qualitative customer preference factors."[71] Statements and qualifications such as these undermine the conclusions in the report and lead me to conclude that relying on the Synapse Report for rejecting the proposed LEA is misplaced.

Q. Coalition Witness Cebulko also claims that eliminating the LEA will align with Avista's agreement to phase out its LEA in Oregon, as well as recent changes in LEA policy in California, Massachusetts, and Connecticut.[72] How do you respond?

A. I have addressed the issue of other gas LDCs in Washington State, including Avista, which has a portion of their service territory in Oregon. The elimination of Avista's LEA is a product of settlement, whereby many issues, including the overall revenue requirement determination, were settled. It is not the product of a Commission order in a fully-litigated case.

Regarding Massachusetts, the Massachusetts Department of Public Utilities "MDPU") issued its Order No. 20-80-B, but does not eliminate LEAs. Rather, this Order is "a regulatory strategy for pursuing an energy future that begins to move the Commonwealth beyond gas and toward its climate objectives."[73] In reading this order it is clear that the state of Massachusetts is in the process of reviewing all gas activities in the broader context of state climate objectives. At present, there is no stated timeframe for specific evaluation of LEAs.

[71] Synapse Report executive summary page vi.

[72] Coalition/100, Cebulko/20.

[73] Massachusetts D.P.U. 20-80-B page 137.

Similarly, Connecticut has not eliminated LEAs. In its April 22, 2022 Order[74] to evaluate the state's natural gas expansion plan, the Connecticut Public Utilities Regulatory Authority ("PURA") "winded down" its gas expansion plan. As part of this cessation of the expansion plan, certain incentives associated with the plan were modified or terminated. With regard to LEAs, PURA reverted its LEA policy back to pre-expansion terms, but did not ban new customer additions.

B. Reply to the Coalition's Model Critiques

Q. Coalition Witness Cebulko states that "the Company's proposed LEA methodology suffers from several significant, problematic assumptions."[75] Do you agree?

A. No, I do not. First, Coalition Witness Cebulko seems to confuse the issue by implying that the Company is changing its LEA calculation methodology from a "times margin" approach to a DCF approach. What Coalition Witness Cebulko fails to acknowledge is that these methodologies are one in the same. The DCF calculation is run to ensure that the expected revenues will result in a positive NPV, and to determine a reasonable times margin factor. The Company's proposed tiered LEA is based on a DCF model approach as shown in my Direct Testimony exhibits. Both approaches rely on the same classic financial methodology of net present value of discounted cash flows. While the approaches express the LEA in

[74] Docket No. 21-08-24: Petition Of William Tong, Attorney General for the State of Connecticut, and the Office of Consumer Counsel for an Investigation Into Eversource Energy Regarding Gas Expansion Marketing.

[75] Coalition/100, Cebulko/18.

different forms (a revenue multiplier and a fixed allowance), both forms are underpinned by a DCF approach.

Q. Why did the Company propose a fixed dollar LEA instead of continuing with a times margin LEA?

A. The proposed fixed dollar LEA (based on usage tiers) now includes additional costs and offsets not included in distribution-only revenues. This change in calculation components is in direct response to the Commission's directives in Order No. 22-388. Expressing LEA on a times margin basis is not consistent with these additional requirements, thus using the DCF methodology to calculate fixed LEA dollar amounts at proposed usage tiers is preferrable and more instinctive compared to carrying forward an LEA expressed on a times margin basis.

Q. Does Coalition Witness Cebulko identify other concerns with the proposed LEA methodology?

A. Yes, Coalition Witness Cebulko identifies six perceived shortcomings in the proposed LEA calculation.[76] Of these concerns I have addressed all of them in response to Staff Witness Dlouhy's and CUB Witness Garrett's Opening Testimony above, except for the assumed operations and maintenance ("O&M") assumption. For clarity, the O&M included in the DCF calculation is incremental. I have assumed that this incremental O&M remains constant over the 25-year LEA DCF analysis because the DCF calculation as a whole is expressed in real dollar terms, meaning it excludes the impact of inflation. Base distribution rates, which

[76] Coalition/100, Cebulko/27.

generate the revenues used in the DCF calculation, are held constant for the 25-year term. These revenues reflect a revenue requirement inclusive of O&M. I did not assume that, over the 25-year term of the DCF analysis, O&M would increase at a greater rate than allowed rates. I have no reason to believe otherwise. As a parallel, I have no reason to believe other components of incremental LEA revenue requirement, such as property taxes or income taxes, would materially differ from that included in base rates in real dollar terms.

Q. Please respond to Coalition Witness Cebulko's assertion that the proposed LEA is "directionally absurd."[77]

A. Coalition Witness Cebulko is comparing a recalculated LEA with new assumptions and requirements from the Commission Order to an artificial cap value. Absent the cap, the comparison would be much closer.

Q. Coalition Witness Cebulko further asserts that "the Company's program is the riskiest structure imaginable for existing customers."[78] Please respond.

A. The LEA model proposed herein is based on a fundamental, long-standing analysis using a common DCF approach. The results of the model reflect the expected cash flows from a new customer connection and will pay for itself, on an NPV basis, in twenty-five years. The size of the proposed LEA is the product of this calculation. It is no more risky than previously calculated LEAs or any riskier

[77] Coalition/100, Cebulko/25.

[78] Coalition/100, Cebulko/26.

than the vast majority of LEAs around the country. I respectfully suggest the Commission ignore such sensationalism from Coalition Witness Cebulko.

C. Reply to the Coalition's Recommendation

Q. The Coalition asserts the Commission should eliminate the Company's residential and non-residential LEAs, on the basis that the policy is no longer in the public interest and exposes customers to economic risk, is counterproductive for meeting the state's emissions reduction goals, and increases the costs and risks for existing customers.[79] How do you respond?

A. For the reasons described in my point-by-point rebuttal above, I recommend the Commission approve the Company's modified LEA, which accurately and fairly reflects the Commission's directives from Order No. 22-388. The proposed LEA does not expose (existing) customers to any incremental economic risk compared to past LEA calculations. The model incorporates the proxy CPP compliance costs consistent with the Commission's directives and is therefore not counter-productive for meeting the state's emission reduction goals. Rather, the LEA alignment that now favors more efficient gas usage (through a higher LEA at lower usage levels) advances the state's emission reduction goals. Lastly, the mathematical calculation of the DCF methodology reasonably ensures that new customers pay (at least) their fair share and do not result in increased costs to existing customers.

[79] Coalition/100, Cebulko/18-19.

VI. CONCLUSION AND RECOMMENDATION

Q. What is your recommendation regarding NW Natural's proposed LEA?

A. I recommend the modest changes to the revised DCF calculation described above, and reject all other recommendations made by Staff Witness Dlouhy, CUB Witness Garrett and the Coalition Intervenors.

Q. Does this conclude your Reply Testimony?

A. Yes.

RE: UG 490 NWN DRs 2-6 to CUB

UG 490
CUB Response to NWN Data Request Nos. 2-6
Date: May 13, 2024

Data Request 2:

Referring to CUB/200, Garrett/10, Line 20 through /11, Line 3, specifically: "The Company's LEA design implies that the product the Company delivers is becoming less cost-competitive, and that the ideal NW Natural customer hooks up to the system but uses little to no therms of gas." Please provide all analyses, workpapers (with formulae intact), studies, reports or other documents that CUB relied upon to make this statement.

Data Response 2:

CUB's statement was based on the implication of the Company's LEA policy design, not on any external analysis.

Data Request 3:

Referring to CUB/200, Garrett/11, Lines 9-12, specifically: "Over the 25-year LEA repayment period in the Company's modeling, the customer charge alone will cost the "new premise" new customer $7,875, meaning the new customer could save $7,875 by discontinuing gas service." Please provide all analyses, workpapers, studies, reports or other documents that CUB relied upon to conclude that a new customer could save money by discontinuing gas service compared with the cost of an alternative electric utility provider.

Data Response 3:

CUB's statement was a statement of mathematics. Over a 25-year period, $7,875 is the cost of NW Natural's "new premise" customer charge and a customer who does not buy gas service would not pay this charge.

Data Request 4:

Referring to CUB/200, Garrett/18, Lines 10-13, specifically: "CUB argues this assumption is unreasonable, and that a meaningful quantity of customers will notice the customer charge, calculate that it alone will cost them $315/yr ($26.25/ month x 12 months/yr), or $7,875 in 25 years, and terminate NW Natural service within 25 years."

a. Please provide all analyses, workpapers (with formulae intact), studies, reports or other documents that CUB relied upon to make this statement.
b. Based on this statement, what is the breakeven amount that would keep a "meaningful quantify" of customers connected after 25 years?

Data Response 4:

a. CUB calculated an approximate 51% rate increase for new customers through the "new premise" customer charge as demonstrated in Cub Exhibit 203 and as provided to the Company in Attachment C of CUB's response to NWN DR 1. Moreover, fundamental economic theory of price elasticity indicates that if you charge customers more and customers have other options (such as electricity, propane, solar, or wood for space heating), then some customers will react to that price signal.
b. CUB's customer attrition modeling covered a broad range of scenarios. See CUB/200, Garrett/26 – 27. CUB analyzed NWN's proposal and did not seek out alternative "breakeven amounts." CUB is uncertain what is meant by "breakeven amount" here.

Data Request 5:

Referring to CUB/200, Garrett/10, Line 4, specifically: "multifamily customers tend to be renters and/or lower income." Please produce CUB's analysis that supports this assertion, including all documents, workpapers, and Excel files with formulae intact, etc.
a. What is the share of low-income households that are in older (10+ years) multi-family housing compared to more newly constructed (10 years or less) housing?
b. What is the share of low-income households in multi-family housing that is individually metered for gas service compared to multi-family housing that is not individually metered for gas service?

Data Response 5:

CUB believes that the statement "Multifamily customers tend to be renters and/or lower income" is a factual statement. While there are owner-occupied condominiums that are considered multi-family housing, CUB believes that it is an accurate statement to say that most multi-family housing supports renters. In addition, there is a great deal of data that demonstrates that renters have lower incomes than homeowners (*see* Portland Demographics and Housing Stock, published by the City of Portland,

https://www.portland.gov/phb/documents/2022-state-housing-part-1-portland-demographics-and-housing-stock/download).

a. CUB has not attempted to quantify the share of low-income households that are in older (10+ years) multi-family housing compared to more newly constructed (10 years or less) housing.
b. CUB has not attempted to quantify the share of low-income households in multi-family housing that is individually metered for gas service compared to multi-family housing that is not individually metered for gas service.

Data Request 6:

Referring to CUB/100, Jenks/7-18, specifically CUB's Rate Shock Standard Proposal.

a. Please describe with specificity what rate changes (e.g. rate case, WACOG, RNG AAC, decoupling deferral, Bill Discount Program) would be subject to CUB's Rate Shock Standard Proposal.

b. How would non-November 1st rate changes be calculated for purposes of determining rate shock? Please provide an example calculation.

c. Please state whether rate increases associated with the reestablished CPP rules are proposed to be included in the rate shock mechanism. Please explain.

d. Please provide: (i) all customer rate impact analyses developed by CUB for the invalidated CPP or any reestablished CPP rules; and (ii) all customer rate impact analyses developed by a third-party that are in the custody of CUB for the invalidated CPP or any reestablished CPP rules.

e. Which version of the Consumer Price Index is CUB proposing to use (e.g., U.S. All Urban CPI, West Region Urban CPI)?

Data Response 6:

a. CUB's proposal would apply to all adjustments that occur on November 1.
b. The rate shock proposal for gas companies is focused on the November 1 rate change. At this time, CUB has not proposed including non-November 1 rate changes for gas utilities. Because CUB is primarily concerned about winter bill impacts, moving some of the rate filing to December 1 or January 1 would not solve the winter rate shock problem and would likely cause CUB to amend our proposal to include the full winter season.
c. Yes, if they occur on Nov. 1
d. The Rate impact analysis of the CPP has been presented in the DEQ's CPP rulemaking and in utility IRPs. CUB did not develop additional CPP rate impact analysis in preparing its testimony.
e. CUB did not propose a specific version of the CPI.

EXHIBIT 4100 – REPLY TESTIMONY – SCHEDULE X ADMINISTRATION

Table of Contents

I. Introduction and Summary.....1

II. Background Regarding the Administration of Schedule X.....2

III. Coalition's Recommendations 14

I. INTRODUCTION AND SUMMARY

Q. Please state your name and position at Northwest Natural Gas Company dba NW Natural ("NW Natural" or the "Company").

A. Jeffrey M. Zaubi, Financial Consultant 3 on the Business Analytics team.

Q. Please describe your education and employment background.

A. I have been employed by NW Natural since 2016. I work on the Business Analytics team and provide analytical and decision support for multiple groups and initiatives within the Company. Prior to working at NW Natural, I worked as a Structuring Manager at SouthStar Energy Services, which is a retail natural gas provider located in Atlanta, Georgia. I worked at SouthStar Energy Services from 2007-2016 and was mainly responsible for developing production cost models. Prior to working at SouthStar Energy Services, I worked for Accenture from 1999 – 2007 as an Information Technology professional.

I have a Bachelor of Science degree in Business Administration from Samford University, located in Birmingham, Alabama, and a Masters in Business Administration from Georgia State University, located in Atlanta, Georgia. I am also a CFA charter-holder (Chartered Financial Analyst).

Q. What is the purpose of your Reply Testimony in this proceeding?

A. The purpose of my Reply Testimony is to respond to the Opening Testimony of Bradley Cebulko on behalf of the Coalition[1] concerning the Coalition's proposed

[1] The Coalition includes the Coalition of Communities of Color, Climate Solutions, Verde, Columbia Riverkeeper, Oregon Environmental Council, Community Energy Project, and Sierra Club.

disallowance of costs associated with system investments to hook up new residential customers.

Q. Please summarize your Reply Testimony.

A. In my testimony, I:

- Provide relevant background regarding the Company's process for adding new residential and commercial customers pursuant to Schedule X of its Oregon Tariff;
- Describe the Company's process for estimating the construction costs for new residential and commercial customers; and
- Demonstrate the Company's constructions costs for adding new residential and commercial customers were prudently incurred and should be recovered.

Q. Do you include any exhibits with your testimony?

A. Yes, I am presenting the following exhibits: NW Natural/4101, Zaubi (modified version of UG 490 OPUC DR 138 Attachment 1 Amended) and NW Natural/4102, Zaubi (calculated Line Extension Allowances compared with estimated construction costs).

II. BACKGROUND REGARDING THE ADMINISTRATION OF SCHEDULE X

Q. Please explain the purpose of the Company's Schedule X to its Oregon Tariff.

A. The purpose of Schedule X is to provide the terms to a customer for installing gas distribution facilities for gas service at a particular premises. Schedule X provides these terms for residential, commercial, and industrial customers. Included in these terms is the methodology by which a customer will financially contribute to the cost of construction of the distribution facilities above a certain threshold based

on the estimated margin. The amount that a customer must pay toward the cost of the construction of distribution facilities is known as a "Construction Contribution." The dollar credit that may be available to a customer to offset the cost of distribution facilities to a new premises is known as a "Construction Allowance" or "Line Extension Allowance." I will refer to Line Extension Allowances as "LEAs" in my testimony. The Company's Schedule X that determines the LEA must be approved by the Public Utility Commission of Oregon (the "Commission"). The administration of a Commission-approved tariff for the extension of service to new customers allows the Company to efficiently serve customers by having a standardized set of terms for customers to rely on when they choose to join NW Natural's system.

Generally, the amount of the LEA provided in a utility's tariff is designed to be a short-hand calculation that reflects the amount of investment that a utility can make to add a new customer. This is reflected in OAR 860-021-0050(1), which states: "Each gas utility shall furnish, a gas service from the gas main adjacent to the customer's premises to and including the meter. Each gas utility shall develop, with the Commission's approval, a uniform policy governing the amount of service extension that will be made free to connect a new customer. This policy should be related to the investment that can prudently be made for the probable revenue."

Currently, NW Natural's Schedule X tariff provides an LEA for residential customers equal to 4.0 times the customer's anticipated annual margin. Based on a customer that uses 531 therms annually, that customer would be entitled to an $1,850 LEA. As I will describe more below, if the estimated costs of construction

exceed that amount, NW Natural will require potential customers to pay a Construction Contribution for the difference between the LEA and the estimated construction costs, grossed up for tax. Commercial and Planned Developments will use at a minimum 5.0 times margin to calculate the LEA. If construction costs are expected to exceed $250,000, then an additional discounted cash flow analysis is also performed.

Q. Please describe the change to the Company's LEA in the Company's last general rate case, UG 435.

A. In NW Natural's last rate case, the Commission modified the Company's LEA to a methodology based on a margin multiplier that phased down over three years. The Commission stated:

> We find it appropriate to implement a reduction to the LEA that is based on a previously used methodology that strikes a balance between drastically reducing the LEA and moderating any adjustment. We accept CUB's proposal regarding the LEA, in part, by ordering the company to adjust its LEA to reflect a five times the annual margin approach, comparable to the methodology the company used prior to its current Schedule X. Specifically, we find that the amount of $2,300, as produced by the company in response to Bench Request 7, strikes an appropriate balance. We find that the amount ordered is reasonable and strikes an appropriate balance of the competing interests we describe in this order.[2]

As such, beginning November 1, 2022, a customer would receive an LEA equal to 5.0 times their estimated annual margin. Beginning November 1, 2023, the LEA decreased to 4.0 times annual margin. Beginning November 1, 2024, the LEA will

[2] *In the Matter of Northwest Natural Gas Company, dba NW Natural, Request for a General Rate Revision*, Docket No. UG 435, Order No. 22-388, at 51 (Oct. 24, 2022).

decrease to 3.0 times annual margin, absent a change in this rate case proposed in the Direct Testimony of Gregg H. Therrien.[3]

Q. The Commission specifically referred to an LEA amount of $2,300. What does that amount represent?

A. The Commission approved an LEA of $2,300 in the Order, which represents 5.0 times the annual margin of a new customer expected to use 531 therms.

Q. Has the Company provided an LEA of $2,300 to all new residential customers regardless of their expected margin?

A. No. Under a margin multiplier approach, the Company estimates the annual margin generated from a new customer based on their expected usage and multiplied that margin by 5.0 times. However, given the Commission's view that $2,300 was a reasonable amount, the Company capped its LEA at $2,300. In other words, even if a customer's expected usage would generate more than $2,300 using a 5.0 times margin multiplier, the Company did not provide an LEA higher than that amount for customers seeking service after November 1, 2022. The Company has taken this same approach using the 4.0 times margin multiplier since November 1, 2023, by capping the LEA at $1,850.

Q. How does the Company develop the LEA for potential customers?

A. In order to estimate annual margin, the Company collects estimated annual usage from each new applicant for service. Estimated usage is based on a variety of equipment and premises attributes, such as square footage, age of premises,

[3] NW Natural/1900, Therrien/15.

number of bedrooms, and equipment type. The equipment and premises attributes are captured for each customer, and an estimated usage and margin calculation is performed. As I explained above, if the estimated annual margin multiplied by the multiplier in effect is higher than the specified cap (i.e., $2,300 when the LEA was 5.0 times margin), then the LEA for that customer is reduced to the cap. It is important to note the LEA step down and cap are only for residential customers. The Commercial customer LEA is based on 5.0 times margin, with no step down and no cap.

Q. Please describe the Company's process for estimating construction costs for residential customers.

A. Generally, the Company uses the average construction costs from the prior year to estimate construction costs for residential customers. Historical costs are segmented by the type of residential service lines. The different residential service line segments include single-family new construction service lines, new construction spot-lot service lines, and conversion service lines. Single-family new construction service lines are associated with planned development neighborhoods. New construction spot-lot service lines are associated with new construction not associated with a planned development, and conversion service lines are for existing premises that choose to add natural gas service. Each year, the average costs of all residential connections are computed and applied to the appropriate type of service. For instance, a single-family new construction premises will use the historical average construction costs for a single-family new construction service line. A new construction spot-lot premises will use the

historical average construction cost for a new construction spot-lot service line, and a conversion premises will use the historical average construction cost for a conversion service line. Costs include the service line, meter, permit, and indirect materials. These costs are reviewed and analyzed annually.

If extraordinary construction conditions exist at the premises, such as extreme rocky conditions along the main and service line route, if the connection must be made from a high pressure main, if the service line length is greater than 300 feet, or the extension requires a railroad, bridge, or other non-standard crossing permit, then a site-specific estimate will be performed. All main extension costs associated with a new construction spot-lot or conversion will involve site-specific cost estimates. All commercial service lines require a site-specific estimate.

Q. How often does the Company update its construction costs?

A. The Company annually updates its construction costs. As mentioned previously, all historical construction costs from the prior year are calculated and segmented by single family new construction services, new construction spot-lot services, and conversion services. Each of these segments share attributes that uniquely impact construction costs.

Q. Please describe the process for a new customer who is requesting that gas service be extended to their premises.

A. The process will vary by applicant type, as new applicants can be builders representing planned developments, new construction spot-lot applicants, conversion applicants, and commercial applicants. The process will vary by

premises type and market segment. For conversions, a request for gas availability for an existing single-family residence may be received by phone, email, or the NW Natural website. An address is provided, and geo-spatial data is used to determine the location of the property to distribution facilities. An evaluation is then performed to determine costing methodology. As long as a premises does not have rocky soil conditions, is not connecting to a high-pressure main, has a service length less than 300 feet, and does not have a railroad or creek crossing, then the premises will use historical costs as a basis for construction cost. Otherwise, a site-specific estimate will be performed. At this point, the customer is provided a quote, which is valid for 30 days on a verbal basis, and 60 days if written. A signed service agreement is required to initiate the construction process, and the customer must pay the Construction Contribution. The service will be installed once all construction permits are received and utility locates are marked.

New Construction spot-lot applicants are similar to conversion applicants in that their proposed building is reviewed for the same criteria. The builder is responsible for installing NW Natural provided conduit for the service pathway. There are no service length restrictions because of the customer provided pathway. For new residential construction planned developments, NW Natural designs its natural gas distribution facilities alongside electrical distribution facilities to utilize the same open trench. If a main extension to serve the planned development is required, then a site-specific estimate will be performed for the approach main extension. If no approach main extension is required, then the designed footage is used with the historical system default costing to generate

construction costs for the distribution facilities. The number of buildable construction lots are defined by the design provided by the developer or civil engineer. Historical average costs are used for the single-family new construction services. The LEA is calculated using estimated usage of the entire development using current times margin and cap for each service.

For commercial applicants, all requests are estimated on a site-specific basis. The projected therm load is calculated using The North American Industry Classification System ("NAICS") code associated to the applicant, square footage of the building, and a historical coefficient of usage based on the NAICS code. A 5.0 times margin calculation is then performed, with no construction allowance cap. If construction costs are estimated to exceed the LEA, then a customer contribution is required for the difference, grossed-up for tax. According to Census.gov, the NAICS code definition is the following:

> "The North American Industry Classification System (NAICS) is the standard used by Federal statistical agencies in classifying business establishments for the purpose of collecting, analyzing, and publishing statistical data related to the U.S. business economy."

New construction spot lot quotes are held open for six months because of the lead time of building a house. New construction planned development and commercial quotes are held open for a year given the complexities of these projects.

Q. Are there different methodologies for determining the line extension allowances for residential and commercial customers?

A. Yes.

Q. Please explain the difference.

A. As explained earlier, the residential construction allowance is based on a specified margin multiplier with a cap. For commercial applicants, Schedule X provides that "the Company will perform an investment analysis for each installation to determine the amount of any [LEA]. At a minimum, the [LEA] will equal 5.0 times the annual margin revenue that is estimated to be generated from the operation of natural gas-fired equipment to be installed at the service address." If the estimated construction costs exceed $250,000, then an additional investment analysis will also be performed to ensure that the contribution generated from the 5.0 times annual margin sufficiently ensures project profitability and does not negatively impact ratepayers. An additional contribution will be required if the investment analysis shows it is necessary. If the investment analysis shows favorable results, then the project may proceed under the 5.0 times margin methodology.

Q. Please explain how the Company performs an investment analysis for commercial customers and how it compares to 5.0 times the annual margin revenue.

A. The investment analysis referenced above utilizes a discounted cash flow model to estimate net present value ("NPV") and present value of revenue requirement ("PVRR"). This model evaluates the cash flow and accounts for capital spend, operational and maintenance expenses, expected margin, and customer contribution from the 5.0 times annual margin. If PVRR from the discounted cash flow analysis is positive, then an additional contribution will be required. If the

results are favorable, then the project may proceed under the 5.0 times margin methodology.

Q. The tariff states that "[a]t a minimum, the Construction Allowance [for commercial and planned developments] will equal 5.0 times the annual margin revenue . . . ." How does the Company interpret the phrase "at a minimum" in this context?

A. To be clear, the Company will not provide more than 5.0 times margin to commercial or planned development customer. The phrasing "at a minimum" is not intended to mean that NW Natural will provide more than 5.0 times margin. Further, residential new construction planned developments are evaluated using the current 4.0 times margin, and not the 5.0 times margin mentioned in the tariff. We recognize this is confusing phrasing and will clarify this portion of the tariff in our compliance filing with this rate case.

Q. Please describe the Company's process for estimating construction costs for commercial customers.

A. Commercial customers require a site-specific estimate. Site-specific estimates require an estimator to visit the premises and estimate the required time, materials, and equipment needed to install the service line.

Q. Please state how many residential line extension allowances have required the new customers to contribute to construction costs over each of the last five years.

A. Please see NW Natural/4101, Zaubi, and Table 1 below. Nine percent of service lines required contributions in 2018. In 2023, 17 percent of service lines required

contributions. Total contribution dollars grew 164 percent, from $479,836 to $1,267,428.

Table 1

Year	Line Extension Count	Count Customer Contributions	% Requiring Contributions	Total Contributions
2018	7,789	678	9%	$479,836
2019	7,642	645	8%	$482,120
2020	7,034	706	10%	$782,478
2021	6,992	670	10%	$884,886
2022	6,284	718	11%	$902,424
2023	4,395	732	17%	$1,267,428
		Contribution Increase 2018-2023---------->		164%

Q. Why does the Company believe that more contributions have been required?

A. Higher, more frequent customer contributions are a result of a lower line extension allowance combined with higher construction costs. Higher construction costs have been driven primarily by jurisdictional restoration requirements. From 2019 through 2022, asphalt costs, which is a large component of restoration costs, grew 137% for conversion services, and 98% for spot-lot services. General inflation only accounts for a portion of those cost increases. Prior to 2018, municipalities, in general, only required a T-cut in the road and approximately 25 square feet of restoration. Post 2018, requirements quickly changed to include 100 to 500 square feet of surface area restoration, plus CDF (Control Density Fill) and Grind & Inlay.

Q. Does the Company keep records of how many potential new customers have received a quote from NW Natural, and ultimately, decided not to join NW Natural's system?

A. Yes. Since April of 2020, there are 4,569 potential new customers who decided not to proceed with joining NW Natural's system.

Q. What happens if the actual construction costs are lower or higher than the estimated construction costs?

A. Given the very nature of construction work there will be a high variability of job types and site conditions, which may lead to volatility between an estimate and actual costs. Even jobs that have a site-specific estimate are subject to higher than estimated construction costs. An estimator may not truly know the site conditions, such as rocky soil, until construction commences. Ultimately the Company honors the signed agreement with the customer, and these costs are included in plant whether or not construction costs are higher than estimated. In the case of a site-specific estimate where actuals come in lower than the estimate, the customer will be refunded the difference to the extent there was a contribution required.

Q. How do you verify that existing customers are not harmed by construction costs for line extensions that exceed the estimated costs?

A. There will always be jobs where actual construction costs are higher than estimated costs. As mentioned previously, the Company honors the signed agreement. However, referring back to NW Natural/4101, Zaubi, when evaluating the total work orders by year using a 25-year discounted cash flow methodology,

the net present value for the portfolio of customers is positive, and present value of revenue requirement is negative, indicating the portfolio of customers do not create a burden for existing rate payers. Even to the extent that there are some outliers (i.e., higher cost than estimated), there are sufficient cases where the costs come in below the indicated LEA. Further, see attachment NW Natural/4102, Zaubi. Eighty-three percent of these work orders have LEAs higher than needed compared to the construction cost. In other words, the calculated LEA exceeded the estimated construction costs, and therefore the existing customers would have benefitted more due to the addition of those customers.

III. COALITION'S RECOMMENDATIONS

Q. Did the Coalition analyze the Company's line extension allowances?

A. Yes, the Coalition argues that NW Natural "billed costs to ratepayers for residential line extensions that exceeded its approved Service Line Extension Allowance."[4] The Coalition argues that any new premises construction costs that exceed the line extension allowance should be disallowed.[5] In making this argument, the Coalition asserts that the Company's contribution to main line extensions "can be virtually unlimited."[6] Specifically, the Coalition argues that $2,222,531 of construction costs incurred in 2023 should be disallowed because those costs exceeded the individual customer allowances.[7] The Coalition also argues that the

[4] Coalition/100, Cebulko/37.

[5] *Id.*

[6] *Id.* at 41.

[7] *Id.* at 43.

Company's work orders for each individual line extension allowance are unclear.[8] Finally, the Coalition states that it is also investigating the Company's non-residential line extension allowances, and expects to address the issue in Rebuttal Testimony.[9]

Q. Please describe the Coalition's methodology and approach for calculating this proposed disallowance.

A. The Coalition first subtracts the customer contribution from the total cost of each 2023 work order. Second, the Coalition then subtracts $2,300 (i.e., the LEA) from the result of subtracting the customer contribution from the total cost for each work order, which the Coalition calls "Overage". If this calculation for any work order results in a negative value, then the result for that work order is given a zero. All the "Overages" for the 4,395 work orders in 2023 are then summed up, for a total of $2,222,531.

Q. Was the Company able to determine which extensions the Coalition has proposed for disallowance?

A. Yes. There are 833 work orders the Coalition has proposed for disallowance. This is 19 percent of the total.

Q. How does the Company respond to this proposed disallowance?

A. First, as described in the above testimony, we follow our Tariff Schedule X for all new customer additions. We have a detailed process to update our construction costs annually to ensure we are providing reliable construction quotes that

[8] *Id.* at 40.

[9] *Id.* at 45.

customers can rely on to purchase natural gas appliances. By isolating single construction costs that went over their reasonable estimate, the Coalition is evaluating prudency based on hindsight. As I explained earlier in my testimony, we endeavor to provide accurate estimates for construction. Simply because certain construction costs go over their estimate does not mean that the Company's actions were *de facto* imprudent.

Second, because we engage in thousands of new customer additions each year, there will always be construction costs that are above and below the estimates that we provide. This is the reality of being in the construction business. This is also why the Company reviews the cost/benefit of new customer additions based on a portfolio approach in any given year. To the extent there were 833 new customer additions that ultimately cost more than the Company's estimated construction costs when signing a service agreement, that also means that the remaining 3,562 customer additions offset those costs, assuming that the present value of revenue requirement for the portfolio is negative, which it is. The Coalition's approach is one-sided and punitive and does not attempt to recognize the benefit of the 3,562 other customer additions.

Third, the Coalition has incorrectly calculated the purported overage. Some of the work orders that the Coalition has proposed for disallowance are from the work orders that were initiated before the LEA was changed on November 1, 2022. There is always a delay between the time customers sign a service agreement and when the construction actually occurs. At the time the Company entered into service agreements with new customers in 2022, the LEA was still $2,875. As

such, the calendar year 2023 for new plant placed in service for residential customer additions would include LEAs from 2022. Additionally, there are work orders included in the 2023 residential connections that include multi-family residential premises. Those premises are captured in a single work order, but would have multiple meters associated with them, and therefore, be entitled to an LEA for each new customer addition. When accounting for theses corrections, this creates an overestimate in the Coalition's proposed disallowance by $320,590.

Q. The Coalition appears to make a distinction of line extension allowances between service line extensions and main line extensions. How does the Company respond?

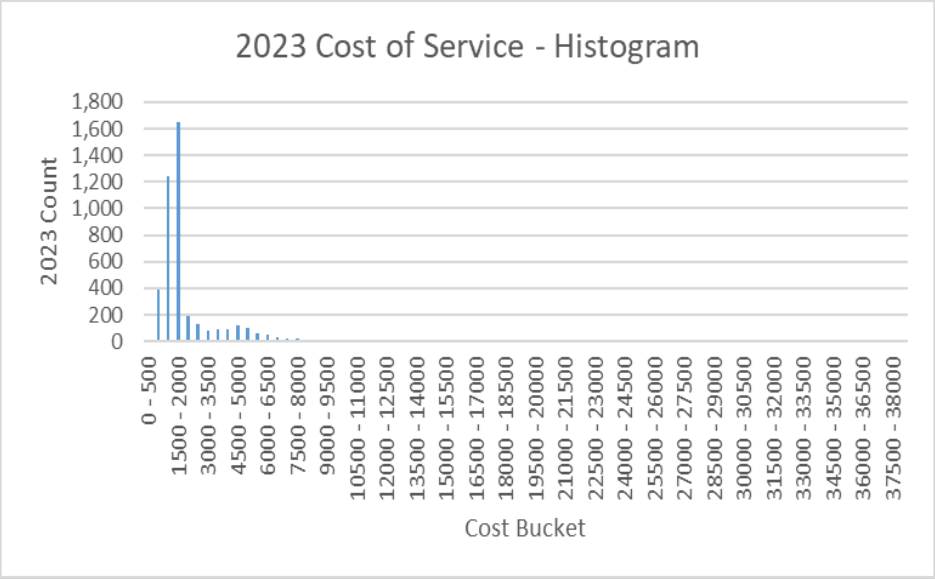
A. All main extension costs are evaluated in the LEA/Customer Contribution calculation, including new construction planned developments, new construction spot-lots, and conversions. Main extensions for new construction planned developments are referred to as system expansion. Main extension costs allocated to individual services lines for Conversions and New Construction Spot-lots are shown in column L in NW Natural/4101, Zaubi.

System expansion costs are typically not allocated to particular service lines on a connection-by-connection basis for each customer addition. Rather, new construction planned developments are evaluated at the project level using an NPV/PVRR analysis and maintaining the current limit of 4.0 times margin allowance for the project. New construction planned developments can include hundreds of premises, and take years for all service lines to go into service. To take a snapshot in time and allocate completed system expansion costs to only a

fraction of actual service lines in service would be misrepresenting costs on a per service line basis. Instead, the Company performs the analysis for the entire development, and then individually applies LEAs to each new premises addition.

Q. The Coalition argues that the Company's work orders were incorrect.[10] How do you respond?

A. As established in the earlier testimony, there may be time entry errors, or miscoding of invoices to wrong work orders in some of the data set. However, this is the exception and not the rule. See the histogram below and in NW Natural/4102, Zaubi. Ninety-nine percent of 2023 work orders are below a total cost of $10,000, and 82 percent of all orders are between $1,000 and $5,000, which suggests costs are approximately in range of expectations, and therefore can conclude are reasonably accurate. If there were widespread work order errors, the distribution would be much more dispersed than observed for 2023.



[10] *Id.* at 40.

Q. Does this conclude your Reply Testimony?

A. Yes.

June 4, 2024

EXHIBIT 4200 – REPLY TESTIMONY – LONG-TERM HEDGING

Table of Contents

I. Introduction and Summary.....1

II. Background.....2

III. Response to Staff's Long-Term Hedging Proposal.....7

I. INTRODUCTION AND SUMMARY

Q. Please state your name and position at Northwest Natural Gas Company dba NW Natural ("NW Natural" or the "Company").

A. My name is Scott S. Johnson and I am Director of Gas Supply at NW Natural.

Q. Please describe your education and employment background.

A. I have a Bachelor's degree in Accounting and started my career working at a public accounting firm where I focused on auditing utilities. I have worked at NW Natural for 13 years in various roles including financial reporting, gas and regulatory accounting and gas supply. I have worked in gas supply for about 10 years.

Q. What is the purpose of your Reply Testimony in this proceeding?

A. The purpose of my Reply Testimony is to respond to the Opening Testimony of Anna Kim on behalf of Staff for the Public Utility Commission of Oregon ("Staff") concerning Staff's proposal to establish a sharing mechanism for gas supply hedges that exceed three years in duration (Staff/1100, Kim).

Q. Please summarize your Reply Testimony.

A. In my testimony, I:

- Provide relevant background regarding long-term hedges, the Commission's previous long-term hedging orders, and the incorporation of stipulated long-term hedging guidelines into the Commission's Natural Gas Portfolio Development Guidelines;
- Provide relevant background regarding increased pricing and volatility at Pacific Northwest gas trading hubs; and

- Respond to Staff's policy proposal, which the Company believes would require it to absorb 10 percent of the "above market"[1] costs for those long-term hedges that exceed either five percent of "total [gas] costs,"[2] or gas volumes.[3]

II. BACKGROUND

Q. Please define hedging.

A. Hedging is defined as reducing risk. It includes activities that reduce risk or that convert one type of risk to another deemed more tolerable. To qualify as hedging, an activity should be expected to produce a measurable offset to risk relating to an asset, liability, committed transaction, or probable forecasted transaction. A "long-term" hedge is considered to be three years or longer.

Q. Please explain how hedging benefits customers.

A. The use of hedging strategies and derivative structures is intended to allow the Company to reduce commodity price, exchange rate, and interest rate risks (market risks). NW Natural's internal policy is intended to prevent speculative risk. Speculative risk is defined as any risk that is engaged in for reasons other than to reduce market or credit risk, including transactions engaged in solely for the purpose of profiting from market movements. Hedging activities are considered speculative if they increase the Company's exposure to market risk. Speculative risk also includes normal market making where the expectation is simply to profit

[1] In her testimony, Ms. Kim defines "above-market" costs as the premium paid for the hedge that is above the forward price curve for the natural gas market. Staff/1100, Kim/7.

[2] Staff/1100, Kim/6.

[3] NW Natural/4201, Johnson.

from the bid-ask differences. Proper hedging using derivatives should decrease net exposures of the Company to market risk. Hedging with a goal of reducing market risk and avoiding speculation benefits utility customers by helping to provide price stability.

Q. Please summarize the Commission's previous decision concerning long-term hedges.

A. The Commission has considered long-term hedging in the past. In NW Natural's 2014 Integrated Resource Plan ("IRP"), the Company proposed to increase its long-term hedging. Staff opened an investigation into that specific issue (UM 1720). During that investigation, the parties "engaged in several workshops to address a variety of issues related to the LDCs' use of long-term hedges."[4] However, "efforts to draft uniform guidelines proved unsuccessful due to the diversity in available hedging instruments and the optionality of the duration and timing of hedges."[5] The Commission "accept[ed] the parties' unanimous conclusion that the diversity and optionality of hedging instruments preclude the ability to develop a uniform set of principles."[6] Instead of developing a uniform set of principles, the parties agreed that a natural gas utility may choose to meet with stakeholders to explain a long-term hedge and stakeholders may provide written comments within 30 days of such a meeting.[7]

[4] *In the Matter of NW Natural Gas Co, dba NW Natural, Investigation into Long-Term Hedging Policy*, Docket No. UM 1720, Order No. 18-019, at 2 (Jan. 18, 2018).

[5] *Id.*

[6] *Id*.

[7] *Id.* at 2.

Q. Was this meeting-and-comment process adopted by the Commission?

A. Yes. In 2018, the Commission approved changes to the Natural Gas Portfolio Development Guidelines that incorporated the meeting-and-comment process summarized above.[8] The Natural Gas Portfolio Development Guidelines list what Oregon natural gas utilities should consider in assembling their natural gas portfolio, as well as a process for stakeholder review and the development of annual Purchase Gas Adjustment ("PGA") filings to recover commodity costs. In the order incorporating the meeting-and-comment process for long-term hedges, the Commission accepted Staff's recommendation to not adopt "a 'one size fits all' approach"[9] to long-term hedges. The Commission agreed with Staff that such a narrow approach is not appropriate given "the diverse hedging instruments available and the optionality of the duration and timing of hedges."[10] Therefore, any long-term hedge should be evaluated on its own merits, not through generic rules or rate sharing mechanisms.

Q. Has NW Natural used the meeting-and-comment process concerning long-term hedges?

A. Yes. The Company has used the process once in January 2024 in response to a specific fundamental market opportunity at the Sumas trading hub. Due to

[8] *In the Matter of the Public Utility Commission of Oregon, Modifications to Natural Gas Portfolio Development Guidelines*, Docket No. UM 1286, Order No. 18-144 (May 1, 2018).

