**. **CUB said many of those issues were fought over in last year's PGE general rate case.**

"The **Company seeks** to re-litigate **many** of the **contentious issues** that were collaboratively resolved and determined to result in just and **reasonable** rates mere weeks earlier," it said in the PUC filing.

CUB said it was **supported in** its **motion by Lewis & Clark Law School's Green Energy Institute and** the Alliance of **Western Energy Consumers**, which represents big energy users.

Rates are ultimately set by the three-person, governor-appointed PUC after a 10-month process that includes regulatory staff analysis and stakeholder and public input.

PGE's Battery Investments

With rates already on the rise, PGE executives earlier last month had told investment analysts that the company would look to file a narrowly focused general rate case, mostly to pay for new battery energy storage systems it expects to bring online next year.

But CUB saw the request that came less than two weeks later as far from narrow. Out of a \$202 million revenue requirement boost, just \$17.3 million was directly attributable to the battery systems.

PGE says associated substation costs also need to be paid for, along with other transmission and distribution system upgrades that it says will improve reliability and help it meet growing load.

Consumer Group asks Oregon Regulators to Dismiss New PGE Rate Hike Request

by [Gosia Wozniacka - Oregonian – Mar. 15, 2024](#)

A state nonprofit group that advocates for utility customers is asking Oregon regulators to dismiss Portland General Electric's newest rate increase proposal.

In a motion filed Thursday, the Oregon **Citizens' Utility Board** **asked** the **Public Utility Commission** to **throw out PGE's 7.4% increase request**. If approved by the commission, the increase would take effect in January 2025.

The **Citizens' Utility Board**, which was **created via a 1984 ballot measure**, said in a statement that it has never taken such an action before and is doing so now "in the face of record bills for PGE customers."

The board points out that PGE's residential customers have seen a 30% increase in power bills over the past two years. Their rates went up 12% in January 2023 and by 18% this past January.

Customers are reeling from record-high bills that resulted from this year's rate increase and the ice storm in January and many won't be able to handle yet another increase, said Bob Jenks, the board's executive director.

Jenks said the utility's latest request for 2025 will likely grow to cover other costs such as wildfire mitigation or winter storm recovery.

"We're asking the Commission to do something they have never done before," Jenks said. "We are seeing historically high bills for many PGE customers, and we need regulators to do something bold and unprecedented."

The **Public Utility Commission** regulates investor-owned electric and other utilities. Commission spokesperson **Kandi Young** **said** the **Commission's normal practice**

would be to seek written replies from its staff and other parties and then issue a written ruling after reviewing responses. **But Oregon CUB's petition asks the Commission instead to decide the motion at a public meeting.**

"The Commission is considering CUB's request for a change to the standard process, and will advise parties when written responses are due," Young told The Oregonian/OregonLive via email.

PGE declined to comment on the petition and said it would continue to focus on its rate increase proposal.

"PGE is and will continue to be fully engaged in the public Rate Review process administered by the Oregon Public Utility Commission," the utility's spokesperson, Drew Hanson, said in an email.

PGE's 7.4% rate increase request is tied to clean energy needs – specifically, battery storage projects, PGE said previously.

In its petition, the Citizens' Utility Board told regulators that its review of the request found that the new Constable **Battery Storage** project, which is what's included in PGE's rate increase proposal, will cost only \$17.3 million, or 8.5% of the total \$202 million revenue demand.

The rest, said **Jenks**, will go toward higher profits for shareholders and shifting financial risk to customers, among other things – issues the **commission already ruled on and rejected in December for the increase that went into effect this year.**

If the Public Utilities Commission will not dismiss PGE's entire rate increase case, the Citizens' Utility Board asks that it limit the scope of what PGE can request, including removing all of the items that the commission previously ruled against.

Is Oregon Utility Regulation Part of the Problem?

by Bob Jenks – Oregon CUB – Jan. 25, 2024

[Is Oregon Utility Regulation Part of the Problem?](#) | [Latest News](#) | [News](#) | [Oregon CUB](#)

As utility bills in Oregon continue to rise in 2024, CUB is asking tough questions from state regulators. Currently, utility regulators spend a lot of time looking at many requests from utilities to raise rates. This analysis can take up to 10 months in many cases. But overall affordability to customers is not part of the equation for regulators.

We need to look at utility bills holistically – before we see rates skyrocket. Our current system means that customer advocates, decision-makers, and customers do not have a clear picture of what to expect from utility bills. And an even harder time knowing when rates will go up dramatically.

Exposing Flaws in Oregon's System of Utility Regulation

From December 2022 to January 2024, Portland General Electric (PGE) customers have seen bills go up by 30%. This large increase in 13 months shows real and significant flaws in Oregon's system of regulation utilities.

Our current structure leads regulation to focus on each individual line item, but not on the overall affordability of rates. There are several parts to this problem:

- Utilities have an incentive to spend money.
- Utilities can request dozens of rate increases a year.
- **Regulator looks at individual utility projects, not total rates.**
- Costs can be updated even after they are approved by regulators.
- Utilities work to keep information confidential from the public.

Electric utilities are typically the ones who see the most frequent requests for rate increases. PGE is not the only utility that has had large bill increases in the past few years. Pacific Power customers saw bills increase by 21% at the start of 2023 and by 11% on January 1, 2024.

Increasingly, gas utilities are also asking for more from customers more often. Alongside the big spikes in the cost of methane, NW Natural gas rates have increased by 32.7% since September 2022.

Utilities have an incentive to spend money

Utilities make a profit from making capital investments. This ability to profit from a new power plant, laying new lines, or other projects is protected by Oregon law. While many investments are necessary to maintain a reliable system, too many investments can cause rates to be unaffordable.

To justify a capital expense, a utility normally has to show that the investment was expected to bring benefits to the system and to customers. But affordability to customers is not part of the equation for regulators.

Example: Wildfire Mitigation

After the 2020 Labor Day fires, it became clear that utilities needed to invest money in wildfire mitigation. Oregon's utilities are now spending hundreds of millions of dollars to mitigate potential wildfires. Since a wildfire caused by a utility line can cause significant harm, it would be hard to argue that this is not a prudent and necessary investment.

For utilities, wildfire mitigation was an opportunity to spend money and increase profits. Did they ask whether this was affordable for customers? Did they look at other investments to see if there were costs that could be avoided or delayed?

Read More: [Protecting Oregon Customers from Wildfire Risk and Cost Increases](#)

Regulation Looks at Individual Investments, Not Total Rates

Under Oregon law, regulators at the Public Utility Commission are supposed to establish fair and reasonable rates. What regulators do not consider is how these costs affect customers overall.

When a utility asks regulators if it can charge customers more money, it brings a list of investments and expenses. Regulators go down the list, examining each cost to see if it is reasonable and justifiable. They ask questions like: Will this cost provide a benefit to the energy system? Will this investment be able to be used for its expected lifetime?

What **regulators do not ask**: How much will approving this cost increase customer bills? **What other costs is the utility asking for that will increase bills?** Can customers afford this large of an overall increase?

Investments.

When a utility makes an investment, it is motivated by profit first and meeting basic standards of providing service second. What is not considered is how an investment will impact the people they are charging.

While adding many new upgrades to the utility's system may help the system, when combined their cost may be beyond the reach of most customers when they are added to the bill. With neither utilities nor regulators considering whether families can afford total energy bills, a lot of pressure falls on advocates like CUB.

Single-Issue Rate-Making Makes Controlling Costs More Difficult

Holistic Utility Regulation: Under traditional regulation, regulators consider utilities' investments, the overall cost of providing service, profits, and more. For a long time, the holistic model was the standard for utility regulation. Over the past couple of decades, utilities have increasingly asked for surcharges outside of this process.

Single Issue Regulation (Surcharges): In the case of single-issue rate-making, regulators typically only look at the utility costs and surcharge requests related to a single issue. One recent example of a single-issue surcharge is the Wildfire Mitigation cases mentioned above. PGE and Pacific Power both asked to add a surcharge to cover costs related to wildfire prevention. Other examples of single-issue requests include surcharges to cover costs associated with the 2021 ice storm and pilot programs for electric vehicle investments.

Right now, electric utilities are the ones most likely to use the surcharge method to raise rates. But gas utilities are also able to use this tactic. Across the country, energy utilities are using single-issue regulation more and more often to get more and more money from customers

Costs are Updated After Regulators Review Them

In some of these mechanisms, PGE will file a proposal but is allowed to update the proposal. In the case of power costs, the final update is after the Commission actually issues its final order in the case. This means the Commission is expected to make a decision without knowing the rate that is established.

Lack of Transparency on Rate Impacts

In order to protect trade secrets, utilities are allowed to designate some information as **confidential**. But utilities abuse this process. When PGE updates its power cost forecasts in power cost cases, it designates the expected price increase as confidential. CUB cannot think of any reason why a forecasted rate increase could ever be considered confidential. But it does make it difficult to inform the public about what their rates will be, and it makes public discussion of future rate hikes more difficult.

Enough is Enough.

PGE's rates have **increased** by **30% in the last 13 months**. But no one has reviewed the overall rate level and asked the question: Are rates fair and reasonable?

Using the Tools in Regulators' Toolbelts

Regulators at the Public Utility Commission have tools that they can use to lower the impact to customers.

Directing Utilities to Adjust Expenses

First, the Commission can order a utility to propose and implement other measures to reduce **rate shock**. The regulators could tell the utility to **delay certain expenses**. They could also direct utilities to take other **cost-cutting measures**, reducing the need for a rate increase altogether.

Delaying Increases

Second, when regulators approve a rate increase, they can order the utility to delay some of that increase until sometime in the future. By **delaying increases**, electric customers in particular can avoid a large increase during winter when energy usage is the highest.

In the case of PGE's 2024 increase, regulators asked the utility to delay an additional 2% increase until the spring. In 2023, Pacific Power delayed the rollout of its 21% increase until the spring, lessening the impact of the winter heating season.

By delaying increases, regulators can help protect customers from surprisingly high bills during the winter months. This could be the difference between a household being able to keep the heat on or facing disconnection.

Tying Customer Costs to Allowable Profits

Third, regulators can add incentives to keep costs low by **lowering allowable profit margins** if the cost to customers is not controlled.

CUB is Pushing for Policy Changes

State utility regulators are required to set some costs, such as utility profits, at a reasonable level. However, the **Public Utility Commission can set the rate at the lowest level** that is **considered reasonable**. For example, the **Commission might determine** that a **reasonable profit margin is anything between 9.0% and 10.0%**. Under normal circumstances, the Commission might set that margin at the midpoint or 9.5%.

But **to mitigate a large rate increase**, the **Commission can set** the **profit margin at the lowest point** which is **reasonable or 9.0%**. Lowering profits will lower the rate increase for customers. This is an important tool because it tells utilities that if they cannot control their costs, it will reduce their profit margins.

CUB advocates are hard at work this year to create lasting change to protect customers from more bill increases. In 2024, we are facing multiple requests from utilities to increase rates again. Oregonians from Newport to Ontario could be impacted.

Reduce the Number of Increases

A big policy issue for CUB this year is to **reduce** the **number of rate requests** that **utilities are asking for each year**. We have been pushing back against the rising tide of surcharges facing Oregon energy customers.

In the PGE case, CUB continued to fight for a more holistic approach to utility regulation and won on several issues we raised. Now, PGE is consolidating some of their requests and has dropped others. This is good for customers' ability to know what to expect from bills down the line.

Pushing for New Policy: Avoid Large Bill Spikes in the Winter

Regulators did the right thing in delaying even more increases for PGE customers this winter. Now, CUB is calling on the Public Utility Commission to make spreading high rate increases a standard practice to prevent disastrous winter bills for Oregonians.

While CUB has negotiated delays in winter increases with utilities, this is the first time in recent memory that the Commission has made such a request. Without this delay, customers could have seen a higher bill increase in January, a month that typically brings the highest energy bills of the year.

Stay Up to Date on Oregon Utility Issues

CUB will continue to advocate for people in Oregon on major utility issues. [Sign up for the CUB email list](#) for the latest updates, action alerts, and news on policies that affect the utilities your home relies on.

It's Been 30 Years Since Food Ate Up This Much of Your Income

by Jesse Newman and Heather Haddon – WSJ – Feb 26, 2024

Ongoing high costs lead food manufacturers and restaurants to keep prices elevated.

The last time Americans spent this much of their money on food, George H.W. Bush was in office, "Terminator 2: Judgment Day" was in theaters and C+C Music Factory was rocking the Billboard charts.

Eating continues to cost more, even as overall inflation has eased from the blistering pace consumers endured throughout much of 2022 and 2023. Prices at restaurants and other eateries were up 5.1% last month compared with January 2023, while grocery costs increased 1.2% during the same period, Labor Department data show.

Relief isn't likely to arrive soon. Restaurant and food company executives said they are still grappling with rising labor costs and some ingredients, such as cocoa, that are only getting more expensive. Consumers, they said, will find ways to cope.

"If you look **historically after periods of inflation**, there's really **no period** you could point to **where [food] prices go back down**," said Steve Cahillane, chief executive of snack giant Kellanova, in an interview. "They **tend to be sticky**."

Companies are set to pay more for staffing, after 22 states in January lifted the minimum wage for hourly workers.

In **1991**, **U.S. consumers spent 11.4%** of their **disposable personal income on food**, according to data from the U.S. Agriculture Department. At the time, households were still dealing with steep food-price increases following an inflationary period during the 1970s.

More than three decades later, food spending has reattained that level, USDA data shows. In **2022**, **consumers spent 11.3%** of their **disposable income on food**, according to the most recent USDA data available.

Many diners have said they are going out less frequently or skipping appetizers, while buying cheaper store brands more frequently at supermarkets and seeking out promotions or deals offered via apps. That is starting to chip away at some sales for food makers and restaurant operators.

Food companies said they are feeling pinched themselves. While commodities such as corn, wheat, coffee beans and chicken have gotten cheaper, prices for sugar, beef and french fries are still high or rising. Companies across the U.S. economy have also raised prices beyond covering their own higher expenses, lifting profits for industries including retail, biotech and manufacturing.

Food inflation has raised the ire of President Biden, who took to Instagram during the Super Bowl to blast food makers that he said were providing less bang for consumers' buck – putting fewer chips in each bag or shrinking the size of ice-cream containers.

Food spending's share of disposable income

Source: Agriculture Department

“The American public is tired of being played for suckers,” Biden said. “I’ve had enough of what they call **shrinkflation**. It’s a rip-off.”

David Chavern, CEO of the Consumer Brands Association, which represents major food manufacturers, said the industry offers many choices at different price points. “We hope to work with the president on real solutions that benefit consumers,” he said.

In suburban Chicago, Lisa Wister said her food bills are rising faster than her family’s income, leading them to make their own granola from scratch and pack their own snacks for the movies. “Everything is a negotiation, an analysis about our budget,” said Wister, an occupational therapist. “It’s exhausting.”

Denny’s, Wendy’s and other restaurant chains told investors this month that their guest counts fell last year compared with 2022 levels as consumers, in particular those with lower incomes, feel the financial pinch. Big food makers including Hershey and Kraft Heinz have reported that their sales volumes declined as prices rose for their products, with several reporting a hit to profits in the latest fiscal year – and others an increase.

Oreo maker Mondelez said in January it would continue raising prices on some of its products this year, largely because of cocoa prices, which earlier in February surged past a 46-year record. Hershey said this month it expects more expensive cocoa to cut into the company’s profit this year. Kraft Heinz said inflation is moderating but that its costs are still higher, driven in part by pricier tomatoes and sugar.

Companies are set to pay more for staffing, after 22 states in January lifted the minimum wage for hourly workers. Hiring skilled workers like mechanics to replace employees who retired during the pandemic is particularly expensive, said Henk Hartong, CEO of Brynwood Partners, which owns 17 food and beverage plants that make Pillsbury cake mixes and other products.

Many people say they are buying cheaper store brands more frequently at supermarkets.

Restaurant chains said they are trying to operate more efficiently to help defray wage increases, but they also expect to raise prices.

“It’s a really fast move and a high percent increase,” Chipotle Mexican Grill CEO Brian Niccol said in an interview, referring to California’s 25% minimum wage increase for fast-food workers employed by large chains, set to take effect in April. “Pricing is going to be part of the puzzle.”

Some restaurant and food companies, including Kraft Heinz, Mondelez International and Olive Garden owner Darden Restaurants, are projecting higher earnings this year. Signs of a consumer-spending slowdown has led others to temper their outlooks, with same-store sales projection for 2024 and frozen-foods maker Conagra reducing its per-share earnings forecast.

Investors have cooled on food stocks. An S&P 500 subindex of restaurant stocks has risen 10% in the past 12 months through Wednesday’s close, while the broader index gained about 25%. An S&P subindex tracking packaged food and meat companies fell roughly 8% over that period.

When Anna Zabinski and her husband eat out these days, she said, they ask themselves whether a side of macaroni and cheese is worth the extra \$1.99, and often go for refills instead of ordering more expensive large-size drinks.

Zabinski, a professor from Normal, Ill., said they'll sometimes split a \$20 steak and side dish at Texas Roadhouse or a large sandwich from Jimmy John's. Nonetheless, she said, "our daily and monthly expenditures still seem higher than even two years ago."

Food manufacturers and restaurants have been offering more deals on some items. J.M. Smucker and Conagra have reduced prices on coffee and margarine, passing through lower costs for coffee beans and edible oils. McDonald's and Wendy's said they would offer deals this year aimed at consumers seeking relief from rising prices.

Gary Pilnick, chief executive of WK Kellogg, said the company has been working to market cereals such as Frosted Flakes and Froot Loops to pressured consumers. An ad campaign launched in 2022, for example, encouraged consumers to eat cereal for dinner, pitching it as an easy, inexpensive alternative that, combined with milk and fruit, costs less than \$1 per serving. "Give chicken the night off," the campaign's tagline says.

Although it is rare for food prices to retreat, it is also unusual for prices to skyrocket as much as they have in recent years, said TD Cowen analyst Robert Moskow. He said he expects grocery prices to decline for a period this year as food makers come under pressure from consumers and retailers.

Kraft Heinz said it is focused on providing affordable options for families, and that while its costs rose 3% in 2023, it raised prices by 1%. WK Kellogg said that before raising prices, the company tries to combat higher costs through greater productivity.

Kellanova said it is working to keep prices as low as possible. Cahillane declined to comment on pricing for his company's products this year but said that the maker of Pringles and Pop-Tarts hasn't raised prices to pad its profit.

Cahillane said that as consumers become accustomed to seeing higher prices on supermarket shelves, they will adjust.

"Just like a gallon of gas, it becomes the new price and people get begrudgingly used to it," he said.

PNM Takes 'Deep Breath' after Avangrid Deal Fails, Eyes Solo Strategy for Now

by Garrett Hering

Standard and Poor's Global Market Intelligence – Feb. 6, 2024

PNM Resources Inc. is refocusing on its future as a growing but independent utility enterprise after its proposed **\$8.3 billion combination with Avangrid** Inc. **collapsed** in **January**. At least for now.

"While we were disappointed with the outcome, we have continued to advance our stand-alone business strategy to invest in the infrastructure needed to meet customer needs, enable the clean energy transition and diversify our rate base," PNM Resources CEO Patricia Vincent-Collawn said Feb. 6 on the company's fourth-quarter 2023 earnings call with investment analysts.

That strategy includes accelerating its earnings and dividend growth and rolling out a five-year, \$6.1 billion investment plan for regulated utility arms Public Service Co. of New Mexico and Texas-New Mexico Power Co., including transmission and distribution system expansion and a build-out of utility-owned battery storage.

"PNM hit a new system peak in 2022 and in 2023 after not seeing one in nearly a decade," Don Tarry, the company's president and COO, said on the call. "Clean energy mandates in New Mexico over the next 20 years will require additional transmission resources to integrate a growing amount of intermittent renewable resources on the system."

As PNM works through a "deep-breath phase" following the failure of its planned acquisition by Avangrid, executives and the company's board still believe that a larger-scale company could benefit from "cheaper capital" as well as access to "materials, supplies [and] employee opportunities," Vincent-Collawn added.

However, the CEO said the company would need to see a change in philosophy at the **New Mexico Public Regulation Commission**, which **rejected** the **merger** in **2021**. A subsequent **May 2023 decision** by the **New Mexico Supreme Court** to **deny PNM and Avangrid a request to remand the case back to state regulators** foreshadowed the termination of the deal.

"When the board talks about it, that's what we're balancing," the CEO said.

Earnings beat, revenue miss

On the call, PNM unveiled its consolidated earnings guidance for 2024 of \$2.65 to \$2.75 per diluted share. The company boosted its earnings-per-share growth target to 6%-7% per year between 2024 and 2028, up from a prior 5% growth target.

For 2023, PNM posted earnings of \$2.82 per diluted share, up from \$2.69 per share a year earlier and beating the S&P Capital IQ consensus estimate of \$2.78 per share. PNM's adjusted earnings of 18 cents per share in the fourth quarter of the year beat consensus by about 29%.

On a GAAP basis, the utility reported a loss of \$50.2 million for the quarter, partially attributed to rate credits associated with the San Juan Generating Station settlement and disallowances in a recent rate case decision.

The company generated \$1.94 billion in revenues in 2023, down from \$2.25 billion a year before and missing the consensus estimate by 7.6%. The company's fourth-quarter revenue of \$412.1 million was about 24% below consensus.

Oregon Loses Jobs for the First Time Since 2021

Mike Rogoway – Oregonian –

Oregon's spectacular rebound from the pandemic recession may be coming to an end.

In January, the state posted a **net loss in jobs compared** to a **year earlier** – the first time that has happened since 2021. And the **unemployment rate climbed above 4%** for the first time in more than a year.

This isn't a recession. Far from it.

Wages continue climbing and Oregon's labor market remains tight, by historical standards. Employers say it's still very hard to find workers.

Still, it's clear that the robust growth that got underway three years ago, in the wake of COVID-19, is at last winding down.

The **state had 1.97 million jobs in January**, according to the latest seasonally adjusted data from the Oregon Employment Department. That's about **5,000 fewer jobs than** it had a **year earlier**.

It's a **tiny decline overall, 0.2% on an annual basis**. **But** it's a **sharp contrast** to the **prior three years**, when Oregon was adding several thousand jobs each month as the state roared back from the pandemic.

The slowdown isn't a big surprise. **Oregon's workforce had regained** all the **jobs it lost to the pandemic by the start of last year** and, with the **state's population stagnant**, Oregon simply doesn't have more people to fill job openings.

Oregon's slight decline in employment compares to 1.9% job growth nationally over the last 12 months. Employment department economist Gail Krumenauer notes in [a new report](#) that Oregon's slowdowns came mostly in the latter part of the year.

Manufacturing was among Oregon's weakest sectors last year, according to Krumenauer, declining by 3.4%. The state's factories began shedding jobs in 2022 and continued their downward trajectory through most of last year.

Blame the semiconductor industry for much of that decline. Chipmakers pulled back last year from three years of outstanding growth. Economists are expecting better results over the next few years as factory upgrades get underway at Intel and other large Oregon chip factories.

In 2023, Oregon also shed jobs in retail – a sector that never fully recovered from the pandemic – and posted declines in categories that include building maintenance and call centers.

Oregon's biggest gains, Krumenauer found, were in health care, local government and hospitality jobs. Construction, which had appeared to be a standout sector last year, actually grew little over the past 18 months, according to newly revised state data.

State economists expect Oregon will resume adding jobs this year, growing by almost 16,000 positions over the next year. Krumenauer notes that works out to about 1% annual growth, anemic by recent standards but suggestive of a state economy that is solid, though no longer spectacular.

–

AEP Agrees to Sell Distributed Resources Business, Retains Retail Energy Unit

by Selene Balasta – Standard and Poor's Global Market Intelligence – May 14, 2024

American Electric Power Co. Inc. agreed **to sell** its **distributed resources business**, AEP OnSite Partners LLC, to funds advised by Basalt Infrastructure Partners LLC for net proceeds of about **\$315 million** in **cash**.

AEP OnSite Partners owns, operates and maintains a more than **300-MW portfolio** of behind-the-meter assets and distributed energy resources at nearly **100 sites across the US**. The assets' output is sold to schools, municipalities, hospitals and other commercial and industrial customers.

AEP plans to use the proceeds from the sale to support the company's financing plan, interim President and CEO Ben Fowke said in a May 13 news release.

The **sale** is **expected** to **close** in the **third quarter**, subject to regulatory approvals.

RBC Capital Markets served as AEP's financial adviser for the sale process. Morgan Lewis & Bockius LLP served as legal counsel to the company.

AEP Energy

AEP decided to retain its retail energy business, AEP Energy Inc., the company said in a separate May 13 news release.

AEP Energy is a competitive retail electricity and natural gas supply provider with 700,000 customers in 28 service territories in six states and Washington, DC.

"We determined that AEP Energy fits into our current portfolio and strategy by providing value to our customers and investors," Fowke said in the release. "As load continues to grow in our deregulated states, AEP Energy keeps us closely connected to opportunities to support this demand and provide tailored energy solutions to customers."

American Electric Power also reaffirmed its 2024 operating earnings guidance of \$5.53 to \$5.73 per share, long-term growth rate of 6% to 7% and funds-from-operations-to-debt target of 14% to 15%.

AEP Ohio

American Electric Power subsidiary AEP Ohio submitted a proposal to state regulators to create a new rate category intended for datacenter customers and cryptocurrency mining or mobile datacenter operations.

The proposal filed with the Public Utilities Commission of Ohio would impose certain requirements on new datacenters before facilities are built to serve them, according to a May 13 news release.

The proposed rate structure would cover new datacenters with loads greater than 25 MW and cryptocurrency mining operations or mobile datacenters with loads greater than 1 MW.

The datacenters would be required to pay for 10 years a minimum of 90% of the energy they say they need each month, even if they consume less.

"Demand for computing power from datacenters, which require enormous amounts of electricity, is being fueled by artificial intelligence and other new technologies," said Marc Reitter, AEP Ohio president and COO. "AEP Ohio is seeing unprecedented demand from datacenter customers, especially in the Central Ohio area. While we see no concerns serving current or new residential and existing commercial or industrial customers, we need to ensure that the right long-term investments are made to the electric grid."

AEP Ohio, which provides electricity to 1.5 million customers, expects that additional large users will require investment in new extra-high voltage transmission lines, which could take seven to 10 years to plan and construct.

Big Rally in Bonds Promises Boost for Housing

by Sam Goldfarb – WSJ – Jun. 17, 2024

10-year U.S. Treasury yield

Yield on mortgage benchmark has slid sharply, as data bolster rate-cut bets

Signs of cooling inflation have driven a furious bond rally this month, boosting stocks to records and promising to inject some life into the listless housing market.

The **sharp rise in bond prices** has **pushed down** the yield on the **10-year U.S. Treasury note by nearly a half percentage point since late May**. The yield on **Friday** notched its largest two-week decline of the year, **settling at 4.212%**.

A benchmark for mortgage rates and other borrowing costs across the economy, the 10-year yield is heavily influenced by investors' expectations for short-term interest rates set by the Federal Reserve. Still, investors' renewed appetite for bonds was barely slowed last week when the Fed suggested it would be cautious about cutting rates in the coming months.

Of the **19 officials** who submitted interest-rate projections last Wednesday, the **median forecast** was for just **one rate cut this year**. That was **down from** their forecast in **March** for **three cuts**, and fewer than the two-cut projection that many analysts thought was possible.

For investors, however, the Fed's outlook didn't matter as much as a run of economic data that has bolstered hopes that inflation is easing again and back on track to reach the central bank's 2% target.

Futures markets Friday showed investors think there is a better than **70% chance** that the **Fed will cut rates at least twice this year**, with the **first cut most likely** happening in **September**, according to CME Group data. That was **double** the **chances seen in late May**.

Recent evidence has indicated that a streak of surprising price jumps during the first few months of the year "was more an aberration than a break in the trend of inflation moderating," said Andrzej Skiba, head of U.S. fixed income at RBC Global Asset Management.

That has given investors the confidence to bet on rate cuts, especially since the Fed released its forecasts just hours after an encouraging consumer-price index report. Many officials might have been reluctant to change their predictions at the last minute, Skiba said.

If sustained, the relatively steep decline in Treasury yields could have major implications for markets and the economy.

Higher yields can hurt stocks by driving up borrowing costs for businesses and consumers and threatening to slow the economy. They **can also make stocks look less attractive** by giving investors a higher return for holding risk free government bonds to maturity.

Stocks have managed to defy rising bond yields for much of this year, fueled in part by investor excitement about artificial intelligence. Even so, they have repeatedly hit rough patches when the 10-year yield has climbed especially high.

The S&P 500 fell 4.2% in April, after stubbornly hot inflation pushed the 10-year yield above 4.5%. The index also edged lower in the second half of May when the 10-year yield climbed back above that threshold. It is now up 2.9% in June, with the benchmark yield retreating.

Existing home sales*, monthly

Even modest fluctuations in Treasury yields can have a serious impact on the housing market.

After mortgage rates declined along with 10-year yields at the end of last year, for example, sales of existing homes climbed to an annual rate of 4.38 million in February, from 3.85 million in October, according to the National Association of Realtors. Sales then declined again when 30-year mortgage rates climbed back above 7%.

Given the volatility in yields since the Fed started raising rates in early 2022, some investors caution they could easily rise again, making any relief for prospective home buyers fleeting.

At the start of the year, investors were brimming with confidence about the outlook for rate cuts after a string of good inflation reports. Then they got a rude awakening when progress stalled over the next three months.

A resilient economy could also reduce the Fed's urgency to cut rates even if inflation does continue to moderate.

Investors have recently been pleased by signs that the labor market is cooling, a trend that should make it easier for inflation to keep falling. Despite robust job growth, the unemployment rate ticked up to 4% in May from 3.4% in the middle of last year. Job openings have also declined sharply, as has the number of workers voluntarily leaving their jobs in pursuit of new ones.

Still, none of this has generated much concern among investors that the economy is losing too much momentum, given how historically tight the labor market was not that long ago, said Vishal Khanduja, a fixed-income portfolio manager at Morgan Stanley Investment Management.

He said demand for workers likely needs to ease even further for the economy to fully normalize.

Some investors, though, are betting that yields can keep dropping.

Regardless of when the Fed starts cutting interest rates, traders are wagering the central bank will eventually stop once they reach about 4%, from their current target range of 5.25% to 5.5%, said Ed Al-Hussainy, senior interest rates and currency analyst at Columbia Threadneedle.

That would mean the economy could withstand much higher rates than what was in place before the Covid-19 pandemic hit in 2020. But Al-Hussainy said he is increasingly skeptical.

"If the labor market is returning to a place that kind of looks like pre-Covid, it will be very unusual for rates to not be aligned with that," he said.

CenterPoint to Sell Gas Distribution Assets in Louisiana, Mississippi for \$1.2B

by Nephele Kirong

Standard and Poor's Global Market Intelligence – Feb. 20, 2024

CenterPoint Energy Inc. has reached a **deal** to **sell** its **natural gas distribution operations** in **Louisiana and Mississippi** for **\$1.2 billion** to **Bernhard Capital Partners Management LP's Delta Utilities**.

The assets covered by this transaction include approximately 12,000 miles of main pipeline serving approximately 380,000 customers. The price tag represents approximately 32 multiple of the two local distribution companies' (LDCs) earnings in 2023, CenterPoint said in a Feb. 20 news release announcing the transaction.

The anticipated \$1 billion in after-tax proceeds will be recycled into service territory where **CenterPoint has both electric** and **natural gas operations** or where it has a larger presence "at a valuation that is more efficient than issuing common equity," President and CEO Jason Wells said.

"The sale will also enable us to redeploy approximately \$1 billion of future capital expenditures intended for Louisiana and Mississippi into jurisdictions with less regulatory lag, thereby enhancing the ongoing earnings power of the company," Wells added. LDCs in the two states represent less than 4% of the company's overall rate base.

In **January 2022**, **CenterPoint closed** the **\$2.15 billion sale** of its **Arkansas and Oklahoma gas utilities to Summit Utilities** Inc. **CenterPoint continues** to **hold natural gas utilities** in **Indiana, Minnesota, Ohio and Texas**. It also **has electric utilities** in **Indiana and Texas**.

For **Bernhard** Capital Partners, this newly announced transaction **builds upon** its previously announced **acquisition of Entergy** Corp.'s **natural gas distribution businesses** in **Louisiana**. "**Once both transactions** are **complete**, **Delta** Utilities will be a **leading natural gas utility** in **Louisiana and Mississippi** and among the top 40 providers in the United States," Jeff Jenkins, founder and partner at Bernhard Capital Partners, said in a separate statement.

The **CenterPoint transaction** is **expected** to **close** toward the end of the **first quarter** of **2025**, **subject to** customary closing conditions, including antitrust clearance and **state regulatory approvals**.

Morgan Stanley & Co. LLC and Wells Fargo Securities LLC were CenterPoint's financial advisers, and Latham and Watkins LLP, Phelps Dunbar LLP and Brunini Grantham Grower & Hewes PLLC were its legal advisers.

Jefferies LLC was lead financial adviser to Bernhard Capital, with Scotiabank also as financial adviser and Kirkland & Ellis LLP as legal adviser. Jefferies LLC and

Scotiabank provided a debt financing commitment to Bernhard Capital in connection with the transaction.

Cleco Closes \$600M Sale of Unregulated Electric Utility Business

by Selene Balasta

Standard and Poor's Global Market Intelligence – Jun. 6, 2024

Cleco Corporate Holdings LLC **completed** the **sale** of its **unregulated electric utility business to Atlas Capital Resources IV LP** for **\$600 million**.

Atlas Capital affiliates Big Pelican LLC and Pelican South Central LLC acquired Cleco Cajun LLC's generating assets and wholesale cooperative contracts. **Cleco Cajun** is an unregulated electric utility that owns 14 power plants with a rated capacity of 3,379 MW and wholesale contracts serving nine Louisiana electric cooperatives.

Under the deal, **\$500 million** is due **at deal closing and \$100 million** is **payable 24 months after closing**, subject to closing price adjustments, according to a Form 8-K filed June 4.

Consumers Fed Up with Food Costs Ditch Big Brands

by Heather Haddon and Jesse Newman – WSJ May 6, 2024

Consumers are **voting with** their **wallets** – and some of the U.S.'s best-known food brands are losing.

Coffee drinkers are leaving Starbucks's loyalty program. Chips Ahoy cookies are lingering longer on grocery-store shelves. Fewer customers are ordering at fast-food drive throughs and kiosks, pressuring companies such as Wendy's and McDonald's.

For about three years following the **Covid-19 pandemic**, **food companies pushed through** a series of **sharp price increases**, saying they needed to recoup their own rising costs – and that consumers would adjust to stick with their favorite brands. As a result, the **portion of U.S. consumers' income spent on food** has **reached the highest level in three decades**.

Now, some consumers are hitting their limits. Restaurant chains and some food manufacturers are reporting sliding sales or slowing growth that they attribute to consumers' inability – or refusal – to pay prices that are in some cases one-third higher than during pre-pandemic times.

In Laguna Niguel, Calif., Denis Montenaro, said he recently headed to McDonald's for a favorite order: a bacon and egg bagel with a coffee. The 75-year-old retired manager was stunned to see the \$9.67 bill.

“I’m done with fast food,” Montenaro said.

The **pace of food inflation** in supermarkets and restaurants has **slowed** significantly over the past year, **but prices** for goods from burgers to mayonnaise are **still far more expensive than they used to be**. **Fast food prices** in **March** were **33% higher than 2019 levels**, according to the Labor Department, while **grocery prices** were **up 26%**.

U.S. fast-food traffic declined 3.5% in the first three months of this year compared with the same period in 2023, according to market-research firm Revenue Management Solutions. U.S. grocery sales of food and beverages fell 2% by volume for the 52 weeks ended April 20 compared with the year-ago period, according to NielsenIQ.

McDonald’s and other restaurant chains have warned for months that **consumers** are **reining in spending**, particularly low-income diners. But the depth of their recent pullback still caught some U.S. restaurant executives by surprise, they said last week.

“The macro headwinds have been more significant than I think we even anticipated coming into the year,” McDonald’s Chief Financial Officer Ian Borden said on a recent investor call. McDonald’s said its pricing remains competitive in the U.S., including in California, where a higher state minimum wage for fast-food workers has contributed to rising prices.

At Starbucks, U.S. traffic dropped 7% in the three months ended March 31, the steepest quarterly decline since at least 2010. Starbucks is losing occasional customers, executives said, and its active loyalty-rewards users declined by 1.5 million members from the end of the first quarter to the end of the second.

David Michael, a 58-year-old attorney from El Dorado Hills, Calif., said he used to get McDonald’s at least weekly but stopped a few months ago now that some sodas cost \$1.69 instead of a dollar, and his regular meal of a small burger, fries and a Coke has climbed. He said he quit Starbucks after the price for a tall mocha climbed to \$5.25.

“It’s not that I can’t afford it now,” Michael said. “It’s the frustration that the same meal now costs nearly double what it did.” Historically, consumers who find restaurants too expensive wind up eating more at home. But some packaged-food giants are losing sales, too.

Kraft Heinz said last Wednesday that its quarterly sales fell 1.2% as higher prices and **reduced food-stamp benefits in the U.S.** weighed on demand. Kellanova, which makes Pringles and Pop-Tarts, said Thursday that North American sales volumes slid 5% after the company increased prices by the same amount.

Prices for goods from burgers to mayonnaise are far higher than they used to be.

At snack maker Mondelez International, cookie sales are under pressure, especially Chips Ahoy, which the company said are favored by lower-income shoppers. Mondelez has long touted consumers’ loyalty to its brands as the company raised its

prices, but Chief Executive Dirk Van de Put said shoppers are now contending with **lower food-stamp benefits and higher interest rates – along with general inflation.**

“We have surpassed certain price points, and that is having a big effect,” Van de Put said. While Oreos are gaining market share, he said that Chips Ahoy is losing ground to cheaper store-brand chocolate- chip cookies.

The rebellion from consumers is prompting some food companies to shift their strategies, even if offering deals comes at a cost. McDonald’s and Starbucks plan to launch more promotions and communicate them more clearly to consumers. Mondelez said it would offer pricing specials and smaller pack sizes, and Kraft Heinz is rolling out new mac-and-cheese products.

Some restaurant chains, such as Domino’s Pizza and Cava, have chosen to stand firm on their prices, resisting raising them to try to gain a bigger share of customers, even if it cuts into profit margins. Domino’s has kept its national mix-and-match deal pricing at \$6.99 since 2022, helping it to steal share from competitors, Domino’s CEO Russell Weiner said. “Customers just don’t want surprises,” Weiner said in an interview.

Van de Put said Mondelez will introduce new, smaller multipacks for Clif Bar, for example, with 10 energy bars instead of 12 inside, to offer the bars at a lower price.

Kellanova CEO Steve Cahillane said the company is offering more deals and adjusting their timing throughout the month, promoting large pack sizes at the beginning of the month, when consumers have the most cash on hand, and smaller ones toward the end of the month.

“With Pop-Tarts, you may not buy the 20-count, you may buy the eight-count,” Cahillane said. Kellanova said its comparable sales rose 5% for the latest quarter and that volume declines in North America continue to moderate.

Starbucks, which has long promoted itself as a premium brand, is now trying to emphasize value. The world’s largest coffee chain by sales for the first time in July plans to open up deals limited to its app to customers who aren’t loyalty members.

“These efforts take time, but our team is working with great energy and speed,” Starbucks CEO Laxman Narasimhan said. Starbucks executives said their customers care about convenience and new products, not just price.

Penny Rackley, a life coach and automotive-services franchise owner in Texas, said she and her husband have scaled way back on their packaged food purchases in recent years. Rackley, 58, said she has cut pasta sauce and snack mixes from her shopping cart as prices surged, opting to make homemade versions after routinely discovering that the products were \$2 or \$3 more than she was expecting.

“It’s gotten to where you think they’ve made a mistake,” Rackley said. “Over time you just feel like a boob.”

Costs of Owning a Car in the US Rising Ever Higher, Complicating Inflation Path

by Brian Scheid— Standard and Poor’s Global Market Intelligence – Apr. 24, 2024

US consumers are **facing higher costs** for **auto insurance, repairs, gas, parking** and **tolls**, all adding extra pressure to inflation even as the once-skyrocketing price of new and used vehicles has largely been tamed.

Insurance prices were **up 22.2%** in **March from a year earlier**, while **repairs increased 11.6%** and **tolls and parking fees** rose **5.3%**, according to the latest consumer price index data from the **Bureau of Labor Statistics**.

While these prices may make up only a sliver of America's consumer price picture – motor vehicle insurance accounts for just 2.8% of the consumer price index's overall weight, for example – they may typify the overall persistence of inflation as the Federal Reserve struggles to bring it closer to a 2% target.

"Once these prices go up, they tend to remain elevated," Peter Nagle, an auto economist at **S&P Global Mobility**, **said** in an interview.

Costs associated with owning a car are on the rise

Change from 1 year ago (%)

Costs Jump

The cost of insurance, which has increased at a double-digit pace since September 2022, has risen in response to the global semiconductor shortage and supply chain stress which drove up prices throughout the auto industry.

"The autos sector at large is still working through some of the ripple effects of COVID," Oren Klachkin, a financial market economist at Nationwide, said in an interview. "It is a reminder that while inflation is down from its recent peak we aren't back to pre-pandemic dynamics."

The rapid rise in costs accompanying car ownership comes as the once-skyrocketing costs of buying a vehicle have come closer to Earth. The **price of new and used motor vehicles fell 0.8% year over year in March**, according to the latest US government data. This marked a steep decline from February 2022, when new and used vehicle prices rose 23.5% from the previous year, by far the biggest annual increase for these prices in US consumer price index history.

"Vehicle prices tend to be less sticky," Nagle with Mobility said. **"As inflation changes, as rates come down, vehicle prices respond much more quickly than the more service-oriented parts of the economy."**

After 2022 dip, US light vehicle sales forecast to climb (millions)

Still, the rise in prices of services used by car owners – gas, repairs and maintenance, parking, insurance and licensing – pushed **overall vehicle ownership costs up 12% year over year in March**, according to the latest data from NerdWallet's vehicle ownership costs index. The index's latest reading is the highest in 16 months, though below the peak of 26% in June 2022.

"Cars are more valuable now, they're worth more, they cost more to repair when they're in an accident and the insurance company has to pay out more," Elizabeth Renter, a data analyst with NerdWallet, said in an interview. "Most people are dealing with these costs in some way, shape or form."

These relatively high costs could be holding back consumers from buying new vehicles. Buying conditions, while recovered from the lows of June 2022 remain deeply negative, according to the University of Michigan's latest data.

Consumer Confidence Hit

For now, the rise in costs that come with car ownership is not having an outsized impact on the US economy, but car and truck owners could work to cover the increases by drawing down savings or increasing their debt to maintain savings, according to Nancy Vanden Houten, lead US economist at Oxford Economics.

"Over time, those options could be exhausted and there might be a more discernible impact on consumer spending if these costs remain elevated," Vanden Houten said in an interview. "Higher costs for essentials like car maintenance could reduce discretionary spending for some consumers."

In addition, these cost increases could cause declines in consumer confidence, even with the job market strong and the unemployment rate below 4%, Vanden Houten said.

And while the odds of a recession remain relatively low, a significant rise in gas prices could further erode consumer confidence and boost that recession risk.

"A sharp rise in gasoline prices – say if oil prices jump sharply due to geopolitical tensions – could dampen other types of consumer spending and weigh on the overall economy," Vanden Houten said.

ECB Cuts Interest Rates for First Time Since 2019

by Tom Fairless and Paul Kiernan – WSJ – Jun. 6, 2024

Rate reduction widens the central bank's policy gap with the Federal Reserve.

President Christine Lagarde speaks at Thursday's ECB press conference in Frankfurt.

The **European Central Bank lowered interest rates** by a **quarter point**, beginning to reverse a historic series of rate increases and widening a policy gap with the Federal Reserve, which isn't expected to follow suit for months.

The ECB said it would reduce its key interest rate **to 3.75%** from 4%, its **first rate cut** in almost **five years**. Future interest-rate decisions will be based on incoming economic data, the bank said in a statement. The ECB's rate-setting committee "is not pre-committing to a particular rate path," the bank said.

The rate cut is a significant moment for investors and the world economy. It marks an **inflection point** in recent **monetary policy** and sends a signal that relief is on the way for households, indebted governments and businesses that have reined in investments in the face of high borrowing costs.

The cut also potentially puts the ECB and the Fed on different tracks and widens an existing gap in borrowing costs between the U.S. and Europe. While this could boost Europe's growth in the short term, the gap could also complicate the work of policymakers, especially in Europe.

Recent economic data suggest that Europe is facing many of the same sticky inflationary pressures in wages and services as the U.S. Underlying inflation in the eurozone, stripping out volatile food and energy prices, ticked higher to 2.9% last month from 2.7% in April. In the U.S., core inflation declined to 3.6% in April.

At a news conference, ECB President Christine Lagarde said that while inflation had come down, wage growth remains elevated and inflation is likely to stay above its 2% target "well into next year." The bank's inflation forecasts for this year and next were revised higher.

Lagarde said little concrete about the likely future path of interest rates, stressing that everything depends on incoming data. "There's a **strong likelihood**" that the **ECB** will **continue to cut rates** in the **months ahead** but "what is very uncertain is the speed of travel and the time it will take," she said.

Investors are closely monitoring any divergences between the world's major central banks, which often ripple across asset and currency markets. For now, they are **betting** on only limited divergence: After Thursday's cut, the **ECB, Fed and Bank of England** are each expected **to cut interest rates** by an average of 0.4 percentage point **by the end of the year**, according to market data from Refinitiv. That suggests one additional quarter-point rate cut and some likelihood of another for each. The Fed is expected to hold interest rates in a range between 5.25% and 5.5% at its policy meeting next week.

Top ECB officials, including Lagarde, had prepared markets for a rate cut this week, making it hard to shift course even as incoming economic data showed growth and inflation tracking higher than expected, analysts said.

"They cornered themselves," said Dirk Schumacher, a former ECB official now at French bank Natixis.

A scenario where the ECB cuts rates further while the Fed stays put would risk reducing the euro's strength against the dollar, pushing up the cost of imports and lifting eurozone inflation higher. This could delay further loosening in Europe, whose economy is in bigger need of relief than the robustly growing U.S. economy.

Despite the sharp interest-rate increases of the past two years, **economic growth** in the **U.S. has proven resilient**. That **isn't the case in Europe, where** the **economy** has been **largely stalled since late 2022**, though growth picked up in the three months

through March and the continent's south has done comparatively well due partly to a tourism boom.

Job creation has been strong on both sides of the Atlantic and wage growth remains high, partly reflecting tight labor markets. Wages are an important input to services-price inflation in the eurozone, which has been running at a roughly 4% annual rate since November.

Just a few months ago, the Fed appeared to be on the same track as the ECB. As of mid-January, market participants were expecting six 0.25-percentage-point cuts from the ECB and between six and seven from the Fed. Some bigshot Fed watchers, including Goldman Sachs chief economist Jan Hatzius, had predicted the Fed would start cutting in March.

A resurgence of U.S. inflation scuttled those hopes. Prices rose at an annual rate of 4.1% in the first four months of 2024, leading some Fed officials to suggest further rate rises might be in the cards.

"We did not expect this to be a smooth road, but these were higher than I think anybody expected," Fed Chair Jerome Powell said on May 14 of the U.S. inflation readings.

At the same time, indicators of the U.S. labor market and economic activity suggest there is little urgency for the Fed to cut rates as aggressively as forecasters predicted earlier this year.

A broad gauge of underlying demand in the U.S. economy, called "final sales to private domestic purchasers," rose a healthy 2.8% in the first quarter. The economy has continued adding jobs, and the unemployment rate stood at 3.9% in April, which is low by historical standards. Wage growth has slowed but likely remains too high for inflation to return sustainably to 2%, Fed officials say.

"The underlying economic dynamic is still much more robust in the U.S. than in Europe," said Gregory Daco, chief economist at EY-Parthenon.

Fed officials have stressed that economic data will guide any changes to monetary policy. To cut rates, Powell said in May, the Fed would have to see lower inflation or an "unexpected weakening" in the job market.

The ECB move leaves the Fed late to the rate-cut party among developed-market central banks. The **Swedish, Swiss and Canadian central banks** have **already trimmed their key policy rates this year**. The **Bank of Japan never fully took part in the rate-hiking cycle**. In the U.K., where inflation is also proving sticky, investors are fully pricing in one quarter-point rate cut by the Bank of England by November, according to data from Refinitiv.

"We need to see more evidence that inflation will stay low before we can cut interest rates," Bank of England Gov. Andrew Bailey said last month after the bank kept rates on hold.

Some ECB policymakers remain concerned about the difficulty of returning inflation all the way to its target, known as the last mile. Robert Holzmann, governor of Austria's central bank, dissented on Thursday's decision, according to a spokesman.

"Data-based decisions should be data-based decisions," Holzmann said in a statement. The Austria central-bank governor would have preferred to keep rates unchanged, according to a person familiar with the matter.

"By cutting once, the ECB shifts the debate from, 'Should there be a cut?,' to, 'What does the rate path look like?,'" said Stefan Gerlach, a former Irish central-bank official who is now chief economist at EFG Bank in Zurich.

"So I think they have screwed up communications a little bit. They have talked too much. They don't know the future."

—

Fed Projects Just One Cut This Year Despite Mild Inflation Report

by Nick Timiraos and David Uberti – WSJ – Jun. 12, 2024

Central bankers see inflation returning closer to their goal next year after longer wait on reductions.

Left: Fed Chair Jerome Powell said that if the economy evolves as expected, the median participant projects the appropriate level of the federal funds rate to be 5.1% at the end of this year, 4.1% at the end of 2025, and 3.1% at the end of 2026. "The sense of this is that rate cuts that might have taken place this year will take place next year. There are fewer rate cuts this year, but one more next year. If you look at year end 2025 and 2026, you are almost where you would have been, just its moved later."

Federal Reserve officials **penciled in just one interest-rate cut for this year**, indicating most are in no hurry to lower rates, even after a widely watched report Wednesday showed inflation improved last month.

The **central bank** also **held its benchmark rate steady, in a range between 5.25% and 5.5%**, a move that was widely expected.

New economic projections showed 15 of 19 officials expect the Fed will reduce rates this year, with that group roughly split between one or two rate cuts. The median, or midpoint, of those projections reflected expectations of one reduction.

Fed officials meet four more times this year, in July, September, November and December, and the rate projections tempered investors' expectations of a September cut. Those expectations rose earlier Wednesday after the inflation report.

After setbacks at the start of the year, more recent inflation readings have shown improvement, Fed Chair Jerome Powell said at a news conference. “We’ve made pretty good progress on inflation,” he said. Wednesday’s report was “a step in the right direction ... but you don’t want to be too motivated by any single data point.”

In order to cut rates, “we’ll need to see more good data,” he said.

Powell’s caution didn’t deter many investors in Wednesday trading. The tech-heavy Nasdaq Composite advanced 1.5%, notching a fresh record, while the S&P 500’s 0.9% gain similarly pushed it to an all-time high. **Benchmark 10-year Treasury yields dropped to 4.294%**, extending June’s bond rally. For **bonds, prices move inversely to yields.**

The latest **Fed decision came** hours **after** the **Labor Department** reported the **Consumer-Price Index** – a measure of goods and services costs across the economy – was essentially **flat from the month before and up 3.3% from one year earlier.** In April, prices rose 3.4%.

Core prices, which exclude volatile food and energy items, posted their mildest gains since 2021 and rose 0.2% from April, below economists’ expectations.

“This was a **very encouraging number,**” said Laurence Meyer, a former Fed governor who runs an economic advisory firm. “I’d need to see more before cutting, but I think **September is in play**” for the **first-rate cut.**

The report showed a slowdown in price pressures was broad based and could help Fed policymakers restore their confidence that inflation will return to their target.

Note: Midpoint of range. Projections are median values for year-end 2024, 2025 and 2026.

Source: Federal Reserve

Officials were surprised in the second half of last year by how rapidly price growth slowed despite strong spending and hiring. Inflation turned around after that and was unexpectedly hot at the start of this year, derailing expectations by investors and the Fed itself that the central bank might have been able to cut rates by now.

Investors were highly focused Wednesday on whether a majority of 19 officials who submit quarterly interest-rate and economic projections would pencil in two rate cuts or just one. In March, a narrow majority of them had [penciled in three cuts](#), but that was before stubborn inflation readings effectively restarted the clock on rebuilding confidence that inflation would subside over the next year.

Officials submitted their rate projections late last week and had the option to revise them up through the end of Wednesday's meeting. Some analysts said the projections looked stale given the CPI and could have reflected a reluctance to change them on the basis of a single data release. Powell, underscoring officials' cautiousness in modeling inflation, twice described the inflation forecasts underlying those rate projections as "conservative."

Officials will have just one more inflation reading before their next policy meeting in July, but they will have three more monthly reports by the time of their meeting after that, in mid-September. The September meeting is the Fed's last gathering before the Nov. 5 presidential election.

"The story is that they're not ready to cut rates. We are on an inflation roller coaster. You have to be careful here," said Meyer.

Consumer-price index, change from a year earlier

Note: Core excludes food and energy prices.

Source: Labor Department

The Fed raised rates at the most rapid pace in decades in 2022 and 2023 to combat high inflation, and many economists have marveled at how the economy has weathered those increases so far.

Powell and his colleagues don't want to cut rates without more convincing evidence their policy stance is as restrictive as they think it is – but they are uneasy that by the time they see that evidence, it will be too late to avoid a big rise in unemployment.

They face two risks. One is that there is more pain to come as banks and businesses least prepared for and most vulnerable to higher rates will encounter serious challenges if rate cuts don't come down in the months ahead, as widely anticipated.

Wages and prices, change from a year earlier

Notes: Consumer-price data aren't seasonally adjusted; wage data are average earnings for all private workers and are seasonally adjusted.

Source: Labor Department

The other is that rate cuts ignite market rallies and increased spending that sustains inflation above the Fed's 2% target, which is measured against a separate index maintained by the Commerce Department. Core prices in that index rose 2.8% in April.

On Wednesday, officials revised up their projections for inflation and now anticipate core prices to rise 2.8% in the fourth quarter from a year earlier, up from 2.6% in their March projections. They see core inflation slowing to 2.3% next year and 2% after that.

Last week, central banks in Europe and Canada made their first interest-rate reductions of the current cycle. Growth has been weaker abroad than in the U.S., where many homeowners have been shielded from the effects of higher interest rates because they locked in ultralow 30-year, fixed-rate mortgages in 2020 and 2021.

Fed officials have puzzled in recent months over why their interest-rate stance, which influences the cost of mortgages, business debt, auto loans and credit cards, hasn't done more to slow the economy. But several measures of labor-market conditions are back to levels last seen in 2018 and 2019, when growth was solid, but inflation was low – a sign that monetary policy and the resolution of pandemic-related shocks have slowed economic activity.

Powell has attempted to explain this mystery by pointing to how a surge of immigration and workforce participation last year boosted demand as well as the ability of the economy to supply more goods and services.

Americans remain gloomy about the state of the economy even though steady job and income growth – and significant gains in asset prices such as stocks and houses – are powering spending.

Consumers are taking little comfort from milder annual inflation rates because the run-up in the price of everything from housing to groceries to cars since 2021 has been unusually large. Over the last four years, prices are up 22% in the CPI, compared with 7% in the four years before that.

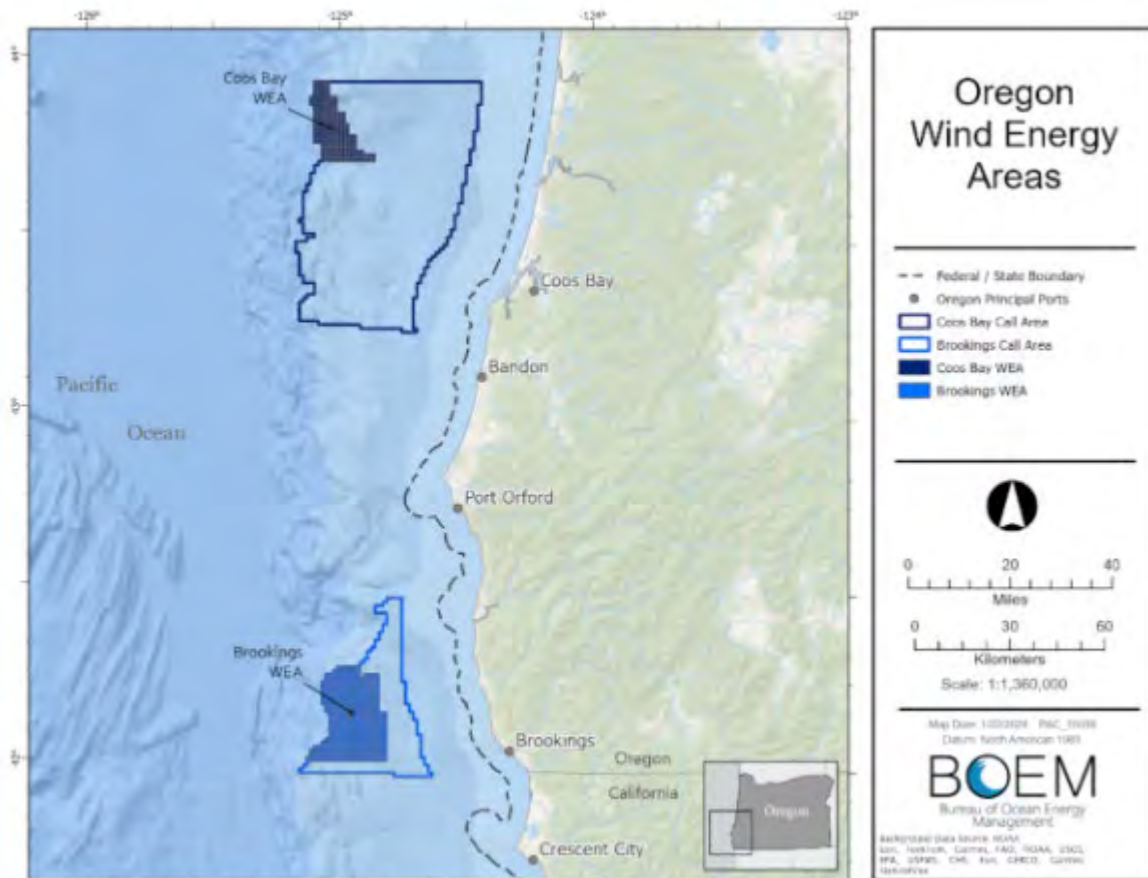

And slower inflation hasn't yet translated to lower borrowing costs: The 30-year fixed-rate mortgage has hovered around 7% in recent months, near the highest level since 2001, while banks are charging 22% interest on credit cards.

Feds Ready to Launch Auction for Wind Farm Leases Off The Oregon Coast

by Gosia Wozniacka – Oregonian – May 5, 2024

[Feds ready to launch auction for wind farm leases off the Oregon coast - oregonlive.com](https://www.oregonlive.com/news/feds-ready-to-launch-auction-for-wind-farm-leases-off-the-oregon-coast/)

The map shows the two wind energy areas approved off the Oregon coast. The federal government says it is ready to sell commercial wind energy leases for the two areas.

The federal government says it is ready to sell commercial wind energy leases for two areas off the Oregon coast, the next step to developing **floating wind** technology in the state.

Tuesday's announcement by the **U.S. Bureau of Ocean Energy Management** does not include a lease auction date but the agency said it would hold the auction and issue leases later this year.

The **proposed lease sale in Oregon** includes two areas totaling nearly 195,000 acres. They **have** the potential to generate 2.4 gigawatts of wind power – enough energy for about 830,000 homes.

The **Coos Bay wind energy area**, about 61,000 acres, is **32 miles from shore** and the **Brookings wind energy area**, more than **twice as large**, is about **18 miles from shore**.

Three of the common types of floating wind turbine platform. Source: NREL

Oregon's wind leases are part of the Biden administration's aggressive development of offshore wind on both coasts, which the federal government deems critical to the country's clean energy transition.

Earlier this month, Secretary of the Interior Deb Haaland announced up to 12 potential offshore wind energy lease sales through 2028, including Oregon's. That's in addition to the eight already approved offshore wind projects throughout the U.S, two of which are under construction.

In Oregon, the federal agency is seeking feedback on certain lease provisions and conditions, auction details, criteria for evaluating competing bids and procedures for lease award, appeals, and lease stipulations and execution.

It proposes, among others, to award bidding credits to companies that commit to supporting workforce training programs for the offshore wind industry and/or to buying U.S.-made offshore floating equipment. Similarly, bidding credits could also be given to companies that commit to executing community benefit agreements with tribes, local communities, ocean users or other groups affected by the wind projects.

Some of the strongest offshore wind power potential in the U.S. is in areas where the water is too deep for fixed turbines, including off the West Coast. NREL

The agency also issued a draft environmental assessment of potential impacts associated with site surveying and other preliminary activities by companies that win the leases.

More specific environmental assessments associated with specific wind farm construction proposals will follow the lease awards, federal officials said.

Winning companies will anchor up to six buoys with weather measurement devices such as vanes and barometers at fixed locations in the wind energy areas. The devices will gather a variety of data and monitor and evaluate the viability of wind as an energy source in the areas.

The companies also will dredge the seafloor for sediment samples and survey the seafloor to ensure that mooring systems, turbines and cables can be properly located, as well as look for hazards. They also will conduct biological surveys to collect data on potentially affected habitats, marine mammals, birds, sea turtles and fish.

According to the draft assessment, the impact of this preliminary work to critical habitat, protected marine mammals, birds and sea turtle species will be negligible. The assessment also found that the buoys and related activities could temporarily limit commercial fishing grounds and entangle gear but the impact would be minor.

The duration of the preliminary work would be five years or less, the assessment said.

Local groups representing coastal fishermen and Indigenous communities have long raised concerns about how offshore wind farms would restrict fishing areas, affect marine life and impair the views that are sacred to tribes.

The **Confederated Tribes of the Coos, Lower Umpqua and Siuslaw** Indians said they were “extremely disappointed” in the decision to move forward with the lease sales.

“The Tribe has consistently urged that BOEM [the Bureau of Ocean Energy Management] delay moving forward with wind energy development until a better understanding is made of the impacts to fish, wildlife, the marine environment, and cultural resources important to the Tribe,” said Tribal Council Chair Brad Kneaper. “No one ... has an understanding on how wind development will impact the fragile marine environment.”

The fishing groups and tribes also said the federal consultation process has been superficial and the government did not take their concerns into account.

“They claim they have collaborated with us, which is completely false,” Heather Mann, executive director of Midwater Trawlers Cooperative, told The Oregonian. “BOEM only cares about getting these leases out before the election. This announcement is a huge slap in the face to fishermen, coastal communities and everyone who cares about doing this process right, not about rushing to meet a political deadline.”

In March, the Legislature passed **House Bill 4080**, which established strong labor standards for Oregon offshore wind development and directed the state Department of Land Conservation and Development to create a roadmap that would consider all benefits and ramifications of offshore wind energy development. That roadmap must be submitted to the Legislature by September 2025.

Last week, an informal working group of Oregon fishing industry, environmental and labor interests delivered recommendations to Gov. Tina Kotek’s office for the offshore wind roadmap.

Among the recommendations is that the state develop offshore wind while protecting the fishing and seafood industry, cultural and archaeological resources and culturally significant views for tribes.

John Romero, a spokesperson for the Bureau of Ocean Energy Management, did not address the criticism from fisheries and tribes. The agency said it engaged the tribes, local communities and other stakeholders in the lease development process and prioritized avoiding offshore fishing grounds and identifying vessel transit routes when selecting the wind energy areas.

The public can comment on the environmental assessment until May 31. A virtual public meeting will also be held on Tuesday, May 21.

Fertility Rate Falls to a Record Low Amid Social Shifts

by Jennifer Calfas and ANTHONY Debarros – WSJ – Apr. 25, 2024

U.S. women are giving birth at record-low rates.