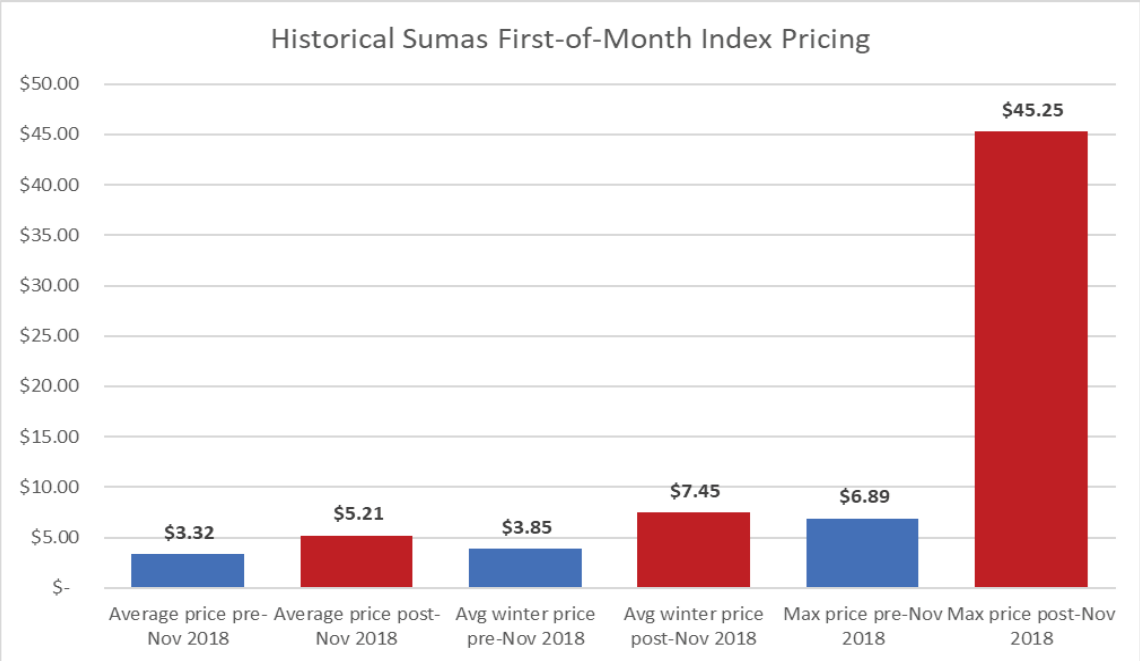
[9] *Id.* at Attach. A, at 3.

[10] *Id.*

changing market conditions, however, the Company ultimately decided against entering the long-term hedge.

Q. Please explain the increased pricing environment at Pacific Northwest gas trading hubs that you have recently observed.

A. The supply-demand balance of western natural gas markets from which NW Natural procures gas has become much more volatile, exposing market participants to much higher prices. Since the long-term hedge NW Natural previously discussed with stakeholders was at Sumas, I will focus on the Sumas market in this testimony. As shown in the table below, since November 2018, Sumas first-of-month index prices averaged $5.21/Dth annually, $7.45/Dth in the winter, and peaked at $45.25/Dth. For the 10 years prior to this most recent five-and-one-half year period, Sumas first-of-month index prices averaged $3.32/Dth annually, $3.85/Dth in the winter, and peaked at $6.89/Dth.



First-of-month index prices do not tell the full picture as daily pricing has seen even higher prices with average daily Sumas prices peaking at $159.27/Dth in 2019, $46.29/Dth in 2022 and $21.77/Dth in 2024.

Q. Please explain the potential benefits of long-term hedges to mitigate the risk of increased customer rate volatility.

A. Customer bills experience less volatility when hedging is part of the portfolio. As longer-term hedges are layered into a portfolio, it further decreases customer bill volatility. Most of the bill volatility reduction is accomplished with a portfolio of hedges up to three years in duration. There can be fundamental market instances when it would be beneficial to hedge longer than a three-year duration. Since Order No. 18-144 was issued, however, NW Natural has only executed hedges that were three years or less.

More recently, the supply-demand balance in the Pacific Northwest has been tightening, leading to higher volatility and prices as I just discussed . **[BEGIN CONFIDENTIAL]** [redacted]

[redacted]

[redacted] **[END CONFIDENTIAL]**

III. RESPONSE TO STAFF'S LONG-TERM HEDGING PROPOSAL

Q. Before addressing the merits of Staff's long-term hedging proposal, please clarify whether NW Natural is seeking either cost recovery of any long-term hedges or policy changes concerning long-term hedges in this proceeding.

A. NW Natural is not seeking cost recovery of any long-term hedges in this proceeding, nor is it seeking any policy changes concerning long-term hedges. Any costs associated with purchased gas, including any potential long-term hedges, are recovered through the PGA, not a general rate case. In addition, NW Natural has not executed a long-term hedge over the last 10-plus years. The proposed long-term hedge recently discussed with stakeholders would not meet Staff's proposed thresholds for inclusion in its proposed cost-sharing mechanism because that hedge would not have exceeded either five percent of total gas costs or five percent of total gas demand.[11]

[11] Staff has been inconsistent as to whether its proposed threshold is five percent of total gas costs or five percent of total gas volumes. Staff/1100, Kim/6 references total gas costs. Staff's response to a NW Natural data request references total gas demand. Confidential NW Natural/4201, Johnson.

Q. Do you believe it is appropriate to address long-term hedging in a general rate case proceeding?

A. No, I do not. It is inappropriate to design a cost-sharing mechanism for long-term hedges in this proceeding because the Commission has already found such hedges to be diverse and, therefore, ill-suited to generic rules or guidelines, as I have described in the previous section of my testimony. In addition, there are procedural issues with Staff's proposal. When NW Natural previously explored pursuing long-term hedges in its 2014 IRP, it led to dockets where all Oregon natural gas utilities, including Cascade and Avista, could participate (UM 1720 and UM 1286). From a procedural perspective, this is important because any generic cost-sharing mechanism approved by the Commission in this docket would likely be applied to Avista and Cascade as well. This docket, however, is a general rate case where other natural gas utilities do not typically intervene (and have not intervened in this particular case). Therefore, NW Natural does not believe it is appropriate to address long-term hedging here, particularly because it is not linked to a specific request for cost recovery or a policy proposal made by NW Natural.

Q. If Staff nonetheless decides to pursue long-term hedging in this proceeding, please explain its cost-sharing proposal.

A. Staff's proposal is not clear, and the Company is unsure how it would be implemented based on Staff's testimony and follow-up data requests. However, it is our understanding that Staff intends for the Company to absorb 10 percent of the "above market" costs of certain sized long-term hedges. In other words, Staff

would build in an automatic 10 percent penalty for long-term hedges that the Company enters into regardless of the underlying prudency of the hedge.

Q. Has Staff adequately explained what long-term hedges are subject to its sharing proposal?

A. No. Staff has not adequately explained which long-term hedges are subject to the sharing proposal. In testimony, Staff states that its sharing proposal would apply if the cost of long-term hedges exceeds five percent of forecasted gas costs.[12] In a response to a data request, Staff states that its sharing proposal would apply if long-term hedges exceed five percent of gas demand.[13] Therefore, it is not clear how the sharing proposal would apply or why Staff is inconsistent regarding its proposal. The Company understands this proposal to be limited to financial commodity hedges and not include foreign exchange or interest rate swaps, for example.

Q. Staff would require sharing of "above market"[14] costs. Is it clear why "above market costs" should be used?

A. No, it is not. For "above market" costs, it is important to recognize that natural gas markets are less liquid further out in the future and the premium is mainly driven by the liquidity of a specific market. We would expect a liquidity premium to be present in all long-term hedges, but that it would be larger in less liquid markets. The Company is having difficulty interpreting the intended signal from Staff of

[12] Staff/1100, Kim/6.

[13] Confidential NW Natural/4201, Johnson.

[14] Staff/1100, Kim/6.

proposing a penalty tied to the liquidity premium of a given natural gas market or why that liquidity premium should dictate how much NW Natural can recover from its customers in rates regardless of the underlying prudency of the hedge. Rather, Staff's proposal functions as an automatic 10 percent penalty on all long-term hedges.

Q. Is it clear how Staff's automatic 10 percent penalty balances the interests of the Company and its customers?

A. No. Staff does not explain how its automatic 10 percent penalty balances the interests of the Company and its customers. Put quite simply, if NW Natural's long-term hedge benefits customers, then the Company would recover 90 percent of the "above market costs" (i.e., the premium paid for the hedge that is above the forward price curve for the natural gas market). Staff makes no attempt to justify why an action to mitigate commodity cost volatility should not be allowed cost recovery if it can be shown to be a prudent decision.

Q. Is it clear why Staff is seeking to change established Commission policy on long-term hedges?

A. No. Staff has pointed to no changes in circumstance since the meeting-and-comment process was adopted in Order No. 18-144. Nor does it address why it is adopting a one-size-fits-all approach that both the Commission and stakeholders

considered during the long-term hedging investigation and then abandoned due to the diversity of long-term hedges.[15]

Q. Is it clear how Staff's proposal minimizes risk for customers?

A. No. Staff has failed to explain why its proposal incentivizes gas supply procurement that minimizes risk for customers. Contrary to its stated intention, Staff's proposal may in fact subject customers to greater risk by disincentivizing long-term hedges that promote rate stability.

Q. Did you seek clarification of Staff's proposal through data requests?

A. Yes, we did seek clarification, which was helpful in certain instances, but it confused other matters further. In NW Natural Data Request No. 10g, Staff clarified that: "The Company should enter into hedges only when the Company believes it is worth the risk of losing ten percent relative to the alternative of not hedging."[16] I would contend that as designed, there is no sharing of risk. The Company would simply take a loss for 10 percent of the "hedge premium", so there is no risk calculus at play. NW Natural would effectively incur a penalty for any long-term hedge executed.

In Staff's response to NW Natural DR 10j: "Staff assumes the Company would choose hedges that would have a neutral or positive financial impact to the

[15] *In the Matter of NW Natural Gas Co., dba NW Natural, Investigation into Long-Term Hedging Policy*, Docket No. UM 1720, Order No. 18-019, at 2 (Jan. 18, 2018).

In the Matter of the Public Utility Commission of Oregon, Modifications to Natural Gas Portfolio Development Guidelines, Docket No. UM 1286, Order No. 18-144 (May 1, 2018).

[16] Confidential NW Natural/4201, Johnson.

Company."[17] We concur with Staff's assumption and note that this proposal would never offer that outcome, since a penalty is a negative financial impact.

Q. Despite some aspects of Staff's proposal being unclear, do you believe you have a general understanding of what Staff is recommending?

A. Yes. Although certain details are unclear, it is apparent that NW Natural would simply take a punitive loss upon executing any long-term hedge, even if it were in the best interest of customers. Imposing a penalty would not incentivize the Company to execute long-term hedges, even when the transaction is in the best interest for customers. Instead, Staff's proposal would have the likely impact of causing the Company to never enter into a long-term hedge, exposing customers to long-term price risk.

Q. Staff states that it is making a proposal in response to a meeting that NW Natural called in January 2024 concerning long-term hedges. Please explain why NW Natural decided to call that meeting.

A. As was noted earlier in my testimony, **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

Q. How did Staff characterize that meeting?

A. Staff stated that it **[BEGIN CONFIDENTIAL]** [redacted]

[17] *Id.*

[redacted] **[END CONFIDENTIAL]**

Q. Do you agree with this characterization?

A. No. The volumes are stated in the Company's presentation. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

[18] Staff/1100, Kim/5.

Q. Despite your disagreement with Staff's characterization of the meeting, it nonetheless is the case that Staff felt that it could not evaluate NW Natural's hedging strategy and make a recommendation. Given Staff's findings, does it logically follow that Staff should make a long-term hedging proposal in this proceeding?

A. Not at all. As I have stated earlier in my testimony, NW Natural decided to not pursue the long-term hedge in question due to changing market conditions. Since NW Natural has not entered into a long-term hedge and, therefore, is not seeking cost recovery or policy changes regarding such hedges, Staff's proposal is unnecessary, especially given the Commission's previous findings that the diversity of long-term hedges precludes a one-size-fits-all approach. Moreover, even if NW Natural entered into that hedge, it would not meet the threshold set by Staff for inclusion into its proposed cost-sharing mechanism (i.e., it is less than five percent of both total gas costs and demand). While NW Natural appreciates the time and effort that Staff have spent on long-term hedges, its proposal is a flawed solution to a problem that does not currently exist.

Q. Does this conclude your Reply Testimony?

A. Yes, it does.

FROM: Anna Kim, Staff

OREGON PUBLIC UTILITY COMMISSION
Docket No. UG 490 – NWN Data Request No 10.

Data Request No 10:
Referring to Staff/1100, Kim/5, "Staff proposes 90/10 sharing on costs of long-term hedges that exceed five percent of total gas purchases."
a. Is the five percent proposal "per year"? Please explain.
b. Is the five percent threshold based on individual long-term hedges or cumulative long-term hedges? Please explain.
c. Is the five percent threshold based on an annual total gas purchase calculation? Please explain.
d. Please provide Staff's analysis for determining the threshold of five percent of total gas purchases.
e. Staff/1100, Kim/7, Line 4 states that Staff "proposes that long-term hedges above five percent of total retail load be presumed reasonable and prudent by evidence of the fact that the Company bears ten percent of the "above market" cost of the contract." Please explain whether Staff's proposed "five percent" threshold would be cost based, load based, or otherwise. Please explain.
f. Please provide an example of how this sharing is calculated over duration of a long-term hedge.
g. How does having the Company absorb 10% of costs of a long-term hedge help ensure that the Company acts in a manner that is in the best interests of both customers and the utility?
h. Please provide any long-term analysis of gas markets relied on by Staff to develop its proposal.
i. Please provide Staff's analysis for determining the 10% sharing level that the Company would absorb under Staff's proposal.
j. Please provide Staff's analysis of the financial impact on the Company of this Staff proposal.
k. Please provide Staff's proposed regulatory process for the 90/10 long-term hedge sharing mechanism.
l. Given that the Company procures gas supplies at several supply points with highly variable pricing, how does this proposal account for pricing at these specific basins?

UG 490– PUC Responses to NWN Second Set of Data Request 10 with CONFIDENTIAL data and CONFIDENTIAL DR 16
Page 2

m. Given that prices at AECO are often around one-third of Sumas prices, how does triggering this mechanism based on price make more sense than triggering based on volumes or another metric?

CONFIDENTIAL Staff Response No 10:

a. Yes. Five percent of forecasted gas demand.
b. Cumulative of hedges on an annual basis in which they are executed.
c. See a.
d. Staff does not believe the sharing mechanism is necessary to protect customers for cumulative annual hedges that are less than five percent of purchased gas costs. Cumulative annual hedges below this amount will have no presumption of reasonableness and no sharing.
e. See a.
f. The above-market cost would be calculated at time of purchase for the entire contract. The above-market cost would be paid over time within the PGA for each year these hedges are executed.
g. Sharing the costs of the hedge will provide some incentive to the Company to align the interests of the Company and customers. The Company should enter into hedges only when the Company believes it is worth the risk of losing ten percent relative to the alternative of not hedging. Staff chose a percentage value equal to the PGA sharing alternative of 10 percent to align those values.
h. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**
i. As noted in (g), Staff proposes ten percent sharing to be consistent with sharing of other costs in the Purchased Gas Adjustment (PGA).
j. With 90/10 sharing, Staff assumes the Company would choose hedges that would have a neutral or positive financial impact to the Company.
k. Staff proposes using the existing annual PGA process.
l. Costs can be compared to the basin in which the hedge is placed.
m. A percentage of expected load has a higher likelihood of transparency than on market forecasts.

EXHIBIT 4300 – REPLY TESTIMONY – PROMOTIONAL ACTIVITIES

Table of Contents

I. Introduction and Summary.....1

II. Background Regarding Promotional Activities and Concessions.....2

III. Reply to Staff and the Coalition 4

I. INTRODUCTION AND SUMMARY

Q. Please state your name and position with Northwest Natural Gas Company dba NW Natural ("NW Natural" or "Company").

A. My name is John D. Frankel. I am the Director of Marketing. As the Director, I am responsible for overseeing various administrative functions at NW Natural involving marketing, customer service and trade ally development. In my role, I am accountable for strategic planning, leadership of the marketing teams, and development of residential, industrial, and commercial marketing programs.

Q. Please summarize your educational background and business experience.

A. I received a Bachelor of Science degree in Business Administration from Oregon State University in 1986. I have been employed by NW Natural since 2005 and have been in my current position since March 2022. During my career, I have held various management positions in marketing, merchandising, operations, purchasing, and customer service.

Q. What is the purpose of your Reply Testimony?

A. The purpose of my Reply Testimony is to respond to adjustments related to promotional and marketing activities proposed by Public Utility Commission of Oregon Staff ("Staff") witness Luz Mondragon, and Coalition[1] witnesses Nora Apter of the Oregon Environmental Council ("OEC") and Meredith Connolly of Climate Solutions.

[1] The Coalition includes the Coalition of Communities of Color, Climate Solutions, Verde, Columbia Riverkeeper, Oregon Environmental Council, Community Energy Project, and Sierra Club.

Q. Please provide a summary of your testimony.

A. In my testimony, I will:

- Review the promotional expenses that NW Natural has withdrawn from this rate case in response to data requests;
- Remove further promotional expenses in response to parties' Opening Testimony; and
- Explain why the remaining costs challenged by Staff and the Coalition are prudent and beneficial for customers and should be recoverable under the Commission's rules.

II. BACKGROUND REGARDING PROMOTIONAL ACTIVITIES AND CONCESSIONS

Q. Please review the definitions of promotional activities and concessions.

A. The Commission's rules distinguish between promotional activities and promotional concessions. Promotional activities are those actions intended to increase or prevent a decrease of energy or service used by prospective customers and inducing a person to use the energy utility's service instead of a competing form of energy. [2] A promotional concession is consideration (usually in the form of a rebate or discount) granted by the utility to any person with the object of inducing that person to use the utility service. [3]

[2] OAR 860-026-0010.

[3] OAR 860-026-0015.

Q. For context, please provide your understanding regarding the Commission's rule governing promotional activities and concessions.

A. I understand that OAR 860-026-0020(1) provides:

> All promotional activities and concessions shall be just and reasonable, prudent as a business practice, economically feasible and compensatory, and reasonably beneficial both to the energy or large telecommunications utility and its customers. The cost of promotional activities and concessions must not be so large as to impose an undue burden on the energy or large telecommunications utility's customers in general and must be recoverable through related sales stimulation within a reasonable time.

Q. Did NW Natural consider these requirements when determining what promotional activities to include in this case?

A. Yes. As I explain below, the expenses included in this case benefit the Company and its customers in a variety of ways. The costs are modest, consistent with the amounts NW Natural has included in past rate cases, and support the Company's provision of safe and reliable service and growth.

Q. Did NW Natural seek to recover expense associated with promotional concessions in this case?

A. No. The Company has removed expense for promotional concessions from its request for cost recovery. Prior to filing this case, NW Natural removed expense from account 10178 for corporate identity, other contract work, and dealer relations in the amount of $151,363. The Company also removed $289,153 for promotional activities and advertising campaigns related to customer acquisition.

Q. Through discovery, did NW Natural identify any promotional activities and concessions expense that should be removed from its initial request?

A. Yes. Those expenses were described in the Company's response to Coalition Data Request No. 72, and total $41,014.70 of Test Year expense.

Q. Is the Company accepting any of the proposed adjustments recommended by Staff and the Coalition?

A. Yes. As detailed below, we have identified other transactions of which the Company will not seek cost recovery.

Q. Please provide the total dollar amount that NW Natural is proposing to remove from cost recovery associated with promotional activities, as updated in this Reply Testimony.

A. As explained below, NW Natural is removing $118,897 in promotional activities (after Oregon allocation).

III. REPLY TO STAFF AND THE COALITION

Q. Please summarize Staff's position regarding the Company's promotional activities.

A. Staff witness Mondragon reviewed the Company's Customer Service and Information; Sales Expense (Customer Service) in FERC Account Nos. 907-916, excluding 909 and 913 (advertising).[4] Staff comments that overall, expense in these categories have declined since 2021, and suggests that it may be the result of the Company incorporating the feedback received in the prior rate case and

[4] Staff/200, Mondragon/8.

making changes to charge to non-recoverable cost centers.[5] Staff proposed reductions to FERC Accounts 908 (Customer Assistance Expense) and 912 (Demonstration and Selling Expense), resulting in a proposed adjustment of $108,457 system-wide or $95,858 Oregon-allocated. Staff also proposed to further reduce the Test-Year Customer Service and Information Sales Expense by $5,810 to account for Staff's proposed Consumer Price Index ("CPI") escalation.

Q. Do you address the CPI escalation adjustment in your testimony?

A. No. The issue is addressed in the Reply Testimony of Company witness Mr. Davilla, NW Natural/3500, Davilla.

Q. Does Staff detail the expenses that are specifically proposed to be removed?

A. Yes. Staff's Figure 7[6] in its Opening Testimony has identified adjustments by the Company's cost center.

Q. What is Staff's rationale for the adjustment?

A. Staff asserts that customers receive little benefit from event sponsorships, Home Building Association fees, home tours, building industry events, and other related activities, and thus they do not satisfy the criteria for rate recovery under OAR 860-026-0020(1).

[5] Staff/200, Mondragon/13.

[6] Staff/200, Mondragon/15.

Q. In response to Staff, why do you generally believe that these activities benefit customers?

A. Resilience, comfort, and fuel choice are important considerations for Oregonians. Increasingly, customers seek natural gas service as a cost-effective way to heat their homes and water, cook, and in some cases drive backup power generation. Having reliable gas service offers the peace of mind that residents need in circumstances where power outages become more prevalent. As such, reasonable and prudent expenditures on promotional and marketing activities are the foundation of our support for the community of trade allies that assist our mutual customers and help to provide reliable energy service in the region.

Q. Please explain how NW Natural's support for its community of trade allies benefits customers.

A. Trade association support and the sponsorship of builder home shows benefits customers by providing them, as well as the general public, information about gas amenities. Additionally, community events provide an opportunity to educate our customers and the general public about the gas system, gas appliances, and NW Natural's decarbonization efforts.

These activities are much more complex than the terms marketing and promotion imply. They involve a varied assortment of stakeholders who engage NW Natural during the construction process, which includes builders, developers, HVAC contractors, fireplace dealers, plumbers, remodelers, architects, and engineers, as well as the actual commercial and residential end-use customers who are adding natural gas service.

It is important for the Company to maintain strong relationships with the various tradespeople who assist our mutual customers. Through NW Natural's engagement with these groups, the contractors and partners who collaborate with NW Natural are trained, properly insured, certified, and fully informed about NW Natural processes. Having a well-trained, fully informed network of independent trade partners (including new construction) is beneficial to NW Natural's customers.

Q. Upon further review of the transactions in Staff's adjustments, does NW Natural continue to seek cost recovery of all of the transactions?

A. No. The Company will no longer seek recovery of several transactions.

Q. Please summarize by cost center the transactions that NW Natural no longer seeks to recover compared to Staff/200 Figure 7.

A. Please see Table 1 below.

TABLE 1

FERC	Cost Center	NWN Removed in Data Request	NWN to remove in NWN/4300	Total NWN to Remove	Mondragon Figure 7 reduction	Difference
908		**$1,995**	**$1,888**	**$3,883**	**$11,848**	**$7,965**
908	10102	$0	$540	$540	$3,682	$3,142
908	10103	$0	$0	$0	$47	$47
908	10161	$1,995	$1,348	$3,343	$8,119	$4,776
912		**$25,348**	**$11,801**	**$37,149**	**$96,610**	**$59,461**
912	10104	$5,000	$0	$5,000	$57,355	$52,355
912	10163	$20,348	$198	$20,546	$27,609	$7,063
912	10165	$0	$2,089	$2,089	$2,132	$43
912	10179	$0	$1,381	$1,381	$1,381	$0
912	10180	$0	$4,427	$4,427	$4,427	$0
912	10185	$0	$3,706	$3,706	$3,706	$0
		$27,343	**$13,689**	**$41,032**	**$108,458**	**$67,426**

In summary, Staff witness Mondragon's testimony asserts that $108,457 (from Test Year) should be excluded. Of that amount and from these cost centers, the Company has already committed to removing $27,343 in response to data requests in the case. Through additional review in response to Staff's Opening Testimony, the Company agrees to withdraw $13,689 from its filing. The total withdrawn from the filing is $41,032 (Oregon allocated).

Q. Please summarize the Coalition's position regarding the Company's expense associated with promotional concessions.

A. The Coalition notes that NW Natural has indicated that it does not seek to recover costs for any of its promotional concessions from customers, but argues that the

Company nonetheless seeks cost recovery for certain promotional activities.[7] The Coalition recommends a disallowance of $115,307 in costs associated with promotional concessions, which are comprised of the following:

- $23,000 in costs related to the Street of Dreams (in various Cost Centers and G/L accounts including Other Contract Work for $11,463, Corporate Identity for $6,154, Mileage Reimbursement for $648, Dealer Relations for $4,083, Misc accounts for $250) (all Oregon allocated);
- $19,300 (Oregon allocated) associated with showcasing natural gas products during home demonstration events, and for its meeting costs with homebuilders associations and the Building Industry Association; and
- $73,007 associated with promotional concessions that NW Natural disclosed in discovery were inadvertently included in its request and committed to removing from its request (Oregon allocated).

Q. Is the Coalition correct that NW Natural identified $73,007 of expense associated with promotional concessions that will be removed from the case?

A. No. It appears that the Coalition is including both the Base Year and the Test Year expense in its proposed adjustment. Only the Test Year expense will be removed, which totals $41,015. NW Natural is removing $41,015 from the Company's request for cost recovery.

[7] Coalition/200, Apter-Connolly/56.

Q. How do you respond to the Coalition's proposed adjustments concerning the Street of Dreams and demonstration and selling expense?

A. Although the Company provided an explanation justifying cost recovery for these expenses in response to discovery, the Company is removing from its request the roughly $23,000 in Street of Dreams-related expense in this rate case.

Q. Of the remaining transactions that the Coalition argued should not be recovered, how does the Company respond?

A. Of the $19,300 of costs the Coalition proposed to be removed as outlined in Coalition/209, Apter-Connolly, the Company agrees to remove $12,768 of the Oregon allocated amount, but disagrees with the remaining exclusions. One item, totaling $1,763 on an Oregon allocated basis ($1,995 on system basis) related to the outdoor gas pizza oven, is being double counted by the Coalition as this is already being excluded in adjustments the Company agreed to in Coalition DR 72.

After removing the double count, the Company believes that the three expense items totaling $5,552 actual or $4,897 on an Oregon allocated basis are justified. As explained in OPUC DR 334 and above in the response to Mondragon Figure 7, these expenses include $1,250 for membership in a Portland realtor association, $2,757 for an HVAC and hearth industry breakfast meeting, and $1,545 for catering for a builder trade group luncheon meeting that provided safety awards to homebuilders. All three expenses are important in building and maintaining the partnership and collaboration with the community of allies that serve our mutual customers. They are reasonable and prudent expenses that

should be recoverable. Please see Table 2 below for a breakdown of the Company's removal of transactions in response to the Coalition's testimony.

TABLE 2

Coalition challenges to Promotional Activities	NWN/4300 Remove from cost recovery	Coalition/200	Difference
Street of Dreams support	$22,448	$22,448	$0

Dealer advertising coop - Lisac's (test year)	$8,460	$8,460	$0
subtotal	**$41,014**	**$73,007**	**$31,993**
total	**$77,962**	**$115,507**	**$37,545**

Q. Does this conclude your Reply Testimony?

A. Yes.

NW Natural®

Rates & Regulatory Affairs
UG 527
NW Natural Alternative Rate Mechanism
Data Request Response

Request No.: UG 527 CUB DR 35

Please explain, and provide any supportive documentation, the discrepancy in disconnection data listed in Docket RO 16 Q4 report for November and December 2025 (139 disconnects in November and 213 in December), and the Company's response in CUB DR 32 stating:

> "From November 15 through December 31, 192 bill discount participants were disconnected for non-payment."

How were less households found to be incorrectly disconnected than what is listed in RO 16 reports? Especially if for all of December the moratorium was supposed to be in place, and there were 213 disconnects in that month alone?

Response:

This difference is the result of an unperceived nuance in the RO 16 data query used for the metric of the number of bill discount participant disconnections. Also, the 192 amount is a system number and includes Washington customers.

The metric of 192 customers disconnected provided in the Company's response to UG 527 CUB DR 32 was derived by querying how many customers were on the bill discount program **at the time of disconnection**.

The metric for RO 16 reporting was derived by querying how many Oregon customers who were disconnected for non-payment were also in the bill discount program that month, **but not necessarily at the time of the disconnection**. Because it is very common for customers to enroll in the bill discount program after they are disconnected – for example, when calling to get reconnected, the CSRs will ask if they would like to self-certify for the bill discount program – the query for the RO 16 report metric will be higher. This is because it will include disconnects for customers that were not in the bill discount program at the time the disconnection occurred.

In reconciling these query parameters, an additional nuance was identified in that the 192 impacted customers inadvertently included only those customers in the bill discount program whose bill discount participation did not change in the period between when the disconnection was scheduled and when the disconnection was completed. However, the number of impacted customers should have also included those

customers who had changes in their bill discount enrollment in the several days' time that may occur between the disconnection being scheduled and the disconnection being completed. For example, a customer may have had their enrollment period end during this interim period and re-enrolled accordingly. Taking into account this nuance in the data query, an additional 22 customers were impacted, for a total of 214 customers on a system basis, or 198 customers on an Oregon basis. Given this, the Company provides the following original and amended count of impacted customers:

Original count

	Nov	Dec	Total
OR	41	135	176
WA	4	12	16
Total	45	147	192

Corrected count

	Nov	Dec	Total
OR	47	151	198
WA	4	12	16
Total	51	163	214

Of the 22 additional impacted customers, all but one were reconnected (the majority were same day or next day). Any reconnection fees are being refunded and all of the impacted customers will receive the $150 bill credit. NW Natural left a voicemail with the one customer who has not reconnected to contact us to be reconnected at no charge.

Due to the updated count of impacted customers, NW Natural will provide supplemental responses to UG 527 CUB DRs 31, 34, 36, and 37 to add the details for the additional 22 impacted customers.

Both of the data query nuances discussed above will be addressed in future RO 16 reporting to more accurately reflect the number of customers disconnected for non-payment that were bill discount participants at the time of disconnection.

BEFORE THE PUBLIC UTILITY COMMISSION OF OREGON

UG 527/UG 528

OPENING TESTIMONY OF BOB JENKS
ON BEHALF OF THE OREGON CITIZENS' UTILITY BOARD

CUB 200

March 18, 2026

Mist Depreciation
Applying Retired Asset Policy to Mist GC 600 Retirement

Q. Please state your name, occupation, and business address

A. My name is Bob Jenks. I am the Executive Director of the Oregon Citizens' Utility Board (CUB). My business address is 610 SW Broadway, Ste. 400 Portland, Oregon 97205.

Q. Please describe your qualifications.

A. My witness statement is provided in Exhibit CUB/102.

Q. What is the purpose of this Joint Testimony?

A. In this opening testimony CUB discusses the Mist assets, update accumulated depreciation for Mist assets, and applying the Commission's retired asset policy (RAP) to the Mist GC 600 retirement.

Q. Are you sponsoring any exhibits?

A. Yes.

Table of Contents

I. INTRODUCTION 2

II. MIST DEPRECIATION 3
III. RETIRED ASSET POLICY APPLIED TO MIST GC 600 7
IV. CONCLUSION 11

I. INTRODUCTION

Q. What is NWN asking for as it relates to Mist

A. NWN is requesting to replace the Mist GC600 Turbine Compressor. The Mist 600 replacement is related to the Mist GC500 Turbine Compressor Replacement Project addressed in UG 520.[1] As NWN testifies, "Like the GC500 unit, the GC600 unit, installed in 2001-2002 and having over 48,000 hours of operation, has exceeded its useful life expectancy."[2] Additionally, NWN is proposing Mist Main Power Feed Replacement Project and the Mist Well Separator Replacement Program. This program will replace the wells over five years. The first series of Mist Well Separators is scheduled to be replaced by October 2026, and this is the project for which the Company is seeking cost recovery in this proceeding.[3]

Q. What does CUB recommend as it relates to Mist?

A. As discussed below, CUB recommends $446,599 to account for accumulated depreciation of Mist assets. CUB also recommends applying the Commission's retired asset policy (RAP) to the Mist replacements consistent with the stipulated outcome of UG 520.

[1] NWN/200 Kizer-Karney-Pipes-Fellon/9.
[2] *Id.* at 11.
[3] *Id.* at 19-20.

II. MIST DEPRECIATION

Q. Please discuss how depreciation fits into an ARM?

A. As depreciation occurs, the remaining outstanding investment or ratebase is reduced, this in turn reduces the return that is applied to that ratebase, and it reduces taxes since the ROE component of rate of return represents net income which is taxed by the federal and state government and customers pay the taxes. Typically, between rate cases, there is regulatory lag on updating depreciation (accumulated depreciation), just as there is regulatory lag on adding new investment to rates. Since the regulatory lag in accumulated depreciation is in shareholders' interest, and the regulatory lag on new investment is in customers' interest, these lags can be viewed as offsetting.

When a utility files an ARM to add new capital investment in order to increase ratebase, it is imperative that it also update depreciation which reduces ratebase. Otherwise, customers will be paying rates that reflect an inflated ratebase. And charging customers for phantom ratebase violates Oregon's used and useful principle.[4]

While NWN claims that the ARM includes offsets to capital additions, including updating accumulated depreciation,[5] it was limited to IT&S capital investments for FERC accounts 303.1, 303.7, and 391.2.[6] NWN did not update accumulated depreciation for Mist assets even though the Company is adding additional, new investments to Mist.

[4] Pursuant to ORS 757.355, a utility may not include in rates the costs of plant "not presently used for providing utility service to the customer."
[5] *See* NWN/100 Kravitz-Walker/2.
[6] *See Id.* at 15.

Q. Is this adjustment within the scope of this proceeding?

A. Yes, the Commission has not established limits on the scope of ARM proceedings. The order in UE 435, however, provides supporting guidance for inclusion of this adjustment. There the Commission emphasized that it would only approve the use of the Seaside tracker ARM "if, and only if, it achieves an appropriate balance between customers and the company, correcting some of the negative consequences of single-issue ratemaking."[7] The Commission continued, noting it expected the Seaside ARM " to balance regulatory lag by truing up depreciation upon the inclusion of Seaside in rate base."[8] Under this guidance, including this adjustment within the scope is essential for use of the ARM to recover costs as it provides the opportunity that this proceeding will result in a balanced rate adjustment mechanism and just and reasonable rates.

That said, NWN did not include it in its proposal, but CUB does not believe that that limits our ability to raise this issue. Unlike UE 455 and UE 459, there is no MOU in this proceeding that defines the content of what parties can address in this proceeding. There is nothing that limits our testimony and evidence to the discrete items identified by NWN. If a utility is allowed to constrain the issues that CUB and other parties review, then it is using the ARM to make ratemaking more one-sided than it already is.

In addition, in its advice filing that started this docket, it described the purpose of the ARM as:

[7] Order No. 24-454 at 45.
[8] *Id.*; *See* also Order No. 25-417 at 4.

> The purpose of NW Natural's application for an alternative rate mechanism ("ARM") is to recover the costs of a limited subset of capital additions through a new base rate tariff, Schedule 123. Importantly, the ARM includes offsets to these capital additions, including retirements and **updating accumulated depreciation**, to ensure a balanced approach to ratemaking for the mechanism.[9]

Updating accumulated depreciation to offset the new capital additions is clearly within the purpose of the proceeding and should not be limited to the accounts that NWN proposed.

Q. What is NWN adding to Mist ratebase?

A. NWN is adding three new capital investments to the Mist Group. NWN uses group depreciation of assets at Mist and these new investments are being added to the Mist Group[10]. The three assets being added are:

Figure 1: Mist additions[11]

Mist Additions	**Amount Added to Ratebase (Oregon allocated)**
Mist GC600 Turbine Compressor Replacement	$11,100,000
Mist Main Power Feeder Replacement	$3,900,000
Mist Well Separator Replacement	$1,000,000
Total	$16,000,000

NWN's ratebase as of December 31, 2025, for Mist assets is $212,317,206.[12] This includes two months of depreciation after the rate effective date of their last GRC. CUB estimates that the ratebase that is currently in rates is $213,024,930.[13] Under NWN proposal, this new ratebase will be added to rate base established in 2025, rather than the

[9] *See* NWN Advice Filing 25-25, p 1 *(emphasis added)*.
[10] CUB/203 Jenks/1-2.
[11] *See* NWN/200 Kizer-Karney-Pipes-Fellon/ 18-22.
[12] CUB/203 Jenks/3-4.
[13] CUB/204 Jenks.

ratebase that will exist on the rate effective date of this case which CUB estimated will be $208,785,734.[14]

Q. What is the effect of accounting for accumulated depreciation?

A. The annual depreciation of Mist assets was approximately $4,239,196.11 in 2025.[15] If this is adjusted to account for another 12 months of depreciation, the depreciation expense is reduced to $4,154,836.11, which reduces revenue requirement by $84,360.[16] Updating the accumulated depreciation also reduces the Company's return on these assets. Because customers pay the income taxes that are applied to the company's net income (pre-tax ROE), the return must be adjusted for taxes. CUB estimated that the pre-tax return is $362,239.[17]

In sum, CUB recommends that NWN's revenue requirement be reduced by $362,239.31 plus $84,360 or $446,599 to account for accumulated depreciation.

Q. Is that the limit of CUB's adjustment for accumulated depreciation?

A. At this time that is what CUB is proposing. CUB is still reviewing whether other projects the Company describes as discreet projects or public work projects require updates to accumulated depreciation in order to avoid customers being charged for ratebase that is not used and useful.

III. RETIRED ASSET POLICY APPLIED TO MIST GC 600

Q. What is the retired asset policy?

A. As discussed in UG 520, the retired asset policy (RAP) is the culmination of the outcomes of the Trojan proceeding and subsequent Commission decisions interpreting Oregon's used and useful law.[18] Our UG 520 testimony has been included as CUB Exhibit 201 and goes into the background of the RAP.[19] In sum, the RAP recognizes that pursuant to ORS 757.355 Oregon only allows a utility to recover from customers the costs that are associated with assets that are used and useful in providing service to customers. After removing the undepreciated value from rate base, ORS 757.140 provides for the recovery of undepreciated utility investments, including retired plant, when the Commission determines that the retirement is due to ordinary wear and tear, casualties, acts of God, acts of governmental authority or the retirement is in the public interest.[20] In this instance the Commission has discretion to make the utility whole by permitting recovery of its original capital investment, along with an interest rate that represents the time value of money, but the utility is not allowed to earn a higher rate on equity.[21] The RAP derived from Order No 20-473 and the outcome appeals of the retired Trojan nuclear power plant's undepreciated costs.[22] Order No. 20-473 made clear that the use of this policy applies to retirements even when the utility uses group depreciation.[23]

[20] *See* UE 374, *In the Matter of PACIFICORP, dba PACIFIC POWER, Request for a General Rate Revision* Order No. 20-473, 91-92 (Dec. 18, 2020).
[21] CUB/201 Jenks/14.
[22] UM 989, *This filing implements the settlements entered into by the Citizens Utility Board, OPUC Staff, and PGE to remove the Trojan Investment and other regulatory assets and liabilities from the Company's balance sheet*, Order No. 00-601 (Sept. 29, 2000).
[23] Order No. 20-473 at 83-84.

Q. How does UG 527 compare to UG 520 as it relates to these Mist compressor retirements?

A. The Mist GC 500 was installed in 1998, and Mist GC 600 was installed in 2001-02.[24] The Compressors are in FERC account 354.[25] In the depreciation study included with NWN UG 520 filing, the assets in FERC account 354 depreciate over 50 years.[26] In both cases, NWN's replacement of Mist Compressors involve retirement and replacement of assets. As NWN did in UG 520, NWN has again proposed to keep the undepreciated amounts of the retiring assets in rate base. As CUB explained in UG 520 and above, leaving unrecovered balance associated with the retired Mist assets in rate base is contrary to ORS 757.355, which prohibits a utility from earning a return on property that is not used and useful. In UG 520, CUB argued retirement and replacement of GC 500 is in the public interest, and therefore NWN is entitled to interest at the time value of money, but not a return on the investment.

Q. What should be removed from rate base to account for Mist GC 600 retirement?

A. GC 600 was installed in 2001-02[27] and NWN states it will be removed by October 2026. This reflects an actual useful life of 24 years, rather than the depreciable life of 50 years.[28] CUB looked at the PUC order from UG 132, which was the rate case following the beginning of the useful life of the GC 500. In that case, the Commission approved adding $27,322,000 in rate base to account for new investments at Mist.[29] Since Mist GC 600 will have depreciated for 24/50 years of its depreciable life, using this same figure for Mist GC

[24] CUB/201 Jenks/19 (citing UG 520 /NWN/100 Palfreyman-Kravitz/14).

[29] UG 132, *In The Matter Of The Application Of Northwest Natural For A General Rate Revision*, Order No. 99-697, Appendix D, page 5 (Nov. 12, 1999).

600, CUB estimates its unrecovered Oregon capital investment upon retirement will be $14,207,440.

Q. What was the outcome of UG 520 as it relates to these Mist compressor retirements?

A. In our UG 520 opening testimony, under the RAP CUB recommended NWN remove the undepreciated balance of Mist GC 500 from its group depreciation account in rate base (FERC Account 354) and placed in a regulatory asset, where it would be amortized over 23 years at 4.499 percent, representing the time value of money.[30] In its reply testimony NWN estimated that the undepreciated portion of the GC 500 compressor upon its retirement would be approximately $11.1 million.[31]

The stipulation followed this same mechanism but with different figures. In the first partial stipulation, the Stipulating Parties agreed that NW Natural will remove $11.1 million, representing the net book value of the GC 500 Mist Compressor, from FERC Account 354, resulting in a reduction to revenue requirement of $1.378 million. The Stipulating Parties further agreed that the $11.1 million will be placed in a regulatory asset and recovered over a period of eight years through a separate base tariff schedule to be filed with the Company's compliance filing in UG 520. The Stipulating Parties agree to use a 4.499 percent interest rate for the regulatory asset. The amortization of the regulatory asset is $1.683 million per year through the separate rate schedule.[32] The Commission accepted this stipulation.[33]

[30] CUB/201 Jenks/20-21.
[31] CUB/202 Jenks/32.
[32] *Id.* at 32-33.
[33] *See* Order No. 25-420.

Q. What accounted for the difference between CUB's estimate in UG 520 of the unrecovered Oregon capital investment and that estimated by NWN?

A. In its UG 520 reply testimony, NWN stated CUB's calculation "overstates the undepreciated balance by not taking into account cost of removal and salvage value, and for the actual accumulated depreciation over the years as the depreciation rate has changed."[34] NWN then stated the undepreciated balance of components of GC 500 that are being replaced is $11.1 million as not all of the related assets are being replaced.[35] The parties agreed to use $11.1 million for the stipulation.[36] While CUB recommends removing $14,207,440 from rate base to represent the 26 years of estimated useful life remaining in rate base, CUB is open to supported adjustments from the Company to account for removal and salvage value, changed depreciation rate, etc.

Q. What does CUB recommend here?

A. Applying the RAP to the Mist GC 600 here, CUB recommends removing $14,207,440 from rate base. Subsequently, based on RAP and the terms of the stipulation in UG 520, CUB recommends $14,207,440 be placed in a regulatory asset and recovered over a period of eight years at 4.499 percent through a separate base tariff schedule to be filed with the Company's compliance filing in UG 527.

[35] *Id.*
[36] CUB/202 Jenks/32.

IV. CONCLUSION

Q. Please summarize your recommendations.

A. Through applying the Commission's Retired Asset Policy, CUB recommends removing the undepreciated $14,207,440 from rate base and placing it in a regulatory asset to be recovered over a period of eight years at 4.499 percent through a separate base tariff schedule to be filed with the Company's compliance filing in UG 527.

Note that this is a summary of our recommendation. The summary should not be read in isolation, but with our testimony as a whole.

Q. Does this conclude your testimony?

A. Yes.

BEFORE THE PUBLIC UTILITY COMMISSION

OF OREGON

UG 520

In the Matter of NORTHWEST NATURAL GAS COMPANY, dba NW NATURAL, Request for a General Rate Revision.	)	OPENING TESTIMONY OF THE OREGON CITIZENS' UTILITY BOARD

Q. Please state your name, occupation, and business address.

A. My name is Bob Jenks. I am the Executive Director of the Oregon Citizens' Utility Board (CUB). My business address is 610 SW Broadway, Ste. 400 Portland, Oregon 97205.

Q. Please describe your educational background and work experience.

A. My witness qualification statement is found in exhibit CUB/101.

Q. What is the purpose of your testimony?

A. I respond to Northwest Natural's ("NWN's") Opening testimony and make recommendations regarding ROE, Capital Structure, the treatment of undepreciated investment in Mist Compressors, the treatment of undepreciated investment in IT&S, the treatment of stranded costs due to electrification, and CUB's concerns with OLGA given recent changes to LIHEAP. In addition, I discuss issues related to group depreciation, and depreciation studies generally.

A table of contents for my testimony is as follows:

Table of Contents

VI. CONCLUSION 33

Q. Are you sponsoring exhibits in this proceeding?

A. Yes. I am sponsoring five exhibits. Exhibit 101 is my witness qualifications. Exhibit 102 contains data responses pertaining to group depreciation of the Mist Compressors. Exhibit 103 contains a data response pertaining to undepreciated investment. Exhibit 104 concerns LIHEAP. Exhibit 105 includes copies of the hyperlinked articles and websites included in this testimony.

I. INTRODUCTION

Q. What is Northwest Natural (NWN) requesting in this case?

A. NWN is requesting a rate increase on November 1, 2025, of 6.5% for single family homes and 6.7% for multi-family buildings[1]. NWN lists several factors as drivers of this rate increase:

- Mist Compressors[2]
- Modernizing IT&S Systems[3]
- Seismic Upgrades to Regional Resource Centers[4]
- Distribution System and Storage Investment[5]
- Meter Modernization[6]
- Depreciation Rates[7]

Q. Do you agree that these items are the drivers of the case?

A. Yes and no. While CUB agrees that these elements are included in the case and make up much of the $62,064,430 increase[8], we also recognize that NWN did not list its proposed increase in ROE and its proposed increase to the equity component of the capital structure as major drivers. NWN is proposing to increase its ROE from 9.4% to 10.4% and increase the equity component of its capital structure from 50% to 52%.[9] Both of these changes increase returns to NWN's shareholders. As

[1] UG 520 – NWN Executive Summary, Exhibit A, p 2.

[7] *Id.*
[8] UG 520 – NWN Executive Summary, Exhibit A.
[9] UG 520 – NWN Executive Summary, p. 3.

the chart below shows, this increase in shareholder return is more than $16 million. Because shareholder returns come out of net income which is taxed at a 27% combined federal and state tax rate[10], the cost to customers for this additional requested shareholder return is more than $20 million or 33.2% of the overall rate hike.

Figure 1 – Effect of Increase in Shareholder Return

	Current ROE and Capital Structure	Proposed ROE and Capital Structure
Rate Base[11]	2,293,722,494	2,293,722,494
Equity Component[12]	1,146,861,247	1,192,735,697
ROE[13]	107,804,957	124,044,512
Increase in ROE		16,239,555.26
tax rate (27%)[14]		4,384,679.92
total cost		20,624,235.18
% of overall increase		33.2%

The proposed increase in returns to shareholders accounts for more than 33% of the proposed increase in this case, so it must be considered a major driver of this case.

Q. How does this increase fit into the broader issue of affordability?

A. This increases effects affordability in multiple ways. The first is how this increase contributes to the increase that customers will receive on November 1, 2025. And the second is the cumulative increase that customers have had from a series of rate increases.

Q. How does this increase contribute to the November 1 increase?

[10] UG 520 – NWN, 1500/Walker/16.
[11] UG 520 – NWN, 1601/Wyman.
[12] UG 520 – NWN Executive Summary, p 3.
[13] *Id.*
[14] UG 520 – NWN, 1500/Walker/16.

A. NWN is proposing a rate increase of 6.5% to 6.7% for residential customers[15]. But this will not be the only rate adjustment that affects customers on November 1, 2025. NWN has designed this rate increase to go into effect at the same time as the PGA, which has two major components: 1) Projected gas costs for usage after November 1, 2025, and a true up for gas costs consumed between November 1, 2024, and November 1, 2025. In addition, NWN has filed a deferred account to track the cost of tariffs on Canadian natural gas.[16] Because the PGA true-up of actual gas costs includes a sharing mechanism, NWN deferral would remove the price increase on gas caused by US implemented tariffs from the PGA and allow recovery with no sharing.

The problem is that as CUB writes this testimony, we have no idea what the combined increase between this case, and the PGA and the tariff deferral will be on November 1. Should CUB be proposing a rate mitigation adjustment, just in case the combined increase reaches a level of rate shock?

Q. The second concern for affordability is the accumulation of rate increase that NWN has been putting on its customers. Please explain this concern.

A. Since 2020, this is NWN's 4th general rate increase. Customers saw general rate increases in 2020, 2022, 2024 and now 2025. In addition, customers have had to absorb increases in the commodity cost. Looking back at the 2020 rate case, NWN's testimony showed that without that increase residential customers would be

[15] UG 520 – NWN, Executive Summary, Exhibit A, p 2.
[16] *See* UM 2369, *In the Matter of NORTHWEST NATURAL GAS COMPANY, dba NW NATURAL, Application for Authorization to Use Deferred Accounting for Tariffs on Imported Natural Gas from Canada* (Jan. 31, 2025).

expected to pay $391 million in revenue and use 398 million therms[17], for a rate of 98 cents per therm. After this case, NWN is projecting that residential customers will contribute $676 million in revenue and use 416 million therms for a rate of 1.62[18]. This represents a 65% increase, since before a rate increase went into effect in November 2020.

II. ROE AND CAPITAL STRUCTURE

A. ROE

Q. Does CUB support NWN's request for 10.4% ROE?

A. No. Such a figure is out-of-line with other regulated utilities in the state and is not supported by the Company's own ROE analysis. CUB is recommending a ROE of 9.24%. The Commission made clear in the recent PGE rate case that frequent rate cases protect utilities from regulatory lag, reduce utility risk, and should be reflected in a lower ROE.

Q. What is NWN's reasoning for requesting a higher ROE?

A. NWN cites two reasons. First, it claims that long term interest rates have increases "substantially" from the "historic lows of 2020[19]. Second, it claims that environmental policy in the Pacific Northwest had increased the "perceived" risk of investing in the Company[20].

[17] UG 388, *In the Matter of NORTHWEST NATURAL GAS COMPANY, dba NW NATURAL, Request for a General Rate Revision*, NWN, Wyman/1101 and Wyman/1102.
[18] UG 520, NWN, Wyman/1601 and Wyman/1602.
[19] UG 520, NWN, 100/Palfreyman-Kravitz/28.
[20] *Id.*

Q. How do you respond to the argument that long term interest rates have increased from their historic lows?

A. It is true that in 2020, that the height of the COVID pandemic had an effect on economic conditions, including long-term interest rates and unemployment statistics. It was in April of 2020 that unemployment approached 15%[21]. CUB agrees that COVID had significant impact on the economy in 2020. But as the economy returned to more normal conditions, long-term interest rates have been fairly stable. The chart below shows 10 year treasury rates for the last 3 years.

Figure 2: Yield on 10-year Treasury Bonds[22]

Today yields on 10-year treasury bonds are at nearly the same level as they were in November 2024 when NWN last general rate case went into effect and are only slightly above the yields from November 2022 when NWN rates went into effect from the 2022 general rate case. NWN's current ROE was reasonable in 2022 and 2024.

[21] US Bureau of Labor Statistics, April 2020 unemployment rate was 14.8.
[22] Yield on 10-year Treasury Bonds, (March 25, 2025), https://ycharts.com/indicators/10_year_treasury_rate

Q. How do you respond to NWN's argument that environmental policy creates additional risk in the Pacific Northwest?

A. I disagree. NWN sells methane, a fossil fuel. As the world responds to climate change there is a need to reduce the combustion of fossil fuels. This is true in the Pacific Northwest and everywhere else in the world. There is no doubt that this creates a risk for companies whose main business is marketing fossil fuels. In the Pacific Northwest Oregon and Washington are advancing policies that attempt to address carbon emissions that are the cause of climate change. But these policies do not increase the risk of a gas utility like NWN, they reduce the investment risk of a gas utility like NWN. Let's look at two examples, line extension allowances and renewable natural gas.

Line Extension Allowances

In the 2022 rate case, the Commission approved a phase out of NWN's line extension allowance (LEA)[23]. This is a subsidy that the Company provides to home builders to connect new homes to the natural gas network. But the service pipe that is a major element of the LEA has a depreciable life of as long as 60 years[24]. Because of climate change and the need to reduce the use of fossil fuels, there is doubt whether many of the new homes that are being connected will still be purchasing the gas commodity decades from now. There is a clear investment risk associated with investing in service pipes that may not be used and useful for the entirety of their depreciable lives. Because in Oregon, utility investors are not

[23] UG 435, *In the Matter of NORTHWEST NATURAL GAS COMPANY, dba NW NATURAL, Request for a General Rate Revision,* Order No. 22-388 (Oct. 24, 2022).
[24] UG 520, NWN, 1402/Spanos/ 53.

allowed to earn a return on undepreciated property that is no longer used and useful, LEAs place a risk on utility investors. Rather than increase investor risk, the phase out of the LEA reduced the investor risk.

Renewable Natural Gas

NWN touts renewable natural gas (RNG) as part of the solution to the climate change challenge of fossil fuels and has made several investments in RNG[25]. But renewable natural gas is significantly more expensive than fossil gas. Without policies that recognize the need to address climate change, NWN would be unable to justify bringing higher priced RNG into its resource mix. The environmental policies that NWN cites are lowering the risk of investing in RNG.

Climate change presents a huge challenge and investment risk to gas utilities. By addressing climate change through a series of government policies, Oregon is actually reducing the investment risk associated with a gas utility.

Q. Please explain how NWN's analysis fails to support a 10.4% ROE.

A. NWN has extensive testimony on ROE and proposes a variety of models to forecast the ROE that is necessary to attract capital, including DCF, CAPM and equity risk premium. While it is not unusual for utilities to look at a variety of models for estimating ROE, for more than 20 years Oregon's preference has been a multi-state DCF model. Oregon first began primarily relying on this model in 2001[26] and in December 2024, reiterated that it is the method the Oregon Commission has

[25] *See* CUB Exhibit 105, NW Natural, Fueling a renewable energy future, (April 2, 2025), https://www.nwnatural.com/about-us/environment/renewable-natural-gas.
[26] UE 115, *PGE's proposal to restructure and reprice its services in accordance with the provisions of SB 1149*, Order No. 01-777 (Aug. 31, 2001).

"primarily relied" upon[27]. NWN used a multi-stage DCF model and the results of that model do not support an increase to the Company's ROE.

Figure 3: Results of NWN Multi-Stage DCF model

	Gas Proxy Group	Combined Proxy Group
30-day average	8.51%	8.45%
90-day average	8.66%	8.62%
180-day average	8.85%	8.85%

Q. What does CUB recommend for NWN's ROE?

A. In its recent decision in UE 435, the Commission reduced PGE's ROE because of financial pressures on customers and a recognition that frequent rate cases reduce shareholder risk[28]. As discussed above, NWN has had 3 rate cases in the last 4 years, and after this rate case, their rates to customers will have increased by more than 60% since 2020. The same conditions that the PUC was concerned with in the PGE case exist here. PGE's ROE was reduced by 16 basis points from 9.5% to 9.34%[29]. CUB recommends a similar reduction of 16 basis points, from 9.4% to 9.24%.

[28] *See* Id. at 12.
[29] *Id.*

B. Capital Structure

Q. What is Northwest Natural's proposal for capital structure and does CUB support it?

A. NWN proposes to increase the amount of equity in its capital structure, moving from a 50/50 capital structure to a capital structure of 52% equity and 48% debt[30].

Q. What is CUB response to this proposed increase in the equity component?

A. Oregon has historically relied on a hypothetical capital structure of 50% equity and 50% debt. The Commission recently reasserted the policies behind this historic position:

> Using a hypothetical capital structure for ratemaking-regardless of whether the actual proportion of equity to debt is lower than the 50/50 hypothetical or higher than the 50/50 hypothetical-provides a consistent regulatory signal that a balanced structure supports the long-term best interests of utility ratepayers[31].

In some previous cases CUB proposed that utilities should provide an analysis to demonstrate that the capital structure of the utility is the best mixture of cost and risk[32]. Equity is more expensive than debt, but equity has a lower risk than debt. During the aftermath of the Great Recession, when the Federal Reserve was holding interest rates low to stimulate the economy, CUB argued that it was time to move away from assuming a 50/50 capital structure. If the policies of the federal reserve kept borrowing costs artificially low, then it could make sense for utilities to take on a bit more risk to reduce borrowing costs. But CUB was unable to convince other

---

[31] UE 435, *In the Matter of PORTLAND GENERAL ELECTRIC COMPANY, Request for a General Rate Revision*, Order No. 24-454 at 13.
[32] UE 294, *In the Matter of PORTLAND GENERAL ELECTRIC COMPANY, Request for a General Rate Revision*, CUB/100/Jenks-McGovern/20-26; *see also* UG 325, *In the Matter of AVISTA CORPORATION, dba AVISTA UTILITIES, Request for a General Rate Revision*, CUB/100/McGovern/28.

stakeholders and never achieved any traction on changing this historic practice. That combined with the Commission's very recent reiteration of its historic practice has led CUB to accept the historic practice of using a hypothetical 50/50 capital structure.

Q. Does this historic practice benefit customers?

A. During the Great Recession with interest rates held artificially low, CUB believed changing historic practices would provide a customer benefit and CUB and believed that utilities should provide analysis that they are using a capital structure that balances cost and risk. Today, interest rates are not being used to stimulate a recessionary economy and NWN is proposing to increase the equity component to reflect its forecasted equity component over the next 12-24 months[33]. In this case moving away from a 50/50 hypothetical structure would harm customers.

Q. What is CUB's recommendation for Capital Structure?

A. As noted above, in the most recent PGE rate case, the Commission stated its preference for a hypothetical 50/50 capital structures "regardless" of whether the actual capital structure varied from this amount[34]. NWN does not provide good reasons to depart from this Commission precedent. CUB recommends a capital structure of 50% equity and 50% debt.

Q. Please summarize your recommendations to the Commission.

A. CUB recommends a 9.24% ROE and a 50/50 Capital Structure.

[33] UG 520 – NWN, 400/Nelson/70.
[34] *See* UE 435, *In the Matter of PORTLAND GENERAL ELECTRIC COMPANY, Request for a General Rate Revision*, Order No. 24-454 at 13.

III. RETIRED ASSETS, MIST COMPRESSORS, AND STRANDED COSTS

A. Oregon's Approach to Retired Assets

Q. What are your concerns about retired assets, depreciable lives, group depreciation and stranded costs?

A. NWN's replacement of Mist Compressors involve retirement, and replacement of assets. Oregon has established policies around retirement of utility assets. CUB is concerned that NWN seems to believe that group depreciation allows for an exemption from these policies.

Q. What is Oregon's policy regarding retired assets?

A. Generally, Oregon only allows a utility to recover from customers costs that are associated with assets that are used and useful in providing service to customers. An exception to this used and useful approach is when the Commission finds that an asset is retired in the public interest. In this circumstance, the utility is made whole by being allowed to recover its original capital investment, along with an interest rate that represents the time value of money, but the utility is not allowed to earn a higher rate on equity.

CUB supports a policy of limiting recovery of retired property to instances where the Commission finds that retirement is in the public interest and disallows the application of the utility's return on equity to the undepreciated investment. This is a good policy that balances the interests of utilities and customers. Utilities only profit from investments that are productive and benefit customers, but utilities are

made whole and allowed to recover their initial investment in assets when that retirement provides a benefit. In effect, this policy shares the stranded cost risk of assets being removed before the end of their useful lives between customers and shareholders. It also helps temper the incentive that utilities have to make capital investments and to depreciate those investments over long periods of time.

Q. Please explain.

A. Utilities profits are driven by three inputs: capital investments, the depreciation period, and the return on equity. A utility finances a capital investment with a mixture of debt and equity, which combined make up the rate of return. Each year they charge customers their rate of return multiplied by the undepreciated investment. This creates an incentive to make capital investments, and it creates an incentive to depreciate capital investments over the longest period of time that can be justified because profits are increased by the size of the undepreciated investment. For example, a $100 million investment in software might have a 10-year useful life, but if a utility had the option of depreciating it over a 10-year or a 20-year life, a 20-year life would increase the earned return on equity from the investment from $27 million to $51 million.

Figure 4: Depreciable Lives and ROE example

Year	10 year (ave. ratebase)	ROE	20 year (ave. ratebase)	ROE
1	95	5.1376	95	5.1376

Q. How does the risk of stranded costs impact depreciation incentives?

A. Offering some counter to these depreciation incentives is the risk of stranded costs. As I explained above, the Company loses the opportunity to earn a return on equity when an investment is retired and it has to make the case that the retirement was in the public interest. This creates an incentive for a utility to ensure that the depreciable lives of assets are realistic. And it reinforces the matching principle where regulation wants to match the benefits of an investment with the costs.

Q. How does group depreciation affect this?

A. Group depreciation should not affect this. Investments are either used and useful or not used and useful. And the policies that apply to retired investments apply when an investment is no longer used and useful regardless of group depreciation. NWN,

however, argues that group depreciation means the Company no longer has to be concerned about undepreciated investment in retired assets[35]. In CUB Exhibit 102, Staff asks NWN whether the Mist Compressors that are being retired are fully depreciated. NWN responds that the compressors are depreciated at the group level rather than at the individual asset level and that because depreciation is done at the group level, rather than the individual level, any undepreciated amounts will stay in the group account[36]. According to the Company "some assets are retired before expectation and others after expectation"[37]. In other words, ratepayers could be paying for annual depreciation and a rate of return on the undepreciated amounts of retired assets that are no longer used and useful because these stray amounts remain lumped in the group depreciation bucket.

Q. Has the Commission ruled on how group depreciation affects retired property?

A. Yes. In docket UE 374, the Commission addressed this exact issue as it related to PacifiCorp's replacement of traditional meters with AMI meters. PacifiCorp, like NWN, argued that because the company uses group depreciation the company did not have to worry about undepreciated investment in individual meters when they were replaced. The Commission flatly rejected that argument[38]:

> Pursuant to ORS 757.355, a utility may not include in rates the costs of plant "not presently used for providing utility service to the customer." The meters replaced during the company's AMI roll out, completed this year, are no longer in service to customers. Although PacifiCorp argues that removal of the replaced meters is contrary to the company's use of group

[35] *See* CUB Exhibit 102.

[37] *Id.*
[38] *See* UE 374, *In the Matter of PACIFICORP, dba PACIFIC POWER, Request for a General Rate Revision* Order No. 20-473, 88-92 (Dec. 18, 2020).

> depreciation, the scale of replacements, 85 percent of the company's meters, is distinguishable from the gradual replacement and retirements of individual units over time. Additionally, because the company now seeks to include all of the new AMI meters in rate base, it is appropriate to remove the replaced meters in determining rate base in this proceeding….
>
> We agree with Staff that the company should have sought to accelerate depreciation for these meters ahead of their retirement if it hoped to earn its rate of return on this plant balance. ORS 757.140 provides for the recovery of undepreciated utility investments, including retired plant, when the Commission determines that the retirement is in the public interest. The company demonstrated benefits of replacing its existing meters with AMI, including those incorporated into rates in this case. We find that the retirement of the existing meters as part of the AMI installation to be in the public interest. Accordingly, we adopt AWEC's proposal to remove the undepreciated balance of the company's old meters from rate base, to be recovered through a regulatory asset. We find no additional adjustment is required to adjust depreciation expense. AWEC provided a calculation of the net book value of retired meters to be removed from rate base of $16,126,628. Staff agrees with AWEC's calculation. We adopt AWEC's proposal to establish a regulatory asset and find AWEC's calculated estimate of the net book value of $16,126,628 should be amortized over 10 years. Because we determined that early retirement of the meters is in the public interest, PacifiCorp is entitled to interest at the time value of money, but not a return on the investment.[39]

Q. Is CUB proposing a new policy?

A. No. The policy that came out of Order No 20-473 is the Retired Asset Policy that was applied to the retired Trojan nuclear power plant[40]. Order No 20-473 made clear that the use of this policy applies to significant retirements even when the utility uses group depreciation.[41]

[39] *Id.* at 91-92.
[40] UM 989, *This filing implements the settlements entered into by the Citizens Utility Board, OPUC Staff, and PGE to remove the Trojan Investment and other regulatory assets and liabilities from the Company's balance sheet*, Order No. 00-601 (Sept. 29, 2000).
[41] *See* UE 374, *In the Matter of PACIFICORP, dba PACIFIC POWER, Request for a General Rate Revision* Order No. 20-473 (Dec. 18, 2020).

B. Applying the Retired Asset Policy to Mist Compressors

Q. Is there undepreciated investment in the Mist Compressors?

A. CUB believes the answer is yes. The two Mist Compressors were installed in 1998 and 2001-02[42]. The Compressors are in FERC account 354[43]. In the depreciation study included with NWN filing, the assets in FERC account 354 depreciate over 50 years[44]. This is consistent with the previous depreciation study[45]. NWN would not answer a data request from the Staff on whether the individual compressors were fully depreciated, citing group depreciation[46]. The FERC account associated with the group depreciation has a net plant balance of $21,070,537 on an Oregon allocated basis.

This case is focused on replacing the GC 500, which was installed in 1998[47] and will be removed by October 2025[48]. This reflects an actual useful life of 27 years, rather than the depreciable life of 50 years. CUB looked at the PUC order from UG 132, which was the rate case following the beginning of the useful life of the GC 500. In that case, the Commission approved adding $27,322,000 in rate base to account for new investments at Mist[49]. This is the best estimate CUB has as to the initial capital investment. Since it has depreciated for 27/50ths of its depreciable

[46] CUB Exhibit 102.
[47] UG 520 – NWN, 500/Kizer-Johnson/31.
[48] UG 520 – NWN, 500/Kizer-Johnson/45.
[49] UG 132, *In The Matter Of The Application Of Northwest Natural For A General Rate Revision*, Order No. 99-697, Appendix D, page 5 (Nov. 12, 1999).

life, CUB estimates its unrecovered Oregon capital investment upon retirement will be $14,753,880.

Q. Is CUB opposing recovery of this $14.8 million?

A. No. CUB believes that NWN makes a reasonable case that this compressor needs to be replaced[50]. While NWN did not include a request to find that the current Mist Compressor is being retired in the public interest, CUB makes that request here. Per the Retire Asset Policy, this request allows the Company to recover its capital investment but not earn its return on the plant.

Q. Why is CUB recommending the Mist Compressor be retired in the public interest?

A. Mist is an underground storage facility for natural gas and NWN uses it to meet winter demand on its system. This allows the Company to avoid the expense of purchasing additional firm capacity on interstate pipelines. CUB believes that NWN makes a reasonable case that the compressor needs to be replaced to support operations at Mist. CUB is not opposing retiring and replacing the compressor.

Q. How is CUB recommending this amount be recovered?

A. In the same manner as the PacifiCorp metering investment discussed above. NWN should remove $14.8 million from FERC account 354 and recover it through a regulatory asset. The PacifiCorp regulatory asset was amortized over 10 years. The remaining depreciable life of this assets is 23 years. While CUB is recommending sticking with the 23-year amortization period, we recognize that the Commission may want to shorten that period.

[50] UG 520 – NWN, 500/ Kizer-Johnson/30-45 and NWN, 505/Kizer-Johnson.

In the PacifiCorp case, UG 132, to determine an interest rate that reflected the time value of money, the Commission used a blended rate, composed of the "company's currently authorized cost of debt and Treasury bond yields.[51]" In this case, NWN is proposing 4.687% for the weighted average cost of debt[52]. The yield on a 10-year Treasury bond is 4.31%[53]. Therefore, the blended rate (50% of each) is 4.499.

This is not a huge adjustment. NWN is proposing a return on equity of 10.4%, a equity component of 52% and a cost of debt of 4.687%[54]. Applying this ROE and capital structure, along with a combined federal/state tax rate of 27%[55], creates a pretax return of $1.35 million. Creating a regulatory asset and using a blended rate of 50% debt and 50% 10-year treasuries, would reduce the overall return to $752,000 for an overall revenue requirement reduction of $598,000. But this adjustments importance is greater than its test year value. NWN claims this retirement is due to the compressors being at the end of their *useful* lives, but they are only about halfway through their *depreciable* lives. As a reminder, a utility can earn more on an asset the longer the utility stretches the depreciation life of that asset. The Company could have earned its full rate of return on the asset if it had accelerated depreciation, i.e., if it had shortened the depreciation life, before the plant was retired. Instead, because the Company used a depreciation life longer than the useful life of the compressor, the Company is left with $14.8 million in

[51] *In the Matter of PACIFICORP, dba PACIFIC POWER, Request for a General Rate Revision* Order No. 20-473 at 91-92 (Dec. 18, 2020).
[52] UG 520 – NWN, 1508/Walker/1.
[53] U.S. 10 Year Treasury Note, (March 25, 2025), https://www.marketwatch.com/investing/bond/tmubmusd10y?countrycode=bx.
[54] UG 520 – NWN, 1508/Walker/1.
[55] UG 520 – NWN, 1500/Walker/19.

undepreciated investment, which, under the Retired Asset Policy should no longer have a return on equity. By removing the earning opportunity from unproductive retired assets, the Commission is creating an incentive for the company to match useful lives with depreciation and minimize stranded costs.

CUB is recommending:

1. That the retirement of the Mist Compressor in October 2025 be found to be in the public interest.

2. That NWN remove $14.8 million from FERC account 354 and place it in a regulatory asset; and

3. That the regulatory asset should be amortized over 23 years with an interest rate of 4.499%, representing the time value of money.

C. Applying this Policy to the IT&S system

Q. What is NWN proposing with respect to its IT&S system?

A. NWN proposes to recover investments to replace end-of-life information technology and services ("IT&S") system.[56] This includes replacing "decades old" SCADA systems with new equipment and cloud-based services.[57] As we have seen with the Mist Compressors, just because the Company describes the old systems as at their end-of-life, this does not mean that they are at the end of the depreciable life.

[56] NWN Executive Summary, page 4.
[57] *Id.* at 4-5.

CUB recommends similar treatment for these assets:

1. That the retirement of the IT&S system be found to be in the public interest.

2. That NWN remove any undepreciated investments associated with the retired IT&S system from its rate base accounts and place them in a regulatory asset; and

3. That the regulatory asset should be amortized over 23 years with a interest rate of 4.499%, representing the time value of money.

D. Applying this Policy to Stranded Costs from Electrification

Q. Explain the issue with applying this policy to stranded costs from electrification?

A. The role of electrification in decarbonizing our economy has been discussed in recent rate cases, IRPs, and the Gas Fact Finding investigation. Anecdotal evidence (i.e., I know people who have electrified their home and discontinued gas service) suggests electrification is happening, though at a level that is less than new customer growth. But as customers electrify, what happens to the assets that are left behind? This becomes significant if electrification accelerates.

The service pipe, for example, serves a single customer. If that customer discontinues gas service then the service pipe is no longer used and useful. It becomes a retired asset. In this case NWN is proposing to reduce the depreciable lives of service pipes from 65 to 60 years. This means that new service pipes will have amortization that lasts until 2085. In light of climate change and Oregon

public policies to address climate change, it is unlikely that a broad fossil fuel gas system will be delivering methane to hundreds of thousands of households in 2085. While the current policy of phasing down the line extension allowance policy (LEA) reduces the potential for stranded costs for new service lines, there is a legacy of decades of service pipes in the ground now with decades of depreciation left.

Q. What is your recommendation with regards to applying the Retired Asset Policy to household electrification?

A. Under NWN's application of group deprecation, as households electrify and leave the system, the unamortized investment will remain in the group depreciation account and be financed at the utility's rate of return by the customers who are left. At its extreme, this means the last customer on the system will be responsible for paying all of the rate base for all of the pipes that are no longer used and useful but are part of the group depreciation account.

Of course, if electrification does cause the gas system to shrink, it may be that the service pipes are not the only assets that become no longer used and useful. It is important for the Commission to reassert Oregon's policy on retired plant. Currently, NWN has little incentive to limit new investment in long-term assets and little incentive to match the depreciable lives with the actual expected useful lives.

While the Commission has directed the Company to consider non-pipe alternatives[58], the Company has little incentive to invest in non-pipe alternatives. Applying Oregon's retired plant policy to NWN will help align the Company incentives with its customers' interests – a system filled with stranded costs will be harmful to both – and non-pipe alternative will reduce risk for both shareholders and customers.

Applying this policy requires that when customers leave the system and their service pipe (or other capital assets) are no longer useful, that the remaining undepreciated capital investment directly associated with that customer, and only that customer, be moved into a regulatory account, so it can be recovered at the time value of money. This requires tracking the beginning of service for each customer address, so the undepreciated investment can be calculated.

Reducing carbon is the public policy adopted by Oregon and reflected in HB 2021, and the CPP and likely future additional policies. Because electrification of households will reduce carbon emissions, CUB recommends that the Commission find that electrification is in the public interest and direct NWN to place plant that is retired due to electrification in a regulatory asset where it will earn interest at the rate of 4.496 %.

[58] LC 79, *In the Matter of NORTHWEST NATURAL GAS COMPANY, dba NW NATURAL, 2022 Integrated Resource Plan*, Order No 23-281 (Aug. 2, 2023).

IV.DEPRECIATION

A. Moving Away From Group Depreciation

Q. How does NWN depreciate its assets?

A. As discussed above, the Company uses the "Group Depreciation Method" for most assets, even large assets like the Mist Compressors.[59] Under the Group Depreciation Method, the service life and net salvage characteristics are estimated for each depreciable group.[60] The total cost of the group is spread out over the useful life of the entire group.[61] When the Company conducts a depreciation study, it reassess the useful life and salvage value of the assets in each group, including retirements, and adjustments to depreciation rates.[62]

Q. What is CUB proposing?

A. CUB is concerned about continuing to use group depreciation does not allow for the kind of insight now necessary into the lives of individual assets. Knowing the specific undepreciated investment in the Mist Compressors would have facilitated applying the retired asset policy. Instead of group depreciation, CUB would like to see the Company use unbundled individualized asset depreciation for assets that have significant cost, or assets that have long depreciable lives. This would allow stakeholders to scrutinize stranded costs.

[59] UG 490, *In the Matter of NORTHWEST NATURAL GAS COMPANY, dba NW NATURAL, Request for a General Rate Revision*, Staff/1000 Dyck/10 (citing Staff/1002, NWN Response to DR 415).

[61] UG 490, *In the Matter of NORTHWEST NATURAL GAS COMPANY, dba NW NATURAL, Request for a General Rate Revision*, Staff/1000 Dyck/10 (citing Staff/1002, NWN Response to DR 415).
[62] *Id.*

In undertaking its depreciation studies, the Commission has tasked NWN with addressing "accelerated depreciation or other adjustments to asset depreciation schedules as a possible tool to mitigate uncertainty about decarbonization pathways and manage potential future risks to customers."[63] Likewise, even without a pathway, NWN's gas customers are electrifying. The value left on the system as customers chose to fuel switch and as Oregon's regulators adopt decarbonization pathways will leave behind stranded assets, that is, assets that are no longer used ahead of their useful life. Whichever pathway we follow, there is the potential for serious financial implications for the Company's captive ratepayers. By using group depreciation, we are limited in our ability to assess and mitigate against this financial impact. That is, group depreciation does now allow us to scrutinize which assets may be no longer used but are otherwise impacting their group's service life and net salvage characteristics.

Q. How does this accounting impact the depreciation of assets in rates?

A. Group depreciation is a simpler accounting method, but assets depreciate regardless of whether they are in group depreciation or depreciate individually. The difference is not in the depreciation of assets but in how we track that depreciation. Group depreciation came about in the days when utility accounting was done by hand on paper. Today, we have computers, software, digital tools and the ability to be more sophisticated in our tracking of asset depreciation.

Q. Has the Commission ever requested that NWN adjust its depreciation method to account for the uncertainty of decarbonization?

[63] UM 2214, *In the Matter of Northwest Natural Gas Company, dba NW Natural, Updated Depreciation Study*, Order No. 22-322 at 3 (Sep 7, 2022).

A. Yes, in in Order No. 22-322 on NWN's depreciation study filed at the end of 2021, the Commission explained that parties may seek to evaluate accelerated deprecation or other adjustments to asset depreciation schedules as a "tool to mitigate uncertainty about decarbonization pathways and manage potential future risks to customers." The Commission then directed NWN to include testimony in its subsequent depreciation study addressing accelerated depreciation.[64] NWN filed a new depreciation study in January 2024 in docket no. UM 2312, but NWN did not file testimony addressing accelerated depreciation.[65] Instead, NWN argued filing the new depreciation study in January 2024 rather than 2027 was responsive to the Commission's directive.[66] According to NWN, the depreciation study reflected the actual operations and depreciable lives of the assets on its system to enable the company to "begin [] discuss[ing] the justifications for, and impacts of, accelerated depreciation."[67] In testimony, NWN did not propose accelerated depreciation "due to the near term rate pressure of increasing depreciation expense in this filing to reflect the useful lives of its assets but is open to a discussion in a future proceeding."[68] The Company added that it was "not attempting to foreclose that discussion in a future filing appropriate for considering whether a disciplined approach to gradually increase depreciation expense to mitigate potential future uncertainties—while balancing intergenerational equity between today's customers and tomorrow's customers—is a reasonable approach for NW Natural and its

[64] *Id.*
[65] *See* UM 2312, *In the Matter of NORTHWEST NATURAL GAS COMPANY, dba NW NATURAL, Updated Depreciation Study*, Order No. 24-302 at 3 ("NW Natural states that to be responsive to the Commission's directive, the company filed this depreciation study now, rather than wait until 2027.").
[66] *Id.*
[67] *Id.*
[68] *Id.*

customers."[69] In the UM 2312 order adopting the stipulation on the revised depreciation rates, the Commission reiterated its directive that the Company to include testimony addressing how the Company could use deprecation as a tool to mitigate customer risk in its next deprecation study.[70] Nonetheless, in the latest study, UM 2363, NWN has again declined to discuss depreciation of the gas system in the context of decarbonization of the gas system. Instead, NWN again filed a new depreciation study. In shortening the lives of certain assets in this latest study, NWN states that "it is very important to have our depreciation rates reflect the actual operations and depreciable lives of the assets on our system."[71] It's important to note that the Commission did not direct NWN to file these back-to-back depreciation studies. Nor does the law require back-to-back studies nor did the prior stipulations. The Commission directed testimony on accelerated depreciation, and in lieu of that, the Company undertook a new study.

Q. What happened in UM 2312, NWN's last depreciation study?

A. In January 2024, NWN filed a new depreciation study with the Commission, docketed as UM 2312. NWN used these depreciation rates proposed in depreciation study in UG 490. AWEC performed a detailed review of the depreciation study in that docket, noting that changes to the depreciation rates were key drivers of the rate

[69] UM 2312, *In the Matter of NORTHWEST NATURAL GAS COMPANY, dba NW NATURAL, Updated Depreciation Study*, NW Natural's Updated Depreciation Study, cover letter at 2 (Jan. 2, 2024).
[70] UM 2312, *In the Matter of Northwest Natural Gas Company, dba NW Natural, Updated Depreciation Study*, Order No. 22-322 at 3 (Sep 7, 2022).
[71] UM 2363, *In the Matter of NORTHWEST NATURAL GAS COMPANY, dba NW NATURAL, Updated Depreciation Study*, cover letter at 2 (Dec. 30, 2024).

increases in UG 490.[72] In August, the Commission adopted the stipulation entered into by NWN, Staff, AWEC in UM 2312. In doing so, NWN agreed to use the revised depreciation rates, as presented in the stipulation, as the basis for its depreciation rates in UG 490 effective November 1, 2024.[73] The stipulation provided that the revised depreciation parameters set forth in the stipulation would be used until the effective date of the company's next depreciation study.[74] Then, in December of 2024, NWN filed a new depreciation study.

Q. What has NWN proposed in the latest depreciation study?

A. Rather than discuss the concerns raised by the Commission related to stranded costs and mitigating risk, the Company seems to be doing nearly-annual depreciation studies and slowly reducing the depreciable lives of assets. Effectively, the company is accelerating depreciation to reduce the risk of stranded costs, but without admitting that this is what it is doing, and without any discussion of those risks, and what depreciable lives make sense in the context of climate change and electrification. For example, this new study reduces the depreciable lives of service pipes from 65 to 60 year[75]. This reduces the stranded cost risk of electrification, but only slightly. A better approach would be testimony that discusses the risks associated with electrification, how that affects the useful life of assets, and in the context of electrification what should be established as the useful life. Because of

[72] UM 2312, *In the Matter of NORTHWEST NATURAL GAS COMPANY, dba NW NATURAL, Updated Depreciation Study*, Order No. 24-302 at 2 (Aug. 29, 2024).
[73] *Id.*
[74] *Id.*
[75] *See* UG 520 – NWN, 1402 Spanos/53; UM 2312, *In the Matter of Northwest Natural Gas Company, dba NW Natural, Updated Depreciation Study,* NWN, Depreciation Study at VI-7.

the rate impact of shortening useful lives, phasing in new useful lives could be used to mitigate ratepayer impact.

NWN's approach of having nearly annual depreciation studies may be a method to phasing in shorter depreciable lives but doing it in this manner removes context and disconnects the rate increases associated with accelerating depreciation from the benefit of such depreciation – reduced risk of stranded costs.

Q. What is the cost of these depreciation studies?

A. In UG 490, the proposed cost to customers from updating depreciation rates based on the study was $35,403 million, or 22.85% of the proposed Oregon revenue requirement, surpassing capital projects, which were 21.27% of the proposed Oregon RR.[76] There is no doubt that reducing depreciable lives increases the rates to customers. But it is unclear how these costs fit into a strategy of reducing the risk associated with electrification and climate change.

Q. Should customers continue to see nearly annual rate hikes associated with new depreciation studies?

A. No. Asking customers to bear higher costs, without explaining how these increased costs provide benefits, should be rejected.

[76] *See* UG 490, *In the Matter of NORTHWEST NATURAL GAS COMPANY, dba NW NATURAL, Request for a General Rate Revision*, Staff/100 Muldoon/11 (chart shows the Rate Case Cost Drivers of UG 490).

V. LIHEAP AND OLGA

Q. What is LIHEAP?

A. LIHEAP is the Low-Income Home Energy Assistance Program. It is funded by the federal government and "provides critical short-term aid" to low-income households[77] for the cost of heating or cooling their homes. In FY 2022, Oregon received $34 million in LIHEAP funding[78]. It is a critical piece of this country's social safety net. In Oregon it is administered through county Community Action Programs, such as the Community Action Team that serves Columbia, Clatsop and Tillamook Counties[79]. From CUB's experience, LIHEAP plays a vital role in providing emergency relief to customers who cannot afford their bills and helps prevent disconnection of vulnerable families.

Q. What is OLGA?

A. OLGA is the Oregon Low-Income Gas Assistance program[80]. It is funded by NWN customers through a surcharge to the bills of residential customers[81]. Like LIHEAP, it is administered through local Community Action Programs[82].