The total fertility rate fell to **1.62 births per woman in 2023**, a **2% decline from a year earlier**, federal data released Thursday showed. It is the **lowest rate recorded since the government began tracking it in the 1930s**.

The decline reflects a continuing trend as U.S. women navigate economic and social challenges that have prompted some to forgo or delay having children. A confluence of factors are at play. Women in the U.S. are having fewer children, later in life. Women are establishing fulfilling careers and have more access to contraception.

At the same time, young people are also more uncertain about their futures and spending more of their income on homeownership, student debt and child care. Some women who wait to have children might have fewer than they would have otherwise for reasons including declining fertility.

“People are making rather reasoned decisions about whether or not to have a child at all,” said Karen Benjamin Guzzo, director of the Carolina Population Center at the University of North Carolina at Chapel Hill. “More often than not, I think what they’re deciding is ‘Yes, I’d like to have children, but not yet.’” Total fertility estimates the number of children a woman would give birth to in her lifetime. The estimates don’t account for what women actually decide in later years, said Brady Hamilton, a co-author of the report from the federal Centers for Disease Control and Prevention’s National Center for Health Statistics.

The number of births last year was the lowest since 1979, according to provisional data. About 3.59 million children were born in the U.S. in 2023, a 2% drop compared with 3.66 million in 2022.

The figures are provisional and likely to adjust slightly when final data are released later this year.

The total fertility rate peaked during the **baby boom after World War II**, with a rate of more than **three births per woman** before falling through the 1960s and 1970s. More recently, the total fertility rate has declined steadily since hitting 2.12 births per woman in 2007, before the financial crisis.

The **rate** in the **U.S.** has remained generally **under** or around 2.1 children per woman, or what is known as the "**replacement rate**," since the 1970s. A rate of 1.62 in 2023 marks a new low and another sign of years of decline.

Births in 2023 were lower than any year since 1979, the data show. U.S. births edged up slightly during and after the Covid-19 pandemic.

The long-term effects of lowering rates could shape the economy, programs including Social Security and other facets of life in the U.S., said Phillip Levine, an economics professor at Wellesley College. "It has the ability to have a significant impact on the way we live for a long time to come," he said.

An influx of people **immigrating** to the U.S. could offset the impact of lower birthrates on the U.S. population's size, said Hamilton, co-author of the report. Immigration has risen in recent years, easing labor shortages and expanding the population of big metropolitan areas.

Birthrates declined more for younger women between 2022-2023, according to the provisional data, while those for women in their 40s were unchanged.

Women in their mid-to-late 30s are having children at similar rates to those in their early to mid-20s. Birthrates for women 35-39 fell to 54.7 births per 1,000 women – closer to the rates for women 20-24, which dropped 4% to 55.4 births per 1,000 women in 2023.

Some women in their 20s might postpone having children. Despite fertility treatments such as in vitro fertilization, egg freezing and artificial insemination, trying to have children later in life can carry lower odds of success and health risks.

While birthrates for teenagers 15-19 continue to decline, they fell just 3% last year – a lower rate than the average 7% annual decline researchers recorded between 2007-2022. It is unclear what might have contributed to the change, Hamilton said.

"There's going to be a lot of interest and investigation into why we're seeing this," he said.

The general fertility rate dropped 3% to 54.4 births per 1,000 women ages 15-44, with declines across most race and ethnicity groups tracked by the federal government. The fertility rate for Hispanic women, after rising in 2022, fell by 1% to 65 births per 1,000 women. Among non-Hispanic groups, fertility rates for American Indian and Alaska Native and Black women fell by 5% and by 3% for Asian and white women.

First-Quarter GDP Comes in Soft

by Dante DeAntonio, Dir. – Moody's Analytics – Apr. 25, 2024

After blowing by forecasts in the fourth quarter of last year, **real GDP growth was softer than expected** in the **opening quarter of 2024**. The **1.6% annualized growth** marks a **slowdown from the previous quarter's 3.4% pace**, though underlying details point to ongoing strength.

Consumer spending drove the bulk of the increase in the first quarter, contributing 1.7 percentage points. Also providing a boost was fixed investment. The housing market delivered 0.5 percentage point to growth, and nonresidential investment 0.4 percentage point. Government delivered a modest 0.2 percentage point boost. Moving the other direction were inventories and trade. Together, these two components shaved 1.2 percentage points off of growth. The components are relatively volatile and are less indicative of the cyclical forces determining an economy's near-term trajectory.

Taking Stock

The **economy is at full employment**, with unemployment steadfastly below 4%, and growth remains close to the economy's potential, with real GDP tracking close to 2%. Job growth continues to surprise, and consumers are growing their spending. Businesses are doing their part as well. Inflation remains the sole blemish. Though growth will struggle to reach potential for a season, **recession risks have declined** as the economy remains resilient.

Prospects are good that the economy will perform well this year. Consumers are doing their part and spending just enough to support broader economic growth. After-inflation incomes and thus consumers' purchasing power are improving, supported by the strong job market. Still substantial excess savings built up during the pandemic by middle- and especially high-income households continue to support spending, giving consumers cash to spend as their wealth rises.

While inflation remains a concern, drivers appear to be in place to push inflation lower despite its uptick at the start of the year. Until that happens, however, risks remain. **Fed** officials have made it clear they **will not cut interest rates until inflation is definitively headed back to their target**. And with rates as high as they are, and the **Treasury yield curve inverted** and pressuring the financial system, it is premature to conclude the economy has soft-landed.

Adding to the concern is the fact that **growth is slowing**. The recent pace of growth was unsustainable as high interest rates take an increasing toll, inventory accumulation remains modest, and the saving rate stops dropping. Growth should stop declining, but it will remain modest given the number of weights in place. Beyond high interest rates these include little if any fiscal support; struggles of some groups of consumers, especially at the lower end of the income distribution who are receiving less government support and have started repaying student loans; and uncertainty caused

by higher energy prices and the conflicts and transportation issues in the Middle East and Ukraine.

Economic growth will remain below trend this year given all these weights, but the baseline outlook holds that slow growth will bring inflation close to the Fed's target without precipitating a recession. **Interest rates will be cut, if not as soon as previously expected.** Despite fading recession fears, **risks around this outlook remain high** and skewed to the downside. Among the more obvious risks are a larger-than expected increase in energy prices, a reversal of recent declines in long-term interest rates, the Fed waiting too long to cut interest rates, a sharp drop in house or commercial real estate prices, and more bank failures or other financial system problems. Upside risks exist, with many centered on the potential that the supply side of the economy continues to outperform expectations.

Hiring Cools, Lifts Rate-Cut Hope

by Sam Goldfarb – WSJ – May 4, 2024
Nick Timiraos contributed to this article.

April's job growth of 175,000 was well off March's pace, easing fears of overheating.

Job growth slowed and unemployment ticked higher last month, marking a break from a string of data showing surprising strength in the labor market.

U.S. employers added a seasonally adjusted **175,000 jobs in April**, the **Labor Department** reported on Friday. That was **far less than** in **March**, when gains exceeded **300,000**. It was also **below** the 240,000 jobs that **economists** had **expected**.

Friday's report will keep hope alive for a late-summer interest-rate cut from the Federal Reserve, because it eases fears of an overheating economy. Still, the Friday jobs figures won't change much for the Fed's immediate outlook, in part because another employment report is due before officials' June 11-12 meeting.

Traders in interest-rate futures saw slightly higher probabilities of a rate cut in July after the report, though still below 50%. Expectations of a September rate cut rose to roughly 70%, up from around 60% on Thursday, according to CME Group.

Stocks climbed. The Dow Jones Industrial Average rose 1.2%, or roughly 450 points, its best day in more than a month. Bond yields fell, with the **yield** on the benchmark **10-year U.S. Treasury note falling to 4.498%** from 4.569% Thursday. Yields fall as prices rise.

Analysts said the April employment report showed that the labor market is cooling but didn't signal a serious deterioration in hiring conditions. The **unemployment rate**

ticked up to 3.9% from March's 3.8%. **Wages also rose less than anticipated, increasing 3.9% from a year earlier** after rising 4.1% in March.

Job gains slowed broadly, with easing particularly noticeable in the government, leisure and hospitality, and construction sectors.

Fed Chair Jerome Powell has repeatedly said that he is happy that the labor market remains in good shape, and that inflation can come back down to the Fed's target without a big increase in unemployment.

Even so, a recent run of hotter-than-anticipated inflation has tempered previous optimism that the economy was on a glide path to a soft landing, where inflation would return to 2% without a recession. Some economists have worried that the strength of the job market could help keep inflation elevated by preventing a further slowdown in wage growth.

April's job gains could be seen as disappointing when measured against much higher numbers in previous months, but "this is a much more sustainable pace," said Thomas Simons, U.S. economist at Jefferies. "I think this is probably something the Fed wants to see."

Before Friday, recent data had shown remarkable stability in the labor market. Despite the Fed's efforts to fight inflation by lifting borrowing costs, businesses have continued to hire at a robust clip, the unemployment rate has risen only modestly, and a report on Tuesday suggested that a slowdown in wage growth has stalled.

Economists have noted that conditions could shift quickly. Past surges in unemployment have often arrived with little warning. **Demand for workers** has already **eased**, with declines in the number of job openings and in the share of workers voluntarily leaving their jobs.

The healthy jobs market has made the Fed's task easier in some ways, allowing officials to keep their focus on inflation. The Fed on Wednesday kept short-term interest rates between 5.25% and 5.5%, the highest in two decades.

Powell reiterated Wednesday that **recent inflation data** likely **means** it will take **longer before** the Fed **starts cutting interest rates**.

However, Powell also signaled Wednesday that the Fed was unlikely to raise interest rates any further. He suggested that the central bank was ready to cut rates in response to “unexpected weakening in the labor market,” though he cautioned that it would likely take more than a small increase in the unemployment rate for the Fed to act.

“A couple of tenths in the unemployment rate...would probably not do that,” Powell said Wednesday.

Many analysts say that monthly job growth had recently exceeded expectations partly due to an increase in immigration. That could mean that some new jobs are the result of a larger population, not necessarily a situation where businesses are desperate for workers.

As a result, some recently have focused more on the unemployment rate, which takes into account the size of the labor force. But that number also has its shortcomings because it is based on a smaller survey and tends to be more volatile from month to month than the payroll figure.

A variety of indicators, however, have all suggested that now is a good time to either hold a job or look for one – a major surprise given how aggressively the Fed raised interest rates from early 2022 through mid-2023.

Trying to explain how this happened, some analysts have argued that **employers** are more **reluctant to let go of workers after** having had **trouble finding them** when the economy was recovering from the initial shock of the Covid-19 pandemic.

Rather than lay off workers, businesses have preserved their margins by increasing productivity, shortening work hours or finding more temporary help. Government spending on infrastructure and green-energy projects has also pumped money into the economy.

While investors cheered Friday’s data, analysts cautioned that the threat remains that the labor market could cool too much.

Friday’s report showed a small decline in the average weekly hours of private-sector workers, in addition to the slowing wage growth. That combination could eventually weigh on consumer spending, which has been the engine of the economy, said **Brian Rose**, senior U.S. economist at **UBS** Global Wealth Management.

“It can’t be that households spend more than they earn, or their spending increases faster than income forever,” he said. “And this month’s report undermines the income side of it.”

April Payrolls for Select Categories – Change from March

Icahn Offloads Stake in FirstEnergy

by Darren Sweeney

Standard and Poor's Global Market Intelligence – May 16, 2024

Billionaire activist investor Carl Icahn's **Icahn Enterprises** LP conglomerate has exited its ownership stake in Akron, Ohio-headquartered utility FirstEnergy Corp. through the sale of its remaining shares, regulatory filings show.

The Icahn Capital LP affiliate **reduced** its **stake** in FirstEnergy **to zero** at the **end** of the **first quarter**, according to the firm's latest Form **13F** filing with the **SEC**. Icahn

owned about 6 million shares of FirstEnergy as of the end of 2023, down from more than 14 million shares at the end of the third quarter of 2023, filings show.

The firm's remaining shares in FirstEnergy were worth about \$216 million at the time of the sale, Guggenheim Securities LLC wrote.

Andrew Teno, president and CEO of Icahn Enterprises, resigned from the FirstEnergy board in December 2023 after the investment management firm lowered its holdings in the company to less than 1.5%.

FirstEnergy agreed to add **Teno and Icahn-backed director Jesse Lynn** to its board in March 2021 as part of a **deal** designed to improve shareholder value as the company navigated legal and regulatory challenges during its financial transition.

Lynn's term ended after the director opted not to stand for reelection at FirstEnergy's 2023 annual meeting of shareholders.

Peer Ohio utility American Electric Power Co. Inc. agreed to add two Icahn-backed directors to its board in **mid-February**. About **two weeks later**, Columbus, Ohio-headquartered **AEP announced a change in leadership** and is **now hunting for a new permanent CEO**.

Inverted Yield Curve Flags as Recession Omen

by Sam Goldfarb and Peter Santilli – WSJ – May 30 2024

One of Wall Street's favorite recession indicators looks broken.

An anomaly known as an **inverted yield curve**, in which **yields on short-term Treasuries exceed those of longer-term government debt**, has long been taken as a nearly surefire **signal** that an **economic pullback looms**. **In each of the previous eight U.S. downturns**, that has **happened before the economy sputtered**. There haven't been any glaring false alarms.

Now, though, that streak is threatened. The **yield curve** has been **inverted** for a record stretch—around **400 trading sessions** or more by some measures – **with no signs of a major slowdown**. **U.S. employers added a solid 175,000 jobs last month**, and **economic growth this quarter is expected to pick up** from earlier in the year.

If a recession doesn't materialize soon, it could do lasting damage to the yield curve's status as a warning system, providing one of the most significant examples of how the fallout from the Covid-19 pandemic has upended longstanding assumptions on Wall Street about how markets and the economy function. Even if the past couple of years have been unusual, investors likely wouldn't be as worried when another inversion occurs in the future.

“It’s not working,” said Ed Hyman, chairman of Evercore ISI. “So far, the economy is doing fine,” though he added that a recession could be just a little late in arriving this time.

There is a reason yield curve inversions precede recessions.

Yields on Treasuries largely **reflect investors’ expectations** for **what short-term interest rates set by the Federal Reserve will average over the life of a bond**. When longer-term yields fall below short-term yields, it is a **sign** that **investors expect the Fed to cut interest rates** – something it often does to jump-start a faltering economy.

The near-mythical status of the inverted yield curve as a harbinger of downturns took time to develop. One of the first to put a spotlight on the link between inverted curves and recessions was Campbell Harvey, now a finance professor at Duke University, who published a dissertation on the subject in 1986.

Inverted yield curves were discussed on Wall Street and at the Fed in the 1990s but remained a relatively niche subject until after the 2008 financial crisis, Harvey said. Then people started taking stock of warning signs they had initially played down.

Data from Factiva supports that narrative, showing a huge increase in the number of news articles mentioning the yield curve when it inverted in 2019 compared with previous inversions.

Still, there have always been limitations to the yield curve as a forecasting tool.

An inverted curve indicates that investors expect rate cuts, but it doesn’t explain why they are making those wagers.

Bets on cuts could reflect some chance of a recession but also some probability of a benign scenario, with the Fed trimming rates as a precautionary measure even as growth remains stable.

Sources: Tullett Prebon (monthly yields); Federal Reserve Bank of St. Louis (spread); Treasury Department (yield curve)

Inversions have reflected differing circumstances over the years. In the early 1980s, the Fed was hardly trying to avoid a recession when it raised rates to nearly 20% to fight double-digit inflation.

In other cases, some economists believe that a recession could have been avoided had it not been for external shocks, such as the surge in oil prices when Iraq invaded Kuwait in 1990 or the Covid-19 pandemic in 2020.

In the current situation, a recession has at times seemed likely. Forecasts for a downturn surged in 2022 as inflation kept climbing and the Fed started raising rates aggressively.

Still, some economists remained confident that a recession could be avoided. Inflation, they argued, could fall at least part of the way to the Fed's 2% target on its own as businesses recovered from the pandemic and were able to boost output to meet customer demand again. Interest-rate increases were still needed but could be reversed before the economy slowed too much.

Since then, inflation has fallen sharply with only a small uptick in the unemployment rate. The prospect of rate cuts without a recession has cheered investors, helping lift the S&P 500 24% last year and a further 11% this year.

Harvey, the economist perhaps most associated with the inverted yield curve, has himself argued that the economy could avoid a recession this time.

"It is naive to think that you can just forecast the complex U.S. economy with a single measure from the bond market," he said.

There is little indication that the inversion will end soon.

Inversions have often ended shortly before recessions when rate cuts from the Fed came closer into view, leading to a big decline in short-term Treasury yields.

"The curve inversion, especially earlier on in the cycle, played a major role in the psyche for investors," he said. "But I do think now this has become kind of the new normal," said Michael Lorizio, senior fixed-income trader at Manulife Investment Management.

More Oregonians Stuck Working Part-Time Jobs

by Mike Rogoway – Oregonian – Apr 28, 2024

<https://www.oregonlive.com/business/2024/04/more-oregonians-stuck-working-part-time-jobs.html>

Oregonians working part-time for economic reasons

The number of people working part time jobs who would prefer to be working full time.

Source: Oregon Employment Department • [Get the data](#)

The **number of Oregonians working part time because they can't find a full-time job** is **up sharply over the past two years**. It's a sign that the state's tight labor market is easing – and a signal that will be a painful transition for some workers.

Roughly **73,000 Oregonians** are working part-time because their hours have been cut or because they want a full-time job but haven't been able to find one, according to data from the Oregon Employment Department.

Fewer than 50,000 Oregon workers worked part time, but not by choice, at the end of 2022. That was the lowest number this century, coming amid an extraordinary period for Oregon's economy when the state had more job openings than unemployed people.

That was a great time for workers because it was pretty easy to find a job and because many employers were raising wages to hire and retain everyone they could.

The tight labor market slowed economic productivity, though, because businesses couldn't find the workers to meet the demand for their products and services. It was

particularly tough on Oregon's hospitality industry and other fields with a high number of entry-level workers.

Nationally, the tight labor market also contributed to inflation. That prompted the Federal Reserve to raise interest rates, making it more expensive to carry a credit card balance or to borrow money to buy a house or car.

Oregon's labor market now seems to be relaxing.

The number of working Oregonians who can't find full-time jobs has increased by more than 20,000 since 2022, over 50%.

It's still not a high number by historical standards, roughly on par with the robust economy that predated the pandemic. And it's down by about half from the worst months of the Great Recession. (The total briefly returned to peak levels in 2020, during the pandemic recession.)

The question now is whether Oregon's labor market is settling out into "Goldilocks" territory – not too hot, not too cold – or whether the number of underemployed workers will continue to rise.

The share of Oregonians in the workforce is at its highest point in a dozen years. And there has never been a time when more Oregon workers had jobs in the prime of their careers, ages 25 to 54.

Yet **hiring** has **slowed considerably over** the **past year** and the **unemployment** rate has crept **up** from historic lows **to 4.2%**.

Recent layoffs in **Oregon's forest products industry**, at **Nike** and at other large employers, along with a **drop in semiconductor jobs**, suggest some of the **state's economic pillars** are at least a tad **wobbly**.

PUC Staff Recommends Substantial Rate Cut, Average ROE for Nevada Power

by Jim Davis –Regulatory Research Associates (RRA)

an Affiliate of Standard and Poor's Global Market Intelligence – Oct. 10, 2023

The **Public Utilities Commission** of **Nevada staff** recently **filed** errata **testimony** in **Nevada Power** Co.'s pending **electric rate case**, recommending that the company be required to implement a revised \$44 million base rate reduction versus the \$96.5 million base rate hike sought by the utility (Docket No. 23-06007).

The utility (NPC) is a subsidiary of NV Energy Inc., which is a **subsidiary** of **Berkshire Hathaway Energy**, which is owned by a consortium of investors, including Berkshire Hathaway Inc. **NPC does business in Nevada** as **NV Energy**.

- The staff's revised rate reduction recommendation is \$140.5 million less than the increase supported by the company in this case.
- The ROE recommended by the staff is in line with prevailing industry averages in recent periods and is above that currently authorized for the utility.
- RRA views Nevada regulation as relatively constructive from an investor point of view.

The **staff's** revised **recommendation** is premised upon an adjusted **9.52% return on equity (52.72% of capital)** and a blended **7.44% return** on a year-end rate base valued at \$5.364 billion for a calendar 2022 test year, updated for certain known and measurable changes.

The **recommendation** reflects a \$1.7 million penalty related to leased vehicles, a \$1.3 million downward adjustment pertaining to the reallocation of transmission costs, and a \$1.9 million premium adjustment related to the natural-gas-fired Chuck Lenzie facility. **Excluding** these **incentives and penalties**, the recommendation utilizes a base **ROE of 9.55%** and a base overall **return of 7.46%**.

The staff's recommended 9.52% ROE approximates the **9.56% average of equity returns** accorded to **electric** utilities in **all cases decided** through the **first half of 2023**, according to Regulatory Research Associates. The average for the full year 2022 was 9.54%. For **vertically integrated utilities**, such as NPC, the average for the first six months of 2023 was **9.7%**, while the average for full year 2022 was 9.69%. For further information regarding equity return trends, see RRA's latest "Rate Case Decisions Quarterly Update."

A final PUC decision in the case is expected in December 2023.

Case history

This case was initiated June 5 when NPC filed for a \$92.7 million base rate increase premised upon an incentivized 10.24% return on equity (53.27% of capital) and a blended 7.82% return on a \$5.568 billion rate base. Excluding certain incentives accorded to the Lenzie facility, NPC's rate application reflected a base return on equity of 10.2% and base overall return of 7.79%.

NPC said the primary drivers necessitating the filing are "load growth in southern Nevada, reliability improvements, interconnection of new renewable generation to serve load and meet the state's renewable energy goals, improvements to existing generation to increase capacity from the existing fleet to meet critical energy needs during peak hours, and enhanced physical cyber security measures on Nevada Power's systems."

NPC further noted that \$27.9 million of the annual rate hike initially sought by the company pertains to a 200-MW battery storage system at the Reid Gardner facility, security upgrades at substation facilities, and upgrade projects to improve the reliability and cybersecurity of certain generation assets.

NPC's rate case application was tendered pursuant to state statutes requiring electric utilities serving densely populated counties to file a rate case every 36 months. There is no such requirement for natural gas utilities.

NPC subsequently supported a revised \$96.5 million base rate increase in a certification filing submitted to the PUC on Aug. 21. The revised increase is premised on an incentivized 10.26% return on equity (54.24% of capital) and a blended 7.91% return on an updated rate base valued at \$5.51 billion. Excluding incentives, the revised increase reflects a base 10.2% ROE and a base overall return of 7.88%.

The staff filed testimony Sept. 25 recommending a \$43.1 million rate reduction premised upon an adjusted 9.52% return on equity (52.72% of capital) and a blended 7.44% return on a \$5.374 billion rate base.

On Oct. 6, the staff filed the instant errata testimony correcting certain errors impacting both the recommended rate base and the revenue requirement.

Recommended disallowances

RRA calculates that about \$31.9 million of the \$140.5 million difference between the \$96.5 million rate hike supported by the company and the \$44 million revised rate reduction recommended by the staff is attributable to the staff's reliance on a lower rate of return.

Roughly \$14.6 million of the difference stems from the staff's recommended adjustments to rate base. The largest staff recommended rate base adjustments pertained to net energy metering regulatory assets, the Reid Gardener facility, asset ballistic shield retrofits and control system migration projects associated with the Clark and Walter M. Higgins facilities.

The remaining \$94 million of difference flows from staff proposed adjustments to net operating income. The largest of the adjustment proposals pertained to depreciation expense and operations and maintenance costs. The largest depreciation adjustments involved net energy metering assets, Reid Gardener, advanced metering infrastructure, and asset undergrounding activities. The staff's operations and maintenance adjustments were associated with incentive compensation, a solar project at the Mojave High School, a customer service contract and a distribution-related expense.

Previous rate case

In NPC's prior rate case, the PUC adopted a settlement requiring the utility to reduce base rates by \$93 million (Docket No. 20-06003). The adopted black box settlement did not include a complete set of rate case parameters but specified a 9.4% ROE and a 7.14% overall return.

Earnings sharing mechanism

The commission's ruling also provided for NPC to operate under an earnings sharing mechanism (ESM). Under the ESM, the utility is able to retain 100% of ROE earnings that range from 9.4% to a 9.7% threshold. Pursuant to the decision, earnings

in excess of the 9.7% ROE threshold are to be shared evenly with ratepayers through the ESM. No earnings sharing is to occur if NPC earns below its authorized equity return. However, subsequent to the conclusion of the previous case, the PUC apparently amended the upper bound of the utility's ESM threshold to 9.8% from 9.7%.

As part of the instant case, the staff is recommending that the PUC require NPC to continue to operate under an ESM. The utility said in its initial filing that it did not oppose the continuation of the mechanism. Notably, NPC's certification filing specifies a \$123.8 million regulatory liability (including interest) associated with the ESM, indicating that it earned above the ESM threshold in 2020, 2021 and 2022. The company's supported revenue requirement reflects a three-year amortization of this total.

RRA's view of Nevada regulation

RRA accords the Nevada regulatory environment an Average/1 ranking, indicating that the climate is viewed as relatively constructive from an investor viewpoint. The state remains traditionally regulated; however, certain large commercial customers in Nevada have transitioned to distribution-only service and purchase energy from competitive providers.

State law requires large electric utilities to file rate cases at least every three years, and the most recent equity return authorizations established by the commission have been in line with or exceeded prevailing industry averages. In addition, state law allows for return on investment incentives of up to 500 basis points for electric generation resources deemed to be "critical."

The utilities generally employ historical test years, updated for certain known and measurable changes, paired with year-end rate base methodologies in base rate cases. ESMs are in place for Nevada's electric utilities, and the state's largest investor-owned gas utility operates under a revenue decoupling mechanism.

Notably, a **vacancy** at the **PUC** was **recently filled by Gov. Joseph Lombardo**, a **Republican**, who **appointed Randy Brown** to the **commission**. **Brown**, a **Certified Public Accountant**, **replaced** former **commissioner C.J. Manthe**, **who retired** from the PUC in August.

Oregon's Birth Rate Is Among Nation's Lowest, and It Keeps Falling

by Mike Rogoway – Oregonian – May 26, 2024

<https://www.oregonlive.com/business/2024/05/oregons-birth-rate-is-among-nations-lowest-and-it-keeps-falling.html>

The maternity ward might feel a little lonely these days.

Oregon has **one of the lowest birth rates in the nation**, according to newly released federal data from 2022.

The state had just about 9 births for each 1,000 residents. Only Maine, New Hampshire and Vermont – the latter being the lowest in the nation at 8.2 births per 1,000 residents – had fewer.

Utah was **tops** at 13.5. The national average was 11.0.

Births per 1,000 residents, 2022

Oregon's annual birth rate ranks 48th out of 51 states plus the District of Columbia.

Source: National Center for Health Statistics • [Get the data](#)

Oregon's schools, restaurants and factories figure to be emptier in the years ahead unless something changes in the state's anemic migration levels or something big changes in its birth rates.

“We need people to work,” said Kanhaiya Vaidya, demographer with the Oregon Office of Economic Analysis.

“We need people to support the elderly, not only financially but also for care,” Vaidya said. “For child care, for elderly care, we need people – working-age people.”

Oregon’s birth rates have long been among the nation’s lowest. The continued decline is in line with trends across the country and – increasingly – around the world.

Families are waiting longer to have children and choosing to have **fewer children** overall, Vaidya said. He attributes that partly to women taking time to get settled into careers and partly to the cost of raising kids.

“People, they want smaller families. That’s what they prefer,” Vaidya said.

Oregon women are averaging 1.4 children over their lifetimes, according to the latest state fertility rate estimates, **down from 3.2 in the 1950s**.

Oregon's fertility rate

Number of children a woman has over her lifetime. A fertility rate of 2.1 maintains current population levels (excluding the effects of migration).

Source: Oregon Health Authority, Oregon Center for Health Statistics, Vital Statistics • [Get the data](#)

Contraception has long been reducing the number of unplanned pregnancies. That trend accelerated in the 1960s, once birth control pills became widely available.

Demographers say **fertility rates of 2.1 produce a stable population size, excluding** the effects of **migration**.

So Oregon's low fertility rates could point to a long-term decline in the state's population. That's especially true because in the years since the pandemic more people have been moving out of the state than moving in.

Already, **deaths outnumber births in Oregon**.

There are many possible reasons why Oregon's birth rates are particularly low, but one explanation stands out to Vaidya: "We're an older state."

One of the oldest states, in fact. The median Oregonian is about 17 months older than the median American. And older people aren't likely to have many more kids, or any more at all.

Over time, fewer births might ease traffic congestion and the state's housing crunch. But a shrinking Oregon could have serious **economic** and cultural **implications** in the generations to come.

Some economists expect at least a modest rebound in migration into Oregon. But if migration doesn't bounce back, the state could feel the impact of low birth rates in many ways.

"The (school) enrollment will go down and also college enrollment will go down. The main **impact** is **on the labor force**," Vaidya said. "We will have **fewer workers in the future**."

Oregon Factories Keep Shedding Jobs; 'A Bit Alarming,' Say State Economists

by Mike Rogoway – Oregonian – Jun. 2, 2024

<https://www.oregonlive.com/business/2024/06/oregon-factories-keep-shedding-jobs-a-bit-alarming-say-state-economists.html>

Oregon's manufacturing sector still hasn't recovered from the pandemic recession – in fact, it's going in the wrong direction, shedding jobs for most of the past two years.

"We've seen **significant manufacturing losses** in **Oregon** over the **last 18 months** or so," interim **State Economist Josh Lehner** told Oregon legislators at a hearing last week. "That's **not what's happening elsewhere around the country.**"

Oregon's labor market remains quite healthy overall, with wage growth outpacing inflation and the jobless rate, at 4.2%, near historic lows.

But factories are a bigger party of the economy here than in most other parts of the country. So Lehner told lawmakers the **persistent loss** of **blue-collar jobs** is "a bit alarming."

Manufacturers employ 189,000 across Oregon, according to the most recent state data. That's **down** about **5% from April 2019**.

Nationally, factory jobs are **up** about **1.1% during** that **same period**.

Why isn't Oregon faring as well lately?

Some of the issue relates to industries with an especially big Oregon presence. State economists note that employment in metals manufacturing and transportation equipment is down sharply from before the pandemic.

That reflects a falloff in aerospace manufacturing that accompanied the pandemic and persistent quality-control failures at **Boeing**, which have reduced aircraft orders and deliveries. Boeing has a large assembly plant in Gresham, and **Precision Castparts** is

a major Boeing supplier that severely reduced its workforce in 2020 as its market collapsed.

At last week's hearing, Rep. Werner Reschke, R-Medford, asked whether the pandemic recession prompted manufacturers to rethink their factory networks and to consolidate their operations outside of Oregon.

"It's certainly on the list of possibilities," Lehner said. "You can't discount that."

Indeed, a **number of Oregon factories** have **recently moved jobs** to **other parts** of the **country**.

For example, Portland manufacturer **Gunderson** shut down its local **railcar factory** last year and **shifted production** to the **Southeast** U.S., closer to its suppliers and customers. (Barge building continues at the Gunderson site under a new owner.)

When **two toilet paper factories** in **Columbia County** **closed** recently, the plants' Canadian owner said it was **moving** the **work** to sites that performed better.

And this past week, when **Campbell's Soup Co.** announced plans **to close** the old **Pacific Foods plant in Tualatin**, it said the site was too inefficient to support growing demand for its products. Campbell's plans to **move** that **work elsewhere** and lay off 330 in Tualatin by 2026.

Manufacturing employment

Percentage change since January 2019

Source: U.S. Bureau of Labor Statistics, Oregon Employment Department, Oregon Office of Economic Analysis • [Get the data](#)

There are some bright spots. Employment in Oregon's electronics manufacturing sector is up more than 4% from 2019, reflecting a post-pandemic surge in semiconductor demand. But a cyclical downturn in the industry erased some of those jobs last year.

State economists are confident **Oregon's chip sector** will rebound in the years ahead, fueled by **billions** of dollars in **federal funding** and **\$240 million in state subsidies**. **Intel** is preparing to spend billions of dollars **to expand** its **main Oregon factory by one-third**.

There's far less optimism, however, that other sectors will recover their losses.

"Moving forward, we know **we have** the **chips growth**, but it's **hard** to **see where** some of the **other growth will come (from)**," **Lehner said**.

Rising US Debt Delinquencies Pose Potential Threat to Economic Momentum

by Brian Scheid

Standard and Poor's Global Market Intelligence – May 17, 2024

The share of US credit card and auto loan debt falling into delinquency has reached a new high amid record housing debt levels. The uptick may add further pressure on an economy grappling with the effects of higher-for-longer interest rates.

Nearly **9%** of **credit card balances became 30 or more days delinquent during the first three months of 2024**, the **highest number since the first quarter of 2011**, according to data released by the Federal Reserve Bank of New York on May 14. For **auto loans**, that debt share is nearly **8%**, the **highest since the fourth quarter of 2010**.

The surge in debt and delinquencies is not a sign of widespread stress so far, with the domestic labor market remaining historically robust and wage growth continuing to outpace inflation. Still, economists warn delinquencies will rise further and pose a potential threat to the economy's strength should the labor market and wage growth cool.

"The combination of subdued job growth, sluggish income progression, and diminished savings could lead to increased delinquencies and a potential retrenchment in consumer spending," said Gregory Daco, chief economist at EY-Parthenon.

Credit cards, auto loans transitioning into delinquency rise to highest levels in 12 years

% of balance 30-plus days delinquent

Data accessed May 15, 2024.

© 2024 S&P Global.

Debt climbs

Credit card and auto loan debt together make up just more than **15%** of **US household debt**, which climbed to a record **\$17.69 trillion** in the **first quarter** of **2024**. More than **70%**, or \$12.44 trillion, of the US household debt in the first quarter was **mortgage debt**. About 3.2% of mortgage debt transitioned into 30 or more days delinquent in the first quarter, the highest since the first quarter of 2020 but still relatively low.

In the first quarter of this year, nearly 7% of credit card balances transitioned into serious delinquency – 90 days or more delinquent – the highest since the second quarter of 2011, while about 3% of auto loans were seriously delinquent, the highest since the second quarter of 2010.

US household debt has risen nearly 150% since 2003 (\$ trillions)

Data accessed May 15, 2024.

Source: New York Fed Consumer Credit Panel.

© 2024 S&P Global.

Americans using their credit cards the most had the highest delinquency rates, New York Fed economists wrote in a May 14 blog post. Borrowers who were up to date with their credit card payments in the first quarter of 2024 had a median credit card utilization rate of 13% in the previous quarter. By comparison, those who were newly delinquent had a median utilization rate of 90%, as **those with less cash flow are more likely to use all available credit**, the economists wrote.

"Since the economy reopened in 2022 and consumption was very strong in 2022 and 2023, credit card balances increased again, resulting in a rise in the share of maxed-out borrowers and their balances," the economists wrote. "These shares remain slightly lower than the pre-pandemic level but are edging back up."

Share of maxed-out credit card borrowers climbs from pandemic lows (%)

Data accessed May 15, 2024.

Source: New York Fed Consumer Credit Panel.

© 2024 S&P Global.

The Fed is holding benchmark interest rates at their highest level in decades as it waits for inflation to fall closer to its goal of 2% annual growth. While the latest inflation reading was in line with expectations, Fed watchers do not expect rates, which influence broader borrowing costs, to decrease until later in the year.

The rise in auto and credit card defaults may not be a harbinger of broader economic trouble and overall debt service still remains relatively low, said Michael Crook, chief investment officer at Mill Creek Capital Advisors.

"Most households are not getting hit by higher debt costs," Crook said. "However, I can't imagine that this is something the Fed really wants to see."

Possible hit to spending

S&P Global Market Intelligence economists expect credit card and auto loan delinquencies to continue to rise this year as interest rates are expected to remain high for longer.

While a recession may not be imminent, a slowdown in spending could hit eventually, said Michael Zdinak, an economist who leads the US consumer markets service at Market Intelligence. GDP growth will slow from 3.3% in the fourth quarter of 2023 to 1.7% by the end of 2024 as monetary policy weighs on consumer spending, Zdinak said.

The New York Fed data shows that the total US credit card balance was at \$1.12 trillion in the first quarter, down slightly from the fourth quarter of 2023 as consumers likely paid down debt accumulated at the end of last year. Still, credit card balances in the first quarter of 2024 were up about 13% from a year earlier, which Zdinak said reflects continued, robust demand for credit amid a strong jobs market.

"Higher nominal balances reflect not just higher prices and expanded access to credit, but a consumer who feels secure enough in the current labor market to continue spending," Zdinak said. "If unemployment were to spike suddenly, these balances could amplify a slowdown in spending, but as it stands both are pushing back against the Fed's effort to cool the economy down."

Store Brands Are Filling Up More of Your Shopping Cart

by Jesse Newman and Stephanie Stamm – WSJ – May 29, 2024

From pretzels to pet food, store-brand goods are gaining on big-name brands: 'Our food budget had exploded'.

Unit sales, change from a year earlier

NATIONAL BRAND  STORE BRAND

Note: 52 weeks ending in May of each year

Source: NIQ

Goodbye, Chips Ahoy cookies and French’s mustard. Hello ... Great Value, Private Selection and Signature Select.

U.S. consumers are **trying** many tactics **to cut their food spending**: eating out less, buying less groceries and ditching name brands. That is boosting lower-cost store brands, which last year claimed 22 cents out of every dollar spent in grocery stores—the largest share ever for so-called private-label products.

National brands are **still** king in the U.S., **making up 78%** of **overall food and beverage dollar sales**, according to data from the market-research firm Circana. **But store brands**, manufactured by companies including TreeHouse Foods for such retailers as Walmart and Kroger, are **gaining ground**, raising pressure on big food companies that have pushed their prices higher.

U.S. private-brands dollar share, consumer packaged goods

Store-brand goods have taken more market share over recent decades, according to TreeHouse Foods, a leading private-label manufacturer.

Source: TreeHouse Foods

The Covid-19 pandemic derailed years of steady growth in private-label products. Stuck at home with federal stimulus money augmenting their budgets, consumers flocked back to national brands – familiar and, at the time, more available on shelves than many generics.

Now, a confluence of factors is fueling store brands again, according to food-industry executives and analysts. **Groceries are far more expensive than they used to be**, with **prices in April 26% higher than 2019 levels**, according to the Labor Department.

Sixty-five percent of shoppers say they choose private label over national brands because of store brands' lower price, according to a Food Industry Association survey. Some consumers are shifting to private-label goods as they give up or postpone other expenses, from piano lessons to streaming services, according to Mary Ellen Lynch, lead analyst for private-label research at Circana.

"In Middle America, it's a lot of pressure," Lynch said.

Retailers are boosting investment in store brands. Walmart, which owns the Great Value brand, is introducing a line of premium food called Bettergoods this year, with many items priced below \$5. Aldi, where 90% of the products on shelves are store brands, is planning to add 800 stores nationwide by the end of 2028.

The quality of private-label offerings has improved markedly, with more resources devoted to product development, packaging, marketing and more. In many cases, retailers' goal now isn't just to emulate national brands, but to beat them, analysts said.

U.S. supermarkets are using private-label brands to try to build loyalty with consumers and boost foot traffic, said Steve Oakland, chief executive officer of

TreeHouse Foods, one of the largest private-brand manufacturers in the country. “Private-label pricing is aggressive right now,” he said.

Unit sales, change from a year earlier (2023-24)

Note: 52 weeks ending May 4
Source: NIQ

More than half of retailers expect private-label goods to be their top driver of growth this year, according to a survey by NIQ, or NielsenIQ. Grocers that primarily offer store brands, such as Trader Joe’s and Aldi, are seeing more foot traffic in recent months.

April retailer foot traffic change from a year earlier (2023-24)

Source: Placer.ai

Private label's incursion is cutting into national brands' sales across a variety of supermarket categories. Pasta, pet food and condiments are among the food categories seeing big moves from national brands to store versions, according to NIQ data.

One flashpoint: Supermarkets' mustard section, where the spice and condiment company McCormick stiff competition from store brands. CEO Brendan Foley said in March that the company is working to increase promotions and narrow price gaps with competitors, as well as rolling out new products such as a creamy dill pickle mustard.

"We continue to experience extremely low price points for private label, which is impacting our consumption," Foley said about mustard.

McCormick said that some retailers use low prices for store-brand mustard as a way to drive traffic, and that the company's distribution remains strong.

Campbell Soup has said that competition from store brands is pressuring the company's pretzel business. Mondelez recently that the same is true for Chips Ahoy cookies. Food manufacturers are offering more deals and smaller package sizes that cost less.

Some analysts have expected stronger momentum for private-label products given the economic pressures facing consumers. Food-industry analysts and bankers said that Americans tend to be loyal to name brands, and that it is difficult to undo the influence of billions of marketing dollars spent over many decades.

Renewed promotions and bringing new products to shelves following a pandemic-driven lull could stem growth of private labels, analysts said, and retailers need to be careful not to lose consumers looking for name brands.

In certain categories, retailers will need to secure more manufacturing capacity to support their private-label aspirations, said Henk Hartong, CEO of Brynwood Partners, which makes such products as pizza and juice under private labels.

Consumers' views on private labels are improving, with millennials and Gen Z leading the pack, according to NIQ. High-income shoppers are also turning to more store brands, with 68% of those surveyed viewing them favorably – above the level for middle- and lower-income consumers.

Wofford Wise said his family has abandoned many packaged foods or switched to store brands since their weekly **grocery bills ballooned** by more than a third in **recent years**. Wise, a salesman in the Knoxville, Tenn., area, said he rarely buys Raisin Bran or Frosted Mini-Wheats anymore, in part because the pace at which his four children devour cereal makes them unaffordable.

"A \$5 box of cereal would last exactly one breakfast," said Wise, 40, adding that he now shops almost exclusively at Aldi and Costco. "Our food budget had exploded."

Tariffs Close Off Route to Affordable EVs

by Stephen Wilmot – WSJ – May 22, 2024

President Biden’s additional tax on Chinese batteries could hit Tesla’s and Ford’s cheapest electric vehicles.

Making cheap electric vehicles in the U.S. is getting even tougher.

Of the tariffs unveiled by President Biden last week, the **100% rate** on **Chinese EVs** caught much of the attention. But in reality it probably won’t change much: Only a few EVs are shipped from China to the U.S., notably by Polestar.

More meaningful for the industry is a **25% tariff** on **Chinese EV batteries and parts, up from 7.5%**. Many details aren’t yet clear, but the news will likely affect **Tesla**. Its cheapest model, the standard range **Model 3**, is **made in Fremont, Calif., using Chinese lithium iron phosphate, or LFP, batteries**.

Based on a crude calculation, the tariff increase could theoretically add roughly \$1,000 to costs per standard-range Model 3 – not unaffordable, but inconvenient when Tesla is desperate to remove costs. The company didn’t respond to requests for comment.

Ford’s standard-range **Mustang Mach-E** is **made in Mexico** but **uses Chinese LFP batteries**.

LFP batteries are less expensive than the more powerful ones with nickel and cobalt that are used by Tesla and others to make most EVs sold in the West. While Japanese and Korean firms such as Panasonic and LG Energy dominate nickel chemistries, LFP technology has been industrialized by the likes of **CATL** and **BYD** in China. This means EV makers will struggle to bypass Chinese companies if they want to use it to cut costs and diversify supply chains away from cobalt, which is mostly mined in the Democratic Republic of Congo.

CATL appears to be planning factories in Thailand and Indonesia that could eventually supply the U.S. Tariffs on Chinese products introduced by former President Trump rerouted

goods via Southeast Asia, so a new shuffling of clean-energy trade routes would hardly be a surprise.

A response more in the spirit of U.S. government policy would be to bring LFP battery production onshore. This is what Ford wants to do with a new plant in Michigan that would license CATL's technology, but the Chinese link remains controversial. If Ford's project goes ahead as planned, it would be a blueprint for Tesla.

The best solution from Washington's view would be for a new low cost battery technology to emerge from outside the Chinese ecosystem. Tesla said last month it expected its battery project in Texas, which is trying to mass-produce a new type of cell, to beat suppliers of nickel-based cells on cost by the end of this year. But that suggests it is still some way behind LFP. The game-changing solid-state batteries long promised by Toyota and others appear to be years away.

Last week's tariff increases aren't the first U.S. assault on Chinese LFP technology. One of the strings attached to the \$7,500 tax credit available for EV purchases as part of the Inflation Reduction Act is no battery materials can come from a "foreign entity of concern," a designation that includes China. This is why neither the standard range Tesla Model 3 nor Ford's Mustang Mach-E are available with the subsidy unless they are leased.

Trump hinted he might cut the EV tax credits if he wins the election, but he promised to go even further than Biden on tariffs. Whoever is in the White House next year, the direction of travel is clear: China's supply chain is effectively off limits in the race to lower EV costs.

Even Tesla Chief Executive Elon Musk seems to be put off by the huge challenge this entails. This year, he talked more enthusiastically about making Teslas autonomous than about making them cheap.

While 4 in 10 new vehicle purchases in China are EVs, America will only adopt the new technology at the pace a new supply chain allows – which is to say, expensively and slowly.

–

There Aren't Enough Babies, Alarming the Whole World

by Greg Ip and Janet Adamy – WSJ – May 14, 2024
Anthony DeBarros contributed to this article.

Falling birthrates bring economic, social, political implications.

The world is at a startling demographic milestone. Sometime soon, the **global fertility rate** will drop below the point needed to keep population constant. It may have already happened.

Fertility is falling almost everywhere, for women across all levels of income, education and labor-force participation. Some estimates now put the number of babies each woman has over her lifetime **below** the **global replacement rate of**

about **2.2**. The falling birthrates come with huge implications for the way people live, how economies grow and the standings of the world's superpowers.

The **baby bust is happening so quickly** and so widely that it's taken many by surprise. In high-income nations, fertility fell below replacement in the 1970s, and took a leg down during the pandemic. It's dropping in developing countries, too. India surpassed China as the most populous country last year, yet its fertility is now below replacement.

“The demographic winter is coming,” said Jesús Fernández-Villaverde, an economist specializing in demographics at the University of Pennsylvania.

Many government leaders see this as a matter of national urgency. They worry about shrinking workforces, slowing economic growth and underfunded pensions; and the vitality of a society with ever-fewer children. Smaller populations come with diminished global clout, raising questions in the U.S., China and Russia about their long-term standings as superpowers.

Donald Trump, this year's presumptive Republican presidential nominee, has called collapsing fertility a bigger threat to Western civilization than Russia. A year ago Japanese Prime Minister Fumio Kishida declared that the collapse of the country's birthrate left it “standing on the verge of whether we can continue to function as a society.” Italian Prime Minister Giorgia Meloni has prioritized raising the country's “demographic GDP.”

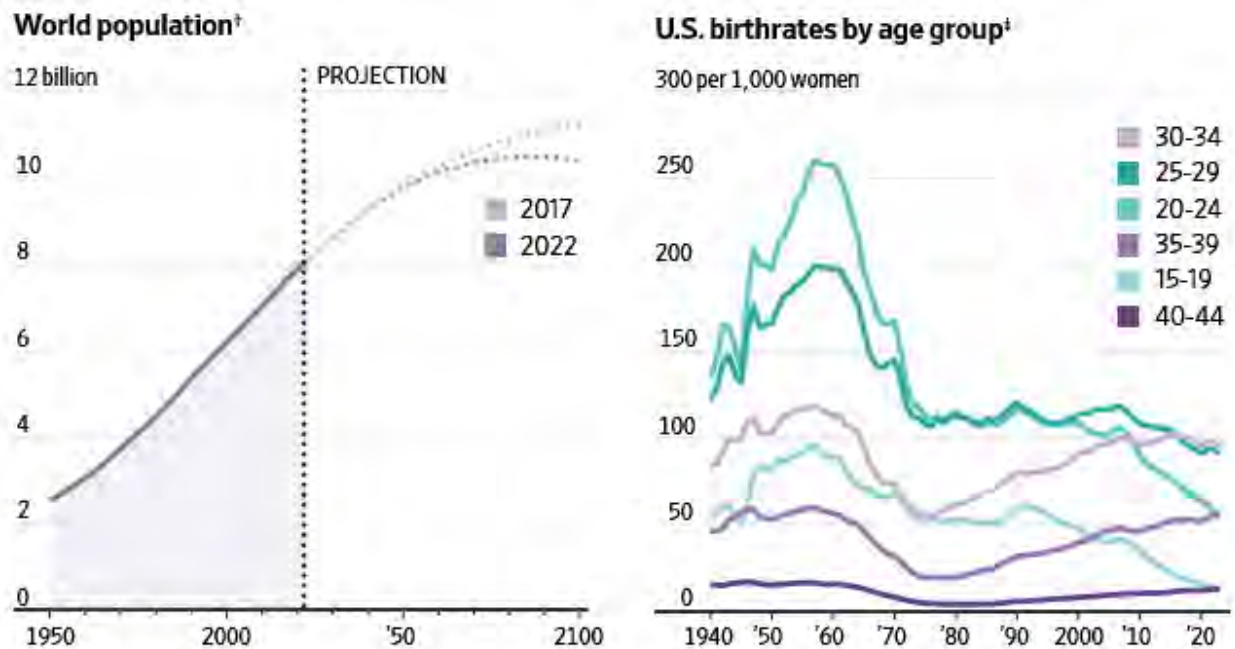

U.N. 2023 projections on top 12 most-populous countries and their total fertility**Crossing point**

In 2017, when the global fertility rate – a snapshot of how many babies a woman is expected to have over her lifetime – was 2.5, the United Nations thought it would slip to 2.4 in the late 2020s. Yet by 2021, the U.N. concluded, it was already down to 2.3 – close to what demographers consider the global replacement rate of about 2.2. The replacement rate, which keeps population stable over time, is 2.1 in rich countries, and slightly higher in developing countries, where fewer girls than boys are born and more mothers die during their childbearing years.

While the U.N. has yet to publish estimated fertility rates for 2022 and 2023, Fernández-Villaverde has produced his own estimate by supplementing U.N. projections with actual data for those years covering roughly half the world's population. He has found that national birth registries are typically reporting births 10% to 20% below what the U.N. projected.

China reported 9 million births last year, 16% less than projected in the U.N.'s central scenario. In the U.S., 3.59 million babies were born last year, 4% less than the U.N. projected.

Fernández-Villaverde estimates global fertility fell to between 2.1 and 2.2 last year, which he said would be below global replacement for the first time in human history. Dean Spears, a population economist at the University of Texas at Austin, said while the data isn't good enough to know precisely when or if fertility has fallen below replacement, "we have enough evidence to be quite confident about ... the crossing point not being far off."

*For women age 15 to 49 †2022 data are estimates (1950–2021) and projections (2022–2100), medium variant; 2017 data are estimates (1950–2015) and projections (2016–2100), medium variant ‡2023 data is provisional

Sources: United Nations (fertility rates in India and the U.S., top 12 countries, world population); national estimates compiled by Jesús Fernández-Villaverde (all countries' fertility rates except for India and the U.S.); Centers for Disease Control and Prevention (U.S. birthrates)

In 2017 the U.N. projected world population, then 7.6 billion, would keep climbing to 11.2 billion in 2100. By 2022 it had lowered and brought forward the peak to 10.4 billion in the 2080s. That, too, is likely out of date. The Institute for Health Metrics and Evaluation at the University of Washington now thinks it will peak around 9.5 billion in 2061 then start declining.

In the U.S., a short-lived pandemic baby boomlet has reversed. The total fertility rate fell to 1.62 last year, according to provisional government figures, the lowest on record.

In 2017, when the fertility rate was 1.8, the Census Bureau projected it would converge over the long run to 2.0. It has since revised that down to 1.5. "It has snuck up on us," said Melissa Kearney, an economist at the University of Maryland specializing in demographics.

Second transition

Historians refer to the decline in fertility that began in the 18th century in industrializing countries as the demographic transition. As lifespans lengthened and more children survived to adulthood, the impetus for bearing more children declined. As women became better educated and joined the workforce, they delayed marriage and childbirth, resulting in fewer children.

Now, said Spears, “the big picture fact is that birthrates are low or are falling in many diverse societies and economies.”

Some demographers see this as part of a “second demographic transition,” a society-wide reorientation toward individualism that puts less emphasis on marriage and parenthood, and makes fewer or no children more acceptable.

In the U.S., some thought at first that women were simply delaying childbirth because of lingering economic uncertainty from the 2008 financial crisis.

In research published in 2021, the University of Maryland’s Kearney and two co-authors looked for possible explanations for the continued drop. They found that state-level differences in parental abortion notification laws, unemployment, Medicaid availability, housing costs, contraceptive usage, religiosity, child-care costs and student debt could explain almost none of the decline. “We suspect that this shift reflects broad societal changes that are hard to measure or quantify,” they conclude.

Kearney said while raising children is no more expensive than before, parents’ preferences and perceived constraints have changed: “If people have a preference for spending time building a career, on leisure, relationships outside the home, that’s more likely to come in conflict with childbearing.” Meanwhile, time-use data show that mothers and fathers, especially those that are highly educated, spend more time with their children than in the past. “The intensity of parenting is a constraint,” Kearney said.

Erica Pittman, a 45-year-old business banker in Raleigh, N.C., said she and her husband opted to have only one child because of demands on their time, including caring for her mother, who died last year after a long battle with multiple sclerosis. Their 8-year-old son is able to participate in theater workshops, soccer and summer camps because the couple, with a combined income of about \$225,000 a year, has more time and money.

Left: A father held his baby in a newborn care unit in Patiala, India.

“I feel like a better mom,” Pittman said. “I feel like I can go to work – because I have a fairly demanding job – but I can also make time to volunteer at his school, be the chaperone for the field trip and do those kinds of things, because I only have one to coordinate with my schedule.”

‘Global culture’

Fertility is below replacement in India even though the country is still poor and many women don't work – factors that usually sustain fertility.

Urbanization and the internet have given even women in traditional male-dominated villages a glimpse of societies where fewer children and a higher quality of life are the norm. “People are plugged into the global culture,” said Richard Jackson, president of the Global Aging Institute, a nonprofit research and education group.

Mae Mariyam Thomas, 38, who lives in Mumbai and runs an audio production company, said she's opted against having children because she never felt the tug of motherhood. She sees peers struggling to meet the right person, getting married later and, in some instances, divorcing before they have kids. At least three of her friends have frozen their eggs, she said. “I think now we live in a really different world, so I think for anyone in the world it's tough to find a partner,” she said.

Sub-Saharan Africa once appeared resistant to the global slide in fertility, but that too is changing. The share of all women of reproductive age using modern contraception grew from 17% in 2012 to 23% in 2022, according to Family Planning 2030, an international organization.

Jose Rimón, a professor of public health at Johns Hopkins University, credits that to a push by national leaders in Africa which, he predicted, would drive fertility down faster than the U.N. projects.

Once a low fertility cycle kicks in, it effectively resets a society's norms and is hard to break, said Jackson. “The fewer children you see your colleagues and peers and neighbors having, it changes the whole social climate,” he said.

New policies

Governments have tried to reverse the fall in fertility with pronatalist policies.

Perhaps no country has been trying longer than **Japan**. After fertility fell to 1.5 in the early 1990s, the government rolled out a succession of plans that included parental leave and subsidized child care. Fertility kept falling.

In 2005, Kuniko Inoguchi was appointed the country's first minister responsible for gender equality and birthrate. The main obstacle, she declared, was money: People couldn't afford to get married or have children. Japan made hospital maternity care free and introduced a stipend paid upon birth of the child. Japan's fertility rate climbed from 1.26 in 2005 to 1.45 in 2015. But then it started declining again, and in 2022 was back to 1.26. This year, Prime Minister Kishida rolled out yet another program to increase births that extends monthly allowances to all children under 18 regardless of income, free college for families

with three children, and fully paid parental leave. Inoguchi, now a member of parliament's upper house, said the constraint on would-be parents is no longer money, but time. She has pressed the government and businesses to adopt a four-day workweek. She said, "If you're a government official or manager of a big corporation, you should not worry over questions of salary now, but that in 20-years-time you will have no customers, no clients, no applicants to the Self-Defense Forces."

Hungarian Prime Minister Viktor Orban has pushed one of Europe's most ambitious natality agendas. Last year he expanded tax benefits for mothers so that women under the age of 30 who have a child are exempt from paying personal income tax for life. That's on top of housing and child-care subsidies as well as generous maternity leaves.

Hungary's fertility rate, though still well below replacement, has risen since 2010. But the Vienna Institute of Demography attributed this primarily to women delaying childbirth because of a debt crisis that hit around 2010. Adjusted for that, fertility has risen only slightly, it concluded.

In the U.S., while state and federal legislators have pushed to expand child-care subsidies and parental leave, they have generally not set a higher birthrate as an explicit goal. Some Republicans are leaning in that direction. Last year, Trump said he backed paying out "baby bonuses" to prop up U.S. births.

Republican Sen. J.D. Vance of Ohio said falling fertility matters beyond the economic pressures of a smaller labor force and unfunded Social Security. "Do you live in communities where there are smiling happy children, or where people are just aging?" he said. Lack of siblings and cousins, he said, contributes to children's social isolation.

Economic pressure

With no reversal in birthrates in sight, the attendant economic pressures are intensifying. Since the pandemic, labor shortages have become endemic throughout developed countries. That will only worsen in coming years as the postcrisis fall in birthrates yields an ever-shrinking inflow of young workers, placing more strain on healthcare and retirement systems.

As birthrates fall, more regions and communities experience depopulation, with consequences ranging from closed schools to stagnant property values. Less selective colleges will soon struggle to fill classrooms because of the plunge in birthrates that began in 2007, said Fernández-Villaverde.

An economy with fewer children will struggle to finance pensions and healthcare for growing ranks of elderly. South Korea's national pension fund,

one of the world’s largest, is on track to be depleted by 2055. A special legislative committee recently presented several possible pension reforms, but there’s only a short window to act before the next presidential election campaign heats up.

There’s been little public pressure to act, said Sok Chul Hong, an economist at Seoul National University. “The elderly are not very interested in pension reform, and the youth are apathetic towards politics,” he said. “It is truly an ironic situation.”

Utilities Survive Broad Decline Among S&P 500 Sectors in April

Annie Sabater and Selene Balasta

Standard and Poor’s Global Market Intelligence – May 13, 2024

Utilities were the **only S&P 500 sector** to close April earning a **positive stock return**, with the **S&P 500 Utilities index increasing 1.6%**.

The **broader S&P 500 index slid 4.1%**, while the S&P 500 Energy index shed 0.8% in April.

Market performance of S&P 500 index, sectors in April 2024 (%)

Data compiled May 5, 2024.

Total return calculated between March 28, 2024, and April 30, 2024.

Source: S&P Global Market Intelligence.

Notching the biggest share price decline in the energy sector was Schlumberger Ltd. with a negative total return of 13.4%. The company doing business as SLB agreed to acquire oilfield technology company ChampionX Corp. in an all-stock deal announced April 2 and valued at about \$7.8 billion.

Phillips 66 shed 12.3% in April. The company recorded first-quarter 2024 earnings of \$748 million, compared with earnings of \$1.96 billion in the same quarter in 2023.

Marathon Petroleum Corp. saw its stock price slide 9.8%. On April 30, the company reported first-quarter 2024 net income attributable to the company of \$937 million, compared with \$2.72 billion in the prior-year quarter.

APA Corp. and Valero Energy Corp. also posted share price declines in April.

On the flip side, EQT Corp. outpaced peers with a total stock return of 8.1%.

President and CEO Toby Rice used an earnings conference call to sketch out a vision of the company evolving into a vertically integrated natural gas major after it closes its purchase of Equitrans Midstream Corp.

Other top-performing energy stocks in April include EOG Resources Inc., Hess Corp., Targa Resources Corp. and Chevron Corp.

Top and bottom performers of S&P 500 Energy index in April 2024 (%)

● Oil and gas exploration and production ● Oil and gas storage and transportation
● Integrated oil and gas ● Oil and gas refining and marketing ● Oil and gas equipment and services

In the power and utilities sector, NRG Energy Inc. outpaced peers with a total stock return of 8%, followed by NextEra Energy Inc. with a stock return of 4.8%. NextEra management made the case on the company's April 23 earnings call that renewables with battery storage are a better answer to the coming US electricity demand boom than other forms of generation, and NextEra is uniquely positioned to meet those needs.

Dominion Energy Inc., which saw a share price increase of 3.6%, launched its Charybdis vessel to support offshore wind construction in the water off the coast of Texas on April 15.

Consolidated Edison Inc. and Public Service Enterprise Group Inc. also logged share price increases in April.

Among laggards, Evergy Inc. posted a stock price dip of 1.7%.

Evergy is seeking approval to add 2,455 MW of "hydrogen-capable" gas-fired power plants to its portfolio through 2032, citing higher-than-anticipated growth in electric load in its Missouri and Kansas service territories.

DTE Energy Co.'s share price declined 1.6%. On an April 25 earnings call, DTE management said the M&A market is not currently valuing DTE Energy's portfolio of renewable natural gas supply projects at a level that would convince the Michigan multi-utility to sell the assets.

‘Cash Trap’ Poses Danger to Some Americans

by Vicky Ge Huang – WSJ – Jun. 26, 2024

5.5% – High end of short-term rates, their highest level in two decades.

Bob McGovern is in no rush to move his cash.

The 66-year-old retired banker and his wife have about 60% of their nonretirement assets in Treasury bills and money-market funds that are paying yields of around 5%. With plans to buy a second home in a warmer area, they expect to keep it there until the Federal Reserve cuts short-term interest rates to 4% or below.

“Until then, I’m just going to keep it in cash. I like the safety,” said McGovern, of Grosse Pointe Woods, Mich.

Americans have poured money into cash-like investments since the Fed began raising interest rates, driving assets in money-market funds to a record \$6.12 trillion earlier this month, according to the Investment Company Institute.

Now, Wall Street traders are betting rates have peaked and those investors face a choice: keep sitting on their cash as interest payments shrink or figure out how to redeploy the money.

Deciding when and how to rebalance a portfolio is challenging even for pros and depends on factors including a person’s age, savings and expected needs. But staying on the sidelines risks missing out on years of potential gains from holding a broad portfolio of stocks, bonds and other riskier investments.

J.P. Morgan Asset Management calls it the “**cash trap.**”

“If you’ve owned cash for the last year and a half, that view in the rearview mirror is pretty attractive and you feel good about yourself,” said John Croke, head of actively managed bond products at Vanguard. “But you have to remind yourself that that’s the rearview mirror.”

Croke said **long-term investors should return to a diversified bond portfolio** so they can **lock in attractive long-term yields before the Fed starts cutting rates.** Savers might find that **hard, with short-term rates at 5.25% to 5.5%, their highest level in two decades.**

Further complicating decisions about when to reallocate cash: Wall Street has repeatedly been wrong about the path of interest rates, with investors earlier this year betting the Fed would cut as many as six times in 2024. People who are going to need their money sooner may also see bigger stock allocations as too risky.

Jean Mersch, 61, an accounting manager for a commercial printer in Minnesota, said a third of her and her husband’s retirement assets is in money-market funds. That includes a few hundred thousand dollars tucked away in a high-yield savings account earning about 4.5% interest.

“If we get back to where there were no high-yield savings accounts that were paying much more than 1%, then we might look at some stuff and try to figure it out,” Mersch said.

Given their substantial retirement savings, Mersch doesn’t mind if the cash portion doesn’t earn large returns. She would consider diversifying more if the Fed starts cutting rates aggressively and the stock market takes a big fall.

The decision could cost her over the long run. **Since the end of 2021**, the **Vanguard Federal Money Market Fund** has **returned 9.1%** through the end of May. The **S&P 500**, meanwhile, **rose 15.1%** over the same period when including price changes and dividend payments. The **Bloomberg U.S. Aggregate bond index** has **lost 9.7%**, according to Dow Jones Market Data.

Another **problem with holding long-term investments in cash**: **Inflation** is likely to **chip away at its value after three years**, said Cody Garrett, a financial planner at Measure Twice Financial.