Q. What is your concern with LIHEAP and OLGA?

A. OLGA was created to supplement LIHEAP.[83] LIHEAP and OLGA work together to help prevent shut offs by providing crisis support to low income households facing unaffordable bills. The two programs have the same income qualifications

[77] *See* CUB Exhibit 104.
[78] *Id.*

[80] RO 10, *Qualified Project Reports per OAR 860-200-0200*, NWN, Oregon Low-Income Gas Assistance Program (OLGA) Annual Report for the 2023-2024 Program Year
[81] *Id.*
[82] *Id.*
[83] *Id.*

and are generally administered by the same agencies[84]. CUB is concerned that the current federal administration and Congress may reduce or eliminate LIHEAP funding before next winter. This concern was further validated on April 1, 2025, when the entire LIHEAP federal staff were terminated, despite there being a remaining $387 million in funds that had yet to be allocated for the year[85]. Mark Wolfe, the executive director of the National Energy Assistance Directors Association, noted that this action would likely grind LIHEAP programing to a halt[86]. If this or worse comes to be, the current level of OLGA funding will likely be insufficient to meet the emergency heating needs of low-income NWN households. There may be a need to increase OLGA funding. But this creates a ratecase timing issue. While the extent of the problem will likely be known when the Commission makes an October decision in this case, it is not known today and may not be known when rebuttal testimony is written.

Q. Does CUB have a recommendation regarding LIHEAP and OLGA?

A. At this time, we do not. CUB is talking to other stakeholders and may have a contingency proposal to make in rebuttal testimony.

[84] CUB Exhibit 105, Energy Assistance, Yamhill Community Action Partnership (YCAP), https://yamhillcap.org/energy

[85] CUB Exhibit 105, Nick Valencia et al., 'It's a bloodbath': Massive wave of job cuts underway at US health agencies, CNN Health (April 1, 2025, updated April 2, 2025, 11:06 AM EDT), https://www.cnn.com/2025/04/01/health/staff-cuts-at-federal-health-agencies-have-begun/index.html

[86] *Id.*

VI. CONCLUSION

Q. Please summarize your recommendations to the Commission.

A. Below is a numbered list here of recommendations made in testimony for easy reference:

1. ROE and Capital Structure:
9.24% ROE and a 50/50 Capital Structure.

2. Mist Compressor:
That the retirement of the Mist Compressor in October 2025 be found to be in the public interest.

That NWN remove $14.8 million from FERC account 354 and place it in a regulatory asset; and

That the regulatory asset should be amortized over 23 years with an interest rate of 4.499%, representing the time value of money.

3. IT&S System
That the retirement of the IT&S system be found to be in the public interest.

That NWN remove any undepreciated investments associated with the retired IT&S system from its rate base accounts and place them in a regulatory asset; and

That the regulatory asset should be amortized over 23 years with a***n*** interest rate of 4.499%, representing the time value of money.

4. Electrification

That the Commission find that electrification is in the public interest and direct NWN to place plant that is retired due to electrification in a regulatory asset where it will earn interest at the rate of 4.496 %.

Q. Does this conclude your testimony?

A. Yes.

UG 520/CUB/101
Jenks/1

WITNESS QUALIFICATION STATEMENT

NAME: Bob Jenks

EMPLOYER: Oregon Citizens' Utility Board of Oregon

TITLE: Executive Director

ADDRESS: 610 SW Broadway, Suite 400
Portland, OR 97205

EDUCATION: Bachelor of Science, Economics
Willamette University, Salem, OR

EXPERIENCE: Provided testimony or comments in a variety of OPUC dockets, including UE 88, UE 92, UM 903, UM 918, UE 102, UP 168, UT 125, UT 141, UE 115, UE 116, UE 137, UE 139, UE 161, UE 165, UE 167, UE 170, UE 172, UE 173, UE 207, UE 208, UE 210, UE 233, UE 246, UE 283, UG 152, UM 995, UM 1050, UM 1071, UM 1147, UM 1121, UM 1206, UM 1209, UM 1355, UM 1635, UM 1633, and UM 1654. Participated in the development of a variety of Least Cost Plans and PUC Settlement Conferences. Provided testimony to Oregon Legislative Committees on consumer issues relating to energy and telecommunications. Lobbied the Oregon Congressional delegation on behalf of CUB and the National Association of State Utility Consumer Advocates.

Between 1982 and 1991, worked for the Oregon State Public Interest Research Group, the Massachusetts Public Interest Research Group, and the Fund for Public Interest Research on a variety of public policy issues.

MEMBERSHIP: National Association of State Utility Consumer Advocates
Board of Directors, OSPIRG Citizen Lobby
Telecommunications Policy Committee, Consumer Federation of America
Electricity Policy Committee, Consumer Federation of America
Board of Directors (Public Interest Representative), NEEA

Data Request Response

Request No.: UG 520 OPUC DR 403

By October 2025, will the compressors be fully depreciated?

Response:

The premise of the question does not reflect how assets are depreciated. Utilities follow group depreciation for all assets which is presented in the Company's 2023 Depreciation Study and has been followed for many years. Compressor Equipment are listed in FERC Accounts 354, 368 or 377. The Mist compressors are recorded in Account 354. Group depreciation provides for proper recording of assets into similar or like assets in order to establish proper recovery of all assets consistent with their life characteristics. Therefore, all assets in an account or group are depreciated at the group level rather than at the individual asset level. Additionally, the accumulated depreciation is recorded and maintained at that group or account level. Given the accumulated depreciation is maintained at the group or account level, when the compressors are retired, the amount of the retired plant as well as any associated net salvage will be credited to accumulated depreciation impacting the group or account rather than any individual asset recorded within the account. Consequently, some assets are retired before expectation and others after expectation. The remaining life technique ensures all assets within an account are fully depreciated no more, no less.

NW Natural®

Rates & Regulatory Affairs
UG 520
NW Natural Request for a General Rate Revision
Data Request Response

Request No.: UG 520 OPUC DR 404

If not, how will the remaining book value of the old compressors be accounted for?

Response:

Please refer the response provided to UG 520 OPUC DR 403 related to the explanation of group depreciation. As stated in the referenced response, once the compressor(s) are retired from service, the original cost of the asset is credited to plant-in-service for the account and also accumulated depreciation along with any net salvage value associated with the retirement of the asset. Given the full value of the asset has been credited to both plant-in-service and accumulated depreciation, the remaining service value (original cost and net salvage) of the account is recovered over the remaining life of the remaining assets within the account or group. The annual depreciation expense and rate are calculated considering the ratio of the accumulated depreciation (book reserve) to plant in order to ensure all investment is fully depreciated within the account.

Data Request Response

Request No.: UG 520 OPUC DR 402

What will be the net plant balance at the end of 2024?

Response:

We are assuming this is asking for the net plant balance for FERC account 354 where the asset costs of the Mist gas compressors are held. The net plant balance of FERC account 354 at the end of 2024 is $23,685,406, or $21,070,537 on an Oregon allocated basis.

A LIGHT FOR THOSE IN NEED:
LIHEAP Enters a Fifth Decade of Service

May 2022

SERVING NEIGHBORS IN NEED

On Saturday mornings, Cincinnati resident Kim Navaro prepares herself for her next shift as a volunteer for St. Vincent de Paul. In the Greater Cincinnati region, St. Vincent de Paul is one of several organizations that help families in need connect with assistance programs, including rent, food, and utilities.

Navaro, who has been a volunteer since November 2020, has to ready herself for the Saturday process. At exactly 12:30pm, all of the individuals that she and other volunteers have previously screened during earlier phone calls—typically more than 100 people each week—will dial into the assistance line. The first 15 people who get through to the volunteers on duty will receive as much help as St. Vincent de Paul can provide them. The rest will have to hang up and try again at 12:30pm the following Saturday.

"The demand for assistance has increased significantly because of the pandemic," Navaro says. "We hear from so many families who are struggling because of job losses due to COVID, single moms who have to stay home with children because school isn't in session, and adult children who stay home to care for their parents."

According to Navaro, the volume of calls and the needs of individuals have increased so much and overwhelmed local organizations like St. Vincent de Paul that it's nearly impossible to keep up. St. Vincent serves a wide range of people, from 18-70+ years of age, who are falling behind on utility bills and other standard expenses. When possible, the organization issues up to $300 in funds directly to Duke Energy, the local utility provider, to help the individual get caught up on their outstanding bills or avoid a shutoff to protect the health and wellness of these families in need.

"They're so grateful for the help," Navaro said. "They're good people, and a lot of them are working as hard as possible to get current on all of their bills. They have a real uphill battle. On a local level, it's hard to witness our neighbors at such desperate points. They don't know where else to turn."

The COVID-19 pandemic exacerbated challenges that America's low-income households have face for decades: increasingly difficult choices about how to use limited funds for household necessities. Built to address this crisis, the Low Income Home Energy Assistance Program (LIHEAP) celebrated its 40th year as an assistance program in 2021. The program is widely supporting by numerous organizations across the nation, including government officials, nonprofit social service agencies, and the two leading expert organizations: the National Energy Assistance Directors Association (NEADA) and the National Energy & Utility Affordability Coalition (NEUAC). And yet in its 40th year, the nation saw a program that is increasingly essential and continually underfunded. There exists an immense need to expand LIHEAP to support the millions of households, including those feeling the deep and lingering impacts of a global pandemic.

LIHEAP: 40 YEARS OF SERVICE

The Dilemma of 'Heat-or-Eat'

Across the United States, low-income households have to make difficult and critical decisions about how to use their available income every month. For many Americans, their wages put them in or near the poverty line. In 2022, a four-person household met the federal poverty guideline with an annual income of $27,750. The reality is that for these households, making decisions about paying rent and utilities, buying groceries, paying for transportation is often a difficult and scary decision. Without enough money to pay for all bills each month, these families often face the 'heat-or-eat' dilemma: deciding whether to put food on the table or keep a home safe with proper heating and cooling.

Since its inception in 1981, the LIHEAP has been on a mission to help families avoid this emotional and stressful dilemma. The program delivers critical short-term aid to our most vulnerable neighbors, including the working poor, individuals with disabilities, and the elderly living on fixed programs.

Extensive academic research has documented the broader impact of energy assistance, from the "heat-or-eat" dynamic seen in many lower-income households, to the health effects on children. LIHEAP continues to be critical in protecting millions of struggling American families. This is especially true during the peak winter heating and summer cooling seasons, when energy bills can comprise nearly 30 percent of a low-income household's monthly income, especially in substandard housing.

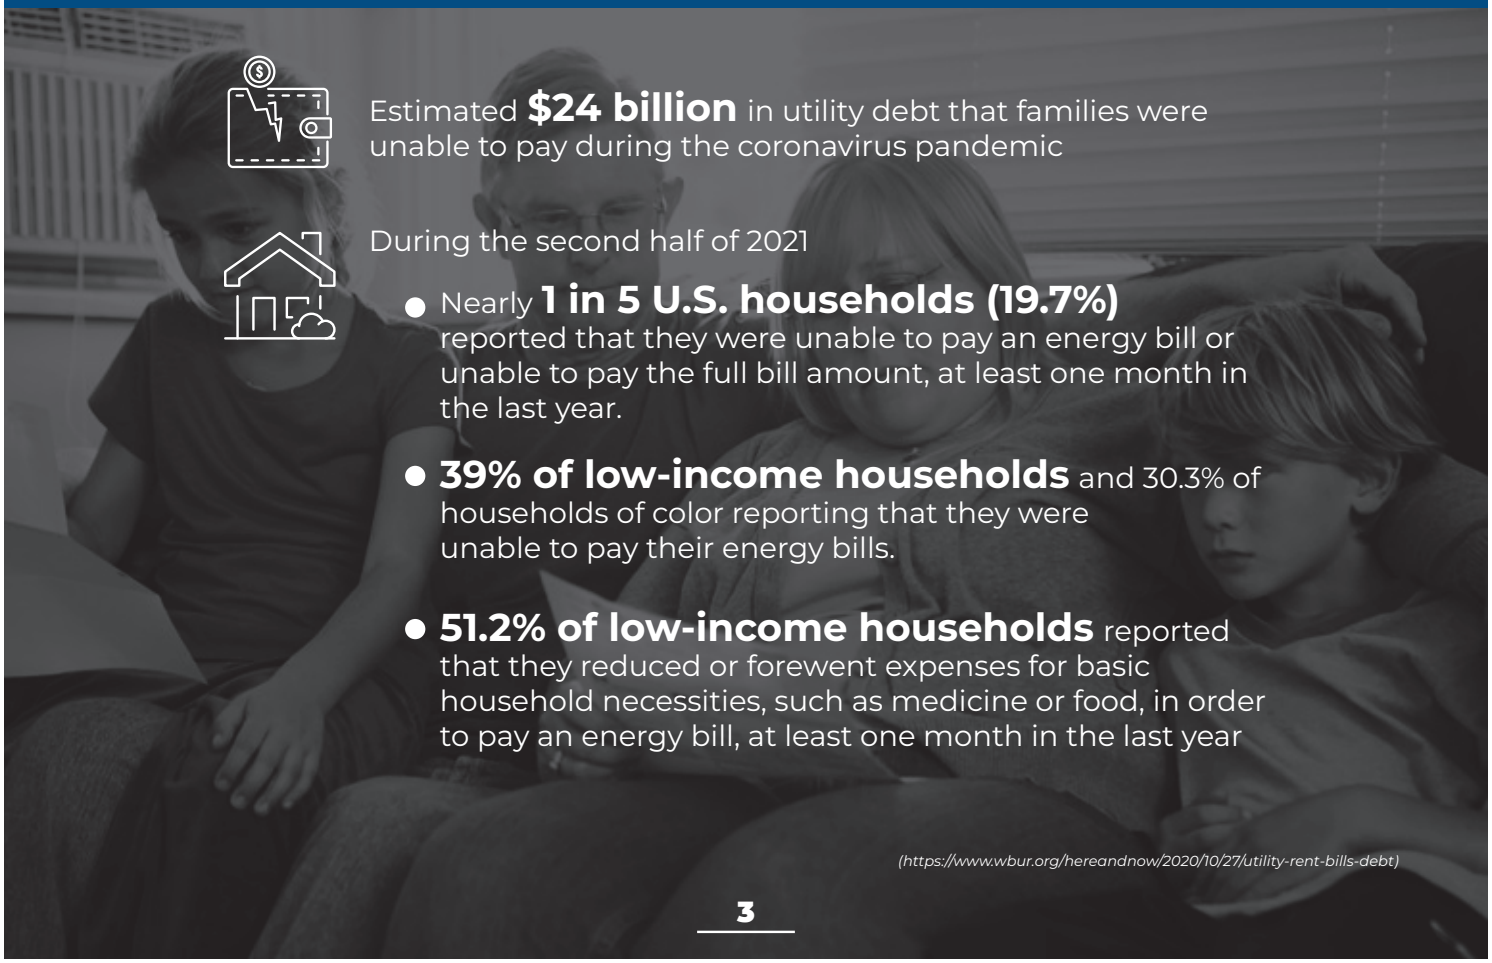
LIHEAP IN THE AGE OF COVID

LIHEAP, by design, serves households that qualify as low income. According to the LIHEAP Clearinghouse, an information source managed by the U.S. Department of Health and Human Services, states must set LIHEAP income eligibility standards within themaximum and minimums as established by law. Today, this LIHEAP statute determines that a household must have an income that "does not exceed the greater of 150 percent of the federal poverty guideline or 60 percent of the state median income level."

The COVID-19 pandemic brought a new economic crisis to American homes, in particular low-income homes. The official poverty rate in 2020 was 11.4%, up one percentage point from 2019 and the first increase in national poverty in five consecutive years, as reported by the U.S. Census Bureau. In 2020, nearly 37.2 million Americans lived in poverty, which is 3.3 million more Americans than in 2019. Black Americans continued to have the highest poverty rate of 19.5% in 2020, and Hispanics had a poverty rate of 17.0%. In addition, the median household income dropped 2.9% from 2019 to 2020, the first statistically significant decline since 2011.

What all of these statistics create is a high-level snapshot of very real, very personal challenges that millions of Americans face every day. The challenges existed before the pandemic, and they will exist after, too. But what can change is the way we address the need from external programs like LIHEAP. The critical nature of this program was demonstrated in many ways, but perhaps most telling was the shutoff moratoria in 2020 and 2021. Lawmakers and decision-makers united to protect what they knew was essential: living environments that are properly heated and cooled for the safety of those who reside inside.

As such, in May 2021, the inarguable necessity of LIHEAP funds was demonstrated by an additional $4.5 billion in supplemental funding. These funds were released for FY2021 under the American Rescue Plan of 2021 "for additional funding to provide payments" for LIHEAP.



Estimated **$24 billion** in utility debt that families were unable to pay during the coronavirus pandemic

During the second half of 2021

- Nearly **1 in 5 U.S. households (19.7%)** reported that they were unable to pay an energy bill or unable to pay the full bill amount, at least one month in the last year.
- **39% of low-income households** and 30.3% of households of color reporting that they were unable to pay their energy bills.
- **51.2% of low-income households** reported that they reduced or forewent expenses for basic household necessities, such as medicine or food, in order to pay an energy bill, at least one month in the last year

(https://www.wbur.org/hereandnow/2020/10/27/utility-rent-bills-debt)

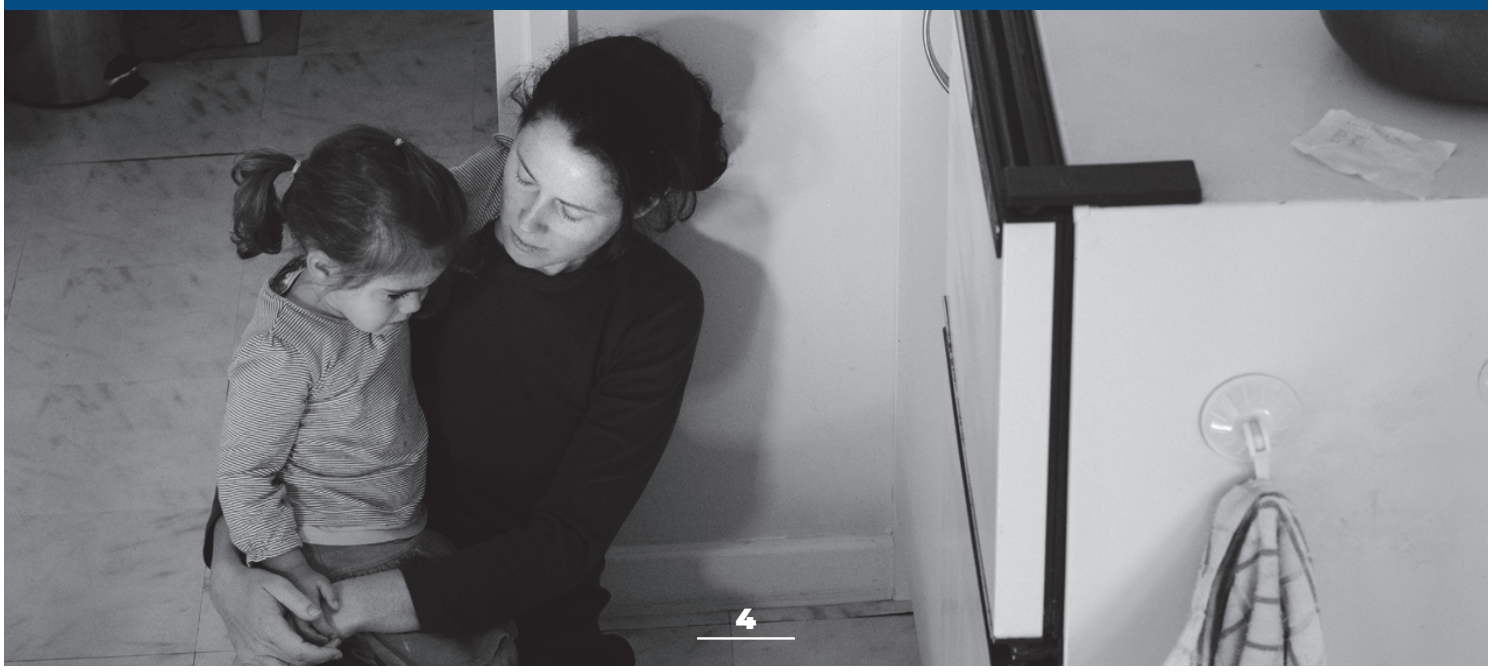
In a 2016 report by Pew Charitable Trusts, nearly 71 percent of Americans surveyed indicated an inability to save money because of unexpected expenses, with more than 26 percent of individuals reporting that this inability to save happens most months or just about every month. When paired with an economic downturn as seen during the COVID-19 pandemic, saving money is no longer the most pressing financial concern for many low-income households. Rather, simply paying bills for daily needs, like utilities and food, becomes the primary focus for many individuals.

With 1 in 5 of all U.S. households (18.6%) reporting that they kept their home at a temperature that felt unsafe or unhealthy for at least one month in the past year, the pandemic-era pressure creates a troubling outlook for low-income households. Indeed, the same report found that 1 in 4 households of color (24.6%) and 1 in 3 low-income households (32.1%) reported that they kept their home at a temperature that felt unsafe or unhealthy, at least one month in the last year.

As low-income households experience increasing pressure to finance core needs, temporary funding from LIHEAP becomes a method by which families are able to maintain safe household environments, particularly for those families with children, seniors and individuals with disabilities. And despite the increase in emergency funding during the pandemic, no long-term solutions have yet been put into place to further—and more thoroughly—meet the growing needs of low-income households.

Even as the nation recovers from pandemic and employment numbers rise, low-income families are left with less flexibility in their spending. In March 2020, state-mandated or voluntary utility shut-off moratoria were in place for 51% of the U.S. population (167 million people). The moratoria put in place in 2020 and 2021 were temporary measures to prevent shut-offs, but when they were lifted, low-income families faced growing bills and mounting debts amounting to more than a year's worth of utility bills that are left outstanding. In 2021, it is estimated that 3.4 million were disconnected from energy.

How do we, as a nation, justify the acknowledgement that utilities are essential elements of creating safe living environments; and yet, when it comes to funding the program that addresses this issue for low-income households, no action is taken to meet the need? Where do people like Kim Navaro, the local volunteer for Cincinnati's St. Vincent de Paul Society, tell individuals to go next?

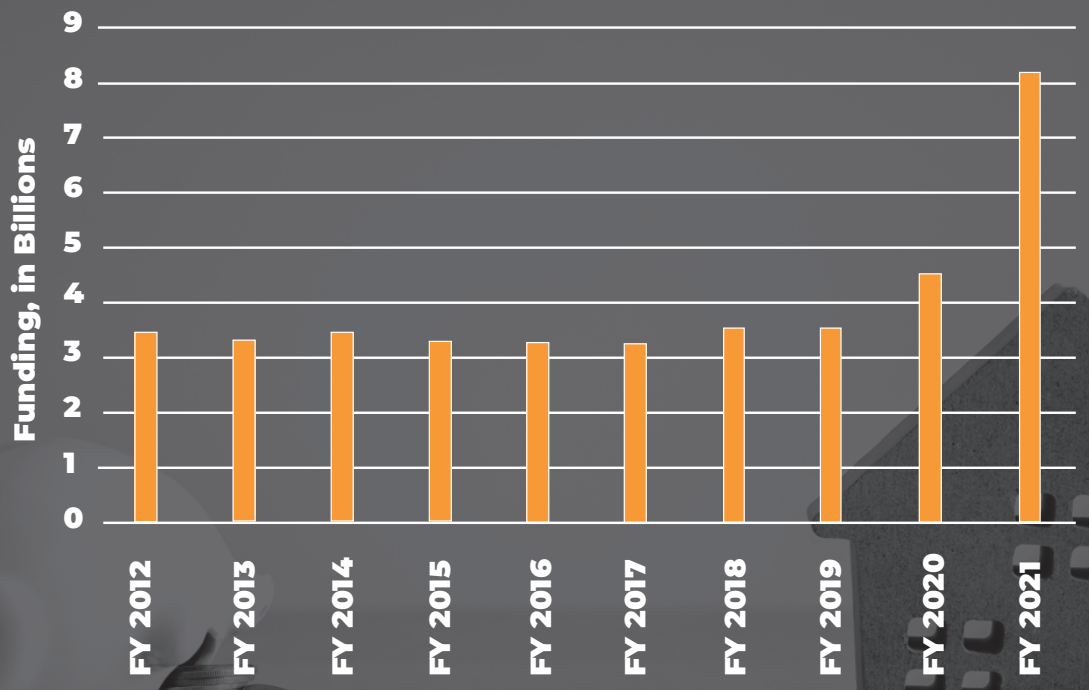


HOW LIHEAP WORKS

LIHEAP is one of the most critical components of the social safety net. The program provides heating and cooling assistance to roughly 6.7 million households. It is an exceptionally efficient and targeted program, with state block grants flowing to local agencies with specific clients on a short-term basis to prevent utility shutoffs or assistance with heating and cooling bills.

LIHEAP has nurtured a very positive, effective partnership between the federal government, state governments and the private sector. By leveraging private dollars to supplement federal dollars, LIHEAP has proven that successful relationships can exist between the government, businesses, gas and electric utilities and community based social service organizations.

Ten Years of LIHEAP Funding



This chart reflects Federal contributions only. State/local and philanthropic dollars are pooled with Federal money to complete the funding pool.

While states, local governments, utilities and charitable organizations have demonstrated their capacity to develop programs to address some energy assistance needs, collectively these programs cannot meet the demand for energy assistance, and this need continues to grow.

In his testimony before the House Subcommittee on Labor, Health and Human Services and Education and Related Agencies in support of FY 2022 funding for the Low Income Home Energy Assistance Program, Mark Wolfe, Executive Director of the National Energy Assistance Directors Association, noted that FY2021 funding levels enabled the "program to serve about 5.9 million households or about 16.7 percent of eligible households. About 70 percent of these households have at least one vulnerable and at-risk member who is elderly or disabled or have a child under the age of six." The average grant, Wolfe noted, was about $525 per family.

Most notably, Wolfe testified on the importance of LIHEAP for low-income families, who spend a disproportionate amount of their income (17.3%) on energy bills, which is more than five times the rate for non-low-income houses.

2. Testimony of Mark Wolfe, Executive Director, National Energy Assistance Directors Association, before the House Subcommittee on Labor, Health and Human Services and Education and Related Agencies in support of FY 2022 funding for the Low Income Home Energy Assistance Program. May 19, 2021.

PROGRAM COMPONENTS

Basic Energy & Crisis Assistance

Federal funding is determined each Fiscal Year through the Congressional Appropriations process, beginning with the Labor HHS Appropriations Subcommittees in the House and Senate. The program itself is administered by U.S. Department of Health and Human Services. Program funds are allocated via block grants determined by a statutory formula. States may spend only 10 percent of allocated funds on administrative costs and may transfer up to 15 percent (25 percent with an approved waiver) of costs to support weatherization efforts. The remaining funds are passed on to low-income households through direct grants.

LIHEAP has been operating under an annual authorization of up to $5.1 billion per year, although the program has only been fully funded in the Appropriations process once in its history. In moments of crisis – including the pandemic – supplemental funds have been pooled with traditional Appropriated funds to create a larger funding pool.

The LIHEAP statute authorizes HHS to assist eligible households in meeting the costs of home energy, which are defined as a source of heating or cooling in residential dwellings. Households are eligible under Federal standards when incomes do not exceed the greater of 150 percent of the poverty level for their state or 60 percent of the state median income. However, states may set income limits as low as 110 percent of the poverty level. The law requires benefits to be targeted to households with the highest energy costs in relation to income and household size.

The Emergency Contingency Fund

The Emergency Contingency Fund historically was used to supplement regular appropriations because some winters are worse than others, summers can be accompanied by prolonged heat waves and emergencies in certain regions may require flexibility in meeting needs beyond the formulas established under the program.

Congress permanently authorized emergency contingency funding at $600 million in FY1994, and they have remained authorized at that same level. Although overall appropriations have declined, Congress has not provided contingency funds in recent budget cycles in an effort to provide states more certainty around the amount of formula funds that would be available in each program year. However, program advocates have clarified the overarching need for all funding available to be directed to state programs. This distribution of funds allows states and organizations to better assist individuals households in need who qualify for the program. In both FY2020 and FY2021, the emergency contingency fund was $0.

Weatherization

States may allocate up to 15 percent of their basic grant allocation for low-cost residential weatherization or other energy related repair and up to 25 percent if they meet certain conditions and obtain a waiver from HHS. The weatherization program reduces the heating and cooling costs for low-income families by improving the energy efficiency of their homes and thereby improves their health and safety.

Planning for Distribution

Federal spending is designed to work under a fairly coherent process: the White House presents a budget blueprint to Congress; House and Senate Appropriations Committees determine spending levels for each Federal program; then these are all reconciled into spending bills that fund the government. Unfortunately, this process, known as "regular order," has not functioned in well over a decade. Instead, every year Congress passes a series of continuing resolution, known generally as a CR, as a means to keep government running while Congress and the White House finalize spending levels for the rest of the fiscal year.

For LIHEAP Administrators, this creates a particular challenge, as there can be significant uncertainty about how much funding will be available during the critical winter months.

Cold weather states traditionally spend more than 70 percent of the LIHEAP funds during the first two quarters of the federal fiscal year. While policymakers informally established a special "seasonality" consideration for LIHEAP and other programs that use their funds disproportionately during this period, the continuing resolution still affects states' ability to plan properly until there is certainty in the final level appropriated.

Another approach would be to return to the "Advanced Funding" model that was in place until FY2002. Advanced Funding sets funding levels a full year in advance, meaning program administrators would have much more time to accurately plan how to spend their state allocation.

MEETING THE NEED

Elderly, Disabled, Children

Many households receiving heating assistance include elderly residents, individuals with disabilities, and/or children. According to data released by HHS and reported by the Congressional Research Service, of all households served by LIHEAP, approximately 29 percent had at least one member 60 years of age or older; 31 percent had at least one member with a disability; and 23 percent included at least one child five years of age or younger.

Native American Tribes

As of FY2014, 153 Native American tribes and tribal organizations located in 22 states received funding through LIHEAP. The funds come out of the gross allotment for each state. Several tribes can form a consortium to administer the funds. The FY2014 tribal set-aside from regular block grant funds was nearly $5 million.

Veterans

Veterans make up nearly 20 percent of all recipients of LIHEAP funds. According to the U.S. Census Bureau's 2015 American Community Survey, there are approximately 1.3 million Veterans living in poverty. More than half a million of these Veterans also have a disability, which further complicates their ability to get or maintain jobs for supplemental income. For decades, homelessness among Veterans has been a growing concern, and eradicating Veteran homelessness has been a leading priority for recent presidential administrations. Among several factors indicated as a method of preventing eviction, many cities' homelessness prevention programs specifically note the importance of maintaining good standing with utilities. This reinforces the ongoing need to support Veterans through important programs like LIHEAP.

A Framework for the Future: Policy Recommendations

In a deeply divided Washington, DC LIHEAP is a bit of an anomaly with near universal support for its mission and respect for the practitioners who administer the program.

With that said, program experts have specific recommendations for how this deeply admired program can be even better.

Annual Funding

Put simply, LIHEAP needs a greater annual Appropriation. While program supporters acknowledge and respect new investments in core services like water and broadband, we must recognize that LIHEAP has been underfunded for years. LIHEAP experts like NEADA and NEUAC are evaluating a wide range of funding proposals, with advocates supporting a modernization efforts that could see funding requests all the way from the current authorization of $5.1 billion up to $40 billion.

The key question for policymakers is how to define eligibility. The program can continue to operate at a high level with marginal increases in Federal funding that would allow all states to maintain robust investments. Similarly, LIHEAP practitioners welcome a conversation about how LIHEAP fits into a more expansive social safety net.

The most important, non-negotiable emphasis is the need for more robust program funding across the board.

Delivery of Services

In keeping with LIHEAP's evolution from a regional to a national program, states can improve delivery of services, especially in areas where the program is relatively new. States are eager to share best practices, engage more effectively with the public, track and evaluate metrics of success and maximize LIHEAP's role in a holistic approach to households in need. Additional flexibility in how states can invest LIHEAP funds can strengthen the overall program infrastructure and maximize return on investment for our collective tax dollars.

Advanced Funding

Congress should consider reestablishing Advanced Funding for LIHEAP, giving program administrators the necessary lead time to make decisions on how to best allocate resources and engage with the public. A combination of a robustly funded multi-year commitment with flexibility to invest targeted dollars in response to economic or weather-related crises could strike a proper balance.

This report was created in support of LIHEAP.org, a website and informational resource managed by Bracy Tucker Brown and supported by a grant from Michigan Energy First.

Fueling a renewable energy future

Shifting from fossil fuels to renewable resources and new technologies is at the center of our goal to evolve our energy supply and address climate change. Do we have a lot of work ahead? Yes. We are at the beginning stages of developing renewables for the gas system.

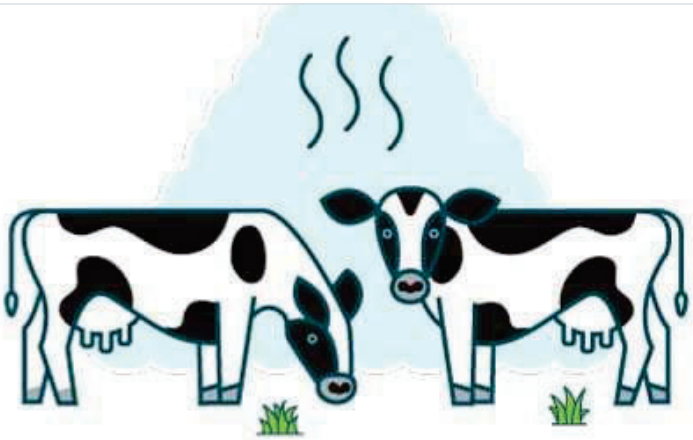
As our nation's electric system continues to work to increase wind and solar generation from 14% annually [1], we also need to aggressively accelerate development of renewables for our pipeline networks.

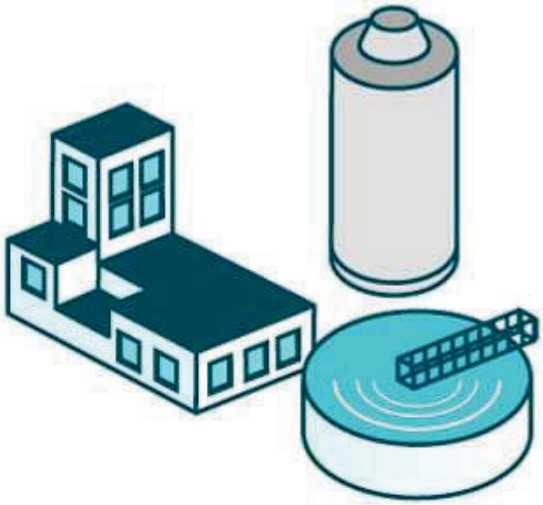
A diverse energy system– with renewable electrons delivered over wires and renewable molecules delivered underground provides a hedge against potential reliability risks while supporting shared climate goals.

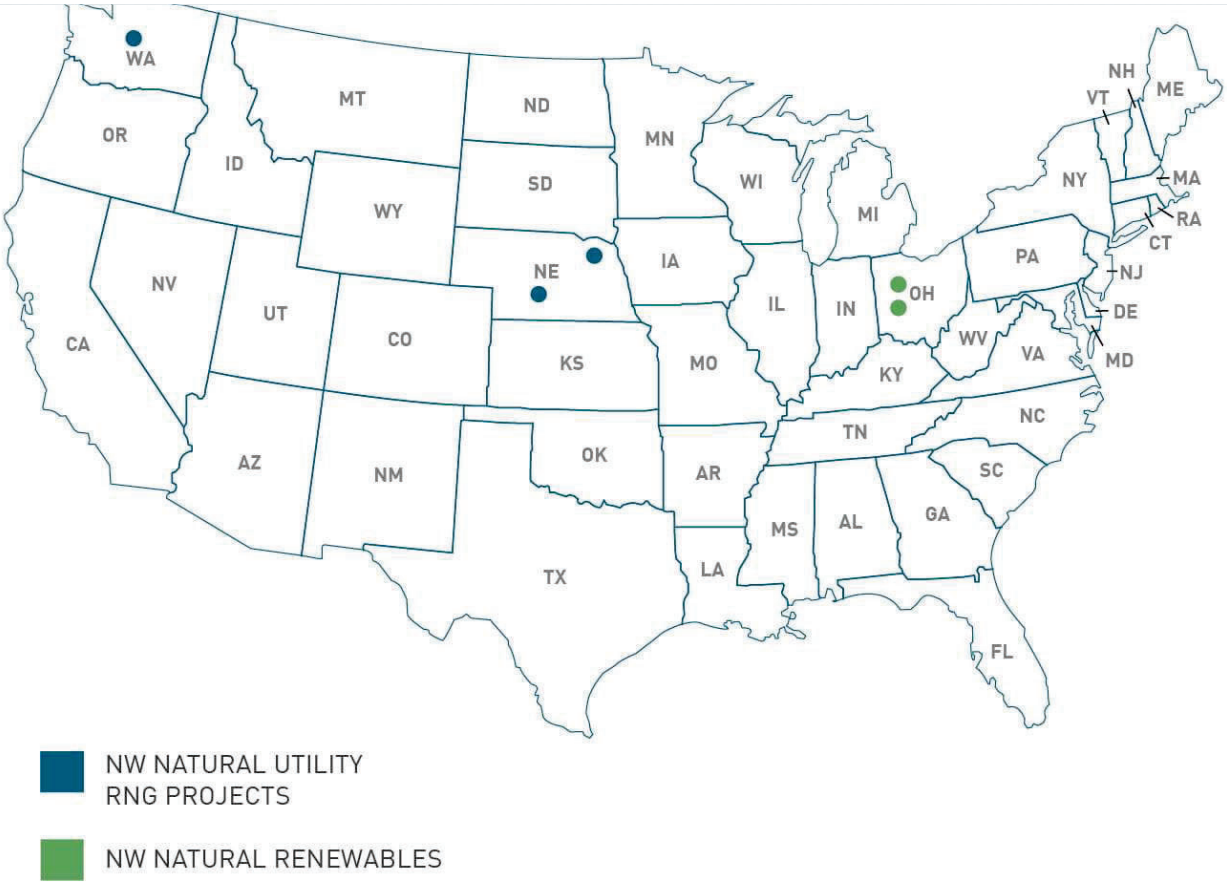
What is renewable natural gas?

Renewable natural gas (RNG) is not a fossil fuel and does not add more carbon dioxide into the atmosphere. RNG is derived from biogas, which is produced from decomposing organic waste from landfills, agricultural waste and wastewater from treatment facilities, that has been captured and cleaned for the pipeline. [2]

UG 520/CUB/105
Jenks/2







Our renewable natural gas projects

Today our system is making it possible for the first RNG projects in our region to deliver their low-carbon fuel, primarily for the transportation sector. We've also started delivering small volumes of RNG to our customers. We have a team focused exclusively on securing supplies of RNG for our customers. It's an important step on our journey to transition our business, but there's far more to do and we're going to need policy support to get there.

Agricultural Waste

Food Waste

Wastewater

Agricultural Waste

Shell New Energies: The Shell New Energies Junction City facility in Oregon uses locally sourced cow manure and excess agricultural residues to produce RNG. It began sending RNG through NW Natural pipelines in December 2021. The facility supports the local economy and helps farmers manage agricultural waste, reduce expenses and protect local air and water quality.

Food Waste

BP Products North America: NW Natural is purchasing Renewable Thermal Certificates (RTCs) generated by a facility in the Western U.S. that produces RNG from organic waste which includes food scraps, liquid waste and manufacturing food waste.

Landfill

BP Products North America: Through a long-term agreement with BP Products North America, NW Natural is purchasing the environmental attributes, or Renewable Thermal Certificates (RTCs), generated by landfills throughout the country.

Wastewater

Anew Climate: NW Natural is purchasing the environmental attributes, or Renewable Thermal Certificates (RTCs), generated by an RNG facility at a wastewater treatment plant in New York City.

MWMC: In November 2021, the Metropolitan Wastewater Management Commission's treatment plant in Eugene became the first public agency in Oregon to produce RNG. Nearly all of the biogas from the facility's anaerobic digesters that stabilize and treat solids is “scrubbed” and then injected into NW Natural's system. RNG also provides the MWMC with potential for an additional revenue source, by selling the gas and its renewable fuel credits to an off-taker that will use it for fueling vehicles.

APPLICATION REQUEST FORM

ENERGY BILL ASSISTANCE

Energy and heating is a necessary aspect of shelter. Deficiencies in home heating pose a threat to life, health, and safety. The purpose of Energy Assistance is to provide support to eligible households to offset residential energy costs. Below are resources that may provide assistance to eligible applicants.

LIHEAP, OEAP, and OLGA require a gross annual income at or below $70,790 for a family of four. Complete income guidelines and additional requirements are available by clicking the orange buttons below the program descriptions.

STATUS OF ENERGY ASSISTANCE

LIHEAP (LOW INCOME HOME ENERGY ASSISTANCE PROGRAM)

LIHEAP is available to customers that meet the income guidelines. Assistance may be directed to the primary heat source in the home. Applications are processed on a first-come-first-served basis. Application packets are anticipated to be available the first week of October for households having either a senior (60 or older) and/or disabled household member(s). Pending funding availability, general public households will be placed on a referral list starting in December and follow the department's application release processes. Applications will continue to be accepted through the heating season until all funds have been utilized.

For additional questions or to be placed on the referral list, please call **503-687-1480**, or use the online form above to be placed on the application request list.

OEAP (OREGON ENERGY ASSISTANCE PROGRAM)

PGE customers only.
Applications are processed on a first-come-first-served basis. Please call **503-687-1480,** or use the online form above to be placed on the application request list. OEAP qualifying criteria includes income eligibility. Priority status may be given to households with no power, medical equipment or a shut-off notice. YCAP receives a monthly allocation to serve a limited number of households.

OLGA (OREGON LOW-INCOME GAS ASSISTANCE)

NWNG customers only.
Applications are processed on a first-come-first-served basis. Please call **503-687-1480,** or use the online form above to be placed on the application request list. Applications will be accepted until funds are exhausted. OLGA qualifying criteria includes income eligibility and an active

account with NWN. YCAP receives a monthly allocation to serve a limited number of households. Once these funds are spent, applications may be placed on a list until additional funding becomes available.

ELIGIBILITY INFORMATION FOR LIHEAP, OEAP, AND OLGA

WEATHERIZATION

The Weatherization program provides free weatherization services to income-eligible residents (homeowners and renters) of Yamhill County. The goal is to lower energy usage in order to lower utility costs.

Income eligible clients must be at or below 200% of Federal Poverty. Once deemed eligible for services, an energy audit will be conducted to identify and prioritize cost-effective weatherization measures.

To request an application or appointment, please call **503-687-1483**.

Weatherization measures may include:

GENERAL HEAT WASTE

Reduce air infiltration in ways such as: replace broken window pane, re-glaze windows, interior caulking, install new weather-stripping on windows and doors, and insulate water pipes.

EFFICIENCY UPGRADES

LED lighting, low-flow shower, and faucet kits.

HEATING SYSTEMS

Pressure test forced-air system, air seal and insulate supply and return duct system. Install as appropriate: flame retention burners, electronic ignition devices, and heating system repairs.

ATTIC INSULATION

Bring ventilation up to code, provide protective barriers around heat-producing devices, and insulate to cost-effective level.

WALL INSULATION

Blow loose-fill insulation into wall cavities to reduce heat loss and air infiltration.

FLOOR INSULATION

Provide vapor barrier on the ground, and install fiberglass batt insulation in the joist cavities.

WINDOWS

Based on results from the home assessment, window treatments may not be cost-effective.

SKIRTING

Install appropriate materials around the perimeter of the dwelling unit to control airflow in the

crawl space.

ENERGY EDUCATION

Consultation with the Energy Professionals to maximize energy savings.

ELIGIBILTY INFO

CLICK HERE TO REQUEST AN ENERGY ASSISTANCE APPLICATION FORM

EASY WAYS TO REDUCE ENERGY:

Check your furnace filter. A dirty filter will make the furnace work harder, and raise your energy bill. It is a good idea to check your filter every month.

Vacuum heat registers to improve air circulation. Be sure registers are open in all rooms.

Keep furniture and drapes away from the heating registers to let air circulate. Keep interior doors open.

Use bathroom and kitchen fans to keep the humidity down and prevent the growth of mold and mildew.

Turn off lights and electronics, such as TVs and computers when not in use. A color TV or computer left on at all times can cost $7 to $10 per month.

Wash full loads of laundry. Always use cold rinse setting.

Use compact fluorescent or LED bulbs. They are four times more energy-efficient than incandescent bulbs and provide the same lighting.

Turn down the heat at night and when you are away from home

SPOTLIGHT STORY

> *Thank you so very much. Due to health problems I have been unable to work for 6 months and am caregiver to my special needs daughter. My husband's hours at work had been cut and we have gotten deeper in the hole until we almost lost our utilities. We are so thankful you provide help to the needy. God bless you for all you do and may you continue in this good work for many years.*

‘It’s a bloodbath’: Massive wave of job cuts underway at US health agencies

By Nick Valencia, Brenda Goodman, Meg Tirrell, Tami Luhby and Sean Lyngaas, CNN

8 minute read Updated 11:06 AM EDT, Wed April 2, 2025

Notices about job cuts are going out to some employees at US health agencies. Kayla Bartkowski/Getty Images

CNN — A massive wave of job cuts got underway at US health agencies Tuesday, with some employees receiving early-morning emails saying their jobs were eliminated and some unable to access the building when they arrived at work.

It was not immediately clear how many employees had received notice Tuesday morning. The US Department of Health and Human Services has not responded to CNN’s request for comment.

HHS cuts 10,000 employees in major overhaul of health agencies

HHS Secretary Robert F. Kennedy Jr. said last week that 10,000 full-time employees would be cut on top of thousands who had already left and probationary employees currently on leave. He said the changes would make fighting chronic disease the priority and reduce “bureaucratic sprawl.” Kennedy promised that the department would do more with less.

After weeks of worry from agency staffers, job cuts — known as a reduction in force, or RIF — were sweeping across offices at multiple agencies, hitting leadership, longtime staffers, scientists, administrators and communications staff. “It’s a bloodbath,” one US Food and Drug Administration employee said.

“These cuts to agency experts and programs leave our country less safe, less prepared and without the necessary talent and resources to respond to health threats,” Dr. Mandy Cohen, director of the US Centers for Disease Control and Prevention during the Biden administration, said Tuesday.

In a post on LinkedIn, former US Food and Drug Administration Commissioner Dr. Robert Califf said, “The FDA as we’ve known it is finished, with most of the leaders with institutional knowledge and a deep understanding of product development and safety no longer employed.” Califf told CNN on Tuesday that “If we let down our guard and don’t do a good job reviewing, we’re going to unleash some things that are really dangerous into the population. Unless there’s some super plan, there’s going to be an effect on safety, because it takes whole teams of people to monitor safety of products, and the timetables for product review will probably be delayed.”

Califf said he was dismayed to see how federal workers were being treated.

“This is a sad and inhumane way to treat people,” he said. “It’s different when you’re a company and you’re out of money and you can’t pay people, but the federal government can pay people and do things in an orderly, respectful fashion – and

Governor warns of loss of life amidst RFK Jr.'s major cuts at HHS

not have them end up in line trying to get to work and have their badges not work as a way to fire them."

Sens. Bill Cassidy, R-Louisiana, and Bernie Sanders, I-Vermont, of the Senate Health, Education, Labor, and Pensions Committee announced Tuesday that they were inviting Kennedy to a hearing April 10 about the restructuring of HHS.

"This will be a good opportunity for him to set the record straight and speak to the goals, structure and benefits of the proposed reorganization," Cassidy said in a statement.

Sanders was also among dozens of senators who wrote a letter to Kennedy on Tuesday to outline areas of the health care system that will be affected by the cuts and to request answers about the number of employees affected, the method of communication and any analysis on the impacts to programs and activities.

"You continue to deny visibility to the American public, despite your oft-repeated commitment to 'radical transparency.' You have promised that HHS will do more for the American people, at a lower cost to the taxpayer, yet you have not provided anything to substantiate these claims, despite repeated requests from Congress to do so," the letter says.

Kennedy said in a social media post that the agency is being "recalibrated to emphasize prevention, not just sick care."

"This is a difficult moment for all of us at HHS. Our hearts go out to those who have lost their jobs," he wrote. "But the reality is clear: what we've been doing isn't working."

Details start to emerge on cuts

The totality of the cuts was not clear Tuesday, with many workers waiting for emails — or waiting to get into buildings, uncertain whether their badges would work. Even supervisors weren't sure who was being eliminated, one senior official at the CDC said.

Cuts at the CDC slashed divisions that work on workplace health and safety, HIV, injury prevention, reproductive health, smoking and violence prevention, among others. Despite Kennedy's focus on chronic diseases, CDC employees described broad cuts at the agency's National Center for Chronic Disease and Health Promotion.

The offices at the CDC and the National Institutes of Health that handle Freedom of Information Act requests were also cut. The FDA lost many of its FOIA officers, but a few remained, including some who were working on litigation, according to a source familiar with the circumstances who spoke on the condition that they not not be named for fear of reprisal.

Several senior leaders at the CDC were reassigned to other roles, and some were told they would have to relocate. At NIH, Dr. Jeanne Marrazzo, director of National Institute of Allergy and Infectious Diseases, was also offered reassignment to the Indian Health Service and would have to move to an area such as Alaska, New Mexico or Minnesota.

RELATED ARTICLE

Is DOGE actually an agency? The answer could have major ramifications

At the Centers for Medicare and Medicaid Services, the entire Office of Equal Opportunity and Civil Rights – which handles issues of diversity, civil rights and a supportive work environment – was let go, according to a former HHS employee.

The notices sent to staffers in the office suggested that they contact the former director of the office if they had a complaint — but that director died late last year, Karen Shields, a former CMS executive, posted on LinkedIn on Tuesday morning. CNN has obtained a copy of the notice.

"The dissolution of the office is disturbing but was expected. The referral to a woman who died over four months ago is a result of a significant lack of collaboration and consultation with the career team at the agency who would have helped to prevent this disgrace," Shields wrote.

Also, CMS cut all or nearly all of the Office of Minority Health, the former HHS employee said. The website of the office, which aims to improve the health of racial and ethnic minority groups through health policies and programs, was not working Tuesday, although it had been operational as recently as Saturday, according to web archives.

The office, which was created by Congress, also focused on rural health, former CMS Administrator Chiquita Brooks-LaSure said Friday.

"We have health disparities, and we need to be measuring what is happening so that we can address those," she said, noting that the office looked at issues such as diet and diabetes.

At the FDA, staffers in the Office of New Drugs, the Office of Policy & International Engagement and the Office of Regulatory Programs were among those receiving notice. The agency's entire press office - the group that shares material with news media - received notice and was put on administrative leave, according to a person familiar with the cut who declined to be named because they weren't authorized to speak publicly about it.

Job opportunities are shrinking and layoffs in the federal government just hit their highest level in four years

A RIF notice received by one FDA employee on Tuesday included performance ratings that were incorrectly low, meaning the severance pay offered was lower than it would be for the ratings they previously received, the employee told CNN.

Multiple other colleagues who received the RIF had the same issue, the FDA employee said, making them uncertain whether they should sign the inaccurate paperwork. The employee said they couldn't tell if the inaccuracy was deliberate or an honest mistake.

"Everybody's got families and mortgages and real-life concerns," the source said, speaking on the condition of anonymity because they were concerned that being named would hurt their job prospects.

Also terminated was the entire staff of the Low Income Home Energy Assistance Program, or LIHEAP, according to Mark Wolfe, executive director of the National Energy Assistance Directors Association. The program provides about $4 billion to help millions of Americans with their heating and cooling bills.

"It will definitely hamper program operations," Wolfe said, noting that he doesn't see how the agency can "allocate the remaining $387 million in funds for this year without federal staff. The program could well grind to a halt."

Staff of the HHS Administration for Children and Families – which provides support for child care, child welfare, early childhood development, family violence prevention, refugee resettlement, homeless teens and Head Start programs, among others – also received notice Tuesday.

"We're devastated for our colleagues and friends who have lost their careers, and we're really feeling primarily devastated for our programs that we care so much about. In the regional offices, we're the ones who work directly with the people — the states, the territories, the tribes, the people that we serve — and we're just abruptly cut off from that work and our relationships," said one employee in the administration who received notice Tuesday.

"Our concerns are that by gutting these offices, it can make child care less safe, less affordable."

Workforce to shrink by 20,000

HHS announced last week that its reduction in force would cut 10,000 full-time employees in addition to 10,000 employees who've left voluntarily, shrinking the workforce from about 82,000 full-time employees to 62,000. About 5,200 probationary workers who have been in their positions less than a year or two were also terminated last month. Most are on temporary administrative leave as their fate winds its way through federal courts.

HHS said last week cuts would include:

- 3,500 full-time employees at the US Food and Drug Administration, not affecting drug, medical device or food reviewers or inspectors
- 2,400 employees at the US Centers for Disease Control and Prevention
- 1,200 employees at the National Institutes of Health due to centralizing procurement, human resources and communications
- 300 employees at the Centers for Medicare & Medicaid Services

Kennedy announced the cuts as part of a sweeping reorganization that would move or cut several parts of the federal health workforce, including the creation of a new Administration for a Healthy America, which it said would combine the Office of the Assistant Secretary for Health, the Health Resources and Services Administration, the Substance Abuse and Mental Health Services Administration, the Agency for Toxic Substances and Disease Registry and the National Institute for Occupational Safety and Health.

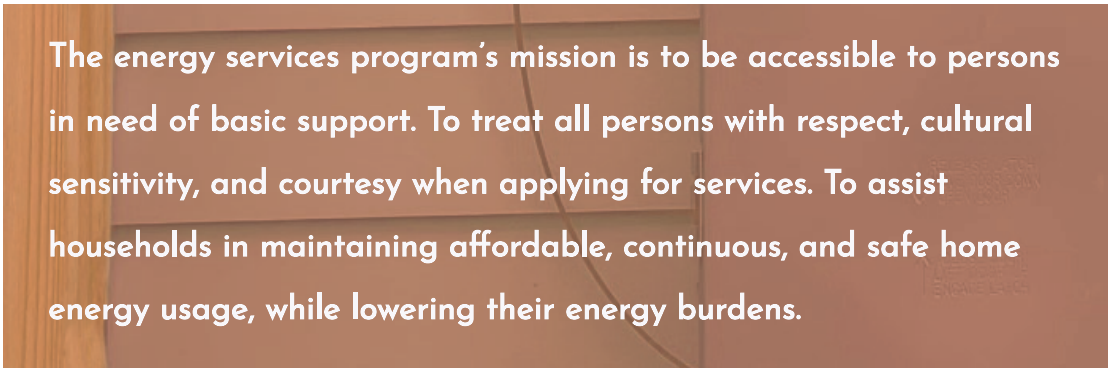
CNN's Ross Levitt and Rene Marsh contributed to this report.

Utility Assistance

Utility Assistance

Utility Assistance programs provide a variety of energy/utility bill assistance with electric, natural gas, pellets, wood, propane, oil, and furnace repair/ replacement. When funding is available, we may be able to assist with water.

Funds are available through a variety of sources. Households that are eligible to receive utility assistance also have the opportunity to attend an Energy Education workshop by our Weatherization department and could receive storm window and energy-saving kits.



Who We Serve

Our services are available to households with income levels at or below 60% of Oregon's State Median Income. Check the income guidelines for more details or reach out to your nearest office:

Our Assistance Programs Include:

Low Income Home Energy Assistance Program (LIHEAP)

English

A federally funded program that supports households with energy costs for electricity, natural gas, oil, pellets, propane, and wood. It also offers assistance with minor furnace repairs or replacements, ensuring homes stay safe and warm during harsh weather.

Oregon Energy Assistance Program (OEAP)

State-funded assistance for Pacific Power customers, focusing on maintaining uninterrupted energy service for those who qualify.

OLGA & GAP Programs

These resources are designed to assist Northwest Natural customers, offering tailored support for natural gas costs.

Medical/Unexpected Events Assistance

For families facing emergencies due to medical needs or other unexpected events, this program helps cover energy bills and even water-related costs, providing a safety net during challenging times.

Energy Education

Practical advice to help families reduce energy use and costs.

Self-Help Weatherization Materials

Low-cost and no-cost solutions to improve home energy efficiency.

Furnace Repair & Replacement

For those with non-functional furnaces, we provide assistance through available energy funds, helping maintain safe and comfortable home environments. Availability is limited, so please contact us for details.

Stipulating Parties

Joint Testimony of Zachary Kravitz, Matt Muldoon, Bob Jenks, and Bradley Mullins

in Support of First Partial Stipulation

EXHIBIT 100

July 10, 2025

I. INTRODUCTION AND SUMMARY

Q. Who is sponsoring this testimony?

A. This testimony is sponsored jointly by Northwest Natural Gas Company, dba NW Natural ("NW Natural" or "Company"), Staff of the Public Utility Commission of Oregon ("Staff"), the Oregon Citizens' Utility Board ("CUB"), and the Alliance of Western Energy Consumers ("AWEC") (collectively, the "Stipulating Parties").

Q. Please provide your names, positions, and qualifications.

A. My name is Zachary D. Kravitz and my current position is Vice President, Regulatory Affairs and Resource Planning for NW Natural. My qualifications are provided in NW Natural/100.

My name is Matt Muldoon and I am a manager employed in the Accounting and Finance Section of the Commission's Energy Program. My qualifications are provided in Exhibit Staff/501.

My name is Bob Jenks and I am the Executive Director of CUB. My qualifications are provided in Exhibit CUB/101.

My name is Bradley Mullins and I am a consultant with MW Analytics, appearing on behalf of AWEC. My qualifications are provided in Exhibit AWEC/101.

Q. What is the purpose of this Joint Testimony?

A. This Joint Testimony describes and supports the First Partial Multi-Party Stipulation Regarding Revenue Requirement ("First Stipulation") filed in this docket on June 23, 2025. The First Stipulation resolves all issues among the Stipulating Parties, except those listed in Paragraph 3 of the Stipulation, which will continue to be litigated in this proceeding or—in the event of a future settlement in this proceeding—incorporated in a separate stipulation. The Stipulating Parties

support all terms in the First Stipulation. Climate Solutions, Coalition of Communities of Color, Verde, Sierra Club, and Oregon Environmental Council (collectively, the "Coalition") is also a party to this docket and does not join the First Stipulation, but the Stipulating Parties are authorized to represent that the Coalition does not oppose the First Stipulation.

II. BACKGROUND

Q. Please summarize the background and context of Docket No. UG 520.

A. On December 30, 2024, NW Natural filed a request for a general rate increase (the "Initial Filing"). The Company developed the case using the Test Year comprised of the 12 months ending October 31, 2026 ("Test Year") and historical base year of the 12 months ended December 31, 2024 ("Base Year").[1] The Company's Initial Filing requested a revision to customer rates that would increase the Company's annual Oregon jurisdictional revenues by $59.4 million, which would have resulted in an approximate 5.79 percent increase to current customer rates (equal to a 9.45 percent increase to current margin revenues).[2] In the Company's Reply Testimony filed on May 21, 2025, the Company updated its requested increase to Oregon jurisdiction revenues to $59.3 million.[3]

Q. Have the Stipulating Parties and the Coalition conducted discovery in this proceeding?

[1] Initial Filing, Executive Summary at 3.
[2] Initial Filing, Executive Summary at 1; NW Natural/1603, Wyman/1.
[3] NW Natural/1700, Rush-Kravitz/6; NW Natural/3200, Walker/27.

A. Yes. Since the Initial Filing, NW Natural has responded to 806 data requests from Staff, CUB, AWEC, and the Coalition, and has provided updates to its data responses during the pendency of this case.

Q. Did Staff and intervenors file testimony and propose adjustments to NW Natural's Initial Filing?

A. Yes. According to Administrative Law Judge ("ALJ") Spruce's February 14, 2025, Memorandum adopting a procedural schedule, Staff, CUB, AWEC, and the Coalition filed Opening Testimony on April 2, 2025, in which they proposed adjustments to NW Natural's Initial Filing. While each of the parties took different positions and made different arguments, collectively, they proposed adjustments to NW Natural's proposed revenue requirement, cost of capital, and rate spread and rate design, as well as certain changes to Company practices. NW Natural filed Reply Testimony on May 21, 2025, responding to the proposed adjustments and other issues raised in the parties' Opening Testimony.

Q. Have the parties to this proceeding engaged in settlement discussions?

A. Yes. All parties engaged in scheduled settlement discussions on April 22, 2025, and June 11, 2025, with settlement discussions ongoing through June 17, 2025. The parties convened an additional settlement conference on June 17, 2025. As a result of the settlement discussions, the Stipulating Parties reached a partial settlement resolving all issues in this proceeding except those issues specifically excluded from the scope of the First Stipulation under Paragraph 3 of the First Stipulation, which will continue to be litigated or—in the event of a future settlement

in this proceeding—incorporated in a separate stipulation. The First Stipulation memorializes the Stipulating Parties' agreements.

Q. Although the Coalition did not join the First Stipulation, did the Coalition participate in settlement discussions?

A. Yes. The Coalition participated in all of the settlement discussions. While the Coalition ultimately did not join the First Stipulation, the Coalition does not oppose the First Stipulation.

Q. Please provide an overview of the First Stipulation.

A. The Stipulating Parties intend the First Stipulation to be a comprehensive settlement of all revenue requirement issues in this proceeding. The First Stipulation also addresses other issues among the Stipulating Parties, including the creation of a regulatory asset associated with the retirement of the GC 500 Mist Compressor, NW Natural's agreement to file officer attestations regarding capital in service, implementation of the Company's updated depreciation rates, and a one-day modification to the rate effective date. Following the Stipulating Parties' agreement to the First Stipulation, the issues that will continue to be litigated—and, if a settlement is reached, included in a separate stipulation—are identified in Paragraph 3 of the First Stipulation.

Q. What issues are identified in Paragraph 3?

A. The issues listed in Paragraph 3 are:

a. Rate Spread (AWEC/100; Staff/1700);
b. Rate Schedule 27 (Coalition Intervenors/100);
c. Load Forecasting (Staff/1700);
d. Regulatory asset for plant retired due to electrification (CUB/100);
e. Analysis of non-pipeline alternatives (Coalition Intervenors/200);
f. Electrification and thermal energy network pilots (Coalition Intervenors/200);

g. Research and Development Reporting (Coalition Intervenors/100);
h. Oregon Low-Income Energy Efficiency ("OLIEE") program funds for electric heat pumps (Coalition Intervenors/100); and
i. Low Income Home Energy Assistance Program ("LIHEAP") funding (CUB/100).[4]

III. ISSUES COVERED BY THE FIRST STIPULATION

Q. Please describe the Stipulating Parties' positions regarding the Company's revenue requirement.

A. The Stipulating Parties agree that the total increase to NW Natural's annual Oregon revenue requirement is $21.315 million.[5] The annual revenue requirement increase is based on the Stipulating Parties' agreement that the Company's Oregon-allocated increase to annual revenue requirement shall be reduced by a total of $37.991 million from the May 21, 2025, Reply Testimony update of $59.3 million, based on the adjustments to NW Natural's Initial Filing and Reply Testimony update described in further detail below.[6]

Q. Do the Stipulating Parties agree on all the methodologies employed to determine each adjustment?

A. No. The Stipulating Parties do not necessarily agree upon all the methodologies used to determine each adjustment included in the First Stipulation. However, the Stipulating Parties believe that the agreed-upon adjustments collectively represent a reasonable settlement of the issues in the First Stipulation, and that, taken together, the adjustments result in an overall revenue requirement that will produce rates that are fair, just, and reasonable. As such, the Stipulating Parties agree that

[4] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 5-6 (June 23, 2025).
[5] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 2.
[6] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 2-3.

the First Stipulation is in the public interest and support the Public Utility Commission of Oregon's ("Commission") adoption of its terms.

A. Cost of Capital/Capital Structure

Q. Please describe the Stipulating Parties' agreement regarding Cost of Capital.

A. In its Initial Filing, NW Natural requested a capital structure of 52 percent common equity and 48 percent long-term debt, which represented a change from the capital structure of 50 percent common equity and 50 percent long-term debt that the Commission authorized for NW Natural in Order No. 24-359 in the Company's last general rate case, Docket No. UG 490.[7] The Company requested an overall rate of return ("ROR") on rate base of 7.658 percent, based on a 4.687 percent embedded cost of long-term debt and a 10.4 percent cost of equity.[8]

In Opening Testimony, Staff proposed a target capital structure of 50 percent equity and 50 percent long-term debt, and an overall ROR on rate base of 7.025 percent "for illustrative purpose[s] only."[9] Staff's overall ROR was based on an embedded 4.749 percent cost of long-term debt and an ROE of 9.30 percent, which was the "illustrative midpoint of Staff's range of reasonable ROEs," which was from 9.0 percent to 9.6 percent.[10] AWEC recommended a capital structure of 49 percent equity and 51 percent long-term debt, and an overall ROR on rate base of 6.898 percent, based on a cost of long-term debt of 4.69 percent and an ROE

[7] NW Natural/300, Wilson/2-3; *In the Matter of Northwest Natural Gas Company, dba NW Natural, Request for a General Rate Revision*, Docket No. UG 490, Order No. 24-359 at 4, 6 (Oct. 25, 2024).
[8] NW Natural/300, Wilson/3.
[9] Staff/500, Muldoon/38.
[10] Staff/500, Muldoon/38-39; Staff/600, Pileggi/6.

of 9.2 percent.[11] CUB recommended a capital structure of 50 percent equity and 50 percent long-term debt, and an ROE of 9.24 percent.[12]

As a result of their settlement discussions, the Stipulating Parties agree to a ROR of 7.120 percent, which is based on a 50.0 percent common equity and 50.0 percent long-term debt capital structure, with cost of long-term debt of 4.740 percent and an ROE of 9.50 percent. This Cost of Capital results in a reduction to revenue requirement of $18.171 million.[13]

Table 1 – Cost of Capital Components

Component	Capital Structure	Component Cost	Weighted Cost
Cost of Long-Term Debt	50%	4.740%	2.370%
Return on Common Equity (ROE)	50%	9.5%	4.750%
	Rate of Return		**7.120%**

Q. Please explain why the Stipulating Parties' agreement regarding NW Natural's Cost of Capital is reasonable.

A. A capital structure of 50 percent equity and 50 percent debt maintains the capital structure last approved by the Commission in NW Natural's most recent rate case.[14] A cost of long-term debt of 4.740 percent and an ROE of 9.50 percent are compromises among the Stipulating Parties with respect to their original proposals and the modeling performed by the Stipulating Parties' respective expert witnesses. The Stipulating Parties' compromise falls within the range of

[11] AWEC/100, Mullins/1-2.
[12] CUB/100, Jenks/12.
[13] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 3.
[14] Docket No. UG 490, Order No. 24-359 at 4, 6.

reasonable ROEs recommended by Staff, and although it is higher than the range recommended by AWEC and the ROE recommended by CUB, upon discussion and analysis, all Stipulating Parties agree a ROE of 9.50 percent, for the sake of settlement, and in the context of the First Stipulation as a whole, represents a reasonable settlement of the issues.

B. Cash Working Capital

Q. Please describe the Stipulating Parties' agreement regarding Cash Working Capital.

A. In the Initial Filing, NW Natural presented the results of the lead-lag study the Company performed to derive the cash working capital component of its rate base request in this case.[15] NW Natural stated that its lead-lag study showed that NW Natural's average operating revenue lag is 40.9 days and its average daily cash working capital requirement in Oregon for the Test Year is $29.4 million, which corresponds to a cash working capital factor of 3.8 percent.[16] In Opening Testimony, Staff stated that it had no concerns with how the Company calculated the revenue lag, service lag or expense lag components of its cash working capital calculation, but stated that it had a concern regarding the annual expenses the Company applied its cash working factor to, because the annual expenses the Company used to calculate cash working capital were different from the Test Year expenses in the Company's revenue requirement model.[17] Therefore, Staff recommended accepting the Company's filed cash working capital factor but

[15] NW Natural/1500, Walker/29-37.
[16] NW Natural/1500, Walker/29, 31, 36.
[17] Staff/200, Chipanera-Stevens-Mondragon/16-17.

applying it to the Test Year operating expenses in the Company's filed revenue requirement model, and adjusting those expenses in accordance with Staff's overall proposed reduction in Test Year expenses of $27.692 million set forth in Staff's Opening Testimony.[18] This reduction would have resulted in a reduction of $1.692 million to the Company's requested cash working capital allowance.[19]

CUB did not address the Company's request for cash working capital in its Opening Testimony, and AWEC's proposed adjustment to cash working capital described in its Opening Testimony was resolved as part of the black box settlement discussed below.

In its Reply Testimony, NW Natural responded to Staff's and AWEC's positions regarding cash working capital.[20] NW Natural stated it believed it was appropriate to use operating expenses and prepaid assets from the cash working capital model rather than the operating expenses used for revenue requirement and provided a reconciliation of the differences between the cash working capital model and the revenue requirement model.[21] The Company also corrected a double counting error in its cash working capital calculation and its revenue requirement, and adjusted cash working capital to reflect the adjustments made in operating expenses in NW Natural's Reply Testimony.[22] In total, the Company's adjustments in Reply Testimony reduced cash working capital by $95,658, a revenue requirement reduction of $9,578.[23]

[18] Staff/200, Chipanera-Stevens-Mondragon/18.
[19] Staff/200, Chipanera-Stevens-Mondragon/18.
[20] NW Natural/3200, Walker/5-11.
[21] NW Natural/3200, Walker/6-8.
[22] NW Natural/3200, Walker/8.
[23] NW Natural/3200, Walker/8.

As a result of their settlement discussions, the Stipulating Parties agreed to a revenue requirement reduction associated with Cash Working Capital of $49 thousand.[24]

Q. Please explain why the Stipulating Parties' agreement regarding this aspect of Cash Working Capital is reasonable.

A. The Stipulating Parties' agreement to reduce revenue requirement by $49 thousand represents a middle ground among the Stipulating Parties' different positions. This outcome represents a negotiated resolution that is informed by the Stipulating Parties' settlement discussions and review of testimony and discovery, and therefore is a resolution that is reasonable, fair, and in the public interest.

C. Land Purchase Associated with The Dalles Resource Center

Q. Please describe the Stipulating Parties' agreement regarding the land purchase associated with The Dalles Resource Center.

A. In its Initial Filing, NW Natural explained that it is relocating its resource center in The Dalles to a new location due to inadequacies with the current office building that houses the resource center.[25] This move involves the purchase of a new piece of land in 2025 to build the new facility, which NW Natural estimates to cost approximately $1.3 million.[26] In Staff's Opening Testimony, Staff recommended a disallowance of the entire $1.3 million request, based on concerns that: 1) the real estate summary provided by NW Natural's broker for the search for the new facility's location included a cost of $999,999.00 for the land acquisition, a different

[24] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 3.
[25] NW Natural/600, Pipes/2, 4.
[26] NW Natural/600, Pipes/2, 6, 10.

number than the estimate in the Initial Filing,[27] and 2) that the land purchase did not meet the "used and useful" standard.[28] CUB and AWEC did not address the land purchase for The Dalles Resource Center in their Opening Testimony.

In its Reply Testimony, NW Natural responded to Staff's concerns about NW Natural's cost recovery request for The Dalles Resource Center. NW Natural explained that the land would be used and useful once the land purchase was finalized, because the land would be immediately used for equipment and materials storage, as well as other activities.[29] The Company also explained that the reason for the discrepancy between the $999,999.00 estimated land purchase cost in the broker's report and the $1.3 million provided in the Company's Opening Testimony was that the $1.3 million included costs associated with due diligence for the purchase, including preliminary planning and design work.[30]

As a result of their settlement discussions, the Stipulating Parties agreed to remove the land purchase[31] from this proceeding—which results in a reduction to revenue requirement of $90 thousand.[32]

Q. Please explain why the Stipulating Parties' agreement regarding the land purchase associated with The Dalles Resource Center is reasonable.

A. While the Company and Staff differed regarding the concerns raised in Staff's testimony, for the sake of settlement, and in the context of the First Stipulation as a whole, the Company believes that it is fair and reasonable to reduce revenue

[27] Staff/800, Bolton/15.
[28] Staff/800, Bolton/16-17.
[29] NW Natural/2200, Pipes/2.
[30] NW Natural/2200, Pipes/3.
[31] NW Natural/2200, Pipes/3.
[32] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 3.

requirement by an amount commensurate with the Oregon-allocated portion of the land acquisition for The Dalles Resource Center in this proceeding. The Stipulating Parties agree that this adjustment, in the context of the First Stipulation as a whole, will result in rates that are just and reasonable.

D. Membership and Dues Expense

Q. Please describe the Stipulating Parties' agreement regarding Membership and Dues expense.

A. In its Opening Testimony, Staff recommended an Oregon-allocated Test Year disallowance to memberships and dues of $341,543 and disallowance to donations of $52,435, due to Staff's concern that some of the activities carried out by the organizations to which the Company pays memberships and dues are not necessary for utility service, primarily to promote the Company within the community, not to benefit ratepayers, or not recoverable in rates if done by the utility itself.[33] Specifically, based on Staff's review of NW Natural's responses to Standard Data Request No. 90 and Staff data requests, Staff proposed to remove the full Oregon-allocated Test Year expense for Staff-identified memberships related to economic development and civic organizations, escalated for the Test Year using the All-Urban CPI inflation factors for 2025 and 2026; 25 percent of the escalated expense for Staff-identified memberships in the Test Year related to, but not limited to, national and regional industry trade organizations; and the full amount of the Oregon-allocated escalated expense for Staff-identified donations

[33] Staff/1100, Ball/18-20.

in the Test Year.[34] CUB and AWEC did not address the Company's expense associated with Memberships and Dues in their Opening Testimony.

In its Reply Testimony, the Company responded to Staff's concerns, explaining that donations expense was removed from the Company's requested revenue requirement in this case.[35] The Company also explained why the Company's memberships in trade organizations and economic development and civic organizations benefit customers and therefore are appropriate to include in revenue requirement, and that the Company excludes from recovery the portions of membership fees that are associated with lobbying.[36]

As a result of their settlement discussions, the Stipulating Parties agreed to a reduction to revenue requirement of $350 thousand for Membership and Dues Expense.[37]

Q. Please explain why the Stipulating Parties' agreement regarding Membership and Dues expense is reasonable.

A. Although the Stipulating Parties do not necessarily agree regarding the extent to which NW Natural's customers benefit from the Company's memberships and dues expenses, the Stipulating Parties do agree that a reduction to revenue requirement of $350 thousand—which is nearly equivalent to the full amount of the adjustment recommended by Staff in Opening Testimony—is a reasonable resolution for settlement purposes. The Stipulating Parties believe that this

[34] Staff/1100, Ball/19-20.
[35] NW Natural/2900, Davilla/16-17.
[36] NW Natural/2900, Davilla/14-16.
[37] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 3.

adjustment, in the context of the First Stipulation as a whole, will result in rates that are just and reasonable.

E. Meals and Entertainment Expense

Q. Please describe the Stipulating Parties' agreement regarding Meals and Entertainment expense.

A. In the Initial Filing, the Company included expenses associated with employee meals and entertainment, awards, gifts, airfare, lodging, and travel expenses in the Test Year. In Staff's Opening Testimony, Staff reviewed what Staff characterized as the Company's "[Operations and Maintenance (O&M)] non-payroll transactional expenses" to identify "O&M non-payroll discretionary expenses" such as "meals and entertainment, awards, recognition, gift cards, coffee, and refreshments."[38] Staff recommended excluding 50 percent of transactions that it deemed "discretionary" and of benefit to both shareholders and customers, based on the Commission's adoption of 50/50 cost sharing in docket UE 197.[39] In total, Staff recommended reducing the Company's non-labor O&M expenses by $410,487.[40] CUB and AWEC did not address the Company's meals and entertainment expense in their Opening Testimony.

In its Reply Testimony, the Company responded to Staff, explaining that the General Ledger Account that Staff reviewed to arrive at its meals and entertainment adjustment included some categories of costs that were not discretionary, such as permits, meal tickets, and the 2024 Pipeline and Hazardous

[38] Staff/1100, Ball/21-22.
[39] Staff/1100, Ball/21 (citing *In the Matter of Portland General Electric Company, Request for a General Rate Revision*, Docket No. UE 197, Order No. 09-020 (Jan. 22, 2009)).
[40] Staff/1100, Ball/23.

Materials Safety Administration ("PHMSA") Assessment Fee to the Portland LNG facilities, and therefore the adjustment was overinclusive.[41] The Company also stated that it disagreed with Staff with respect to whether expenses such as employee awards and gifts, or refreshments and meals, should be deemed prudent and fully recoverable expenses.[42] The Company stated that although it disagreed with Staff's adjustments for meals and entertainment, awards, gifts, airfare, lodging, and travel, the Company would narrow the issues in the case by removing its request for amounts in these categories other than the amounts associated with the Company's safety jackpot program, meal tickets, and the 2024 LNG PHMSA fee, which the Company explained were non-discretionary.[43] In total, the Company removed $224,280 in its Reply Testimony.[44]

As a result of their settlement discussions, the Stipulating Parties agreed to a reduction to revenue requirement of $68 thousand for Meals and Entertainment Expense.[45]

Q. Please explain why the Stipulating Parties' agreement regarding Meals and Entertainment is reasonable.

A. Although the Stipulating Parties do not necessarily agree regarding whether expenses in this category should be subject to cost sharing, they agree that their resolution of this issue through an adjustment of $68 thousand is fair and reasonable. The Stipulating Parties' adjustment takes account of the Company's

[41] NW Natural/2900, Davilla/23-26.
[42] NW Natural/2900, Davilla/24-27.
[43] NW Natural/2900, Davilla/27-28.
[44] NW Natural/2900, Davilla/27-28.
[45] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 4.

previous narrowing of its cost recovery request for meals and entertainment expenses in its Reply Testimony as well as the Stipulating Parties' interest in reaching a negotiated resolution. The Stipulating Parties believe that, in the context of the First Stipulation as a whole, this adjustment will result in rates that are just and reasonable.

F. D&O Insurance Expense

Q. Please describe the Stipulating Parties' agreement regarding D&O Insurance expense.

A. NW Natural included directors and officers ("D&O") insurance premiums in the Test Year.[46] In Staff's Opening Testimony, Staff recommended permitting the Company to recover a projected amount for its 2025-2026 D&O insurance policy renewal by escalating the Company's 2024-2025 Oregon-allocated D&O insurance premium by 1.3 percent and then disallowing 50 percent of the resulting amount, which Staff asserts is standard Commission policy.[47] Staff's method would result in a downward adjustment of $729,015 to the Company's D&O Insurance expense.[48] AWEC also recommended 50/50 cost sharing between shareholders and ratepayers for NW Natural's D&O insurance costs based on AWEC's understanding of Commission policy.[49] AWEC calculated a $51,539 reduction to revenue requirement as a result of its adjustment.[50] CUB did not address D&O premiums in its Opening Testimony.

[46] *See* NW Natural/1300, Davilla/13-14.
[47] Staff/1100, Ball/13-14.
[48] Staff/1100, Ball/13.
[49] AWEC/100, Mullins/40.
[50] AWEC/100, Mullins/40.

In its Reply Testimony, the Company responded both to Staff and AWEC's 50 percent sharing proposal as well as Staff's use of a 1.3 percent escalation to arrive at a D&O insurance premium amount.[51] The Company explained that it disagreed with the premise that customers receive only a partial benefit from the Company's D&O insurance expense, because D&O insurance is a necessary cost of doing business and a prudent expense.[52] The Company also explained that, because the Company already removed D&O liability expenses allocated to non-utility business units, the remaining amounts should be fully recovered.[53] The Company also provided an update concerning updated estimates it had received from its D&O insurance broker for the Company's D&O premiums for its 2025-2026 renewal.[54] Based on the updated estimates the Company received from its broker, NW Natural reduced its request for D&O insurance costs from the amount in the Initial Filing.[55]

As a result of their settlement discussions, the Stipulating Parties agreed to a reduction to revenue requirement of $312 thousand for D&O Insurance expense.[56]

Q. Please explain why the Stipulating Parties' agreement regarding D&O Insurance is reasonable.

A. The Stipulating Parties' agreed reduction to D&O insurance expense is a reasonable compromise between Staff's and AWEC's position and the Company's

[51] NW Natural/2900, Davilla/58-61.
[52] NW Natural/2900, Davilla/61.
[53] NW Natural/2900, Davilla/61.
[54] NW Natural/1900, Wilson/28-29.
[55] NW Natural/1900, Wilson/29.
[56] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 4.

position. Although the Stipulating Parties do not necessarily agree with respect to whether D&O insurance premiums should be subject to cost sharing, they do agree that their agreed reduction to revenue requirement is a reasonable and fair compromise that results in just and reasonable rates.

G. Wages and Salaries, FTE Adjustments, Incentives, Payroll Taxes, Depreciation Expense

Q. Please describe the Stipulating Parties' agreement regarding Wages and Salaries, FTE Adjustments, Incentives, Payroll Taxes, and Depreciation Expense.

A. NW Natural projected having 1,249.1 gas utility Full-Time Employees ("FTEs") in the Test Year[57] and included $132.902 million for wages and salaries associated with Oregon-allocated FTEs[58] and $9.653 million for pay-at-risk[59] in the Test Year. To mitigate the size of its rate request, the Company did not seek recovery of the costs of pay-at-risk for Company officers in this proceeding.[60] Staff recommended a reduction to rate base of $3.725 million associated with the capital components of Staff's adjustments to wages and salaries, FTEs, and incentives, and a reduction to O&M of approximately $6.062 million associated with the non-rate base components of wages and salaries, FTE, and incentives, in addition to corresponding adjustments to payroll tax expense and depreciation expense.[61] AWEC recommended removing 75 percent of employee incentives from the Company's O&M expenses and removal of the capital portion of employee

[57] NW Natural/1000, Rogers/20-21.
[58] NW Natural/1000, Rogers/6.
[59] NW Natural/1000, Rogers/12.
[60] NW Natural/1000, Rogers/8.
[61] Staff/1200, Dyck/3-23.

incentives from rate base, resulting in a reduction to revenue requirement of approximately $4.627 million.[62] CUB did not address wages and salaries, FTE adjustments, incentives, payroll taxes, and depreciation expense in its Opening Testimony. The Company filed Reply Testimony responding to Staff and AWEC's Opening Testimony regarding employee and officer compensation.[63]

As a result of their settlement discussions, the Stipulating Parties agreed to a reduction to rate base of $2.971 million, resulting in a reduction to revenue requirement of $270 thousand. The Stipulating Parties also agreed to a reduction to O&M expense equivalent to a $4.698 million reduction to revenue requirement. Combined, these adjustments result in a total reduction to revenue requirement of $4.968 million.[64]

Q. Please explain why the Stipulating Parties' agreement regarding Wages and Salaries, FTE Adjustments, Incentives, Payroll Taxes, and Depreciation Expense is reasonable.

A. The Stipulating Parties' agreement to reduce revenue requirement by $4.968 million in total—based on a reduction to rate base of $2.971 million and a reduction to expense of $4.698 million—is a reasonable compromise of the Stipulating Parties' differing interpretations of Commission precedent and different analytical approaches to calculating projected FTEs, as well as costs and expenses for wages, salaries, and incentives. The Stipulating Parties' agreement is a middle ground among the Stipulating Parties' different viewpoints and corresponding

[62] AWEC/100, Mullins/33.
[63] *See* NW Natural/2500, Rogers.
[64] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 4.

adjustments that they proposed in their filed testimony. As the agreement represents a reasonable negotiated outcome, the Stipulating Parties believe the adjustment results in just and reasonable rates in the context of the First Stipulation overall.