Taxes and fees can eat into returns as well. **Interest** payments from money-market funds are **generally taxed as ordinary income**, not at the usually lower rates for dividends or capital gains.

Money-market funds also tend to **charge higher fees than stock index funds**. “Investors who are maintaining large cash balances are basically taking a very one-sided position that rates will not go lower,” said Richard Saperstein, chief investment officer at Treasury Partners, which manages \$12 billion in client assets.

Some investors cite reasons other than attractive interest rates for sticking to cash. Frank Hammond, a 72-year-old retiree in Pittsburgh, said he is nervous about November’s presidential rematch between President Biden and former President Donald Trump. Geopolitical tensions, including escalating conflicts in the Middle East, are another reason for worry.

“If rates go below 4%, it won’t trigger me,” he said. “I think that we’re in for some real turbulence in the markets.”

Hammond said he has 25% to 30% of his retirement assets in a money-market fund, up from about 15% a few weeks ago.

The anxiety is understandable, because global instability can lead to market volatility. But **investors shouldn’t try to time the markets or invest based on their emotions**, said David Kelly, chief global strategist at J.P. Morgan Asset Management.

“People generally feel negative and pessimistic,” he said. “If they invest based on how they feel, they are going to hang on to cash forever.”

Copper Fever Breaks as Metal Loses Luster

by Enes Morina – WSJ – Jun. 26, 2024

Investors piled into bets on a looming copper shortage this year. That itself is helping to ease the potential problem – and spoil the party for latecomers.

Copper bulls, who long touted the metal as an energy-transition play, appeared vindicated a month ago. On May 20, spot prices on the London Metal Exchange hit a record of about \$11,100 a metric ton in intraday trading, up 29% from the beginning of the year. The commodity’s starring role in what might have been the biggest mining deal in history, as industry leader BHP courted its peer Anglo American, only added to a sense that this was copper’s moment.

But the moment passed: BHP never made a firm offer, and the **LME spot price** is **down** more than **14% from** its **peak**.

One reason is the **spring run-up in prices** was **driven by speculators more than** by **users of copper**. From the start of April to mid-May, copper futures in New York surged by 26.4% as traders and commodity trading advisers, or **CTAs** – many of which use **algorithms** to follow market trends – **bet on a supply deficit**.

In London, the long position on the LME grew from around 5,300 lots in January to a high of 71,900 lots in mid-May, according to commodity data provider Fastmarkets,

with each lot representing 25 metric tons of copper. That put pressure on bearish traders who sold short, creating a short squeeze.

But the rally forced some industrial buyers to pull back. Investors took profits as hopes of a shortage cooled somewhat.

The new trend has room to run, particularly with algorithms doing some of the selling. In mid-June, the LME's long position remained frothy at about 47,000 lots, close to a previous high in early 2021. While a big chunk of that is sticky, says Max Layton, global head of commodities research at Citi, a concern remains around CTAs. If they keep selling, the price of copper could slide to \$9,000 a metric ton by the end of the year, he estimates.

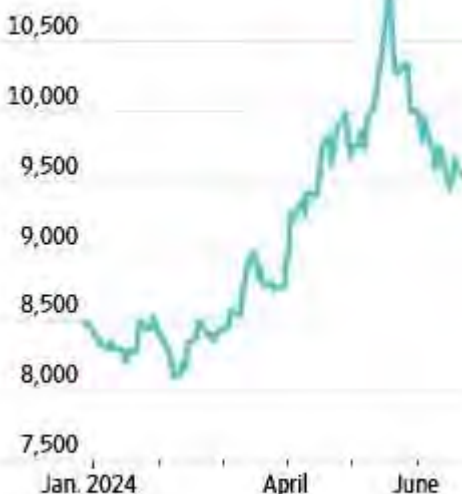

Then there is the underlying **question of supply**. Mining woes in South America and central Africa have led StoneX, a commodities brokerage, to lower their copper concentrate supply forecasts by 1.2 million metric tons over recent months.

Although the market was in a surplus for the first four months of the year, analysts say that will soon change.

Citi expects copper demand to exceed supply this year and is penciling in a deficit of around 600,000 metric tons over the next three years. Goldman Sachs forecasts a shortfall approaching half a million metric tons in 2024 alone.

LME copper price, year to date

\$11,000 per metric ton

Source: FactSet

But a supply crunch isn't guaranteed. The closure last year of one of the world's largest **copper mines** in **Panama** after a court ruling has been one problem. If the mine were to reopen early next year, that would tip the market into a surplus of 1.8%, according to Deutsche Bank.

A rally in copper prices forced some industrial buyers to pull back as hopes of a shortage cooled.

Meanwhile, the **supply of copper scrap** might exceed expectations. China has ramped up imports of the waste metal, taking in nearly a million metric tons in the first five months of 2024.

Trying to map out where that supply comes from, and how much can be recovered, is a Herculean task, as copper scrap is often procured from obscure mom-and-pop shops. For now, though, it is clear higher prices made stripping out the metal from unwanted appliances a lucrative endeavor.

High commodity prices have a way of bringing obscure sources of supply to light. **Prices of lithium**, another much-hyped energy-transition metal, **collapsed from** their late **2022 peak as unconventional mining operations took off in China and Africa**.

For copper, **Chinese demand** is another swing factor. The country consumes more than half of the world's copper and faces a deepening property slump. New-home prices in big cities fell 4.3% in May compared with a year earlier, worse than the 3.5% decline in April, according to China's National Bureau of Statistics. With industrial production also wavering, Chinese copper inventories are at their highest level since 2020.

The world will need a lot more copper in its **shift to renewable energy**, but don't count out the incentives created by high prices. Copper might just be the latest example of a common pattern in commodity markets: The moment investors start to see anything as a sure bet, it unravels.

—

Fed-Preferred Inflation Gauge Inches Toward Goal, Raising Odds of Fall Rate Cut

by Brian Scheid,

Standard and Poor's Global Market Intelligence – Jul. 1, 2024

The Federal Reserve's chief measure of inflation growth fell to its lowest point since March 2021 and within striking distance of the central bank's target. Yet a long-awaited rate cut remains highly unlikely before September, Fed watchers said.

The core **Personal Consumption Expenditures (PCE) price index**, which excludes volatile food and energy prices, **rose 2.6% from May 2023 to May 2024**, the **US Bureau of Economic Analysis** reported June 28.

The increase was within economists' expectations and was the smallest in more than three years. It is a likely respite for Fed officials who have fretted over annual core PCE growth, which has hovered around 2.8% for the previous three months.

Inflation nears Fed's 2% target

Change from a year ago (%)

Data accessed June 28, 2024.

Source: US Bureau of Economic Analysis.

© 2024 S&P Global.

The central bank has held its benchmark federal funds rate above 5% for nearly a year and Fed Chairman Jerome Powell has repeatedly said rate cuts are not coming until annual core PCE growth shows meaningful progress toward 2%. While the inflation slowdown signals some progress toward the Fed's goal, it is likely not enough to shift expectations from a view that rate cuts will start in the fall.

"I don't think it changes the calculus for the Fed," said Michael Arone, chief investment strategist for the US SPDR business at State Street Global Advisors. "They'll continue to be data dependent. But I do think it allows investors to breathe a sigh of relief to suggest that April's hotter-than-expected data may have been a bit of a hiccup and we're back on track for data falling, rather than accelerating."

'Road to normalization'

After the latest inflation data was released June 28, the odds of a rate cut at the Fed's next meeting in late July were about 10%, essentially unchanged from a month earlier, according to the CME FedWatch Tool, which measures investor sentiment in the Fed funds futures market.

The **odds of at least one cut by the Fed's September meeting** were at about **66%** on **June 28**, up from about 46% a month earlier, according to the tool.

The modest decline in core PCE was "another step on the road to normalization," said Oren Klachkin, a financial market economist at Nationwide.

While there are signs of overall cooling, the economy continues to expand, likely keeping the odds of a near-term rate cut very low, Klachkin said.

"The only way we get a July cut is a deterioration in the jobs machine and consumer spending that leads Fed officials to materially alter their views on the economy," Klachkin said.

For the Fed to consider a cut at its meeting in July, there would need to be considerable weakening in the labor market.

The unemployment rate, which had been below 4% since February 2022 before hitting that mark in May, would need to rise "notably," possibly by 20 basis points, Arone with State Street said. "The Fed wants to cut rates, they just want the data to confirm that inflation is in fact falling before they do that."

Unemployment rate reached 4% in May (%)

Data accessed June 28, 2024.
Source: US Bureau of Labor Statistics.
© 2024 S&P Global.

Before the next Fed meeting in late July, the jobs report for June will be released only July 5. Additionally, the latest consumer price index, the market's preferred inflation measure, will be released July 11, and the PCE for June will come out July 26.

"Investors know there will likely be several steps involved before the Fed feels confident enough to cut rates," said Bret Kenwell, US investment analyst with eToro. "To get a cut in July at this point, we would likely need to see a combination of cooler-than-expected inflation and weaker-than-expected economic and labor reports."

While the Fed is now expected to cut rates in September, monetary policy easing this fall is not a sure thing, James Knightley, chief international economist with ING, wrote in a June 28 note. The Fed needs to see more evidence that inflation pressures are easing, additional signs of labor market slack, particularly with cooling wages, and a softening in consumer spending before it can cut, Knightley wrote.

"The Fed doesn't want to cause a recession if it doesn't have to and if the data allows it to start making monetary policy slightly less restrictive, we think the Fed will take that opportunity," Knightley said.

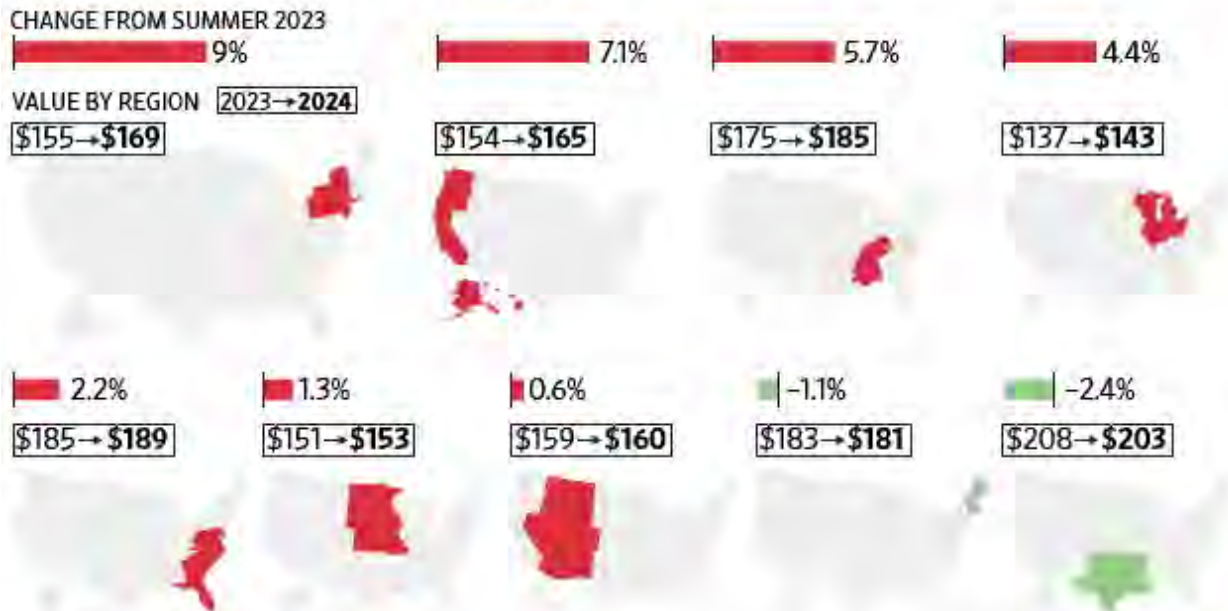

In Comes the Heat and Higher Electric Bills

by Ryan Dezember – WSJ – Jun. 21, 2024

Record Temperatures Heat Up Utility Bills

The average monthly home power bill is expected to rise 3% to \$173 this summer, with the biggest increases along the Pacific Ocean and in New York, New Jersey and Pennsylvania. **A3**

Projected monthly power bills for summer

Note: Projected average costs
Source: Energy Information Administration

Ashley Cai/THE WALL STREET JOURNAL

Summer is **off** to a **sizzling start**, which means higher electricity bills are on their way.

The **E**nergy **I**nformation **A**dministration **e**xpects the **U.S. average monthly residential power bill** to rise to **\$173 in June, July and August**, up 3% from last summer.

The government's estimates are subject to the weather, of course. But the **biggest bumps** in electricity expenses will likely occur **along the Pacific Ocean and in New York, New Jersey and Pennsylvania**.

New Englanders can expect to receive smaller bills than in 2023, according to the EIA. So should residents of Texas, Oklahoma, Arkansas and Louisiana, who nonetheless can anticipate another summer of America's biggest power bills, the EIA said.

The Southwest has been baking and a high-pressure ridge smothering the East is expected to bring triple-digit temperatures to Washington, D.C., this weekend for the first time since 2016. It **snowed in Montana this week**, but the **Northwest is heating up** and is forecast to join the rest of the country with above-normal temperatures next week.

Natural-gas futures price, weekly

\$10 per million British thermal units

This month will likely wind up being the warmest June in records dating back to 1950, both in terms of actual temperature and cooling-degree days, said Steve Silver,

senior meteorologist at Maxar. Cooling-degree days are a population weighted measure of temperatures above 65 degrees Fahrenheit that energy traders use to gauge demand.

“I wouldn’t expect a big change to a much cooler pattern for the rest of summer,” Silver said. “As far as whether we’ll be talking continued record heat, I think it’s a little too early to speculate on that.”

Air-conditioning season would be even more expensive had it not been so warm this past winter. With less need for heat, a lot of natural gas was left unburned. Prices plunged into spring, when demand for gas is low.

Though renewable energy production—particularly **solar** – is **booming, burning natural gas remains** the **dominant means** of **producing electricity in the U.S.** It accounted for **43%** of **utility scale power generation last year, more than** the next three biggest sources – **nuclear, coal and wind – combined**, according to **EIA** data.

Earlier this year, natural gas futures hit their lowest inflation-adjusted prices since trading began on the New York Mercantile Exchange in 1990. Big producers, including Chesapeake Energy and EOG Resources, dialed back output to keep the glut from getting bigger and hold back gas until prices improved.

Chesapeake, for example, began curtailing its output in February when prices bottomed out, and has drilled but not completed wells and deferred connecting others to pipelines.

Chesapeake started April holding back about 500 weeks as prices improved, Chief Executive Nick Dell’Osso told investors Tuesday at a conference.

“When you think about the demand spike that we should see in the Northeast going into this weekend, as it’s going to be very hot, we would be ready with additional volumes to bring to market,” Dell’Osso said.

EOG throttled back output from its big new gas field in South Texas. The Houston-based company will wait to complete wells until later this year when new export terminals for liquefied natural gas are expected to open and lift demand and prices, Chief Operating Officer Jeff Leitzell said at the same conference this week in New York.

“Obviously that’s worked out,” Leitzell said. “We’ll see kind of what type of summer we have from a weather standpoint.”

The **curtailments** have **already eaten into the glut**. In late **March**, when prices bottomed, there was **41% more gas in domestic storage caverns than the five-year average for that time of year**. **Last week**, the **EIA data showed that stockpiles were down to 24% above the normal level for early June**.

Gas prices have risen as inventories have been burned down. **Futures for July delivery** ended Thursday at \$2.741 per million British thermal units, **up 74% from the low in late March** and **5.1% higher than a year ago**.

Futures have recently traded even higher, rising last week above \$3 for the first time since November. They retreated after developers of the **Mountain Valley Pipeline** told regulators that the 303-mile conduit was **ready to move gas** to market from prolific drilling fields in Ohio, Pennsylvania and West Virginia.

On Thursday, **Tropical Storm Alberto** soaked the **Texas** coast, **cooling off the region** and **pushing down futures** an additional **5.8%**.

MOODY'S RATINGS

Rating Action:

Moody's Ratings changes Portland General's outlook to negative; affirms ratings

Moody's Investors Service – Jun. 3, 2023

Approximately \$4.4 billion of securities affected.

Moody's Ratings (Moody's) today **changed the outlook** of Portland General Electric Company (**PGE**) **to negative from stable**. At the same time, Moody's has **affirmed PGE's ratings, including its A3 long-term Issuer rating, its A1 first mortgage bond rating and P-2 short-term commercial paper rating**. A complete list of rating actions is provided toward the end of this press release.

Ratings Rationale

"Portland General's financial profile is pressured by higher leverage to fund capital expenditures and **slow cash flow recovery**," stated Edna Marinelarena, Moody's Assistant Vice President. Although PGE benefits from a variety of cost recovery mechanisms, the company's financial profile has been pressured since 2020 due to several onetime costs that led to a **substantial increase in cost deferrals**, while at the same time **increasing its leverage to fund its higher capital expenditure program**.

PGE's **cash flow from operations before changes in working capital (CFO pre-WC) to debt ratio averaged about 15% over the last three years** ending at **15.3%** as of the **last twelve months ending 31 March 2024**, which is **below** the company's established **downgrade threshold of 18%**. We see PGE's credit metrics remaining

pressured over the next 12 to 18 months due to sustained capital expenditure spending and higher leverage.

In **2023**, **PGE doubled** its **capital expenditure program** spending about **\$1.4 billion compared** to an **average** of about **\$700 million** from **2018-2022**. The company **plans** to **sustain** the **higher capex spending**, averaging about \$1.3 billion, annually, starting in **2024 through 2028**. The capital program has **largely** been **debt-funded with minimal equity**.

Looking ahead, the **company expects** to have a **more balanced** approach to funding its capex program, which **could lead to** an **improvement** in credit metrics and sustainment of the **CFO pre-WC to debt ratio** above 18%. In **April 2023**, **PGE entered into** a **\$300 million at-the-market program** of which **\$78 million** was **settled** in **March 2024 under separate forward agreements**.

PGE's A3 rating is supported by its business risk as a regulated, vertically integrated electric utility operating under the **generally supportive regulatory construct afforded by** Oregon Public Utilities Commission (**OPUC**). The company has a track record of credit supportive regulatory outcomes, including the authorization to begin recovering on the about \$180 million of deferrals accumulated from 2020 through 2022.

Among the **deferrals** were costs associated with the coronavirus **pandemic**, a **2020 Labor Day wildfire**, a **February 2021 ice storm** and the utility's annual power cost adjustment. The OPUC had previously approved the deferrals, but recovery of the costs was pending OPUC review at a later regulatory proceeding. Regulatory approval of deferrals are a constructive rate making provision, however, **deferrals** are also a **near-term drag on credit metrics** and **increase regulatory lag**. Additionally, because of the size of the deferrals, PGE will recover these cost over the next several years further **pressures near-term cash flow during** a period of **heightened capex spending**.

PGE's credit can also be affected by **wildfires**, but **Moody's views this risk as moderate**, due to the **company's robust mitigation plans** and general level of **preparedness**. This includes OPUC-approved public safety power shutoff (**PSPS**) protocols, which PGE executed in 2023. **However, wildfire mitigation requires ongoing investment** and could also exert financial pressure if cash flow recovery lags spending.

Outlook

The **negative outlook reflects PGE's persistently weak credit metrics** that will remain pressured over the next 12 to 18 months due to higher capex spending and debt levels. The company's financial metrics could improve and its CFO pre-WC to debt ratio sustained above 18% given the expectation of ongoing supportive regulatory outcomes and a more balanced approach to funding capital spending. However, at 15% CFO pre-WC to debt, there is **no financial cushion** in the event of another one-time event.

Factors That Could Lead to an Upgrade or Downgrade of the Ratings

Factors that could lead to an upgrade

A rating upgrade is **unlikely** given the persistently weak metrics. An upgrade could occur if PGE's regulatory framework improves, providing more timely cost recovery, including stakeholder support for carbon transition investments, leading to CFO pre-WC to debt above 23% on a sustained basis.

Factors that could lead to a downgrade

A **rating downgrade could result if** PGE's key financial metrics do not recover, including if the company's ratio of **CFO pre-WC to debt remains below 18% in 2024**. Additionally, a **deterioration** in the **credit supportiveness of the Oregon regulatory environment**, as evidenced by adverse rate case outcomes, **or diminished support for carbon transition investments** could lead to a rating downgrade.

Portland General Electric Company (PGE) is an integrated electric utility company, servicing about 934,000 retail customers in Portland, Salem and surrounding areas; together comprising a population of about 2 million people or 50% of Oregon's total population. PGE's customer base is largely residential. The utility is under the purview of the Oregon Public Utility Commission (OPUC).

Regulatory Disclosures

For further specification of Moody's key rating assumptions and sensitivity analysis, see the sections Methodology Assumptions and Sensitivity to Assumptions in the disclosure form. Moody's Rating Symbols and Definitions can be found on <https://ratings.moodys.com/rating-definitions>.

For ratings issued on a program, series, category/class of debt or security this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series, category/class of debt, security or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the credit rating action on the support provider and in relation to each particular credit rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the issuer/deal page for the respective issuer on <https://ratings.moodys.com>.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this credit rating action, and whose ratings may change as a result of this credit rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

These ratings are solicited. Please refer to Moody's Policy for Designating and Assigning Unsolicited Credit Ratings available on its website <https://ratings.moodys.com>.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

The Global Scale Credit Rating(s) discussed in this Credit Rating Announcement was(were) issued by one of Moody's affiliates outside the EU and UK and is(are) endorsed for use in the EU and UK in accordance with the EU and UK CRA Regulation.

Please see <https://ratings.moodys.com> for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the issuer/deal page on <https://ratings.moodys.com> for additional regulatory disclosures for each credit rating.

PGE Joins Allete, Grid United in Planned \$3.2B HVDC Transmission Line

by Stephen Cedric Jumchai

Standard and Poor's Global Market Intelligence – May 29, 2024

Portland General Electric Co., also known as **PGE**, signed a **nonbinding memorandum of understanding** with **Grid United LLC and Allete Inc.** to **join** in the **development** of a **high-voltage direct-current transmission** line in the US.

The **North Plains Connector** is a **415-mile transmission line** to be constructed with **endpoints near Bismarck, ND, and Colstrip, MT**. It is touted as the nation's first high-voltage direct-current line **connecting** three regional power grids – the **Midcontinent ISO**, the **Southwest Power Pool**, whose areas include North Dakota and Montana, **and** the **Western Interconnection**, which includes parts of Montana. Allete and Grid United announced the project in January 2023.

The project represents an investment of approximately \$3.2 billion in Montana and North Dakota and is expected to create over 600 jobs during construction, according to a May 28 news release. The parties will now work to finalize the agreements, with **PGE** expected to take a **20% stake** in the **project**.

"The North Plains Connector is a key step in serving the growing needs of customers with safe, reliable, clean energy through joint collaboration," said PGE President and CEO Maria Pope. "Additional transmission capacity will provide access to renewable energy over a wider and diverse geographic area, helping to deliver economic and environmental benefits."

The Second Quarter Split the Market

by Jon Sindreu – WSJ – Jul. 1, 2024

Modest stock gains and low volatility have masked some large divergences.

The market drama in the **second quarter** of **2024** was all under the surface.

The **S&P 500 index rose 3.9%**. The Stoxx Europe 600 and Japanese Topix did less well, but mostly held on to gains recorded during the first half of the year. However, the unremarkable headline numbers mask some striking trends.

Beyond artificial intelligence, the S&P 500 has been unloved.

Artificial intelligence has been the fuel propelling stocks since late 2022, and the second quarter of 2024 was no different. Within the S&P 500, companies related to the theme gained 14.7% in market value this part quarter, whereas the rest lost 1.2%. In June, chip maker Nvidia briefly became the world's most-valuable listed company. These aren't purely speculative moves: Massive spending on AI has boosted earnings, which means that AI-related price/earnings ratios have remained relatively stable.

Yet, in previous quarters, AI valuations moved broadly in lockstep with the wider market. At the start of April, when investors became jittery about the S&P 500's P/E ratio being too high, the selloff affected both AI and the rest.

Then something changed, and the two became disconnected: The **AI** corner of the market has now **shot up beyond** what is **warranted by higher earnings forecasts, while valuations elsewhere remain below** their **March peak**.

More S&P 500 Sectors Are Down Than Up.

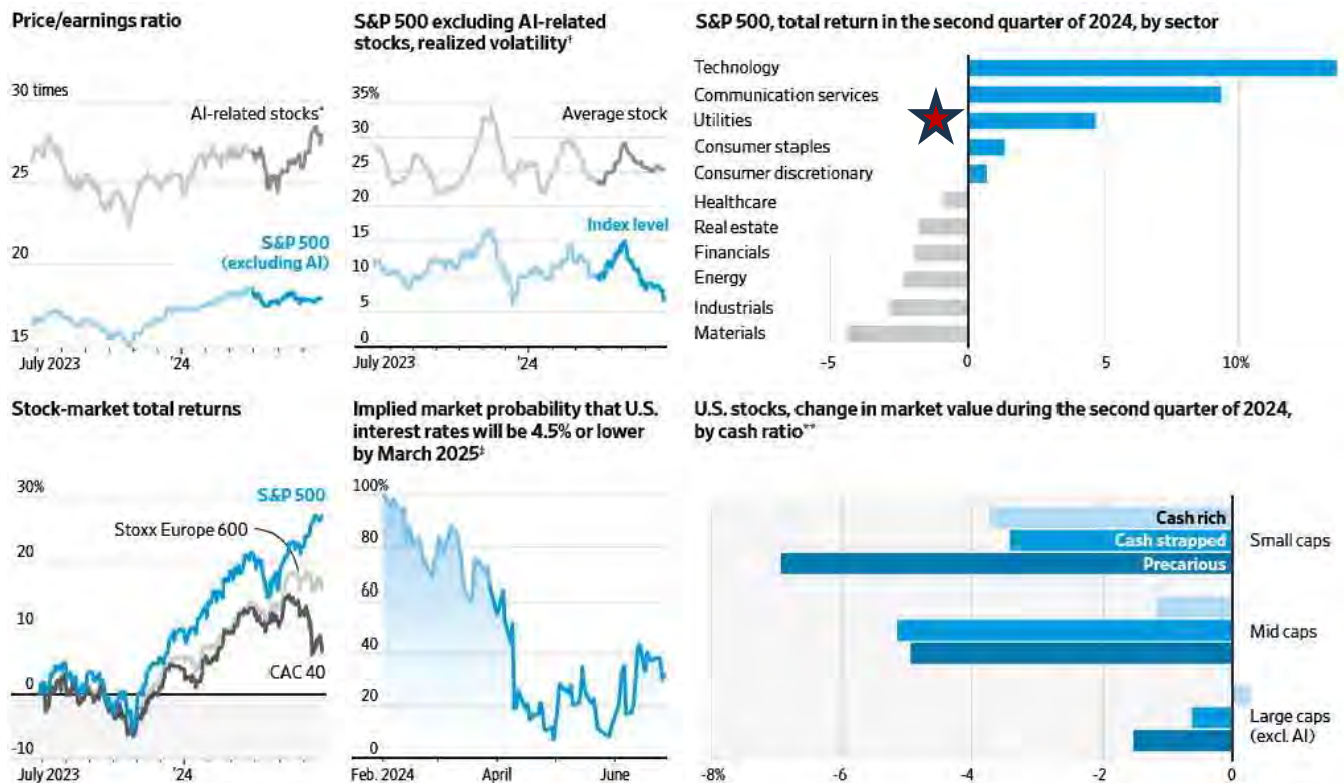

This pattern of divergence shows up in sector performance, too. Tech led the way in the second quarter, followed by previously oversold telecoms and media companies – grouped as communication services. **Utilities**, which **have become an AI play** because of **expectations** that **new data centers will stoke electricity demand**, also did well. **But six** out of 11 **sectors** – healthcare, real estate, financials, energy, industrials and materials – **lost market value**.

It is also telling that “consumer staples,” which include must-buy household products and food brands, have outpaced the more cyclical “consumer discretionary” firms such as apparel retailers, restaurants and carmakers. Perhaps investors recognized that economic optimism had gotten out of hand. But they may also be becoming more cautious.

Index Volatility Has Tumbled, But Single-Stock Volatility Hasn't.

The low volatility of the S&P 500 points to a market without much to worry about. Daily moves have become less pronounced, with the calm close to pre-pandemic levels. But there is a catch: The actual shares that underlie the S&P 500 have recorded much higher price swings, leading to an almost-unprecedented **gap between index and single-stock volatility**. This is true even excluding AI-related companies.

It may be a result of investors themselves betting against volatility, which has in the past kept actual volatility misleadingly low. The structured products that have become popular among Americans may be having a particularly strong effect at the index level. Or perhaps, with most people today investing through tracker funds, top-down views on the market increasingly dominate.

*Based on a basket of 50 U.S.-traded stocks. ¹20-day standard deviations of daily moves. ²Using 30-day fed funds futures. ³Using the S&P 500, S&P MidCap 400 and S&P SmallCap 600 indexes. Cash ratios are cash and equivalents divided by current liabilities. 'Cash rich,' 'cash strapped' and 'precarious' defined as ratios over 1, 0.5 and below 0.5, respectively. Companies with no available data excluded. Sources: FactSet (S&P 500, S&P MidCap 400 and S&P SmallCap 600 indexes, 2Q returns by sector, total returns); WSJ calculations (P/E ratios, volatility, returns, cash ratios); Bespoke Investment Group (AI basket, AI stocks); CME Group (implied market probability on rates)

“Higher for Longer” Rates Are Now Priced In.

Markets have had to accept that central banks, and especially the Federal Reserve, aren't going to embark on the rate-cutting spree that was embedded into derivatives prices over the winter. In early April, the implied expectation that borrowing costs would be 1 percentage point or more lower by March of next year fell from more than 60% to less than 20%. It has ticked up a bit since.

Higher rate expectations haven't reverberated across sectors exactly as the classic market playbook would suggest – tech hasn't suffered, nor have banks benefited. But they have still had a subtle impact. **Weaker balance sheets** have been **punished**.

Beyond the AI champions, **investors** have **looked kindly on large capitalization companies with strong balance sheets**, and **punished ones** that are **short of cash**. Among **U.S. medium-size firms**, for example, those **with current liabilities exceeding their liquid holdings lost 5% of their combined market value during the quarter**, compared with a **roughly 1% drop for the rest**.

Smaller companies generally have fared badly, but – unlike in previous AI-focused markets – financial strength, not size, has correlated better with performance. **Higher**

borrowing costs are clearly **hitting fragile businesses**. This can also be seen in the high-yield bonds issued by companies rated triple-C or lower.

France Has Brought Political Risk Back to European Markets.

The Stoxx Europe 600 hasn't matched the tech-driven rally of the S&P 500, but it has kept up while offering diversification in the form of pharma and luxury goods. In a predictable plot twist, though, political risk has returned, this time in France, where either a euro-skeptic party or a tax-loving leftist alliance could win legislative elections. The CAC 40 has finished the quarter down 8.9%.

Disaster is unlikely, but this is giving overseas investors a reason to avoid buying broad baskets of European equities.

Pessimists look at this splintered market and – quite reasonably – foresee a correction once the AI rally runs out of steam.

But there is also a more cheerful interpretation: Given the strength of the global economy, the fact that most stocks are cheaper than they were three months ago could lay the groundwork for broader based gains once rates finally come down.

Track the Markets: Winners and Losers

A look at how selected global stock indexes, bond ETFs, currencies and commodities performed around the world for the quarter

The U.S. Gave Chip Makers Billions. Now Comes the Hard Part.

by Asa Fitch – WSJ – Jun. 3, 2024

President Biden spoke in March at an Intel campus in Arizona, where the company is building two new chip factories.

Chips Act's early stages have been challenged by rivals overseas and the sheer expense of making chips.

In a series of articles this week, Wall Street Journal reporters from around the world go inside the escalating global chip battle. At stake: leadership of an industry expected to double in size by the end of the decade to \$1 trillion.

Two years into a nearly \$53 billion government effort to shore up the U.S. chip industry, the program's impact is becoming clearer: Big companies making advanced chips are getting a boost, but there are limits to what the money can do.

The Chips Act, passed in 2022 to jump-start domestic semiconductor production, is supposed to supercharge chip making in the U.S. But even in its early stages, it is being challenged by fast-growing chip industries in competing countries, political complexity regarding the allotments at home and the sheer expense of manufacturing chips.

The lion's share of the allotments have been slated for Intel and other large chip makers that plan to make advanced chips in the U.S., while some companies that are

important in other parts of the chip-making supply chain have missed out. Meanwhile, other countries have amped up spending to keep competitive.

The White House calls the policy a victory. In his State of the Union speech in March, President Biden pointed to shortages of chips during the pandemic that drove up prices for mobile phones and cars. Instead of importing those chips, he said, private companies are now investing billions to build new factories in the U.S.

The program is forecast to triple the number of chips made in the U.S. by 2032, according to a new Boston Consulting Group study commissioned by the Semiconductor Industry Association. The building boom should boost the U.S. share of global chip production to about 14% in 2032, the study projects, compared with 12% in 2020.

President Biden, New York Gov. Kathy Hochul and Senate Majority Leader Chuck Schumer with Micron CEO Sanjay Mehrotra, whose company is planning to invest up to \$125 billion in new facilities in New York and Idaho.

That modest overall increase in U.S. market share partly reflects that European countries, South Korea, Japan, Taiwan and China are also stepping up investment in their own respective chip industries, underscoring how the global race to produce more of the most advanced semiconductors is expanding and accelerating.

Regardless, the money will give the U.S. a major boost in making the most cutting-edge chips, said Jimmy Goodrich, a senior adviser for technology analysis to Rand, and is likely to change the trajectory for a U.S. industry that had fallen behind much of the rest of the world. Without the program, Boston Consulting estimated, the U.S. share would have fallen to 8% in 2032.

“What the Chips Act is going to do is arrest that terminal decline, right the ship and put it back on a more stable path,” Goodrich said. “It might slightly increase U.S. overall chip production, but the more significant increase is going to be the relative share” of advanced chip production.

Indeed, Chips Act grants have focused on cutting-edge chip factories that require tens of billions of dollars of capital outlays, and in that arena, the Boston Consulting report projected the U.S. share would grow from zero to 28%. That is more bullish than a recent prediction of a 20% share by the end of the decade from Commerce Secretary Gina Raimondo, who is overseeing the funding.

Total Chips Act incentive grants awarded since December, by receiving company

Note: Awards are maximum amounts and are contingent on due diligence.
Source: Semiconductor Industry Association

“Because of the Chips Act, every company capable of producing leading edge semiconductors at scale is now expanding in the United States, and we have bolstered

our country's supply chain resilience and national security," said Mike Schmidt, director of the Chips Program Office, in a statement.

The Chips Act was a bid to reinvigorate the American chip industry and fend off rising competition from China in a sector increasingly crucial to national security. It outlined \$39 billion of direct grants for chip factories, alongside funding for government-led research and workforce-development initiatives, among other efforts. As a result, **new** chip-making plants – known as **fabs** – are **sprouting up** in **Arizona, Texas, New York, Oregon** and **Ohio**.

Political maneuvers

The government received hundreds of applications for the grants from companies eager for funding. The **biggest chunks of money went to Intel**, which got up to **\$8.5 billion of grants** for several projects, and to **Taiwan Semiconductor Manufacturing Co., Samsung Electronics** and **Micron** Technology, each of which were allotted more than \$6 billion for their projects.

TSMC, the **world's largest contract chip maker**, is investing more than \$65 billion to build factories in Arizona. Samsung is investing about \$45 billion in Texas, and Micron, a memory manufacturer, is planning up to \$125 billion worth of new facilities in New York and Idaho.

Industry executives have largely been pleased with the rollout of the program, even as labor disputes, higher costs and extended environmental reviews are slowing work compared with some other countries.

Samsung is investing about \$45 billion in Texas.

Some have said the program's success is still in doubt because it isn't clear if all of the promised chip factories will be fully built out. Also, **TSMC and Samsung** are **expected to keep** their **most advanced chip production** back home in **Taiwan** and **South Korea**.

A TSMC spokeswoman said the decision was based on the practical difficulties of moving advanced chip making to the U.S. rather than political considerations. Samsung declined to comment.

Some investors are worried about the amount of money being spent on new construction. Elliott Investment Management, an activist investor, took a \$2.5 billion stake in Texas Instruments and wrote a letter last month to its board of directors urging slower spending on manufacturing growth to boost cash flows. TI is expected to receive grants under the Chips Act.

Some companies missed out. Almost two years ago, the U.S. chip maker SkyWater Technology unveiled plans to build a \$1.8 billion research and production facility in West Lafayette, Ind., contingent on government funding under the Chips Act.

A provision in a March spending bill directed that **\$3.5 billion** of **Chips Act money** be **reserved** for a **secure project making defense-industry chips**, which is **expected to go to Intel**.

Construction at Intel's campus in Arizona.

That change led the office doling out the money to cancel funding for commercial chip research and production facilities being planned by companies including SkyWater and Applied Materials, a maker of chip manufacturing equipment.

SkyWater recently decided to cancel the project and release its option on the land. The Bloomington, Minn.-based foundry makes older generation chips for the military, among other customers.

"The project is on hold with no definitive plan to move forward, but the concept is viable," SkyWater Chief Executive Tom Sonderman said. If and when government mechanisms "are in place to support R&D facilities, SkyWater will examine those opportunities," he said.

Applied Materials still plans to build its research center, originally expected to cost \$4 billion, but might not do so in a single facility, and parts of it could be outside the U.S., according to people familiar with the situation.

Chips Act grants have focused on cutting-edge chip factories that require tens of billions of dollars of capital outlays.

Funding gap

The impact of the program is also limited by the sheer cost of chip plants. A single advanced chip fab can cost more than \$20 billion, and the planned U.S. facilities won't be operating until later this decade. Those realities mean that even a historic \$39 billion grant program can't itself tip the global share significantly in the U.S.'s favor.

"This could only support maybe a few big fabs, but I think that's the starting point," said Ajit Manocha, chief executive officer of the industry group SEMI and a former CEO of the chip maker GlobalFoundries. "I'm pretty sure that the Department of Commerce and the government in general understands that we have a huge gap to close."

That gap, Manocha said, will probably take several hundred billion dollars to fill and would take a decade, assuming further replenishments of Chips Act funding pass through Congress.

The chip companies see the program as a solid start to a long-term push with more money likely required, although it isn't clear that lawmakers have the appetite to support the industry with further grants.

In the absence of more grant money, tax breaks for purchases of chip manufacturing equipment might end up having a deeper impact, industry executives

said. The **Chips Act** included a **25% tax credit** for that equipment, which some executives estimate has already funneled tens of billions of dollars into the industry.

A silicon wafer with chips etched into it.

Intel Chief Executive Pat Gelsinger said in an interview that tax incentives were the most important mechanism to keep the momentum of the program going in the long run, among other efforts to support the supply chain and domestic innovation.

The tax credit expires in 2026, and industry lobbyists are already preparing to push for an extension.

—

Why Utilities Are Lighting Up the Stock Market

by Jason Zweig – WSJ – May 17, 2024

Utility stocks are suddenly white **hot, thanks** largely to **artificial intelligence's thirst for electricity**. Investors accustomed to thinking of the sector as sleepy and safe need to realize the game has changed.

The stock market's tortoises just got hare-y.

Electric-utility stocks have **long** been **considered** the ultimate in stodgy, **slow-but-steady investments** – **appealing** strongly to **people who value income and long-term safety above growth and quick gains**.

In the past few months, though, utilities have left the rest of the market in the dust. These dullest of all stocks have suddenly become a bet on the single flashiest area of the market: artificial intelligence. **AI requires** a lot of computing power, and computers use a **lot of electricity**.

That has introduced a new risk to an old bet on safety. **Investors looking for income and value may now find themselves holding stocks that bang around a lot more than** they did **in the past**.

This spring, “AI caught the market by storm,” says Douglas Simmons, portfolio manager of the \$1.2 billion Fidelity Select Utilities mutual fund. “It became recognized more broadly among generalist investors that **utilities have become a play on AI**.”

And just like that, as if someone had flipped a switch, the spotlight was on and these stocks got hot.

Selected utility stocks, total return, past three months

Source: FactSet

As Bespoke Investment Group, a research firm, pointed out this week, three of this year’s five best-performing stocks in the S&P 500 are utilities: Vistra, Constellation Energy and NRG Energy. Vistra, up 143%, has even outperformed the king of AI itself, Nvidia; Constellation, up 85%, is barely behind it.

For utility investors, this is like night and day.

Last year was a total blackout. The Dow Jones Utility Index lost 7.2%, while the S&P 500 gained 26.3%; both figures include dividends. That was the worst annual underperformance by utilities since 1999.

Higher interest rates were part of the problem. Rising yields not only **increased borrowing costs for utilities**, but **made their shares less attractive relative to bonds**.

And 2023 wasn’t the only recent off year. The spectacular implosion of PG&E in 2017 and 2018 had investors worrying that power companies face growing risks in a warming world.

Utilities inched up only an average of 6.6% annually over the five years ended last Dec. 31; the S&P 500 gained 15.7% annually.

The business of providing electricity hasn't grown in the past couple of decades as conservation and more-efficient technology have reduced consumption. The U.S. generated slightly less electricity in 2021 than it had in 2007, according to the federal Energy Information Administration – even though the economy grew more than 3% annually over that period.

Now, however, the need for energy is finally expanding. On their April 23 earnings-announcement call, executives at NextEra estimated that electricity demand from data centers alone would grow 15% a year through the end of the decade.

AI isn't the only reason utilities have heated up so fast. The rapid increase in demand for electricity nationwide comes from three main sources, says **Maria Pope, CEO of **Portland General Electric**, Oregon's biggest utility.**

One is the **revival of domestic manufacturing** after decades of moving offshore. **Another** is the **boom in semiconductor production**, boosted by government support. **But** the expansion of **data centers**, "driven by the insatiable appetite of AI," is the **fastest-growing source of industrial demand, says Pope.**

Jay Rhame, chief executive of Reaves Asset Management, which manages about \$3 billion in utility stocks, thinks the only historical parallel is the boom in electricity generation that followed the widespread adoption of air conditioning in the 1960s and 1970s.

Utilities are suddenly so hot that they're affecting the performance of funds in broader segments of the market. Look at two exchange-traded funds that specialize in income-producing stocks: iShares Select Dividend and iShares Core High Dividend. Over the past three months, Core High Dividend is up 7.2%, slightly more than the S&P 500; Select Dividend, meanwhile, has gained 9.6%, outperforming the broad market by 3.2 percentage points.

Nearly half the recent difference in return between the two funds is attributable to utility stocks alone, says Daniel Prince, head of iShares product consulting at BlackRock. Select Dividend, with 28% of its assets in utilities, has gotten a big boost from them. Its top utility holding, Dominion Energy, has gained 17.8% over the past three months. Core High Dividend, with only 9% in utilities, hasn't kept pace.

To be fair, utility stocks have still barely caught up to where they were at the end of 2021. They were beaten up so badly last year that they're still considerably cheaper, on average, than the stock market overall.

The **Dow Jones U.S. Utilities Index trades at 17 times expected earnings over the next year**; the **S&P 500 is at 20 times projected earnings.**

So this **isn't a bubble – not yet, anyway.** But income-oriented investors accustomed to thinking of power companies as the sleepest and safest of industries should realize the game has changed.

Hot money always follows hot performance. Remarkably, investors have yanked about \$4 billion out of utility ETFs over the past year. That outflow will surely turn into a flood of new money if the stocks stay hot.

And stocks that can go up 15% or more in a month, as many power companies have done since mid-April, can also go down 15% or more in a month – something that utilities never used to do unless they were on the verge of going bust.

Just as bonds have delivered startling **volatility** in the past few years, income-oriented utility investors should make sure they're ready for some shocks along the way.

Population, by Age Group

Millions of people

The number of people ages 25 to 54, which particularly affects the number of people employed, is projected to grow more slowly than the number of people age 65 or older, who are less likely to work and who are generally eligible for Social Security and Medicare.

Data source: Congressional Budget Office. See www.cbo.gov/publication/59711#data.

The population referred to in this figure is the Social Security area population, which includes all residents of the 50 U.S. states and the District of Columbia, as well as civilian residents of U.S. territories. It also includes federal civilian employees and members of the U.S. armed forces living abroad and their dependents, U.S. citizens living abroad, and noncitizens living abroad who are eligible for Social Security benefits on the basis of their earnings while in the United States.

Portland Is Aging Faster Than the Rest of the Country.

by Riya Sharma – Oregonian – Jul. 5, 2024

The Community for Positive Aging hosted a "Memory Care Cafe" on Thursday, an event for seniors with memory loss and their caregivers and families.

Even on a typically quieter day of the week, a Northeast Portland senior center bustled with activity.

About 20 seniors sat in a circle last Thursday – some in wheelchairs or sharing tables with their caregivers – and waved colorful scarves to the strum of a music therapist's guitar. Others stopped by the pantry to take home fresh vegetables or fill their mugs with coffee.

The phone rang constantly. Jaden Saloum, a center assistant at The Community for Positive Aging, answered requests for legal support, tax help and health assistance. One caller had nothing to ask for, but the conversation lasted 13 minutes anyway. As it ended, the woman on the phone thanked Saloum for listening, saying she lives alone and had no one else to go to.

"It's a big issue with seniors, the social isolation is huge," center manager Kaylyn Peterson said.

Groups like The Community for Positive Aging, formerly the Hollywood Senior Center, serve an ever-growing population of retirement-age adults. New numbers

released Thursday by the U.S. Census Bureau underscore the demographic shift underway – one for which researchers say the region is unprepared, even though it could be predicted decades ago.

The **numbers show** the **effect** will be **magnified in** the **Portland area, where** the **65-and-older population** is **growing even faster than** the **U.S. average**.

And this is **just** the **start**. **Oregon's aging population** is **not expected to peak until 2050**, said Carolyn Aldwin, director of the Program on Aging Studies at Oregon State University.

The **state's low fertility rates combined with rising life expectancy contribute to** the **trend**, said **Neal Marquez, forecast manager** at **Portland State University's Population Research Center**.

Social service strain

The **aging population threatens to overwhelm underprepared social services**.

Calls to Northwest Pilot Project – a nonprofit that helps low-income seniors in Multnomah County find housing – have tripled in the last three years.

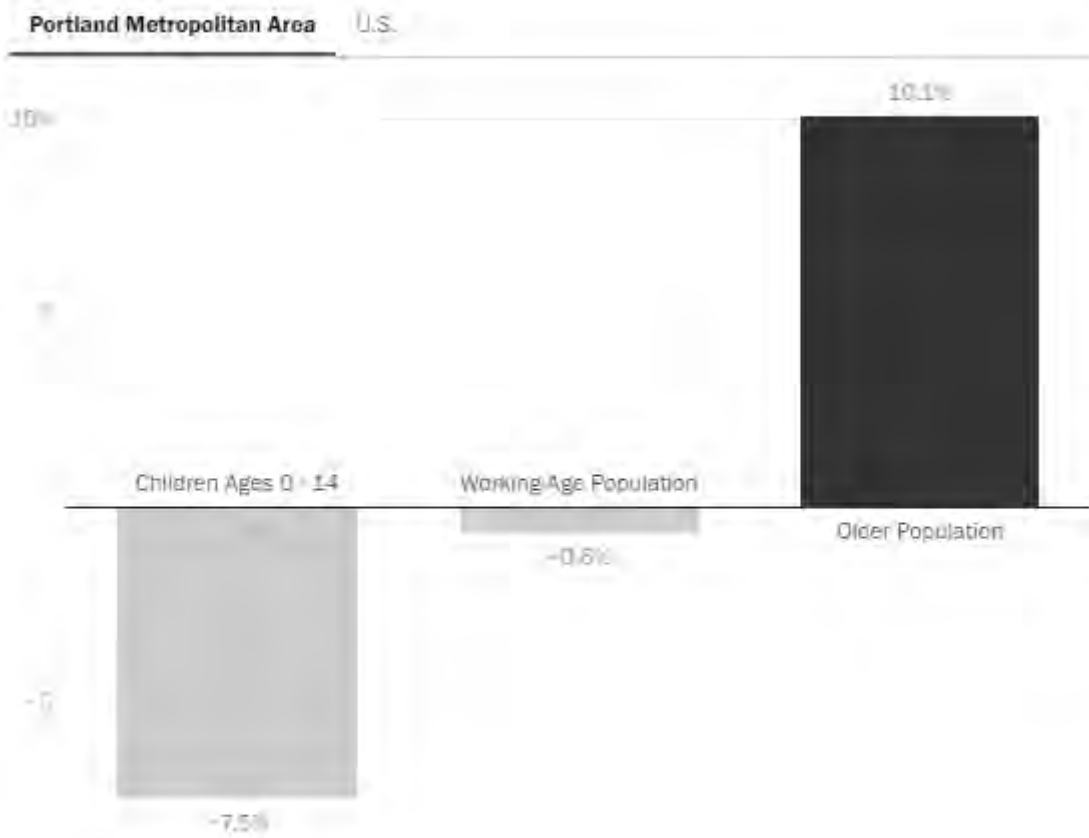

In the same time period, the **number of older adults** who are **homeless** in **Multnomah County increased by 15%**, said Laura Golino de Lovato, executive director of Northwest Pilot Project. **Adults over 60 make up a quarter** of the **homeless population in the county** and projections suggest this number will increase, she added.

“There are **more people at risk of eviction** and there are **more older adults** who are **becoming homeless for the very first time** in their lives because the **fixed**

income that they're on **does not cover** the **increasing rents** that they have to pay," Golino de Lovato said. "We are overwhelmed with calls and requests for support."

The majority of Golino de Lovato's clients rely on social security. But because the model is based on earnings over time, people who have worked low-wage jobs their whole lives don't receive enough to support themselves, she said.

How Portland's age distribution changed between April 2020 and July 2023

Data estimates percent change between April 1, 2020 and July 1, 2023. Working-age population includes ages 15-64. Older population includes ages 65 and over. Portland Metropolitan Area is defined by the U.S. Census as Portland-Vancouver-Hillsboro, OR-WA.

Client: Riva Sharma | Source: U.S. Census Bureau, Vintage 2023 Population Estimates | [Get the data](#)

One in five adults aged 50 and older have no retirement savings, according to an AARP survey conducted in January.

The result? “We’ve been operating for almost 55 years,” Golino de Lovato said. “This is definitely the **biggest increase** in the number of **low income, older adults** that we’ve **seen** in **Multnomah County in our history.**”

Calls and requests to 211info, a statewide social service referral hotline, show that affordable housing is just one piece of the puzzle. Seniors, officials for the program say, routinely reach out for a range of additional services.

“The main thing we’re hearing from older adults is, ‘I worked my whole life and I’ve never had to ask for help before,’” said Dary Nutter, a spokesperson for 211info.

Top services requested by Oregon adults 60+

Based on year-to-date calls made to 211info as of June 27, 2024. Percent of calls calculated from total calls made by Oregon adults 60+.

Chart: Riya Sharma • Source: 211info • [Get the data](#)

Evolving needs

When Amber Kern-Johnson first started working at The Community for Positive Aging in 2007, things looked different.

The senior center’s executive director remembered the center as a place to relax, dance and socialize and where a group of regulars came to kick back around the pool table.

But the laid-back model couldn’t keep up with seniors’ growing needs. In her 15 years with the organization, Kern-Johnson has seen a significant increase in demand for social services.

“Now, people have serious needs around affordable housing, around food security, around mental health, physical health,” Kern-Johnson said. “Our organization made a very intentional shift to move from more of a traditional senior center to providing more direct service and response to needs because we saw that need.”

The center started an additional free meal service in March for participants 60-years-old and older. Friday’s lunch had almost 50 attendees, which Kern-Johnson said underscored the need for food and community.

“We’re seeing folks whose needs are a lot higher than they have been in the past,” she said.

More than 90% of The Community for Positive Aging’s clients are low-income, with over half living at or below the poverty line of \$15,060. Requests to the food pantry have more than doubled in the last year alone.

The center sees up to 5 to 10 new clients requesting specialized assistance each week. Upwards of 80% of case-managed clients are living with disabilities, mobile or cognitive impairments, chronic health conditions, or alone without any natural support.

“We’re seeing more people coming in who are classified as high-need,” Kern-Johnson said.

Resources are stretched thin, though, and the waitlist for clients seeking case-management support is growing.

“We don’t have unlimited staff,” she said. “I see the toll it takes on my team.”

Another meal service held at the Community for Positive Aging is a monthly Asian Food Pantry, providing culturally-specific foods for people who might otherwise have trouble accessing them.

Health care challenges

Mary Kay Brennan arrived early for a storytelling class at the senior center Thursday. As she waited, she greeted Carol Emens and pointed out the new permanent crown on her tooth; the dentist had tried to delay the procedure, but to Brennan's relief, it got done just in time for a trip to San Diego.

"It's the little things when you get older, like getting your crown on time," the 77-year-old said.

Emens, who just had a root canal, said that teeth are only one of the health issues that become common with age. As they waited for class to begin, the two women discussed their friend's unfortunate accident that resulted in a broken hip.

The problem, 85-year-old Emens said, is that nobody goes into geriatric medicine.

"You go to a general practitioner and she doesn't really know the foibles of old people, and it is really difficult."

The growing number of seniors is already overwhelming health care systems, said Aldwin, the Oregon State researcher.

“Some facilities will no longer take new Medicare patients because the health care system folks argue that Medicare systems don’t really cover their costs. That’s a bone of contention between how much Medicare should pay, how much they can pay, and how much the care actually costs,” Aldwin said.

The crisis facing rural Oregon is even worse. Aldwin described it as a “double whammy” – older adults often relocate to rural areas for the lower cost of living while younger adults often move to cities for jobs.

“So you have a smaller population which is older, frailer, and in need of more services and the rural counties don’t have the economic base to support this,” Aldwin said. “It’s going to keep increasing and the problem is going to get worse.”

In Oregon coast city of Gearhart, calls to volunteer firefighters have more than doubled since 2019 with the majority of requests being for slip-and-fall injuries and other medical services, city attorney Peter Watts said.

During the same time period, an increased number of older adults moved to Gearhart from the Portland metro area, creating what Watts called a “critical housing shortage.” The workers who might provide clinical or home care can no longer find an affordable place to live, Watts said, so they leave, or they don’t move to Gearhart in the first place.

Hospitals in Gearhart have had to rely on travel nurses that stay in hotels, he said. “I think they’re really struggling to keep up.”

At some point, Aldwin said, urban centers won’t be able to keep up either.

Contributors to society

The growing senior population will doubtless stress the system, but researchers say it’s easy to overlook the contributions of older Oregonians.

At the Community for Positive Aging gift shop last Thursday, Georjean Wilkerson, 85, wrapped an ornament in purple tissue paper while chatting with a regular customer. Next to her, Madeline Stark, 87, sorted through a box of new donations, dusting off a set of four lemon-printed glasses on the counter.

The two women volunteer every Thursday at the shop – a thrift-style store that features handmade crafts made by seniors. The artists split the proceeds with the senior center.

Volunteers Georjean Wilkerson (left) and Madeline Stark (right) assisted customers at the senior center's on-site gift shop.

Stark moved to Portland from Santa Fe three years ago to be closer to her daughter.

"I decided I would come here and see what it's like and volunteer," said Stark, who's also taken classes offered by the center on living with chronic conditions. "It was very welcoming. I was so happy, and I met Georjean and the other women."

Wilkerson, who was born and raised in Portland, first got involved with the center when she took a class on how to care for her husband, who had been diagnosed with Alzheimer's disease. "I've been coming for over 20 years for different things," she said.

At least 85% of the center's 140 active monthly volunteers are 55 and older, Peterson said.

Research has shown that older adults are more likely to create startup companies, support arts and cultural centers, and be active volunteers. Aldwin said the unpaid contributions of older adults are part of what allows the working-age population to contribute to the economy.

There are benefits to an aging population too, Aldwin said. “It’s not all doom and gloom.”

—

Metal Producer Wrestles with Energy Costs

by Bob Tita – WSJ – Jul. 8, 2024

A **Chicago-based aluminum company** is betting billions of dollars that it can solve one of the biggest challenges in American manufacturing: paying for electricity.

Century Aluminum aims to roughly double domestic output of aluminum from smelters by **building the country’s first new smelter in 45 years**. The company’s **biggest hurdle** to starting the project is **securing an affordable power supply**.

“As a U.S. aluminum producer in a market where there is a huge deficit, why don’t we produce more? It’s all about the power,” said Matt Aboud, vice president for strategy and business development for Century Aluminum. The company has lined up a **\$500 million grant from the Energy Department to support the planned facility**, which could **cost** as much as **\$5 billion**.

Steadily climbing electricity costs have been a major factor behind the shrinking ranks of U.S. aluminum smelters, leaving buyers increasingly reliant on imports as demand is growing.

Automakers, energy companies and the aerospace industry are hungry for more of the aluminum from smelters, prized for its purity and ability to blend with other metals. The U.S. imported nearly 4 million metric tons of such aluminum last year, while 4.7 million metric tons was produced from recycled aluminum, from old beverage cans to manufacturing scrap.

Domestic production of smelter aluminum – which is known as **primary aluminum** – is **on pace this year for 689,000 metric tons**, which would be the **lowest since 1950**. **Smelters** have been **steadily going out of business** for years, pinched between stagnant aluminum prices and escalating power costs, which in some cases have climbed by more than one-third in recent years.

Century is still arranging financing and seeking a site for its smelter, which would be the largest in the U.S. with about 600,000 metric tons a year of production capacity. Aboud said much depends on where the company can find a steady supply of affordable power.

Century aims to secure a power-supply deal and complete the plans for the plant in the next two years and then start construction, which is expected to take about three years.

In manufacturing, few things are as power-intensive as smelting powdery aluminum oxide into aluminum. The process takes about 24 hours, and producing a ton typically uses more electricity than a single household consumes in an entire year. Century expects its planned smelter to produce about 1,500 metric tons of aluminum a day.

Four smelters remain in operation in the U.S., down from seven in 2020 and 23 in 2000, when the U.S. was the world's leading producer of primary aluminum. A smelter in southeast Missouri was the most recent to close in January after reopening in 2018. Century and Alcoa now account for nearly all the U.S.-made primary aluminum.

Electricity accounts for 40% of smelters' operating expenses. Century said that for over a decade it was able to secure enough reasonably priced power for its 55-year-old aluminum smelter in Hawesville, Ky.

When Russia invaded Ukraine in 2022, the cost of U.S. natural gas used to generate electricity rose as the U.S. exported more gas to Western Europe to offset the loss of Russian supplies. The average cost for a megawatt-hour of electricity for U.S. smelters jumped to \$54 in 2022 from \$39 in 2021, according to commodities analyst CRU Group.

Century idled the Hawesville smelter in the summer of 2022 and has no plans to restart it, though CRU said smelters' average price for electricity receded to \$36 a megawatt-hour last year. Century said **forward prices for electricity in Kentucky are above \$45 per megawatt-hour through 2027 – too high for Century to recover its restart costs and make a profit.**

Power accounts for 40% of smelters' operating expenses.

Aluminum prices

\$3,500 a metric ton

Note: Official cash price from the London Metal Exchange
Source: FactSet

Century Aluminum hopes to build a new smelter, but the company faces a big hurdle: securing an affordable power supply.

Century Aluminum's new smelter would be the biggest in the U.S. with about 600,000 metric tons a year of production capacity.

For every dollar increase in the price of a megawatt-hour of electricity, Century said it costs the company at least \$3 million in annual profit.

Century and other primary aluminum producers also have been hamstrung by low prices that have been held down by China's massive production of the metal. The annual average inflation-adjusted price of aluminum on the London Metal Exchange slipped 2.1% from 2010 to 2023, CRU said.

Still, Century is betting that it can conquer the power conundrum. **In addition to the Energy Department grant, its planned smelter will be supported with tax breaks created by the Biden administration to revive U.S. aluminum smelter operations and reduce carbon dioxide emissions from the electricity they consume.**

"This is going to be a **test case for America's reindustrialization**," said Joe Quinn, executive director for the Center for Strategic Industrial Materials. The Washington-based group advocates for more domestic aluminum production to support electric vehicles, solar-energy panels and other manufacturing.

Century is counting on the aggressive build-out of solar- and wind-powered generating capacity now under way to start yielding excess power after 2030, and the company hopes to lock down supply in exchange for a decade's worth of steady electricity demand from a new smelter.

Much of that **renewable-energy capacity isn't yet connected to power grids**, making it difficult for industrial users to access it. Grid-connected renewable energy is expected to attract high demand, said Greg Wittbecker, an aluminum-industry analyst.

Other big users of electricity also are vying for large loads of renewable energy, including **new semiconductor chip plants** and **computer server centers** that are expanding to accommodate **artificial-intelligence** products such as ChatGPT.

Renewable power currently costs about **\$10 more per megawatt-hour** than electricity generated by conventional power plants using coal or natural gas, according to analysts. The price gap could be narrowed with a provision in the **Inflation Reduction Act** that **allows primary aluminum producers** to **receive a federal tax credit** for **up to 10%** of their **production expenses, including electricity**.

Aboud said Century purposely opted for yearslong lead time for the plant to give executives enough time to obtain a favorable deal for electricity. "We need to see a sustained low-cost power environment and a sustained improvement in aluminum prices," Aboud said.

COST OF LONG-TERM DEBT

Q. What does Staff recommend for Portland General Electric’s Cost of Long-Term Debt?

A. Staff recommends a Cost of Long-Term Debt (Cost of LT Debt) for Portland General Electric (PGE or the Company) of 4.641 percent. This reflects the cost of servicing outstanding LT Debt as well as the forecasted issuances in 2024 and 2025.¹

Q. How is the Cost of LT Debt determined?

A. The Cost of LT Debt is the cost to an organization to service outstanding debt. This may include costs to call or refinance debt when advantageous to do so; coupon payments; and embedded costs to debt, such as issuance fees; and whether the bonds were sold at par, discount, or a premium. To provide a reasonable Cost of LT Debt, any outstanding issuances that will have a maturity of less than one year from the rate effective date must be removed from the calculation. Additionally, a reasonable Cost of LT Debt must be informed with values for forecasted debt issuances. Forecasted debt issuances are reviewed for impacts to maturity profile, and a reasonable expected coupon is calculated for each forecasted issuance.

Q. How is a reasonable expected coupon on future issuances calculated?

A. To forecast an expected coupon on a future debt issuance, Staff looks at the utility’s credit rating, expected risk-free rate, and calculates the current credit spread of similarly rated utility bonds over an appropriate risk-free

¹ PGE/600, Figueroa - Liddle/15-16.

1 rate. This credit spread is applied to the forecasted risk-free rate to
2 generate a reasonable coupon required by the market at the time of the debt
3 issuance.

4 **Q. Please explain how Staff calculates an appropriate forecasted risk-free**
5 **rate and credit spread.**

6 A. Staff utilizes a Bloomberg terminal to review forward curves of risk-free
7 rates, at various tenors, and takes a five-week average of these forecasted
8 rates to provide a well-informed estimate of future rates that is reasonably
9 assumed to be free from exogenous and endogenous shocks that might be
10 captured if the forecasted rates were taken from a single data point. To
11 calculate the current credit spread, Staff uses the Bloomberg terminal to
12 review market indices of utility debt instruments with similar ratings and
13 deducts the current active Treasuries yield. The indices and active
14 Treasuries curves, as well as their spreads, are shown below in Figure 1.

1

FIGURE 1. UTILITY AND TREASURY CURVES

2

Q. Did Staff perform other analysis on the forecasted issuances?

3

A. Yes. Staff also reviewed the outstanding debt profile of the Company and

4

reviewed the forecasted issuances for their fit in the profile. Staff has

5

reviewed the outstanding debt and forecasted issuances and, while the

6

forecasted issuances do create some peaks in the debt maturity profile,

7

Staff believes that the forecasted issuance dates are representative of the

8

rates that the Company would pay if the issuances were spread across

9

similar tenors that lessen the peaks. The debt maturity profile, inclusive of

10

the forecasted debt issuances, is shown in Table 1.