H. Advertising Expense

Q. Please describe the Stipulating Parties' agreement regarding Advertising Expense.

In the Initial Filing, NW Natural requested $1.521 million for Category A (customer communications) advertising expense for the Test Year, which was approximately $160 thousand, or $0.22 per customer, in excess of the level presumed just and reasonable under OAR 860-026-0022(3)(a).[65] The Company explained that it believed the portion of its Category A expense request above the amount presumed just and reasonable under OAR 860-026-0022(3)(a) should be recoverable, because this amount was on par with the amounts presumed reasonable for electric utilities in NW Natural's service territory based on the revenue-based formula, due to differences in revenue structure between gas and electric utilities.[66] The Company also explained that it had requested Category A expense above the amount presumed reasonable under OAR 860-026-0022(3)(a) because of additional targeted communications and outreach for the Company's bill discount program.[67] The Company also requested $900 thousand for Category B advertising expense in the Test Year.[68] NW Natural did not seek recovery of any

[65] NW Natural/1100, Beck/1-3; NW Natural/2600, Beck/2.
[66] NW Natural/1100, Beck/3-4
[67] NW Natural/1100, Beck/6-8.
[68] NW Natural/1100, Beck/13.

expenses in Category C (corporate imaging), Category D (political/non-utility advertising), or Category E (energy efficiency/consideration advertising related to a program approved by the Commission).[69]

In Staff's Opening Testimony, Staff recommended a reduction to Category A expense of $159,697, or the amount beyond the level presumed reasonable under OAR 860-026-0022(3)(a).[70] Staff stated it "appreciates the Company's point that the difference in revenue structure between natural gas and electric utilities results in a disparity on a per customer basis with regard to advertising expense," but explained that Staff does not view this disparity as a sufficient grounds for finding the Company's Category A advertising expense above the amount presumed reasonable to be recoverable.[71] AWEC and CUB did not address advertising expense in their Opening Testimony.

In its Reply Testimony, the Company responded to Staff's Opening Testimony regarding advertising expense and made a correction to the allocation of Category A and Category B expense. By moving the cost of legally mandated customer notices from Category A to B, NW Natural revised its request for Category A to $1.485 million, or $2.10 per customer, and revised its request for Category B to $936 thousand.[72]

As a result of their settlement discussions, the Stipulating Parties agreed to a reduction to revenue requirement of $123 thousand for Advertising Expense.[73]

[69] NW Natural/1100, Beck/2.
[70] Staff/1400, Moore/5.
[71] Staff/1400, Moore/4-5.
[72] NW Natural/2600, Beck/22.
[73] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 4.

Q. Please explain why the Stipulating Parties' agreement regarding Advertising Expense is reasonable.

A. The Stipulating Parties continue to have different views regarding whether the disparity between gas and electric utilities under the revenue-based approach to advertising expense in OAR 860-026-0022(3)(a) is informative with respect to whether Category A spending amounts are just and reasonable. However, the Stipulating Parties agree that their adjustment, which would remove from revenue requirement the amount of NW Natural's revised Category A request above the amount presumed reasonable, is a fair compromise between the Stipulating Parties' different positions for settlement purposes. The Stipulating Parties believe that this adjustment results in rates that are just and reasonable in the context of the First Settlement as a whole.

I. Leasehold Improvements

Q. Please describe the Stipulating Parties' agreement regarding Leasehold Improvements.

A. NW Natural's Initial Filing requested to include $17.317 million in Oregon-allocated Test Year rate base for leasehold improvements, primarily associated with the Company's headquarters at 250 Taylor.[74] This represented a $1.279 million decrease to the amount approved for leasehold improvements in the Company's last rate case.[75] Staff stated in its Opening Testimony that it had reviewed testimony, orders, and workpapers regarding this issue; issued DRs; and was "awaiting responses to DRs and may have an adjustment once the analysis is

[74] NW Natural/1500, Walker/27; NW Natural/1501, Walker/1.
[75] NW Natural/1502, Walker/1.

complete."[76] AWEC stated that it disagreed with the Company's methodologies for calculating non-plant balances, including leasehold improvements, but did not recommend a specific adjustment to leasehold balances.[77] CUB did not address leasehold improvements in its Opening Testimony.

As a result of their settlement discussions, the Stipulating Parties agreed to a reduction to rate base of $49 thousand for leasehold improvements, which results in a reduction to revenue requirement of $4 thousand.[78]

Q. Please explain why the Stipulating Parties' agreement regarding Leasehold Improvements is reasonable.

A. The Stipulating Parties' modest reduction to rate base to reach an agreed resolution to the leasehold improvements issue is reasonable, considering that none of the Stipulating Parties proposed a specific adjustment for leasehold improvements in Opening Testimony. In the context of the First Stipulation as a whole, the Stipulating Parties believe their adjustment is a fair and reasonable resolution that will result in rates that are just and reasonable.

J. Retirement of GC 500 Mist Compressor

Q. Did the Stipulating Parties agree to a revenue requirement adjustment related to the retirement of the GC 500 Mist Compressor?

A. Yes. As a result of their settlement discussions, the Stipulating Parties agreed to a cost recovery arrangement associated with the retirement of the GC 500 compressor, which is described in greater detail in Section III.O below. The

[76] Staff/200, Chipanera-Stevens-Mondragon/24.
[77] AWEC/100, Mullins/29.
[78] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 4.

Stipulating Parties' agreement results in a reduction to revenue requirement of $1.378 million.[79] As addressed further in Section III.O below, the Stipulating Parties believe this adjustment is reasonable.

K. Test Year Plant Additions and Other Miscellaneous Adjustments

Q. Please describe the Stipulating Parties' agreement regarding Test Year Plant Additions and Other Miscellaneous Adjustments.

A. The Company calculated Utility Plant in Service during the Test Year by using a 13-month Average-of-Monthly-Averages (AMA) approach and including all capital additions in the forward test year, including those associated with customer additions (mains, services, and meters), as well as recurring replacement of capital assets, and larger planned projects through the Test Year.[80] The Company also proposed to roll forward accumulated depreciation through the Test Year, and lowered its gross plant and accumulated depreciation amounts for the Test Year to reflect forecasted asset retirements.[81]

In Opening Testimony, Staff disagreed with including all Test Year capital additions in rate base, based on Staff's interpretation of ORS 757.355(1).[82] Staff proposed excluding all Test Year capital additions from rate base except for growth-related capital additions on the basis that including growth-related capital additions was responsive to the Commission's orders regarding rate base calculation method in Docket Nos. UE 433 and UE 435, Staff's view that growth-related capital investment is predictable, and because of the system benefit of new revenues from

[79] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 4-5.
[80] NW Natural/1500, Walker/25.
[81] NW Natural/1500, Walker/25.
[82] Staff/200, Chipanera-Stevens-Mondragon/8.

new customers causing the growth-related capital additions.[83] As a result of Staff's adjustment, Staff recommended a reduction to revenue requirement of approximately $10.1 million at the Company's requested cost of capital, or between $9.2 million and $9.6 million at Staff's proposed cost of capital range.[84]

In its Opening Testimony, AWEC recommended that plant additions and retirements occurring subsequent to the rate effective date not be considered in NW Natural's revenue requirement, based on AWEC's interpretation of ORS 757.355.[85] The impact of AWEC's proposal would be to reduce revenue requirement by $13.099 million.[86] In addition to the treatment of rate base, AWEC raised several other revenue requirement issues, which were resolved through the black box adjustment, including adjustments to cash working capital, directors' and officers' fees and expenses, stock incentives, miscellaneous operations and maintenance expenses and other adjustments.

In its Reply Testimony, NW Natural responded to Staff's and AWEC's testimony regarding rate base methodology, including by explaining why the Company believed that the guardrails in its rate base methodology, such as the moderating effect of a large capital investment portfolio and the AMA approach, addressed Staff's and AWEC's concerns about consistency with ORS 757.355.[87]

As a result of their settlement discussions, the Stipulating Parties agreed to a black box reduction to revenue requirement of $7.2 million, which

[86] AWEC/100, Mullins/24.
[87] NW Natural/3100, Dane/3-35.

comprehensively addressed Test Year Plant Additions and other miscellaneous issues and adjustments raised in the proceeding.[88]

Q. Please explain why the Stipulating Parties' agreement regarding Test Year Plant Additions and Other Miscellaneous Adjustments is reasonable.

A. Although the Stipulating Parties do not agree with respect to rate base calculation method, the Stipulating Parties do agree that a black box adjustment of $7.2 million to resolve their differences of opinion concerning rate base, as well as other miscellaneous adjustments, is reasonable. This adjustment was the subject of active negotiation by the Stipulating Parties and results from concessions on the part of each Stipulating Party. Moreover, the Stipulating Parties agree that, in the context of the First Stipulation as a whole, this adjustment will result in rates that are just and reasonable.

L. Officer Attestations

Q. Please explain the Stipulating Parties' agreement regarding attestations for capital projects.

A. In its Opening Testimony, AWEC recommended a capital attestation process similar to the one adopted by the Commission in Docket No. UE 435.[89] AWEC recommended that NW Natural provide capital attestations for all projects over $1 million, with projects under $1 million reviewed in the aggregate as a single project, on a portfolio basis.[90] In its Reply Testimony, the Company proposed to file two attestations confirming that projects over $1 million would be placed in service

[88] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 4.
[89] AWEC/100, Mullins/26-27.
[90] AWEC/100, Mullins/27.

by October 31, 2025.[91] Staff proposed that NW Natural provide officer attestations for all new "discrete" projects requested in the Initial Filing that are expected to go in service by October 31, 2025.[92] The Company proposed that projects over $1 million that would not be completed by the rate effective date would be incorporated into an updated future test year (FTY) forecast with a revised in-service date and recovered in the FTY using the Average of Monthly Averages (AMA) methodology.[93]

As a result of their settlement discussions, the Stipulating Parties agree that NW Natural will file officer attestations on or before October 3, 2025, and October 23, 2025, attesting to whether any projects forecast to cost over $1 million and to be completed by October 30, 2025, will be completed after that date. The Stipulating Parties further provided that if there are any such projects, those projects will be removed from rates.[94]

Q. Please explain why the Stipulating Parties' agreement regarding attestations is reasonable.

A. The Stipulating Parties agree that NW Natural providing officer attestations for certain capital projects will facilitate final review of project costs and ensure that only projects completed by the October 30, 2025, cut-off date will be included in rates. The Stipulating Parties agree that this approach reflects a reasonable compromise between the Stipulating Parties' positions.

[91] NW Natural/1700, Rush-Kravitz/14.
[92] Staff/1000, Abraham/7; Staff/200, Chipanera-Stevens-Mondragon/11 (providing Staff's definition of "discrete" projects).
[93] NW Natural/1700, Rush-Kravitz/14.
[94] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 4-5.

M. Rate Effective Date

Q. Please describe the Stipulating Parties' agreement regarding the rate effective date.

A. In the Initial Filing, NW Natural requested that the new rates resulting from this proceeding be made effective November 1, 2025.[95] As part of the First Stipulation, the Stipulating Parties agree to move the rate effective date to October 31, 2025—an advancement of the rate effective date by one day.[96] The Stipulating Parties understand that their agreement to modify the rate effective date to October 31, 2025, is subject to the Commission's approval.

Q. Please explain why the Stipulating Parties believe a change in the rate effective date is reasonable.

A. Modifying the rate effective date by one single day is reasonable, given the pendency of legislation that may prohibit NW Natural from implementing its requested rate increase on November 1, 2025. Because this minor modification of the rate effective date would have no legal or practical effect on the sufficiency of the time for Commission review and public notice of the Company's rate revision requested in this proceeding, and for the sake of efficiency, the Stipulating Parties agree that modification of the rate effective date from November 1, 2025, to October 31, 2025, is fair, just, and reasonable.

N. Depreciation Rates

Q. Please describe the Stipulating Parties' agreement regarding Depreciation Rates.

[95] Executive Summary at 1.
[96] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 5.

A. In the Initial Filing, the Company stated that it was proposing updated depreciation rates as part of this general rate case, based on the updated depreciation study filed concurrently with this proceeding in Docket No. UM 2363 on December 30, 2024.[97] On June 13, 2025, NW Natural, Staff, and AWEC filed a notice in Docket No. UM 2363, informing the Commission that they had reached a comprehensive agreement in principle.[98]

The Stipulating Parties agree to adjust the Company's depreciation rates subject to the resolution of the Company's depreciation study in Docket No. UM 2363. Although the Company's updated depreciation rates have not yet been resolved in Docket No. UM 2363, the Company expects the reduction to revenue requirement associated with this adjustment to be $5.278 million.[99]

Q. Please explain why the Stipulating Parties' agreement regarding Depreciation Rates is reasonable.

A. The Stipulating Parties' agreement that the Company will update depreciation rates for purposes of the rates resulting from this proceeding based on the outcome of Docket No. UM 2363 is reasonable. Doing so will ensure that the Company's depreciation expense reflected in the revenue requirement approved in this proceeding will be the product of the most accurate, current information about the depreciable lives of the Company's assets.

[99] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 5.

O. Retirement of GC 500 Mist Compressor – Regulatory Asset

Q. Please describe the Stipulating Parties' agreement regarding the GC 500 Mist Compressor.

A. In the Initial Filing, the Company indicated that it is replacing the older of the two compressors at its Mist storage facility, the GC 500 compressor, in October 2025, and a second compressor at the Mist facility, the GC 600, is scheduled for replacement in October 2026.[100] The Company stated that it is replacing these two compressors because they have exceeded their expected useful lives and require ongoing break-fix repairs that routinely disrupt operations at the Mist facility.[101]

In its Opening Testimony, Staff stated it agreed with the Company's assessment that both Mist compressors had exceeded their useful life expectancy, but Staff would not support the inclusion in rates of new plant not yet in service by the rate effective date.[102] Therefore, Staff stated it would "monitor the progress" of the GC 500 project and require officer attestations supporting the Company's projection that the project is on track to be completed by October 31, 2025.[103]

In its Opening Testimony, CUB stated it did not oppose the retirement and replacement of the GC 500 compressor, and CUB recommended that the Commission find the GC 500 retirement to be in the public interest.[104] CUB estimated that the Company's undepreciated investment in the GC 500 compressor was $14.754 million, based on CUB's assumption that the GC 500

[100] Executive Summary at 4; NW Natural/100, Palfreyman-Kravitz/14.

[102] Staff/1000, Abraham/9-11.
[103] Staff/1000, Abraham/10.
[104] CUB/100, Jenks/19.

compressor had a 27-year useful life and a 50-year depreciable life.[105] CUB recommended that the Company be allowed to recover, but not earn a return on, its undepreciated investment in the GC 500 compressor, and that $14.8 million be removed from FERC Account 354 and placed in a regulatory asset, where it would be amortized over 23 years at 4.499 percent, representing the time value of money.[106] CUB stated that its recommended cost recovery treatment for the undepreciated portion of the GC 500 compressor was based on CUB's understanding of the Commission's retired asset policy.

NW Natural filed Reply Testimony responding to CUB's proposal. NW Natural defended the continued inclusion of the GC 500 unit in FERC Account 354, argued that there was not a need for extraordinary ratemaking treatment for the GC 500 plant following its retirement, and disagreed with CUB's interpretation of the Commission's retired asset policy.[107] NW Natural also clarified that the undepreciated portion of the GC 500 compressor upon its retirement would be approximately $11.1 million, rather than CUB's estimate of $14.8 million, and that the actual amount of undepreciated investment in the GC 500 compressor at the time of its retirement would actually be somewhat less than $11.1 million, accounting for the actual net book value at that time, as well as the cost of removal and salvage value.[108]

As a result of their settlement discussions, the Stipulating Parties agreed that NW Natural will remove $11.1 million, representing the net book value of the

[105] CUB/100, Jenks/18-19.
[106] CUB/100, Jenks/19-20.

[108] NW Natural/3000, Spanos-Wilson-Kravitz/20-21.

GC 500 Mist Compressor, from FERC Account 354, resulting in a reduction to revenue requirement of $1.378 million.[109] The Stipulating Parties further agreed that the $11.1 million will be placed in a regulatory asset and recovered over a period of eight years through a separate base tariff schedule to be filed with the Company's compliance filing in this rate case. The Stipulating Parties agree to use a 4.499 percent interest rate for the regulatory asset. The amortization of the regulatory asset is $1.683 million per year through the separate rate schedule.[110]

Q. Please explain why the Stipulating Parties' agreement regarding the GC 500 Mist Compressor is reasonable.

A. The Stipulating Parties' agreement is a reasonable resolution of CUB's and NW Natural's differing interpretations of Commission orders and policy governing cost recovery for retired assets. The removal of $11.1 million from rate base is responsive to CUB's concern about the Company's ability to earn a return on retired plant, and the eight-year time period for the amortization of the regulatory asset will enable the Company to recover its costs for the GC 500 compressor within a reasonable amount of time. Therefore, the Stipulating Parties believe that the $1.378 million reduction to revenue requirement resulting from the removal of the GC 500 compressor from rate base will result in rates that are just and reasonable, and that the creation and amortization of a regulatory asset as described in the First Stipulation is in the public interest.

[109] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 4-5.
[110] First Partial Multi-Party Stipulation Regarding Revenue Requirement at 5.

IV. SUPPORT FOR THE FIRST STIPULATION

Q. What is the basis for the First Stipulation?

A. The First Stipulation is a compromise based on the record in this case, which includes NW Natural's Initial Filing, the Opening Testimony of Staff and intervenors, and NW Natural's Reply Testimony, as well as the data requests and data responses the parties have exchanged to date. Over the course of the settlement discussions, the Stipulating Parties resolved their differences regarding all issues in the First Stipulation—except for those explicitly excluded in Paragraph 3 of the First Stipulation—and ultimately resolved all issues in the First Stipulation through dialogue, negotiations, and compromise to reach a fair result.

Q. What is your recommendation to the Commission regarding the First Stipulation?

A. The Stipulating Parties recommend and request that the Commission approve the First Stipulation in its entirety.

Q. Please explain why the Stipulating Parties believe the Commission should adopt the First Stipulation.

A. The Stipulating Parties have carefully reviewed NW Natural's Initial Filing, NW Natural's responses to data requests, and have thoroughly analyzed the issues during multiple days of settlement conferences. The Stipulating Parties believe that the adjustments and agreements in the First Stipulation provide a fair and reasonable resolution of the issues in this proceeding and the resulting rates are fair, just, and reasonable.

V. CONCLUSION

Q. Does this conclude your testimony?

A. Yes.

Data Request Response

Request No.: UG 527 CUB DR 15

It is CUB's understanding that these Mist storage facility investments are being retired:

a. GC600 turbine compressor;
b. Main Feed Replacement Project;
c. Mist Well Separator Replacement Project.

For each of these assets/projects, please provide the following information:

a. What is the depreciable life of each of those investments?
b. What is each asset's depreciation rate?
c. Are the depreciated as separate assets or in group depreciation?
d. When were each of these assets installed?

Response:

GC600 Turbine Compressor

a. The current depreciable life for the Group as of OR rates effective November 2025 is 50 years.
b. The current depreciation rate effective November 2025 is an annual rate of 1.99%
c. These assets are depreciated using group depreciation.
d. This specific asset was put into service in 2003.

Main Feed Replacement Project

a. The current depreciable life for the Group as of OR rates effective November 2025 is 50 years.
b. The current depreciation rate effective November 2025 is an annual rate of 1.99%
c. These assets are depreciated using group depreciation.
d. This asset was put into service in 1991.

Mist Well Separator Replacement Project

a. The current depreciable life for the Group as of OR rates effective November 2025 is 52 years.
b. The current depreciation rate effective November 2025 is an annual rate of 1.93%
c. These assets are depreciated using group depreciation.
d. This asset was put into service in 1987 and 2007.

Group depreciation rates represent the overall estimated useful life for the entire group, expecting lives to be shorter and longer, and that there can be other operating purposes (repairs, higher usage, etc) that can impact the underlying useful life of individual assets within the group.

What's the total amount of rate base of Mist assets in group depreciation as of November 1, 2025, for each of the last 5 years?

Response:

Please see UG 527 CUB DR 16 Attachment 1 for the total amount of rate base of Mist assets in Group Depreciation. Our plant reporting processes report on 12/31 annually so we have provided the 5 year summary as of 12/31 (year end) as a proxy for the request for November balances.

Request No.: UG 520 OPUC DR 402

What will be the net plant balance at the end of 2024?

Response:

We are assuming this is asking for the net plant balance for FERC account 354 where the asset costs of the Mist gas compressors are held. The net plant balance of FERC account 354 at the end of 2024 is $23,685,406, or $21,070,537 on an Oregon allocated basis.

BEFORE THE PUBLIC UTILITY COMMISSION OF OREGON

UG 527

OPENING TESTIMONY OF BOB JENKS AND EMILY DOUGAN
ON BEHALF OF THE OREGON CITIZENS' UTILITY BOARD

CUB 300

March 18, 2026

The Coos County Pipeline
The Coos County Distribution System

Q. Please state your name, occupation, and business address

A. My name is Bob Jenks. I am the Executive Director of the Oregon Citizen's Utility Board (CUB). My business address is 610 SW Broadway, Ste. 400, Portland, Oregon 97205. My Emily Dougan. I am a Utility Analyst employed by CUB. My business address is 610 SW Broadway, Ste. 400 Portland, Oregon 97205.

Q. Please describe your qualifications.

A. Jenks' witness statement is provided in Exhibit CUB/301 and Dougan's witness statement is provided in Exhibit CUB/302.

Q. What is the purpose of this Joint Testimony?

A. In this testimony, we will provide a brief history of the Coos County Pipeline (CCP) and the Coos County Distribution System (CCDS), why they were built, how they were funded, and what repair work needs to be done. We'll review to what extent NW Natural ratepayers and Coos County customers have already subsidized the operation of these pipelines highlight the shortfalls in funding for needed maintenance and capital recovery. We'll discuss demand trends and finally recommend three possible options for the future of the CCP, and how to recover the remaining capital costs associated with the CCDS.

Q. Are you sponsoring any exhibits?

A. Yes.

I. INTRODUCTION: A BRIEF HISTORY OF THE CCP AND CCDS

Q. Please briefly describe the history of the Coos County Pipeline.

A. In 1999, Coos County became interested in bringing natural gas services to the area to attract and grow industry in the region.[1] County officials approached the legislature, which approved a $70 million bond package for economic and community development programs, including $20 million for the Coos County Natural Gas pipeline.[2] The project had two parts: the Coos County Pipeline (CPP) that runs from the Williams pipeline to Coos Bay and the Coos County Distribution System (CCDS), which Northwest Natural built to provide gas service within Coos County.[3] This was part of an "economic

[1] *See* CUB/312 Jenks-Dougan.
[2] CUB/311 Jenks-Dougan/43.
[3] *See* CUB/302 Jenks-Dougan .

development project" undertaken by Coos County with support from the State of Oregon.[4] Specifically, it was designed to add "significant industries to locate in the area", increase employment, and support additional economic development.[5] The cost of the CCP was split between the state contribution of $20 million and $27 million charged to Coos County tax payers.[6]

Q. Please describe the history of the Coos County Distribution System.

A. On December 31st 2003, the Company filed a request for recovery of its investments in the CCDS in Coos County from residential and small commercial customers.[7] CUB opposed that treatment arguing:

> The Company is asking the Commission to include in the revenue requirement costs that are not economic and are being incurred to serve a significant volume of industrial load. But the Company is not asking industrial customers to share in the costs of service. This raises a fundamental question of fairness.[8]

Staff also opposed the Company's proposal, arguing that building the distribution system was governed by the Company's line extension policy for mains:

> A main extension is the piping and associated facilities required to extend service from the company's existing main facilities into an area not previously supplied to serve an applicant. Schedule X states how the construction allowance is determined for applicants and therefore, what construction contribution will be required to serve the applicant. If the allowance is greater than the cost of construction, the installation is performed at no charge to the applicant. If the cost of construction is greater than the construction allowance, the applicant must pay a construction contribution equal

[4] *See* Order No. 00-274 at 2; *see also* Order No. 02-678 at 3.
[5] CUB/308 Jenks-Dougan/16.

[7] CUB/302/Jenks-Dougan/9.
[8] CUB/303/Jenks-Dougan/3.

to the difference between the cost of construction and the construction allowance.[9]

Staff also expressed concern that if we ignored the line extension policy and asked customers of the larger gas system to subsidize this extension, it would set a precedent to extend the uneconomic service to communities unserved by natural gas.[10] Finally, Staff argued that spreading the entire cost to only residential and small commercial customers was "entirely inappropriate".[11]

As an alternative to its initial proposal, the Company, Coos County, and Northwest Industrial Gas Users (NWIGU) reached a settlement that placed a 1 cent surcharge on Coos County sales customers to help recover costs associated with the CCDS.[12] Any additional costs associated with the County's pipeline would be recovered from "all application NW Natural customers in Oregon in conjunction with the PGA mechanism"..[13] These parties agreed to place the $12 million cost of the Coos County Distribution System (CCDS) into system rates of sales customers beginning on the date of service.[14] Neither PUC Staff nor CUB supported this stipulation and instead called for an allocation of costs based on the Line Extension policy.[15]

Ultimately, NWN, Coos County and NWIGU agreed to apply the Line Extension policy, which limited what the system could pay to $10 million and required a 2 cent/therm

surcharge on Coos County customers to recover $1.6 million, and NWN to contribute $400,000.[16]

At the time, there was concern that the Company's load forecast would not materialize, and thus a stipulation included the requirement that if the surcharge did not recover the Coos County allocation of $1.6 million, that NWN would set, "with the Commission's approval, an appropriate surcharge for Coos County customers until the entire balance has been paid."[17]

Q. Has demand on the CCDS materialized as expected by the Company?

A. No, the forecasted demand for the CCDS has not materialized and thus the initial investment remains unpaid.[18] CUB raised our concerns in UG 152 and we can see now that those concerns were warranted. The surcharge placed on Coos County customers never generated enough revenue to pay back the initial investment and has certainly not raised enough to cover ongoing O&M costs.

In response to OPUC IR 16 in ADV-1789,[19] the Company shows that demand growth in therms in year 1 to year 20 was much lower than predicted – with only 5.9 million therms per year as opposed to the estimated 7.9 million therms.[20] Thus, recovery of the initial investment was not recovered because of this 2 million therm shortfall. But now, through

[20] CUB/305/Jenks-Dougan/124.

years of mismanagement, the CCP is threatened by landslide activity, putting pressure on an already vulnerable community – and the funds meant to address this are nowhere to be seen.

It was anticipated by CUB in 2003 that demand might not materialize, and CUB supported the backstop that would revisit the CCDS surcharge and update it to collect the remaining amount.[21] Now, over 20 years later, we, unfortunately, see that our concerns were well founded. CUB does not wish to relitigate UG 152, whether this investment was prudent for the County or the Company in the first place, or to continue to criticize the Company for its miscalculations in the initial demand forecast. We were a party to the stipulation that implemented this agreement. Instead, we need to look at the work that needs to be done, and most importantly, determine who should shoulder these costs.

Q. To summarize, provide a brief timeline of the degradation of the CCP and this case.

A. CUB presents the history of problems concerning the CCP:

- 1990s: County officials become interested in bringing natural gas to the County through the expansion of a new main. They levy a bond from County taxpayers to fund this.[22]
- 2003: The County and NW Natural approach the Public Utility Commission to recover costs associated with the distribution system in the County.[23]

[21] CUB/309/Jenks-Dougan/6
[22] CUB/312/Jenks-Dougan.
[23] CUB/309/Jenks-Dougan/3.

- 2003: U.S. Army Corp of Engineers files suit against the County and MasTec Inc., the firm hired to build the pipeline, over Clean Water Act violations stemming from construction of the pipeline.[24]
- 2004: The County terminates its initial contract with the company hired to install the pipeline.[25]
- 2004-2009: The County and its contractor experience repeated lawsuits from environmental groups and residents, including counter-claims, ending in settlement and remediation plans related to water pollution and personal damages from construction of the pipeline.[26]
- 2021: NW Natural commissions a study to determine landslide risks along the pipeline and identifies 13 high risk sites.[27]
- Spring 2025: Heavy rains impact the area in March, leading to landslide activity that threatens the pipeline.
- Fall 2025: In October, the Company files to cancel charges for Coos County Customers and submits a proposal to purchase the CCP.[28]

II. CCP: WHERE ARE WE NOW?

Q. What work needs to be completed to remediate landslide risk, and what are the costs?

A. The Company is requesting an initial $12.2 million cost recovery for three project areas on the pipeline: Mile 98 at $4 million, Coquille River at $4 million, and an additional unnamed

[24] CUB/304/Jenks-Dougan/4-6.
[25] CUB/304/Jenks-Dougan/2.

[27] NWN/200 Kizer-Karney-Pipes-Fellon/ 28.
[28] *See* CUB/313/Jenks-Dougan.

project site which it estimates will require $4.2 million in remediation work.[29] The Company currently has design plans for Mile 98 to relocate sections of the pipe and install it at a deeper location, but has not finalized design proposals for Coquille River or the third site.[30]

The Company identified 13 high risk areas in total in 2021 but is only requesting cost recovery for the sites listed above in this proceeding. The Company stated that it expects to incur additional O&M costs for pipeline management but has not estimated these, nor presented them in the filing.[31] However, in questions posed in discovery during ADV-1789, the Company estimated even higher landslide mitigation costs with O&M included – coming in at $13.2-14.7 million.[32] The Company also recognizes that sites like the Coquille River will likely require extensive environmental permitting as remediation will take place along the river's riparian area.[33] The Company offered in discovery that it does not believe this initial investment in landslide remediation will be its last.[34] The incongruence between the estimates in this filing and responses to data requests raises concerns for CUB.

Q. What is the lifespan for the CPP?

A. The Company estimates that for the three areas in which pipeline replacement will be needed, the depreciation of those replacements will be 67 years,[35] and that the remaining useful life on the rest of the CCP is around 29 years.[36] The contradiction between the long

[29] NWN/200 Kizer-Karney-Pipes-Fellon/ 28-30

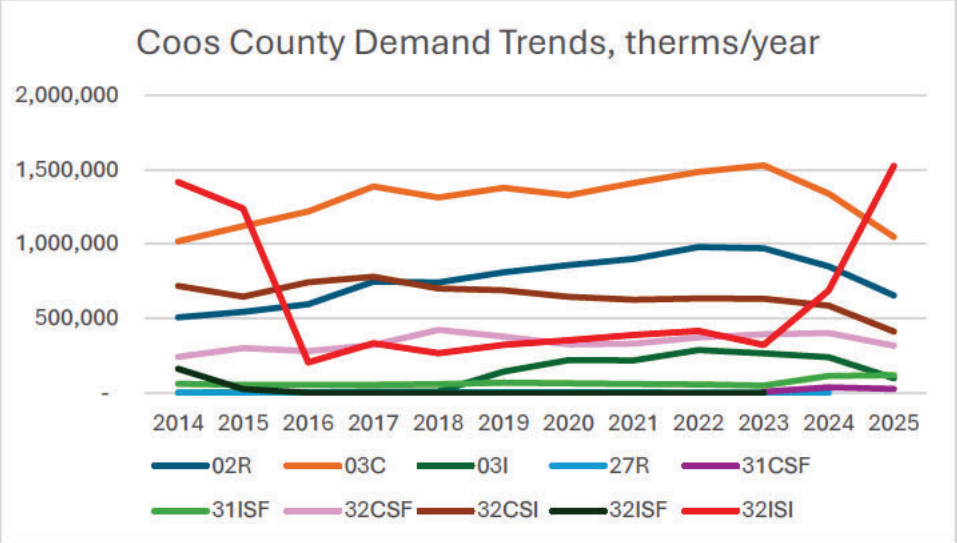
[35] *Id.* at 123.
[36] *Id.* at 118

useful life of replacement parts compared to the pipeline itself makes little sense unless NWN plans to complete rebuild the CCP. Such a plan raises serious questions about prudency, used and usefulness, and the full costs that NWN expects its system to pay in relationship to the CCP.

Q. What have demand trends looked like in Coos County over the last 10 years?

A. The Company provided CUB with throughput demand data among all classes from 2014-2025 (see figure 1 below). While demand among commercial customers (03C) has stayed relatively stable, residential demand reached a high of only around 1 million therms in 2023. All customer classes, in fact, appear to be trending downward, apart from Interruptible Industrial customers (32ISI).

Figure 1: Coos County Demand Trends, therms/year[37]



[37] *Id.* at 115.

Q. Has the Commission ordered on similar cases to this in the past? Please provide an overview.

A. Yes and no. The situation in Coos County is relatively unique, as discussed above. However, there are instances similar to this case where the Commission has ordered alternatives to replacements or repairs of infrastructure. In UG 519 (Avista's last general rate case), the Commission adopted a stipulation that in lieu of jumping right into an expensive Aldyl-A pipeline replacement program, Avista first conduct a cap and prune, and targeted voluntary electrification (TVE) study and pilot.[38] This situation, too, involved the safety and energy security of customers served by the Aldyl-A pipe – but the Commission found it unreasonable to move forward without investigating alternatives first.

In UM 2026, the Commission ordered against Cascade Natural Gas's proposed automatic recovery mechanism for safety projects, arguing that the Company's proposal was "a departure from traditional ratemaking, which is done through a general rate case where a company's total revenues, costs, and rate base are evaluated to establish that rates are just, reasonable, and in the public interest**.**"[39]

In Order No.24-359, in regard to line extension allowances (LEAs), the Commission explained "we are concerned with plant costs that will remain in rates past the 25-year payback period and the potential for stranded asset costs if customers leave the system."[40]

[38] See Order No. 25-198 at 3.
[39] *See* Order No. 20-015 at 11.
[40] *See* Order No.24-359 at 10.

While an electric utility case that involved intervention from the Oregon Legislature, in UE 219 the Commission determined that the costs of relicensing PacifiCorp's Klamath River dams were too costly, and that transferring ownership of the dams and removing it was the most prudent option available.[41] Customers contributions for funding dam removal were capped, and amounts collected were remitted into specially created trust accounts to fund dam removal.[42]

Q. What relevance do you see in these to the filing at hand?

A. UG 519: CUB understands that the Aldyl-A pipeline replacement program involved service lines, not mains, but presents this to share how the Commission has required consideration of alternatives in other cases regarding infrastructure replacements and safety.

UM 2026: Order No. 20-015 in UM 2026 shows how the Commission has previously ordered on how gas utilities can and should recover safety related costs. UM 2269: While the Company taking ownership of the Coos County pipeline is not a *line extension*, we find the concern over the payback period and the risk of stranded costs in Order No.24-259 is relevant here. The Company is replacing sections of a pipeline that is 21 years into its 50 year useful life, with investments that have a 67 year useful life. This creates not just a risk of stranded costs, but a likelihood of stranded costs.

UE 219: Finally, as discussed more below, the order in UE 219 offers an example of how infrastructure can be removed with the creation of trusts to support replacement.

[41] *See* Order No.10-364.
[42] *Id.* at 5.

III. COOS COUNTY RESIDENTIAL IMPACT

Q. Please describe the impact of the proposal on residential customers living and working in Coos County.

A. As described by Rogue Climate;

> The average household income in Coos Bay is $55,292, highlighting the need for affordable sources of energy that can keep homes safe during any weather. 30-39% of households in Coos county are facing severe energy burdens while also earning less than $15,060 per year. As extreme weather events become more common, from heat waves to ice storms, families on the South Coast are increasingly burdened by high energy costs and power outages, highlighting the urgent need for affordable, climate-resilient solutions. As more and more customers across the state move off gas and choose more affordable and efficient energy sources, rural communities locked in to natural gas reliance will be forced to pick up the cost, resulting in skyrocketing bills.[43]

Rogue Climate is familiar with the community as it works alongside Southern Oregon and South Coast communities most impacted by climate change, including low-income, rural, youth, and communities of color. In their comments to this docket they note the local interest in electrification by these residents.[44]

The Coos County pipeline was built for economic development purposes to bring jobs to the port of Coos Bay. While demand is well below what was anticipated, there are industrial customers and jobs in Coos Bay that are dependent on the pipeline. As Rogue Climate notes, the Coos County Pipeline currently serves around 1,700 residential customers as well as the essential but underfunded Bay Area Hospital and Rosburg Forest Products.[45]

[43] CUB/318 Jenks-Dougan/2.
[44] *See* CUB/318 Jenks-Dougan CUB/319 Jenks Dougan, and CUB/320 Jenks Dougan.
[45] CUB/318 Jenks-Dougan/2.

Q. What should the Commission look to for guidance on how to assess the impact of the proposal on Coos County Residents?

A. The Commission should look to the public comments in this docket and the associated dockets. These can be found in CUB exhibit 316. The Commission should also consider its reflection on the proposal at public meeting on UM 2419, which can be found in CUB exhibit 307. Additionally the Commission should consider the findings of the Natural Gas Fact Finding Report, SB 32, and the prior history of lawsuits associated with the CCP. Additional consideration should be given to outside funding options and the timing of this proposal. These are discussed below.

Natural Gas Fact Finding Report

Q. What is the Natural Gas Fact Finding Report, and how does it relate to this filing?

A. The Natural Gas Fact Finding (NGFF) Report was an assessment completed by PUC Staff, regulated gas utilities, and stakeholders to explore how gas utilities can lower greenhouse gas emissions while reducing impacts on ratepayers and the system.[46] The report identified several topic areas and offered actions utilities should take during planning, programmatic and rate setting decision making periods. In one section, the report focuses on protecting customers with limited options (i.e., low-income customers, and business customers who rely on natural gas for a specific end-use).[47] As recommendations for rate making, the report offers the following action items:

- Include assessments of Climate Protection Program (CPP) compliance risks, like load growth from new customers, in prudency review of investments in the distribution system, in order to limit uncertainty around accumulation of long-term capital assets.

[46] *See* CUB/316 Jenks Dougan
[47] CUB/316/Jenks-Dougan/20

- Explore accelerated depreciation of unamortized investments in the gas utilities' next depreciation studies and provide sensitivity analysis to better understand rate impacts.
- Explore transport customer rate spread and rate design issues related CPP Compliance in general rate cases.[48]

Q. Has the Company incorporated these recommendations into its plan for the CCP?

A. Simply, no. While these recommendations are intended for rates and general rates cases, the Company has requested recovery of these costs outside of a general rate case, as discussed in CUB/100. From CUB's review of the record, the Company has not assessed CPP compliance risks regarding investments on the CCP. For example, the Company is not asking for the customers who most benefit (e.g. 32ISI) to shoulder a larger share of the costs through rate spread or rate design.

SB 32

Q. Please describe the outcome of SB 32 and how it relates to this filing.

A. SB 32 which was passed by the legislature in 2015 created a natural gas task force to study natural gas expansion to unserved areas in Oregon.[49] The work group found that communities interested in having gas service expanded to previously unserved areas should be the ones to pay for any costs beyond the allowance for new mains.[50] This is relevant to this filing as we determine who should be on the hook for the $12.4 million in repairs needed on the Coos County Pipeline.

Since the expansion of gas infrastructure to Coos County, other communities in Oregon have come forward seeking the build out of gas infrastructure, to bring natural gas to their

[48] *Id.* at 26.
[49] CUB/314/Jenks-Dougan/1.
[50] CUB/306/Jenks-Dougan/3.

communities for the first time. This led to the legislature establishing a task force managed by the PUC to analyze issues related to natural gas expansion.[51] Gas utilities wanted the Commission to allow for tariff riders and expanded line extension policies to pay for gas expansions – but the task force report determined that "new customers located within a previously underserved area will receive benefits from expansion (access to new service) and should be charged accordingly."[52] The settlement in UG 152 was 10 years before the SB 32 report, and limited NW Natural's ratepayers to funding the main extension allowance allowed under Schedule X, Coos County residents were required to pay a 2 cent per therm surcharge to recover the costs that were above the allowance. Though as explained this surcharge was not enough and $1.6 million of the original investment remains. So now, with outstanding costs associated with building the CCDS and major repairs needed on the CCDS, the community that would benefit from them does not have the load to support those costs.

Q. What is SB 32?

A. SB 32 was passed by the Oregon Legislative Assembly in 2015, as it found that "having access to natural gas is in the public interest and that the extension of natural gas pipelines and other infrastructure necessary for providing natural gas to areas that do not have access to natural gas is necessary for the communities of this state to preserve local economies, enlarge tax bases and generate additional economic opportunities".[53] As mentioned above, this legislation directed the PUC to form a work group to conduct a study on which methods a public utility should expand gas to previously unserved areas – and one of the findings

[51] CUB/314/Jenks-Dougan/1.
[52] CUB/306/Jenks-Dougan/3.
[53] CUB/314 Jenks-Dougan/1.

of this committee was that the communities requesting gas expansion were the primary beneficiaries and should pay for any costs above the main extension allowance.[54]

Q. Does CUB feel the Company has addressed concerns raised previously by the Commission and the SB 32 work group in its approach to the CCP?

A. No. The Company seems to ignore the concept that the amount of this investment that is supported by customers outside of Coos County should be capped and limited to amounts that are economic. It is not clear that the Company or the County has accurately weighed alternatives to the proposed remediation plan. The Company stated that they had not been approached by any other parties interested in purchasing the pipeline or funding the landslide work.[55] The Company also said it was not aware of any entities that had approached the County with proposals to purchase the pipeline but could not say for sure.[56] This is a passive approach, not an exploration of alternatives. Without an examination of possible alternatives, which should provide a firm answer to the question of whether there were other entities considering proposals to purchase the pipeline, it isn't possible for us to determine if Northwest Natural is the right fit.

Prior lawsuits associated with the CPP

Q. What can you tell me about the prior lawsuits associated with CPP?

A. The CPP has been plagued with legal problems as laid out in CUB exhibit 304. For example, a Coos County lawsuit in 2004 against MasTec, a contractor for the CPP, cited numerous problems with the construction of the pipeline, including four lawsuits from

[54] CUB/306 Jenks-Dougan .
[55] CUB/305 Jenks-Dougan/2
[56] Id.

private landowners against the County alleging damaged private property during construction. According to the lawsuits, while drilling underneath stream beds, MasTec employees caused the ground to fracture and drilling lubricants to ooze into at least five local streams.[57] MasTec and the County sued each other in a case that took four years to reach settlement. MasTec agreed to pay Coos County $8.7 million and dismiss its claims against the County, which totaled $14.5 million.[58]

Additionally, a coalition of groups (including property owners) sued the County in district court for Clean Water Act violations which resulted in a $1.5 million fine to MasTec. The Oregon Department of Environmental Quality also fined MasTec $205,000, then settled for $63,000. Additionally, in September 2003, the U.S. Army Corps of Engineers filed suit against both the County and MasTec. This resulted in fines and an MOU resolving claims of Clean Water Act violations against the County stemming from the 2003 construction of the natural gas pipeline from Coos Bay to Roseburg. The MOU required environmental remediation to the streambeds.

These past lawsuits are relevant to consideration of the risks at hand for landowners and ratepayers and evaluation of the prudency of NWN's proposal. Public comments in this docket show that ratepayers are concerned with paying for pipeline leaks and aging infrastructure fixes, and point to these past lawsuits. Likewise the community cites to these lawsuits and concerns over the risks to their fragile coastal ecosystem. They raise the risk of natural disasters, including from the Cascadian subduction zone earthquake event and/or

[57] CUB/304 Jenks-Dougan/8.
[58] *Id.* at 2.

tsunami.[59] As NWN works to replace the pipeline it does so in an area prone to landslides. It risks further erosion and water pollution lawsuits similar to those discussed above. It risks the potential for costly environmental remediation and landowner property damage. But its customers who will pay for these risks.

Funding the Remediation

Q. Has the County received additional support or funding as an alternative to NWN's purchase?

A. The County has received grants and funding to tackle some of the pipeline work. The County was granted American Rescue Plan Act (ARPA) funds, which it allocated $1.45 million to mitigate risk at the Coquille River project.[60] The County has also attempted to obtain a FEMA Building Resilient Infrastructure and Communities grant, but the program was cancelled because of the federal shutdown in fall 2025 and has not reopened.[61] The Company received some FEMA dollars after the March 2025 storms but has been informed this funding cannot go toward relocating the pipe.[62] Finally, Coos County does still maintain a pipeline fund used for landslide mitigation work, which the Company reported is currently at $600 thousand.[63]

[59] CUB/318 Jenks-Dougan/1.
[60] CUB/305 Jenks-Dougan/122.
[61] Id.
[62] Id.
[63] CUB/305 Jenks-Dougan/122.

Q. What concerns does CUB have about the timing of NWN's request to purchase the line?

A. As shown above and in the Company's initial filing, the Company commissioned a study to identify landslide areas near the pipeline in 2021.[64] Further, the Company states in the filing that signs of erosion were seen at the Coquille River site as early as 2020.[65] Thirteen areas were identified as high risk – yet the Company waited another 4 years to act on this. As the Company recounts, in March 2025 heavy rains put further stress on the pipeline. If this truly is as imminent of a safety threat as the Company would like us to suppose (which CUB agrees it may be, especially now given the storms last spring), and the Company knew of this risk four years ago, it is truly not fathomable why it has waited so long to act. If the Company waited so it could align this purchase of the CCP with the 20 year review of the CCDS, it suggests that the risk isn't really immediate. Additionally, in its 2022, 2023, 2024 , 2025, and 2026 Annual Oregon Safety Project Plan, plans for landslide remediation at the CCP are nowhere to be seen.[66] CUB also questions why, again if this is an urgent safety issue, the Company has not finalized proposals for remediation at *all* sites. This is highly problematic. If the Commission places the costs of remediation of some sites, those investments may only be used and useful if all sites (and possibly additional sites) are remediated. It is not clear what we are getting into with this transaction.

Q. Have the Commissioners weighed in on this transaction?

A. Yes, in the OPUC Public Meeting on February 3, 2026, Commissioner Karin Power raised the question of "whether NW Natural's rate base should absorb significant ongoing

[64] NWN/200 Kizer-Karney-Pipes-Fellon/28-29
[65] *Id.* at 31.
[66] *See* CUB/305 Jenks-Dougan/3-114 (UG 527 OPUC DR 47, NWN Safety Project Plans included as attachments 1-6)

structural issues"[67] and concerns of "shareholder utilities stepping in to absorb locally owned infrastructure that they can no longer maintain on their own."[68] CUB echoes these concerns and the precedent this sets.

Q. What do you make of these concerns?

A. This brings us to the crux of the issue with this pipeline: per cost causation principles and SB 32, County customers *should* be on the hook to incur an extra charge for the needed $12.4 million landslide maintenance. However, with just a monthly therm usage of 33,1450 averaged out for all rate classes from 2016 to 2025,[69] that surcharge would need to be raised for the average rate payer in the County – a 21cent surcharge per therm for timely recovery.[70] If applied to residential and commercial schedules only, this would raise the surcharge to 79 cents per therm.[71] At the same time, system ratepayers have *already* made substantial contributions to the expansion of the gas system in the County in 2005 – thus it is unfair to continue to ask them to continue to do so.

Q. Could industrial customers cover these costs?

At the PUC Public Meeting on February 3, 2026, Chair Tawney expressed her interest in seeing industrial customers in Coos County play a role in amortization.[72] The industrial

[67] CUB/307/Jenks-Dougan/78-79.
[68] *Id* at 80.
[69] The monthly usage averaged out amongst all rate schedules from 2016-2025 was 33,145 therms per month. *See* CUB/306/Jenks-Dougan/115-117. Note that the Coos County surcharge was initially only applied to residential and commercial customers.
[70] Assuming a recovery of 29 years, the remaining useful life of the CCP and the ongoing $400,000 necessary in yearly O&M as discussed in ADV-1789, the Company would need to recover $827,600 per year. With the average usage of all customers this comes out to a .21 cent per therm surcharge.
[71] Assuming a recovery of 29 years, the remaining useful life of the CCP and the ongoing $400,000 necessary in yearly O&M as discussed in ADV-1789, the Company would need to recover $827,600 per year. With the average usage of R2 03C and customers this comes out to a 79 cents per therm surcharge.
[72] CUB/307/Jenks-Dougan/84 (Chair Letha Tawney stating "And I am not comfortable with an amortization that would place this on residential customers more broadly. I think that there is a really important role for industrial customers in Coos Bay").

load on the pipeline is 42% of the total load.[73] CUB has considered another option to place this surcharge on rate schedules seeing increased usage in the County (e.g. Interruptible Industrial 32ISI), but calculating the average monthly demand in this schedule alone would also require a substantial, unattainable surcharge.[74] Increasing costs from the Climate Protection Program (CPP), that industrial customers are now on the hook for paying themselves, will continue increasing their costs and potentially lowering their demand. Additionally, through discovery CUB learned that the 32ISI schedule has only **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** customers in the County currently.[75] At the same time, CUB recognizes that the CCP and the CCDS serve industrial load that provides jobs in a community that has struggled. Quite simply, there are no optimal solution – no win-win alternatives – to the CCP.

Q. What about the CCDS?

A. There are no good solutions here either. The original agreement that CUB supported proposed required NWN to evaluate a new surcharge that would collect the remaining $1.6 that remains of the initial Coos County investment. However, because this number is identical to the number 20 years ago, expecting the limited number of customers there to pay for the pipeline would be a large commitment.

[73] *See* CUB/305/Jenks-Dougan/115-117.
[74] Assuming a recovery of 29 years, the remaining useful life of the CCP and the ongoing $400,000 necessary in yearly O&M as discussed in ADV-1789, the Company would need to recover $827,600 per year. With the average usage of 32ISI customers this comes out to a $1.3 per therm surcharge.
[75] CUB/315C Jenks-Dougan/2.

Q. NWN argues that Coos County customers are poorer than the rest of the state, so they should not be surcharged?

A. Coos County customers were also poorer 20 years ago when the original surcharge was adopted. But it is important to recognize that:

- The Oregon coast has a milder climate than most of NWN service territory. The 1,793 residential customers in Coos County used 365 therms in 2025[76], whereas the average load of all residential customers is greater than 600 therms/year.[77] So without a surcharge, Coos County customers pay a lower share of the fixed costs of distribution pipes.
- Today Coos County customers who meet income qualifications are eligible for the original surcharge.

Q. Please summarize how NWN's ratepayers have paid for the expansion of gas service.

A. To summarize who has paid for this pipeline in Coos County to date:

- County taxpayers have paid for the CCP through the bond measure to build it;
- County ratepayers have paid a surcharge for continued maintenance and operation of the CCP;
- Because that surcharge is not large enough to pay for the County's share of the CCDS, NW Natural ratepayers continue to pay for the expansion of the distribution gas system (CCDS) throughout the County, under the terms of the Schedule X that was in place when the CCDS was built;
- All NWN customers pay O&M costs through the PGA;

[76] *See* CUB/305/Jenks-Dougan/115-117 showing 2025 Coos County load by class, divided by 1,793 customers in 2025.
[77] CUB/310/Jenks-Dougan/53.

Q. How is NWN proposing to pay for these costs going forward?

A. NWN has proposed eliminating the surcharge altogether and instead placing this charge on all sales customers as an equal percent of margin, this means that residential customers would pay 66.6% of the cost.[78] But in 2025, residential customers were only 15.45% of the natural gas load in Coos County.[79] In addition, these costs were incurred to support industrial economic development placing them primarily on residential customers does not seem fair. Finally, the original agreement said that Coos County customers should continue to pay an adjusted surcharge to pay for the remaining cost of the CCDS. While there are so few customers, this might be problematic, but relieving them of any responsibility does not seem to fair.

IV. BURDEN OF PROOF

Q. Did NWN consider alternatives to replacement of the CPP sections after receiving the results of the 2021 study identifying landslide areas near the Coos County Pipeline?

A. The record does not support a finding that NWN considered any alternatives. Already this pipeline's cost and repairs have exhausted the budget of the County. Under NWN's solution these ongoing costly repairs will be pushed onto its ratepayers. The Company and County should first have to fully investigate alternatives and should not be given carte blanche to add new segments of the pipe that will remain in base rates for decades – even under emergency conditions.

[78] *See* NWN/101 Kravitz-Walker/2.
[79] CUB/305 Jenks-Dougan/115-117.

Q. Has the Company met its burden of proof that it should be allowed to recover the $12 Million CCP replacement costs?

A. Under ORS 757.210(1)(a), NWN bears the burden of showing that a proposed rate is fair, just, and reasonable. While, this is a difficult situation, that does not mean that this burden is lowered or that NWN's proposal is by default fair, just and reasonable. Based on the current load in Coos County, it is not economic for the system to continue to put millions of dollars into supporting this project. And to the degree this is being done for economic development and jobs in Coos County, this is not a basis for the Oregon PUC to raise rates to residential customers throughout its system.

Q. Is this ARM the appropriate place to recover these costs?

A. Single-issue ratemaking presents certain risks and shortcomings in the regulatory process, and adds increased risks to customers that rates depart from being cost-based and subject to the normal reviews for overall reasonableness.[80] For this reason, before the Commission can authorize cost recovery under this ARM, NWN must demonstrate that circumstances *warrant an exception* to typical rate recovery, including that the benefits of using an ARM approach justify its use when compared to the detriments associated with it.[81]

When presented with a similar question of the standard for recovery of pipeline replacement in a single-issue mechanism, the SCRM, the Commission found it would "require more than a showing that the projects are related to safety. In other words, we do not deem an SCRM to be appropriate for all safety-related costs."[82] Likewise, before

[80] Order No. 20-015 at 11.
[81] *Id.*
[82] *Id.* at 11-12.

approving this ARM for recovery of the CCP investments, NWN must identify that this mechanism is necessary for this recovery, *i.e*., "whether the company would be able to complete the necessary investments and achieve cost recovery in a reasonable manner under traditional ratemaking, or if recovery of incremental costs between rate cases is needed to ensure the company has the ability and incentives to complete those investments in an appropriate timeframe."[83] While there may be urgency to *mitigate* the landslide risk, the record does not support transposing that urgency to the *recovery* of the pipeline replacement costs outside of traditional ratemaking.

For example, NWN has not demonstrated that it lacks the incentive or ability to complete the CCP projects without use of the ARM. NWN has maintained and operated the CCP in the past absent use of an ARM. And NWN has replaced pipeline on its system in the past without use of an ARM. As NWN testifies, these CCP projects are likely to be ongoing phases of pipe replacement projects as the pipeline is located in a landslide area.[84] We also note that NWN seems likely to file one or more future rate cases in timeframes that make it workable to review the investments in those proceedings. These are the same factors the Commission considered when it denied Cascade's recovery in Order No. 20-015. Under this same reasoning, the record here does not support a finding that the ARM is superior to relying on traditional ratemaking approaches for the associated cost recovery of the CCP.[85] The Commission can both acknowledge the Company's decision to undertake these projects to ensure safe and reliable service while also finding that the record does not

[83] *Id.* at 12.
[84] CUB/305/Jenks-Dougan/120.
[85] *Id.* at 13.

support that specialized ratemaking treatment of an ARM for the capital investment associated with this pipeline replacement.[86]

V. ALTERNATIVES

Q. Given all of this, what does CUB recommend?

A. Because of the complexity of this situation, CUB offers three potential options for the CCP and one proposal for the CCDS. We admit that this feels like an impossible situation. Per findings from SB 32, communities should cover the costs of gas expansion that supports their economic growth. NW Natural ratepayers should not be on the hook to remediate a pipeline and a distribution system that was based on faulty, misinformed data and that ultimately should not have been built in the first place. But it was built, customers did pay, and - now because of NW Natural's delay in addressing landslide vulnerabilities identified 4 years ago – the pipeline and energy security in Coos County are at serious risk.

CCP

CUB offers three potential paths forward to collect the costs associated with the CCP. While none of these are perfect, and will require further discussion, we offer them for consideration:

- **<u>Option 1: Decommission the pipeline.</u>**
    - The first option CUB proposes is to decommission the pipeline. This option is supported by public comments across the related dockets.[87] CUB recognizes that an unanticipated closure of the pipeline would have significant negative effects on the entire region and that is not our goal. In this option then, the pipeline will be decommissioned after a 5-7 year grace

[86] *See Id.* at 14.
[87] *See* CUB/318 Jenks-Dougan; CUB/319 Jenks-Dougan; CUB/320 Jenks-Dougan.

period. In that time, the Company, the County and local electric utilities will create a strategy to fuel switch customers quickly and cost effectively. Funding to recover the costs of decommissioning the pipeline will be collected from ratepayers for a period to be determined by the Commission, which could look something like the fund to pay to decommission the Klamath Falls dams, whereby there was an interest-bearing trust account to pay for the decommissioning costs and customer contribution cap on how much customers pay towards decommissioning (see UE 219).[88]

CUB finds this option reasonable as there is no indication that the $12.4 million requested for landslide remediation will be a complete solution to landslide risk. Additionally, as demand in the County is low, and too low to recover landslide remediation costs from County ratepayers alone, the prudency of keeping this pipeline in operation is questionable.

- **Option 2: Split remediation cost recovery between rate payers and the Company.**

In this option, ratepayers pay 50% of the $12.4 million in cost recovery and the Company pays the remaining out of shareholder profits, and/or charges to Coos County customers or taxpayers. The costs would be allocated to customers based on the load that is serving Coos Bay, updated each rate case. Figure 2 below shows the allocation for 2025.[89]

[88] *See* CUB/321 Jenks-Dougan and CUB/321 Jenks-Dougan.
[89] CUB/305/Jenks-Dougan/115-117

Figure 2 costs based on the load that is served by these investments[90]

Rate Schedule	percent of cost
02R	15.46%
03C	24.76%
03I	2.32%
27R	0.00%
31CSF	0.62%
31ISF	2.79%
32CSF	7.47%
32CSI	9.73%
32ISF	0.84%
32ISI	36.02%

CUB feels this option is reasonable as the Company has yet to take *any* risk in the maintenance of the pipeline, and these risks should not be put solely on customers. CUB would also recommend a caveat that the amount recovered from customers is capped at $6.2 million Any additional maintenance needed on the pipeline would need to be brought to the Commission and intervening parties in a GRC to determine next steps.

If this option is chosen, CUB also recommends two additional requirements. First to avoid stranded costs, CUB recommends that the useful life of the replacement pipe be aligned with the useful life of the CCP itself and these costs would be amortized over the life of the CCP. The Company has shared that the depreciation estimates for the newly installed portion of the pipes is 67, while the entire pipeline itself only has a 29-year life.[91] If the pipeline's life ends in 29 years, that will then limit the useful life of the new additions. Thus, the lifespan of the current pipeline must be used for the

[90] CUB/305/Jenks-Dougan/115-117.
[91] *Compare* CUB/305 Jenks-Dougan/118 (noting the depreciable life of the CCP is 50 years and was placed into service in 2005) *with* CUB/305 Jenks-Dougan/123 (noting 67 and 80-100 year lives for replacement).

lifespan of the group depreciation, not the average between the useful life of the replacements and the pipe. Second, the Company should be required to produce an independent study which estimates the full cost of repairing and maintaining the CCP for the next 29 years. The study should be submitted to the PUC and parties to this case by January 1, 2028.

- **Option 3: The Company pays for the remediation costs in full through shareholder profits.**
  - In this option, the Company covers the full cost of remediation through shareholder profits. The Company has stated several times that this is an issue of environmental justice, energy resiliency, safety, and economic development. But this pipeline also allows NWN to sell gas to customers in Coos County, increasing Company revenues. The Company is also proposing to spread these costs over 67 years so the cost per year is small. Thus, we feel it is reasonable for the Company to invest financially in achieving this. CUB understands that this option is likely the least desirable to the Company but there is little evidence that this investment is cost effective for the system.

CCDS

For the CCDS, CUB recommends that the Coos County surcharge be maintained but adjusted for inflation. It was proposed in 2003, so today it would be 3.55 cents/therm. CUB recommends that it be updated for inflation in every GRC. For the remainder of the costs, CUB proposes that they be allocated to customers classes based on each class's share of the load in Coos County. More than 20 years ago in UG 152 CUB argued that the ideally these costs would be allocated to customer classes based on the projected load for that class but we

had no faith in the Coos County load forecasts that NWN was projecting.[92] Today we have the knowledge to allocate these costs based on the load that is served by these investments.[93] This is shown in Figure 2 above.

VI. CONCLUSION

Q. Please summarize testimony and your recommendations.

A. In 2003, it was predicted by stakeholders in UG 152 that the surcharge on Coos County customers would never be enough to recover costs or O&M for the pipeline due to low demand. 20 years later, we clearly see this was not just a prediction but reality – and the County and the Company has been unable to maintain the pipeline. To avoid re-litigating the past, and deal with the situation at hand, CUB has proposed three options, and recommends:

- Adopt Options 1, 2 or 3 as discussed above regarding the CCP.
- Update the CCDS surcharge based on inflation and allocated based on historical rate class usage.

Q. Does this conclude your testimony?

A. Yes.

[92] CUB/303/Jenks-Dougan/29.

PUBLIC UTILITY COMMISSION OF OREGON

COOS COUNTY DISTRIBUTION SYSTEM STIPULATION

NW Natural

Joint Direct Testimony of
Messrs. Dennis L. Henderson and Donald W. Schoenbeck,
and Ms. Nikki Whitty

March 2003

DOCKETED

Q. Please state your names and positions.

A. My name is Dennis L. Henderson. I am employed by Northwest Natural Gas Company ("NW Natural") as the General Manager of the company's Industrial-Commercial Business Solutions Department. I have previously filed testimony in this docket.

My name is Donald W. Schoenbeck. I am a principal of Regulatory & Cogeneration Services, Inc., which is employed as a consultant in this docket by the Northwest Industrial Gas Users ("NWIGU"). My qualifications are attached as Exhibit 1509.

My name is Nikki Whitty. I am one of three elected County Commissioners for Coos County, Oregon.

Q. What is the purpose of your Joint Testimony?

A. The purpose of our Joint Testimony is to describe and support the Stipulation Relating to the Coos County Distribution System (the "Stipulation") between NW Natural, NWIGU, and Coos County (together, the "Parties"). *See*, Exhibits NWN/1510 – 14.

Q. Please describe the background for this Stipulation.

A. Pursuant to Commission orders issued in 1965 and 2000, NW Natural holds exclusive rights to provide natural gas service in Coos County under the Territory Allocation Law, with the exception of the City of Bandon. The company presently provides propane service in Coos County. The 1999 Oregon Legislative Assembly approved funding for Coos County to construct a gas transmission

Rates & Regulatory Affairs
NW NATURAL
220 N.W. Second Avenue
Portland, Oregon 97209-3991
1-503-226-4211

pipeline that would route natural gas from the Williams pipeline, at a point near Roseburg, to the south coast. Coos County voters authorized general obligation bonds to cover the balance of the cost of construction.

On July 30, 2001, NW Natural and Coos County entered into a Transportation Service Agreement under which NW Natural agreed to construct certain minimum distribution facilities on a schedule designed to get gas to customers soon after the County's pipeline is completed. NW Natural will serve its distribution customers by transporting its own gas through the interstate pipeline, purchasing gas transportation services on the County's pipeline, and then delivering gas on its local distribution system to customers under appropriate tariffs. NW Natural may also provide local gas transportation services to industrial customers, from the County pipeline to the customer's facilities. The Agreement contains several conditions precedent to NW Natural's obligation to construct a distribution system, including Commission approval of the Company's proposal concerning statewide rate treatment of the initial investment in Coos County distribution.

On December 31, 2001, NW Natural filed a request for statewide rate treatment of its Coos County investment. The request was docketed as UG 147 but was converted, at the Commission's request, to a declaratory ruling petition that was docketed as DR 30. Through most of 2002, the parties to DR 30 participated in workshops, stipulated to a single set of assumed facts, and briefed the legal issues. When a parallel application, Docket UA 93, was denied

Rates & Regulatory Affairs
NW NATURAL
220 N.W. Second Avenue
Portland, Oregon 97209-3991
1-503-226-4211

in October, the Commission held DR 30 in abeyance pending notice from NW Natural on whether it wished to continue DR 30. NW Natural delivered a notice of its intent to continue DR 30 on November 4, 2002. Subsequently, NW Natural, NWIGU, and Staff discussed the possibility of resolving the Coos County rate proposal in the context of NW Natural's anticipated general rate case. On November 25, 2002, NW Natural filed a request with the Commission to hold DR 30 proceedings in abeyance. On November 29, 2002, NW Natural filed an application for a general rate revision and included its Coos County rate proposal. The DR 30 docket was closed on December 11, 2002 and an expedited schedule for the Coos County issue was established in this rate case on January 10, 2003. The Parties reached agreement on the terms of the Stipulation at the end of February.

Q. Please summarize the Stipulation.

A. The Stipulation covers the same issues set forth in NW Natural's prefiled testimony, Henderson, NWN/1500. The Stipulation defines the scope of costs included in the initial investment; the Parties support the Company's proposal to place the revenue requirement associated with that initial investment into rates, effective with the distribution system's in-service date, subject to audit and review procedures. The Parties also support the Company's proposed mechanism for collecting a surcharge from Coos County sales customers to recover the costs of transportation capacity on the County's pipeline. Subject to certain conditions, the Parties support collection of the balance of such costs, after the surcharge,

Rates & Regulatory Affairs
NW NATURAL
220 N.W. Second Avenue
Portland, Oregon 97209-3991
1-503-226-4211

from all Oregon sales customers. Finally, the Company agrees that, following initial construction of the distribution system, it will extend natural gas to Coos County customers according to Schedule X, the Company's line extension policy.

The Stipulation represents a negotiated compromise among the Parties. Thus, the Parties have agreed that no Party shall be deemed to have approved the facts, principles, methods, or theories employed by any other in arriving at the Stipulation, and that the terms incorporated in the Stipulation should not be viewed as precedent in subsequent proceedings. In addition, the Parties have the right to withdraw from the Stipulation if any material part is rejected by the Commission, and the Parties remain free to pursue any appropriate course of action with respect to any issue or matter in this proceeding that is not covered by the Stipulation.

Q. What do the Parties recommend regarding the Stipulation?

A. We recommend that the Commission admit the Stipulation into the UG 152 record and adopt the Stipulation in its entirety in determining the rate treatment of NW Natural's initial investment in a Coos County distribution system.

Q. Does this conclude your Joint Testimony?

A. Yes.

PROFESSIONAL EXPERIENCE

Mr. Schoenbeck was employed at a large Midwest investor-owned electric and gas utility from 1972 to 1980. While in the transmission and distribution function of the utility, Mr. Schoenbeck was responsible for various special studies related to end-use energy consumption, transformer load management, distribution line configurations, and statistical sampling. In the rates function, he assisted in the preparation of electric, gas, steam, and water tariffs and rate filings for presentation to the several state regulatory commissions and the Federal Energy Regulatory Commission. Upon transferring to the corporate planning function, Mr. Schoenbeck developed computer programs that forecasted various corporate financial statements used by the officers of the company, board of directors, and financial rating agencies.

Mr. Schoenbeck has been a consultant in the field of utility regulation since 1980, offering a broad base of experience in various natural gas, electric, and cogeneration matters. His responsibilities have included:

* power cost forecasting
* avoided-cost pricing
* contract negotiations for gas and electric services
* natural gas storage, transportation, and balancing provisions
* siting and licensing proceedings
* computer model simulation
* capacity need determination
* rate case proceedings involving deregulation, decoupling, revenue requirement determination, cost-of-service and rate design issues
* audits of utility power costs.

WITNESS EXPERIENCE

Mr. Schoenbeck has appeared as an expert witness before the state regulatory commissions of Alaska, Arizona, California, Delaware, Illinois, Montana, Nevada, North Carolina, Ohio, Oregon, Washington, Wisconsin, and Wyoming. In addition, he has presented testimony before the Bonneville Power Administration, the Federal Energy Regulatory Commission, the National Energy Board, publicly owned utility boards, and in court proceedings in the states of California, Washington and Oregon.

EDUCATIONAL BACKGROUND

Mr. Schoenbeck holds a Bachelor of Science degree in Electrical Engineering and a Master of Science degree in Engineering Management from the Universities of Kansas and Missouri, respectively. In addition, he has completed all the course work for a Master of Science degree in Nuclear Engineering.

Public Utility Commission of Oregon
Administrative Hearings Division

BEFORE THE PUBLIC UTILITY COMMISSION
OF OREGON

UG 152

In the Matter of NORTHWEST NATURAL GAS COMPANY Application for a General Rate Revision	Stipulation Relating to the Coos County Distribution System

This Stipulation is entered into between Northwest Natural Gas Company ("NW Natural"), the Northwest Industrial Gas Users ("NWIGU"), and Coos County (together, the "Parties"). The purpose of this Stipulation is to resolve all issues between the Parties relating to the treatment, in this Docket, of NW Natural's investment in a Coos County natural gas distribution system (the "CCDS").

The terms and conditions of this Stipulation are set forth below.

1. **Rolled-In Rate Treatment**

The Parties agree to accept and support NW Natural's proposal to place the revenue requirement associated with the initial investment in the CCDS into rates effective with its in-service date, provided that the initial investment is subject to continuing audit by the Commission Staff and Parties to ensure that only actual, prudently incurred costs are recovered. "Initial investment" includes NW Natural's construction and associated costs, as well as operations and maintenance expense, incurred during the Initial Construction Period to build mains, service lines, and other distribution facilities and appurtenances in the cities of Coos Bay, North Bend, Coquille, and Myrtle Point, including a pipeline connecting the Coos Bay/North Bend distribution system to the North Spit industrial area. "Initial Construction Period" means the first 15 "construction months," or those months of the year during which weather conditions allow active construction to occur, beginning when NW Natural commences construction of the CCDS. The estimated cost of such initial investment is $12 million.

DOCKETED

2. Coos County Transportation Surcharge

The Parties agree to accept and support NW Natural's proposal to impose a $0.01-per-therm surcharge on Coos County natural gas sales customers (the "Coos County Surcharge"), to recover the costs of transportation capacity on the natural gas transmission pipeline owned by Coos County. The Coos County Surcharge is summarized in Rate Schedule 1G, Tariff P.U.C. Or. 23, as proposed in this Docket, and would apply to all sales service customers connected to the CCDS. The Coos County Surcharge may be adjusted annually at the time of the company's purchased gas adjustment filing, to reflect any increases or decreases in the costs of transportation capacity on the Coos County pipeline. Upon the abandonment of the Company's Tariff P.U.C. Or. 23, the provisions and conditions contained in Schedule 1G will be incorporated into the company's Tariff P.U.C. Or. 22.

3. Statewide Collection of Coos County Pipeline Demand Charges

The Parties agree to accept and support NW Natural's proposal to collect, statewide, any balance of Coos County pipeline demand charges not recovered through the Coos County Surcharge as part of NW Natural's annual purchased gas adjustment. Specifically, NW Natural would spread any such balance to all NW Natural's Oregon sales service customers in the same manner as other pipeline demand charges, as set forth in the company's filed Tariff, Schedule 169, "Purchased Gas Cost and Weighted Average Cost of Gas." The charge would apply to all Oregon sales service customers; it would not apply to transportation customers who do not otherwise pay pipeline demand charges to NW Natural through a tariffed rate.

Annually, in the purchased gas adjustment, NW Natural agrees to reassess the Coos County Surcharge to determine whether it is sufficient to recover NW Natural's cost of transportation on the Coos County pipeline. At the point any such assessment shows that the Surcharge is sufficient (the "Breakeven Point"), NW Natural agrees to terminate statewide recovery of the balance of the transportation costs from its Oregon sales service customers.

STOEL RIVES LLP
900 SW Fifth Avenue, Suite 2600, Portland, OR 97204
Main (503) 224-3380 Fax (503) 220-2480

Following the Breakeven Point, NW Natural's transportation costs on the Coos County pipeline would be recovered only from Coos County sales service customers, with no further recovery from Oregon customers outside Coos County.

4. Line Extension Policy and Tariff Application

NW Natural agrees that, following construction of the initial CCDS (as described and defined in Section 1), the company's line extension policy, as set forth in the company's Tariff P.U.C. Or. 22, Schedule X, and any successor tariff, will govern extensions of natural gas distribution service to potential gas customers in Coos County who request such service. Following construction of the initial CCDS, all of the company's sales and transportation service schedules set forth in Tariff P.U.C. Or. 22 will be made available to potential gas customers in Coos County who request such service.

5. General Terms and Conditions

(a) The Parties agree that this Stipulation represents a compromise in the positions of the Parties. As such, conduct, statements, and documents disclosed in the negotiation and discussion phases of this Stipulation shall not be admissible as evidence in any proceeding before the Commission or a court.

(b) The Parties agree that with respect to the issues covered in this Stipulation, this Stipulation is in the public interest and all of its terms and conditions are fair, just, and reasonable.

(c) The Parties will cooperate in submitting this Stipulation promptly to the Commission for acceptance and will support adoption of the Stipulation in testimony and argument submitted in this proceeding. The Parties may also offer into the record of this proceeding those portions of the record from Commission Docket DR 30 deemed relevant to support this Stipulation. If a hearing is scheduled for presentation of the Stipulation, each Party must make available a witness in support of this Stipulation. If the Commission rejects all or any material portion of this Stipulation or imposes additional material conditions in approving

STOEL RIVES LLP
900 SW Fifth Avenue, Suite 2600, Portland, OR 97204
Main (503) 224-3380 Fax (503) 220-2480

this Stipulation, any Party disadvantaged by such action has the right, upon written notice to the Commission and all parties to the proceeding within 15 days of the date of the Commission's Order, to withdraw from this Stipulation. If any Party withdraws from this Stipulation as permitted in this subsection, no Party to this Stipulation will be bound or prejudiced by the terms of this Stipulation, and each Party will be entitled to seek any remedy set forth in Oregon Administrative Rule 860-014-0085(6) or other applicable law, rule, or order; and in general to put on such case and pursue such course as it deems appropriate and the law allows.

(d) Execution of this Stipulation does not constitute an acknowledgment by any Party of the validity or invalidity of any particular method, theory, or principle of regulation, and no Party may be deemed to have agreed that any method, theory, or principle of regulation employed in arriving at this Stipulation is appropriate for resolving any issue in any other proceeding. No findings of fact or conclusions of law other than those stated in this Stipulation may be deemed to be implicit in this Stipulation.

(e) Each of the Parties reserves the right to respond in oral argument, file testimony, or pursue such course of action as it as it deems appropriate on any CCDS issue not covered by this Stipulation or on any other matter in this proceeding.

UG 152/CUB/100
Jenks/1

**BEFORE THE PUBLIC UTILITY COMMISSION
OF OREGON**

UG 152

In the Matter of Northwest Natural Gas Company's Application for a General Rate Revision	)))	Testimony of the Citizens' Utility Board of Oregon on Coos County Pipeline Costs

I am Bob Jenks, Executive Director of the Citizens' Utility Board of Oregon (CUB). My qualifications are set out in Exhibit 101.

I. Introduction.

NW Natural's request to include in revenue requirement the Coos County distribution system asks too much of the Commission while at the same time provides too little from which the Commission must make its decision.

First, NW Natural's request to the Commission is incomplete. By asking the Commission to address revenue requirement without addressing allocation of that revenue requirement, the Company undercuts the necessary process of setting "fair and reasonable *rates*." Second, the Company fails to make its case that the Commission should ignore current regulatory policies in order to allow NW Natural to make uneconomic, subsidized investments for the primary purpose of economic development. The Company does not provide the evidence or justification necessary to depart from established policy or to place the expansion in rates at all. Third, the Company's case to justify the Coos County line is seriously deficient. The Company's forecast study and the identification of costs are unsupported or unsupportable.

Rather than setting terrible precedent by ignoring working policies and creating a new policy of ad hoc decision-making, we should attempt to address particular problems by focusing on the particular circumstances within the context of existing policy.

The Company fails to show why the Commission should overturn traditional ratemaking for this project. So the Commission should look to its traditional ratemaking approaches to determine how to treat this project. First the Commission should protect customers from paying for a project that harms them, i.e. provides a "negative benefit." This can be best done by applying the line extension policy in this case. However, recognizing that the citizens of Coos County may have difficulty paying their share of the line extension policy before the project is built, CUB is willing to consider a method to help Coos County.

II. Establishment of fair and reasonable rates requires the setting of revenue requirement and allocation of costs.

NW Natural provided half a filing in this phase of UG 152. There are two parts to ratemaking: deciding whether a Company can get recovery of certain costs and deciding which set of customers should pay those costs. In this phase of the case, NW Natural is asking the Commission to decide that the Company is allowed recovery of certain costs, but to punt on a decision over who pays those costs for several months.

It is inappropriate to do what NW Natural asks. The fundamental requirement for Commission decision-making is to obtain "adequate service at fair and reasonable rates." By asking the Commission to make a revenue requirement decision without allocating it to customers, the Company departs from the obligation to undergo traditional scrutiny to

establish fair and reasonable *rates*.

While the Company might argue that the rate implications are small enough that it is doubtful that a full decision would not be "fair and reasonable," this is not correct. We don't know the rate impact without knowing how the Commission is allocating these costs. Just as importantly, the law requires that rates be *fair, not that rate impacts be small*.

The Company is asking the Commission to include in revenue requirement costs that are not economic and are being incurred to serve a significant volume of industrial load. But the Company is not asking industrial customers to share in the costs of this service. This raises a fundamental question of *fairness*. However, the NW Natural proposal attempts to hide this very issue. By not allocating the increase in the first phase, there is not an issue of fairness to judge.

Finally, this raises questions of process and rationality. It is impossible to appeal the Coos County distribution system revenue requirement decision based on a claim that the Commission has established rates that are not fair and reasonable, because rates have not been set. Moreover, no set of customers can claim to be harmed by the decision, since the costs may later be allocated to a different set of customers. After the final order in the second phase of the case allocating costs, a party could ask for reconsideration of the rate spread in that case, but it will be too late to challenge the decision to include Coos Bay costs in revenue requirement. Because ratemaking is a combination of revenue requirement and allocating that revenue requirement to create rates, an appeal or reconsideration of a rate decision must be allowed to explore both the

revenue requirement and the allocation and the connection between the two.

For these reasons, CUB opposes NW Natural's proposal to disassociate the revenue requirement from the rate spread. CUB agreed to allow the Coos Bay distribution system to be on a separate phase and to be considered separately from the rest of the rate case, but we believe that this requires full ratemaking for those costs.

III. A Review of NW Natural's case.

Simply stated, the Coos County distribution system, as proposed, is an economic development program subsidized by existing NW Natural customers. Traditionally, rates would not be increased for an economic development program, but NW Natural is asking the Commission to ignore the economic development aspects of the program that is driving these costs.

A utility ought to have a compelling case in order to convince the Commission to override traditional policy. But Northwest Natural offers little evidence and a weak case. The Company offers 16 pages of testimony along with 7 exhibits. An examination of this testimony and exhibits reveals that it contains critical flaws:

- Nowhere in its testimony does the Company make a reasonable attempt to fully identify the costs that this investment will require from the customers of NW Natural. By ignoring the costs associated with the required "aggressive marketing effort," and the cost of the required special contract discounts, NW Natural's testimony oversells the benefits of the investment.
- All of the revenue assumptions are based on load forecasts from a

marketing study that is overly optimistic. The Company fails to provide the analysis and assumptions that drive the marketing study. By discounting the overly optimistic study (based on NW Natural's own "study" which is not included in the record) NW Natural is admitting that the marketing study is flawed. Even with the discount, the assumptions are too optimistic.

- By asking that the Commission approve rolling in all costs associated with this project, the Company is placing residential and small commercial customers at risk for this project. If its costs are higher, if demand is lower, it is residential and commercial customers who bear this risk. The Company fails to provide any real discussion of these risks, or why it is appropriate for these risks to fall on its residential and small commercial customers.

The Company begins its case by saying that the testimony would do four things:

1. Provide background on the project;

2. Descibe the research the Company conducted and its projections of load;

3. Describe the rate treatment of the project; and

4. Discuss the application of the Company's line extension and other relevant economic policies.

A. Background on the project. NW Natural describes the background, including the legislature's approval of $20 million in lottery funds to cover part of the cost of a pipeline from Roseburg to the Coast, the Coos County residents approving a maximum $27

million bond to pay for the rest of the cost of that pipeline, and the Transportation agreement that NW Natural signed with Coos County which requires NW Natural to construct a distribution system, serve customers and provide transportation services for industrial customers who buy directly from the County.

This background, however, makes clear that the purpose is industrial economic development. The legislature's approval of lottery funds was because "the pipeline will enable Coos County to attract significant industries to locate in the area, thereby increasing opportunities for employment and additional economic activities that well be generated as a result of such industries." NWN/1500/p2. The transportation agreement with Coos County also makes clear that the purpose is economic development:

> "The parties acknowledge that one purpose of Coos County's Pipeline construction is to attract businesses to Coos County that will utilize natural gas in industrial operations. Accordingly, as outlined in this Article 8, the parties will cooperate to encourage industrial gas customers to locate in Coos County and to contract with NW Natural for gas distribution."
>
> NWN/1501/23.

Article 8 of the agreement goes on to require that NW Natural offer special contracts to new industrial customers. NWN/1501/24. This project is clearly economic development and while that may be an appropriate action for the legislature and an appropriate use of lottery dollars, this Commission does not have statutory authority to engage in economic development by imposing a "tax" on existing residential and small commercial customers to pay for the Coos Bay system.

NW Natural suggests that because the legislature allocated $20 million in lottery funds, that ratepayers outside of Coos County should also pay millions of dollars. But we

read the legislature's decision differently. We believe that the Legislature allocated the amount of money that the State was willing to pay to support the Coos Bay project. The customers of NW Natural, outside of Coos County, are part of the State of Oregon and have made their contribution through the allocation by the Legislature.

The transportation agreement with Coos County is notable for several reasons. It requires that NW Natural "shall spend at least $1 million in marketing gas service in Coos County generally." NWN/1501/9. This is the only reference in this case to the cost to NW Natural for marketing.

B. The research the Company conducted and its projections of load.

The Company presents several studies that project load on the new system. Load projections are critical in this case because they will tell us if the Coos County project is economically viable to begin with, and will tell us the size of the subsidy coming from existing customers. If the load projections are too optimistic and the actual load does not meet the projections, then the revenue assumed does not materialize and the cost to existing customers increases.

Mr. Henderson's summarizes these studies (NWN/1500/6-8) and includes them as a Forefront Economics study and update (NWN/1502 and NWN/1505), an ECONorthwest study (NWN/1503) and a summary load projection from NW Natural (NWN/1504). The ECONorthwest study simply uses the Forefront Economics study as an input in calculating benefits from constructing, operating and using the distribution system, but made no attempt to verify the load projections. NW Natural's summary load projection is based on its "own research in 1999 [where] the Company adjusted Forefront Economics' low scenario forecast downward by 30 to 70 percent."

NWN/1500/7.