1

TABLE 1. CONFIDENTIAL PGE DEBT MATURITY PROFILE

2

[BEGIN CONFIDENTIAL]

3

[END CONFIDENTIAL]

4

Q. Please summarize Staff's recommendation on the Cost of Long-Term Debt.

5

6

A. Staff recommends an overall Cost of LT Debt of 4.641 percent, comprised of a Cost of LT Debt of 4.548 percent for outstanding LT Debt and 5.746 percent for forecasted issuances. This represents an increase in the Cost of LT Debt of 0.013 percent, or 1.3 basis points, from the Company's proposed Cost of LT Debt of 4.628 percent.²

7

8

9

10

² PGE/600, Figueroa - Liddle/15.

1 **Q. Does this conclude your testimony?**

2 A. Yes.

WITNESS QUALIFICATIONS STATEMENT

NAME: Rose T. Pileggi

EMPLOYER: Public Utility Commission of Oregon

TITLE: Senior Utility Analyst
Energy Costs Section

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: In 2013, I received a Bachelor of Science in Business Administration from Thomas Edison State University. In 2017, I received a Master of Science in Finance from the University of Portland.

EXPERIENCE: I have been employed by the Commission since July of 2022 analyzing finance, power cost, rate case and affiliated interest dockets.

From July 2021 through June 2022, I worked as an Analyst for the Oregon Judicial Department. Duties included data analysis, ensuring compliance with pertinent statutes and rules to ensure that data was being handled in accordance with requirements and recommending process improvements.

From 2017 to 2021, I worked as an Investment Analyst, Portfolio Manager, and Systems Manager for Northwest Capital Management. My work included analysis of the markets and investments, the management and rebalancing of portfolios, creating reports as required by the SEC, as well as managing software integrations for operational and reporting purposes.

STAFF EXHIBIT 600

Opening Testimony

July 15, 2024

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is Melissa Nottingham. I am a manager employed in the Consumer
3 Services Section of the Public Utility Commission of Oregon (OPUC). My
4 business address is 201 High Street SE, Suite 100, Salem, Oregon 97301.

5 **Q. Please describe your educational background and work experience.**

6 A. My witness qualifications statement is found in Staff Exhibit 601.

7 **Q. What is the purpose of your testimony?**

8 A. I provide the public comments submitted by consumers pertaining to UE 435
9 with a summary of issues and concerns identified, and if applicable, refer to the
10 Staff testimony addressing the topics raised in public comment.

11 **Q. Did you prepare any exhibits for this docket?**

12 A. Yes. I prepared Exhibit Staff/602, consisting of public comments received by
13 July 1, 2024.

14 **Q. Please explain the reasoning behind the inclusion of public comments in
15 Staff's testimonies.**

16 A. Consistent with the Commission's Internal Operating Guidelines as addressed
17 in Order No. 20-065 in Docket No. UM 2055, public comments regarding a
18 request for a general rate increase received by the Commission are now made
19 part of the Staff's Opening Testimony. This is to provide more transparency
20 about the public comments in rate cases.

21 Staff Exhibit 602 contains the public comments received through July 1,
22 2024, including public comments provided during the May 16, 2024, Public
23 Comment Hearing, and any correspondence submitted by interested parties.

1 Written comments received after July 1, 2024 will be included in subsequent
2 Staff testimony. However, Staff will not be able to testify regarding comments
3 received after Staff prepares its final round of UE 435 testimony.

4 Presenting comments at a Commission Public Hearing or through the
5 Commission's website does not make the commenter a “party” to the
6 proceeding or subject the commenting person to cross examination. Any party
7 that has intervened in the proceeding may respond to Staff's summary of the
8 public comments or the comments themselves in testimony.

1. SUMMARY OF COMMENTS**Q. How are public comments received by the Commission?**

A. Comments may be submitted via an online form, an email, a letter, or a telephone call. All comments submitted and published to the Commission's webpage and are available for review. Please see: [UE 435 PGE Request for a General Rate Revision](#).

Q. Please summarize the public comments received to date in this rate case.

A. PGE's request for a general rate increase has received 2,344 electronic comments and letters, including letters submitted by members of the Oregon Legislative Assembly, the Yamhill County Commissioners, and the Multnomah County Office of Sustainability. Commenters emphasize the frequent rate increases by PGE are adding significant financial strain to their households. PGE's utility customers are struggling to manage their budgets and pay their bills due to the higher utility costs. Commenters note that these increases make it more difficult to afford other essential expenses such as housing, food, and healthcare. A significant number of commenters point out that the rate increases disproportionately affect low-income households, seniors, and individuals with disabilities. These groups are already facing economic challenges, and higher utility costs exacerbate their financial difficulties.

Consumers express skepticism about the justification for the rate increases. They feel that PGE has not provided adequate reasons for the frequent hikes and that the increases are not aligned with improvements in service or infrastructure. Commenters often call on regulatory bodies to

1 intervene and reject PGE's rate increase requests. They argue that without
2 such intervention, the unchecked increases will continue to negatively impact
3 consumers. There is a strong sentiment against any further rate increases as
4 commenters feel the current rates are already high enough and that additional
5 hikes are unwarranted and unfair.

6 In summary, the comments reflect a deep concern about the financial
7 impact of PGE's rate increases on the cost of living, particularly for vulnerable
8 populations. There is a call for greater justification and regulatory oversight to
9 prevent further financial strain on consumers.

10 **Q. What are the top concerns from consumers?**

11 A. The comments oppose the proposed rate case, with the following concerns
12 most frequently mentioned:

- 13 1. **Frequency of Rate Increases:** Commenters feel that this rate case
14 and recent increases are unjustified and place an undue financial
15 burden on consumers, particularly during challenging economic
16 times.
- 17 2. **Transparency and Justification:** Many commenters demand
18 greater transparency from PGE regarding how the additional funds
19 from rate increases will be used.
- 20 3. **Impact on Vulnerable Populations:** Concerns are raised about the
21 disproportionate impact of PGE's practices on vulnerable
22 populations, including low-income households, seniors, and
23 individuals with disabilities.

1 4. **Customer Service and Value:** Some comments highlight
2 dissatisfaction with the customer service and service reliability
3 provided by PGE relative to the rates charged.

4 **Q. Are any of these issues addressed in Staff's Opening Testimony?**

5 A. Yes. The overwhelming majority of the comments focus on the financial impact
6 of frequent large rate increases on customers. Michelle Scala, Energy Justice
7 Program Manager, discusses the impact of rate increases on energy justice
8 communities and the overall impact on vulnerable communities in Staff Exhibit
9 200.

10 **Q. Does this conclude your testimony?**

11 A. Yes.

Witness Qualifications Statement

July 15, 2024

Witness Qualification Statement**Name:** Melissa Nottingham**Employer:** Public Utility Commission of Oregon (Commission)**Title:** Consumer Services and Residential Service Protection Fund (RSPF)
Manager**Address:** 201 High Street SE, Suite 400
Salem, Oregon 97301**Education:** Bachelor of Arts in English, Arizona State University**Experience:**

I joined the Public Utility Commission of Oregon on May 1, 2022. I manage a team of 14 employees overseeing consumer complaints, the Oregon Lifeline Program, and the Telecommunication Devices Access Program. I also sponsor Staff testimony in dockets filed by Commission jurisdictional utilities related to Oregon Administrative Rules Division 21 and other consumer protections. I provided testimony for United/Qwest/CenturyLink UM 1908, Oregon Water Utilities/Mountain Lakes UM 2203, PGE UE 416, and active general rate cases: Idaho Power UE 426, NW Natural UG 490, PacifiCorp UE 433, and PGE UE 435. I also provided Staff comments for Commission rulemaking AR 653, Airvoice Wireless UM 2237, and PacifiCorp ADV 1391. Prior to my employment at the Commission, I worked for 25 years at PacifiCorp, a multi-jurisdictional regulated electric utility. From 2010 until my departure in 2022, I was a Regulatory Manager. My responsibilities included ensuring regulatory compliance in six states, including Oregon. I provided testimony in general rate cases in six states focusing on the company's Schedule 300 fees and any PacifiCorp tariff modifications. Other duties included: representing PacifiCorp in formal customer complaints and small claims court, overseeing contracts for new service for loads more than 1 megawatt, sponsoring modifications to PacifiCorp's rules, and participating in each state's administrative rule dockets.

OREGON LEGISLATIVE ASSEMBLY

June 14, 2024

Public Utility Commission of Oregon
201 High Street SE, Suite 100
Salem, Oregon 97301-3398

RE: Public Comments on UE 435

Dear Public Utility Commission,

As members of the Legislative Assembly, we are reaching out to share a pressing concern from our constituents regarding the Portland General Electric (PGE) rate case (UE 435).

Many of our constituents have expressed their worries about the proposed 7.4% rate increase for Oregon households. This increase comes at a time when we all are still grappling with the financial strain from the previous substantial rate hike and the hefty bills following January's ice storm. To put it plainly, PGE's rates for households have skyrocketed by 30% from December 2022 to January 2024.

Although we recognize the importance of building a future-ready grid and PGE's commitment to delivering reliable electricity at a lower cost, it is crucial to ensure that these advancements do not disproportionately disadvantage our most vulnerable communities along the way.

We hear firsthand that these increases are impacting people's lives. Families are struggling to make ends meet, and this additional burden would continue to exacerbate the financial challenges faced by many in our community.

We urge you, as the Commission, to stand with us and reject this rate increase. Now is not the time to place further financial strain on Oregon households. We need you to protect consumers and help ensure that utility rates remain fair and reasonable.

Thank you for your attention to this matter. We look forward to seeing how PGE and the Oregon Public Utility Commission will address these concerns in the coming months and we plan to follow up accordingly.

Sincerely,

RE: Public input on PGE rate increases

Mayor Malcomson, City Manager Dross:

It has come to our attention that the City of Lafayette, at the behest of Mayor Malcomson, City Manager Dross, and the Lafayette City Council, is engaging directly with PGE regarding rate increases on behalf of our shared constituents. We are not aware of other cities stepping up to advocate for ratepayers and we are indebted to you for leading this effort.

Please consider this letter as part of the package of testimony you plan to deliver to PGE. The Yamhill County Board of Commissioners shares your deep concern about the impact that significant PGE rate increases have had on tens of thousands of residents that live here.

PGE's rate increases over the past ten years have been shocking...with a 57% increase in residential rates, 47% increase in commercial rates, and 28% increase in industrial rates from 2014-2024. Residential rates have increased by more than 30% just since 2022. With PGE requesting another 7.4% for 2025, this would push rates to more than 40% higher than they were in 2022. Ratepayers feel that they have no recourse and are relying on the Oregon Citizens' Utility Board to reject proposed increases. Many of our residents are living on fixed incomes, and with food and gas costs rising with inflation, huge jumps in utility bills are simply unsustainable. There is very little transparency around why these drastic rate increases are necessary.

In the spirit of transparency, we would be remiss if we didn't highlight some of the reasons why PGE is asking for constant rate increases. Extreme price volatility was predicted when the Oregon Legislature passed the Renewable Portfolio Standards and banned coal in 2016 and natural gas in 2021. There was no clear plan to replace baseload power with renewable energy sources. In fact, wind and solar generation only produce power about 30% of the time. In order to avoid rolling blackouts, Oregon has had to rely on purchasing baseload power from other states. Unless Oregon prioritizes investment in carbon-neutral baseload power sources like nuclear energy, we will continue to have to rely on fossil fuel sources from other states.

Moving entirely to wind and solar power generation will never work as the grid needs reliable, non-intermittent power sources. The State of California is learning this the hard way as they've been forced to extend the lifespan of numerous natural gas plants in order to avoid devastating blackouts.

Legislating that Oregon's greenhouse gas emissions must be zero by 2040 is creating a forced push by PGE to invest in wind and solar "renewable" infrastructure. Yet as of 2021, over 84% of Oregon's energy was still produced by hydro, coal and natural gas coming in from other states. The carbon-neutral goals of the Oregon Legislature are illogical and impossible in the proposed timeframe and there is no plan for maintaining necessary baseload power. PGE knew this when they closed the Boardman coal plant.

We acknowledge that PGE is responding to the demands of a state legislature that has an unrealistic expectation of energy goals in the future. Politicians promised that their "emissions-free" laws would not saddle ratepayers...clearly that was false. However, PGE does have a moral obligation to be honest about what is necessary to meet renewable energy standards and what it will cost ratepayers in the short and long term.

We stand ready to assist PGE in advocating for common sense energy policies that don't force seniors on fixed incomes to choose between grocery money or unsafe temperatures inside their homes during freezing weather. It's time Governor Kotek and the Oregon Legislature step up to protect ratepayers as well.

Thank you for standing up for our families.

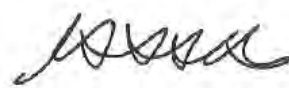

Sincerely,

Lindsay Berschauer

**Re: UE 435 – Multnomah County Office of Sustainability’s Comments on Portland
General Electric’s Request for a General Rate Revision**

Dear Chair Decker and Commissioners Perkins and Tawney,

The Multnomah County Office of Sustainability offers these comments to encourage you to reduce the percentage of Portland General Electric’s requested increase that you grant to the minimum possible. Portland General Electric (PGE) filed this request just weeks after the effective date of the 18% increase that this Commission approved in October 2023, and days after people in our community felt the rate shock caused by the overlap of that increase and their increased need for electricity to stay warm during the January 2024 winter storm.

Our requests and advocacy in this proceeding are guided by our Office’s environmental and energy justice priorities. The Office of Sustainability’s policy direction includes prioritizing partnerships to reduce the cost burden for low-income customers,¹ and centering environmental and energy justice communities in our work.² As a result, we engage to the best of our ability in proceedings that, like rate cases, can disproportionately impact low-income and other environmental justice communities.

¹ Board of County Commissioners for Multnomah County, Resolution 2017-046 at 4 (Jun. 1, 2017), available at <https://multco-web7-psh-files-usw2.s3-us-west-2.amazonaws.com/s3fs-public/2017-046%20-%20Mult%20Co%20Signed%20100by50%20Resolution.pdf>.

² With Resolution 2017-046 the Board of County Commissioners for Multnomah County set a target of supplying 2% of community-wide energy needs via community-based renewable energy infrastructure by 2035, committed to pursuing “additional policies and partnerships to include low-income residents in the economic, social, and environmental benefits to be derived from the clean energy transition,” resolved to “prioritize recruitment from within communities of color and women that have traditionally been underrepresented in renewable energy and energy efficiency fields, and in the workforce needed to implement a successful renewable energy transition,” and resolved to “partner with Oregon tribes and native communities, communities of color, and low-income communities to address environmental, economic, and social inequities.”; Resolution 2018-018 supports direction to our office to “[a]pply a lens of environmental justice in all relevant areas of its work, and continually search for opportunities to improve County practice to better align with the principle of environmental justice.”

PGE serves most of Multnomah County, including areas like Wood Village, the Rockwood Neighborhood, and other East Portland and East Multnomah County communities. These areas have a high proportion of residents from environmental justice communities who are on the frontlines of climate change, with high vulnerability to heat,³ experiencing low tree-coverage and high energy burden.

We encourage you to use your discretion so that our community sees as small an increase as possible, if any, as a result of this request. We also offer the following specific recommendations:

- 1) Reject PGE's proposal to increase its return on equity.

PGE proposes to increase its return on equity by 0.25%. However, you set the Company's current ROE at 9.5% less than eight months ago.⁴ PGE's request to revise its ROE so soon after your Order seems untimely and not in the interest of customers.

- 2) Reject PGE's proposed Investment Recovery Mechanism

PGE proposes an Investment Recovery Mechanism for investments to sustain its current business and customer base, including meeting and maintaining safety and reliability standards.⁵ While we appreciate and support PGE's efforts to bolster system reliability, we have concerns with PGE's proposal. First, PGE's proposal would create yet another mechanism that would bake an increase in rates every winter for a number of years. Second, as the Oregon Citizens' Utility Board has highlighted, the new mechanism would afford more limited opportunities to vet costs, and it would consider these investments outside of the more holistic evaluation process that a rate case provides.

We find the proposed mechanism more concerning in the context of PGE's parallel proposal to change elements of the Power Cost Adjustment Mechanism (PCAM). As PGE describes these changes in its Request,⁶ PGE's PCAM proposal would significantly change how PGE shares the costs and risks associated with power cost forecasting with its customers, also shifting more costs and risks to utility customers.

³ Multnomah County, *Results of heat mapping project show inequitable impact of hotter summers, will inform actions by Multnomah, Washington and Clackamas counties* (Apr. 3, 2024), available at

<https://www.multco.us/multnomah-county/news/results-heat-mapping-project-show-inequitable-impact-hotter-summer-will-0>.

⁴ Docket No. UE 416, Order 23-386 (Oct. 30, 2023).

⁵ UE 435 / PGE / 400 Bekkedahl - Felton / 17.

⁶ UE 435 / PGE / 100 Pope - Sims / 31.

We appreciate your consideration of our comments and encourage you to reduce PGE's requested increase to the minimum amount possible, reject efforts to shift risks to customers, and consider postponing the effective date of any increase to after the end of the 2024-2025 heating season.

Respectfully submitted this 14th of June, 2024

Public Comment Hearing

UE 435 Portland General Electric Request for General Rate Revision

Date: May 16, 2024

Time: 6:00 pm

Administrative Law Judge: Kathrine Mapes

Public Comments Received:

1. **Branden Dross:** So, my name is Branden Dross. I am the City Administrator with the City of Lafayette. I have sent some stuff over to you all via the public comment portal on the website, but as due diligence and the commitment of public service, I have decided to be here tonight just to echo some of the notifications that we received, and just to let you know that this is impactful, not to just Lafayette residents, but also Yamhill County. We've gotten support from Yamhill County Commission to not go ahead with this rate increase, as well as my City Council. We've had numerous conversations with PGE. Lovely people, as I'm sure everybody would confirm that. But on a day-to-day basis, I run this City and I have -- I have to listen to the concerns about the future of poverty in our city, the future of not being able to live in a city that they moved here from to be more -- to live in a more affordable place. I have been on the other side. I used to work for CPS Energy in San Antonio, Texas. It was a publicly owned utility, similar size, similar structure of PGE. We would never do more than three or four percent a year. Almost 40% over three years is a little egregious. Not only are our residents seeing 40% over three years, but you also have to take into account wastewater, water, any other fees or taxes that are associated with other cities. I mean, with our water and wastewater and trash, we're seeing 10 to 15% just on that. Then you throw in Northwest Natural and then PGE, we're looking at close to 80% of increases in utilities in three years. It's damaging -- it's damaging the pocketbooks of the working class, and I would really appreciate it if you can just think about what this does, not just to the people in Portland or the people in the three county metro area, but all along the service territory as constituents of the state and yours. That's all I ask. I ask you just please think about this. None of my peers wanted to come speak about this. I don't see any public officials here. I have to be the one to talk about this at a public official level. People are scared to do this because we get franchise fee money off this. That franchise fee money is not worth the pain and suffering of our residents. So, please think about what this does for the residents and for the community. That's all I ask. Because somebody in your family is going to be impacted by this just as much as we can, and they may not be in the financial situations we all are in. So please think about that. Thank you.
2. **Viviana:** Thank you. Hello. My name is Viviana. I am a representative from the Willamette Valley Workers Benefit Council (WVWBC). The Willamette Valley

Workers Benefit is a delegate party representing thousands of local paid workers in a variety of industries throughout Washington and Multnomah Counties. We speak for those who labor as farm and nursery workers, childcare workers, house cleaners, construction workers, landscapers, as well as a variety of other jobs, including working in low end manufacturing, often through temporary agencies. Our local economy could not function without these workers, and yet our jobs general (Audio cut out) Hello. My name is Viviana, I am a representative from the Willamette Valley

Workers Benefit Council. The Willamette Valley Workers Benefit Council is a delegate party representing thousands of low paid workers in a variety of industries throughout Washington and Multnomah Counties. We speak for those who labor as farm and nursery workers, childcare workers, house cleaners, construction workers, landscapers, as well as a variety of other jobs, including working in low end manufacturing, often through temporary agencies. Our local economy could not function without these workers, and yet our jobs generally pay far below a living wage adequate to support a family. Our struggle to survive is made all the more difficult by skyrocketing utility rates, which the Oregon Public Utility Commission has allowed in contradiction with your mission under state law. We are here today to oppose PGE's proposed 7.4% rate increase, UE 435. We call upon the Oregon Public Utility Commission to act in the interest of the public by doing the following:

1. Deny all of PGE's proposed rate increase.
2. End all shut-offs of residents at or below 200% of the federal poverty level.
3. Make utility providers finance conversion to renewable energy through their massive profits not repeated rate increases.
4. Make large industrial users, like data farms, pay for the cost of utility infrastructure expansion in accord -- with the massive increase in energy consumption the operations require and that these industrial users pay equal rate to residential users.

The OPUC granted PGE 30% in rate increases in the last 18 months. This has directly contributed to the frequency that farm seasonal and service worker families are forced to go without adequate food or needed medical care in order to keep their electricity on. PGE's reported profit in 2023 were \$228 million, a 217% increase from 10 years earlier. Maria Post, PGE's executive officer, made \$6.97 million last year. That is almost \$20,000 per day, every day of the year. The mission statement of the Oregon Public Utility Commission states that your mission, "Is to ensure Oregonians have access to safe, reliable, and fairly priced utility prices that advance state policy and promote public interest." PGE shut-off 27,407 households last year, 76 of those were medical certificate holders who may have lost their life as a direct result of the policies of the OPUC and the

State of Oregon. Maria Post's pay alone could have prevented every customer in the state of Oregon from suffering a shut-off. You cannot say that the utility service are safe, reliable, and fairly priced when a single executive's compensation could have prevented the shut-off of thousands. That does not promote the public interest. We call on the OPUC to serve the majority of people in the state who are not benefitting from the decisions. Data farms use our clean energy, then pass on the cost of building new power generation to ratepayers, most of whom are residential ratepayers. Industrial users, like data farms, pay a far lower rate than residential customers and small business customers, and the gap is growing as more and more of the burden is put on us. That must stop. The Willamette Valley Workers Benefit Council demands that you stop this rate increase and pursue all of the demands we listed today. Thank you.

3. **Mary D.:** Good afternoon, everyone. My name is (inaudible) well, today is May 16, 2024. I'm here and I'll introduce myself. My name is Maria D. I live in Washington County and have been a PGE customer for over 20 years. I am concerned because this rate increase will impact members of my community and family members. I come from living in situations where \$20 makes a difference. I understand what it means when paths are closed and for such basic services you have to go through traumatic situations when you ask for support. Many times you don't find those doors that would make the difference to your family and your children. The traumas of feeling unheard and abandoned can be avoided. We have unfair and inequitable systems. To that end, I'm going to include some questions and answers that will help you understand why I stand in solidarity with my community at this time. Was there a time when you felt vulnerable or let down by the energy system? Yeah. When I get home to make the payment -- to get the payment or estimate from the representative of the energy company, I know that it is no longer possible for me and my family to avoid the electricity being cut off. How did you feel? I felt helpless. Well, did you know about your inflexibility? No matter how much I could explain or plead, they would proceed. And if I didn't have the payment in my hands at that time, they would turn off the power. What would I like that to change? How would I like it to change? I would like there to be more options for people who do not qualify for government programs or because of your legal status, and less requirements when there are children in a home. Reflect on a time when you lived with a power outage or a time of PGE unreliability. What happened? It destroyed me to see my children not being able to do their homework due to lack of energy, to see them cold because they couldn't use a heater. Did you feel a lack of empathy from the PGE department? On occasions, when I was able to avoid power outages, I had to give part of what was for rent and face late payment charges for not having all the money. Was there something at risk? Feeling that we could lose the food in the refrigerator due to lack of power, such as milk and other dairy products, losing the few food supplies for two weeks. Just remembering, my heart breaks for my children, even

though they are adults now. I wouldn't want any family to go through that situation. What should be improved? Take into consideration the basic needs of the children in those places, elderly, or people with disabilities, and have special programs so they can access with less bureaucracy and more empathy. A domino effect happens when electrical outages, such as energy or light, are made for low-income families or those with little or no access to aid programs. Example: They lose physical or mental health when experiencing these needs and frustrations. They are affected by extra charges for disconnection and reconnection. They lose the few resources they have. Trauma is caused at the family level, et cetera. Are there any questions that need answers? Yes. Where is the equity? How can you be so inhuman? How can I receive help if I do not meet requirements? Most of the time absurd. Where do I go if I don't have valid insurance or paystubs to prove my income? What if I don't qualify for aid when only \$20 separates me from the resource qualification tables? And many other questions to ask. Thank you for taking my testimony into account. I hope you can support not raising rates. Good afternoon.

4. **Nikita Daryanani:** Good evening, Chair Decker and Commissioners Tawney and Perkins. My name is Nikita Daryanani. I'm the climate and energy policy manager at the Coalition of Communities of Color. I'm also a PGE customer. I'm here today to express our opposition to PGE's rate increase proposal. This request cannot come at a worse time. The cost of rent, food, transportation, and other living expenses are skyrocketing, while people are already struggling to make ends meet and pay their bills, as you've heard from the previous commenters. The rate increases from last year hit folks so hard this winter. I've heard of folks paying \$300 to \$400 on their PGE bills for apartments after the ice storm this January. On top of this, many folks were left without power for several days, including those that I work with. Those on the front lines of climate change often live in housing that is already poorly insulated, requiring them to use more energy to stay warm or cool in the summer. And some people go without heating or cooling when they really need it just to keep costs low. And some adjust their whole daily routines just to use energy during off-peak hours, and sit in the dark during the day. Unaffordable utility costs is really top of mind for so many of our partners and community leaders. You've heard many of their stories during the other rate case public hearings these past few weeks, and if these requests continue to pour in as they have these past two years, you'll continue to hear harrowing emotional stories of people trying to struggle -- or people of -- people struggling to keep up with all of their mounting expenses and debts with limited incomes. I also always think of the stories and experiences that we don't get to hear in these spaces. Annual increases in rates cannot be the new norm. This cannot continue yearly with no end in sight and there has to be another way. We have a duty to our neighbors and those in our communities to ensure that energy assistance programs actually provide relief from energy burden, that it's not

difficult or burdensome to receive this assistance, and that we're preparing for and adapting to climate change equitably. Once again, I urge the Commission to use your authority to diligently scrutinize this request in light of the current economic climate and the way it's impacting real people. Thank you.

5. **Kendal:** Hello, my name is Kendal and I -- I'm severely opposed to this rate increase. The last increase more than doubled my monthly bill, and I haven't -- I've used less electricity and I have less occupants in my home. That's not acceptable. My pay has not increased for that matter. It's not acceptable to have a company making billions in profit to raise the rates on income of people that aren't getting their incomes raised. And they're certainly not making the income that those corporations that are making either. I agree with the Willamette Valley Workers in the proposals that they've requested, and I also agree with the other people in that the shutoffs are -- like, they're at a corporate level, they're not at a personal level, and it's not acceptable to raise all the rates and expect people to live while we want to say we have a homeless crisis. Well, I wonder why. It's -- they can't have their basic needs met, and it's not fair. There has to be other ways to make it so that PGE can do their business without rate increasing on the people that are hurting the worst. I really hope the Commission takes into consideration that as Yamhill County or Lafayette had mentioned, that the rate increases over the last three years are astronomical. It's not just a little three percent here or four percent, it's a lot, and that's -- you wouldn't expect that from yourself. Like, you wouldn't just go and say, Hey, I'm gonna put an extra 30% into savings every month, because you know, I need to prepare for whatever." And that's what PGE's doing to us, while on top of making billions a year. And that's unacceptable. So, I really -- I really hope the Commission listens to the people and understands that it's -- it's a burden that's not one that can be helping the crisis that we have in terms of mental health, physical health, employment options, and then housing. I appreciate your taking your time to listen.
6. **Bill Burgess:** Okay. Do you hear me now? Great. Thank you. Bill Burgess, Marion County Clerk in Salem, Oregon. And I got quite a few notes from other constituents telling me they could not afford the increase. And from what I've heard tonight, it really gives you the feeling, and I'm sure you Commissioners understand it, that it can affect some people much more than other people and we need to find a fairer way to make sure that the improvements that PGE is asking for can take place, but it may be a completely different type of rate structure. We certainly want those local battery storage projects, those investments in transmission and distribution, those upgrades in technology for increased resilience. We know all that is important. We know it's important for people to have electricity, too, and that we just have to find maybe a different way of funding this. And I guess I was surprised when I heard so many people before me tonight speaking about the pain that this is causing them. And so I just plead

for you to find a different way to have the funding available to get the job done so that we can all depend on clean electricity and renewable energy for the future. So, thank you.

7. **Phillip: Hi.** My name's Phillip. I live in Washington County. For many years now I've been part of PGE's time of use plan. This plan, along with the newly formed time of day plan only represents about one percent of PGE's customers. Because of this, I believe that the rate changes for those plans have been getting overlooked, I can say it definitely did for the 2024 rate increases. These proposed 2025 is also definitely unreasonable. If you're unfamiliar, these plans help shift the usage of customers' energy to off-peak times, such as at night and weekends when the demand on the grid is less. It also helps PGE save money. In turn, they offer a discounted rate to shift your usage. But then, on the other hand, you get charged more during these on-peak rates. Now for my residence, based on my 2023 usage, I have shifted -- I have 74% of my usage is on the off-peak, and so with these new rate increases, compared to my 2023 time of use rates, the new 2025 rates would be an increase of 190% for my off-peak and 87% for on-peak, which based on my overall usage, that's a net increase of 152%. So, my rates are going up astronomically compared to what I was paying in 2023. And I think, you know, because -- and the one percent of customers, I think that that's just getting -- you know, it's down on page 25 or whatever, it's not getting looked at and understood how much of an impact that is to people on these special rate plans that are there. It's an option to save money by shifting usage. We're doing more than a lot of people to, you know, shift our usage, help the grid reduce the impact during these peak times so others can use that electricity, but then we're now getting penalized because PGE thinks maybe they can, oh, you're saving money, so we're just gonna increase, we're gonna double this amount and maybe no one will notice. So, yeah. Thanks for hearing me.

8. **Stephen:** Good evening, everyone. My name is Stephen, I am a resident of Multnomah County. I have been in this county for five years and have been paying utilities since, and the 40% rate hikes over the last three years have been pretty tough on this middle class. I can't imagine what it's doing to people that are less fortunate than I. I just wanted to bring up the fact that the reasoning given this year for the increase was very similar to the reason given for the increase last year, and it led me to believe, or at least assume, that possibly the amount of money or funds increase needed was spent before and is being rolled out in phases. Otherwise, I feel like a more elaborate or detailed excuse or explanation should have been given for this reasons, 'cause it was almost the same exact as last year, the batteries and the grid. So, with that being said, I'm not sure if (inaudible/garbled) were just not being transparent enough, or if the PR people aren't researching enough as to explain why, but on top of that, the solar subsidies are for people that try and balance their usage with renewable

energies. The solar subsidies aren't there barely enough to make any of that worth it, considering the initial investment, along with the industries or the companies being monopolized. I think there is two electric companies in Portland the last time I looked, and we have no other way of getting electricity. So, the fact that the rates keep going up just feels like we can't do anything. And I'm honestly pretty positive that these comments aren't going to do anything because, you know, the rates are still going to go up, you guys are still a corporation, at the end of the day they still gotta make that money. But a lot of people suffer from this, I'm included, hundreds and thousands of Oregonians are included, and there has to be other ways to make this money up, or other benefits that you can give to people that are trying to separate themselves from your energy monopoly. Thank you for your time. Have a great rest of the day.

9. **Lucas:** Great. My name's Lucas, I'm a member of the Willamette Valley Workers Benefit Council. And, you know, I'm here with my fellow volunteers. And I wanted to mention that agreements such as exclusive contracts that reduce competition may also violate the Sherman Anti- Trust Act and are subject to civil enforcement. The Sherman Act also makes it illegal to monopolize, conspire to monopolize, or attempt to monopolize a market for products or services. And there's another section that I wanted to read about the Clayton Act, and it's (inaudible) to promote fair competition and prevent unfair business practices that could harm consumers. This is on the U.S. Department of Justice website. That being said, the new Amazon warehouse that's being built, the giant one, it boasts that they use clean energy. And I think that the government should subsidize renewable energy so we have access to it, and PGE has more competition. You know, with all the money that they have for improving infrastructure, they sure were unprepared for the ice storm and power outages that happened recently. That's my comment.
10. **Mr. Philips:** Okay. I'm speaking on behalf of a resident and small business owner who could not attend the meeting today. She says, "I live and work in a small building in Hillsboro at 909 Southeast Cedar Street, 97123. I am 65 and semi-retired, in that I cannot afford to retire. I have a small part-time chiropractic practice. My reimbursement from patients' insurance keeps going down, while all my expenses, especially utilities, are increasing at an alarming rate. "I strongly encourage you to reconsider another rate increase at this time. Thank you.
11. **Karyna Graham:** My name's Karyna Graham, I am also a member of the Willamette Valley Workers Benefit Council. I am a single mom on disability. I have an extremely fixed income. I get -- I got a three percent raise of my income in January, PGE got a bigger raise on their rates that affected my income more greatly than my raise did for my monthly income. Every month I have to decide if my daughter is going to be able to eat food, have heat, or be cool enough to be

comfortable. It is inhumane that people have to choose whether they're going to freeze, overheat, or buy food for the month. It is not just me, a single mom, that is on a fixed income. You have elderly people. You have disabled people. And you're only allowed to get help from community action once in 12 months. I am only allowed to be poor once. I am poor every single month. I am unable to have a job that pays me more money, but PGE is allowed to raise their rates every single year. They requested a rate increase in February, not even an entire month after their original -- their last rate increase went into effect. They didn't even give it time so that they could see how much the rate increase affected not only their profits, but the people being effected. It is year after year after year that PGE is requesting rate increases and the PUC is rubberstamping them saying, yes, go ahead, raise the rates, turn people's electricity off, have people go homeless, have people starve without any kind of thought for the people that cannot afford to pay a penny more than what they already do. People already cannot afford their electricity. You guys need to lower their rates, not continuously increase them. Thank you.

12. **Silvia Tanner:** Chair Decker, Commissioners Perkins and Tawney, ALJ Mapes, thank you for the opportunity to comment. For the record, my name is Silvia Tanner, that is spelled S-i-l-v-i-a, last name T as in tango-a-n-n-e-r. I'm a Senior Energy Policy and Legal Analyst with the Multnomah County Office of Sustainability. PGE -- as Mrs. Karyna just stated, PGE requested an increase in residential rates of about seven percent just weeks after the 18% increase that you approved in 2023 went into effect. They also made this filing days after people in our community felt the shock of their January bills due to the 18% increase, plus that increase -- the increase in use that they needed to keep warm during the January winter storm. The increase that people experience could be also larger than the proposal due to additional cost recovery that PGE may seek this year, including costs associated with wildfire mitigation or fuel costs. And this is, again, on top of the nearly one-third increase that we've seen since December 2022. PGE serves most of Multnomah County, including areas like Wood Village, the Rockwood neighborhood, and other East Portland and East Multnomah County communities. These are areas that have a high proportion of residents from environmental justice communities and communities that are very much on the front line of climate change with high vulnerability to heat, low tree coverage, and high energy burden. Our ask throughout this last rate -- three testimonies that we have offered regarding rate increases that impact our community has been consistent, and that is that you use your discretion to reject any unwarranted and untimely elements of this proposal. Here specifically, we encourage you to first reject PGE's proposal to increase its return on equity by 0.25%. That makes -- PGE makes that proposal although you set the current ROE at 9.5% less -- at 9.5% and this happened less than six months ago. We also encourage you to reject PGE's proposal to shift risks to customers through

an additional investment recovery mechanism that will make it easier to add capital expenses into rates every winter. The utility can already recover costs deemed prudent by the Commission through its rate cases. And our concern, particularly in light of the issues that CUB has raised, is that this proposed mechanism would not provide a sufficient opportunity to vet costs in the full context and visibility that a rate case process provides. Third, we encourage you to consider this proposed risk shift in the context of PGE's parallel proposed changes to the Power Cost Adjustment Mechanism, which PGE describes in its rate -- in its rate case filing. That PCAM proposal would significantly change how PGE shares the costs and risks associated with power cost forecasting, shifting more risk to customers. We encourage you to reject this additional proposal, again, because it is a risk shift to customers. This is not the time for proposals or to raise customer rates. Oh, and my time is up. No, sorry, that's my own timer. I don't know why my own timer's going off. I apologize for that distraction. I'm just going to keep speaking (inaudible). So, this is not the time for proposals or rate customer rates -- raise customer rates and shift risks to customers. This is not the time to add new mechanisms -- this is not the time to add new mechanisms to raise rates outside of the comprehensive process afforded in a rate case. We believe various elements of this proposed increase are unwarranted and not well timed and encourage you to reject them. And finally, we encourage you, Staff and intervenors, to consider the timing of any portion of the increase that you may end up approving so that customers do not experience the increase in the middle of the heating season. You could avail yourself of models that you have used in other rate cases, like shifting the effective date of some or all of the increase to after the 2025 heating season ends. Again, thank you for your time. And I'm sorry for the distraction of the beeping that you couldn't hear, but I did. Thanks.

13. **Nina Kong:** Good evening, Commissioners Decker, Perkins, and Tawney. My name is Chong Kway Nina Kong. I'm a resident of Portland. I'm here to ask you not to approve the 7.3% utility rate increase PGE is asking to place on residential customers with additional rate increases possible. Recently, PGE had already increased its residential energy rates by 18% and energy rates have been up 33% since December 2022. PGE is passing on costs of several wildfire related damages that the courts found PGE to be at fault for. PGE is also raising the rates to expand fossil fuel infrastructure during the climate crisis. In addition, PGE is raising the rates to convert the coal facilities to natural gas facilities. This conversion is unsustainable, damaging to the environment, and impacts the health of customers. The rate increases are misplaced, unfair, and further damage health and livability. We've had a long winter, and many utility energy customers are still paying for winter heating. This rate increase adds additional burdens to us while we face soaring costs of living. Also, there are energy customers who rely on energy to refrigerate medications and operate prescribed medical equipment to manage health conditions. Although PGE has discount

programs, the discount is too small to reduce energy bills. The LIHEAP program only opens for application in October and November for seniors and people with disabilities, so many low-income families cannot apply for them the rest of the year. Also, many low income energy customers live in rented old buildings which are barely insulated. These homes take up much more energy to heat and cool during cold winters and hot summers, while housing costs soar. Despite weatherization, these buildings are not energy efficient and cost much more to heat and cool for comfort. So, residents are further in debt with these rate increases. Many of us have already done all we can to reduce energy use. I've switched my energy use to off-peak hours. PGE calls me energy superstar, but I still can't afford its electricity. I use for basic use. I use nightlights when lighting at home. I cover my windows with blinds, and hang up drapes to separate rooms for individual room heating throughout a winter. I keep the room temperature at 55 degrees throughout the winter. This has not kept the rooms warm enough to fall asleep at night. With climate change our winter has been extended, too, so the rate increases add additional burdens. Many of our -- many of my neighbors share the same burdens. For all these reasons, I urge you not to approve the energy rate increase PGE is asking. Thank you.

14. **Chelsea Alatraste Martinez:** Thank you. My name is Chelsea Alatraste Martinez and I serve as board secretary for Fair Oregon Utility Rates for Small Businesses, otherwise known as FOUR. As a lifelong Oregonian born and raised in Newport, I understand the vital role small businesses play in rural communities. My connection to the restaurant industry provides me with valuable insights into the needs of the small business commercial class. On behalf of FOUR, I'm here to advocate for the fair treatment of small commercial customers amidst Oregon's efforts to decarbonize its energy supply. It's important that small businesses are not unfairly burdened by the financial implications of these decisions. In your previous presentation there was no mention of small residential class, which is really troubling considering that the small nonresidential ratepayer group is by far the second most numerous group of utility customers, with over 200,000 small commercial customers. We are concerned that the directly previous rate case, which combined with this one, creates an increase of well over 20%. Small businesses have had to pay Covid-19 costs and face pressures of inflation, short staffing, higher wages, and so I ask that you consider how small business – how the small business commerce class will be impacted and demonstrate your commitment to ensure fairly priced utility services for all. Thank you so much.
15. **Solidad Molina:** Okay. Dear Chairman Decker, Commissioners Tawney and Perkins: My name is Solidad Molina. I live in Portland and have been a PGE customer for 24 years. Throughout these years, bills were accessible. However, over time, they have gone up a lot and this has affected us economically and emotionally. Before, my bills were less than \$100, now they come in anywhere

from \$200 to as much as \$300 every month. I don't have enough money to pay for all the bills and the food that keeps going up. Currently, I participate in the PGE discount program -- sorry -- in the PGE discount program, but with the increases, it is practically as if they do not help me at all. I understand that they want to increase their rates, considering this is a business, and up to a certain point, yes, I agree so that they can provide the services, what doesn't make a good reason is when this affects people with low income. I would like you to think about a process where the most vulnerable communities do not have their rates increased. And, likewise, that they not be as affected as they are. Many of us do not have better job opportunities due to our immigration status, and our options are to work where they pay the minimum. Taking into account that our families in Mexico depend economically on us, that seems to me to be a racial injustice that must be taken into account when making these decisions. We have to choose to reduce the light or heat in the winter season. In the heat, my family must turn down the air conditioning, but it makes me -- my food goes bad quickly. My apartment is electric only. So when there is snow, there are storms, or the power goes out, it is very dangerous for my family. You can't go out and you can't feed my -- I can't feed my children. I think it also affects the company, since they have fallen poles, cables, et cetera, and they have to work double. But for the same reasons that you raise your rates, one does not have a job because he cannot go out, and if we go out, we are risking our lives. And if we do it, it is so that we are not left on the street. I would like them to think of another way to continue services with affordable rates. Thank you for your time.

16. **Ms. Reich:** (Singing the following words: First 12% and then 18 for pour workers. This is obscene choosing whether to heat or eat. This raise we must defeat. They want another seven percent, meaning some couldn't pay their rent. They already struggle to make ends meet, this raise we must defeat. We all have families we must feed. This raised up fees investors greed. Do not let this new raise pass, e-i-e-i NO.
17. **Ms. Lucia:** Good afternoon. My name is Lucia. It's -- I have 20 years with PGE for my electricity. Sorry, I don't know how to explain it well. But we, most of Cornel -- I'm talking about Cornelius, Oregon, Hillsboro, Forest Grove we are all people who work in the field. We are working there and they pay us the minimum. This past year there was almost no snow and there were almost no fields. There were many losses. Because of that, now the -- the ranch bosses, they lost a lot. There were a lot of losses and now there isn't much work. They hardly give us work because, since they lost, they don't want to invest more and hire people, and we don't have enough money to survive. We are paying a lot for the electricity and every year it goes up more, and now it's gone up quite a bit. What are we going to do if you are going to increase and increase, and how are we going to survive, mostly like us, who are low income, we who work the mundane

jobs in the countryside and in the nurseries? We are asking a favor that -- that they please think carefully what they are doing in increasing quite a bit. We don't -- we don't have enough money to survive here and pay rent and our food. Please listen to us and don't increase the lights anymore. Thank you.

18. **Ms. Henkels:** Thank you, ALJ Mapes. Hello Chair Decker, Commissioners Tawney and Perkins. Thank you very much for the time to address you this evening. This will be brief. This is in support of fair and reasonable rates in terms of service for the small nonresidential customer of PGE. It is by far the second most numerous class of ratepayers that is Schedule 32. And the PGE service territory is primarily in the Portland Metro down to Salem area, and not quite mid-Willamette Valley, and that's the area in the state of Oregon with the highest concentration of small non-residential customers. We also want to note that the small -- as our local government commenter identified earlier, that the small non-residential customers also include small government ratepayers, and I think that would be good to dive into. We notice that the proposed rate increase is higher for the small non-residential customer at 9.5% than any other customer class. We ask the Commission to dive in deep to that. We'll be providing more comment -- public comment later, but we are very concerned that the Commission will review very closely whether fair and reasonable rates with this request is actually possible, and that the small non-residential customers will be paying for the State's energy policy implementation while others benefit unjustly. Thank you.
19. **Unidentified Female:** I want to thank you for allowing me to join in your meeting. I'm going to be very brief. I just think that you shouldn't even consider doing this. People are struggling to pay after the last rate increase. You're going to have people who are literally not being able to buy groceries because they have to pay their power bill. Please reconsider this. Thank you.
20. **Martha Cardenas:** Hello, my name is Martha Cardenas. I am here for a reason; for the needs of all of us who are here present in the community for the PGE -- for the increase in electricity. I am a mother of four children. At the moment, I am living in a very difficult situation. I never thought I would be in this moment, but this week is the last week of my job. I worked for a hotel for 25 years and due to (indiscernible) verify I have to leave my job. Last month I received a note that my rent is going to be increased and I am also being told that PGE is going to increase as well. I understand that we are living in a society where those who have power or those who want to generate money, want to generate more money, and those who are in average society go through many difficulties, those who work in the fields, too. And I would like to touch on a point in your heart and ask you to have a little consideration for the community in increasing electricity. I am a mother of four children, and please I ask you to have that compassion with the increase. Thank you.

21. **Isabel Sanchez:** Sorry. Yes. My name is Isabel Sánchez, I was here before, and I just arrived, and I am here with you again. I'm not very involved with everything, but I'm listening to what they present. And really, yes, we need that a lot, because there are many elderly people, like me, who is already 91 years old, and everyone insists on heating, and the costs have risen considerably, so we need to put our foot down on that. But I'm not very related to that right now because I just arrived. But what you want – I think you guys are doing a great job. And as always with this program, we are supporting the community, ensuring that its workers have what they need. (Indiscernible) and that is why I am very happy. But they just told me that I have to leave now and I'm very sorry. But I'm going to be here, just excuse me because I have to go. This program has really always been very good and very supportive, and you must continue to support it and have more staff and more people to support those you are working on, I imagine. For now I think that's all I can tell you. Thank you for your attention. Thank you.
22. **Unidentified Male (WVWBC):** Good afternoon, everyone. I'm here because it has been very difficult for everyone lacking energy, especially for me. And I believe that, not just me, but the entire community in general, we have problems with money, with work, we don't have enough to pay, and the salary is very low. We need help, if you have a good heart, for all of us as agricultural workers in the fields that we produce. It is very good for you to help us, too, you who are in the front. We ask the personnel that -- In two days they cut my energy, and I was not aware because I was working in the field, but when I came back, my wife told me that she had already installed it. That was what bothered me the most, it gave me, like everyone else, the courage that you work, work, you get home without energy and there is no way to defend yourself. But I think that the union that we are here, we need everyone so that the government will listen and also our voice is heard for all of us in the community and not only here, but in general at the national level. That is all the help that I ask for everyone, not only me. I went through that, that's why I'm here. Nobody told me, "Come on, let's go." No. I come personally to demand that you help us to keep the prices low. Maybe not too low, but, yes, with a fair price of energy that is very high. An 18%, I don't know how much it represents, but it is too much that they have increased. And then if they let us know, maybe if they gave us information that -- personally I don't understand much English, but I express the little I do know in my Spanish, because I also speak another language. I am from a descendant group from Mexico and I speak that language, too. The language I call it in Spanish is the dialect that I'm telling you about. That's what I can speak, but very little English. And for that reason, I probably don't understand it the best why they treat us like that, because we don't speak much, but I don't think so. We are here to defend ourselves and thank you for your support to all the community who are present. We kindly ask you to help us with that. Thank you.

23. **Angelica Sanchez:** I'm going to tell you everything I know. Good afternoon. My name is Angelica Sánchez. And the reason for me being here is because we, the entire community, do not agree with the increase in the price of electricity. And the truth is, for us, it is very difficult, because it is every day that we get up, we are fighting to give a better future to our children. And mostly we who are (inaudible) mothers -- who are single mothers, and we have the responsibility of supporting our children ahead by paying rent, by paying for food. And what we earn, well, it is very little. For me, I have been paying \$600 since last year. And what I earn is not enough because I have to pay my rent and feed my children. I have a child with autism, and I have to work, and I have to take care of him, too. And, well, sometimes I have enough for electricity, but I don't have rent. And if I have rent, I'm late with the electricity. And my children's food is also very difficult. So we beg you to please put your hand on your conscience, as much as you put your hand in our pocket, because it is very difficult to pay for all the public services and also rent and food. And we beg you, please, not to raise the (cost of) electricity, because what we are paying now is already a lot, and that is not fair. Thank you.
24. Erica Strong: Okay. Hi. My name is Erica Strong. I appreciate you guys having this meeting to hear us all out. I was born and raised in Clackamas County, and I've been fortunate enough to have power my whole life. I live in a rural area, so that does mean that if I didn't have power, I would also not have water service, because we rely on power to our well to pump water. The power bill has been so expensive lately. We are making cuts left and right. We are doing everything we can to keep our power bill as low as possible. It's been crazy. We've taken out loans to do construction on our home so that we can lower our power bill. And at this time, we're talking about currently for our power bill, entire weeks of income are going to a monthly power bill. I wish that I could go back in time and be involved in the meetings last year. I didn't even know about this meeting until today because you guys gave two weeks' notice for this meeting. This is -- this is not sufficient notice for the life changing changes that you're -- that are being proposed here. We can't afford this, and we can't afford to use our own utilities right now. And this increase asks us to shoulder a cost that needs to come from the profits. It needs to. This is -- this is ridiculous. We don't have any other choice. We don't have anywhere else to get our power from. And I think we should consider whether the industrial customers should -- should shoulder this expense, since they can afford it. We're talking about companies as opposed to people that would be out of house and home. 'Cause power is required for housing, and when your power gets cut off, your landlord kicks you out. So you're talking about rendering people homeless to fund a profitable company. As Commissioners, it's your job to protect us from this. Please do that. Thank you.

25. **Nicholai Gallegos:** Okay. Thank you. Hello, my name is Nicholai Gallegos. I am a resident of Clackamas County. And I would just like to bring up some numbers, 'cause numbers seem to make more sense to me. According to the 2023 PGE annual report, revenue from retail sources was \$2,447,000,000. In 2022, it was \$2,223,000,000. That is a \$224,000,000 increase in revenue. The request that PGE has put in for the rate increase expects to increase revenues by approximately \$202,000,000. As far as I am concerned, PGE has already gotten this increase in revenue from the past year. Also, it's no secret that residential, i.e., the people, electricity are going to suffer most. In 2023, according to the same PGE annual report, retail power revenue from residential was \$1,263,000,000. For commercial, it was \$800,000,000. For industrial, it was \$349,000,000. According to the Oregon Department of Energy with energy consumption by sector, residential accounts for 25.2% of energy consumption. Industrial accounts for 27.4% of energy consumption. Commercial accounts for 18.8% of energy consumption, which means despite industrial energy consumption being higher, residential power -- or retail sales for PGE accounts for 52% of revenue, while industrial accounts for 15% of revenue, commercial 33% of revenue. Why is PGE allowed to directly effect the people this badly? This is money coming from people who don't -- otherwise can't afford this, and this strikes me as nothing but pure greed, frankly. So, please help us, the people of Oregon, by not approving this rate increase.
26. **K.B.:** Okay. Hi -- hello, Chair Decker, Commissioner Tawney and Perkins, and Judge Mapes. Tonight -- or maybe tonight I should address you as therapists listening to all of our community struggles with the PGE rate increases. I've often wondered if these decisions are predetermined and the public comment sessions are just formalities, but as I watch you all here tonight, listening to residents for many hours, I have to believe that our PUC Commissioners are fair, compassionate, and concerned about their residents. And we trust you to stand with our constituents over billion-dollar for-profit companies, and please decline this request from PGE for a rate increase, especially during the time in which inflation is rapidly outpacing wages. Thanks for hearing us.

Name/Location	UE 435 Public Comments
Daniel Jensen - ESTACADA	Good morning, With the impact of inflation the Oregon middle class in the Portland Metro area is feeling the burden of cost increases. Please do not allow PGE to again increase rates after they have already significantly increased rates only one month ago. As a middle class worker I already work very hard to support my family and feel the effects of a tight budget. Please do not allow a higher burden to be placed on me and other in the same place.
Gary Poulos - TALENT	Hello. It's my understanding that previous and currently proposed rate increases are due to poor management. It is also my understanding that shareholders chose to risk their investments in a company because they believe that the management will make sound business decisions that will increase the value of that investment. And if management fails in that responsibility, the cost of that failure must be born by those who took the investment risk. This is what causes investors to do their due-diligence before taking a risk, and if the management still fails them, they should replace the management. To do otherwise would only serve to encourage speculation. As a rate payer, I have nothing whatsoever to do with the management decisions of those in charge of PP & L, and should not be held fiscally responsible for such. To charge rate payers for poor management will only discourage the performance of due-diligence prior to investments. It will also encourage both irresponsible speculation and the retention of poor managers. For these reasons, I strongly encourage you to unequivocally oppose such rate increases. Shareholders must be solely responsible for the financial risks they take. Regards, Gary Poulos Talent, OR.
Robert Carnagey - BEAVERTON	I am not sure just how utility rate hikes are reviewed and decisions made on any approved ones, but I have to say that the huge rate hikes for utilities, especially for electricity seem over the top! And, the news is reporting these same utilities are back at the money trough looking for ever more money. What the heck is going on here? They are making the cost of energy unaffordable to many of us, especially those like me who have retired! Please do your job and hold back on approving these types of rate increases..... let them take the cost out of their existing funding and rates! Maybe their execs don't really deserve million dollar compensation packages,,,,ya think!
Kenneth Harrison - PORTLAND	You guys on this board are too work and selfish. You now are allowing pge costumers to choose from food or having electricity. You on the board are rich and can not care if rates go up. More people homeless because of you. How many more children without food or heat? Pge big wigs still giving themselves pay increases. Hello want us to be third world country? Stop the rate increases pge are lying. Thank God I'm not part of pge but I know people who are and when the last time you told pge to jump in the lake? -

Kelly Lanspa - PORTLAND	I totally oppose the rate increase. these costs should be born by the company and not the residents. These are standard costs all companies have to invest in their company. Take your profits and salaries and use that for you infrastructure upgrades!
Frank C - NA	I am interested in understanding when we the consumer became responsible for a company's failure to perform maintenance? As a facilities manager in my past life we planned and budget led for such things. Frank C.
Reid Zielissai - PORTLAND	PGE has increased last 3 years, totaling 45%. Does not know how people can live with these kind of increases. There will be more homeless people that can not afford to live. He also stated that he feels all of the comissioners that have left, have gone to private industry and are benefitting from the increases.
Jon Smith - BEAVERTON	The proposed rate revision is higher than wage growth or inflation, and with so many service providers raising rates unbounded, this seems an onerous amount, especially for customers whose earnings don't get raises to offset their own rising costs.
Gary Feierfeil - NEWBERG	Why is PGE asking for for increase rate if they already gotten 18 percent. It's not the customer fault that they can't maintain the system or wild fires were caused because of PGE miss management.. Most of us have done all that required to lower usage but every time we do, PGE ask for rate increases and OPUC grants it.
Margaret L - SALEM	Please do not approve PGE's request for a rate increase. They already got one, and it's been devastating. Everyone I know was horrified by their increased energy bills this year. The average person's wallet is already strained right now, between out-of-control grocery prices, rent increases, and employers refusing to give anyone enough hours to live on. My family is struggling financially. We can't possibly "save energy" any more than we already are, and we can't possibly "save money" on anything else. There are no frivolities left to cut. We don't have streaming services or cable TV. We don't go out to eat anymore. We have the cheapest internet and phone service we can get that meets our work needs. We can barely afford basic necessities. Yes, we know about their income-qualified discount-- it barely helps at all. It is PGE's turn to be more responsible with their money. Please don't let them hurt us even more.

Name/Location	UE 435 Public Comments
Matt Delapena - BEAVERTON	I wholly oppose the rate hike. The increases since 2021 have been burdensome on the Portland Area middle class, many of whom already live paycheck to paycheck. Focus on maintaining the EXISTING infrastructure and making THAT resilient and reliable.
NA - PORTLAND	Please do not allow PGE to raise rates again. It's unconscionable to have hundreds of millions of dollars in profits while people can't afford their electric bills. Unplugging a phone charger is not going to make a substantial difference to people who have to choose between heat and food. You are supposed to protect consumers from this monopoly charging whatever they'd like. 49% since 2022 is not protection.
Kris Angerano - NEWBERG	Another rate increase for sub par service is not acceptable. Poll the general portland population with electric heat pumps how they feel about another 9% increase on top of the "18%" from last year. The available rebates for low income families is also not available to a retired couple with social security as only income. Yes that is correct, thats like 45k last year, with the rebates at 43k income. As a single family home, my bill will have gone from \$150 a month to \$210 per month after these increases within 2 years. This is a NO.
Valyrie Ingram - FOREST GROVE	Please stop allowing PGE to raise rates. There has to be a limit.
J White - TIGARD	Absolutely not.
Ben - PORTLAND	I strongly oppose allowing another PGE rate increase. The company is overly profitable and should be reinvesting its own resources rather than overburdening rate-payers again. Our electric bill has become a heavy financial burden and we do not qualify for their "relief". Please do not allow PGE to continue their pattern of annual increases well above inflation.
Emily W - PORTLAND	Rents are already sky high. We don't need another essential utility to go up even higher. If companies keep squeezing us working folks they will eventually have no one left to squeeze. There aren't even any other companies we can go to for electricity.
Hailey Jole - TIGARD	Do not allow them to raise the rates, it is already complete and absolute robbery.
Shirley R - GRESHAM	I can't hardly afford electricity anymore, people will lose their houses because they either keep warm and can't pay their mortgage or they pay their mortgage and have to be cold.
Corey Coleman - PORTLAND	PGE has raised rates substantially for multiple years now including a 18% hike just this year. They are also very profitable. People in Portland such as myself are struggling to pay our very high bills this winter. I switched to all electric in my home replacing an oil furnace with a heat pump to be more environmentally sound. But now I'm struggling with incredibly high electric bills after this years hike. Please do not allow them to gouge us even more to sustain their profits.

Name/Location	UE 435 Public Comments
Jacob Rose - TROUTDALE	Please stop raising rates. You're harming us all, every group that isn't part of the elite are suffering. If you're not part of the evil in this world than prove it by not raising rates on everyone.
NA - PORTLAND	These drastic raises by PGE will negatively impact citizens who are already struggling through the housing crisis. They should not be permitted to raise their prices yet again at such a steep rate.
Autumn Violet - BEAVERTON	Please do not allow pge to raise their rates again.
Rebecca Lindberg - TIGARD	I'm paying 250\$ in electricity bills for a tiny apartment that we STOPPED USING THE HEATER IN unless it was brlow freezing. We chose to be cold and bundle up in our own home and still paid 250\$. We used the heater last year and it was almost the same amount since they have already increased prices. I work as a full time medical worker and can barely afford my bills as is. Please don't let them continue this sick greed.
Benjamin Serreau-Raskin - PORTLAND	Absolutely do not allow PGE to raise prices again this year, or even the next. Everyone is already getting squeezed, the last thing we need is AC and heat getting more expensive.
N S - PORTLAND	I am a local caseworker helping low income residents of Multnomah county. So many people are struggling to make ends meet. Cost of living and inflation have gone up and our pay has not come close to keeping up with this. The rates were just raised by a significant percentage at the start of winter. Incredibly cruel timing. Now more hikes are being proposed? Who is meant to be speaking up for the best interests of the people of Portland struggling to meet their basic needs? They were just handed a large increase just before a historically cold and lengthy freeze. They should not get any new funding while people struggle to decide between heat or food. It's time for public utilities.
Robinson Wilburn - PORTLAND	Asking for yet another rate increase is too much. The last rate increase was too much and it's pushing a lot of citizens out of our city. Please deny PGE's request to bill Portlanders even more. This is going to hurt a lot of people who are already struggling financially.
NA - CORVALLIS	Please do not allow pge to raise rates for the second year in a row at levels far higher than inflation in the middle of a cost of living crisis.
Dana Keeler - PORTLAND	I strongly oppose PGE's request for another rate increase. They were already significantly more expensive than Pacific Power even before raising residential rates by 18% this year. PGE needs to focus less on making money for executives and shareholders and more on providing a necessary utility for Portlanders.
Thomas Foulks - PORTLAND	PGE has already risen rates by a historic amount, well above even the worse inflation during the recent pandemic. The proposed rate increase is even larger, putting an increased burden on already struggling families.

Name/Location	UE 435 Public Comments
Marshall Nystrom - CORBETT	The proposed rate increase - 16.9%, especially on the heels of last year's rate increase - would cause undue hardship to me, my family, and my friends. I respect that upgrades cost money; however, considering that the rate hike last year was followed by PGE announcing a 25% increase in profits, and this year my power was out for over a week, I believe PGE should put its service first and profits second, using the money they've already secured as the exclusive electricity provider for the Portland area to improve services instead of price-gouging customers who are already struggling. Asking for a rate increase is a smokescreen for corporate greed from the already-wealthy company, who could provide these services without charging more if they were just willing to accept a lower profit margin for their services. Corporations know no shame. It's up to the people, and their representatives, to establish boundaries for acceptable behavior; this proposal does not constitute such behavior.
Timothy Banas - PORTLAND	If PGE feels that they can't make enough profit, perhaps the utility should simply be brought under full state control. No to raising their rates.
Brad Wasbrough - BEAVERTON	I thought they already raised rates in the last few years. Is PGE not budgeting their money properly? Even with recently increased rates, they still weren't able to handle outages from a recent ice storm in a timely manner. What guarantees do we have as Oregon residents that giving PGE more money will translate to better service and safety for their customers?
Nathan Cook - OREGON CITY	PGE has raised their rates 20% in 2024 alone. Their CEO, Maria Pope, got a 25% salary increase this year (2024) too. Now they want to raise rates a further 7.4% in 2025 to pay for "upgrades". That's what the raise this year was supposed to be for. I'm going to be living by candle light this time next year if they keep up the way they're going. Nobody can afford these raises and we do not have a need for Energy Storage capacity in Oregon. Which is what the proposed "upgrades" are meant for. Maria Pope needs to lose her job and PGE needs to quit being so Greedy.
Emme Nye - PORTLAND	we should not raise rates for electricity. it is already so much and as a disabled person i am on quite a budget and the cost to keep my place at a liveable temperature is quite burdenson. increasing rates would only further restrict my limited funds.
Jackson Crippen - ALOHA	I am vehemently against PGE raising rates. Raising rates yet again at a time when general cost of living in Oregon is already ludicrously expensive is downright predatory and will negatively impact tens of thousands of Oregon citizens.
Isabel - PORTLAND	The cost of living is already too high. PGE makes millions every year they don't need more from average people struggling to pay their bills.
Jean Jennings - CORNELIUS	PGE needs to learn how to manage a budget instead of raising rates AGAIN! No one is receiving a 25% raise in income right now. It's bad enough that we are trying to cut other areas of our budgets for the 18% increase but another 7.4% is ridiculous. It seems like PGE leadership needs to take a pay cut!

Name/Location	UE 435 Public Comments
Miles Reid-Anderson - PORTLAND	A 7% rate increase the year after a 18% hike is unacceptable and unsustainable. Do not approve this request. It is absurd in an environment where most workers are only receiving 2% raises. - 3
Katherine Lewis - BEAVERTON	This is ridiculous and is outpacing inflation. Given the rate hike last year and how they responded to the storm a month ago this is unacceptable, and the justification of this rate hike is not there. - 3/1/2024 7:01:58 AM
NA - PORTLAND	PGE raising the rates AGAIN is unbelievably greedy. We need a public electricity utility. PGE's CEO makes millions and they keep reporting record profits. They're bleeding Portlanders dry. People are watching their bills double and triple. Mine certainly have. PGE is a scam organization that is actively harming the people of Portland when they are supposed to be providing us with vital services. - 3/1/2024 7:31:44 AM
Cheryl Eby - SALEM	In regards to another rate increase by PGE, the answer is NO. They have just had an increase, and I don't believe for one minute that the claims on what they plan to do with this latest money grab is legit. We, the consumer, are sick and tired of being increased to death in these difficult times, especially those of us who are seniors. I urge you this time to give them a resounding NO and tell them to live within their means as we are all trying to do. - 3/1/2024 7:36:15 AM
Melody Crippen - PORTLAND	Rising energy costs for consumers are not reflective of actual new challenges on the part of energy providers; this is an example of "greedflation" plain and simple. Oregonians have enough hands diving into their pockets as it is; allowing this avaricious rate hike to occur would be another major drain on the already strained purse of the average citizen. Please do not allow PGE to recklessly and pointlessly increase their rates yet again. - 3/1/2024 7:49:26 AM
Alex Cassidy - PORTLAND	I am writing to oppose any increase in rates for PGE. I believe the service they currently provide is NOT proportional to the costs of service. Poor maintenance and blackouts should be addressed before considering a change in rates. - 3/1/2024 7:51:59 AM
Chris Boatwright - HILLSBORO	Please do not approve this rate increase! - 3/1/2024 7:55:25 AM
Chris Ladu - ALOHA	Regarding PGE rate increases, how many times will the Public Utility Commission (PUC) side with greedy for profit companies and leave citizens out in the cold. I think it is time for new legislation governing the PUC that will actually support Oregon's citizens. - 3/1/2024 8:05:41 AM
Paulane Collison - EAGLE CREEK	I don't agree with the rate increase. They already got 17% and now asking another 7%. This is hurting the elderly who don't get much for income. She is all electric and can't afford it anymore. This is hard on those who have medical issues like chemo who crank up the heat and this is really going to affect them. Not all customers have the option of using gas especially in older homes or trailer homes. - 3/1/2024 8:09:36 AM

Name/Location	UE 435 Public Comments
Steven Marker - FAIRVIEW	<p>Good morning, i am Steve Marker, City Councillor for the City of Fairview, first i would like to say that during the winter weather we had, our utility companies in my view did the best they could do under the circumstances. My concerns are centered around rate increases for PGE and NW Natural. Being retired and on a limited income makes it difficult. I dont get compensated for being a city councillor and had to apply for income qualification for both NW Natural and PGE and this makes me undestand as an elected official how hard it is for our elderly and income challenged residence. One of my concerns is we live in an area because of our dams and electrical facilities that we should not be paying a huge amount for electricity. I understand PGE'S issues, but if we allow another 7 pct rate increase that will really break the backs of our folks who are income challenged. I would welcome a representative from the PUC to help us understand why we pay so much when we live in the NW where hydro electric power is plentiful. I Chose PGE but would welcome a rep from NW Natural as well. - 3/1/2024 8:23:24 AM</p>
Mark Rose - GLADSTONE	<p>I just heard the PGE proposed another rate increase for next year. I understand operational cost are increasing but the average PGE customer can not afford another rate increase after we just experienced a 17% increase this year. I make too much for any assistance but not enough to qualify for assistance. The recent rate increase is very noticeably and been difficult for my family. Please do not support another rate increase!!! - 3/1/2024 8:42:25 AM</p>
Kathryn Furr-Danner - OREGON CITY	<p>I ready on KPTV that PGE wants to raise rates again in 2025: https://www.kptv.com/2024/02/29/portland-general-electric-wants-raise-rates-again/ "PGE's rate increase in 2022 was 8%, and in 2023 it was nearly 9%. The 18% increase in 2024 plus the proposed 7.4% increase in 2025 means a more than 42% increase in total since 2021." This is untenable. Of course cost of living increases over time. Everyone understands this. Salaries do increase somewhat to go along with this. I do not know any whose salary has increased by anything close to FORTY-TWO PERCENT over the course of four years. How is the average person supposed to meet this kind of increase? It is particularly galling considering Maria Pope's compensation of well over \$6M. it is shameful that she would be willing to accept accept a six-figure salary, blithely asking for yet another increase, while knowing that so many people are struggling to make ends meet year after year, increase after increase. I urge you to deny the 2025 rate increase for PGE. Thank you. - 3/1/2024 8:57:06 AM</p>
Sam - SALEM	<p>UE435 is ridiculous. My power bill is already untenable and further increases will force me to choose between power bills and food. Start focusing on improving the infrastructure we have instead of squeezing blood from your captive customer base to build superfluous new projects. Get bent - 3/1/2024 9:27:04 AM</p>
E F - PORTLAND	<p>Please protect consumers from monopolies charging exorbitant prices. Electricity bills should not push people into poverty. - 3/1/2024 9:32:23 AM</p>

Name/Location	UE 435 Public Comments
Adam Kimbrough - PORTLAND	NO MORE PGE RATE INCREASES. As long as they are profiting and their CEO is taking \$6 million + a year, it's on them to be fiscally responsible. Infrastructure maintenance and improvements is not a cost that should be passed onto the consumer via a rate hike. Work for the people. - 3/1/2024 9:51:18 AM
Corey Cowels - SALEM	I feel it's unaffordable for customers with raising rates again in 2024 to go into effect next year. Customers can not afford to pay their bills. This is only going to make housing worse and the fact the PUC is approving all these rate increases, it does not feel PGE is being regulated. I am frustrated and the fact you are using the statement of inflation for the justification of these rate increases, while wages are not increase, it's going to make it difficult for people to afford their bills. I would expect the commission board to do their due diligence and feel this has not been done. - 3/1/2024 9:57:38 AM
Jon Miranda - PORTLAND	PGE is a terrible company!! They're raising utility prices by 42% in three years'. This is ridiculous as other utility companies nearby charge less than half of what PGE charges - 3/1/2024 10:00:19 AM
Julie - CORVALLIS	Our power bills are becoming completely untenable because of corporate greed. Further increases will force more Oregonians to choose between the increasingly expensive facets of their survival, being able to afford only one or the other when it comes to food, housing, and electricity. As for me, and many others like me, we also rely on having electricity at home to be able to complete our work in our day jobs and/or additional side gigs that allow us to survive, so a rate increase will have broader impacts on our state's unemployment rates and economy when people who work remote or self-employed jobs will not be able to afford the power bills that allow them to earn a wage and survive. - 3/1/2024 10:02:17 AM
Greg Cyrus - MILWAUKIE	It is unfair for yet another substantial rate increase that will burden families and households even further. This last recent rate hike has caused untold and unknown burdens on many people and businesses. We have to be able to buy groceries, pay rent or mortgage, care for loved ones. Our money is stretched thin as it is. We cannot be expected to pay for another increase. - 3/1/2024 10:03:17 AM
Aaron Matney - PORTLAND	It is unreasonable to accept a 42% increase in electricity rates since COVID began. A proposed 25% increase in the last two years is unbelievable. I can stop buying a product at a store if it goes up 42%; I can't do that with electricity no matter how much I conserve my energy. No one is out there with their lights on 24/7; there is very little people can do to save money on their PGE rates. PGE is literally encouraging people to leave this city/county- that is not hyperbole. It's time to revisit why PGE is a for-profit company and why it is not a PUD. Look at Clark County Kwh rates and ask why is PGE more than double and rising? It's Un-Oregonian to allow this to continue. Full stop. - 3/1/2024 10:07:09 AM

Name/Location	UE 435 Public Comments
Brenda Cyrus - COLTON	I just read an article in the Statesman Journal that PGE has filed papers asking for yet another rate increase next year. PGE increased electric rates by 14.8% in 2023 and 18% in January of this year. That is already a 32.8% increase in 2 years. If allowed to raise rates again next year the total rate increase would be 40.2% in 3 years. This is an unacceptable increase for most working families. My electric bill is already the most expensive monthly expense I have. As a widow raising an autistic grandchild I have limited income and another increase in electric rates will be untenable. We have already stopped using electric heating as I can not afford. PGE posted a net income of \$228 million for 2023 while I make less than \$50,000 a year. Please deny PGE's latest request to increase our electric rates. Many of us are already barely able to make ends meet as it is, increasing electric rates again will make it impossible. Sincerely, Brenda Cyrus - 3/1/2024 10:15:51 AM
Matt Wujcik - SALEM	Do not allow PGE to raise the price of electricity once again! They need to be held accountable for the money they are stealing from local citizens. I say this because out of nowhere i had a 500.00+ electric bill. When every year since, at the same time it was never more then 300. Never ever! They tell you one thing, and when your not looking they lie. We need transparency! How much money in profits are they gonna report now!? Do not let them tell you they need more money its all lies!!!!!! - 3/1/2024 10:18:26 AM
Padilla Liana - GRANTS PASS	Do NOT allow PGE to raise their rates again. Oregon citizens can't afford more price hikes! I will not support Docket UE-435! - 3/1/2024 10:52:23 AM
John Doe - PORTLAND	I was hugely disappointed to read about PGE's request for an additional rate increase. PGE customers have experienced a net increase of 49% since 2021, and while infrastructure investment is certainly a priority, PGE is a for-profit company whose interests lie with shareholders rather than customers. I would like to see Portland embrace a PUD model. - 3/1/2024 11:43:04 AM
Jayne Scheckla - COLTON	I strongly object to another PGE rate increase. I live on a fixed income and these increases are killing me. My electric bill in December was almost \$600 thanks to last year's 17% increase. If you continue to increase every single year, people will be forced to choose to be warm or eat. It's that simple. Do you really expect people to be able to absorb almost 40% of increases in three ? PGE is making a good profit. That should be enough without gauging the people. - 3/1/2024 12:07:53 PM
Linda Cyrus - BEAVERCREEK	I am totally opposed to yet another increase for electricity service. We are retired on a fixed income and are finding our electric bill beyond our ability to pay. These increases are exorbitant and simply cannot continue. - 3/1/2024 12:16:07 PM
David Wyatt - CARLTON	This is in reference to the proposed 7 percent rate hike that PGE is wanting to tack on to the 17 percent . I cannot afford being on a fixed income to these increases. I am sure that most of the customers are in I the same predicament. - 3/1/2024 12:22:19 PM
Craig Smith - HILLSBORO	Please don't let Portland General Electric raise their electric rates again We can't afford it - 3/1/2024 1:10:15 PM

Name/Location	UE 435 Public Comments
Greg Pearson - PORTLAND	The 17% was just done and now PGE is asking for another 7.5%? Over last few years they've increased rates around 40%. I feel this is getting out of hand. Everyone has to make due with what we earn. I feel these increases are too frequent and too much. - 3/1/2024 1:31:43 PM
Jettison Tenacity - SALEM	The prices of PGE are too high. This last price increase is too much for so much of our community to afford. The price of infrastructure maintenance and upgrades should come from the company's profit, not the pockets of the customers. If they receive allowance for another pay increase next year then even more of their profits will be funded directly by tax funded initiatives essentially giving this private company our tax dollars directly. As is, their prices and fees need to be lowered and their costs of business falling on the shareholders instead of the general public unable to choose who their electricity, a necessary amenity, comes from. - 3/1/2024 2:20:59 PM
Eli - PORTLAND	I am writing to state my strong disagreement with this rate increase. An increase in 2025 would be the fifth increase in five consecutive years, and this proposed rate would leave us nearing a 50% increase in price since 2021 on residential customers. PGE was already granted a massive increase of 18% in 2024. This is an absolutely untenable cost-of-living increase, and I'm astounded the OPUC granted the 18% this year. There is no way PGE should be permitted to keep their monopoly price on this sharp of an incline. I worry OPUC and other regulators act as rubber stamps, while a monopoly worries more about dividends and year-over-year returns, leaving captive customers footing the bill. PGE's various public filings show they have increased profit margin on specifically residential customers. Someone needs to put a stop to this. I oppose this rate hike and will be reaching out to as many representatives as I can to voice this opinion, and hope to see harsher scrutiny of PGE's blatant profiteering in future. - 3/1/2024 2:45:55 PM
Adam Fisher - PORTLAND	I heard you are going to approve another rate increase for PGE for Portland electricity. I am against this. Rates have just gone up and I am trying to convert away from fossil fuels, but how can I do that if electricity keeps getting more expensive. And, especially if PGE wants to spend the money on large scale batteries. That is a waste of money and a technology that is not mature yet. I voice my desire that you reject any future rate increases. - 3/1/2024 2:57:18 PM
Gaynell Thornbrough - WELCHES	I am a customer of PGE. We have just had an increase of 18% and now I see that they have filed for another increase. I really feel that this needs to be denied! If they are already willing to assist people with the current increase then this shows that another will only add more of a financial burden on all. My husband and I like a lot of other people are retired and living on a tight budget and our income doesn't cover everything. If we need to live with in our current income, then so should our utility companies. Please, do not approve this increase!!! - 3/1/2024 3:21:03 PM
Kyle Fontaine - PORTLAND	This price hike will put disabled and geriatric citizens at significant health risk if they become unable to afford heating and cooling during extreme seasonal shifts. - 3/1/2024 3:30:16 PM

Name/Location	UE 435 Public Comments
Nebella Freilinger - PORTLAND	I am a citizen of Portland, OR and I am squeezing by with the job I have already. A further increase to PG&E's rates after their historic increase this year would make my ability to live in Portland with my full time, above minimum wage job even harder, and serve as a contributing factor to my exodus from a city I love. I view this attempt to increase rates as a means to exploit the consequences of their gross energy production which produces pollution which forces the people of the world to endure harsher weather conditions, which leads to more energy usage to maintain comfortable temperatures during blazing summers and frigid winters. They are attempting to profit off of their pollution which is killing our planet. Their contribution to the gross negligence on our planet's atmosphere should not be supported. - 3/1/2024 3:47:04 PM
Pia Allabastto - PORTLAND	I want to express my opposition to any further rate increases for Portland General Electric customers at this time. The recent hike was quite substantial and has placed a great hardship for many people. If a rate hike is considered, I believe the public deserves to hear about salary and compensation packages for PGE executives along with a clear overview over how current funds are being allocated within PGE. I strongly disagree with citizens financing high salaries for officials providing a public utility service and question whether current resources are being effectively managed. - 3/1/2024 4:25:40 PM
Donna Rash - SILVERTON	I believe an increase would be excessive for a single year, and would not approve an increase. - 3/1/2024 4:31:46 PM
Allison Sandstrom - BANKS	Please do not let PGE raise their rates again. We have no other option for electricity where I live and we can not afford to keep the lights on and feed our families. - 3/1/2024 4:57:52 PM
Haley - GLADSTONE	We can't afford this. Where is the accountability? My bill is 400 a month just to keep my home at 60 degrees - 3/1/2024 6:25:27 PM
Sandy Berger - HILLSBORO	It's my understanding that, together with the PGE proposed rate increase for 2025, that rates will have risen by approximately 39% since 2023. With increased rates for Pacific Power, and the increased cost of food and rent, the cumulative effect for senior citizens and low income Oregonians is not sustainable. I would hope that rather than low income individuals applying for utility discounts, that PGE and other utilities would exempt any Oregon customer who qualifies for SNAP benefits. - 3/1/2024 6:33:04 PM

Name/Location	UE 435 Public Comments
Aaron Hensley - HAPPY VALLEY	Another rate increase proposed? Let me understand this, PGE lobbies to get rid of gas utilities and pushes for more reliance on electricity (electric cars as 1 example), giving them more market share and effectively eliminating any form of competition then at the same time raises rates with the excuse that they do not have the infrastructure to support the additional electricity required for the items they lobbied for and the consumer is stuck with no voice and no recourse? Electricity is no longer a luxury like when it is first made available, it is a necessity. PUC I was already disappointed in how you handled the 2022,2023, and 2024 increases. A statement needs to be made to PGE that like every company they need to budget what they already have more effectively and we will not allow more increases for the foreseeable future. PUC you have a responsibility to the consumers not PGE, if the individuals that make up the PUC are not up to the task of standing up for citizens rights to affordable utilities please resign and let someone that is willing step in. - 3/1/2024 7:09:28 PM
Peggy Foster - MOUNT ANGEL	Just say NO! PGE residential customers cannot afford another rate increase. People can't pay rent, utilities, gas, groceries now, and we are tired of taking it in the rear end from PGE! Stop their continued requests for rate increases. As senior citizens now paying double electricity costs from the recent rate hike (truth), this will force us out of our home. Stop the bleeding please. - 3/1/2024 7:54:21 PM
- MILWAUKIE	The rate hike proposed for 2025 is ridiculous and considering the hike this January is untenable. Give the CEO a pay reduction first. - 3/1/2024 8:36:43 PM
Daniel Tate - PORTLAND	After the 17+% rate increase my electric bill jumped from \$120+ a month the to \$260+ and you now want to approve another increase a month I'm on SSD not to mention these crazy rent increases of \$130 a month . At what point do you start caring about the public instead of big Business - 3/1/2024 11:57:12 PM
- BEAVERTON	For the love of all that is good and holy (and my bank account), do not raise the rates again. I will cry. - 3/2/2024 12:38:12 AM
Josh - HILLSBORO	How is PGE able to raise rates 14% in 2023, raise rates another 17% in 2024, and now ask to raise rates even more in 2025 while also reporting a 24% increase in profit? If a company has government permission to be a monopoly, there needs to be strict laws for how they operate. They should not enjoy a \$2.2 billion dollar profit for 2023 with zero competition and still operate for profit like they are competing in a legitimate market. I would gladly pay someone else for utilities, but there is nowhere else to go. It's absurd to even consider another price increase. - 3/2/2024 6:57:54 AM

Name/Location	UE 435 Public Comments
Trina Voss - ESTACADA	My electric bill is averaging \$550 a month. And about to go up AGAIN. PGE is making over \$220 Million dollars in profit, and about to raise rates again. We're looking at over 40% increases over a couple of years. While power goes out for days, or weeks. We have ONE choice for electricity. People DIE during extreme weather incidents because they can't access or afford heat or cooling. And the rates are going up again. Allowing them to raise the rates again is failing to protect Oregonians who have a choice of using PGE or living without running water (many of us are on wells), light, heating and cooling. Make them use some of that profit to secure the upgrades. - 3/2/2024 8:11:21 AM
Paige Barletta - PORTLAND	PGE wants to raise rates by 25% in 2 years. This is unacceptable. They need to be audited to prove where the allotment of funds go, how much bonuses they get, and how to justify the raises explicitly. Their price gauging is untenable while the CEO makes 50+ million a year, and they are approved 235 million bonuses for 10,000 people. This is a public service, we deserve representation and a stand against this monopoly. - 3/2/2024 8:26:27 AM
Mel Zillick - PORTLAND	I can't believe that the state is continuing to consider rate hikes by PGE and PAC. 3 days ago PGE made what looked like a reach out to help low income homes, then the very next day they announced asking for a significant rate hike. So the low income reach was simply a marketing strategy. By continuing to approve these you are pushing more people to the financial edge. I work with low to moderate income communities and I also work with the utilities. This winter some residents have experienced \$400-600 per month electricity increases. Someone that I know that has a completely natural gas home and completely insulated, is married with 2 kids and still experience's \$400 winter bills. Why are you putting these electric changes all on the laps of the people? Yes we need to change the grid, yet the federal and state governments should be addressing this and stop making all of us poorer through utilities greed. A lot of people are now starting to say that they are sticking to natural gas or switching back over. That is turning us in the opposite direction. Please stop these increases! - 3/2/2024 8:38:37 AM
Kelly Mason - LAKE OSWEGO	Make Portland utilities an actual public utility company or at least look into them price gouging. From what I understand they charge more than double per kWh compared to Clark Public Utilities. Portland already has a housing crisis and now they're going to hike it up another 7% next year. Please do something. More people are becoming houseless. - 3/2/2024 10:09:38 AM
Kate Davis - PORTLAND	I don't know which bill it is but please please don't let pge increase our rates. The latest has been bad enough. Very bad. Thank you - 3/2/2024 10:22:20 AM
Erik Hanstad - PORTLAND	NO MORE PGE RATE HIKES!!! This is obscene and unacceptable. - 3/2/2024 10:24:35 AM

Name/Location	UE 435 Public Comments
Joshua Cook - SCOTTS MILLS	Over the last few years the rate at which PGE charges for electricity has increased 42%. If this is approved it will go to 49% (when compounding is accounted for) whereas my income has only gone up \$1/hr. My last power bill was \$388. Doing the math there, the same bill before the rates started to skyrocket would've been \$270. That means I have to work an additional 110 hours a month or 25 hours a week just to break even from where I would've been a few years ago. These rates are forcing us into poverty at an alarming pace. Additionally, PGE profited somewhere around \$250 million last year which goes directly to their investors. This is a great indicator that they do not need to increase rates to accomplish that which they claim they will use the additional revenue from the 7.4% rate hike they are proposing. I'm asking, no begging, that you deny this request and any future requests for at least the next several years to allow us hard working folks the chance to catch up. - 3/2/2024 10:33:19 AM
Lauren Decker - PORTLAND	I am writing to voice my disappointment regarding the proposed rate hike for PGE in 2025. We can barely afford to keep our apartment heated after the 2024 increase and will have to leave the city if utilities keep increasing at this rate along with rent. Corporate greed is affecting the people who love this city, and we have no alternatives as PGE has a monopoly on the area. Please do not allow them to squeeze every penny of our paychecks just to have heat and basic necessities. - 3/2/2024 10:35:03 AM
Andrew Riehle - WEST LINN	No more rate hikes! - 3/2/2024 10:36:35 AM
Mary Cook - SCOTTS MILLS	I understand the need for updating infrastructure, but before any more rate increases are approved for PGE there needs to be increased fiscal oversight and accountability. The latest bill for my family of four who lives rural with an electric furnace we NEVER use was \$388. When we moved to our home in 2022, the same usage would have cost us \$271. Neither my husband who works private sector or myself who is a government employee have received any wage increase to help offset the rising cost of living. Electricity is a necessity. I ask for some serious review and consideration on this proposal before people are forced to live in the dark - 3/2/2024 10:37:21 AM
Daniel Moya - PORTLAND	I do not support rate increases. Our electricity rates are already some of the highest in the nation. If more money is needed they should get rid of some executives or take a hit in their profits. Having to continually fund increasing profits is unacceptable! - 3/2/2024 10:48:28 AM
Turd Ferguson - PORTLAND	These rate hikes are out of control. They are just doing it to make back the money that they will have to pay in fines for mismanaging their infrastructure, it's time for it to become a PUC, like in Vancouver WA. - 3/2/2024 10:57:59 AM
Grey Osten - PORTLAND	Writing to oppose the Portland General Electric's proposed rate hikes. With no choice of electric companies and no wage increases to ease the burden the pricing changes level the entire burden on already strapped residents. When will it stop? - 3/2/2024 11:00:16 AM

Name/Location	UE 435 Public Comments
- PORTLAND	Can the state of Oregon just buyout the public utilities and we can have it run that way? Seems like right now the utility companies aren't benefiting anybody but their shareholders. - 3/2/2024 11:02:07 AM
Cooper Schulze - TIGARD	I step up disagree with the rate hikes. The rates should not be increased because it has been increased almost 40% in the last 10 years! How is a family suppose to be comfortable in their home worried if they're about to blow their budget just keeping warm. Needing money for the future for batteries? TAKE THEM FROM THE PGE PROFITS. - 3/2/2024 11:02:31 AM
Ryan Dornfeld - PORTLAND	PGE are profiteering and price gouging customers. - 3/2/2024 11:04:23 AM
Elizabeth M Locke - PORTLAND	We are already on a limited income and we cannot have higher rates on our electric bill. It's bad enough our property taxes are high. Plus we shouldn't be on a fixed payment plan where we use less electricity and still have to pay more. - 3/2/2024 11:16:28 AM
Ryan Mooney - PORTLAND	PGE should not be able to request a rate hike after making such a historically high rate hike last year. Their CEO compensation is far too high for them to continue raising rates on their customers. Shame on you all if you let this needless greed go unchecked - 3/2/2024 11:19:36 AM
Thaddeus Durfee - PORTLAND	This company is using inflated executive pay (increase of 2023 equal to losses reported the previous year), continuing increasing dividends to multinational investors all while stating they are unable to afford the system updates long past due for modernizing our grid. this is clearly a money racket and not a service or utility. After acceptance of ppp loans, on top of build it back better funds, and reallocation of state funding to protect and update outdated hardware PGE went on to use those funds for anything but all while increasing service charge for their own failures to maintain the system as contracted by the public. I vehemently oppose all increases and demand we investigate pge for their complicity in our on going seasonal wild fires, as well as remove the monopolistic practices by either forced split or divestments from PGE in favor of a PUD. - 3/2/2024 11:19:55 AM
Adam Gresham - FAIRVIEW	The new PGE rate hike is predatory at best. They continue to report record profits, quarter after quarter. Failing to invest in infrastructure improvements shouldn't be rewarded with more profit. - 3/2/2024 11:20:07 AM
Andrew Upton - PORTLAND	On the backs of multiple, substantial rate increases, now is not the right time for PGE to be making large capital investments that require additional rate increases. The kind of capital investments in UE 435 should be funded instead by a temporary bond, not a permanent rate increase. Battery technology is still improving dramatically, and PGE should pursue it. However, it should not be pursued if the only mechanism to support battery implementation in PGE's infrastructure is through a rate increase. - 3/2/2024 11:22:00 AM
Christopher Boyll - HILLSBORO	These rate hikes need to be investigated to the fullest extent. There is no way PGE cost has gone up almost 50% from 2022 to 2025 while maintaining high corporate profits. - 3/2/2024 11:22:55 AM

Name/Location	UE 435 Public Comments
Robert Richards - BEAVERTON	I am disappointed to hear of PGE request to change rates. While I sympathize with the challenges that our country has faced due to inflation, I cannot believe that this change is warranted. We are seeing record numbers of solar installations, with lower costs, longer life of cells, and ultimately a cheaper KWH/hr cost than more traditional sources such as coal or natural gas. Where is PGE spending this additional money and what oversight do we have of this privatized monopoly? Where do we see these funds going and how is PGE a justified as the single source supplier for these changes? This little oversight is not tolerated in the defense industry or other government contracts; why is it allowed here? PGE should have to provide a bid to keep their contract with us, and it should be open to a competitive bid process. We should not be held to whims of this monopoly, they should provide value to us, they should be competing to lower rates compared to what others would offer. - 3/2/2024 11:23:28 AM
Julie Ramos - PORTLAND	Enough already. This would be the third rate hike in three years. Three years ago my rates varied from \$30-\$125, currently \$60-\$175, and now they want another request. As a retired person living on fixed income and my whole house dependent on electricity, I can't afford this continued increases. My income is a few hundred dollars over the eligibility requirements for financial assistance. Here in Portland all utilities increased - garbage, water, electricity. The CEO of PGE makes \$51.2 million/year yet they keep raising the rates. Perhaps instead of increasing the rates they should decrease her salary. I can not believe that this greed and excess is allowed while the public has to bear the brunt of improvement and stabilization of services. This is criminal. - 3/2/2024 11:29:55 AM
Dominic Mcloughlin - MULTNOMAH	How can PGE be allowed to raise rates every year with no compromise? It's not like I can change my energy supplier. How is this not regulated? - 3/2/2024 11:33:21 AM
Mark Papworth - GRESHAM	PGE just got an unconscionable 20% rate increase. Why are we even considering another huge increase? One more 20% increase will leave people homeless. Absolutely no. - 3/2/2024 11:33:49 AM
Angela Zehava - PORTLAND	NO rate hikes. We are already dealing with price gouging by corporations. We will not tolerate price gouging by our local utility. PUBLIC POWER!! - 3/2/2024 11:41:16 AM
- BEAVERTON	Another PGE rate hike in 2025, on top of a HUGE rate hike in 2024 and previous rate hikes in 2023 and 2022, would make our electricity rates 42% more than they were just 3 years ago. That's unconscionable. Our income has not gone up in that time. Inflation is high, but it's not 42% in 3 years high. And I have zero choice as a consumer but to pay these rates. PGE is a monopoly, and if the PUC is doing its job it would be looking out for consumers. Right now, it's letting PGE run wild with rate increases for superfluous improvements. The battery upgrades are not necessary at this point in time. Give consumers a year break. I strongly oppose this rate increase. - 3/2/2024 11:42:26 AM
Angela Zehava - PORTLAND	NO rate hikes. We are already dealing with price gouging by corporations. We will not tolerate price gouging by our local utility. PUBLIC POWER!! - 3/2/2024 11:43:59 AM

Name/Location	UE 435 Public Comments
Tom Odgers - PORTLAND	Dear Oregon Public Utility Commission, I am writing to express my profound concern and dissatisfaction regarding the recent announcement of rate increases by Portland General Electric (PGE). As a resident of Portland, living at 3324 SW Fairmount Blvd, Portland, I have been a loyal customer of PGE, relying on their services for my daily needs. It has come to my attention that PGE plans to increase their pricing rates. This decision is particularly disheartening because it seems to disregard the current economic challenges faced by many Oregonians, myself included. The lack of significant infrastructure improvements or movements to justify such an increase adds to my frustration. Moreover, despite these proposed rate hikes, I, along with other residents, continue to experience frequent power outages, which further questions the rationale behind increasing the financial burden on consumers. The absence of tangible enhancements in service delivery and infrastructure, coupled with the continuous inconvenience of power disruptions, raises concerns about the justification for this rate adjustment. It is crucial for utility providers like PGE to ensure that any increase in rates is matched with proportional improvements in service quality, reliability, and customer satisfaction. Therefore, I urge the Oregon Public Utility Commission to thoroughly review PGE's proposal for rate increases. It is essential to ensure that any adjustments are reasonable, justified by concrete improvements, and considerate of the economic impact on Oregon residents. I look forward to your response and hope for a favorable review of this matter. Please consider the implications of these rate increases on consumers like myself, who depend on PGE for essential services but are left questioning the value and reliability of these services in light of recent developments. Thank you for your attention to this matter and for advocating on behalf of Oregon's utility consumers. - 3/2/2024 11:53:19 AM
Emily Garcia - PORTLAND	Burdening residential consumers with the cost of PGE's investments is unjustified. Rates were just raised an unreasonable amount this past January. Many Portlanders who don't qualify for PGE's financial assistance are struggling to pay bills. - 3/2/2024 11:54:39 AM
NA - PORTLAND	These price hikes for electric are criminal and need to be regulated - 3/2/2024 11:58:45 AM
NA - PORTLAND	PGE rates are already high enough to be a cost burden to many people, especially as climate change advances and causes more severe weather with potentially fatal temperatures in both summer and winter. Affordable heat and cooling must be viewed as a human right and raising rates more will force many to choose between heat exhaustion, freezing and other necessities such as food. - 3/2/2024 12:03:13 PM

Name/Location	UE 435 Public Comments
Daniel Miller - PORTLAND	<p>Regarding HB 2021: Hopefully by now it has been heard by someone of the PUC that the PGE rate hikes have been severely impacting Oregonians. This coupled with sensational headlines of heads of PGE receiving year-over-year bonus increases in the millions, totally unjustified in the wake of extreme rate hikes. The gall of those so greedy and of those who rubber-stamp such moves is appalling. But here we are, paying so much more with even greater hikes being threatened. Looking at the bill, there's one portion I want to bring attention to, a portion which seems to run against these rate hikes: "decarbonize their retail electricity sales by 2040 with consideration for benefits to local communities." Understanding what "consideration" means here, clearly that's to refer to the near-future benefits of being carbon-free; what is not being understood or interpreted is "consideration for the benefit of local communities" NOW. To approve a private monopoly outrages pay increase while the impose outrages fee hikes is NOT "consideration for benefits of local communities," it's TOTAL DISREGARD of the benefit of local communities. To sign off on rate hikes and CEO payouts is an abdication of any duty the PUC may have been heated in Relieve the tax payers and utility-paying members of communities you claim to represent. Make the greedy heads of PGE return their bonuses and investbthosebfunds in infrastructure. Stop increasing rates while increasing payouts. This comment will hopefully find at least one sympathetic ear, though probably unlikely considering the callous actions of the PUC. No accountability and everyone lining their pockets. - 3/2/2024 12:11:32 PM</p>
Evan Schaye - PORTLAND	<p>Please do not let PGE raise rates again. I'm already paying out my nose to try and raise my kids in the city I grew up in. Another rate hike is going to push a lot of people out or into poverty. Plus, Maria Pope makes \$6m/year. Ask her to take a pay cut first. - 3/2/2024 12:19:37 PM</p>
Christopher Faux - PORTLAND	<p>The price gouging from PGE is so severe. Oregonians cannot keep up with this terrible company. We need to stop privatizing utilities to millionaire CEOs! - 3/2/2024 12:21:39 PM</p>
Kristen Reach - WEST SALEM	<p>Please do not permit PGE to raise our rates again. We cannot afford it. Its emotionally and financially difficult. We are angry and tired. Many PGE customers are low income or are not able to get help because our wages are just over what is allowed for financial help. We can't keep doing this. Stop pay raises and bonuses and lower salaries. No wasting money! - 3/2/2024 12:44:44 PM</p>

Name/Location	UE 435 Public Comments
Melinda Hasting Baker - PORTLAND	I am writing to express opposition to the aggressive rate increases by Portland General Electric. I am a Portland resident (address redacted) and a PGE customer. We have no choice in providers, or vote in rate increases. PGE's commitment to improve existing infrastructure and rectify regular outages is profoundly underwhelming. If PGE's claim that the legislature, via HB 2021, has literally forced them to raise rates more than 40% since 2020, then please publicly let us all know so we can direct outrage in that direction, too. I hope the Commission can scrutinize PGE's compensation structure for executives and shareholders, particularly during a time when everyday people are trying to bounce back economically from the pandemic. Thanks for your service to the community, and I hope you will think of the consumers as you deliberate PGE's proposal. - 3/2/2024 12:52:20 PM
Terry Maloney - PORTLAND	Don't you dare let PGE raise rates again! They are making record profits and asking for another raise. No rate increase for 2025. Every penny of their increase in profit is taken directly from our pockets. You are either corrupt or inept at doing your job. 41% increase in 4 years? Who is lining your pockets? - 3/2/2024 12:54:07 PM
Stella Garza - BEAVERTON	The 17% PGE rate hike this year has been hitting us hard. PGE has proposed ANOTHER rate hike for 2025 (3rd year in a row?!) Please, we don't have choices and are at your mercy. We can't afford another rate hike. Please do not approve PGEs request for another rate hike. We need time to financially adjust. Michael Goodman - PORTLAND	<p>Subject: Concerns Regarding Portland General Electric's Rate Increases To the Oregon Public Utility Commission, I am writing to express my deep concern and dissatisfaction regarding Portland General Electric's recent announcement of rate hikes. As a loyal PGE customer residing in Portland, I rely on their services for my daily needs. The proposed rate increases are troubling, especially considering the economic challenges faced by many Oregonians, myself included. The lack of evident infrastructure improvements and ongoing power outages without justification intensify my frustration. The absence of substantial service enhancements and persistent power disruptions raise questions about the rationale behind this rate adjustment. It is crucial for PGE to justify any rate increase with improvements in service quality, reliability, and customer satisfaction. I urge the Oregon Public Utility Commission to thoroughly review PGE's rate increase proposal, ensuring it is reasonable, justified, and considerate of the economic impact on Oregon residents. Your attention to this matter is vital in protecting consumers who rely on PGE for essential services. I anticipate your response and hope for a favorable resolution in favor of Oregon's utility consumers. Thank you for your advocacy on our behalf. Sincerely, Michael - 3/2/2024 1:44:06 PM</p>
Melody Macready - PORTLAND	<p>Rate proposals when wages simply cannot keep up with the rate of inflation are unconscionable. PGE has already raised rates far beyond what is reasonable for anyone below the median household income for Portland proper, let alone those in struggling rural communities. We are already paying sky high rates for property taxes and other utilities. To raise rates at this time will force those barely scraping by to forego basics such as food and medical care, as many are already doing. Many seniors on fixed incomes as well as people with disabilities and other marginalized communities will be hit hardest by this. How can this be justified? If the infrastructure is aging or the renewable energy is not meeting the demand, that is on the company itself to rectify by cutting into their own profit margins. Poor planning and mismanagement should not be passed on to consumers. The rates are already exorbitant AS IS. Please advocate for working class Oregonians by saying no to this rate hike. - 3/2/2024 1:48:26 PM</p>
NA - HILLSBORO	<p>PLEASE DO NOT APPROVE ANOTHER RATE INCREASE FOR PGE!!!! These rate increases are hurting lower and middle income families!!!! Food, rent increases and now utilities are going to put more people in danger of losing basic needs!!!! - 3/2/2024 1:53:10 PM</p>
Larry Rehm - PORTLAND	<p>How is it that PGE had their net profit margin up by 26% last year, yet the public is responsible to pay, with yet another rate hike, for so-called improvements to their infrastructure? How are they not a monopoly? What options do we as Portlanders have to shop for alternate services? If nothing is done to curtail their greed to raise investor profits, it will continue to happen and more and more Portlanders will struggle to cover what is a necessary utility. - 3/2/2024 2:21:03 PM</p>

Name/Location	UE 435 Public Comments
Tyler Dellasega - PORTLAND	The fact that we still are paying a monopolized, private company for electricity in one of the bluest cities in one of the bluest states and in 2024 is insane. Abolish PGE and turn it into a public utility. As we just saw with the snow and ice, people cannot live for days or weeks without power. Putting the control of electricity in the hands of a for-profit company instead of the public (like water etc) only allows them to increase the price multiple times, slows response and coordination, and reduces accountability. - 3/2/2024 2:43:32 PM
Dan Lappin - BEAVERTON	Please do your job and prevent PGE further increasing their already-outrageously high electric prices. If their proposed 2025 increase of 7.5% goes through, that will mean an increase of around 40% since 2020. The people are no longer buying the tired excuses (COVID, Ukraine war etc.) when corporate profits and shareholder dividends continue to prosper. Do the right thing and regulate any further increases. - 3/2/2024 2:55:00 PM
Maryam Hoffmann - PORTLAND	Thanks for this! I wrote: I am writing to express opposition to the aggressive rate increases by Portland General Electric. I am a Portland resident (address redacted) and a PGE customer. We have no choice in providers or vote in rate increases. PGE's commitment to improve existing infrastructure and rectify regular outages is profoundly underwhelming. If PGE's claim that the legislature, via HB 2021, has literally forced them to raise rates more than 40% since 2020, then please publicly let us all know so we can direct outrage in that direction, too. I hope the Commission can scrutinize PGE's compensation structure for executives and shareholders, particularly during a time when everyday people are trying to bounce back economically from the pandemic. Thanks for your service to the community, and I hope you will think of the consumers as you deliberate PGE's proposal. - 3/2/2024 3:35:20 PM
Terri Nelson - PORTLAND	I would like to request an investigation to find out whether the proposed rate hike is proportional to PGE's infrastructure costs. Further, I believe this is a permanent hike in rates, and although this increase is ostensibly to pay for batteries to comply with HB 2021, I think that HB 2021 required any hikes to be temporary. - 3/2/2024 4:02:30 PM
Liam Compton - LAKE OSWEGO	I strongly disagree with PGE rate hike. We have been getting rates hikes every year for no discernible improvement in service. I live in lake Oswego and the storm we had seemingly caught PGE off guard despite the crazy amounts of warning. I'm not saying that they are responsible for a weather event but it is literally their sole job to keep the power on and we already got a rate increase at the beginning of this year. They are proposing that they're going to be using this money for batteries, but I really don't have much faith in PGE at this point. We really should not allow this corporation to squeeze money out of the pockets of the people. I understand they have programs for people living in low income situations and that's great but it doesn't really affect that many people in the grand scheme of things. What we need to do right now is either look for ways to transition PGE into being a public utility or we need to find ways to keep the cost of electricity down as it really feels like we are just being squeezed dry for the sake of lining some pockets. - 3/2/2024 4:03:18 PM

It has come to my attention that PGE plans to increase their pricing rates. This decision is particularly disheartening because it seems to disregard the current economic challenges faced by many Oregonians, myself included. The lack of significant infrastructure improvements or movements to justify such an increase adds to my frustration. Moreover, despite these proposed rate hikes, I, along with other residents, continue to experience frequent power outages, which further questions the rationale behind increasing the financial burden on consumers. The absence of tangible enhancements in service delivery and infrastructure, coupled with the continuous inconvenience of power disruptions, raises concerns about the justification for this rate adjustment. It is crucial for utility providers like PGE to ensure that any increase in rates is matched with proportional improvements in service quality, reliability, and customer satisfaction. Lastly, consumers of essential utilities generally do not have a choice of provider. Unfortunately, I do not have the option to choose a different provider of electric services and "vote with my dollars" like I do with literally every other service I use. It is vital that any increase in rates be carefully reviewed to ensure that it's fair to consumers and does not impact consumers negatively without any benefits. Therefore, I urge the Oregon Public Utility Commission to thoroughly review PGE's proposal for rate increases. It is essential to ensure that any adjustments are reasonable, justified by concrete improvements, and considerate of the economic impact on Oregon residents. I look forward to your response and hope for a favorable review of this matter. Please consider the implications of these rate increases on consumers like myself, who depend on PGE for essential services but are left questioning the value and reliability of these services in light of recent developments. Thank you for your attention to this matter and for advocating on behalf of Oregon's utility consumers. - 3/2/2024 4:28:43 PM</p>
NA - PORTLAND	<p>PGE rate hikes are unreasonable and put too much of a burden on the public, who have no choice about this monopoly. - 3/2/2024 5:10:21 PM</p>
A P - TIGARD	<p>Please say no to PGE's latest rate hike request. Enough is enough. If you never say "no" or deny their requests then why even exist as an oversight entity? PGE will not suffer nor go away if you deny them their increase so it begs the question of why would you? Thank you. - 3/2/2024 5:21:28 PM</p>
Adrienne B - LAKE OSWEGO	<p>This proposed rate increase my PGE is absolutely outrageous. We are already paying some of the highest utility bills in the country, and the fact that PGE wants to institute such a high rate increase is absurd. They feel more and more like a monopoly and the people of Portland have had enough. Why would we want to continue paying these fees and we're still dealing with the power outages caused by storms? - 3/2/2024 5:35:21 PM</p>

Joseph Kirk - PORTLAND	<p>I find it distressing that such increases are being proposed, particularly considering the economic challenges faced by many individuals and families in our city. It is evident that these rate hikes will place a significant burden on a large portion of Portland's population, especially those who already struggle to make ends meet on modest incomes. Many hardworking individuals in our community barely earn a decent wage and find it increasingly difficult to afford basic necessities, let alone the additional financial strain that higher utility bills will bring. For countless Portlanders, affordable housing is already a pressing issue, with rent prices continuously rising beyond the reach of many. Adding further financial pressure through increased utility costs will only exacerbate the situation, forcing individuals and families to make impossible choices between paying for essential services like electricity and meeting other critical needs such as housing, food, and healthcare. Moreover, these rate hikes disproportionately affect vulnerable populations, including low-income households, seniors, and individuals with disabilities who are already marginalized in our society. It is imperative that any decisions regarding rate increases take into account the broader socioeconomic impact on the most vulnerable members of our community. As a responsible and community-minded utility provider, Portland General Electric has a duty to consider the well-being of all its customers, especially those who are most financially vulnerable. I urge you to reevaluate the proposed rate hikes and explore alternative solutions that prioritize affordability and equity. This may include seeking efficiencies within the company's operations, exploring renewable energy options, and advocating for policies that support fair utility pricing for all. Failure to do so will only deepen the economic hardships faced by many in our city and undermine the principles of community solidarity that we hold dear. - 3/2/2024 5:50:06 PM</p>
Keith Aisner - TIGARD	<p>This is the wrong time for a rate hike. People are struggling already with inflated goods - 3/2/2024 5:55:46 PM</p>

Juan Villicana-Chavez - BEAVERTON	<p>Dear Oregon Public Utility Commission, I am writing to express my profound concern and dissatisfaction regarding the recent announcement of rate increases by Portland General Electric (PGE). As a resident of Portland, living at [insert your address], I have been a loyal customer of PGE, relying on their services for my daily needs. It has come to my attention that PGE plans to increase their pricing rates. This decision is particularly disheartening because it seems to disregard the current economic challenges faced by many Oregonians, myself included. The lack of significant infrastructure improvements or movements to justify such an increase adds to my frustration. Moreover, despite these proposed rate hikes, I, along with other residents, continue to experience frequent power outages, which further questions the rationale behind increasing the financial burden on consumers. The absence of tangible enhancements in service delivery and infrastructure, coupled with the continuous inconvenience of power disruptions, raises concerns about the justification for this rate adjustment. It is crucial for utility providers like PGE to ensure that any increase in rates is matched with proportional improvements in service quality, reliability, and customer satisfaction. Therefore, I urge the Oregon Public Utility Commission to thoroughly review PGE's proposal for rate increases. It is essential to ensure that any adjustments are reasonable, justified by concrete improvements, and considerate of the economic impact on Oregon residents. I look forward to your response and hope for a favorable review of this matter. Please consider the implications of these rate increases on consumers like myself, who depend on PGE for essential services but are left questioning the value and reliability of these services in light of recent developments. Thank you for your attention to this matter and for advocating on behalf of Oregon's utility consumers. - 3/2/2024 6:46:56 PM</p>
Michelle Melgard - PORTLAND	<p>I oppose this docket because the price increases burden me to the extent of hardship. I qualify for a reduced rate but cannot afford to turn my heat on. I can barely afford the minimum amount for lighting and live in conditions where my residence is below 60 degrees. I work in the legal field and my partner for the federal government and we both have degrees and cannot afford it now. Shame on PGE - 3/2/2024 6:56:53 PM</p>

Grey Dodds - PORTLAND	<p>It is infuriating to see the greed on display by PGE with another request for a rate increase after the last two years. They are more profitable than ever and we already have unusually expensive power and water costs in this area compared to much of the rest of the country, the vast majority of which are not consumption-based but high base fees. I will have zero faith in OPUC as a regulator if this continues. This should be the easiest denial decision in a very long time. Time to prove if you serve the public, or just rubberstamp what public utilities ask for. - 3/2/2024 8:07:37 PM</p>
Jared Swingle - OREGON CITY	<p>I'm concerned about the steep rate increase which no discernible improvement to warrant the increase. I believe they were sued a few years back for the devastation they caused with the forest fires. They were punished and it really feels like we lost a second time as consumers now that they are taking more of our money as a result. Please help! - 3/2/2024 8:21:54 PM</p>

Name/Location	UE 435 Public Comments
Chris Gifford - RHODODENDRON	Why would we approve PGE rate increases when they are making profits in the billions? They donate millions of dollars, for added tax write offs. They have raised their stock dividends every year for the past ten years. Why did we ever privatize our power supply? The CEO Maria Pope total compensation for 2023 reported at 6.3 million. All of the executives make well over a million dollars per year. - 3/2/2024 8:27:04 PM
Brian Campagna - PORTLAND	For a "for profit" corporation, PGE certainly seems to be making enough money to avoid rate hikes. Please stop PGE from making excessive profits from the customers. I know what regulatory capture is, and this seems to be the case. - 3/2/2024 9:27:40 PM
Jesse Lawrence - GRESHAM	Dear Oregon Public Utility Commission, I am writing to express my profound concern and dissatisfaction regarding the recent announcement of rate increases by Portland General Electric (PGE). As a resident of the greater Portland area, living in Gresham, I have been a customer of PGE for years, relying on their services for my daily needs. It has come to my attention that PGE wanting another price rate increase . This decision is particularly disheartening because it seems to disregard the current economic challenges faced by many Oregonians and this news comes immediately after a recent rate increase. The lack of significant infrastructure improvements or movements to justify such an increase adds to my frustration given the recent problems we've already dealt with. Moreover, despite these proposed rate hikes, I, along with other residents, continue to experience frequent power outages which further questions the rationale behind increasing the financial burden on consumers. The absence of tangible enhancements in service delivery and infrastructure coupled with the continuous inconvenience of power disruptions raises concerns about the justification for this rate adjustment. It is crucial for utility providers like PGE to ensure that any increase in rates is matched with proportional improvements in service quality, reliability, and customer satisfaction. That said, I urge the Oregon Public Utility Commission to thoroughly review PGE's proposal for rate increases. It is essential to ensure that any adjustments are reasonable, justified by concrete improvements, and considerate of the economic impact on Oregon residents. Doubly so as we as consumers lack much choice in who supplies our energy needs. I look forward to your response and hope for a favorable review of this matter. Please consider the implications of these rate increases on consumers like myself, who depend on PGE for essential services but are left questioning the value and reliability of these services in light of recent developments. Thank you for your attention to this matter and for advocating on behalf of Oregon's utility consumers. - 3/2/2024 9:38:02 PM

Heather Lagaso - GERVAIS	<p>Subject: Urgent Concerns Regarding Portland General Electric Rate Increases</p> <p>Dear Oregon Public Utility Commission, I am writing to express my deep concern and dissatisfaction with the recent announcement of rate hikes by Portland General Electric (PGE). As a resident of Portland at [insert your address], I have been a loyal PGE customer, relying on their services for my daily needs. The decision to increase pricing rates, especially by over 40% since 2021, is particularly disheartening, overlooking the economic challenges faced by many Oregonians, including myself. This significant surge is especially devastating for families already struggling to meet basic needs such as rent, food, and medical costs. Adding to my frustration is the apparent lack of substantial infrastructure improvements or justifications for such an increase. Despite these proposed rate hikes, residents, myself included, continue to endure frequent power outages, raising questions about the rationale behind imposing a heavier financial burden on consumers without tangible service enhancements. The absence of evident improvements in service delivery and infrastructure, combined with persistent power disruptions, heightens concerns about the justification for this rate adjustment. It is imperative for utility providers like PGE to ensure that any rise in rates corresponds with substantial improvements in service quality, reliability, and overall customer satisfaction. Therefore, I urgently appeal to the Oregon Public Utility Commission to thoroughly scrutinize PGE's proposal for rate increases. It is crucial to ensure that any adjustments are reasonable, grounded in concrete improvements, and considerate of the economic strain on Oregon residents. I anticipate your prompt attention to this matter and hope for a comprehensive review of the implications of these rate increases, especially for consumers like myself, who rely on PGE for essential services. Your commitment to advocating for Oregon's utility consumers is highly appreciated. Thank you for your consideration and efforts in addressing this pressing issue. - 3/2/2024 9:41:28 PM</p>
Syd A - PORTLAND	<p>We cannot afford another rate hike. We are struggling to make ends meet. - 3/2/2024 10:11:49 PM</p>

Jennifer Dequattro - FOREST GROVE	As a residential customer in Gales Creek (Washington County) I submit my vehement opposition to PGE's requested rate increases - both realized in 2024 and requested again for 2025. My primary opposition is due to the level of rate increase foisted onto individual customers in comparison to the main utility users, large corporate industrial customers. This, and the condescending and idiotic recommendations to those of us carrying the burden, to turn off our lights and unplug our devices when not in use, as if that's going to make a \$40-\$100 difference in our bills and our environment. Can we all do something to conserve energy? OF COURSE, and everyone one of us should. And yet when we do our part, as residential customers living on single or maybe double salaries that are documented to have less buying power now than in the past, and still get increasing rates and we're told it's our fault, it's insulting beyond measure and creates distrust and bad blood. - 3/3/2024 10:43:07 AM
Alison Stump - PORTLAND	I am a resident of SE Portland. My heat is electric, my stove is electric, I am a senior software engineer and so rely on electricity to do my job from my house. I can not install solar panels without cutting down a large old tree. PGE is a monopoly and I have no choice but to rely on them for electricity. They regularly raise rates while providing the same or worse service. For the month of January I was out of my house and the heat to the house was off due to a broken furnace. My house is 1200sqft. My bill was still \$150. The public utility commission has to do something. Oregonians deserve public utilities at a fair price not supporting private corporations who are only beholden to their share holders. - 3/3/2024 11:25:49 AM

Jason Keyes - PORTLAND	<p>The PGE rate hikes in Oregon are untenable. It's a LOT. Average citizens are having trouble paying for necessities. It's 34 degrees out, currently. It's assisting in killing the middle class. - 3/3/2024 12:58:32 PM</p>
Alea Martinez - HILLSBORO	<p>DO NOT ALLOW PGE TO RAISE THEIR PRICES!! We cannot afford it already - 3/3/2024 1:39:03 PM</p>
Loren Behrman - BANKS	<p>PGE hasn't focused on needed upgrades in the past ignoring infrastructure and finding expensive pet projects. Now with the last few increases power is unaffordable to many, and by their intent it is to make PGE and its investors happy. I am not allowed to choose my power company, I am not allowed to make my choice with my dollar to help PGE improve itself in any way, I have no say in the management of a private company that overpays its employees, and ignores needed public safety and infrastructure. Now they want us to take another 7% of our income and dedicate it to them.....no thanks! Spend what you already make on needed infrastructure improvements and safety upgrades and stop pissing more money away for pet projects that sound "green". Have them start proving that they want to be a power supplier that understands basic economics. - 3/3/2024 2:49:36 PM</p>

Name/Location	UE 435 Public Comments
Jess Vestrit - PORTLAND	If PGE is hurting for money for their green energy plan, they can take it out of their CEO's salary and shareholder profit instead of making people freeze in literal state of emergency disaster weather. Raising prices year after year for a necessary service while making money hand over fist is disgusting and unconscionable. - 3/3/2024 3:36:23 PM
Grace Alston - PORTLAND	This rate hike will make electricity unaffordable, full-stop, for low-income people. Electricity must not become a luxury. We, as consumers, should not be price gouged in the name of grid improvements. I'm not convinced this rate won't go towards stock PGE buy-backs, executive bonuses, or shareholder dividends. - 3/3/2024 4:02:19 PM
Kelly La Croix - PORTLAND	Re: The proposed 2025 Portland General Electric rate hike: Sections 10 and 11 of HB 2021 state a rate hike must be proportional to increased infrastructure costs and that an investigation can be done to ensure this. I am writing as an affected party - a resident of Portland living at 5028 SE 86th Avenue, Portland, OR 97266 - of the proposed rate hike to ask that an investigation be done and that any rate hike be temporary to pay off the cost of said infrastructure implementation. Please consider the implications of these rate increases on consumers like myself, who depend on PGE for essential services but are absorbing financial losses in rent/mortgage, gas, groceries, and other inflation-related burdens at alarming rates. - 3/3/2024 8:14:48 PM
Alex Dawson - MERLIN	Opposing PGE rate hikes: Please stop trying to raise rates for what should be a free, public utility. We have had free energy tech since the 1800s. We've been scammed by this for far too long and we aren't going to tolerate it much longer. If we want to really be green, how about pushing for the free energy to be rolled out? Then we all prosper and you can go on to creating a business 10X larger that would yield far more profit without polluting the entire world. For those who don't know, there is an active working tesla coil between Dallas and Austin, TX. It is in the open and visible from the highway. A lot of people are pushing for free energy to be rolled out, for free, around the planet now. The US military has been using it for some time now. Please use your station to really think about return on investment. You don't want to be the last person to make an 8-track or a buggy whip or to support the enslavement and pollution of this planet, when beautiful clean options already exist. Be forward thinking. We don't need more operational finance, we need a new paradigm entirely. - 3/4/2024 6:01:22 AM
Steve Lattanzi - MILWAUKIE	I feels this is difficult for customers with the last 17% and now another 7% after that is very concerning. Please do not approve another rate increase. I am pleading with the commission to not let it pass! - 3/4/2024 9:16:32 AM
Cameron Van Sant - PORTLAND	Please do not increase rates. I think the historic rate jump here in 2024 is big enough that one next year isn't warranted. So many people right now are struggling to pay groceries and rent, this is not the time for a second big price increase. - 3/4/2024 9:19:14 AM
Carl Marshall - PORTLAND	I just want to let you know that my family thinks that PGE's recent rate increase is far too much and will adversely affect our already tight home budget. - 3/4/2024 9:34:30 AM

Name/Location	UE 435 Public Comments
Eric Hayward - BEAVERTON	PGE just raised rates this past year significantly, an additional rate increase is not sustainable for customers forced to utilize a utility company they have no choice over. - 3/4/2024 9:53:15 AM
Tyler Vranizan - PORTLAND	I am a customer of PGE and I consider this to be price gouging. It appears to be a reflection of greed rather than need. The public should not support the burden of excessive executive/administrative salaries. Nor pay for the corporate legal struggles this private corporation has brought on itself. Anything done directly on behalf of shareholders/executives should not land on the public who rely on this monopoly. - 3/4/2024 11:18:19 AM

Ross A Chase - PORTLAND	Please help the people of Oregon rate hikes people can't afford pge gets the water for electricity for free dams are paid for and shareholders get paid and we pay more billions in profit and they need more if the state was doing good okay but this state needs help and quick question did pge ever ship the fuel rods from trojan up river to hanford maybe the people of oregon need help please listen thank you very much, - 3/4/2024 12:50:08 PM

Name/Location	UE 435 Public Comments
Philip Munson - BEAVERTON	<p>I am a customer of PGE since I moved to Oregon in 2011. In 2017, I joined the Time-of-Use plan with PGE to maximize my solar panel savings, reduce overall electricity costs (especially due to EV charging), and reduce the impact to the grid. For 2024, I have been hit disproportionately hard by the increase of PGE's rates. And this continues even more into 2025. Although this affects only ~1% of PGE customers, we are the ones that are doing more than anyone else to reduce the impact to the grid during peak times. During such times, PGE is needing to buy much more expensive electricity. With our efforts to shift our usage to mid or off-peak, we are not only improving the grid performance, but also allowing PGE to save significant amounts of money. For my data, I present my general usage of energy by peak times over 2023 and show the impact of PGE's rate increases. My off-peak usage accounts for 74%, mid-peak 13% and on-peak 13% with a total usage of 9362kWh. * With 2024 rate increases for Time of Use, this nets a 37% increase for off-peak, 27% increase for mid-peak and a 26% increase for on-peak. This is a net of 34% energy cost increase. * In 2024, PGE also announced a new Time of Day plan to replace Time of Use and Time of Use will expire by the end of 2024. On this new Time of Day plan in 2024, my rates vs 2023 would net a 123% increase for off-peak, 5% reduction for mid-peak, and an 88% increase of on-peak. This is a net increase of 101%. That means my costs will have doubled! Who approved this?? * Time of Day 2024 compared to 2024 Time of Use rates, this is a 63% increase for off-peak, 25% reduction for mid-peak, and 48% increase for on-peak with a net increase of 49%. * For 2025 suggested Time of Day rates, this becomes even more disproportionately high for off-peak usage. Compare to 2023 Time of Use rates, this will be an increase of 190% for off-peak, 3% for mid-peak, and 87% for on-peak. For a net increase of 152%! * 2025 Time of Day compared to 2024 Time of Use sees a 112% increase for off-peak, 19% reduction in mid-peak and a 48% increase for on-peak, for a net increase of 86%. * 2025 Time of Day compared to 2024 Time of Day sees a 30% increase for off-peak, 8% increase in mid-peak, and a 0% increase for on-peak, for a net increase of 23%. As you can see, because of my high off-peak usage, I am hit disproportionately hard by their rate changes. And the purpose of these plans are to move customers away from mid and on-peak towards off-peak. It is easiest enough to say that "overall, customers will only see an increase of 7.4%", but the 1% of customers that are doing their part are getting overlooked and their rates are increasing by an inordinate amount. Please do something about this. PGE should not be allowed to increase these rates so significantly. Also, if PGE wants to increase the number of customers that will help with grid reliance and saving costs during peak times, they need to provide a more reasonable rates for customers on Time of Use and Time of Day. In addition, EV charging is becoming more popular and will have a bigger impact to the grid. If PGE and Oregon want to support more EV vehicles and EV charging at home, then they need to look closely at these rates that are attempting to shift usage away from peak times. With rates as high as they will be for 2025, there will be very little incentive for customers to stay/join Time of Day rate plans. Not only is a strict schedule (and corresponding inconvenience) required to ensure you don't incur high costs during on-peak, there will always be energy usage during on-peak. No one can cut out 100% of their usage and shift everything to off-peak. - 3/4/2024 2:02:10 PM</p>

Justin Luther - PORTLAND	<p>Dear Oregon Public Utility Commission, I am writing to express my profound concern and dissatisfaction regarding the recent announcement of rate increases by Portland General Electric (PGE). As a resident of Portland, I have been a loyal customer of PGE, relying on their services for my daily needs. It has come to my attention that PGE plans to increase their pricing rates. This decision is particularly disheartening because it seems to disregard the current economic challenges faced by many Oregonians, myself included. The lack of significant infrastructure improvements or movements to justify such an increase adds to my frustration. Moreover, despite these proposed rate hikes, I, along with other residents, continue to experience frequent power outages, which further questions the rationale behind increasing the financial burden on consumers. The absence of tangible enhancements in service delivery and infrastructure, coupled with the continuous inconvenience of power disruptions, raises concerns about the justification for this rate adjustment. It is crucial for utility providers like PGE to ensure that any increase in rates is matched with proportional improvements in service quality, reliability, and customer satisfaction. Therefore, I urge the Oregon Public Utility Commission to thoroughly review PGE's proposal for rate increases. It is essential to ensure that any adjustments are reasonable, justified by concrete improvements, and considerate of the economic impact on Oregon residents. I look forward to your response and hope for a favorable review of this matter. Please consider the implications of these rate increases on consumers like myself, who depend on PGE for essential services but are left questioning the value and reliability of these services in light of recent developments. Thank you for your attention to this matter and for advocating on behalf of Oregon's utility consumers.</p> <p>- 3/4/2024 3:38:32 PM</p>
Sandy Pace - SALEM	<p>I would like to comment on the price increase. With PGE our only choice, we can't shop around for cheaper service. There are seniors only receiving 1000.00 a month to live on n barely hanging on. With top management making millions I am not sure they ca n relate. Also: I Do Not Like that I am asking for more taxes like the Public Purpose charge and low income charge. I agree the low income need it but' it used to be voluntary n all of a sudden it is on people bills. Many, myself included want to know how top management can make millions or close to it but you need to raise the rates to millions of people. - 3/4/2024 3:56:57 PM</p>

Tess Mccoskey - NEWBERG	<p>March 4, 2024 Re: Portland General Electric Rate Hike Increase for 2025 Dear Oregon Public Utilities Commission: As a senior citizen and Portland General Electric customer, I want to record my strong opposition to the proposed rate increase by Portland General Electric for 2025 for any amount. As you are aware, the following increases have already been approved for this utility: 8% in 2022 (34.4% + 8% = 42.4%) 9% in 2023 (25.4% + 9% = 34.4%) 18% in 2024 (7.4% + 18% = 25.4%) With the proposed increase of 7.4% in 2025, that will bring the total increase in our rate pricing to a whopping 42.4% at a time when there are exorbitant increases on everything from food, services, other goods, healthcare, utilities, etc. This unconscionable rate increase request tantamount to extortion and exorbitant give the last increase of 18% along with the most recent multiple rate increases. . The recent rate increases are devastating and doing immense damage to the current living standard and quality of life for all Oregonians not to mention seniors in general. I, along with my neighbors and friends here in Newberg and locally cannot comprehend the justification for the raising of the rates just shortly out of the crushing pandemic and while our inflation rates on everything are so very high. To top it off, Maria Pope, the CEO of Portland General Electric is recorded as receiving \$6,256,599 in total compensation in 2022, which I am certain is has vastly increased since that date. Instead of requesting more money, the company should be cutting back on their expenditures like their own pay increase, Green/Renewable Energy, and EV programs. I ask that you please reject Portland General Electric's request for the rate increase. Thank you for your attention to this matter. Sincerely, Tess McCoskey Newberg, OR - 3/4/2024 4:53:13 PM</p>
Seth Arnold - PORTLAND	<p>Hello, I'm writing about PGE's requests to raise their rates. I understand that their intention is to raise their profit margin to above nine percent. These kinds of profits feel incompatible with their storm response this year: - decisions to run power lines above ground rather than buried focused on short term profits at long term costs - their infrastructure for tracking which customers had service and which did not constantly failed, many people had to report their lost service many times - their communication was consistently poor and confusing I don't have an easy solution to suggest, but raising rates on consumers to pass along profit to owners and executives feels like the exact wrong direction. Raising rates to pay for necessary improvements would be far more palatable if the executives would receive the regional median salary and share buybacks or dividends require matching contributions to low income programs. - 3/4/2024 7:55:50 PM</p>
Jonathan Butter - SAMS VALLEY	<p>Citizens in Oregon can't afford the latest 17% PGE price hike. Please reduce rates and do not approve any further price hikes. People are barely getting by as it is, you are going to create more homeless. - 3/4/2024 9:09:11 PM</p>

Name/Location	UE 435 Public Comments
Ben S - PORTLAND	PGE Should not be allowed to set a target profit margin and then pass all additional costs off to consumers via rate increases. Unlike other businesses/industries, we do not have a choice in going to another Utility for power, and lowering our power consumption only goes so far. Market pressures do not work to motivate PGE to lower costs/rates, only the utility oversight can reign in their excessive rate hikes. These persistent rate hikes cannot be allowed to continue. The business must stomach the costs of operating and not treat rate-payers as a blank check. I strongly oppose allowing PGE to continue raising rates year after year! - 3/4/2024 9:49:13 PM
Kelly Smith - PORTLAND	Cap the rate hikes, this only hurts those most vulnerable and benefits very few. - 3/4/2024 10:41:24 PM
Clifford Spencer - COLTON	In 2022 PGE raised rates 3% In 2023 PGE raised rates 12% In 2024 PGE raised rates 18% Now they want ANOTHER 7.3% increase. I write to ask the PUC to say " N O " !! Let's put this in perspective...my Social Security went up this year 3.2%. IF I cannot afford "batteries" I do not buy them. Let PGE "tighten the budget" some, beginning with the absurdly high administrators' compensations. This is all about GREED, and more compensation for PGE investors. - 3/5/2024 12:56:59 AM

Name/Location	UE 435 Public Comments
Connie Brooks - PORTLAND	<p>PGE is asking for another rate hike. This is after they already got some hefty and ridiculous rate hikes the past three years. This is unsustainable. The last rate hike that went into effect this past January is on top of the incredibly generous one they received the year before from 21% to 18%. Yet they showed profits due to the rate hikes they levied on consumers. I would hope that the PUC will not grant any more rate hikes for the next three years. They need to tighten their belts and not worry about their investors and wasting money on projects that are money pits. We have weather events every year. They need to plan for them and put money aside for those winter storms. Asking for rate hikes is not the solution to a company that has proven it does not know how to budget and wastes money. A full audit needs to be enacted as to how every penny is spent. We, the customers, have to pinch our pennies, watch our budgets like hawks and hope we find additional work to pay the bills. PGE wasted money redesigning their residential customer bill statements. Why? The old format was much better than their new format. That was a complete waste of money Here's a news flash. I want to see the charges on the first page of the statement, not the backside of it. Also the layout of the new statement is harder to read. I hate their new statements. The old ones were easier to read and the charges were listed in a logical manner --- especially the totals for each category. Their new AI operated customer call center. What a travesty. If they wanted to anger customers, they succeeded. I dread calling that AI voice mail hell. That is not customer service. Mandy, the virtual assistant, is anything but helpful. How much money was wasted on that "upgrade"? Their system has hung up on me several times because, "that is not one of the options." The "Reach out and Touch someone" commercials from the past are a good reminder what we would really like to do with their new system. I would like to know how much money they wasted on that system. Now they are using the excuse because of the ice storm they need more money? Baloney. It means they are greedy, are wasteful and fiscally irresponsible. My paycheck has not gone up by double digits at all. They should have planned and had a fund set aside for emergencies and weather conditions. Here's a newsflash, we've had worse weather conditions in the past. They come every year. Some years are worse than others. They can't keep coming back for more rate hikes -- that's the easy way out instead of cleaning their house and tightening their belts. Perhaps they can cut out some of their pet projects, middle managers and decrease the pay of their directors, CEO, managers, etc. Fiscal responsibility is just lip service on their part. A lot of us are already hurting. Does PGE want us to shiver in the darkness? That's what our decision are right now. Do we turn on heat? Do we turn on lights? Where else can we cut expenses? That's what PGE needs to do too. Do they need all those consultants? Managers? CEO? Coordinators? Golden benefits? They can write grants to finance their pet projects. They wasted so much money on Mandy and in Mandy's words, here is my response to PGE's request for more money, "that is not one of the options." <Click> - 3/5/2024 2:01:35 AM</p>
Craig Doherty - PORTLAND	<p>Oregonians are already being priced out of their homes at record rates. My electric bill is now over \$200 a month after I replaced all my light bulbs with LED lights, I've better insulated my home, I've upgraded appliances to energy star products. I've used less energy now than ever before but the electric bill keeps going up. Stop rate increases. Keep people in their homes. - 3/5/2024 5:55:19 AM</p>

Chris Riddell - PORTLAND	<p>Dear Oregon Public Utility Commission, I am writing to express my profound concern and dissatisfaction regarding the recent announcement of rate increases by Portland General Electric (PGE). As a resident of Portland, living at 2114 SE Hemlock Ave, Portland, OR 97214, I have been a loyal customer of PGE, relying on their services for my daily needs. It has come to my attention that PGE plans to increase their pricing rates. This decision is particularly disheartening because it seems to disregard the current economic challenges faced by many Oregonians, myself included. The lack of significant infrastructure improvements or movements to justify such an increase adds to my frustration. Moreover, despite these proposed rate hikes, I, along with other residents, continue to experience frequent power outages, which further questions the rationale behind increasing the financial burden on consumers. The absence of tangible enhancements in service delivery and infrastructure, coupled with the continuous inconvenience of power disruptions, raises concerns about the justification for this rate adjustment. It is crucial for utility providers like PGE to ensure that any increase in rates is matched with proportional improvements in service quality, reliability, and customer satisfaction. Therefore, I urge the Oregon Public Utility Commission to thoroughly review PGE's proposal for rate increases. It is essential to ensure that any adjustments are reasonable, justified by concrete improvements, and considerate of the economic impact on Oregon residents. I look forward to your response and hope for a favorable review of this matter. Please consider the implications of these rate increases on consumers like myself, who depend on PGE for essential services but are left questioning the value and reliability of these services in light of recent developments. Thank you for your attention to this matter and for advocating on behalf of Oregon's utility consumers. - 3/5/2024 6:08:02 AM</p>
Sean Welter - PORTLAND	<p>Portland General Electric is attempting to get away with robbery for a second time starting 2025. I am already starting to feel the affects of their 17% bill raising as it seems my costs have nearly doubled. I think it would be best for the state to step in and take initiative to start running both pacificorp and Portland general electric. - 3/5/2024 6:50:53 AM</p>
Shelby Parrott - HILLSBORO	<p>Allowing PGE to raise energy prices yet again to cover losses AT THEIR OWN FAULT is criminal, and citizens owe nothing to a local gov that is allergic to accountability at all levels and bleeds them dry at every turn. If you want a community, foster it. - 3/5/2024 7:21:04 AM</p>
Connor Katchmark - MILWAUKIE	<p>I don't think a public utility should EVER be able to make a profit off of the citizens it services. Profit incentivizes exploitation and shouldn't be apart of a government service. If shareholders are involved, a company will never put its customers first. PGE needs to be made a PUD so their customers are their first and only priority, as should be the case with every government service. - 3/5/2024 7:35:18 AM</p>

Name/Location	UE 435 Public Comments
Renita Mcnaughtan - SALEM	<p>The additional requested increase by PGE is ridiculous! They have already requested and received increases in the past two years. The public cannot expect to continue to pay more and more. Our paychecks are already stretched to the max. As it is, we barely turn on the lights and heat and wear sweaters around the house to keep warm. I would love to not have my fingers freezing all the time. Please do NOT allow another increase. We cannot take another one. Every increase takes more and more out of our gas and grocery budgets and I can't imagine what it does to the fixed income, of which I will become one in another year. - 3/5/2024 8:34:46 AM</p>
Tamara Ostervoss - PORTLAND	<p>Dear Oregon Public Utility Commission, I am writing to you in opposition of UE 436, PGE's 2025 Annual Power Cost Update. Raising rates an additional 7% on top of the already 18% increase from this year will have a detrimental effect on working class families. While there are income qualified plans to assist people with bills, many working class families do not meet the requirements. To give you perspective on what average families are dealing with, my overall household expenses in 2024 increased \$12,000 between water, taxes, energy, garbage, and insurance increases while my household income remained exactly the same. If I and others are expected to meet increasing costs without an increase in budget, so can a billion dollar company like PGE. Living in Oregon has become completely unaffordable and this is from someone with a six figure income that has to meticulously budget and purchase second hand items to make ends meet, I cannot even begin to imagine how others less fortunate are able to get by. Support the working class families in Oregon and opposing the 7% increase PGE is proposing. While this may not seem a lot, this is the difference between being able to get by and having to skimp on food for many people. - 3/5/2024 8:40:52 AM</p>
Lynn Blessing - WEST LINN	<p>I am frustrated with rates as we are seniors on fixed income. The cost for power and constant rate increases are insanity! Our bill practically doubled and was over \$500 when normally around \$300 even though we are using a wood stove and shutting off lights around the house. How anyone can sustain this? PGE is increasing rates every January and I am not sure how seniors are going to handle it. Those living in Portland pay a much higher rates than WA or CA even though we are sitting on hydro power. I feel like Oregonians are being punished. Please stop raising rates every January! - 3/5/2024 9:01:27 AM</p>
Anthony Riddick - PORTLAND	<p>Hello, I'm fairly new to Oregon (4 years to be exact) and this new proposed 7.4% increase on rates is rather ridiculous. Considering rates with PGE just went up 17% in January which disproportionately affected alot of its customers was hard enough. Is it not OPUC job to protect customers from rates like this? Why is this commission's job not being done? If those on the commission are unable to do their jobs they should be replaced with people who actually can instead of holding on to incompetent and worthless individuals. This is just another reason to leave this state for a place more affordable. GET IT RIGHT OR GET OUT! - 3/5/2024 9:18:17 AM</p>

Name/Location	UE 435 Public Comments
NA - PORTLAND	Please oppose the PGE 7.4% rate increase request for 2025. We are already seeing an insane increase in 2024 right as I lost power for 3 days in the dead of winter. It's maddening that I'm paying 18% more over last year, and being a monopoly, I have no alternative supplier of power. infrastructure and safety advancements should not be placed on the customer. - 3/5/2024 10:32:24 AM
Ed Wagner - TUALATIN	Much of the wild fire prevention collaborative effort between the PUC and electric companies is focused on forested areas. However, I don't seem to be able to find any effort or consideration about electric companies planning of installing high voltage power lines through neighborhoods, especially ones that are already in high fire risk areas. In todays extreme weather patterns whether high temps and wind or ice storms the risk for electrical equipment and power line failures increases every year. Allowing high voltage power lines in high fire risk neighborhoods is negligible and presents our properties and human population with life threatening risk and even death. The current plan by PGE to install 115kv high voltage power lines (Tonquin Project) on Stafford Road between I205 and Wilsonville is a perfect example of gross negligence considering all the terrible electrical started fires in California, Oregon and Hawaii just in the past few years. This neighborhood of about 100 homeowners is highly concerned about the danger these power lines will pose and we look to the PUC to give serious consideration to what the future of our community faces regardless of the current Convenience and Necessity rules. They are outdated and allowing such dangerous power line installations by utilities without common sense decisions puts all of our lives at risk. - 3/5/2024 10:53:50 AM
Stephen Jupe - SANDY	For a public essential 'services' company to expect to raise rates to the public of 18% plus in a lump sum, it is unconscionable. Even more astounding is PGE's declared expectation of a 9.75 % profit return. Why are you, the commission permitting such greed? One would hope there are no conflicts of interests in this capitulation. perhaps it is time to reconsider a PUD for Portland Metro. - 3/5/2024 10:59:37 AM
An-Nony Mouse - PORTLAND	I owe over 800 right now for electricity. My house is cold all the time because I can only turn on heat to take chill off. 56 is "warm" at my house. I can't afford food because I'm afraid my electricity is going to be shut off. I see no end in sight to this. It is so stressful. My job does not keep up with the rate increase you recently implemented. - 3/5/2024 12:27:45 PM
Joan Ritchie - TIGARD	Please consider denying another rate increase for PGE. This last one really hit me financially. My bill increased considerably and it went into effect during the coldest time of the year. Inflation is hurting us all. - 3/5/2024 12:31:15 PM
Peggy Anonymous - PORTLAND	I would like it noted that social security went up 3%, but PGE raised rates over 18%. It is very unjust that all of the costs are going up and I have no way to pay them. I am in a wheelchair and if they raise the rates again next year I may need to go buy a tent. - 3/5/2024 1:05:50 PM

Branden Dross - LAFAYETTE	<p>RECEIVED MAR 01 2024 P.U.C. City of Lafayette 486 Third Street, P.O. Box 55 Lafayette, Oregon 97127 Phone: (503) 864-2451 Fax: (503) 864-4501 February 26, 2024 Subject: Concerns Regarding Unprecedented Electric Bill Increases</p> <p>Dear Chair Torgerson and PGE Board, On behalf of the Lafayette City Council, we are writing to express our profound dissatisfaction and growing concern over the recent double-digit increase in electric bills for our residents, continuing a distressing trend from the past two years. The frustration among our constituents is understandable, and it is imperative that the concerns are addressed in future rate discussions. The consistent escalation in electric bills has placed a financial burden on our residents, and they are rightfully distressed by the lack of community engagement surrounding these increases. In viewing the fact of the magnitude of these changes, our community feels unheard and excluded from the rate increase decision-making process. It is crucial that residents have a voice in decisions that directly impact their financial well-being. We request that Portland General Electric take immediate steps to involve the community in an open and meaningful dialogue about these rate increases and consider their input in future decisions. In light of the hardships our residents are facing, we also implore Portland General Electric to explore alternatives to alleviate the financial strain imposed by these consecutive double-digit increases. A collaborative effort between PGE and the Lafayette community is essential as Lafayette continues to grow. The Lafayette City Council is committed to representing the interests of our residents, and we trust that Portland General Electric shares our commitment to fairness, transparency, and community engagement. We look forward to being included in your plans for future rate decisions. Sincerely, /s/ /s/ Branden Dross Hilary Malcomson City Administrator Mayor CC: State Senator Brian Boquist State Representative Lucetta Elmer - 3/5/2024 2:13:18 PM</p>
David Wyatt - SALEM	<p>I am oppose to the rate increases from PGE. I cannot believe they are proposing more in the following year. I want to make it known this is not fair to the consumers who are barely making it and are not eligible for assistance. - 3/5/2024 2:26:17 PM</p>
Corwin Brence - HILLSBORO	<p>There are so many better ways to ensure that PGE gets their due for energy bills. Raising the rates will ensure that FEWER people can pay them. This cannot continue. - 3/5/2024 2:39:56 PM</p>
Steven Price - WELCHES	<p>According to PGE and local news reports, the utility has asked for another raise in rates by 7.3%. As a business owner we are paying almost 40% more than two years ago because of two recent rate increases of nearly 20% each. I would oppose the current request for this additional raise in rates. We are a non-profit and must fundraise to meet things such as this. Thank you. - 3/5/2024 2:50:18 PM</p>

Name/Location	UE 435 Public Comments
Dan Abbott - WELCHES	I don't think this is a good idea. It has already gone up 40% in the last couple of years. Talking with so many on fixed incomes, it is nearly impossible to meet their payments as is. To continue increasing the rates cannot be a good solution. The 7.4% might seem like a little bit but stacking that up over the last few years the increase is astronomical. - 3/5/2024 3:42:03 PM
Jon Hall - PORTLAND	The PGE rate hikes this past year have been absolutely ridiculous, please don't let them see record corporate profits and then continue to raise our rates. - 3/5/2024 4:14:41 PM
Jen Ferry - PORTLAND	Stop raising our rates so shareholders can get richer. - 3/5/2024 6:33:53 PM
Sofie P - SALEM	This is too much after you approved the incredibly high price hikes from 2023 and 2024. My electricity costs are 40% higher than they were in 2022 and PGE should not be allowed to increase it further for 2025. While I know they didn't have any rate increases for several years prior to that, this needs to stop. We need some relief from these outrageous charges, not higher rates. With the current rates, there are already people who will be too hot in the summer and too cold in the winter to keep their costs down (and not all of these people would be qualifying the "help" currently available). You have people working from home and buying electric plug in cars and now PGE wants to raise their rates even higher? No more increases for at least 2025 or 2026. Please do not approve this. Salem's citizens should not have to deal with another increase. - 3/5/2024 6:46:27 PM
Leslie Nassar - OREGON CITY	I oppose the proposal by PGE to raise rates yet again next year by 7%. This is becoming a yearly thing and a burden on low income earners like myself . Please do not approve this increase, which along with rising prices in all areas far outpace any meager wage increases I and those like me receive. We cannot keep up! - 3/5/2024 6:56:57 PM
Leslie Nassar - OREGON CITY	I oppose the proposal by PGE to raise rates yet again next year by 7%. This is becoming a yearly thing and a burden on low income earners like myself . Please do not approve this increase, which along with rising prices in all areas far outpace any meager wage increases I and those like me receive. We cannot keep up! - 3/5/2024 6:56:57 PM
Bryan Vance - PORTLAND	PGE has already raised electricity rates by nearly 20%, causing hardship to middle income residents. Now they want to raise it more? I stead of charging customers who are forced to support their monopoly more, they should use their record-setting profits to pay for their business. They should be bared from any more price increases so long as they pay their executives obscene amounts. - 3/5/2024 7:18:24 PM
Roy Rios - PORTLAND	PGE is a crap company run by people who are uninterested in improving people's lives. Their sole purpose is to pick pockets. They are theives. - 3/5/2024 9:00:57 PM
Scott Jasimak - PORTLAND	This proposal is an insult to the customers forced to use PGE. They already increased our rates this year by a staggering 19%. That increase did not yield positive benefits for its customers. The corporate greed of PGE should be punished. Their mismanagement of funds should not fall on the ratepayer. - 3/5/2024 9:02:04 PM

Name/Location	UE 435 Public Comments
Ande Ktreva - SALEM	Stop raising our rates!! This has gotten ridiculous, and I'm tired of making the shareholders vacation fund fatter. STOP - 3/5/2024 10:08:16 PM
Clare Perry - BEAVERTON	We oppose yet another significant rate increase for 2025 requested by Portland General. In two years, our costs for electrical use have soared, approaching 40%. It is deceptive of the utility, and disingenuous of the PUC, to allow the fiction about incremental kWh changes when the total amount of a consumer's bill is far greater. The basis for their request is nowhere near substantive. You are the PUBLIC Utility Commission. Be there for the public who have no other recourse. - 3/6/2024 6:05:27 AM
Unknown - PORTLAND	I know what is going on and it's dirty and illegal. PGE employees are getting 'big fat raises' and laughing all the way to the bank. The PUC just gives them another rate increase. I am done with this and this is a rip off to the consumer. No one is investigating anything, no one is looking at the books or questioning why PGE is getting raises. This corruption at it's best. PUC is bought and paid for by PGE. It's better to sue PUC for corruption as you don't look at anything or prove why PGE needs the rate increase. You just grant the rate increases and pass the buck. From the gov office on down is corruption. - 3/6/2024 9:37:46 AM
J R - PORTLAND	My household lives paycheck to paycheck. An increase in electricity costs would dig into our ability to buy food and other necessities. Can't PGE increase revenue some other way - 3/6/2024 2:49:44 PM
Dale Robertson - SALEM	How many times is the PUC going to allow PGE to jack up rates? I feel the PUC is getting their pockets line by PGE. The rates have doubled over last year and now PGE going 8% after just getting 17%. The PUC just keep taking the from the people and someone needs to be held accountable. The people on fixed income with health issues struggle the most and I would like to see accountability by the PUC to stop raising rates. - 3/6/2024 4:11:40 PM
John D'Angelo - SALEM	Rates were already increased by over 17% this past year. Another 8% increase will have a devastating effect on people living on fixed incomes and those on lower-middle class incomes living paycheck to paycheck. Maybe your CEO shouldn't be making 6 mil. per yr. Also, you all know completely green energy cannot sustain our power grid. Please consider the people you serve and not your bosses in politics. - 3/6/2024 4:34:26 PM
Charles Schmidt - PORTLAND	I vehemently oppose any more rate hikes. - 3/6/2024 5:35:30 PM

Name/Location	UE 435 Public Comments
<p>Corey Cowles – Marion County</p>	<p>Hello All, I am contacting you as a citizen of Marion County, residing in Salem Oregon. I want to address my concern of the 30% rate increase that Portland General Electric has requested over the last 13 months, which then has been approved by the Portland Utility Commission. There is no clear evidence that these rates are required to continue to provide service. There is no ramping period for these exorbitant rate increases to allow for families to adjust. There is no concern that this will increase the homeless population in an area that is already highly devastated by unaffordable housing. I am disgusted by how much consumers are expected to pay for an essential utility service, in a location where we have no other service option. This is a monopoly and is forcing already budget constrained families to make difficult decisions about where their money goes. Do they put food on the table or keep the lights on? Do they maintain their vehicle so they can get to and from work or pay their 30% higher than 13 months ago electric bill? I am disgusted that this has been approved and taken into effect. I am disgusted that large corporations are allowed to continue to raise their rates at an exponentially higher rate than wages are increasing. How are working class families supposed to keep up with these increases? We have NO MORE money to give. We are making ends meet paycheck to paycheck. Where is the concern for the people? Where is the understanding of how incredibly negatively impacting these decisions are upon the citizens that this affects?. We all know that these rate increases are not necessary and that there is room for PGE to rebudget and find it elsewhere. Those who are in power at PGE are making a PROFIT off these increases. They are directly profiting from the moth ridden pockets of working class people who have nothing left in their wallets to give. I demand that this be addressed by those that have the ability to change this. As a citizen of Oregon and Marion County, I expect more. Thank you for reading and please do not hesitate to respond and continue this dialogue. 248-217-5774 - 3/7/2024 12:32:18 AM</p>

NA	<p><alison.topliff16@gmail.com<mailto:alison.topliff16@gmail.com>> Sent: Thursday, February 29, 2024 5:55 PM To: PUC puc.publicmeetings * PUC <puc.publicmeetings@puc.oregon.gov<mailto:puc.publicmeetings@puc.oregon.gov>> Subject: Public Hearing Written Comment for March 5th Meeting alison.topliff16@gmail.com<mailto:alison.topliff16@gmail.com>. Regarding PGE's proposed rate hike for 2025: I recently read about the Portland General Electric proposed rate hikes for 2024 and 2025, I'm sure announcements for 2026 will be coming soon enough. I understand that utility costs rise and infrastructures need to be improved. However a 42% increase from 2021 to 2025 is going to put a big strain on residents and force people to leave the city or state. Our most recent hike has already caused strain on already struggling families in Oregon. Between inflation, grocery prices rising, other utilities, and income that doesn't rise at the same rate, people are able to put their resources in enough directions. This has caused many families we know to either relocate from the state, or start plans for relocating. I'm thankful that my husband and I make good wages. However, with the ever rising costs from every direction we turn, we are going to have to discuss a Plan B if financials keep continuing in the same direction. I urge you to reconsider another massive hike in 2025. For the sake of residents and for the sake of the state. - 3/7/2024 12:32:23 AM</p>

Corey Cowles - NA	<p>corey.m.cowles@gmail.com<mailto:corey.m.cowles@gmail.com>. Hello, I am requesting consent to speak at the next PUC public meeting. My comments are in regards to the exorbitant rate increases that you have approved from Portland General Electric for 2025. A rate increase of 17% was in effect starting January, and now in March, a second rate increase has been requested of an ADDITIONAL 7%. I ask how in good faith can you approve these rate increases knowing full well that the customers of PGE are already struggling to pay their bills. Wages are not increasing at the same rate of inflation and we are unable to keep up with the rates of increases with EVERY bill we have to pay each month, not only our electric bills. This will not only increase the homeless population but instills a strong sense of distrust that your regulatory board is regulating anything. I am contacting state legislatures, federal energy regulatory commissions, participating in petitioning, and making my presence here. You say that you have programs for payment assistance but that does not help those that are just on the fringes of making ends meet. What exactly are you doing to regulate and approve these rate increases? What are the justifiable means for these rate increases? Thank you and I am intending to be present in the virtual meeting regardless of whether or not you give consent for this public comment. Corey Cowles 248-217-5774 - 3/7/2024 12:32:31 AM</p>
Georgine Freiburg – Portland	<p>PGE has already raised rates this year. Now they are applying to raise rates again in 2025. I tried to email them but the email address on their site is incorrect. What recourse, if any, do I have to challenge another rate raise? I would appreciate a response as soon as possible. There are many other people waiting for a response. Thank you, Georgine Freiburg 9201 SW 28th Ave. Portland, OR. 97219 Sent from my iPhone - 3/7/2024 12:32:33 AM</p>

Charlene Wells – Portland	<p>From: Charlene Wells <charlenew1@q.com<mailto:charlenew1@q.com>> Sent: Thursday, February 29, 2024 4:54 PM To: PUC CONSUMER PUC * PUC <puc.consumer@puc.oregon.gov<mailto:puc.consumer@puc.oregon.gov>> Subject: PGE rate hikes charlenew1@q.com<mailto:charlenew1@q.com>. I am emailing you about something I saw on the news regarding PGE wanting to raise rates again for 2025. We just had a historic rate increase in Portland from this utility, and they are already wanting more. This is just getting to be too much for people to handle, and they need to be finding ways to save consumers paying higher rates and not finding excuses to be wanting more. Going under the guise of paying for green energy is something I am just not buying. You as the governing authority of PGE need to question these constant rate increases and not just giving them blanket approvals. Sincerely, Charlene Wells - 3/7/2024 12:32:35 AM</p>
Brian Copper - Portland	<p>Hello, I just heard that PGE is requesting an additional rate hike for the 2025 year. I and other PGE customers would greatly appreciate it if you denied this request, preferably without a hearing. PGE customers just got hit with a 17% hike that is ridiculous, outrageous, and just greedy. Customers are struggling already and the price hike is more of a gut punch than a service. The 2024 decision should be reversed. Either it be reversed or a 10-year ban on PGE from requesting rate hikes. PGE needs to learn how to budget the money they have. Customers do not have a choice of who supplies their power like a phone company or Internet provider/Cable. I hope that your commission sees that PGE is asking way too much out of their customers at one time. In closing, I want to express my deepest disappointment with the committee's decision to approve a 17% price hike for 2024 year. In my opinion, customers would be more willing to accept the rate hike if PGE requested the 17% rate hike to be spread over 5 years, which would have increased rates by 3% each year. My apologies, if I was a bit brash in my letter. Thank you for your time, Brian Copper. PGE Customer - Portland Oregon. - 3/7/2024 12:32:39 AM</p>
Michelle Suguitan-Reed - Gaston	<p>I live in Gaston Oregon. I here PGE is tring to get a utility increase by 14%.that Would harme. a lot of Rural resident. Please reconciled this. Thank you for your reconcentration on this matter. Michelle suguitan-Reed - 3/7/2024 12:32:41 AM</p>

Eldon Lampson – Portland	<p>To Whom itMay Concern I object to a rate increase while PGE pays for advertisemrnts and sponserships of any kind. If they are so desperately in need of money then give up expenses first. These include PGE Park corporate sposnership. All commercial video snd print adds. Sponserhips for non profit groups and sports teams and all other similar marketing campaigns. Why does a company with no competition need these marketing expenses. I can't go out and choose a different electric or natural gas supplier, there is no competitor. The number of times i have seen glossy high production print and video media adds advertising for the services I am forced to use is infuriating and unjustified. Any rate increase must be tied to ceasing all financial donations to causes. And this does not even touch profit sharing. If there is a windfall of profits from power generation. A 17% increase this year and thd a an ask of 5% next year? And then they pay divedends to investors? I am 100% supportive of this capitalism model if and a big IF I had the opportunity to choose who i wanted to purchase my power and natural gas from. In my opionion utilities need to be publicly owned like clark county PUD or at best a non profit without stock holders requiring dividends on the backs of consumers required to purchase their product. This is just not against PGE but all public utilities that provide services where there is no choice of an alternstive. My garbage hauler Waste Management is thd same. The print material I receive from them has extremely high roduction cost. The tv adds i see them run and the corporate sponserships where they give away marketing dollars is abhorrent. There is no reason to have any marketing budget for a service i am forced to use. Thank you for your time. Eldon Lampson 7906 SE141st Ave Portland OR 97236 503-250-4971 - 3/7/2024 12:32:44 AM</p>
Brad Hodges - NA	<p>Enough with PGE greed, I understood the 17% for this year, but more for next year. Nope no way 8% more, they get sued and we pay up, maybe their board needs a pay cut. We are already fiscally stressed maybe PGE should return less money to their investors and take care of the maintenance out of their profits. Brad Hodges 830-377-7456 - 3/7/2024 12:32:47 AM</p>
Alison Topliff - NA	<p>To whom it may concern, I recently read about the Portland General Electric proposed rate hikes for 2024 and 2025, I'm sure announcements for 2026 will be coming soon enough. Rachel Spada - NA	Good afternoon, I'm writing today after reading on koin.com that PGE is proposing yet another rate increase. This is upsetting beyond measure. My family doesn't qualify for reduced rates (by less than \$500 gross) nor do we earn enough to comfortably pay our electric bill on time each month. I don't know if this organization takes into consideration the working poor, who are barely surviving and don't qualify for any sort of government assistance or if y'all even want community comments. Please, tell PGE to stop thier greedy, predatory pricing and give Oregonians a damn break. Kindly, Rachael Spada Frustrated and cold and in the dark, again, thanks PGE - 3/7/2024 12:32:53 AM
Charlene Wells - NA	I am emailing you about something I saw on the news regarding PGE wanting to raise rates again for 2025. We just had a historic rate increase in Portland from this utility, and they are already wanting more. This is just getting to be too much for people to handle, and they need to be finding ways to save consumers paying higher rates and not finding excuses to be wanting more. Going under the guise of paying for green energy is something I am just not buying. You as the governing authority of PGE need to question these constant rate increases and not just giving them blanket approvals. Sincerely, Charlene Wells - 3/7/2024 12:32:55 AM
Kent Helm - NA	No No No to the proposed new rate hike by PGE for "battery storage". For two reasons: 1) those batteries WILL expire at some point and there is no plan nor way to recycle them. 2) production of those batteries is hugely damaging to the environment. 3) this would make it 42% increase since 2021! NO NO NO. -kent Helm - 3/7/2024 12:32:58 AM
Tom Mostert - NA	How can this commission justify rate increases of 42% since 2021 if the request for next year is approved? You obviously don't live in the real world where these increases would be considered insanity! I can afford it, but not so many of my friends. Please do your job and say "NO" for once. Tom Mostert Sent from my iPad - 3/7/2024 12:33:00 AM
NA	How was pge allowed to increase there rate at current levels without a public vote - 3/7/2024 12:33:03 AM
Michael Cambalik - BEAVERTON	I am 41 fully disabled and rely on the unreliable power company PGE. Since Jan 1st we have lost power about 3 times and one time being out about 3 days in 14 degree weather with no visible work being done until the hour it was back on. Around the areas in various cities I see power lines that was hanging, drooping, and we've all heard of the power line accident during the winter storm. In the past we've seen in my neighborhood a power line melting a tree while the fire depart stood by to watch it until pge showed up. Nothings being maintained, and our outages seem to be more often. I'm very concerned that pge is so unreliable yet there's no other options for electrical power therefore we are stuck with outages as the new norm and higher prices. My bill doubled since January. That's a huge percent increase. It unfathomable. I dont receive enough in social security to pay outrageous unbelievable increases especially when service rendered is poor service provided. Please, we put caps on bank fees, and have made accomplishments in the what's right category in life, there SHOULD be caps on the utilities. Please act swiftly and please help us. - 3/7/2024 1:47:26 AM

Name/Location	UE 435 Public Comments
NA - HOOD RIVER	If you're going to raise utility rates by 25%, then you better raise the minimum wage by 25%!! I'm damn tired of companies and landlords being given the okay to charge citizens more every year, but then no one stands up for us citizens being paid more so we can afford those increases. - 3/7/2024 3:52:13 AM
Debby Patten - MILWAUKIE	Please do not approve another increase for PGE as electricity will become impossible to afford, if it hasn't for some already. What is the point of utilities that no one can afford to use. - 3/7/2024 4:25:08 AM
Noah Gonzalez - PORTLAND	Stop further rate increases by PGE. We are being bled dry. - 3/7/2024 4:43:11 AM
Brandon Hatt - BEAVERTON	Pge is a joke. The corruption is getting beyond crazy. This is a renewable energy theres no excuses for a rate jump. Corporate greed is helping destroy this once great state - 3/7/2024 4:59:00 AM
Shannon Caley - PORTLAND	Please protect the average worker who is struggling with everyday utility bills. - 3/7/2024 5:03:42 AM
Mark Copley - CORNELIUS	Can't afford to pay the high rent.let alone able to pay electric to cook no food we can afford. OMG ??!!! - 3/7/2024 5:06:50 AM
Michael Montgomery - PORTLAND	40 percent increase in 4 years. Listen to you're customers. If you think this is sustainable you have already been bought by the utilities. I do not support your inflationary price increases! - 3/7/2024 5:13:17 AM
Scott Glenn - SHERWOOD	These rate increases are a money grab by public utilities taking money from the average citizen. To suddenly require this kind of increase either shows incompetence by the utility or is a bold theft from the public during a time of inflation when people can least afford it. I suspect you'll be seeing more people leave Oregon due to this incompetence. Do not let them move forward with this increase. - 3/7/2024 5:16:24 AM
A Hoff - MILWAUKIE	PGE just had a substantial rate increase last year. My family's average electric bill last winter was approximately \$250 per month. We do not have a large household, approximately 1600 sq. feet. We cannot afford another rate increase. Moreover, with all of the electrification policies that are being promoted by local/federal government agencies (switching gas powered tools to electric, electric vehicles/bike incentives, potential bans to gas appliances & wood burning fireplaces, etc.) the average family may not realize what the economic impact of another rate increase will have on their household yet. We need to slow these rate increases down and consider their full impact when coupled with recent policy changes that are encouraging further electric usage. It feels like we are encouraging people to make themselves dependent on electricity, but in a way that is financially unsustainable for the average household. I am concerned about the long term impact this will have on our communities. - 3/7/2024 6:02:38 AM

Name/Location	UE 435 Public Comments
Aubrey Sidwell - HILLSBORO	<p>PGE is only 1 of 3 area investor owned utility companies that serve Oregon. Pacific Power charges 28 cents per kwh during on peak and 10 cent for off peak. Idaho Power on and off peak cost per kwh is just under 8 cents. Based on the published rate plan PGE sent out as going into effect on March 1st of 2024 the cheapest rate plan cost per kwh during non peak times is 42 cents per kwh and 53 cents during peak times. All the municipal, cooperatives, and public PUDs have rates that typically average less than 12 cents and most average 8 cents per kwh. What OPUC needs to answer for is how, is it that out of nearly 30 electricity utilities in the state, PGEs rates are, on average, six times higher per kwh for 99% of the other options in Oregon and more than twice that of Pacific Power who is also an investor owned utility that is seeking an increase as well but still be cheaper than PGE. - 3/7/2024 6:12:04 AM</p>
Will Pivrotto - ESTACADA	<p>I'm on a fixed income and have struggled paying my last two(2)bills from pge. The way I understand it is they (pge) want to maintain a certain profit margin for their shareholders well boo who .I have to make choices between staying warm and what I can afford to eat as well as the rest of the monthly expenses they can take their profit margin and stick where the sun don't shine! - 3/7/2024 6:16:53 AM</p>
Wayne Yarga - FAIRVIEW	<p>I believe the public is bearing the cost for companies like Amazon and Google as they install data centers across the state. These are extremely power intensive facilities that use a lot of power. They should ve bearing the weight of the cost increase, not residential. - 3/7/2024 6:25:42 AM</p>
Cole Parks - OTIS	<p>Regarding rate increases, it has become a struggle to pay the bill. My other concern is that we are paying all of this money yet in older neighborhoods like ours, we run into the same reoccurring issues each winter with power loss. I pay more but nothing changes. Our pricing needs to come down. - 3/7/2024 6:25:56 AM</p>

Name/Location	UE 435 Public Comments
Rev. Tom Mann - SALEM	<p>Dear PUC - I am writing about the recent rate-increases the various utility companies are seeking. Simply put, these massive rate increases are outrageous. Any reasonable person can see that an 18 percent increase in any consumer product is untenable, especially when considering the average household has seen little to no increase in earnings during these inflation years. What is really disturbing is these utility companies are asking for these massive increases in order to offset their legal costs for losing the wildfire lawsuits. Yes, I know that businesses don't really pay taxes; they pass those costs off to the customer. But in the case of these utilities which caused wildfires, passing those legal costs on to the consumer is unethical. Should you approve their rate increase schemes you basically are enabling the companies to escape responsibility for their actions at the expense of their customers. You know that this product is a near monopoly - everyone needs energy and you have no choice from where you get it based on where you live - there is no real competition. That is why we customers rely on you to protect our interests. My plea to you is to give significant weight to the concerns of customers. My solution is to give the utilities a rate increase but no more than 10 percent. That is a fair amount for all involved. Even those who are underprivileged may find that amount manageable with the various low-income energy support programs. Thank you for taking the time to read my note. I'd be happy to answer any questions you may have. Tom Mann Salem, OR chilovek@hotmail.com 503-559-2402 - 3/7/2024 6:37:15 AM</p>
Kim Wallis - SAINT PAUL	<p>PGE is out of control and the PUC should deny the proposed 2025 rate increase. PGE needs to stick to providing basic power and stop the pie in the sky projects it always seems to be pushing, especially the wind and solar "green" power scams. - 3/7/2024 6:47:20 AM</p>
Brandon Fennern - FAIRVIEW	<p>These rate have go to stop, this is insane. How and why does pge need to hike rates again? They profited 2.2 billion dollars and one of the head people at pge raked in over 50 million, in one year mind you. Why are the customers having to take the hit? Who is really struggling out here? The company? Doesn't seem like it. I am struggling with the thought that they say this infrastructure but is it? Really think out it. 2.2 billion in profits and all the bonuses to these executives that deserve them? For what? This sucks and how many people does it help when you raise rates? How many people does it hurt? I think it hurts more then it helps. Seems like an easy decision. Thanks for all the approved hikes and for thinking about each and all of us before you do. - 3/7/2024 6:49:04 AM</p>
Maria Graham - HILLSBORO	<p>My electric bill has been at least 450 dollars a month since December and I literally cannot afford groceries for my 2 children - 3/7/2024 6:51:21 AM</p>

Name/Location	UE 435 Public Comments
Paul Rossi - SALEM	When PGE gets a 18 percent rate increase and the next thing they do is increase the amount of money they give away to the supposed poor, this is what is called a wealth transfer. I have worked hard for over 50 years and still do. There have been many times in my life when money was tight, I never asked for or got a free ride. Maybe people should learn how to manage what they have and take some accountability for there own situation. Do not get me wrong I am all for helping people who are truly in need because of things beyond there own control. - 3/7/2024 7:00:14 AM
Fawn Luft - TURNER	The amount of rate increases made by PGE over the last 4 years is simply far too much. Customers cannot pay even more on top of what is already happening. We don't have any other utility providers to choose from to try and find an affordable rate. It's a monopoly. And just because a family doesn't qualify for an assistance program doesn't mean they can afford over \$400 per month just for their electricity. PGE and other power companies need to find extra money a different way. There just aren't words to express how wrong this is. People are freezing in their homes just trying to keep their bills low enough to keep the power on. Please protect consumers, not the utility companies profits. - 3/7/2024 7:00:37 AM
Eric Wallace - PORTLAND	The cost should be covered by a wage/salary cuts of the very top of the corporate leaders. Normal wage earners are effected by wage cuts and company cut backs all the time. Why can't the most comfortable with the largest pockets feel the brunt of these sort of things? These are services and costs that should be covered. regardless of weather or whatever their excuse is. Stop gouging the most vulnerable and average workers. We are already dealing with inflation, flat wages that don't cover the cost of living, toxic environments that lead to health problems, global pandemics and health insurance costs that are the highest in the world. Just shave a few million from the corporate leaders and we are good to go. - 3/7/2024 7:09:44 AM
Bruce Hinshaw - PORTLAND	The recent rates increase from PGE are not sustainable for the consumer. You add water, gas and local taxes and you have a cost of living that is not aligned with the average income of the population. It is time to either move to a Public utility model such as Sacramento or permit net metering for the owners of solar power and batteries system. This would be a more cost effective solution that would return some of the control back into the hands for the consumers. - 3/7/2024 7:14:07 AM
Spencer White - BEAVERCREEK	To increase electricity cost 40% over 4 years on existing customers is offensive. If you don't want to see offensive language, than don't rob your customers. It's not the customers responsibility to pay for PGE's lawsuits. Most costumers can't afford this, so you'll pass it on to other customers to pick up the bill. If you were a private business you would cease to exist. - 3/7/2024 7:21:37 AM
Elizabeth Yeary - PORTLAND	The recent rate increase and request for further increase by PGE puts a terrible strain on customers, particularly those on limited income and social security. For major infrastructure work, is there no way the utility can invest for further needs? - 3/7/2024 7:23:47 AM

Name/Location	UE 435 Public Comments
Mt - HILLSBORO	18% is a lie, our bill is 100% higher and has been each month as opposed to 2023. We have 2 less people in the household, removed a large fish tank & no more electric vehicle and it's still over \$300/month'no "ice" storm in February either. - 3/7/2024 7:29:01 AM
Jordan Jansson - PORTLAND	Allowing price setters to increase prices on basic necessities only makes life harder for those who have to pay them. With price increases, such as what PGE and Portland Power want and you've granted, families and individuals have fewer opportunities, in the land of supposed opportunity, to better themselves, maintain savings accounts, or buy things in a retail economy. And such price increases make it much more difficult to be able to meet the 40% max of income that is the golden standard for living anywhere, especially as renters suffer from capricious price increases from landowners and property managers. Allowing price increases also fails to do anything to help alleviate Oregon's homelessness crisis; in fact, such increases only serve to compel people to leave the state, if not lose their home. And, greed is recognized as a sin by every established religion. And the term "inflation" is just a word to distract from what's really occurring in utilities, groceries, housing, and power: man-made intentional greed and price-gouging - 3/7/2024 7:43:26 AM
B Diane Eames - BANKS	PGE is asking for another rate increase. In that time they still do not provide proper maintenance of their power lines. We were without power for several days last year as trees came down in the west hills. We lost power for days even though we do not live in the west hills, but west of Banks. This year PGE stated they required to reinforce our power pole by our house, and they damaged our driveway in the process, and have done nothing to repair the damage despite requests to repair the damage left. No maintenance of trees by power lines was done this year, so we lost power for a time during the ice storm this year. How can PGE ask for a second rate increase when they do not spend any of the money on line maintenance? My driveway is dangerous but PGE won't repair their damage they did. - 3/7/2024 7:43:37 AM
Jenny Watters - PORTLAND	I'm writing to state that an 18% increase from PGE was shocking and poses a hardship. Many households fall above the financial guidelines to receive relief from the rate increase, but also are not so well-off that this extreme rate increase doesn't adversely impact them. I can't think of an industry where this kind of rate increase would be acceptable and tolerated. My salary (and no one I know) receives anything close to an 18% raise ever. - 3/7/2024 7:46:54 AM

Name/Location	UE 435 Public Comments
Greg Sargent - SALEM	<p>Dear Oregon Public Utility Commission, I am writing to express my profound concern and dissatisfaction regarding the recent announcement of rate increases by Portland General Electric (PGE). As a resident of Salem I have been a loyal customer of PGE, relying on their services for my daily needs. It has come to my attention that PGE plans to increase their pricing rates. This decision is particularly disheartening because it seems to disregard the current economic challenges faced by many Oregonians, myself included. The lack of significant infrastructure improvements or movements to justify such an increase adds to my frustration. Moreover, despite these proposed rate hikes, I, along with other residents, continue to experience frequent power outages, which further questions the rationale behind increasing the financial burden on consumers. The absence of tangible enhancements in service delivery and infrastructure, coupled with the continuous inconvenience of power disruptions, raises concerns about the justification for this rate adjustment. It is crucial for utility providers like PGE to ensure that any increase in rates is matched with proportional improvements in service quality, reliability, and customer satisfaction. Therefore, I urge the Oregon Public Utility Commission to thoroughly review PGE's proposal for rate increases. It is essential to ensure that any adjustments are reasonable, justified by concrete improvements, and considerate of the economic impact on Oregon residents. I look forward to your response and hope for a favorable review of this matter. Please consider the implications of these rate increases on consumers like myself, who depend on PGE for essential services but are left questioning the value and reliability of these services in light of recent developments. Thank you for your attention to this matter and for advocating on behalf of Oregon's utility consumers.</p> <p>- 3/7/2024 7:49:47 AM</p>
Almitra Stayer - ESTACADA	<p>What is the margin of earning for PGE? What was the income percentage increase for the CEO and other leadership or administration within the company? What percent of this cost increase is going to toward their income and what percent is going toward the infrastructure ect? My thought and belief is that this is a monopoly and the rich are getting richer at the expense and well-being of the customers they serve. - 3/7/2024 7:49:53 AM</p>
Alain Deschain - PORTLAND	<p>We are having to deal with the damage from the ice storm as well. We have had to put off home repairs and endure lower temperatures in our home because of the rising costs of energy. If our electric bill goes up any further we will have to sacrifice even more just to make ends meet. My wife and I are stressed out and everything keeps getting more expensive. Another rate increase would be catastrophic - 3/7/2024 7:51:28 AM</p>
Grant Crook - TIGARD	<p>We are trying to get away from fossil fuel, I get it. Then we take out the dams to save the salmon, makes sense. Now we are forced into higher cost electricity, who or what is going to save us? People can not afford this, so what do we do? The government subsidies farmers, electric cars, etc., maybe they should subsidies power company's so people can afford electricity. - 3/7/2024 7:51:41 AM</p>

Name/Location	UE 435 Public Comments
Kayla Hall - SALEM	Rate increases have put all Oregonians in tough situations financially. We are a 2 adult working family and last year was the first time in our lives we have paid bills late due to cost of utility services. With the rate increase over the last 2 years around 25%, people are not able to continue to afford necessary heating and cooling. I oppose a 2025 rate increase. - 3/7/2024 8:04:34 AM
Deborah Day - GRESHAM	Having lived in the eastern part of the metro area since 1975, I am curious as to why small underground utility upgrades are not made yearly? No one can afford full upgrades all at once, but I would think a known trouble area not just repaired but fitted to avoid future ice storms, wind and fire would be doable. It seems very similar to the roads and schools. Somehow waste money doing the minimum as it occurs then cry for more money later. - 3/7/2024 8:10:56 AM
Pete Renfrow - DUNDEE	The PUC will "synthitize" our comments is all you need to know. It's time for utility companies to be owned by the rate payers and not a private concern. On another note I constantly hear the PGE gives grants for e-bikes and other projects. If they have money to give away then they have too much of the rate payers cash. - 3/7/2024 8:11:06 AM
Kathleen Branham - NEWBERG	I oppose the recent rate increases. I live on Social Security with my husband. We budget for every dollar spent and cannot afford this!! I have had to ask my son for financial help to pay my power bill. All because rate increases!! Thanks alot!! I know we are not the only seniors struggling with this. You should be ashamed of yourselves. I bet you have no problem paying your power bill, even? Most of us don't believe this about wildfire or new equipment or whatever excuses you folks come up with. Because we know it's all about the green initiative, the climate change crap, the tearing out of our dams and power plants. You are doing your best to cripple us common people. You should all rethink the rate increases as they are not fair nor warranted. - 3/7/2024 8:20:44 AM
Richard Recanzone - PORTLAND	My salary has not gone up as much as utilities, or groceries. Utilities should have same control as rent. - 3/7/2024 8:32:27 AM
Robert Buckley - SALEM	I don't believe the commission should grant the requested increase. I also do not think the company should be fined for issues that are not within their control, because it gets passed onto the consumers. - 3/7/2024 8:33:28 AM
Holly Coddington - MILWAUKIE	I would like to see these power companies have Apps that would provide people a way to view how much power they are using, just like the cell phone companies use for data use. I feel like power companies are intentionally not using current technology to make it easier for their customers. I am trying to figure out whether I pay my medical bills this month or get caught up with my outrageous PGE bill. Please help us, customers find a way to not have to sacrifice other necessities in life so that we can have power in our homes!!!! - 3/7/2024 8:33:46 AM
Louy Wolf - EAGLE CREEK	My husband and I are seniors living on social security. We just cannot afford more rate increases to PGE. So far we only qualify for a 15 percent discount which still makes our bill unaffordable. Please do not approve another rate increase. This is killing us. - 3/7/2024 8:37:39 AM

Name/Location	UE 435 Public Comments
Alesha Munkelwitz - WOODBURN	I think its unfair that PGE is asking to increase rates yet again. Have they cut costs at all? Their CEO is making millions of dollars while I sit here barely making ends meet with all my bills especially this last rate increase. Before they gouge us anymore they should trim their costs and reduce the salaries of their top workers. Why should we be the only ones to sacrifice - 3/7/2024 8:38:48 AM
John Rowan - RHODODENDRON	Thank you for the opportunity to speak. PGE saved our entire community up here on Mt.Hood by powering down their lines during the September wind event , an event that was forecast nearly a week out. PGE informed communities that there is a good chance that the power would be cut off. Their Board understood the REAL danger at hand. The other electronic companies to our south were asleep at the wheel and entire communities burned and people died. Now ,electric rates have soared with more increases to come along with lawsuits . Are these increases to cover the costs incurred from horrible leadership at Board level ? I'm a 60 y.o. man with 30 years as an ER RN , as a young man, I was the lead the Polaski on a Hotshot crew with the Tahoe National Forest later a fire fighter/ medic. - 3/7/2024 8:42:40 AM
Laura Jones - TUALATIN	PGE needs to stop raising its rates. If rent is going to continue to increase so much, the cost of utilities should not. I can barely afford the rent (and I make good money), let alone the PGE prices. If equipment needs to be upgraded - One, this should have been done years ago and Two, this needs to be done gradually and not all at once. We can't afford to correct PGE's mistakes, and we shouldn't have to. Even people I know who are employed with PGE are barely making it with the rate increases, and they also don't agree with the increases. It's just ridiculous. What happens when we can no longer afford it? What then? - 3/7/2024 8:50:56 AM
Dagovertto Benavidez - SALEM	As a consumer of PGE electricity i find the increase outrages, the increase i saw today when i received my bill where it averages \$115, today it is \$185. How can a person buy food and keep warm? This is contributing to the homelessness issue which society then needs to address with more money! - 3/7/2024 8:52:57 AM
Dagovertto Benavidez - SALEM	Rate increases like the one PGE is putting out is a major factor on why we have so much homelessness, people just cant afford this price gauging!! - 3/7/2024 8:59:28 AM
- SALEM	I honestly do not care anymore that costs have gone up. Stop passing it along to customers in order to maintain desired profit! PGE better eat this cost. I don't care if it put them in the red. If they can't invest at current rates then they just have to wait - 3/7/2024 9:09:29 AM

Name/Location	UE 435 Public Comments
Valentin Uzunov - HAPPY VALLEY	While my electricity bills have not gone up as much others, i do see the recent pattern in rate hikes, justified by convenient timing and circumstances. Its seems that the only solutions are more money. I would like PUC to hold public utility companie accountable to a minimum 75% company efficiency in management. When the PG&E CEO has a yearly compensation of about ~\$50mill and a cash flow from operating activities amounting to \$4.75 billion for 2023. I think that unless PG&E can demonstrate, transparently why they cannot use the cash from operating activies? Or some income stream. Given a total Net revenue of 25Bil. Its time public companys are required to show they are maximally efficient, before charging consumers more. I have also heard about large miss management being a leading cause for rising cost. PUC should also continously keep in mind that a balance should not be tipped in favor to either side. But to do that it needs solid metric, the public can see and digest to have trust in the process. PUC should demonstrate complete transparancy by making documentaion public for review - 3/7/2024 9:22:43 AM
Russell Shackleford - CLACKAMAS	I am writing to inform you that if you vote to raise electric rates it will backfire. I will pay my rates...for a while. Then, before I move, I will use every bit of electricity I can and never pay the bill. I'm talking about \$800-\$1000 electric bill that will never be paid. It's the only way you people will ever get the point. You don't listen to common-sense, you don't respect the citizenry, you're obviously in PGE's pocket. The only way to get you people to understand anything is to completely screw you over. So, go ahead with your planned electric-rate scam. You'll get paid for a bit, then you'll get hammered. LOL! And I will enjoy cursing and ridiculing every collection agent that rings my phone trying to collect the money I took from you. And I'm going to do it, guaranteed. In fact, I'm going to do it whether you raise the rates, or not. LOL! - 3/7/2024 9:29:31 AM
Josef Nelson - HILLSBORO	A 40% increase in costs over 2 years would ruin any privately held company that has competition. A 40% cost from a monopoly is a cartoonish scenario of people with low incomes having to decide between groceries or power bills. - 3/7/2024 9:44:22 AM
Heather Hendricks- Thurber - PORTLAND	PGE's income last year increased. They cannot say they need more money and it not be clear that they just don't want to cut into their profits. Unless they are operating at a loss, rate increases should be declined. It is a travesty for utilities to be profit driven especially since consumers cannot choose their utilities. - 3/7/2024 9:48:12 AM
Becky Zimmerman - PORTLAND	For many families, it will be "eat or heat". Utilities should continually upgrade rather than waiting for catastrophies that are more costly. Be proactive rather than reactive. - 3/7/2024 9:48:23 AM
Debbie Hildreth - MOLALLA	I am older & on social security . I can not afford another rate increase . I am barely surviving now . I don't drive an electric car & it seems unfair that I have to support infrastructure for that . How am I supposed to survive ? - 3/7/2024 9:49:07 AM
NA - BEAVERTON	We're also paying for a \$1,700,000,000,000.00 Infrastructure Bill, I don't see any of that being used in Oregon! ?? - 3/7/2024 9:55:57 AM

Name/Location	UE 435 Public Comments
Maureen Heaster - TIGARD	<p>Raising the rates for customers again because PGE hasn't been updating its infrastructure should be criminal. Keeping their facilities up to date, making repairs after weather events, this should be part of their normal operating budget. The PGE CEO's yearly compensation has gone from \$1.5 million to over \$6 million since 2018. How much money is going to shareholder payouts? This money should be going back into the company for their facility improvements, not given out as bonuses and payouts for the company executives. PGE may be a private company, but they are providing a necessary service that consumers have no choice but to use. This shouldn't be a private company, this should be a public utility, but that's an argument for another day. If the Oregon Public Utility Commission is going to regulate Portland General Electric, they need to make sure money isn't just going to the people at the top. If PGE wants to be our only source for power, it is their responsibility to spend their money on keeping their facilities working. CEO bonuses and shareholder payouts do nothing to help the public, nothing to help the power grid and I'm sure it doesn't do anything to help the people actually working on the streets to fix our power lines. If PGE can't keep up with improvements and can't spend their money wisely, maybe it's time to make it a public utility or to find a different company to serve the Portland area. Increasing prices on customers for a basic necessity that is struggling due to PGE's negligence should not be something the Oregon Public Utility Commission allows. If they need more money, PGE can use the \$5 million in CEO bonus pay to fix their structural issues. - 3/7/2024 9:59:40 AM</p>
Lilith Knoblock - PORTLAND	<p>Please do not increase PGE prices. We struggled greatly to pay for our heating during this very cold and icy winter and will likely struggle more to keep cool this summer. People will die if they cannot pay their electric bills. - 3/7/2024 10:01:56 AM</p>
Debbie E - GRESHAM	<p>I would like to see an independent body do a line-by-line overall audit of the PGE budget. Where there is waste, eliminate it and use the money more wisely planning for long term solutions. Struggling consumers cannot keep paying higher and higher rates -- they do not have the luxury of limitless household budgets. The PUC should push back and stop approving annual increase requests from PGE: Consumers must prioritize and live within their budgets, PGE can do so as well. - 3/7/2024 10:07:40 AM</p>
Christian - PORTLAND	<p>I oppose any more rate increases from P.G.E. at this time. Customers are still feeling from last year's increase, while shareholders for the company are still taking in huge profits. Businesses need to accept that monthly payments for utilities are not a "Kickstarter" or "GoFundMe" for their business. Any improvements or inflation related price increases need to come from the top down so the poorest customers aren't paying for a C.E.O.'s new yacht. Do better PUC!! - 3/7/2024 10:17:48 AM</p>

Name/Location	UE 435 Public Comments
Barbara Roach - WEST LINN	Look at the salaries of executive's at PPG and it's obvious they are overpaid and gouging us consumers to line their pockets and the pockets of their shareholders. They could all contribute some of their salary to make improvements if that was really their goal. My bill in the last 4 years has gone from an average of \$138.00 to 410.00 as of the last increase. All housing costs have skyrocketed and if someone can afford their rent, utilities can price them out. The citizens cannot keep absorbing these prices. https://www1.salary.com/PGandE-CORP-Executive-Salaries.html - 3/7/2024 10:27:15 AM
Jay Marcy - PORTLAND	Continuous significant rate increases are going to cause catastrophe for those relying on PGE. I understand that infrastructure changes and post-storm repairs are costly, but trimming trees prior to storms would help prevent some of that damage in the first place, minimizing the need for emergency power restoration efforts and associated costs. PGE notified residents of SE Portland of anticipated tree trimming just days before this 2024 ice storm - this tree trimming did not occur and tree damage to power lines left many without power for several days. Use your budget to work on disaster prevention, don't just milk us dry for money we don't have. People rely on PGE to provide power so we don't die of exposure during weather events like this, and we were failed miserably during this storm. Absolutely horrible to raise rates at this time. - 3/7/2024 10:31:40 AM
Dawn Schmidt - SALEM	Cut your salaries FIRST! No excuse for increase, just because others have done it! I might add the other's increases are a lot lower than what you have/are doing! Why should we be paying for your lack of integrity and negligence, loss of homes, property and lives from the 2020 wildfires? STOP the MADNESS and GREED! What does PUC mean? PUBLIC utility commission, that means the PUBLIC needs to be heard and accepted by OUR decisions. NOT to pay your outlandish salaries and living style. - 3/7/2024 10:34:24 AM
V Demary - PENDLETON	For elders on limited income bit expensive thru winter - 3/7/2024 10:57:45 AM
Leslie Yoder - MULTNOMAH	My full monthly income is \$1228.00 per month. I cannot pay my electric bill because of the 18% rate increase. I am 76 yrs old and I don't think you want me to be without electricity. Please help me. Leslie Yoder, 503-419-7170. - 3/7/2024 11:03:30 AM
Diane Edmonds - GRESHAM	PGE raising their rates is hurting its customers in their pocketbook, people will have to decide whether they keep the lights on or put food on the table, they can't do both with rate hikes again. There's very limited resources available to help with customers bills, sometimes no assistance at all, what are we supposed to do? - 3/7/2024 11:22:34 AM
Stephen Ewald - PORTLAND	Companies like PGE using the public infrastructure, shouldn't be able to jack up my rates by 40% over 4 years. That either shows bad planning and foresight or greed. Let's be honest though it is pure greed to appease the stock holders. - 3/7/2024 11:33:16 AM
Rachel Lucas - SHERWOOD	Most people are having a hard time just buying groceries. With the increase in utility bills takes away from that. Not only food but prescriptions too. I have cut back on electricity and heat but am still struggling to pay bills. I have cancer and need certain meds. These increases would hurt peoples lives!! It should not be allowed. We all need to work with in our means. - 3/7/2024 11:53:00 AM

Name/Location	UE 435 Public Comments
John Reichert - MILWAUKIE	It's sad to think that because of the negligence of PGE and all the lawsuits that customers have to bail them out when times are already hard. Let them suffer. We shouldn't have to pay off their fines. Which is exactly what's happening. - 3/7/2024 11:53:39 AM
- PORTLAND	STOP RATE HIKES. The average person can NOT afford to live in Portland anymore. CORPORATE GREED - 3/7/2024 12:01:41 PM
Erin Sauer - BEAVERTON	I understand rising costs for companies but when you raise it to where we cannot afford to pay the utilities and you deem it acceptable to leave families in the cold and the dark I cannot support you or any form of reason that you have. - 3/7/2024 12:09:06 PM
Kristin G - MILWAUKIE	The recent rate hikes, proposed future rate hikes, and the reporting that was done on KATU news channel are extremely disheartening. The average rate hike of is unreal. People in this community are struggling to survive and in the midst of that struggle large utility companies are complaining about the cost associated to them instead of valuing and helping the customers in the communities that they serve. The message is "give us more of what you don't have because we need it more." A sentiment that breeds distrust and dissatisfaction among constituents. It is basic economics that the price gets passed to the consumer. However, conglomerates such as utility companies have an obligation to the people they serve. Power is a basic necessity of average living just like water. If you keep increasing rates you will also increase the amount of people who die or become seriously ill in extreme heat or cold situations that were used to justify these rate hikes. That will be a direct effect of people being unable to afford to heat or cool their homes due to these rate hikes. It is no longer just about our most vulnerable members of society but about everyone because we are ALL struggling. If you need funding to update the power grid apply for other resources. Do not pass these massive rate hikes onto consumers expecting that they can take this hit. Imminently, there will come a day when people will choose not to run their power because they simply cannot afford it. It is already happening that people wear extra sweaters or use extra blankets to stay warm rather than turn on the heat. Sadly, for some, that is a choice to live or die. And then what will utility companies do? Pass another rate hike to collect the money lost when others could not afford to keep the lights on? That is the absolute failure of civic duty. - 3/7/2024 12:36:33 PM
Gordon Fultz - MCMINNVILLE	I find no defensible justification for an additional rate increase other than corporate greed! We have seen no definable improvements in our area and we lose power several times a year. I hope the PUC will look this PGE proposal over very carefully and see where the money is really going. It would be wrong for all of these rate increases to be paying stockholders, executives and not being used for the upgrades. These rate increase are driving people out of their homes and prohibiting renting and buying of homes-and homelessness! Please say "NO". - 3/7/2024 12:41:59 PM
Dav Smit - HILLSBORO	I really, really, really have zero faith in your organization and what it has become. - 3/7/2024 12:42:20 PM

Name/Location	UE 435 Public Comments
Timothy Bryson - OREGON CITY	The current rates for electricity are already staggering. How are lower income residents expected to pay even more than they already are without making sacrifices in other areas of their lives? People have enough to worry about already, and now the thought of their light bulbs going out is potentially a very real fear - 3/7/2024 12:44:14 PM
Tilden Chin - BEAVERTON	The PGE rate hikes have been completely outrageous. The low-income families in my area cannot afford these rate hikes. Please reject any more rate hike approvals, the 18% increase is already far too high. We would like a complete comprehensive re-examination on why the rates have been increasing so much, and what the city can do to make more economically conscious decisions. - 3/7/2024 12:47:14 PM
Rebecca Ruppert - SALEM	I don't qualify for an accommodation on my utility bill. The accommodations do help those in dire need, but, more rate hikes will put more people in the qualifying bracket. This means that everyone who struggles but doesn't qualify pays more for people who can't pay. The rates hike but without improved service. Stop wasting everyone's money. Audit! Where is all the money going? An irrate taxpayer!!! - 3/7/2024 12:49:39 PM
Russell Nault - CARLTON	Your killing us with these rate hikes. I cannot afford to heat my home. - 3/7/2024 1:01:26 PM
Elisa Kozma - CORBETT	Cost is way too much and too fast with limited public input and too many mandatory monthly fees. No longer affordable. Wish there was more competition for electric and heat where we live. - 3/7/2024 1:08:18 PM
Matthew Sprague - NEWBERG	As a concerned consumer of utilities, my observation along with many people I know is that the Public Utilities Commission is simply a rubber stamp for providers to get what they want every time. Yes on occasion we see where someone wants 12% and you knock it down to 10% however our view of that is the utility company has your number and is providing something higher in case you actually approve it but knows they may get less and can live with that. Its also not lost on the general public that these utility providers generate the appearance of an inefficient operation that would bankrupt them if they were operating in a true private field without a captive audience. We have one company offering the provision of electrical service. This is a monopoly no matter how you slice it. The PUC is there to protect the consumer but the consumers don't believe this is what the PUC is doing or at least not doing it very well. One of the biggest excuses for rate increases for example is wildfire potential. Wildfires are not getting worse because of climate change. They are getting worse because government agencies are not managing their forest lands the way private land holders do. The consumer now has to pay for failed government policies which create increase fire risk. The consumer really needs the PUC to task providers with being more efficient before asking for more increases. As you can probably see because it's all over social media and the press....we are getting awfully tired of the increases. Especially in a state where our state taxes are the 2nd highest in the nation behind only Massachusetts. And this isn't just for power. It applies for all providers seeking substantially increased rates. - 3/7/2024 1:19:41 PM

Name/Location	UE 435 Public Comments
Julie Hamilton - SALEM	I'm on a very fixed income. These rate increases are taking food out of the mouths of people existing just on Social security. Sleeplessness nights as it is. I can't even imagine next year and the rates for utilities are unfair. How about the top 10% of pay for utilities employees be deductible from your personal income. No more bonuses or raises freeze for the upcoming future. You still wouldn't feel our pain, worry, stress, hunger or sleeplessness nights. - 3/7/2024 1:21:58 PM
Liz Browr - WELCHES	It's been debilitating as a single income mother to have my 1600 square foot home electricity bill be \$300. I do not have the money to buy solar panels. Paying this high bill each month is my only choice to stay warm. The system is broken. - 3/7/2024 1:31:24 PM
Kevin Sprague - CORBETT	As a Corbett resident that was impacted by the recent severe weather, I strongly oppose PGEs requests for rate increases. PGE has proven to be a poor steward of public utilities and consumer funds to ensure safe, efficient access to power. Their choices have proven to be careless and irresponsible causing distress and life threatening circumstances to our community. The price hikes are another example of wanting to bolster profits without taking the appropriate actions to prevent future system failures. The weather that caused the outages is not new and reasonable steps should've been taken all year to prepare for the season. Before price increases are granted, a formalized plan needs to be reviewed and enacted by PGE to ensure that their system is prepared for the weather in the areas they operate and to reduce fire risk with minimal disruption to its customers. The reason they don't take these steps is because they are more expensive and will cut into profits and this is unacceptable. I've come from areas with more severe weather including wind and ice and they do not have issues since the utilities are run through the city rather than a private company. We need to hold this company accountable for their actions and the very real risk they put our community in each year. No power for days in subzero temperatures is dangerous for many individuals. We look to the PUC to ensure they are responsible stewards of our utilities. Thank you for the time and consideration while reviewing this request. - 3/7/2024 1:43:04 PM
Wendy Walker - SALEM	I would like to propose higher subsidies covering energy prices for individuals making under \$50,000 per household, to better afford the energy increases. Thank you! - 3/7/2024 2:09:34 PM

Name/Location	UE 435 Public Comments
Tyler Forst - PORTLAND	<p>It is outrageous, that a company with this level of increasing net income, and the ability to provide a dividend to shareholders while holding a monopoly over its customers is allowed to increase rates at the speed and magnitude PGE is asking. 40% over four years is criminal. Furthermore, the price signaling happening in the market, driving other utility companies in the Oregon markets to increase their rates to match those of PGE is also unacceptable. Choosing two different increase values that magically equal the same total increase over two years across these two companies is more than a coincidence. This is classic market manipulation and price signaling among monopoly holders. With the revenues and administrative cost PGE has there is no excuse for not having the strategic foresight and budgetary acumen to see, and plan for infrastructure cost which are being used as a crutch, and excuse for further, gouging the consumer, and lining the pockets of shareholders and executives of PGE, rather than serving the community which has no alternative other than to utilize the service. If the leadership collecting these massive salaries does not have the ability or foresight to plan appropriately for changes in the marketplace and protect the consumer while still delivering a quality product. They have no business collecting massive paychecks they do. Choosing to reestablish a dividend payment to shareholders while consumers the bill is insulting to all of our intelligence, and should be reviewed by the justice department for monopolistic practices, and abuse of that position in the market. - 3/7/2024 2:10:09 PM</p>
NA - MOLALLA	<p>40%. That's how much the rates have increased in four years?! Everything else has also gone up 40%. We can't afford our bill already, we can't get help with our bill because we make 40k for a 4 person household, with kids, and Oregon has steadily pushed for electricity consuming products and appliances. Those that can't afford to pay these insane prices won't have a choice but to disconnect from pge. The fact that there is only one company to purchase from where we live, our hands are tied. Make this make sense! - 3/7/2024 2:10:24 PM</p>
Jeff Olsen - GRESHAM	<p>We are already being over charged way too much, not all customers caused the law suit, I already knew the utility company would do this when they lost in court, it's not fair and not right - 3/7/2024 2:10:36 PM</p>
NA - PORTLAND	<p>I will become homeless if they don't fix the PGE prices and increases. Bills are already super high and I barely use heat as is. So many people won't be able to afford electricity. It's also not the people problem businesses havnt kept up with infrastructure. You don't increase rates to fix cosmetic damage you should be able to fix without increases. I guess Portland just wants more and more homeless!n - 3/7/2024 2:10:42 PM</p>

Name/Location	UE 435 Public Comments
Aaron Hensley - PORTLAND	I read OPUC's official comment on PGE's proposed rate increase, you should be embarrassed that there is public outcry over the cost of a necessity and OPUC is repeating the same talking points as PGE. The fact that PGE feels so entitled to ask for another increase after just getting a 17% increase shows how little of respect, they have for OPUC and the consumer. PGE knows OPUC will cave on the matter and have made clear PGE's only interest is that of the PGE shareholder not consumers who are forced to have PGE as the sole electric provider. OPUC is made of individuals given the position by elected public officials, and yet OPUC is acting like an extension of PGE's PR department. PGE is laughing that OPUC, because they are seasoned negotiators, that 17% increase that ended up being much higher to the individual consumer is exactly what PGE wanted. To educate you on how large companies negotiate: they go into it asking for everything under the sun knowing full well they won't get it, then OPUC counters that proposal with an unheard of 17% increase (which ended up being larger) and OPUC acts like they won, when in reality the consumer lost. It is clear that OPUC has been outmatched and outwitted at every turn since 2021. In the best interest of Oregonians, we need change to the OPUC. Electricity is not a luxury; it is a necessity. OPUC has allowed and created a status queue that when PGE wants to raise rates they can. OPUC is an embarrassment and CUB should get the funding that is currently used by OPUC. CUB is the only entity that is actually looking out for Oregonians utility costs. - 3/7/2024 2:19:06 PM
Nathan Bissonette - PORTLAND	Pge is going up way to much. I understand the weather and everything can effect it but when the profits are rising for the company and the ceo is on such a high salary it doesn't far well with the majority of people. I make 17 an hour right now and the pge bill is about 4 days of work for me alone and is one of my biggest expenses. As someone who has lived in Portland for 28 years I love this place but the high taxes and cost of living has made it near impossible to live alone and for me turning 30 this year it sucks to still not be able to grow and be able to afford anything without being paycheck to paycheck - 3/7/2024 2:19:49 PM
Craig Roberts - WILSONVILLE	We are fixed income senior citizens who cannot tolerate these gigantic rate increases. - 3/7/2024 2:27:08 PM
Denver Hendrix - GRESHAM	PGE made a 2BILLION\$ profit last year but they need more of my money..Please stop the greed - 3/7/2024 2:33:25 PM
James Oneill - GRESHAM	Tell the stock holders yo take a reduction in profit shares. Even single one of them is far more wealthy than the struggling customers. If there was an other utility provider I would drop PGE in a heartbeat. - 3/7/2024 2:34:57 PM

Name/Location	UE 435 Public Comments
Michael Jewett - KING CITY	The utilities should stop investing in expensive "renewable" power infrastructure and focus on providing reliable, inexpensive power for the majority of users. How many people will freeze to death because they can't afford to heat their homes this winter? Stop outlawing natural gas appliances. Stop investing in the construction of outrageously expensive offshore wind projects. Don't require solar panels on new construction. - 3/7/2024 2:47:19 PM
Margaret L - SALEM	I've been thinking about this a lot and I would like to add on to my previous comment: I've been watching PGE's response to the outrage about this proposed increase, and they keep trying to point people toward "power-saving options" and weatherization and solar panels, and they don't seem to understand just how out-of-reach a lot of that is. Poor people can't just drop hundreds of dollars on new, more energy-efficient appliances. Home maintenance is expensive, and a lot of us have been struggling long enough now that we haven't been able to keep up with it. Solar panels aren't an option for everyone. I'm in a manufactured home, and I CAN'T have solar panels, because my roof would not support them. I also lived in an apartment for a long time that had no central air and terrible air circulation, and I had no choice but to run two expensive AC units and a TON of fans all day and night in different parts of the apartment, or it would literally be unlivable. And I don't just mean uncomfortable, I mean I'd have been at risk for heat sickness indoors. During the hottest part of the summer, the un-air-conditioned parts of that apartment would regularly hit or exceed 90F. The kitchen would hit 100. Even with fans in every window, it was impossible to cool the place down to a comfortable temperature, even at night. These were decent, pretty well-maintained apartments, but they were constructed before we started seeing such regular extreme temperatures in the Willamette Valley. We were also not allowed to have window units in that complex, so I had to use more expensive, less efficient floor units that sealed poorly and used more electricity. I had NO choice but to pay huge electric bills if I wanted to be able to sleep and work. I shudder to think how high our bills would have gotten after this latest rate increase, and what my old neighbors there will end up paying. Some apartment complexes also require you to run heat to a certain temp if it's freezing at night, to prevent your pipes from freezing, and if they're old, inefficient baseboard heaters, that's going to raise your bill. PGE needs to stop pretending that this comes down to individual choices. PGE and the PUC don't understand the challenges faced by the working class. Renters and low-income homeowners have a lot fewer choices. The choices we have barely make a dent in our bills, and mostly just contribute to us living in even worse conditions: doing less laundry, showering less, trying to find ways to tolerate uncomfortable indoor temperatures to save money, turning off air purifiers, cooking as little as possible, living in the dark all summer because the temperature will go up another two degrees indoors if we open our blinds (fun fact: if you have seasonal affective disorder, this can cause you to get depressed in the summer too. I know because I lived it). Again, I'm calling on you to deny this increase. Tell PGE they need to spend a few years learning how to be more efficient with their money instead of asking the poorest to lower their standard of living even further. - 3/7/2024 2:47:49 PM
Kevin S - WILSONVILLE	I have had more power outages in the last 5 years (one of which lasting 9 days) than the rest of the last 20 years. I have zero trust in PGE using any rate increase to actually fix any infrastructure, as we just approved an 18% increase and have seen no improvement in reliability. - 3/7/2024 2:48:38 PM

Name/Location	UE 435 Public Comments
Brandon - SALEM	Utility companies are not new. They have been around for may years. Just like the state oregon has been around for many years. Pge should have planned ahead and saved its money to offset costs. Cant let a company that doesnt know its envorment continue to raise rates because of stupidity, ignorance, or greed. Oregon has had trees and wildfire danger since before america was created. Whats changed? Nothing. So if they cant plan for extra costs the same way all citizens do they should close up and let someone else take over. - 3/7/2024 2:58:46 PM

While we do not qualify for discounts it's becoming impossible to keep up. Please consider us when allowing price hikes... - 3/7/2024 3:02:27 PM
Ken Clampitt - MILWAUKIE	My electric bill in January and all the months before never whent over a hundred and fifty dollars , when they said 18% my bill when "t to 240.00 and the like a lmost a 50% rise and now they want more they lied , it not likly that all of the sudden my electric bill went up because I was using more which is not true , - 3/7/2024 3:07:44 PM
Julie Davis - TROUTDALE	Pge is a for profit company. Consumers are being unfairly overpriced with the increase. For those who are on a limited income i dont know how we can continue to pay for what should be a basic necessity. Please consider peoples basic needs before you hit us with another huge increase. I am paying almost double what I did last year. I love in a mfg homes. They ice storms were bad this year but we cannot survive without heat. - 3/7/2024 3:12:31 PM
Cara Walker - PORTLAND	PGE rates have increased 40% in the last 4 years. Add in the fact that Multnomah county is threatening to regulate gas out of existence (increasing the dependence on electric) and you have a very scary situation for tax paying home owners who are already stretched thin. Enough is enough, stop the rate increases! - 3/7/2024 3:18:28 PM
Jaime Harmon - SALEM	We used to be able to live within our monthly budget and break even but with all the power increases we can no longer do that. We need to be warm and have power but the bill is so high now. There must be other cuts they could make instead of passing all of it on to consumers. Many people can no longer afford to keep warm. - 3/7/2024 3:22:33 PM
Judy Bailey - TIGARD	PGE must be accountable to consumers. Why the massive increase this year? Why another one next year? What exactly have they done to make our power reliable during snow/ice storms and wildfires? This information needs to be sent out to users once a year before another rate increase is approved. We can not let a monopoly exist without accountability. - 3/7/2024 3:31:12 PM
Robert Prah - BEAVERTON	Each city and county in the tricounty have us pay a 5 % privilege tax. This tax in beaverton was raised from 3 % to 5 % for no reason other that at tax payers expense a retreat. Here they learned that other countries were getting. Roll theses back - 3/7/2024 3:34:14 PM

Name/Location	UE 435 Public Comments
Bill Mason - MILWAUKIE	PGE rate increases are not acceptable. You say that the public has a 'perception' that the PUC always approves rate increases; Perception is reality. You basically do approve all rate increases. PGE can fund their initiatives out of their stock profit plan. Quit forcing environmental costs to be part of the rate structure. Make it a part of PGE's stockholders plan. - 3/7/2024 3:35:24 PM
Sonceerahray Miller - PORTLAND	I'm sorry but with all we been through in the last 4-5 years, inflation creating havoc to peoples money especially the ones on a fixed income. It's not a good idea to increasing electric bills. People aren't doing well as far as money goes. We are living paycheck to paycheck. It's not an easy way to live. I guess you have to decide if you want to freeze from the cold weather vs. buying food and starving. It's just insane that people especially retired people on SSA and very low payout of a retirement annuity are trying to make ends meet every month. - 3/7/2024 3:49:07 PM
Nash Drake - BEAVERTON	PGE made \$1.9 BILLION dollars last year. The CEO makes over \$6 MILLION a year. If they want extra money for anything at all, I suggest they start looking for savings in those two areas. We are already struggling to pay our electric bills. They can't get blood from turnips, and someone should remind them and all the money grabbers of that fact. WE NEED A BREAK FROM THIS AND WE NEED YOU TO DO YOUR JOBS AND TELL THEM ENOUGH IS ENOUGH. - 3/7/2024 3:52:59 PM
Jocelyn Chiu - SALEM	I'm appalled that our concerns over rising utility costs are being met by indifference. We are telling you something has to be done because we can't survive with prices going up. Why are we letting public utilities be run by for profit interests? How can this be excused? Is your allegiance to Oregonians or to shareholders of private corporations? We are telling you to stand up for us. Do your job and stop greed from destroying your own communities. If a private entity can't be reigned in, then join us to fight for it to be publicized. If you can't reign it in, you will see how desperate and unsafe our society can get without heat and light. Without electricity we will turn to fire. Fire is hard to contain. Please do something before it's too late. - 3/7/2024 3:57:49 PM
Dave Harmon - SALEM	Rates are already too high...we are not making ends meet - 3/7/2024 4:00:03 PM
Angela Tittle - GRESHAM	You should be ashamed of yourselves. Your wink, nod and approve approach to PGE's money grab is going to literally kill people. How many little old ladies will have to freeze to death in the winter, or suffer heat stroke in the summer because they can't AFFORD to heat or cool their homes before you care? SHAME ON YOU. - 3/7/2024 4:08:38 PM
Kc Knight - GRESHAM	Why are residents serviced by PGE taking the brunt off the price increases? Businesses consume more power on average by leaving their office lights on over night. Businesses are using more of the power and should therefore be paying more. By saying that the businesses of Oregon are allowed to pay less, the PUC is siding with the rich, and telling Oregon residents that their suffering under this economy doesn't matter. It is the residents that keep the economy moving. Stop raising residential prices and start raising business prices. - 3/7/2024 4:10:19 PM

Name/Location	UE 435 Public Comments
Tim Moran - HAPPY VALLEY	What is your plan when you price out all but the richest people? Let them eat cake? Your increases are not sustainable for most people. - 3/7/2024 4:11:45 PM
Shannan Smith - PORTLAND	I'm on social security supplemental income. We keep losing food stamps because we get a small raise in our income that year. At the same time the rent goes up (I live in public housing) because we got a small raise. Now the energy assistance is running very lean and the light bill goes up. It's a LUXURY to take a bath or shower because the hot water is crazy expensive. I live like they did in the time before electricity. I use a gas cook stove I see and get heat from candles. This is no way to live at 55. PgE the Portland one said I only get a 25% discount, yet they give up to a 60% discount. How in the world do I not qualify for the 60%? Electric is not the only bill people have to pay. Please stop the increases. Yes we have storms. Ok. There used to be a thing called the cost of doing business. It would be great if PGE could absorb some of this 'extra' work and not pass every single penny of cost down to the consumer who has NO CHOICE but to use it. Unless you wanna live like cave people again. Thank you for listening ?? ?? - 3/7/2024 4:12:50 PM
Dee T. - HILLSBORO	There is absolutely no reason to approve PGEs rate increase proposal when their CEO takes home over 6 MILLION dollars PER YEAR. Sure, that includes bonuses but even if we factor out bonuses and stock, she still takes home 16.9% of \$6.3 million, or roughly \$1,064,700 a year. She makes over a million dollars a year in salary alone. I make less than \$40k and the average Oregon citizen makes \$32,071 per year. The citizens of the Portland Metro Area are struggling to survive and in the 6+ years Maria Pope has been the CEO of PGE, the citizens of Oregon have paid her enough money to comfortably retire on forever. This proposal for an increase is greedy and unnecessary. In 2023, PGE received 8 grants, totaling \$314,000,000. PGE reports a net income based on GAAP of \$228,000,000. Their non-GAAP net income was \$233,000,000. What are they doing with all that money? Why does a company with a natural monopoly, a CEO who "earns" over \$6,000,000, and a net income of over \$200,000,000 need to increase our rates yet again? Please make it make sense, because all I see is a greedy corporation trying to make more money off the backs of hard working Oregonians. PGE should be a non-profit with a \$1,000,000 gross cap on employee salary and every dime that isn't spent should be invested into infrastructure and supporting our lowest income residents who need the help, instead of employee bonuses. It's a "natural monopoly" which means that they shouldn't be able to make such a huge profit off of residents of Oregon. If I could choose a different power company, I would, but my home isn't set up for natural gas (nevermind the attempts to outlaw natural gas). If the grocery store or gas station prices are higher than I want to pay, I can go to a different store. But with the natural monopoly PGE has, they're able to run free with no natural consequences of rate increases. Oregon citizens are held hostage by the whims of PGE. Please do not approve this rate increase proposal. - 3/7/2024 4:21:21 PM

Name/Location	UE 435 Public Comments
Sarah Bollar - PORTLAND	The oregonians are unable to afford these extreme rate increases and will not be able to afford electric in a place that absolutely requires electricity to live. 40% increase in 4 years is what this docket is supposing, 25% increase in just 2024-2025 alone. This is outrageous and to blame weather and "needing upgrades" is an utter fallacy. Not every weather related event affects Electric companies and the ones that do should have a contingency plan setup. The oregonians would like to see exactly what upgrades are being supposed and if they are necessary. We would also like to see how the weather has directly affected PGE over a period of 2 decades and see if there are some years that are worse than others and if it balances out over time. Increasing costs to the average household is extreme and unaffordable, if we must provide extra funding, lets have the wealthy provide the extra supplements via taxing those who make over \$100,000 individually each year. - 3/7/2024 4:25:32 PM
Paula Sanders - PORTLAND	If the PUC doesn't want to give the impression that they give public utilities whatever they want, they need to start telling these companies to find ways to offset costs without asking for a rate increase. The working class customer is struggling and they know it. - 3/7/2024 4:33:19 PM
Dave Standy - SHERIDAN	40% increase in four years. you have to be kidding me. we can not afford this kind of runaway increases. - 3/7/2024 4:33:32 PM
Barbara Russell - SALEM	So what happens to people who are barely able to pay their electric bill now? Raise the rate again??? No more raises for at least 2 years. People are hurting now. This only makes things worse. - 3/7/2024 5:00:33 PM
Leslie Beaty - SALEM	After the most recent increase, my bill went from an average of 400 to over 600 . No more usage than normal it's to the point the bills coming in are so excessive we taking from other areas of our budget. In our case that happens to be food, it is getting to the point I can't have heaters on in more than 1 room and that is just our toddlers room, the rest of us are piling blankets and sweaters when the temps are dropping into the mid to high 30's. Anticipation those rate increases we used less energy yet our bill is over 200 dollars more than when we were using heat a few months ago. This is becoming egregious, and the expectations for consumers to pay the debt of a company that chose inaction during wildfires is completely ridiculous. I understand They lost a lot of money due to their choices during fire season, but that shouldn't fall on the consumers back to help their bottom line. - 3/7/2024 5:07:52 PM
Chris Jones - GRESHAM	I live in Gresham. My electric bill went up over 30% with the recent hike and now you want another hike next year. This is crazy. My winter electric bill went from \$200 / month to nearly \$300 / month this year. I didn't get an accompanying 30% pay raise. I got laid off due to lack of work. Just stop it. - 3/7/2024 5:24:57 PM

Name/Location	UE 435 Public Comments
J Slack - PORTLAND	<p>Considering PGEs gross profit for 2023 was 2.2 billion and over the last 13 years they have had a gross profit of 20.231 billion I don't think they need any more of my money to make any necessary infrastructure changes when I struggle to even pay all of my bills every month AND the public/state is funding energy assistance programs" .. How much does CEO Maria Pope of PGE make? \$5,480,355.00 in 2021 according to the ERI economic research institute. And what has her annual increase been each year? But you need to take even MORE money from the public who are not even making a living wage and work multiple jobs to fund a cost of doing business??? Absolutely NO increase should even be considered. You need to be decreasing the amount they are able to charge. I also think it is odd that when I've called to ask about high electric bill amounts I'm told to do a test to see what is using the energy in my house at what times, yet the following month after I call my bill decreases' I find it odd when this has happened twice' - 3/7/2024 5:41:20 PM</p>
Aaron Fehon - PORTLAND	<p>How do we, as consumers, know that these rate hikes requested by the utilities are actually justified and not just more greedflation? - 3/7/2024 6:15:16 PM</p>
Jordan Davidson - HILLSBORO	<p>Hello, I feel like we need to address the financial disparity when we are talking about increasing prices. There is a large population in Oregon who has the money to pay for this increase. And some. And then you have people who are going without power due to the increases. We should implement a sliding scale based off of household income, so that way the needs of the utility companies get met as well as the needs of the citizens. It would essentially just be a tax on utilities. That's the only way that this is going to work and not completely decimate low-income households. If you put it out for the people to vote for, it might be close but I am sure the people would vote for a sliding scale. - 3/7/2024 6:17:43 PM</p>
Aaleron Fehon - PORTLAND	<p>People are already suffering in great numbers. Corporations are ruthlessly raising prices without any reason other than greed, rent is through the roof, and no one can afford a house. Raising the price of electricity at this time is just going to add insult to injury. There is only so much you can squeeze people before you run out of blood, and the American people are already down to the last drop. - 3/7/2024 6:17:56 PM</p>
T Roberts - LAKE OSWEGO	<p>Let start getting the power lines underground. Solves fires and repeated power outages every year. Seems bizarre to me using 100 year old technology. It seems the pay outs out after catastrophic fires could have been better spent placing the lines below ground. Cutting trees back? Seems like backward thinking in a climate crisis. Could also upgrade for electric vehicles and such at the same time. Let's clean up Lake O. - 3/7/2024 6:20:09 PM</p>

Name/Location	UE 435 Public Comments
David Johnston - HILLSBORO	<p>After switching to the time-of-use plan with Portland General Electric, I spent some time trying to decode the now much more complicated bill. It is clear that PGE are lying about their rates on their web page at https://portlandgeneral.com/about/info/pricing-plans/time-of-use/time-of-use-pricing-home . The web page states the low, mid and peak rates per KWh are 5.16c, 21.031c and 27.693c respectively. In my bills, the per KWh prices are actually 8.651c, 16.029c and 41.431c. This includes the additional non-time-of-day charges that are still per KWh along with the transmission and distribution charges that they have broken out, separately listed and not included in the web page. Accordingly my electric rates are significantly higher than I anticipated based on the misleading information that PGE are pisting. In addition, for each of the 24 line items they include, covering at least 6 different methods of charging (9 time of day charges, per-KWh charges, capped per-KWh, flat rate, percentage of the bill and percentage of something else not described in the bill), the bill is computed by computing the line item, rounding to two the nearest cent for each line item, then adding the line items after rounding, rather than computing to sufficient decimal places, adding, then rounding. By doing this, the rounded errors are compounded. I would appreciate action from the PUC to require PGE to be honest in their pricing, transparent in their billing and accurate in their billiong. With best regards, - 3/7/2024 6:43:06 PM</p>
Bernie Nickels - PORTLAND	<p>My comment is: the last four years rates have gone up 40%, my retirement has not. Specifically, Social Security has not. Yes, I have other income because Social Security, at the time of its implementation, an since, has never been intended to be anything but a supplement. These other incomes have not gone up by 40% either. We are speaking of just one utility here. I hear what might and could happen but not a bonafide solution other than the solution is in someone elses hands. Understanding this is a for for profit corporation? Might I suggest another solution? Take 39% of the profits this year, if thats what it takes, and put it towards whatever problem has been presented above. Im sure anything needed, to supply the service you offer, would immediately, if not shortly rectify itself. As people change, so must buisness. Just sayin profit is claimed after, the expense of doing buisness. Not matter what, I would still argue, at times a Corporation giving up some profit may be what's needed to continue doing buisness. Maybe 39%is a stretch, but not if the service is unaffordable. Isnt this what I was taught a monopoly is in school? I think I was taught its wrong, and Illegal. Not, monopoly is what i hear because? I hate do not appreciate being put in a position where I feel I have to argue. This is alot like comparing apples to oranges. My story and Ill stick to it! Cheers - 3/7/2024 6:52:36 PM</p>
Alasa Hughes - SALEM	<p>I just saw PGE filed to raise costs again in 2025. I am pleading for this to be denied. The 18% increase this year put a lot of families in a bind. Making families having to chose between groceries or heat. I am no longer in the super low income bracket, but we are barely getting by as it was. Now we have to magically find more \$ for almost 20% increase. Where is the line? Enough is enough. Thank you. - 3/7/2024 7:02:01 PM</p>

Name/Location	UE 435 Public Comments
Josiah Hughes - SALEM	I saw PGE requested to increase rates again next year. I am beyond frustrated. How much can all the corporations squeeze out of oregonions before most of us are homeless? What happened to PGE's part of the \$450 million dollars from the federal government not even 5 months ago! It was for the same reason they are claiming to need the increase again. This is your chance to stop corporate greed. None of us regular citizens can get our head above the water. - 3/7/2024 7:16:50 PM
Gary Thompson - TROUTDALE	PGE submitting another rate increase request right after getting a 24% increase in January is unconscionable. Using the inclement weather as an excuse to jack up rates so they can apply the money to infrastructure does not guarantee that's where it will be applied. It's their responsibility to maintain their infrastructure with the revenue they currently receive, not to enrich shareholders on the backs of the ratepayers! - 3/7/2024 7:36:35 PM
Trevor Beaty - SALEM	Stop raising my electric bill! ?? - 3/7/2024 8:04:32 PM
Ahren Richards - PORTLAND	PGE should stop their bonus structure and defund the team coming up with their narratives. We can't sustain as a society paying for these rates. They should have been more prepared when the coal plants were turned off by Brown. - 3/7/2024 8:06:43 PM
Kara Githens - WELCHES	The multiple increases in PGE's rates is making it hard for our family to adequately heat our house in the winter. The cost has become prohibitively expensive. Please do not allow further rate increases. - 3/7/2024 9:02:34 PM
Amanda Pentecost - PORTLAND	OPUC should challenge utilities to explore other solutions besides raising rates a total of 40% over what consumers were paying four years ago. Please serve true to the mission of why OPUC exists in the first place. - 3/7/2024 9:30:25 PM
NA - TIGARD	The electric companies basically have a monopoly. PGE made a \$18 billion dollar profit in 2023. Improvements & repairs, should be absorbed as much as possible by the service provider who is in a (Can't lose position). Raising the rates should be a public decision; we should vote on such matters. We make them money, we don't serve them. - 3/7/2024 9:53:57 PM
Julie Wisner - MILWAUKIE	Your increases are crushing us. I'm a retired single female on Social Security. I own my home and would like to keep living in it. With house taxes going up, and electricity going sky high, inflation at the grocery store and gas prices soaring to name a few, how can PGE raise rates again? Please don't raise rates again! - 3/7/2024 10:01:32 PM
Cindy Norberg - NEWBERG	I'm on a fixed income I have terminal cancer. I just turned 65. You wouldn't think I would have to choose to stay warm or freeze. Please stop food is so expensive now this. - 3/7/2024 10:24:30 PM

Name/Location	UE 435 Public Comments
James Winkler - BEAVERTON	Public Utility Commission I understand our rates have increased 17-18% this year and PGE is requesting another 8% increase by 2025. Although I do understand that PGE is ramping up their climate chaos resilience for the region, I do not think they are doing enough to keep up with the realities that human induced climate change is causing and how the damage will exponentially increase over the years to come. According to the plans presented, Portland General Electric anticipates it will spend around \$50.6 million this year in wildfire mitigation and capital expenditures. That sounds like a lot of money, but being born raised and now raising a family of my own in Oregon, I do not believe PGE is spending enough to prepare our region for what's to come. Though anecdotal, the 2023 winter storm that put thousands out of power due to down trees and power lines is a most recent example of our lack of resilience, and that happened in the most populated area of PGE's jurisdiction. As a teacher in SW Portland, we are still impacted by this outage, as the lack of heat destroyed two large schools (Markham and Robert Gray). I believe it would be worth while for the PUC to find ways for rate payers to access emergency power to keep homes and public buildings heated so that we are not dealing with more bursted pipes, or medical device failures, etc. we should all have access to Generators, solar panels, power walls etc. for these emergencies; however the up front costs are unaffordable for many if not most rate payers. I know you all are doing the best you can for rate payers, and I understand that the utilities have to make money for their share holders and CEO exuberant pay, but there is a general sense that the ratepayers are getting screwed again. - 3/7/2024 10:58:34 PM
Bonnie Waterston - PORTLAND	I'm a senior concerned about the electricity rate hike; My bill already went up from \$104 last year to \$128 per month this year (equal pay)! I have gas heat in my master bedroom. - 3/8/2024 12:03:15 AM
Keith Leete - PORTLAND	As a retired senior citizen I feel it is totally unfair to raise rates as much as you have when we only got a 3.2% raise in our pay! How can you honestly feel good about robbing customers. I understand costs have went up, but what you pay your workers is way out of bounds and just shows how greedy your company is, you make more than enough with the money you collect through our bills, be reasonable about what you ask for and don't be a price gouging company. Just remember there are many of us out here that are on a fixed income and can't continue to afford outlandish pay hikes! - 3/8/2024 6:37:50 AM
Goid Citizens - ESTACADA	They are already over charging us. A 40% increase over a few years is ridiculous and theft. They have already had 2 massive increases over the past few years. Force them to decrease their executives salary and bonus packages. Stop this madness and make them lower their rates. They are charging us into poverty. - 3/8/2024 6:44:49 AM
Venita Alford - SALEM	I feel like utility costs are going up because we are supplying power to the state of California. I suspect it does take more money to do that but that should cost the Californians; not Oregonians. - 3/8/2024 6:50:42 AM

Name/Location	UE 435 Public Comments
Roy Herrera - SANDY	Your financially bankrupting rate payer with extremely EXCESSIVE RATE INCREASES THAT IN THE LAST FOUR YEARS IS MORE THAN DOUBLE THE RATE OF INFLATION. YOUR SUPPOSE TO AN ADVOCATE FOR OREGON CITIZENS NOT A shill for PGE. QUIT BEING THEIR STOOGES. THIS IS A HOT TOPIC WITH ALL MY NEIGHBORS! - 3/8/2024 7:34:07 AM
An Omos - CANBY	Power should never increase. It only increases because the state sells off are power to other states. This must stop. We are already the 2nd highest taxed income state. Inflation is up over 100%-200%+ on many items. Now you want to increase utility. It is blatant theft on all levels. I would encourage you to be a moral and ethical human being. Demand no more rate increases. Help your fellow man. Stop harming the population. - 3/8/2024 7:59:24 AM
Robert Viores - ROSEBURG	Why are the customers being charged for the cost to upgrade and repair of the Electric Companies infrastructure, when they have collected millions over the years and kept the profits. And only did the necessary repairs instead of putting money aside for the upgrades they knew they were going had to do anyways. Now the general public is expected to cover the costs while the Electric Company still gets to keep its millions in profit still. That is not fair. If your answer is capitalism, then the people need to move away from that idea. - 3/8/2024 8:13:27 AM
Stuart Malkin - LAKE OSWEGO	PGE is hiking rates at a rate too quickly for Oregonians to afford. My own power bill is pressuring our financial situation even in taking measures to reduce our heating and electrical usage including adding insulation and only heating or using appliances during non-peak hours. And now they are proposing another rate hike for 2025, using the justification of January 2024 storms! My understanding from news reports is that they justify a rate hike such as in 2024 for battery storage infrastructure, but much of the revenue from the hike doesn't go to the project. They need to be held more accountable in their justifications. - 3/8/2024 9:13:06 AM
Nic - CLACKAMAS	Oregon generates tons of electricity through solar, water, and wind technologies that we sell our surplus power to California. Why is it that the consumer has to pay an increased rate when you're already profiting from the sale, and from the rate hike. You can blame fires, and cold weather but none of this is new for oregon. Also if you're going to say the rate increase is for new technologies then show us what exactly its going for as PROOF. Otherwise you're saying you need a rate increase just for your own pockets since your stock is losing money - 3/8/2024 9:53:08 AM
- FAIRVIEW	We can hardly afford rent and food. We cannot afford to pay an increase to PGE for electricity. This is outrageous. Don't make us choose between food and heat. - 3/8/2024 11:25:16 AM

Name/Location	UE 435 Public Comments
- OREGON CITY	In today's society, electricity and other utilities should be considered a necessity, not a luxury. Which would only make sense that they be tax funded rather than extorted for profit. Even so, rate increases in the last couple of years could be covered by a small fraction of a singular shareholder's annual income. Furthermore how is it justified that rates for residents using utilities for survival are increased more than commercial rates using them for capital gains? I don't understand how our choices have come to be either continuing to support the racket, or to live in the dark. - 3/8/2024 11:48:10 AM
Michael Humphreys - PORTLAND	I think that approving a 40% rate increase for PGE rates over the last four years is absurd. This is a business which is basically a monopoly. I think this increase only benefits the grossly overpaid executives of the company and stockholders. This is greed, pure and simple! - 3/8/2024 12:03:24 PM
Rachel Jonesmith - MEDFORD	I strongly oppose the pacific power proposed rate increase. Last year's rate increase that hit us in January has had a large effect on my family's ability to balance our monthly budget. We are as energy efficient as can be in our home and see no more corners we can cut to keep our bill down. I understand that utilities need to balance their own rising costs, but Pacific Power is using our rate increases to pay off the \$299 million dollar settlement they owe after ignoring issues for a prolonged period of time leading to wildfires. The people of Oregon should not have to cover the costs of a company's blatant mishandling of risks. - 3/8/2024 12:38:52 PM
NA - PORTLAND	Before PGE gets approved another cost hike. Maybe take a look at their executives bank accounts? I have to choose between rent and food already. I have to pay power every other month when I bonus. I have a very well paying job and live in a tiny apartment. If you raise the power AGAIN you are going to see unprecedented deaths. Stop punishing the poor because these ceos know how to deliver a pretty pitch. - 3/8/2024 12:48:31 PM

<p>Julie - PORTLAND</p>	<p>Electric docket 7.4% for homeowners, 44% increase in last 3 years. Please most homeowners can not afford to take on all the price increases in this State. 1. we pay tax on our bills already for those that can not afford it. 2. All the electric cars, people that can afford a car like this are not charging at home, they are charging at all the FREE charge stations all over. We pay gas price to fill up why do they not have to pay electric rate like you charge homeowner? Make you money up here at charge stations. 3. Why should we continue to pay for people this government allows into the country illegal, they are being paid to live here and taking from the homeowner and taxpayer who already paying for all this stuff. People that worked hard all their lives are losing everything to paid for all this thru. Gas, electric, gas at the pump, groceries, property taxes, state and federal taxes, we go without and work hard and the system needs to change. I worked since I was 12 and I do not expect a FREE ride, but I EXPECT all to pay their share. PLEASE STOP taking from us. 4. This State spent 300 million of the marijuana profits plus property taxes, and federal funding for what? Where is the money from federal for Covid that was given, where is the marijuana profits efforts to other areas like low income funding for water, gas and electric. You took federal and other funds for are Veterans to help others that you are paying for coming here and bad behavior. Are Vets are on the street those that protected US. This is a crime in itself. Where is the money going to help people that are USA citizens that are trying to keep up above water. Where is the lottery money really going???</p> <p>STOP ASKING FOR US TO PAY MORE AND MORE we are working and paying you for what, when do we get a break, if you can fix all this have a meeting and re-duce programs. Something has to give WE THE HOMEOWNERS AND BUSINESS'S OWNERS we really funding it all and we can't do it. Police, safety, all of it you take from us. - 3/8/2024 1:12:26 PM</p>

Dartagnan Georgiades - MILWAUKIE	<p>I have in interesting idea. Why not limit utility increases to the same amount that social security recipient's get increased. I think that would be fair for everyone. - 3/8/2024 1:28:49 PM</p>
Douglas Hansen - GRESHAM	<p>With the cost of utilities going up and food costs going up. There is nothing left. The increase in utilities at 16% is going to eat my check up. How are people supposed to save for retirement when everything increases - 3/8/2024 1:41:40 PM</p>
Evelyn Fuller - GRESHAM	<p>Every corporation is raising rates and claiming bankruptcy since the Covid-19 Pandemic. Also climate change too. The cost of living in Oregon is too high. You have increased your rates since the Pandemic 4 times. I had to pay \$570 dollars for February that is armed robbery for a one level 1600 square feet home. We keep our heat on 68 degrees and we wear sweaters at all time and long John's under our clothes. Me and my husband are on SSI. You all need to make due with what you have now. Stop killing your customers by nickeling and dime us. We are broke. - 3/8/2024 2:03:42 PM</p>

Name/Location	UE 435 Public Comments
Chris F. - HAPPY VALLEY	<p>This past years the rates for our electric bills have skyrocketed in a time when inflation and costs are at an all time high. This morning I read an article on a response made by the Oregon Public Utilities Commission. Before reading this article I was under the assumption that rate hikes were only a result of the company itself. I was not aware that these hikes must be approved by the Oregon PUC. These rate hikes are unacceptable and must be reversed and capped. It is unfortunate that the utility companies were sued and are still being sued due to the wildfires, however what is unacceptable is that our rates are drastically increased to supplement the payouts and costs for repairs. It is the sole responsibility of the utility companies to properly maintain the electric grid. Pacific Gas & Electric annual revenue for 2023 was \$24.428B, a 12.68% increase from 2022. Pacific Gas & Electric annual revenue for 2022 was \$21.68B, a 5.03% increase from 2021. Pacific Gas & Electric annual revenue for 2021 was \$20.642B, a 11.77% increase from 2020. In 2021 the CEO for PG&E received a total compensation of \$51.2 million. Instead of giving it's CEO excessive compensation packages the company should spend it's funds properly and put it's profits into the infrastructure making sure they are safe. Instead they neglected maintenance and paid enormous wages to it's CEO and now they are passing on it's new expenses to the customers. This is not ok! Many people were struggling just to keep the power before these rate hikes especially the elderly who are on fixed income not to mention the rest of us who are paying to try to keep up with inflation. PG&E should of carried an extensive insurance policy to cover any damages they might be responsible for. Although hard to predict what happend with the fires, an adequate policy should of had them covered. I know with companies this large they often self insure, nonetheless the consumer should not bare the brunt of the outcomes of the lawsuits. The Oregon PUC should not of approved these excessive rate hikes and needs to reverse their approval to a % that is fair to the consumers. Here is the quote from the Oregon PUC: "I recognize that people are struggling with rate increases from the utilities, compounding the rising costs that they're seeing across the economy," said Megan Decker, chair of Oregon Public Utility Commission. "We only approve rate increases when we are persuaded based on the evidence that is put before us by groups representing residential consumers, business consumers, environmental justice advocates, that the utility is managing reasonably, but costs have nonetheless gone up." Rate hikes should not be approved on a persuaded argument from Environmental justice advocates. It should be solely based on the cost of electricity based on the number of customers and use. Things are getting out of control for the average individual trying to make it thru life, with the excessive rate increases on everything, Oregonians are going to be forced to live somewhere else. This case is a direct result of the electric infrastructure not being properly maintained over the years and it was only a matter of time for this to occur. While I appreciate everything all of the work the hard working individuals at PG&E do to keep power on at our house, no CEO should be taking home \$51.2 million while the grid goes neglected. And the people who are dependent on electricity which is pretty much most of us should not have to eat the cost of their improper money management. I urge Oregon PUC to seriously reevaluate the rate increases they have approved and to reverse them to a point which is fair to the consumer. - 3/8/2024 2:21:59 PM</p>

Name/Location	UE 435 Public Comments
Ann Warner - FAIRVIEW	This rate hike is ridiculous, I'm a retired disabled hospital worker and my husband is a retired disabled heavy equipment operator. Between the two of us we barely make rent and food not including our electric bill. This month with the rate hikes our bill was over 500 dollars. That is roughly half of my monthly income. Pretty soon if it I might just be a homeless person! What did working tirelessly all those years get me but a home on the streets because of my rate hike. It's not worth working anymore if those high paid individuals can retire on more Than probably make in my lifetime. Maybe the should look at rate decreases in their own income before they take more of mine. - 3/8/2024 3:01:37 PM
Travis Wagner - GRESHAM	I think PGE should be owned by the state. They are raking in huge profits and instead of those profits being used on repairs and other costs they want the costumers to pay for it so they can still continue to get max profits and exec getting huge bonuses. Let the company pay their share. They already increased our bills by 30%. No more. - 3/8/2024 3:56:08 PM
Travis Wagner - GRESHAM	No to increases of any kind. - 3/8/2024 3:57:05 PM
Kenneth Tam - PORTLAND	Here is a template; Dear Oregon Public Utility Commission, I am writing to express my profound concern and dissatisfaction regarding the recent announcement of rate increases by Portland General Electric (PGE). As a resident of Portland, living at 911 SW 21st Ave. I have been a loyal customer of PGE, relying on their services for my daily needs. It has come to my attention that PGE plans to increase their pricing rates. This decision is particularly disheartening because it seems to disregard the current economic challenges faced by many Oregonians, myself included. The lack of significant infrastructure improvements or movements to justify such an increase adds to my frustration. Moreover, despite these proposed rate hikes, I, along with other residents, continue to experience frequent power outages, which further questions the rationale behind increasing the financial burden on consumers. The absence of tangible enhancements in service delivery and infrastructure, coupled with the continuous inconvenience of power disruptions, raises concerns about the justification for this rate adjustment. It is crucial for utility providers like PGE to ensure that any increase in rates is matched with proportional improvements in service quality, reliability, and customer satisfaction. Therefore, I urge the Oregon Public Utility Commission to thoroughly review PGE's proposal for rate increases. It is essential to ensure that any adjustments are reasonable, justified by concrete improvements, and considerate of the economic impact on Oregon residents. I look forward to your response and hope for a favorable review of this matter. Please consider the implications of these rate increases on consumers like myself, who depend on PGE for essential services but are left questioning the value and reliability of these services in light of recent developments. Thank you for your attention to this matter and for advocating on behalf of Oregon's utility consumers. - 3/8/2024 4:30:55 PM

Steve Albert - FOREST GROVE	Utilities need to make a return on its investment. Over the years PGE et al have paid out dividends and made huge payments to executives. Now, they find themselves in need of money to improve the infrastructure. They had an obligation to improve that infrastructure prior to paying the dividends and executive pay. We the rate payers now have provide those needed funds. Enough! Any rate increase should only increase at the rate of inflation. Do not approve any more rate hikes until the utilities become more responsible. - 3/8/2024 4:57:36 PM
Kevin Scott - TIGARD	Your selling Orgonians down the river & we know it. Wait till we come looking for you! Everything being said about fire danger is Absolutely a lie to take folks over the coals. There's no accountability on this new revenue, windfall profits for them. There's no accountability on behalf of Orgonians. - 3/8/2024 5:03:14 PM
Victor Filmer - ALOHA	Raising rates at this time is simply unfeasible with the way the entire economy is facing an entire breakdown . The average person cannot make these payments and survive with a family to take care of. The country will be making changes thru out the year until Election Day and I feel raising rates at this time is just wrong for the middle class family to have to afford before food. - 3/8/2024 5:15:40 PM
NA - CORNELIUS	I strongly oppose this rate increase. Please block this and do not let PGE increase rates yet again year over year. If they are going to try to increase rates 42% over a few years time, perhaps it's time to bust their monopoly and reintroduce some competition or stricter oversight into the mix. Better yet, let's reverse their last rate increase. Customer currently have no choice of electricity provider, no say on rates, no real buffer or reimbursement for over paying on this basic utility. Reading over their financials, it appears PGE is upset that customers used less electricity then normal in the winter, as well as their renewables producing less. It seems to me, those two factors balance themselves out nicely. Why should we pay more because we used less electricity last winter? Steps should also be taken to decrease their monopoly over electricity in the area or give consumers greater ways to hold them accountable. If PGE needs to pay for more batteries and infrastructure I suggest they use some of their profits from previous years, decrease some of their top earners salaries (Maria pope made 4 million last year I believe.) wait until they can afford it, or perhaps request more grants from the government, but under no circumstances should PGE strangle their consumers with another rate increase. - 3/8/2024 5:15:40 PM

Richard Crimi - BEAVERTON	<p>Let them eat cake. That's what I hear the PUC Chair telling the public about this rate increase request. The Commission has repeatedly granted PGE rate increases, including the highest in history just last year. Now they want even more money for total increases of 40% in just the last few years. Included in this round is to raise their profit margin. Enough. We are told to seek ways to lower our bills. I have done that, installing new, more efficient HVAC equipment in my home. I have paid attention to "peak periods", and made adjustments to lower my energy consumption. Yet my bills have done nothing but escalate. I am paying almost 100% more in energy bills than I was just a few years ago. While we need to prepare and build for tomorrow, we need to live within our means today. That is what households do. And they are struggling with the inflation of the last few years, increased housing costs, and getting back on our feet from the pandemic. How will the Commission factor in these realities in their decision? Sincerely, Richard Crimi Beaverton - 3/8/2024 5:31:03 PM</p>
Richard Crimi - BEAVERTON	<p>I have a proposal for PGE's requested rate hike. For every percent increase in rate, lower the profit margin by that much. In fact, go back the last two years. That would result in a 40% decrease in profits. How would that go over? Not at all, I'm sure. But let's try something new to get rates in control, because they are getting way out of whack. Richard Crimi Beaverton - 3/8/2024 5:51:58 PM</p>
Gwen Ingram - PORTLAND	<p>I oppose another rate increase by PGE. Customers are not receiving wage increases due to increased cost of weather repairs, increased rent, increased groceries, and we are just trying to survive. So many of us are on the brink of becoming homeless as it is, with the housing cost increases. We are working hard, just to continue to be beat down. I emphatically oppose yet another increase, which equates to a 40% increase in four years! - 3/8/2024 5:55:13 PM</p>
Khilee Miller - GRESHAM	<p>I just want to say that I don't think it's a secret that there's a lot of people that are financially strapped. I'm a single mother and I'm low income and I already get a discount of 15% off but my electric bill is \$200 a month and I live in a two bedroom apartment. I've chosen to use my fireplace to heat up my apartment a few times and the electricity doesn't really change. Something's got to give I'd rather be a part of a solution than part of a problem. I'm just sharing that I'm really struggling and trying to get help with electric bills is really hard cuz there's so many people that need help. I don't know what I'm really asking for if I'm even asking for anything I'm just trying to stay positive, respectful and share where I'm at. - 3/8/2024 6:29:10 PM</p>
M S - PORTLAND	<p>PGE Rate increases. So now within 2025 we are looking at paying way more due to their rate increases. That means less food on our tables and less medications that we so desperately need. Going solar sure does sound great. Food increases, gas increases and all the company cares about is their stocks and what they pay out. It is their responsibility to manage the money right and do the necessary power grids upgrades instead of customers paying an extra \$75.00 a month. - 3/8/2024 6:46:52 PM</p>

Name/Location	UE 435 Public Comments
NA - SELMA	So while the power companies post record profits, customers are to foot the bill for "infrastructure " upgrades that should be ongoing improvement paid from profits. Or are the increases necessary to pay for class action law suits? - 3/8/2024 8:07:24 PM
Anna Neet - SALEM	There has been a huge increase in rent, groceries, and other essentials. Combined that with utilities, I am close to losing my apartment. I understand that there needs to be some increase, however please do not make it so extreme. - 3/8/2024 9:05:52 PM
Jasmine Burns - RHODODENDRON	This proposal will harm so many Americans who are already struggling right now. It is my hope that we can find alternatives to aid in relief of mother natures wrath. - 3/8/2024 10:12:35 PM
Jasmine Burns - RHODODENDRON	This proposal will harm so many Americans who are already struggling right now. It is my hope that we can find alternatives to aid in relief of mother natures wrath. - 3/8/2024 10:13:33 PM
Victoria Campbell - BEAVERTON	No! My bill just went up \$70 and I wasn't even living there most of the month due to storm Damage. - 3/9/2024 11:09:41 AM
Lindsay Kane - BEAVERTON	PGE has failed to consistently provide power at our residence in the Portland metro area since their last rate increase. We have been without power once a month (1/13, 1/14, 2/17, & 3/9) since 1/1/24. They often are unable to respond to outages stating, they don't have crews working this weekend or they can't provide any plan for restoration. Their online system consistently provides incorrect information and waiting on hold for an hour to speak with an agent is fruitless because they seem to be using the same system. PGE needs to recognize their management and prioritize customer service. The last thing they need is more money to waste. - 3/9/2024 11:11:30 AM

Name/Location	UE 435 Public Comments
Ashley Paulman-Garrison - PORTLAND	<p>Here I go again, wasting my time, asking that you not push more Oregonians into indigence. I am convinced upper PGE management and leaders of this state, including those on the OR PUC, are so out of touch that outcries from us ratepayers fall on deaf ears & numb consciences. You SAY you're here to weigh our burden with the "requirements" of those asking for constant rate hikes, but your actions say otherwise. Why even invite our input when it makes no difference to you? Do you enjoy hearing how the working & middle class of Oregon are struggling to keep a roof over our heads, pay for groceries, and keep the utilities on? You all basically make 200K each to be the yes-men for companies headed by millionaires, demanding over 40% of rate increases on the rest of us in just 3 years. About 2 weeks ago, several neighbors lost power for "unknown" reasons for hours. They cancelled schools last minute, so parents had to call into work (again) last minute. No snow was falling, no ice, not a single breeze could be felt in the air, and yet half of us were in the dark & the other half had another missed day of school and work. For WHAT? The rate increases continue, year after year, without a single improvement in service. In fact, the service is worse. Maria Pope made 8 million in 2023-- she hasn't shown her face or made a single comment about how her company has failed its most burdened rate-payers. She responded to utility advocates complaining that another one of her slimy plans was "nothing but a money grab" & she (shockingly) momentarily backed off of that one. People DIED in their homes during our January ice storm & PGE blamed their "lack of planning". Perhaps we could have planned had PGE's phones & website worked & customers were given ONE factual piece of information to figure out next steps. PGE knew a storm was coming, then waited days into it, with ice everywhere, trees down and hundreds of thousands without power, to get out-of-state crews to come help while people risked hypothermia in their homes. Did THEY plan? You can see why some of us stuck with PGE are concerned about giving them record amounts of more money. I'd also like to add that those of us stuck in the middle were not punished with an 18% rate increase-- it was far more & you all know that. We're also the ones on the hook to provide others who qualify for discounts with relief, but will receive 0 such consideration ourselves. Ever. You are killing us. Portland is already one of the most expensive places to live, in a state most taxed (second to Massachusetts) in the nation. What makes you think, in 2024 with record gas prices, food prices, inflation, and raising costs of EVERYTHING, us Oregonians can take on ANY MORE? Last time, we told you we couldn't; you passed the rate hike anyway. And you'll do it again. I just wanted to make sure you knew how high the stakes are for most of us. I was raised here. I've been raising my family here-- my kids are bonded to their community & friends here, and yet all we can think about is how you are forcing us to leave. Think about how devastating this is for lifelong Oregonians. Think about our senior citizens, disabled citizens...think about literally anyone less fortunate than Maria Pope, her C-suite, and the three of you. - 3/9/2024 11:44:25 AM</p>

Name/Location	UE 435 Public Comments
Whitney V - CORNELIUS	<p>It is wrong to increase the rates, you are forcing people that are already living paycheck to paycheck to choose between feeding their family or having power. There are people that are close to being homeless because of all the price hikes. The problem is companies say it's for the greater good and for improvements, when really they sit in their high paying positions living comfortably making 6+ digits a year while the middle class is becoming the low class and the low class is becoming the poor and almost homeless. Instead of padding the paychecks of those in charge, maybe skip the rate increases and actually care about people. I am sick and tired of companies that have CEOs making hundreds of thousands of dollars to millions of dollars a year and not care about paying their employees better or increasing prices to keep their money coming. CEOs need to have an adjustment and give living like us a try for a year and see how it feels. They wouldn't last the full year being able to live. We have health and family we need to worry about, we can't worry about being able to make it to the next paycheck. DO BETTER! - 3/9/2024 12:06:34 PM</p>
Clarissa Wallace - BEAVERTON	<p>I understand about rate increases. However there a a bunch of us that are one paycheck away from being homeless. Consumers should NOT be forced to choose between food on the table or keeping the power on. The cost of gas, food, rent,etc. It's ridiculous! Everything is going up but our wages stay the same. There needs to be more help to assist with those who can't afford these ridiculous increases - 3/9/2024 2:41:20 PM</p>
Jeff Jones - OREGON CITY	<p>We understand utility companies need to raise rates. But can't these rate increases be done in smaller increments, so the impact is not so difficult for those of us on fixed incomes to absorb? The latest rate increase of 18% was just too much all at once. We are retired living in a 1200 sq ft home with vinyl windows and partial insulation (we lived through the years of turning your lights off when you left the room and we continue to practice this). We are now going to insulate the balance of the home to, hopefully, help with future heating and cooling costs. But we will also have to work our budget to include this added upgrade, all the while budgeting for the current rate increase. We went back through the last five years of PGE billings and our billings have increased by approximately 47%! In five years! We have the documentation to show this. Now, we understand that PGE is asking for another rate increase for 2025 of 7.5%! Please, reconsider this. With food, gas, insurance, medical, drug costs skyrocketing, there are so many people in our State that are hurting financially. PGE's increases are going to literally put people out of their homes. We simply won't be able to afford to pay all of our utility bills. Again, please reconsider the 2025 rate hike request by PGE. Thank you. Jeff and Jill Jones - 3/9/2024 3:03:00 PM</p>

Name/Location	UE 435 Public Comments
Dustin Moon - MULINO	I read the rate increase was largely due to investment into renewable energy. Why not continue to allow those in position to afford 'green energy' pay for that luxury? Also, why not gradually increase the rate? Many of us can't just suddenly get an extra 18% from our employers, or paychecks. It just doesn't make sense to suddenly charge an additional 18% and get nothing additional in return. Slowly add add it in for the working class, have a heart ?? - 3/9/2024 6:58:33 PM
Raul Trevizo - KEIZER	All the dams were paid for by the people for the people if you're going to raise your rates 26% because it was 18% last year for PGE and they won another 7% this year. We need to raise the rates for them buying it so they can give it back to the people the dams are paid for by the people and the taxes that it took to built those dams but yet you're taking the peoples money. You gotta remember you work for the people public means public owned. Make the right decisions for the public, not for PGE and their profits. Wow they're asking this year for 7 1/2%. KATU your voice, your vote the chairman come on blowingsmoke. Why don't you raise the rates of which PGE buys power from our dams 26% and give it back to the public, holding us hostage with electricity. - 3/10/2024 9:18:08 AM
Robert Carnagey - BEAVERTON	I watched the program "your voice, your vote" today with your group being interviewed. Just one comment, rates for water (in our area are up over 10% per year for the last 6+ years) and now PGE's electricity rate increases are making it impossible to live in a home - unless you want to go without power and water! Yes, these group deserve to make a decent return on investment but NOT if they are not managing their respective portfolio properly! For water, these bozos decided it was better to build out a brand new delivery system but had no money to do so. What to do... hell, just rake the rate payers and force them to pay for the buildout (I was never sure it was really necessary or just something they wanted to do?). And, now our electric grid suppliers have mismanaged their care of their utility infrastructure and we get to pay for their mismanagement! In your reviews of their rate increases and the need to maintain an adequate ROI, if they aren't doing their job, just why should we, the rate payers, have to pay for their incompetence? And, ROI is based on costs and income. Just how has PGE managed its executive cost? Are they raking in gigantic bonus's for convincing you to approve huge rate hikes? If we rate payers need to take hit, after hit.... then the exec's there should be sharing our pain.... right! - 3/10/2024 2:05:56 PM
Gary Vandyke - SHERWOOD	I would propose that when PGE wants to increase rates that you would ask to see their performance details. Each time I see the line crews performing general line work there are 4 more crews to do what 2 crews did in the past. Please help save our fixed income. Stop these ridiculous increases each year. Poor management should not be rewarded with rubber stamping rate increases. Just dig under the glossed over requests and see what's really going on. - 3/10/2024 5:17:45 PM

Terry Gray – Happy Valley	<p>What are you people trying to do!? put everyone into poverty by way of these ridiculous rate increases!? as if the cost of food, fuel, insurance (of any ilk) property tax, art tax, transit tax -I could go on and on- isnt enough, an 18% increase plus more in the future is more than most working people can withstand. As far as renewables (solar, etc) those systems are ultimately not free either, despite the statement of "No money out of pocket", not to mention poking holes in a newly installed roof that would intimately leak, how many home owning wage earners can absorb that extra cost? and I am not just speaking on my own behalf. At any rate, I believe I have conveyed my displeasure with these increase adequately, hope you all can sleep at night. Terry Gray, home owner, Happy Valley, Oregon. Get Outlook for Android - 3/11/2024 12:32:10 AM</p>
Kimberly - NA	<p>Hello, I'm writing to ask why you would consider another rate increase for PGE when they just increased our rate by 18%. The next increase is to help to offset fire equipment costs and President Biden just gave them several million dollars for this exact reason. They shouldn't need more. I think the increase is excessive and they need to work with that they have in their budget and tighten their belts like the rest of us are all having to do. It's possible that when they requested this rate increase they hadn't gotten the monies from the Government, but now that was announced by the news last week. Thank you, Kimberly - 3/11/2024 12:32:12 AM</p>
NA	<p>Commissioners, As a small business owner I understand having to increase rates as costs have increased, however, a very large increase was just approved last year and over the last few years a 40% increase has already been established and has increased hardships for a large number of Oregon families. If we increased our rates at that rate we'd already be out of business, but our business isn't a daily requirement in peoples lives as electricity is. Please don't approve another rate increase this soon. PGE should look into cost cutting measures if they're unable to make ends meets with an already 40% increase. Thank you for considering my comments. Sent from my iPhone - 3/11/2024 12:32:19 AM</p>
NA	<p>Begging you to deny the latest request. I'm retired, disabled, on a fixed income. I make enough to just not qualify for assistance. There are so many people being pushed over the edge by this. I'm going to have to be cold and hot to barely break even. Bet PGE makes a profit, though. Bet their execs & shareholders dont have that experience! How about PGE investing some of their profit instead of victimizing customers? People are dying because they can't keep cool. Some of this is due to unaffordability of electricity. PUC can stop this!Don't let their greed win over your empathy & compassion!! - 3/11/2024 12:32:21 AM</p>
NA	<p>Maybe you can discuss PGE CEO salary before telling everyone to pay such an increase. When companies ask for money they don't expect to get that amount but they did - they probably had a party. And then the gall to ask for more. I don't think so. Tell them to look at their outrageous salaries for money!! Sent from my T-Mobile 5G Device - 3/11/2024 12:32:23 AM</p>

Name/Location	UE 435 Public Comments
NA	<p>It appears that OPUC is rubber-stamping PGE's request for a rate increase. Shame on both of you. You have become nothing but corporate shells. You seem to have NO regard for the public welfare, allowing a 40% increase in rates in less than two years. How do you propose low-income and your elderly customers pay for that? Would you like it if your elderly parents had to choose between heat and food? Get Outlook for Android - 3/11/2024 12:32:26 AM</p>
Leanne Stoneberg	<p>From: Leanne Marshall <lm20or@yahoo.com> Sent: Tuesday, March 5, 2024 3:02 PM To: PUC puc.publicmeetings * PUC <puc.publicmeetings@puc.oregon.gov> Subject: PGE RATE HIKE lm20or@yahoo.com<mailto:lm20or@yahoo.com>. I called PGE on February 28 to express my extreme concerns and frustrations with the rate hike. I find it even more appalling the CEO would take such a large pay raise. During my conversation with the manager I spoke with at PGE I was informed I could express my concerns with PUC and the Oregon legislatures who are all responsible for this rate hike so that is what I'm doing. Ironic the people of Oregon wouldn't have any say in such a thing as a rate hike, especially one so substantial. I also understand that the raising of our rates isn't done yet and there is more to come. Is that correct? Will we, the citizens of Oregon, be seeing another rate hike in April? How much this time? Are you SERIOUSLY expecting to have bills paid in full? My family's home bill went from \$275 to \$500 in less than a month with little change in usage. That's a substantial jump. How would you honestly expect a family to pay such a large sum, especially with the rising costs of food?!?! Is the CEO of PGE planning on paying what families can't come up with? Better yet, are those that voted for this and went along with this rate hike going to pitch in and help all of us families pay these ridiculous bills? I'm pretty disgusted with this all together to be honest. As my family and I are trying to keep up with the inflation of food prices that this wonderful (not so much) administration has instituted, the raising prices of a power bill makes it EXTREMELY difficult to meet or even pay the bill in full. To have our home bill experience such a jump is ridiculous. As we have worked hard to remodel the home, replace windows to help and put in quality insulation, I'm extremely frustrated as our bill continues to climb. Our home is heated with a wood stove and not so much power usage. As I told the manager on the phone call with PGE, this is a two way street. The Oregon legislators voted for this...(NOT ME) But it takes someone on the other side to agree to go along with this. Anyone who thinks this is a good idea can pay any and all my future bills along with the families of all the Oregon citizens. This is utterly ridiculous! Its time for all of you who voted for this to be voted out! Its time for the PUC to hear from the people. Don't think I won't be at any and all meetings, rallies, and gatherings making my voice heard. What do any of you have to say about this rate hike which is utterly ridiculous??????? Who is going to pay my family's future bills? And who is going to work to remove this ridiculous and ludicrous rate hike???? I'm guaranteeing I won't hear from many if any of you. Many of my emails in the past have gone unanswered anyways. Might I remind most of you that you work for the citizens, we the people. Want to remain there? Time to listen to us! Leanne Stoneberg - 3/11/2024 12:32:29 AM</p>

Tess McCoskey - Newberg	<p>From: Teresa McCoskey <tessmc_57@yahoo.com> Sent: Monday, March 4, 2024 5:07 PM To: PUC puc.publicmeetings * PUC <puc.publicmeetings@puc.oregon.gov> Subject: EU 435 - PGE REQUEST FOR GENERAL RATE REVISION</p> <p>tessmc_57@yahoo.com<mailto:tessmc_57@yahoo.com>. March 4, 2024 Re: Portland General Electric Rate Hike Increase for 2025 Dear Oregon Public Utilities Commission: As a senior citizen and Portland General Electric customer, I want to record my strong opposition to the proposed rate increase by Portland General Electric for 2025 for any amount. As you are aware, the following increases have already been approved for this utility: 8% in 2022 (34.4% + 8% = 42.4%) 9% in 2023 (25.4% + 9% = 34.4%) 18% in 2024 (7.4% + 18% = 25.4%) With the proposed increase of 7.4% in 2025, that will bring the total increase in our rate pricing to a whopping 42.4% at a time when there are exorbitant increases on everything from food, services, other goods, healthcare, utilities, etc. This unconscionable rate increase request tantamount to extortion and exorbitant give the last increase of 18% along with the most recent multiple rate increases. . The recent rate increases are devastating and doing immense damage to the current living standard and quality of life for all Oregonians not to mention seniors in general. I, along with my neighbors and friends here in Newberg and locally cannot comprehend the justification for the raising of the rates just shortly out of the crushing pandemic and while our inflation rates on everything are so very high. To top it off, Maria Pope, the CEO of Portland General Electric is recorded as receiving \$6,256,599 in total compensation in 2022, which I am certain is has vastly increased since that date. Instead of requesting more money, the company should be cutting back on their expenditures like their own pay increase, Green/Renewable Energy, and EV programs. I ask that you please reject Portland General Electric's request for the rate increase. Thank you for your attention to this matter. Sincerely, Tess McCoskey Newberg, OR - 3/11/2024 12:32:34 AM</p>
NA	<p>This is ridiculous! Why do I pay for the shareholders to be rich? 42% hike in recent years and they want more? I will be homeless, many others too! When will this stop?!!! Please deny more increases for at least two or three years. - 3/11/2024 12:32:37 AM</p>
Laura Fenstermacher - NA	<p>Please, after this years whopping rate hike, I can hardly afford my energy bill as it is. Raising my rates to redistribute a portion of my bill to others who cannot afford their bill is not an answer. In order for me to qualify for assistance I have to be negligent in my own bill. I'll take another job before that happens. Just because I'm responsible does not mean I can afford another hike. Last years was too steep. Add to that another portion of that going to affect this April. Please do not raise my rates in 2025. Laura Fenstermacher - 3/11/2024 12:32:40 AM</p>

Name/Location	UE 435 Public Comments
Brenda Moorman - NA	I understand PGE is asking for another rate increase! I sincerely hope you will not allow this to happen! Living on social security makes it very difficult to continue to make ends meet. I know they are coming up with reasons why but I really feel they are trying to recoup losses from the devastating fires. Please think about all Oregonians & think about the financial burden it will place on us! Sincerely, Brenda Moorman Sent from my iPad - 3/11/2024 12:32:43 AM
Michael Balen - NA	As per the subject, I need to know what PGE plans to do in the future regarding rate hikes. My power cost is nearly 90% higher per kwh than is was in 2021 (I paid \$0.13/kwh then; in January 2024, I paid \$0.20/kwh), and I can't stand the rate hikes since I'm retired and live on social security. In order for me to understand what the most economical thing is for me to do, I need to first know what PGE is going to do for as far out as possible regarding rate hikes. How high do you intend to go? Another 10% per year for 10 more years is what I'm hearing. I can't trust the solar power salesmen to give me the straight scoop on rate hikes they always paint a dire picture. So, what's it gonna be? Please advise. Michael Balen, P.E. 208-901-5181 - 3/11/2024 12:32:45 AM
Clifford Spencer - NA	Clifford Spencer P.O.Bx.8871 Portland, OR 97207 503-824-6193 PUC, I wrote to strongly urge you to vote AGAINST A N O T H E R PGE rate increase, and, instead demand they LOWER the rates by AT LEAST 5%. This year you voted to, AGAIN, approve rate increases by PGE, this time 18%.This, after rate increases the past several years TWICE. Their justification for THIS latest one, effective Jan.1, 2024, was to increase their investors' annual yield from 5+ % last year to their PROJECTED expenses so they can increase their investors' yields to almost 10%. Again these were PGE's "PROJECTED" costs, ***which I am wondering if you truly scrutinized***. I'd be willing to bet PGE's "projected expenses" are quite "generous" in PGE's favor to justify the dramatic increase you approved. Now PGE wants you to approve ANOTHER increase! This, in my opinion, adds "insult to injury"! IF I cannot afford something, I budget, something, quite apparently PGE thinks they do not need to do. Their administrators' pay rate is OBSENE in the light of their requested increases! IF I cannot afford to buy batteries, I either budget from my budget or do not buy them. The increase this year in PGE's rate is 18%, which you approved. After last years increase pf about 8%, which you also approved. My Social Security increase this year was 3.2%. Should I petition the Oregon PUC for an increase?? Again, I write to let you know the hardship your latest approval of PGE's rates are on ratepayers, especially those on Social Security, and, emphatically, ask you to deny PGE's latest greed driven request for ANOTHER increase. Suggest they try budgeting, for a change, beginning with PGE's "overly generous" administrators' pay. Sincerely, Clifford Spencer Sent from Mail for Windows - 3/11/2024 12:32:47 AM

Margo Sprietsma - NA	<p>Hello. Thank you for the opportunity to address the rate increase proposal by PGE for 2025 As you know we all just had our rates increase by 17%. My neighbors and myself were shocked by the first bill with this increase. Well over 17% of my previous bill and no real explanation from PGE When I read about yet another increase I looked at what PGE had stated was the reason for this last increase. I discovered that they are basically asking for another 7% for the same reasons they asked for the 17% Before another increase is permitted, I think it's a deep dive into their operating costs and internal cuts need to be made before another rate hike is foisted upon Oregonians Over \$6 million for the CEO alone leaves me wondering what other outrageous salaries are being paid? We all see the 10 people on the side of the road for tree trimming - when 4 would be sufficient. Because it's PGE and we pay their bills it feels they spend money Willy Nilly and just keep asking for more I hope their a deep dive and true die diligence into their books Thank you Margo Sprietsma - 3/11/2024 12:32:50 AM</p>
Tom Odgers - NA	<p>Dear Oregon Public Utility Commission, I am writing to express my profound concern and dissatisfaction regarding the recent announcement of rate increases by Portland General Electric (PGE). As a resident of Portland, living at 3324 SW Fairmount Blvd, Portland, I have been a loyal customer of PGE, relying on their services for my daily needs. It has come to my attention that PGE plans to increase their pricing rates. This decision is particularly disheartening because it seems to disregard the current economic challenges faced by many Oregonians, myself included. The lack of significant infrastructure improvements or movements to justify such an increase adds to my frustration. Moreover, despite these proposed rate hikes, I, along with other residents, continue to experience frequent power outages, which further questions the rationale behind increasing the financial burden on consumers. The absence of tangible enhancements in service delivery and infrastructure, coupled with the continuous inconvenience of power disruptions, raises concerns about the justification for this rate adjustment. It is crucial for utility providers like PGE to ensure that any increase in rates is matched with proportional improvements in service quality, reliability, and customer satisfaction. Therefore, I urge the Oregon Public Utility Commission to thoroughly review PGE's proposal for rate increases. It is essential to ensure that any adjustments are reasonable, justified by concrete improvements, and considerate of the economic impact on Oregon residents. I look forward to your response and hope for a favorable review of this matter. Please consider the implications of these rate increases on consumers like myself, who depend on PGE for essential services but are left questioning the value and reliability of these services in light of recent developments. Thank you for your attention to this matter and for advocating on behalf of Oregon's utility consumers. Sincerely, Tom Odgers 907-250-7457 - 3/11/2024 12:32:53 AM</p>

Lawrence Novakowski - NA	Without a plan for bringing costs down through efficiency there is seemingly no end to amount that can be requested. Allowing for handouts and reductions for lower income is just transferring wealth. Families that exist at the cutoff threshold for assistance are left teetering on the edge of public assistance. Public assistance is something we all cannot afford. Go back to drawing board with the charter to reduce costs and makes it work. Get creative, innovate, and drive efficient solutions. Lawrence Novakowski - 3/11/2024 12:32:56 AM
Seth Talbot and Rachel Brunner - Portland	Hi there, I just heard about the proposed rate hike for 2025 and I think you should not consider it at all. PGE has been making ridiculous profits on consumers in the past few years, and when we need them to do something like manage power outages in a storm they outright fail. A family died in the last storm because PGE told them it was safe to exit a car when it was not. They cannot communicate what lines are under power and which are not to other utilities and government agencies and generally waste money like no other organization in our region. There is no way we should be paying them any more. Sincerely, Seth Talbot and Rachel Brunner Portland Residents Sent from my iPhone - 3/11/2024 12:32:59 AM
NA	They've raised rates significantly two years in a row. No to any increase in 2025. Sent from my iPad - 3/11/2024 12:33:02 AM
NA	No! Absolutely not! The fact that PGE has the nerve to request an additional 7.4% rate for 2025, a year after the 18% increase is incomprehensible. Here is the reality, it is the middle income families that are burdened with these constant increases, ie. the poor can't afford to pay so PGE offers more discounts to lower income families and, for those with high incomes, these increases are less burdensome. BUT families who don't fall into either category are left to carry the ultimate burden. Shame on you if you pass this request. It is time for PGE to get off the backs of the middle income families. Sent from my iPad - 3/11/2024 12:33:05 AM
Kristina Ernstrom - NA	Hello, I am a PGE account holder, I live in low-income housing. I have struggled to pay my electric bill for the past 3 years. The current rate increased is already taking an effect on my income. Normally my bill for winter is \$60, but now it running at \$220. Although I am signed up for low-income rates it only brings my cost down to \$180. If I am already struggling during winter time, summer won't be any better as my bill is double to triple the cost of my winter bill You see during the winter I don't use much heat, but since my home stays decently warm during winter that means it becomes overwhelmingly hot during the summer and requires A/C to run non stop. With the increase in food, gas and household items we cannot afford rate increases. It a blatant disregard toward those struggling in today's economy, and unfortunately Oregon has a high population of struggling families. Kristina Ernstrom - 3/11/2024 12:33:08 AM

Name/Location	UE 435 Public Comments
Joe Hovey - Portland	<p>Writing again, as I just read the PGE is looking to increase rates again for 2025. MTC3DDWO4JFCLCTSACTJ6RK7VQ.jpg Portland General Electric proposes 2025 rate hike as many still reel from January bump opb.org I don't buy into their reasoning as do many of my neighbors. While they may say they are doing it for "green" goals, I find that difficult to believe. If anything, they want to pass onto the Consumer their costs for their liabilities in the various wildfires within the last two years. As a Commission, you need to be looking at these requests more from a consumer point of view as it relates to "affordability". Of their own device, PGE will "spend money" as it is a Public Utility beholden to its investors. I am asking and urging you as a Commission to make PGE "budget" their existing dollars to meet their needs. A number of families in OR are already strapped for Income due to various increases, the most being the most recent 18% increase by PGE. Enough is Enough!!! As you are an appointed Commission, your role is still to insure that Consumers are protected from Price Gouging from the likes of PGE. Thank you for your time. Joe Hovey Portland OR On Jan 30, 2024, at 12:51?PM, Joe Hovey <joho@joebove.com> wrote: The recent increase of 18% by PGE is outrageous. And after a rough two weeks of below ZERO temps and snow & ice, people are now getting their electric bills. For the majority of these people, their sole source of heat is also electric! Their bills are astronomical!! How could you ' in good conscience ' approve such a drastic increase especially considering that the State is trying to push Electric over Natural Gas? It is appalling that a governor appointed Commission could put its citizens in such dire straits. One can only assume you are getting some kickback from the Utility for allowing such a steep increase. And I am even more concerned about the upcoming PGE increases that the Utility wants to tack onto their invoices. There is even talk about using some type of increase to offset their liabilities for the wildfires in the State. It's obvious these are moves to keep their investors happy and "in cash" with no concern about the citizens of Oregon. My first response to PGE would be - figure it out!!! They should be held accountable for how they spend their money and be more efficient in its use; not subject citizens to their own shortcomings. Concerned Citizens will be watching you and how you handle such an audacious move by PGE. Let us hope you can see through PGE's motives and not approve any further increases. Thank you for your time. Joe Hovey Portland OR - 3/11/2024 12:33:11 AM</p>
Joseph Edmonds - PORTLAND	<p>Electric cost increase proposal by PGE should not be approved. I READ OF NO PGE MANAGEMENT CHANGES, this is indicative of doing business the same and passing inflationary costs to public. - 3/11/2024 10:15:32 AM</p>
Dave Potts - CORNELIUS	<p>I heard about rate increase by PGE and wanted to voice my concern. The OPB story stated PGE is asking way too much and it's being driven by investors so the public is paying for all challenges they are having. PGE they just had a 20% rate increase and are now asking for another increase. I also hear PGE put in the rate request the right to ask for rate increase anytime they want to. I feel this is outrageous and I can't believe the PUC would even consider this request! Please turn it down these absorbent rate increases and modify their request to increase whenever they want! - 3/11/2024 2:41:42 PM</p>

Name/Location	UE 435 Public Comments
Linda Monahan - TIGARD	I am writing to express concerns about the recent and future PGE rate increases. We invested in solar panels to mitigate the rising cost of energy. Even so, our bill went up 11%, not based on utilization. PGE supplies electricity, a basic need for Oregonian consumers. PGE is a business to make a profit and pass dividends on to shareholders. PGE provides electricity to their former employees at a reduced rate. Consumers should not have to bear the full cost of building out infrastructure and insuring against wild fires. Consumers don't have provider choice for electricity. PGE's efforts to provide subsidies to low income consumers is a joke. I implore you to NOT grant PGE's proposed rate increase for 2025. - 3/11/2024 4:25:19 PM
Cindy Hanson - GLADSTONE	You have got to rein in these utilities with these insane rate hikes. Got us in Gladstone, the water department is pricing us out of our houses and we have reached out to the state with no answers!! - 3/11/2024 4:42:50 PM
Kelley Chaney - GLADSTONE	Hello: I have lived in Oregon for 53 years. I understand the importance of PGE service and infrastructure. I was not happy with the most recent rate increase because it was so large. As a single working mother, the 2024 rates are not sustainable. I know many people in my community who just cannot make the payment. When I see a request for an additional increase next year, I am furious. PGE's Executive Summary saying that a return on invested capital is a factor driving an additional rate increase, it is upsetting. The summary says the purpose is for PGE to maintain its credit and attract capital to ultimately benefit customers. That sounds like a plan that rich people consider, but it is just too much for average people to handle right now. Oregonians are still recovering from the pandemic, crippled at the grocery store and gas station. Rent is unmanageable and corporate greed is eating us alive. All utilities have increased. These are basic needs that people cannot meet right now. The PUC needs to protect people and ask PGE to come up with another plan. Let citizens try to adjust to this current massive rate increase for a few years. PGE can make a new proposal in a couple of years when they can show the progress of their infrastructure plan. They cannot justify hitting customers so hard with back-to-back increases. This goes for their peak pricing proposal as well. Electricity is not a luxury item; it is a basic need. The OPUC's mission must insure that Oregonians have access to "fairly priced" utility services and "promote public interest" to "arrive at a balance." Please do not support any additional increase. Your previous approval is already crippling Oregonians. - 3/11/2024 4:50:17 PM
Yvonne Phipps - SHERWOOD	Please do not approve the rate increase. PGE and it's shareholders should not be passing on a rate increase to it's customers. Like other companies doing business they need to plan for these types of situations. They know because they must have hired knowledgeable people to do risk assessments and instead of budgeting and setting funds aside they've added it to their profit. We the customer are not their rainy day fund! - 3/11/2024 8:19:12 PM

Name/Location	UE 435 Public Comments
NA - PORTLAND	It is getting ridiculous they have already increased residential rates over 40% in three years and basically priced people out of their homes, for that matter they are pricing residents out of the city of Portland. All while commercial businesses that use much more electricity get smaller rate hikes, really calls into question the ethics of our utility commission and whether or not they are being bribed by businesses to keep their rates down. At the rate they are hiking residential prices, I am half tempted to go medieval and turn the power off to my home all together, put in a manual well pump, do all my cooking on the fireplace, wash the clothes in the bath water once a week. Which is exactly what it looks like the utility companies want us to do. - 3/12/2024 10:16:11 AM
Kimberly Teal - STAYTON	Well I think you should give a discount to all that are 62 and older because there on a fixed income and they might not be able to pay - 3/12/2024 11:48:39 AM
Judy Parrish - MILWAUKIE	Hello, Due to the recent 18-19% price increase PGE has put in place & another 8% purposed increase next year is putting an enormous burden on low, middle & elders on fixed incomes. There is no reasonable reason for this than greed that many of us can't understand. Please consider 'No More' increases in the near future. Many people are suffering because of PGE's price hike. Thank you, Judy Parrish - 3/12/2024 1:43:40 PM
NA - PORTLAND	An additional rate hike to an already predator increase in 2024 would be a gross example of companies extracting money from captive peoples struggling to pay existing rates. As a Portland resident who makes 55k a year, I already have to struggle to pay to keep my home heated in our relatively mild winter climates. The high cost of living will continue to push people to die in our cold spikes even when not suffering from being houseless. - 3/12/2024 11:34:33 PM

Amber Pfaff - NA	<p>Hi. My name is Amber Pfaff. I'm a resident of Multnomah County, and live in downtown Portland. I'm writing to speak out against allowing PGE to raise their rates, yet again. Another 7.4% so shortly after the 18% raise is unconscionable! The 18% is already horrific! I'm a resident on a very small fixed income of \$11,000 a year. I am disabled and have been for nearly 20 years. I already was struggling to make ends meet and pay my electric bill. I'm supposedly getting a percentage off, due to my low income status, yet my bill still went up so much that I'm terrified of losing my home! If my electricity gets shut off, I get evicted! It's not making a dent, and PGE claims I'm using way more electricity, when that's not even possible! I'm watching what I use more than ever before! I try to get help through energy assistance programs, but it's nearly impossible! I can never find one with availability when I need it. The phone lines and waiting lists are open randomly. I don't hear back from them. I haven't been able to get help in this way for several years. I had to spend this winter with my thermostat set at 55°F. I have all of my lights on timers. I go to the bathroom & shower in the dark. I don't know what I'll do when it gets hot and I can't afford to use my air conditioner. My medication makes me very heat sensitive and I have a companion pet that I'm afraid will suffer! My rent was increased, grocery prices are sky high, we are losing the Affordable Connectivity Program. I can't afford to have a coffee with friends anymore, even. I'm so isolated! I'm getting priced out of life! Please stop this! Please do not allow this increase! Please help people like me! I did nothing to deserve this suffering! I do not have control over my disability! Please help! Please!! I shouldn't be in a position to pay shareholders and fill a millionaire CEO's pockets! This is cruelty! Help us! Please! I'm desperate! I cannot afford this! I can't live on the street! I'm a good person. I don't break the law. I keep to myself. I don't drink or use drugs. I volunteer when I'm healthy enough. PGE is inhumane! They are price gouging is! Please stop making us pay for their greed and negligence! It's going to kill people! It already is! Thank you for your time. -Amber Pfaff - 3/13/2024 12:31:55 AM</p>

William McKinney - NA	<p>Dear Senators, enough is enough. The unchecked gouging of the people of Oregon by monopolistic entities such as PGE needs to stop, NOW! The people of this state cannot afford these excessive rate hikes, especially at a time when soaring taxes and food, gasoline and housing prices are rising faster than many can hope to keep up with. If there was ever a time for government regulators to take action against scheming organizations such as this, it is now. Monopolies such as this must be by law closely regulated or broken up in the best interests of the public. The continuation of complacency on the part of the Oregon legislature concerning this untenable situation is completely unacceptable and even criminal on its face. As a result, I and many other people of the state of Oregon are increasingly suspecting a condition of blatant collusion between our legislature, our elected representatives in general and the power companies. We demand immediate, legislative action be taken to mitigate this destructive behavior or a sure and effective purging of the dead wood in the halls of power will be the only choice left to the people, whatever form that may take. Mark my words; some of us are not so easily swayed by promises of free lunches. Hoping that you will use your heads for something more than a hatrack. William McKinney Sign the Petition https://s.yimg.com/nq/storm/assets/enhancrV2/23/logos/change.png Sign the Petition State Regulation of Portland General Electric's Unfair Rate Hikes - 3/13/2024 12:31:57 AM</p>
Bonnie Carter Waterston - NA	<p>My electric bill is now \$128 per month! I am a senior citizen on a fixed income. The bill went from \$108 previously & I thought that was outrageous. BTW, I have gas heat in my master bedroom, electric in rest of house, but only use heat in living room area.. Bonnie Carter Waterston, Editor Positively Entertainment & Dining positivelyentertainment.com peeditor@comcast.net Phone: 503-253-0513 - 3/13/2024 12:32:00 AM</p>
Jessica Capps - BEAVERTON	<p>Families, myself included are struggling beyond our means. I work 2 jobs and have 2 children and a disabled mother who live with me. I can't tell her to just put another sweatshirt on or cover up with a blanket. I cannot afford these rate increases, heck I can't even afford the rate before that. I have the thermostats set at 65 and I'm still getting outrageous bills and we're living in sweats and blankets not wanting to get anything done cause it would require us to get out of said blankets. We're freezing and yet you want to do another rate increase. Have compassion for your customers instead of greed for your pockets. - 3/13/2024 8:15:23 AM</p>

Cara Johnson - PORTLAND	UTILITIES ARE UNAFFORDABLE FOR THE AVERAGE AND ESPECIALLY FOR THE LOW INCOME AMERICAN PEOPLE! IT IS OUTRAGEOUS! ALONG WITH EVERYTHING ELSE WE HAVE TO PAY TO DRIVE AND EAT, SURVIVE, HAVE WARM WATER!!!... ELECTRICITY AND STAYING WARM IS JUST LIKE BREATHING AIR! WE NEED ELECTRICITY TO SURVIVE IN THIS DAY AND AGE AND YOU GUYS ARE MAKING IT IMPOSSIBLE TO KEEP OUR HEADS ABOVE WATER!!! THERE ISNT ENOUGH RESOURCES OR FINANCIAL ASSISTANCE AVAILABLE FOR ALL WHO NEED! PLEASE STOP BEING SO GREEDY AND LOWER COST OF ELECTRICITY!! - 3/13/2024 12:41:30 PM
Edward Murphy - DAMASCUS	After the ridiculous 18% increase they are asking for another 13% increase. The 18% bothered me so much I'm sure the 13% might kill me. - 3/13/2024 1:53:12 PM
Bernd Brandle - PORTLAND	I want to know at what point will the electric and telecommunications utilities be forced to underground local distribution of these utilities as a requirement as part of these requests to increase rates? Particularly in the dense urban environment of metro Portland in particular, I observe major road infrastructure projects CONSTATNLY undertaken without any provision made to underground the overhead wiring which would have ample opporunity to place infrastructure with trenching open. Why are we spending endless amounts of ratepayer funding on constantly replacing overhead wiring that WILL fail and further cause the kinds of fire danger seen over the last several years? Its time to move to the 21st century and underground these facilities. I know its "more expensive" but the phrase 'buy once, cry once' springs to mind. - 3/13/2024 2:11:51 PM

Anthony A - BORING	<p>Hello, Hope everyone is doing well. I just wanted to encourage and I'm sure that you are, but I want folks to really think about this fast rollout of net zero initiatives related to utilities and where we get our power from. The rates are becoming unaffordable for power, water, and natural gas that you are trying to get rid of. Can we really put this much cost on the customer? I know you will be seeking grant and other revenue sources to help set up infrastructure and ease the burden, but the fact is that rates for Portland Water will go up 50% in the next few years, PGE just raised 40% in the past two years, NW Natural is up, trash and recycling are up, inflation for fuel and groceries, it's a lot for most folks to manage. I'm feeling the pressure making 130K a year with no real debt other than my home. I just really think we need to think long term about how we roll these "requirements" out so we are spreading out these costs more thoughtfully, especially for anyone making 100k or less, 100k is the new middle class. Also, what is the anticipated demand and are we actually going to meet it with renewable energy sources? What is the real cost of all of this? Is this being communicated in a real way to customers? Why are we not looking at nuclear when it's renewable and a better solution than wind and solar which have clear limits for consistent output? Do we have back up plans, why are we not utilizing everything we can to offset these costs? Everyone is so focused on going green that we're not looking at how it impacts peoples lives financially and if it is actually a viable option. Can our grid handle it especially with phasing out gas and coal, and then will have infrastructure in place to meet this demand by the time you require it? - 3/13/2024 3:28:27 PM</p>
Ron Smith - SALEM	<p>I'm a retired person with a wife on social security. This years increases was devastating to us and an another increase in rates could possibly require us to sell our home and look for alternatives. This is outrageous and the green movement is costing native Oregonians unjustly. Please think about this objectively. - 3/13/2024 6:51:34 PM</p>
Jack Newman - SALEM	<p>Please reconsider as this is a huge impact on consumers who are already struggling to keep our homes warm during the winter and cool in the summer. The income guidelines would need revision for every time and just as quickly as PGE to increase their rates! Why would we force victims to pay back the money that they won from a lawsuit against PGE back to PGE? Where is the accountability for their negligence? Why would we reward the company millions of dollars to disregard the safety of human lives, land, and properties? - 3/14/2024 12:11:25 AM</p>

Desiree Dean - PORTLAND	At this time, given the sharp rise in inflation, an increase in the cost of a basic need of energy(PGE) is inappropriate and detrimental to the community. Also coupled with one of the highest costs of living and housing crises utilities are flat out already unaffordable. Michael Wherity - WELCHES	WITH OREGON HOME AND SMALL BUSINESS OWNERS ALREADY STRUGGLING TO PAY RIDICULOUSLY HIGH ELECTRICAL BILLS, HOW CAN PORTLAND GENERAL ELECTRIC, A MONOPOLY WITH NO NEED TO ADVERTISE, JUSTIFY THE SPONSORSHIP OF A TELEVISION PROGRAM ON PORTLAND'S CHANNEL KPTV. IT IS AN UNNECESSARY AND RIDICULOUS EXPENDITURE! IF ANYTHING, THE OREGON PUBLIC UTILITIES COMMISSION SHOULD DEMAND THAT PGE LOWER ITS OPERATIONAL COSTS AS THEIR RATES ARE BECOMING TOO UNAFFORDABLE AND VERY STRESSFUL FOR THE MAJORITY OF OREGONIANS. ELECTRICITY IS A NECESSITY AND SHOULD BE EASILY AFFORDABLE AS ARE WATER AND SEWER. THANK YOU SINCERELY. A DEFENSELESS PGE VICTIM, MIKE WHERITY. WELCHES, OREGON... - 3/14/2024 5:52:18 AM
Matthew Ward - PORTLAND	Please do not approve yet another major increase of cost to the customers of PGE. We already had a huge increase of cost this year, it is putting unfair stress on peoples cost of living when facing rising costs of just about everything else locally. The fact that PGE keeps finding reasons to raise costs should be a warning sign to a poorly run budgetary department within the company, or perhaps greed in the CEO department? Whatever it is causing these huge repeated increases it is unfair to the rate payers. Thank you. - 3/14/2024 11:01:52 AM
Patricia Reese - HILLSBORO	I would think that before an additional 7% increase requested in 2025 for PGE would be granted, the Oregon Public Utility Commission should review the profit earned in 2024 after the 18% rate increase. I can appreciate the need to improve infrastructure to handle the push to go all electric, but maybe the increase could wait another year or two if PGE has additional unanticipated profits after the most recent increase. - 3/14/2024 3:21:41 PM
Wade Fauth - PORTLAND	We as citizens can't absorb another giant rate hike. If anything you should LOWER it that much! - 3/14/2024 3:48:14 PM
Scott Kirkwood - HILLSBORO	My electric bill was already outrageous before the current rate hike. To propose another especially so soon after is absolutely ludicrous. Regular people cannot afford this, and in this economy in particular. - 3/14/2024 6:31:55 PM
Timothy Ulrey - PORTLAND	I'm writing oppose yet another rate hike. Many people, myself included are already struggling with the recent rate hike and it seems cynical and egregious to pass one again so soon. - 3/14/2024 8:07:22 PM
NA - PORTLAND	We have *just* been through a rate hike. PGE is profitable enough. We do not need to subsidize any further raises Maria Pope gives herself. - 3/14/2024 9:25:55 PM
Kameron Monk - SALEM	Times are extremely tough, this rate hike is greed over service. This is going to hurt so many people and contribute to Oregon's homelessness. - 3/15/2024 8:03:29 AM

Allen Michaels - TIGARD	<p>It is all just too much! Inflation, interest rates, food, housing, rent, & gas prices have all been on the continual rise, & now, PGE wants to raise prices every single year, enough is enough! We all need better solutions, maybe make PGE a true non-profit, or maybe have the state purchase the majority of PGE stock so PGE does not feel like investors always need a >9% return on their investment in order to be financially competitive, maybe pass price caps through the Oregon state legislature, maybe raise energy rates only on Businesses, government agencies, & the rich who are able to absorb the increases much easier than Private Residential Households, the elderly, disabled, low income, & the poor. When an electric customer has done everything possible to lower their electrical usage/bill, (turned off all their heaters, uses a single heating pad in bed to stay warm), then they are at their breaking point! There has to be better solutions out there, somewhere, then to keep raising prices on people who can NOT afford it anymore, even with PGE's discount programs. And lastly, change the electric shutoff temperature requirement from 32F to 39.5F, why? Because it's just as easy to freeze to death from hypothermia, below 40F, as it is at 32F or below. - 3/15/2024 11:42:04 AM</p>
R K - CANBY	<p>someone should be investigating forming a 3 county PUD. the last time PGE used scare tactics to persuade the voters to vote against it. the 3 county would set the rates the same for everyone. the employees would still have their jobs. The repair people would be the same, there just wouldn't be the expensive overhead for corporate. I worked for the same company for 35 years but we had 3 owners & nothing changed. I had the same job. I live in a PUD & my bill is a lot less. I live in a 1700+ sq.ft house. - 3/15/2024 6:22:50 PM</p>
NA - OREGON CITY	<p>They already increased rates in 2023. If they need to increase rates this drastically again they must not be doing a very good job at budgeting properly. They shouldn't be trying to lower costs by increasing the cost to the customer, especially not with something as essential in this day and age as electricity. There is no competition for them, so they get to pull one over on every single one of their customers even more than they did in 2023? This is ludicrous and unacceptable no matter how they try to spin it. - 3/15/2024 6:40:02 PM</p>
Dona Shook - BORING	<p>This is definitely not wise. This is making customers rob Peter to pay Paul. People are already at their max of all bills and taxes and food going up. We unplug most everything in our house and now we enrolled in an on and off peak program to see if it makes a difference as well. This is just NOT for the interest of customers. When does it stop? - 3/15/2024 6:47:27 PM</p>

Name/Location	UE 435 Public Comments
Clyde T. Keeland - PORTLAND	I am against any and all rate increases for PGE! They just received a rate increase of 17% in Jan of 2024. That left me and my family paying at least \$60-75 more per month for electricity! This has to stop! Everyone in the PNW has to bite the bullet so must PGE! This is an outrageous request. Their CEO, CFO, and all other top officials have receive substantial increases in wages and benefits and not this additional request is uncalled for! No! Absolutely not is this warranted in any way shape or form! They say it is because of the recent winter cold but yet they still have given the executives large raises and benefit increases. Unbelievable.The people in the PGE area cannot and should not be made to pay for this when the company has made a profit and the upper executives still take pay raises and bonuses. Please do not allow this rate hike to proceed. - 3/15/2024 7:33:12 PM
NA - PORTLAND	PGE residential costs have risen exponentially in the past several years and the proposed rate increase for 2025 is just too much. Residential customers, especially those with lower incomes, need a break from significant cost increases each year. There should be no rate increase for any PGE residential customers in 2025. - 3/15/2024 8:03:51 PM
Martin Kaegi - TROUTDALE	The huge hike in January killed us financially, over 700 and we are looking at close to 700 for February! Now we are buried and are paying 500 every two weeks. This is crazy. Please consider your customers. Only 6% of the people in Oregon make more than 60 thousand a year. Think about that. - 3/15/2024 8:08:28 PM
Erin Shepherd - PORTLAND	PGE customers are already hurting from recent rate increases and the storm was a horribly impactful for so many people in the area. I am someone with a decent job, steady income and I am struggling to pay my utilities. I can only imagine what it's like for those with greater financial hardship. Please do not increase rates, give people time to recover and adjust to this last round of increases. - 3/15/2024 8:15:47 PM
Margaret A Doherty - PORTLAND	The rate increase up for review by PGE is an Afront to consumers. Actually, it's a slap in the face. Do not approve! - 3/15/2024 8:16:50 PM
Michael Rice - GRESHAM	PGE believes that it is "entitled" to a 10% profit margin. They seem to forget that they are a public utility. Their profit margin should b around 3%! Oregon PUC should never have given them the 17% increase and certainly should not consider any further increase for three or more years! The PUC needs to protect Oregon rate payers. - 3/15/2024 8:37:53 PM
Cristy Sellers - MILWAUKIE	Recent rate increases in the midst of unreliable service during times of extreme heat and cold over the past few years are unacceptable.y family is solid middle class and the increase since January has been hard to stomach (and pay!); the request for new rate hikes one year later should be denied. My elderly neighbor just told me today he disconnect service from an axillary building and can no longer afford to heat his home. Please stop this madness. - 3/15/2024 9:10:27 PM

Name/Location	UE 435 Public Comments
NA - PORTLAND	We can not afford to let PGE keep raising the rate because we will not be able to afford to pay for the service and then we will not have power in our house and people will get sick and die from the cold! PGE has been increasing the rate of service for the past several years and enough is enough stop this now!!!! - 3/15/2024 11:21:56 PM
Benjamin Murphy - HILLSBORO	Please do not approve another electricity rate increase. Ratepayers are still reeling after the recent seventeen percent increase. Personally, our family's electric bill went from \$199 to \$260 in one winter month. What would that mean with seven percent additional? Many people are also struggling with basic costs such as groceries and rent. Utilities should not have the same inflation increase, as the cost is slower to realize. We understand there are infrastructure improvements, but these steep increases are not rational nor reasonable. Please do not approve this increase. - 3/15/2024 11:38:32 PM
John Bates - PORTLAND	No more rate hikes for PGE! PGE is strangling consumers with its greedy money grab. Do your job and protect the people from predatory utilities like PGE. We the people are fed up! - 3/16/2024 12:10:41 AM
Anonymous - BEAVERTON	Please reject PGE's proposal of an additional 7% as the prior 17% increase fully materializes on the company's financial statements. Based on the company's 2023 annual filing with the SEC, the company generates 52% of its revenue from residential customers but only consumes 37% of the power. This disproportion is due to the industrial customers only paying 15% of PGE's revenue but consuming 29% of the power generated. Additionally, PGE generated 228 million in annual profit. Based on this information PGE should only raise prices on industrial customers in order to close this gap. Stop having the residential subsidize industry, and make them pay their fair share. Again please reject this general price increase. PGE should consider raising rates on industrial customers from ~6 cents/ KWH if they wish to maintain the same profits. For comparison residential is ~15 cents/KWH, 2.5x more. Again please reject this unnecessary general rate increase. - 3/16/2024 12:29:02 AM
Jerian Abel - PORTLAND	Please consider rejecting this latest rate increase. I and many of my friends & neighbors do not have the room in our already tight budgets to afford this increase. Please consider the impact on fixed income residents and communities where poverty is high. Why can't PGE spread the improvements over multiple years so that the annual hikes are more doable for its customers? - 3/16/2024 7:35:50 AM
Cori-Ann Woodard - PORTLAND	Due to the fact that many senior citizens such as my self are already suffering due to inflation and rent increases, the forthcoming rate increase of another 7 percent in January 2025 is unwarranted. It seems motivated by profits and is badly timed. This rate increase is further evidence of why utilities should go public. And we don't have the option to switch, so we're sitting ducks at the hands of a big monopoly. Thank you. - 3/16/2024 8:38:51 AM
Kelly McCormick - PORTLAND	Enough is enough. This rate increase for a wish list of items is unacceptable. We are already reeling from the dizzying rate increase in January! - 3/16/2024 9:06:15 AM

Name/Location	UE 435 Public Comments
Jessamyn Wesley - PORTLAND	<p>PGE raised rates by 17% this year, and is proposing another 7% increase in 2025, totaling a 23% increase over two years. While PGE has a low income assistance program, this involves a process that may be cumbersome for people, and additionally is unavailable to middle income people, who may also struggle with the cost of utilities. Many are struggling with astronomically rising costs of living in rent, food, transportation - and utilities. In 2023 PGE reported a net income of \$228 million dollars. Where does this money go? Shareholder profits, exorbitant executive salaries, bonuses, and buybacks. Every year PGE spends upwards of \$300,000-400,000 on lobbying, and \$10,000 on campaign contributions. If this money were redirected towards the very necessary infrastructure upgrades and repairs, climate adaptations and improvements, and employee pay and benefit raises, they would not need to raise rates for residential customers. It's unethical to continue to hoard profits, while telling the public that customers need to pay even more for improvements, as if PGE doesn't have plenty of income as it is. People across income brackets are challenged to afford the cost of living and raising electricity costs another 7% will only cause more economic hardship for everyday people. This negatively affects quality of life, community and public health, economic circulation, and causes people to forgo other necessities in order to attempt to meet basic needs. Please deny PGE's request for another rate increase. - 3/16/2024 9:13:02 AM</p>
Lynn Taylor - HILLSBORO	<p>As a retired person on a single fixed income, I was shocked by my recent PGE bill that is rising faster than the rate of inflation. Then reading about PGE's additional proposed rate increases! Electricity needs to be affordable; it is a necessity, not a luxury and should be reasonably priced. - 3/16/2024 9:57:38 AM</p>
Christian Lycan - AURORA	<p>Please do not raise our electric bill again next year. We are seniors and still trying to cope with the Last increase. - 3/16/2024 10:11:50 AM</p>
Robert Whitfield - TIGARD	<p>The prices of everything have gone up to where making \$70,000 a year can still be challenging which is sad to say in it self. For PGE to want to raise the rates again in 2025 is clearly not being made with the consumer cost in mind. What good are we doing by continuing to raise prices so high to where people cannot afford to live here anymore, or worse yet end up on the street like so many already. If these Companies continue to operate with only their bottom dollar in mind they will knowingly be contributing to the hardships we are seeing across our country. At some point these companies need to have some understanding and empathy to what they are doing to the consumers by raising rates so high they are not sustainable for us consumers to stay ahead on. Most people's rent and mortgages are already taking a 1/3 to 1/2 of people's income. Throw these kinds of hikes on there and people will be stuck making decisions on if the power or food is more important. PGE please reconsider raising your rates again. If anything at least wait until the economy is in a bit of a better state. - 3/16/2024 10:38:13 AM</p>

Name/Location	UE 435 Public Comments
Melissa Gagliano - PORTLAND	I agree wholeheartedly with Oregon CUB's appeal to OPUC to immediately throw out PGE's latest filing before review. The majority of Oregon's citizens are already at the breaking point financially, with increased costs of most essential living expenses: housing, food, utilities (including PGE's last 2 approved rate increases), healthcare, transportation, and childcare costs. Oregon CUB's description of this new rate increase request as "tone-deaf" is spot on. It's clear that PGE has no understanding and empathy for its customers and their financially-burdened lives, and, I for one, am glad that Oregon CUB has done the right thing by calling them out. - 3/16/2024 10:46:19 AM
Shandra Battern - PORTLAND	Just say no to more rate increases for PGE! Especially after a sizable increase just this year, Andrew one that tries to build in yearly increases thereafter!! - 3/16/2024 2:16:06 PM
Shandra Battern - PORTLAND	Just say no to more rate increases for PGE! Especially after a sizable increase just this year, Andrew one that tries to build in yearly increases thereafter!! - 3/16/2024 2:16:06 PM
Victoria Nied - PORTLAND	PGE raised their rates this January, and now they want to make another rate hike. People on Social Security and other fixed incomes can barely afford the January 2024 rate hike as it is way more than inflation. I request that PGE be denied another rate hike. - 3/16/2024 5:46:47 PM
Danielle Holmes - PORTLAND	The price increases over the last couple of years are becoming unsustainable for consumers. Electricity isn't the only think going up. Several services for consumers have had horrendous price hikes to where its becoming more and more difficult to live. The average consumer doesn't get cost of living raises anywhere close to the increases that are happening all over. How are we supposed to live? We're all going to end up on the streets if something doesn't change...and soon! - 3/17/2024 12:19:49 AM
Garrett Yoshimoto - PORTLAND	Responding to the request of PGE to raise rates another 7.4%. If approved, this amounts to a 25% increase in rates over the last 2 years. It is a obnoxious request to place on the general public. How about taking the salaries of the top 20% earners in PGE starting with the CEO to fund the request. Why burden the citizenry for the greediness of this company? why aren't they funding any improvements using their profits gained over the last 30 years? take take take seems to be their philosophy. then lie lie lie to this commission to get approvals. Someone has to say 'stop, this is enough'. Show the public your care by deny this request and any further increases for 5 years. - 3/17/2024 8:44:17 AM
Trina Bridsky - PORTLAND	I would like to protest against the proposed rate hike plan by PGE. This is an excessive raise and should not be approved. - 3/17/2024 9:06:14 AM
Lindy Rutherford - OREGON CITY	Regarding the proposed PGE Rate hike. Please Just Say NO to another rate hike. A rate hike of 12% in January 2023 and another big rate hike of 18% in January of 2024 is just too much already. Let them find the money for their shareholders and investors elsewhere in their CEO salaries and bonuses. Enough already. Are you for the people or against the people? - 3/17/2024 11:08:52 AM

Name/Location	UE 435 Public Comments
NA - SALEM	Yeah, That rate increase is airacant, and bullying, I oppose - 3/17/2024 11:23:14 AM
Dotty Hoesly - GLADSTONE	This has to stop, people can't afford these hikes & feed their family. When will it stop? Everywhere you go things are getting out of hand. Price gouging should stop now. The poor people are going into dept cause they can't pay bills. - 3/17/2024 6:48:08 PM
Elizabeth Brown - PORTLAND	No more rate increases. No new projects. No new upgrades. - 3/17/2024 11:32:21 PM
Jim Schroeder - HAPPY VALLEY	I firmly oppose PGE's latest rate increase request and support CUB's recommendation to outright reject. Rate increases in three consecutive years is unacceptable. PGE needs to be held accountable to a budget and learn to manage their costs like all of us need to. Make PGE outright justify their new battery costs once expended. - 3/18/2024 9:50:02 AM
None - BEAVERTON	I am finding it more and more difficult to stay in Oregon. I am 5th generation and the rates are so high they are pushing people out of their homes. Needs to be revisited as this is the responsible thing to do. - 3/18/2024 10:55:25 AM
Callie Sacarelos - PORTLAND	Portland General Electric's customers have already seen a 30% increase in power bills since 2022. And now the official consumer advocacy group Oregon Citizens' Utility Board is asking the state's utility regulator to reject a new 7.4% rate hike, which would take effect in January 2025. An analysis by the consumer group found that upwards of *****90% of the rate increase would go toward greater profits for PGE shareholders and other uses forbidden by regulators.***** Another rate increase proposed by Portland General Electric last week has many customers up in arms, wondering how they're going to afford paying their bills. If approved by the Oregon Public Utility Commission, it would add up to about a 40% increase in PGE's power rates since January 2022. Pacific Power customers are also feeling the pain. If the utility's latest rate proposal is approved, they're looking at a 50% increase since January 2023. Wildfire mitigation is the biggest driver of Pacific Power's proposed rate increase it includes a proposed "Catastrophic Fire Fund" to cover the utility's liability for wildfires. A jury in Oregon has found the company was grossly negligent and reckless, awarding millions in damages. Pacific Power residential customers have already seen two double digit increases and likely will see a third one next year. In January 2023, their bills went up by 21%; this January, they rose by 12.9%; and last month Pacific Power proposed a 17.9% rate hike that would go into effect next January. One of the big questions is whether customers should pay the wildfire litigation bill. There's a fundamental question whether it's legal to charge customers for those damages. If a court puts punitive damages on a company and that company is just allowed by regulators to pass those punitive damages on to customers, who's being punished? - 3/18/2024 11:40:33 AM

Christian Rodriguez - GRESHAM	<p>The new proposals are ridiculous considering the enormous rate hike just a few months ago. PGE should be ashamed of themselves. I and my entire household of 4 people WHOLEHEARTEDLY OPPOSE THIS PROPOSAL - 3/18/2024 4:57:43 PM</p>

Name/Location	UE 435 Public Comments
Steve Stein - SALEM	It's ridiculous to ask for yet another increase so soon after the last one. Electricity is a need, not a luxury, and the rate increase will push the cost of electricity out of many people's budgets. - 3/18/2024 6:54:07 PM
Meg Cole - PORTLAND	As a single mother in Portland, I struggle to pay my bill as it is...a 12.8% increase this year has made it very difficult for me. Now I hear PGE is proposing another 7.4% increase? This is absurd. I truly hope the company considers the residents of its state and does not increase rates anymore. Give us a break. We are all trying to get back on our feet. Thank you. - 3/18/2024 7:51:29 PM
Megan Fowler - OAK GROVE	The PGE rate increases are too significant. I would like to see an accounting of the spend and clarification as to what the recent fee hike is funding. I am not supportive of further increases in fees or rates at this time. - 3/18/2024 10:03:51 PM
Lindsey Uhl – Portland	uhl.lindsey15@everyactioncustom.com. Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Lindsey Uhl 5234 SE Franklin St Portland, OR 97206-2967 Uhl.lindsey15@gmail.com - 3/19/2024 12:33:31 AM

Mr. and Mrs. Susan Reid - Salem	<p>rich@everyactioncustom.com. Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As PGE customers, we ask you to please reject PGE's request to raise rates on Oregon households by 7.2%. Here's why. Thousands of PGE customers cannot afford any more increases. We are still catching up from the last rate increase and ice storm bills from January. As the Commission knows, PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. Very few people have had their incomes increase. We are counting on this Commission to please protect us. PGE desires \$202 million (7.2%) to fund battery storage projects that will increase PGE's profits. Seventeen million dollars, a fraction of this latest increase is earmarked for battery storage. Additionally, this case includes many issues this Commission rejected just a few months ago. Allowing utilities to continuously raise rates has tragic consequences for families across the State. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr and Mrs Richard and Susan Reid 3242 Bluff Ave SE Salem, OR 97302-3207 Rich@RichSueBluffhouse.com - 3/19/2024 12:35:06 AM</p>

Gaynell Schenck – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. I am a senior citizen watching increase in many items necessary for everyday living. I cannot afford another utility rate increase. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Gaynell Schenck 1975 NW Everett St Portland, OR 97209-1966 gschenck@hotmail.com - 3/19/2024 12:35:27 AM</p>
Matthew Gray – Corvallis	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). James Wygant – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). I'm a PGE customer. I strongly encourage the Commission to reject PGE's request to raise their rates in Oregon by 7.2%. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects, as though anything associated with new car batteries justifies a rate increase. I understand that only about \$17 million of the \$202 million requested is actually for battery storage. Instead, this request appears to include many issues the Commission rejected just months ago. Is this a disguised wishlist for management? Please reject PGE's request. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. James Wygant 7505 SE Reed College PI Portland, OR 97202-8362 jrwygant@gmail.com - 3/19/2024 12:36:21 AM</p>

Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Anne Reeser 1216 NE Beech St Portland, OR 97212-2261 annereeser@gmail.com - 3/19/2024 12:36:50 AM</p>
Phyllis Jaskowiak – Marylhurst	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. We are counting on you, the Commission, to put a stop to this and protect customers like me. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Amy Carlson 2006 N Emerson St Portland, OR 97217-3807 amycarlson@comcast.net - 3/19/2024 12:37:52 AM</p>

Name/Location	UE 435 Public Comments
Deborah Carey – Corvallis	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Deborah Carey 1975 SE Crystal Lake Dr Unit 111 Corvallis, OR 97333-0003 boiester@gmail.com - 3/19/2024 12:37:55 AM</p>
Beverly White – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). I am a fourth generation Oregonian, born in Portland in 1946. I've been a PGE customer my entire adult life. I have been retired and living on social security for eleven years. I have downsized to a small apartment in the cheapest senior community in the Portland Metro area. My electric bill has doubled in the last few years, while my (fixed!) income has not. On behalf of myself and so many other elderly, single women struggling to get by I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms Beverly White 12635 SW Prince Edward Ct Apt D Portland, OR 97224-2143 bev.terrace@gmail.com - 3/19/2024 12:37:58 AM</p>

Name/Location	UE 435 Public Comments
Carol Alery - FOREST GROVE	<p>There have been multiple public meetings over the past year and people have showed up as well as left public comment stating that they (Oregon Citizens) do NOT want wind farms off our coast OPB Article If I hear of another opportunity to submit public comment I will share it with you. The "green energy" policy is also threatening farmland. A South Korean Solar company wants to put 1600 acres of solar panels on farmland in the Harrisburg area. You can read more about it here 1600 Acre Solar Park Friends of Gap Rd The last thing I want to share is about the HCP The Habitat Conservation Plan was voted on by the Oregon Department of Forestry. It was passed on 03/07 by a vote of 4 -3 Two of the members that voted for the HCP have ties to environmental driven organizations. The chair Jim Kelly and Chandra Ferrari both have environmentalist backgrounds. The HCP will lock up state forests for 70 years. Here is a video about the HCP as well as 4 testimonies including one from Betsy Johnson. HCP Video There is an explanation of what the HCP is and links in the description if you would like to learn more. The failings of this board vote is that they do not have any plan to replace the funding that will be lost by closing the forests down. There are currently 15 counties that rely on funding. ONRI (Oregon Natural Resource Industries) as well as a school district are working on plans of how to fight this. This decision will effect ALL Oregonians. Why? Because there is no replacement funding, so they will be expecting us to replace the lost funds. Please respect the voice of the people. Thank you - 3/19/2024 10:32:21 AM</p>
Longtime Customer - HILLSBORO	<p>PGE can not be allowed to raise the rates AGAIN!!! I now pay over \$600+ for one month, its crazy. especially hard on seniors & folks with limited income. corporate greed, they expect us, the consumers to pay for their fines & penalties they've received from wildfire/storm incidents. electricity is a necessity not a luxury item!! Vote No - 3/19/2024 7:38:39 PM</p>
Estelle Voeller – Medford	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a friend of PGE customers, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. Samatha Hernandez – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. After enduring the freezing winter storm in January, my February utility bill came out to a skyrocketing \$285. My roommates and I are already feeling the financial repercussions of the rate increase that went into effect this January 2024. Due to this high utility bill, my roommates and I have had to cut back on other necessary monthly expenses including food and medical. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Name/Location	UE 435 Public Comments
Julie Blackman – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I urge the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. Furthermore, PGE's ratepayers pay far more per kilowatt hour than our neighbors across the river in Vancouver who are supplied by a PUC. Increases have been substantially higher for residential users than for corporate and industrial users. Such increases are not sustainable and now is not the time to entertain PGE's unreasonable request to raise rates yet again. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wish list for management and, quite significantly, includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Julie Blackman 4489 SW Fairview Circus Portland, OR 97221-2717 jnblackman@yahoo.com - 3/20/2024 12:32:24 AM</p>
Michael Phipps – Sherwood	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. As we try to move to using a cleaner energy for everything we use in our lives such as electric cars, raising the rates is the very last thing we need to happen. As a result of the 18% rate increase I am not looking at using a electric car now and will stay to using a Gasoline car for a long time. With this 7.2% rate increase coming up I can only imagine that this will greatly discourage others from considering or moving to cleaner energy alternatives so as long as these rates increases keep happening. Rates should be going down and not up. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Name/Location	UE 435 Public Comments
Rick Silverman – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. At a personal level, we were without power for eight days during the storm, due to poor maintenance of trees in our area. They have never properly maintained the trees near the power lines in our neighborhood and we and several of our neighbors sent them a letter stating that Asfaltum(?), their contractor does a terrible job. Our house got down to below 40 F, we used our gas stove to heat water on the stove, otherwise it would have been colder. The gas heat doesn't work without a spark from electricity. PGE increased rates last year by a huge amount. Their problems should not be ours and they want more money for profits not just the maintenance they have failed to maintain. They have forgotten they are a public corporation with responsibilities to their customers, not to gouge us for corporate profits. PGE can claim anything they want but the reality is their problems should not be resolved with more profits and that is what this rate case is about, \$17 million for batteries, I get that, but after 30% increase in the past two years and yet they want another \$107 million, that is \$90 million to profits. Really, is that something that should be our responsibility? They are already allowed a large profit margin as a public company to provide continuous power. My pension doesn't go up at anything close to their request, who is going to bail me out? I hope it is you! You are supposed to be the -Public-utility commission not their cosigner on their profits. Please dismiss this case and let them sort their stock price concerns by becoming a dependable corporation. Rick Silverman Please dismiss this case and tell PGE that enough is enough. Sincerely, Mx Rick Silverman 2416 SW Mitchell St Portland, OR 97239-2129 gizmot@teleport.com - 3/20/2024 12:32:37 AM</p>

Name/Location	UE 435 Public Comments
Helen Beckman - Keizer	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. The average household income has not increased anywhere near that much. What exactly justifies PGE's unreasonable request to raise bills. We are counting on you, the Commission, to protect PGE customers from unwarranted increases. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wish list for management and includes many issues the Commission rejected just months ago. Has their request been thoroughly reviewed? I respectfully request that you reject PGE's proposed increase. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Helen Beckman 1143 Rafael St N Keizer, OR 97303-6236 hbeckman0613@gmail.com - 3/20/2024 12:32:40 AM</p>
Laurie Brooks - Tigard	<p>brookscronkrite@everyactioncustom.com. Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. It is utterly beyond the pale for the PUC to approve \$185 million for higher profit margins, making it easier to force annual rate increases through and holding ratepayers responsible for risks that should be born by the shareholders. This is a textbook case of privatizing profits and publicly subsidizing costs for a monopoly where customers have no choice. It is flat out wrong. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Laurie Brooks 12278 SW Millview Ct Tigard, OR 97223-3510 Brookscronkrite@comcast.net - 3/20/2024 12:32:42 AM</p>

NA	<p>I oppose the new 7.4% rate increase request by PGE. The last 3 increases have had a huge impact on citizens. As someone on a fixed income, my income does not increase consistent with the rate hike. It seems with the previous approved rate increases there should have been some forethought to set aside some funds to cover the current need. While I appreciate the thought that PGE has for the future, there needs to be some realistic thought about what the users can afford. An unlimited rate increase is unrealistic. - 3/20/2024 12:33:07 AM</p>
Mike LaPorte – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Name/Location	UE 435 Public Comments
Ed Miska – West Linn	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). PGE raised rates 21.9% for the first 1000 kWh already. It is time to be more rational about the very high cost of battery backup and other mandates on PGE that force them to have more expensive power. That is, stop allowing them to do things that are very high cost. We are counting on you, the Commission, to put a stop to this and protect customers like me. You should however be helping to make customers that allow tall trees, that are a wind and fire hazard to be responsible for their own choices. We have had absurd levels of fire damage awarded to people that in part caused the problem themselves. I should not be paying \$ to these people thru my PGE rates! PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. The idea that I should be paying for PGE to translate their info into 100+ languages is also absurd! Anyone in the US is probably capable of finding their own contacts to do any necessary translation. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mr. Ed Miska 29255 SW Mountain Rd West Linn, OR 97068-9687 ed.miska@gmail.com - 3/20/2024 12:33:35 AM</p>

Yvonne Phipps – Sherwood	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). Please take into consideration the timing of this request and how it affects people. We're still trying to recover from increases in health insurance, other utility increases, and the cost is living. As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Yvonne Phipps 23720 SW Mountain Home Rd Sherwood, OR 97140-9495 x5850@yahoo.com - 3/20/2024 12:33:52 AM</p>
Noreen Lesage – Lake Oswego	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a long time PGE customer, I adamantly oppose PGE's request to raise rates by 7.2% for Oregon households. They just raised their rates three months ago and this request is unconscionable. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these uncalled for increases. Do not entertain PGE's unreasonable request to raise bills. Consumers are suffering through an unstable economy and high inflation as it is. You must put a stop to this excessive request and protect PGE's customers. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Mrs. Noreen Lesage 523 9th St Lake Oswego, OR 97034-2914 noreenlesage@yahoo.com - 3/20/2024 12:33:55 AM</p>

Judith Aftergut – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). I am a senior (80 years old) and am planning to stay in my home for as long as possible. That means saving money in every way I can. Last year's PGE rate increase has added a significant challenge --as rates go up, I must consider what's left that I can do without. I love living in Oregon and especially appreciate this state's basic practicality and realistic approach. As regulators, I would very much appreciate your continuing that tradition. Please considering prioritizing ratepayers rather than corporate profits. As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. NA	<p>Hi, I am a consumer that is upset with the recent approval 18% increase in 2024 and the proposed increase of 8% in 2025. PGE has demonstrated their negligence in ensuring equipment safety with the recent wildland fires that resulted in damage to consumers' properties. How are we holding them accountable for their negligence? The potential monopoly is becoming quite evident. The economy is suffering and I hope you reconsider the huge impact this will have on all consumers. Awarding them \$202 million in 2024 does not protect consumers. Thank you. - 3/20/2024 12:34:22 AM</p>
Cassandra Crandall - SILVERTON	<p>The people of Oregon especially PGE customers have been hit hard enough with inflation, let alone the electric rates that have become unbearable with the last round increases. My family has good paying jobs and I do not think we could survive another increase. The proposed increase would be detrimental to most households regardless of socioeconomic status. If this increase is allowed I predict that you will see more accidents when people are forced to find alternative ways to heat their homes ie bbqs (I know how wrong this is but we all know it happens) and fireplaces that have not been maintained. The customers should not shoulder the greed of shareholders, the lack of system maintenance that has now made the grid inferior, and the push for Electric vehicles. PGE and other large utility companies see great profits each year, why should they profit even more when so much is at stake for the people of Oregon. Please deny their request on behalf of the millions of already struggling citizens of Oregon. - 3/20/2024 5:39:49 AM</p>

William Stewart - SILVERTON	I oppose any additional rate increases, this would be a breaking point for many people in Oregon. My household has two working adults and we would Have to find an alternative way to heat our home if this increase is allowed. I cannot imaging being retired or having an income that has become unlivable due to inflation and being hit with another outlandish increase. Please put the people of Oregon before the profits of this corporation and their shareholders. - 3/20/2024 5:52:38 AM

Sandy Richards - ESTACADA	PGE Rate Hike: The previous rate hike of 17%: WE are not sure from what past billing amount the % was calculated from. We have an1800 square foot manufactured home in very good condition. There are three of us. Our bill after the hike was \$494. Wood is our main source of heat because we could barely afford the current billing. I don't have access to all past billings but cannot recall any amount that would justify \$494. We have an upgraded thermostat and heat pump suggested by PGE for usage savings. Additionally, we live in the Riverside Fire area. Because our homeowner insurance has rated us in a high-risk area, our insurance has gone from just over \$1000 to \$3500. Clackamas County has reassessed our area this year. Property taxes will most likely go up. A new school Bond will be on the November ballot. I fully support it, but that is another added cost. My husband retires at the end of this year. Our income will be cut in half because we will then need to pay our own health insurance. PGE workers, especially lineman, are amazing and are very appreciated of them, but something needs to give. Please review upper-level PGE staff salary, bonuses, perks as a consideration before any further hikes. Possibly have an independent agency audit PGE contracts with contractors. We do not support further rate hikes. - 3/20/2024 1:21:17 PM
Clarence Cannon - GALES CREEK	We on fixed income can't pay double what we were paying. Pud,s pay quarter of qhat we pay. We need help here and its by pay as much for pge as my mortgage is. - 3/20/2024 2:35:27 PM

Name/Location	UE 435 Public Comments
Ange Javens - PORTLAND	Pge has already increased thier rates by nearly 40% the last few years. There has not been any updates to equipment or security of power during natural disaster/storms. It does not make sense to have billion dollar profits, yet request an increase. Pge should utilize thier resources they already have and profits they already earn to do what they propose. We are all barely making it with how expensive everything is, none of us have rainy day funds like pge.. so instead of digging into our pockets deeper, let them dig into thier own. People on a fixed income or poor, low, moderate middle class cannot take anymore increased for our basic needs. Think they should take a few years off from increases and let the rest of us catch our breath. - 3/20/2024 4:28:43 PM
Edwin Simons - MILWAUKIE	As a retired veteran of the Vietnam campaign/era and have paid taxes well over 50 year. My last COLA adjustment was a meager \$54 a month. This was quickly negated by the rate increase from PGE for 2024. Everything else has increased to the point where I'm lucky I can still afford most of my medications! Yet I understand that PGE wants even more money for me in the near future? This is straight up extortion and know just how the digital meters on everyones homes can and are overclocked! You think that not happening? Who's the real fool here! Yet you are going to allow this? Ya better think again! This "increase" effects the senior citizens the most simply because they are mostly @ home everyday! This simply amounts to extortion against we senior citizens is tantamount to age discrimination! I will not let this go. - 3/20/2024 9:32:44 PM

Sofia Murray – Portland	<p>Dear Public Comments Oregon Public Utility Commission, I am writing to comment on the Portland General Electric rate case (UE 435). As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Ms. Sofia Murray 1571 SE Stark St Portland, OR 97214-1487 murray.sofie@gmail.com - 3/21/2024 12:32:08 AM</p>

Ann Tubbs - PORTLAND	<p>Please take in consideration of the growing challenge to make ends meet at inflation keeps rising. I ask that the price hike for PGE not be more than 2-3% for 2025. Have concern for the residents that have a tight budget and cannot live without heat! - 3/21/2024 9:12:40 AM</p>
Tegan Glenn - OAK GROVE	<p>Increasing utility costs further will only continue to make this city unaffordable and will directly contribute to our houseless population. We are paying almost \$300/monthly with the new increase (for a 1000sq ft apartment, electric heating, 2 adults). I cannot imagine how anyone would be able to afford a whole house. This will cause undue stress to the working class. - 3/21/2024 2:34:58 PM</p>

As a PGE customer, I strongly encourage the Commission to reject PGE's request to raise rates by 7.2% for Oregon households. Thousands of PGE customers are still reeling from the rate increase and ice storm bills this January. PGE's rates for Oregon households have already gone up by 30% from December 2022 to January 2024. People cannot afford these increases. Now is not the time to entertain PGE's unreasonable request to raise bills. We are counting on you, the Commission, to put a stop to this and protect customers like me. PGE has requested \$202 million (7.2%) under the guise of needing more money for battery storage projects. Only about \$17 million is for battery storage. Instead, this case is a wishlist for management and includes many issues the Commission rejected just months ago. We cannot keep allowing utilities to continuously ask for the same bad policy over and over again. Please dismiss this case and tell PGE that enough is enough. Sincerely, Miss Suzanne Biehl 35 NE 22nd Ave Portland, OR 97232-3175 suzibiehl@gmail.com - 3/22/2024 12:32:40 AM</p>

Linda Estes - SALEM	It's hard to agree with a 17% increase when the CEO is making 6 million a year. - 3/22/2024 11:29:30 AM
Lori Christian - GRESHAM	The PGE Bill for a 730sq ft 1 bedroom apartment is nearly \$200. We live in Gresham and it gets cold out here and the apartment building was built in 1991, so there is not much insulation and the winds blow through the door and outlet cracks. We have tried getting the door weather stripped by maintenance but they did a poor job and it fell off. Please we are low income and have the discount but even with that discount the bill this month was \$145. If the bills keep going up we will be homeless. This is greed. - 3/23/2024 1:46:33 PM
David Harris - BEAVERTON	Nay I oppose the rate increase - 3/23/2024 3:03:40 PM