The Company does not believe that the marketing studies included as Exhibits 1502, 1503, and 1505 are a good basis for projecting load. This leaves us with their own summary projection, Exhibit 1504. The Company says its projection is based on its own study of initial customer loads. However, the Company did not include its study in its testimony. The Company did not include its methodology. The Company did not include the study's assumptions. All it included was a one page summary of its study. NWN/1504. The Company's testimony and exhibits include the studies the Company rejected, but fails to include the one study that was actually used.

In addition, the Company's projection (Exhibit 1504) includes Bandon as if it were part of the planned distribution system. NWN/1500/7. But Bandon is not included in the actual distribution system, so, in the words of the Company "load for the actual distribution system would be somewhat lower" than the Company's projections. NWN/1500/7. It is unclear why the Company did not updated its load forecast to exclude Bandon, but we are left with a record that does not contain an accurate projection of load.

According to the Forefront Economics study, in 1998 Bandon represented approximately 11% of the single-family households. NWN/1502/9. Failure to remove those households from the Company's study overestimates usage by 11%. However, the impact of not removing Bandon from the Company's projections is even greater. Bandon is growing at an annual rate of 3%, which is 10 times faster than the remaining communities (0.3%). CUB Exhibit 102. Because new houses are much more likely to use gas than existing homes, not correcting its study to remove the growth of new homes in Bandon increasingly overstates demand throughout the 20-year projections.

It is necessary to test the Company's load projections. Because there is little growth expected in the communities that NW Natural will serve and rental housing is unlikely to convert to natural gas, the primary residential market for natural gas will be existing single-family, owner-occupied homes.

We know that in 1998 there were 14,953 single family homes in Coos Bay, Coquille, Myrtle Point and North Bend and that this figure is growing by 0.3%/year. NWN/1502/9. CUB Exhibit 103 shows the percentage of these homes that NW Natural is projecting will be served by gas in the next few years. Northwest Natural assumes that 7% will get service in the first year and 29% will get service by the 5th year.

Year	Northwest Natural's Market Share Projections for SF homes
1	7%
2	12%
3	18%
4	23%
5	28%

Is it realistic to expect that nearly 30% of all owner-occupied homes in this area will convert to natural gas in the next five years? CUB believes that common sense and analysis tell us that this is wildly optimistic.

Converting to natural gas is expensive. This docket is only about the backbone distribution system. That backbone does not get gas to people's homes. If you look at the maps provided in the Company's testimony, they show a backbone distribution system through the commercial and industrial centers of these communities, which does not deliver service on most streets where residential customers live. NWN/1501/33-37.

The Company is building a pipeline to the North Spit where some future industrial customer might locate and might desire to gas service, but it is not building a pipeline down the residential streets where people currently live. The Company's line extension policy (the Company assumes the Commission will apply the line extension policy at this point) will require that residential customers make a significant investment to hook up to the backbone that in most cases is blocks away. In addition, to convert, customers must invest in their on-premises equipment -- replacing their furnaces, hot water heaters and any other appliances that they wish to run off gas.

Currently gas prices are near record highs and the gas futures market is suggesting that the near-record high prices will be around for a while. While the cost of oil heat is also climbing, there currently is little incentive to switch from heating oil to natural gas. Electricity customers currently have electric heat provided by PacifiCorp's coal and hydro system that is likely to see relatively stable rates for the next few years.

Finally, this is a community that is not doing well economically. Unemployment is high. Incomes are relatively low. Where will customers get the money to convert to gas?

There are several elements to the residential market. First, NW Natural assumes that few multifamily and rental residences will convert initially, leaving single-family owner-occupied residents as the primary market. There are several elements to this market:

1. Propane-heated homes. These homes should be the easiest to get to convert. Natural gas has significant economic advantages over propane. And because propane homes will not need new ductwork or a great deal of new equipment, the change will not

be prohibitively expensive assuming that customers can afford the line extension costs. This represents 7% of the homes in the county. CUB Exhibit 104. Even if the Company gets all of these homes in the next five years, they must also get ¼ of all other homes.

2. Heating oil. Heating oil homes will convert at a much slower rate. While oil heated homes have central furnaces and ductwork, there is little current price advantage to oil heat. According to the Office of Energy $1.39 per gallon heating oil is the same cost per MMBtu as $1.00 per therm gas. Oil heat customers primary incentive to switch is not cost savings, but problems with underground storage tanks and the convenience of not having to order heating oil. Because these customers will require the expense of line extensions and furnace work, and will see little economic benefit, it is doubtful that conversions from oil heat will happen at a rapid pace. There is some evidence to suggest that over time as people have to repair and replace furnaces and underground storage tanks that there will be conversions, but it will happen slowly. Oil heat homes make up another 13% of the homes in the area. If between furnaces breaking and leaking storage tanks the Company got 5% of these per year (all in 20 years) this would still leave the Company with a total market share of 11% after 5 years, less than half of what the Company is projecting.

3. Electric heat. There are clear price advantages to gas over electricity, though new models of heat pumps will work well in Coos Bay and allow customers to get some of the advantages of more efficient heating systems without paying for the cost of line extensions. Electric heat customers make up 56% of the homes. However, many existing electric heat homes do not have ductwork -they use baseboard or ceiling heat – and installing ductwork requires a systematic remodeling of an entire home. While

natural gas would likely replace electricity in new homes, few new homes are being built in this area. Natural gas might save these folks money in the long run, but between new duct work, the sunk cost of existing furnaces, and the cost of the line extension, the short term costs of conversion would be too high for a significant number to convert quickly.

4. Wood. We are left with the households that currently use woodstoves as their source of heat. With gas prices rising, there is no evidence that we have seen to suggest that these customers will save money converting. It is also unclear what alternatives these folks already have but are not currently using. If they have electric heat, but use wood as a cheaper alternative (which is probably most likely considering that electricity is the primary fuel for home heating in the area), then they have all the barriers of other electric heated homes. Because of the cost of conversion and the fact that they already have wood as an alternative, it is doubtful that many will pay the money for conversion.

The load forecast was an assumed fact in DR 30 and was not subject to scrutiny in that case. Because the projected revenues from this system depend on load, this load forecast deserves serious investigation. As offered in its testimony, the Company's studies are insufficiently supported and contain unrealistic conclusions. NW Natural's claim that this system will eventually pay for itself is based on these studies.

If the Commission accepts NW Natural's proposal and rolls these costs into normal revenue requirement, then the existing customers are on the hook for the costs. If the "expected" load does not show up, we pay even more. Because the Company controls when rate cases are filed and the Company can ask for a deferred account between ratecases for discrete cost items, customers are the ones taking the risk for this project and the risk that loads will not be as great as projected.

C. *The rate treatment of the project.*

Mr. Henderson describes the rate treatment for this project in pages 8 to 12 of his testimony. He begins by stating that NW Natural will incur three types of cost: construction, ongoing operations and maintenance expense, and the costs for gas transportation. His testimony does not mention the costs associated with marketing the gas, which the Company promised the County would be at least $1 million or the costs associated with special contracts that the Company has pledged to negotiate. NWN/1501/9 and NWN/1501/24.

1. The Cost of Construction. The cost of construction is estimated at $12 million. According to the Company:

> "NW Natural requests that the investment in the initial Coos County distribution system be included in rates effective with its in-service date, which we project will occur during the test period. The Commission staff has agreed to conduct a continuing audit of the project to ensure that only the actual, prudently incurred costs are included in rates. Once the initial distribution system is in service and the staff has completed its audit, NW Natural will ask the Commission to approve a special tariff schedule placing the costs in rates. Based on the estimated $12 million construction cost, the cost-of-service for this investment will add approximately $1.4 million per year to the Company's revenue requirement." NWN/1500/9.

The $12 million is only an estimate. The Company is asking for pre-approval from the Commission for all prudently-incurred costs of the project without actually knowing the real costs. Typically a utility that invests in a new capital project would absorb the costs of that project between the in-service date and the end of the next rate case. However, in this case Northwest Natural wants approval in advance so it can immediately place the costs in rates with a special tariff once the project is in service and

avoid the risk of regulatory lag. Customers are taking all the risks associated with this project. Why should the Company earn a return on equity for this project, if shareholders take almost no risk?

The Company's proposal creates significant problems. Assuming a construction cost of $12 million, NW Natural's presentation shows at best a marginal benefit. (Our analysis below shows that costs outweigh the benefits). If the Company wins pre-approval now, but the project ends up costing $15 million, the Commission does not get to revisit the analysis and decide that at $15 million, the project is not economic and turn it down. Instead the Company would get the entire $15 million. Customers could still try to show that the cost overruns were due to imprudent actions taken by the Company, but both customers and the Commission could no longer revisit the underlying benefit issue.

The Company is also including the cost of a pipeline connecting the Coos Bay/North Bend system to the North Spit, which is located on a peninsula west of Coos Bay. Currently there are no customers for the system on the North Spit. This is an area that the County is interested in for economic development reasons. If there are no customers for that section of the pipeline when it is completed, then the "used and useful principle" prevents it from being included in rates. According to the Transportation agreement with the County, the rate for an industrial customer locating on the North Spit will be based on the "lowest reasonably estimated bypass rate for connecting to the Pipeline." NWn/1501/26. In other words, residential and small commercial customers are being asked to pay for a pipeline to the North Spit specifically so a new industrial customer can "threaten" to bypass that pipeline and get a lower rate than is normally allowed, ensuring that residential and commercial customers continue to pay for this

industrial pipeline even when it is used and useful.

2. The Cost of Operation and Maintenance. The operations and maintenance costs are not described in Mr. Henderson testimony, nor detailed in his exhibits, beyond NWN/ 1506/1, which lists them at $418,000. The only discussion in testimony is a minimalistic description of this cost:

> "The forecast for Coos Bay O&M expense is $418,000. This amount will cover normal district office expenses, including customer acquisition, customers service, meter reading, and system integrity." NWN/200/8.

It is not clear if "customer acquisition" includes the marketing costs. The Forefront study talked about "aggressive marketing." NWN/1502/14. The transportation agreement with the County requires the Company during the first five years to spend $1 million on marketing. NWN/1501/9. NW Natural's testimony on marketing suggests that they plan to increase their marketing costs by $260,000 from 2001. NWN/600/8. Is this due to Coos County? Does the $418,000 for O & M include marketing costs or not? The testimony does not sufficiently enlighten us. The Company never explains how the marketing costs will be incorporated.

3. Transportation Costs. The Company is proposing to limit Coos County customers' transportation charge to 1 cent per therm, arguing that any amount above this will be a disincentive to those customers to convert to gas. NWN/1500/10. (To put this in perspective, the Company also argues that charging existing customers 1/3rd this amount to subsidize this project is so small as to be insignificant.) Transportation costs above this will be absorbed by the remaining customers, through the annual PCA mechanism.

4. Other Costs. The Company does not mention the costs of special contracts.

Under the transportation agreement with the County, new industrial load is eligible for special contracts. This will reduce the revenue from these customers. NW Natural claims that the Coos County project "is unlikely to earn its rate of return until approximately the twelfth year of service." NWN/1500/15. Does this analysis include the cost of special contracts discounts? Special contracts are typically offered to customers who have competitive alternatives. A special contract is supposed to make some contribution to distribution costs, but a lower one than under the tariffed rated. We cannot tell if the Company included these discounts in their model for this project.

The following is a more complete listing of the charges that the will fall on existing residential and small commercial customers of NW Natural as a result of this project:

*The projected cost of the pipeline.

*Any cost overruns.

*Costs (reduced revenues) from any shortfall on load projections.

*Transportation costs that are not covered by the $0.01/therm surcharge.

*O&M costs of the Coos County system.

*Marketing costs.

*Special contract discounts.

D. The Company's line extension and other relevant economic policies.

The Company argues that its line extension policy is not applicable in this case. Mr. Henderson argues that the Coos County service territory is unique because of the state and locally funded transmission pipeline, and that the proposal is "economically sound." NWN/1500/14. While the Company may consider the proposal economically

sound on the basis of what is proposed in this case, the proposal places the risks onto the residential and commercial customers. As we will show in the next section, based on what we know and don't know, the investment is not economically sound. If the pipeline costs more than projected, if the loads are lower then projected, if more marketing costs are included and if industrial discounts are taken into account then the project is not economically sound.

Which brings us back to the line extension policy. The reason we have a line extension policy, as articulated by Company witness Dr. John Hanson, is to ensure that growth is profitable. The policy protects existing customers from uneconomic investment. Under that policy the contribution from existing customers is fixed. If there are cost overruns, or load does not materialize, then existing customers are not left with their wallets exposed. The Company's rolled-in approach by design reverses this policy and places all the risk onto existing customers.

Mr. Henderson fails to make any mention of how the line extension policy protects existing customers or why it is appropriate to change policy and place all the risk on residential and small commercial customers. NW Natural has completely failed to carry the argument that standing policy to protect existing ratepayers should be thrown out.

IV. CUB's Conclusions.

A. Purpose is economic development.

An examination of this proposal makes clear that the real purpose is economic development. However the Public Utility Commission is not an economic development

agency and does not have authority to set economic development rates or create subsidies for the purpose of economic development. We have already discussed some of this in our review of the Company's proposal:

> *The legislature clearly was pursuing economic development when it made the decision to commit state funds to this project.*
>
> *The transportation agreement clearly states that a goal is economic development.*
>
> *The pipeline to the North Spit, which is part of the proposed distribution system, leads to no existing customer and has no purpose other than economic development.*
>
> *The requirement in the transportation agreement that NW Natural provide new industrial customers with special contracts is clearly part of the County's economic development strategy.*
>
> *The study by ECONorthwest (Exhibit 1503) shows that the motivation behind this is economic development.*

The ECONorthwest study is not just a clue as to the motivation behind the investment in the distribution system, but shows that the distribution system investment will create real, tangible and significant economic development results. Coos County would receive benefits far and beyond the cost of their bond and the cost of the Company's line extension policy:

> *Construction of the pipeline will add $6.9 million to personal income in the local community.*
>
> *Construction of the distribution system will contribute 95 person-years of employment and $2.3 million in personal income to the local community.*
>
> *The availability of natural gas for industrial development will provide a benefit of $1.6 billion in personal income and $253 million in business income over the next 20 years.*
>
> *Lower energy costs will save businesses $3.4 million over the next 20 years.*

*Coos County will receive an additional $79.3 million in prop*erty taxes.
NWN/1503/2-3.

These are laudable economic goals for Coos County, but there is no justification for why a subset of Oregon residents and businesses outside of Coos County, i.e. customers of NW Natural, should subsidize this county's business plan through utility rates.

The Company is asking the Commission to do something extraordinary. Normally a natural gas utility in Oregon would not make an uneconomic investment in a distribution system. Northwest Natural refers to this as "profitable growth":

> "Ratepayer benefits can be produced by growth if customer growth adds more to revenue than to the cost of serving new customers. This is the case for NW Natural. NW Natual has managed growth over a decade so that it is beneficial to both shareholders and ratepayers. Our growth policies are contained in our Main Extention tariff. Customers receive the benefits of profitable growth whether or not a general rate case is filled. Effectively, profitable growth allows an LDC to absorb cost increases or margin revenue losses without the need for formal rate relief."
> NWN/600/11

Traditionally, the Coos County distribution system investment would be covered by the Company's line extension policy. But this investment is not profitable growth, therefore a ratecase is required in order to ensure that the costs of this unprofitable growth fall on existing customers. So, in order to allow it to make an investment in "unprofitable growth" and because NW Natural would not normally be allowed to make investments that do not provide a net benefit, the Company is asking that the Commission ignore the line extension policy. This investment fails to provide net benefits to the system. Under traditional ratemaking it should not be allowed.

B. Are there customer benefits?

The real question that needs to be asked is do existing customers of NW Natural who are being asked to pay for this investment receive a benefit? Customers should not be made to pay for utility costs that provide a harm or no benefit to the utility system.

This is often referred to as the net benefits analysis. Ironically the net benefits analysis began with natural gas. When gas utilities were switching from manufactured gas to natural gas, commissions began evaluating the new investments in natural gas based on whether they provided a net benefit to customers. This is the same situation we find ourselves in today. Does the cost of bringing natural gas to Coos County provide a net benefit to NW Natural customers?

Even NW Natural argues that this is an appropriate test for adding new customers to the system generally: "In simple terms, the 'net ratepayer benefits' test is an evaluation of the financial performance of NW Natural's investments in new customers." NWN/600/Hanson/ 9.

However, NW Natural fails to apply this test to its investment in new customers in Coos County. Why? Because this investment cannot pass a net benefits test. Instead, NW Natural devises a new test of whether an investment is economic:

> "Q: Will the expansion of service into Coos County be economically sound?
>
> A: Yes, based on the proposal we are presenting in this case. Roll-in is necessary because we expect the customer base in Coos County to grow relatively slowly, so that the system is unlikely to earn its rate of return until approximately the twelfth year of service."

This answer says nothing about whether the project is economically sound, it only states a rate basing truth. Rate base and return on rate base are

front-loaded. In the first 12 years of an item being in rate base customers pay substantially more than they do in the next 12 years. CUB Exhibit 105 provides an example of a $20 million investment that will be rate based over 20 years. The costs of the plant are collected at $1 million per year with the Company earning a 9.5% rate of return on the unamortized plant. To ratepayers the total cost of the plant over 20 years is $38.05 million. However, the cost to customers in the first 12 years is $27.4 million. During the first half of the plants life, customers pay more than 62% of the costs associated with rate basing that plant.

For the Company to say that after 12 years the revenues will be greater than the costs is based on an accounting reality, but it is not a reasonable description of an "economic" investment. Even so, it is probably not accurate. It is based on unrealistic assumptions about load in the County, it does not seem to include the $1 million commitment to marketing and it does not include the cost of the special contract discounts the Company has committed to providing new industrial load in Coos County.

The reason the Company does not give a straight answer to the question of the whether this project is "economically sound" is that the Company knows that this project is not. In answering data requests in DR 30, the Company admitted that the project even over the next 30 years is a loser, would not provide benefits and would require a subsidy from existing customers:

> "Over a 30-year horizon, the difference between Coos Bay revenue requirement and the revenues generated by Coos Bay customers would lead to a levelized Oregon rate impact of about $.00049 cent per therm."
> CUB Exhibit 106.

This number may sound small, but the point is significant. First, the calculation is

based on the assumptions of costs and revenues that are optimistic. Second, it assumes that all customer classes are paying for the subsidy, when in fact the Company is asking that only residential and small commercial customers pay for the subsidy. Finally, a 30-year levelized per therm cost hides the real number. That number can be seen in CUB Exhibit 107.

The net present value for total revenue requirement is $29.9 million. The net present value for Coos Bay revenues is $ 23.7 million. The subsidy necessary for this project is $6.2 million.

Remember the Company stated that ratepayer benefits come from growth "if customer growth adds more to revenue than to the cost of serving customers." NWN/600/11. In this case the answer is growth in Coos County adds more costs than revenues.

In order to invest $12 million to build a Coos Bay distribution system, NW Natural is asking for a $6 million subsidy from residential and small commercial customers. Of course, because existing customers are taking the risk, the costs could be higher and/or the Coos Bay revenues could be lower, and therefore the subsidy could be higher. The Company must have meant that this project is economically sound for shareholders. Existing customers will not only subsidize Coos County customers, by enlarging NW Natural's service territory and rate based assets, existing customers are funding additional benefits for shareholders.

V. CUB's proposals.

A. *CUB's proposal for rate treatment.*

1. Transportation Costs.

NW Natural is proposing that Coos County customers receive a surcharge of $0.01 per therm to pay for transportation on the County's pipeline which NW Natural says "is NW Natural's cost of transportation on the County pipeline." NWN/1500/11. However, because the contract with the County has minimum charges that NW Natural will have to pay even if the load in Coos County is not high enough to cover the transportation costs, NW Natural is proposing that the existing customers pay this fee through a surcharge added to the normal PGA mechanism. The Company attempts to minimize this by stating that the:

> effect of statewide demand charges is extremely small. Even if the total possible transportation costs (approximately $200,000 per year) were included, the effect on rates would amount to only 0.00031 cents per therm.
>
> NWN/1500/12

The effect may be small, but why should customers who are not using the Coos County pipeline be paying transportation charges for that pipeline at all. The Company's answer is that if they were to charge Coos County customers more than $0.01 per therm, "it would threaten the viability of the entire project." NWN/1500/12. However, the Company offers no evidence to support this statement.

The Purchased Gas Adjustment mechanism is an annual rate change that exists because the variations in the cost of gas from one year to the next is too great a risk for the Company. The Company is now trying to use this mechanism to place a small risk associated with this project onto its residential and small

commercial customers. The shareholders want to earn their ROE on this investment but do not want to take any risk – even a risk whose maximum exposure is $200,000!

CUB could see a way to have the customers of NW Natural help pay for the costs of the pipeline that the Company will build (see next section). But we will not support charging non-Coos County customers O&M costs relating to a pipeline that is owned by the County. We agree the cost is relatively small, but believe that it is unfair for the shareholders of NW Natural to ask customers to bear the entire risk of all aspects of this project. This cost should be denied outright. The Company then has several options:

*it can raise the surcharge for County customers,

*it can ask the County to renegotiate these costs,

*or recognizing that the return on ratebase that shareholder will receive from this project are many times greater than this cost, and it can absorb these costs until demand grows on the system.

2. Distribution Pipeline Costs.

When considering how to allocate the costs of the pipeline, it is important first to identify what costs we are talking about. The Company's testimony is based on a pipeline that costs $12 million, but that is only an estimate. If the Commission approves adding pipeline costs into rates it must specify the amount that is being considered. The Company made the decision to seek pre-approval of the cost of the pipeline in order to avoid the normal regulatory lag between a Company making an investment and the Commission issuing an order allowing it in rates. This significantly reduces risk to the Company. However, in doing so the Company cannot be allowed to turn approval of the

project into a blank check, for costs above $12 million. Seeking pre-approval to avoid the risk of regulatory lag, creates a new risk of cost overruns that make the costs of the project greater than the pre-approval. If the Commission believes that this investment is reasonable at $12 million, that decision cannot mean that the Commission believes the investment is reasonable at $15 million. At $15 million, the Commission might find the entire project to be unreasonable. The Company has offered no evidence to support a cost above $12 million. The Commission should state clearly that any approval is limited to the costs that the Company filed in this case and the Company takes the risk for any costs above that amount.

Secondly, the Commission has to make a decision as to the North Spit pipeline. There is real doubt as to whether that section will be used and useful when completed. Ratemaking principles require that investments be used and useful before being added to rates. Oregon law requires that new investments be "presently used to serve customers" before they are added to rates. Any order from the Commission should clarify that the North Spit pipeline will not be added to rates until the Company can demonstrate that it is used and useful.

The Company argues in this case that its line extension policy is what ensures that new growth is profitable and provides a net ratepayer benefit. We agree. That is why we believe that it is the appropriate model for how to recover costs in this docket.

Under the line extension policy, the contribution from the Company (or existing customers in this case) is equal to the expected net revenues for the first five years of operation. In the case of the $12 million Coos Bay distribution system, this contribution from existing customers would be approximately $6 million. (This figure was arrived at

in DR 30.) The County (or its industrial, commercial and residential customers) would have to come up with the other $6 million. This works out well, since as we stated above, the expected subsidy under the Company's proposal is $6.2 million, so using the line extension policy will eliminate that subsidy.

We recognize that asking individual customers to pay for this before hooking up to the system becomes difficult. However, one option is to have the County pay this amount. Coos County voters authorized bonds for $27 million to pay for the County's share of the transportation pipeline, but the actual costs are expected to be $18 million. NWN/1500/14. This suggests that County residents are willing to spend an additional $9 million in order to receive natural gas service. The ECONorthwest study showed that the economic benefits to the County over the next two decades are nearly $2 billion. Asking County residents who stand to receive substantial benefits to share an additional $6 million in costs is much more sensible than asking remaining ratepayers, who receive no benefit to pay these costs.

However, if the County is unwilling to do so, we are willing to consider an agreement where the existing customers pay these costs, but are repaid over time by Coos County customers. CUB attempted to calculate what it would take for Coos County customers to pay back this amount over a 20-year period, but found the information on the record in this case was so flimsy that we could not complete the analysis. The forecasts the Company has included on the record in this case and DR 30 vary widely, particularly when it comes to industrial demand. (One forecast predicted 1 million therms of industrial load, another forecast predicted 19 million therms.) But we do believe that the concept ought to be workable. During the first 7 years all customers

would pay the costs of the distribution system as Northwest Natural proposes. Coos County customers, however, would pay an addition surcharge (possibly a combination of a customer surcharge and a per therm surcharge). The Coos County surcharge would go to pay back the non-Coos County customers for the $6 million in costs that is Coos County's share under the line extension policy.

B. CUB's proposal for rate spread.

The Company has proposed that the entire cost of this investment be placed on residential and commercial customers. This is unfair.

The purpose of the pipeline is industrial economic development. The transportation agreement that Northwest Natural signed with the County makes clear that NW Natural is building this distribution pipeline so the County can use it to recruit new industrial customers, who will be given special contracts.

In addition, the pipeline is designed to go through the commercial and industrial parts of the communities, but there will still be a significant investment required to bring natural gas service to residential customers. The Company proposes that residential customers pay for the extensions needed to bring gas from this backbone to their neighborhoods through the Company's line extension policy.

The Company's projections for residential demand on this pipeline are overly optimistic. Even the Company seems to agree that the real purpose is to serve commercial and industrial customers:

> "the state's and county's purpose in bringing gas to the regions is to strengthen the local economy, and NW Natural sees potential for industrial and commercial load growth, in particular, once the distribution infrastructure is in place."

NWN/1500/15.

The Company's proposal to make residential and commercial customers pay for a project that is designed primarily to serve commercial and industrial load seems like a cynical attempt to get industrial customers to support the pipeline. And why should they not. They get commitments for special contracts, they get gas service, and someone else pays all the development costs.

This will be defended by pointing to the Company's Long Run Incremental Cost study (LRIC) in UG 152. This should not be used as the basis to allocate the costs of this pipeline for several reasons:

- The LRIC study has yet to be reviewed.
- This pipeline has nothing to do with the long run incremental cost of service for residential or industrial customers in Portland or Eugene. These costs are a direct subsidy that has nothing to do with the cost of serving the existing customers.
- The reason we use LRIC to help allocate some costs is that LRIC is related to the cost of service in a competitive industry. If the price of a product is above LRIC and there are no barriers to entry, new providers will enter that market, sell the product and drive the price to LRIC. The scrutiny of the PUC is supposed to substitute for the market discipline. Because all customers groups including residential customers are above LRIC, the Commission has failed to provide this discipline and all customers are paying rates that are above what the market would allow.
- In an actual market, these pipeline would not be built if it required such a

subsidy. Market discipline would drive the price to LRIC and no provider would be allowed to add the cost of uneconomic investments to rates that are already above LRIC.

- The Company's admits that its LRIC study should not be the sole element in determining cost allocation, that the "results must be applied with caution." UG/152/1300/4.
- Even when using LRIC, good cost allocation says that costs that can be demonstrated to be caused by a specific rate class should be allocated to that rate class.

Ideally we would apply these costs between customer classes based on the projected load for that class. This keeps with the principle of cost causality. The problem is that the Company's load projections are not accurate enough to be sufficient as a basis to allocate these costs. Therefore CUB proposes that costs be allocated on an equal cents per therm basis.

Contractor loses suit over Coos County gas pipeline

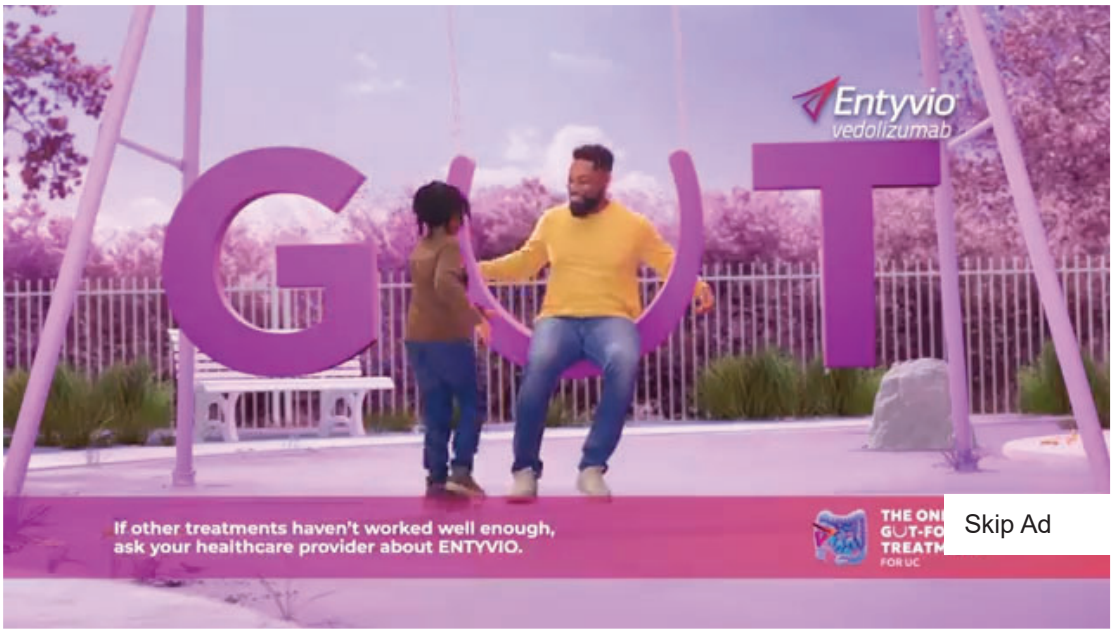
Published: Feb. 24, 2009, 1:40 p.m.

By Dylan Rivera, The Oregonian

MasTec Inc., the contractor fired not long after being hired to build a natural gas pipeline from Roseburg to Coquille, has been ordered to pay $1.5 million in penalties to the U.S. Treasury because of damage caused to pristine streams and rivers.

U.S. District Judge Michael Hogan issued the order despite finding that government agencies provided inadequate oversight of the $51 million project. And though the contractor violated the Clean Water Act, the judge said there did not appear to be serious environmental harm.

A MasTec attorney declined comment when reached by The Register-Guard newspaper Monday.



The project was dogged with problems since the summer of 2003, when work began on the 60-mile long, 12-inch pipeline. Crews filled streambeds with drilling spoils, threatening fish habitat. Regulators later discovered that project managers had not taken adequate steps to protect hillsides from erosion, leading to more sediment in fish spawning habitat.

Coos County terminated its contract with the Coral Gables, Fla.-based company in April 2004, and an Oregon firm finished the project later that year.

Until the project was completed, Coos County held the distinction as the largest county in the United States without natural gas service.

Coos County spent $35 million to build the pipeline over terrain that contractors described as some of the most rugged in the West. The line follows the old Wagon Road from Lookingglass near Roseburg west over the mountains through dense forest and under 188 streams.

Residents and environmental groups complained early and often about the project, contending that the state Department of Environmental Quality, the U.S. Army Corps of Engineers and Coos County were lax in their oversight of a project that crossed sensitive terrain, including dozens of parcels of private property.

Officials initially maintained that the project was on track and that state and federal clean water laws were being followed. But cost overruns and damage to pristine streams and rivers plagued the taxpayer-funded project.

The Oregon Department of Environmental Quality fined MasTec $205,000, then settled for $63,000. MasTec and the county sued each other in a case settled last year. The firm agreed to pay Coos County $8.7 million and dismiss its claims against the county, which totaled $14.5 million.

Then the Sierra Club, along with other environmental groups, filed suit in the case Hogan has now ruled on.

The $1.5 million fine fell well short of the amount sought by the plaintiffs. Their case was based in part on assertions that the company had saved $6 million by avoiding its Clean Water Act obligations. Hogan, however, wrote that MasTec lost $9.23 million on the project.

The lack of government oversight was another factor Hogan used in determining the size of the penalty. "In this case, there was a failure of all parties concerned," wrote Hogan, who grew up in Myrtle Point, south of Coquille.

MasTec is a leading communications and energy infrastructure builder. For decades the company grew under the leadership of Jorge Mas Canosa, regarded as the most powerful and politically influential Cuban exile in the United States and head of the Cuban American National Foundation.

Jorge Mas Jr. is chairman of the board of the company, whose stock is traded on the New York Stock Exchange, where shares were at $9.25 this morning, up 22 cents from Monday's closing price.

County to pay final penalties on natural gas pipeline claims

By Jolene Guzman, Staff Writer
Mar 19, 2008

COQUILLE — The Coos County Board of Commissioners approved and signed an agreement last Wednesday resolving claims of Clean Water Act violations against the county stemming from the 2003 construction of the natural gas pipeline from Coos Bay to Roseburg. In September 2003, The U.S. Army Corps of Engineers had filed suit against both the county and MasTec Inc., the Miami-based firm hired to build the pipeline.

A memorandum of understanding addressing the pipeline was signed by the county and the Corps in September 2004, but it has taken until now for the county to see a final agreement, Chairman John Griffith said. The county is the first to give its stamp of approval to the agreement. The U.S. Department of Justice has yet to sign, Commissioner Nikki Whitty added.

The agreement calls for payment of a $75,000 fine and restoration of sections of rivers and streams affected by pipeline construction.

Much of the restoration work has already been done, Griffith said. The 2004 agreement stated the county would spend $525,000 on restoration and fish passage improvements.

ADVERTISING

“There isn’t very much (left),” Whitty said. “There might be seven or eight spots where we think the work is done, and the Corps isn’t sure.”

What remains is payment of the civil penalty. The county will transfer funds to the United States Department of Justice account in three $25,000 payments, the first of which will be paid within 30 days of signing the agreement. The remaining two will be paid on June 30, 2009; and June, 30, 2010.

Whitty said she is happy with the agreement, given the county could have been on the hook for a much larger amount.

Griffith was not of the same opinion. He said he voted against the memorandum of understanding in 2004 because the penalty was too severe.

“I thought it was excessive, because we hadn’t done anything wrong,” he said, adding that each time the Corps and the county sat down to negotiate, the requirements of the county were reduced. “We had them coming our way.”

This agreement doesn’t spell the end of lawsuits for the county, which still has to settle differences with MasTec, Griffith said.

In 2004, MasTec and the county exchanged lawsuits. MasTec drew first blood in February, in a $9.8 million suit, citing the county’s failure to pay for work. In April of that year, the county terminated its contract with the company and, in May counter-sued for $10 million, citing breach of contract. That lawsuit was later upgraded to $14 million.

Both lawsuits are now being addressed in settlement negotiations, Whitty said.

The county awarded the $23.3 million contract in June 2003 with completion expected by Dec. 31, 2003. A series of lawsuits against both MasTec and the county filled the following months. In October 2003, four county residents sued MasTec for $500,000, claiming damage to water pumps and creeks during underground drilling. Later that year, the Sierra Club, filed a $4.3 million suit against Coos County and MasTec, claiming environmental damage.

Along with the memorandum of understanding between the county and the Corps, claims brought by the Sierra Club, Klamath-Siskiyou Wildlands Project and the Coos County Coalition were settled in September 2004. The first lawsuit was settled in August 2004.

The county hired Oregon-based firm Rockford Corp. to finish the project in the summer of 2004. The finished pipeline started delivering to Coos Bay residents and businesses in January 2005.

So far, the pipeline has cost around $53 million, which is about $10 million more than the projected cost at the beginning of the project, Whitty said. She added the final cost will depend on the outcome of negotiations with MasTec.

Residents file pipeline suit against Coos County

By Amy Moss Strong, Staff Writer
Dec 10, 2003

A lawsuit filed late Monday in federal court is charging that Coos County and MasTec Inc. have violated the federal Clean Water Act by allowing illegal discharges in streams, during construction of a 60-mile natural gas pipeline being built from Roseburg to Coos Bay.

The plaintiffs, including local residents and environmental groups, are seeking more than $4.3 million in fines and civil penalties.

This is the second lawsuit filed against MasTec over pipeline issues. The first one was filed in Coos County Circuit Court in October by several citizens with properties along the pipeline route. They asked that more than $500,000 be awarded in personal damages for discharges on their properties. MasTec has not responded to that lawsuit, according to Brent Foster, a Portland lawyer working with Thane Tienson of Landye, Bennett and Blumstein, which filed both lawsuits.

Foster filed the lawsuit on behalf of the Sierra Club and the Klamath-Siskiyou Wildlands Project and the Coos County Coalition, a community group formed to address what it perceived as problems with the pipeline project.

Named as defendants in the lawsuit are MasTec, the Florida company installing the pipeline; Coos County; Coos County Commissioners Nikki Whitty, Gordon Ross and John Griffith; and Clark Besack, MasTec's project manager.

The lawsuit claims that, while drilling underneath stream beds, MasTec employees caused the ground to fracture and drilling lubricants to ooze into at least five local streams, including Rock Creek, Cherry Creek, Middle Creek, Wilson Creek and the North Fork of the Coquille River.

Those "frac-outs" have occurred for at least 157 days of the project, the lawsuit asserts. The plaintiffs are asking for $27,500 a day in civil penalties, that the directional drilling stop until the proper permits are obtained and that plaintiffs' legal fees be paid.

In addition, the plaintiffs are calling on MasTec and Coos County to take immediate steps to address perceived water pollution problems due to erosion along the pipeline project.

"What MasTec has done in Coos County is absolutely unconscionable," said Del Knight, a Myrtle Point resident and former logger who is president of the Coos County Coalition.

"Many of us would not have imagined being on the same side of an issue as the Sierra Club," Knight said, "but this is about our water and neither the county nor the Oregon Department of Environmental Quality have been willing to stand up to MasTec."

Foster described the situation as extreme, alleging MasTec and the county have "ignored the most basic water pollution laws we have and devastated critical habitat for salmon and polluted people's water supplies as a result," he said.

Commissioner John Griffith disagreed.

"It's unfortunate," Griffith said after reading the lawsuit Tuesday afternoon. "When the county designed the project, it chose to directionally drill streams 30 feet wide or under as an extra measure of environmental protection."

According to Griffith, typical pipeline construction consists of damming and trenching in streams. The county didn't choose that method because it wanted a pipeline that would be held to a higher standard, he said.

"I guess no good deed goes unpunished," he added. "We on the board are not happy that there was any discharge at all into those streams that were directionally drilled. The idea of going under the streams was to avoid that, so we're unhappy, too."

Jay Waldron, the county's lawyer handling pipeline issues, said he had not yet read the complaint.

"When I do, I'll be happy to talk about it," Waldron said.

Commissioners Nikki Whitty and Gordon Ross and MasTec's Clark Besack were unavailable for comment.

The state court lawsuit is about getting compensation and relief by those people who allege their water supplies were damaged as a result of MasTec activities, Foster said.

"This federal lawsuit is about the most fundamental aspects of the Clean Water Act, which is that you're not allowed to discharge without a permit and there was no permit to allow the frac-outs," he said.

Foster added that the DEQ issued a notice of non-compliance and the Army Corps of Engineers issued cease and desist orders to MasTec prior to the filing of the first lawsuit.

"The big thing that neither of these agencies did is force (MasTec) to stop, which they could have easily done through a court order," Foster said.

Besack, as project manager for MasTec, is directly responsible for overseeing the directional drilling, the lawsuit claims, and was aware of the problems. In addition, the lawsuit contends that both the county and the Board of Commissioners have been aware of the discharges and have allowed drilling to continue.

Work on the pipeline has slowed and plans are to take it up again in January, although MasTec spokesman Jack Beebe said Monday that final cleanup might not be complete until spring.

That has the plaintiffs' worried.

"There is a compelling need for MasTec to immediately install the basic erosion control measures as they said they would," said Breanna Bell, an attorney with the Klamath-Siskiyou Wildlands Project.

Randy Knop, a union representative who works with the pipeline industry, said he sees the suit as a necessary step.

Knop said in his opinion, the bottom line is that MasTec is giving the entire pipeline industry and pipeline workers a bad name and they need to be held accountable.

Steve Oxford, county pipeline adviser with Industrial Gas said in an interview Monday that he feels the citizen group has a hidden agenda. Rather than helping with problems, the group has delayed work into the rainy months, he said.

NW NATURAL ADVICE NO. 25-23 SCHEDULE 160 TSA COOS COUNTY

Data Request Response

Request No.: ADV 1789 OPUC IR 5

With construction overheads included, what does the Company estimate Pipeline landslide mitigation costs to be?

Response:

With construction overheads included, the Company estimates Coos County Pipeline landslide mitigation costs to be roughly $13.20 million to $14.70 million.

NW Natural Alternative Rate Mechanism

Data Request Response

Request No.: UG 527 CUB DR 20

Has Coos County or the Company approached or been approached by any other entities for taking ownership of the pipeline? If so, please provide a narrative explanation for why those proposals were not deemed acceptable.

Response:

No, the Company has not approached or been approached by any other entities regarding interest in taking ownership of the Coos County Pipeline.

Regarding Coos County being approached or approaching other entities: The Company is not aware of Coos County approaching or being approached by other entities regarding interest in taking ownership of the Pipeline.

NW Natural Alternative Rate Mechanism
Data Request Response

Request No.: UG 527 OPUC DR 47

Please provide an estimate of the proportion of the Company's rate base that is made up of investments that were made to address identified imminent safety risks.

Response:

After the Company explained to Staff the challenges of estimating the proportion of safety-related capital identified in rate base, Staff suggested that the Company provide narrative examples of safety-related projects from the past throughout its system, including the size of the projects.

a. Safety Project Plans

Each year, the Company performs safety-related activities all throughout the Company's Oregon service territory.

In compliance with the Public Utility Commission of Oregon's Order No. 17-084 in Docket UM 1722, the Company has annually filed a Safety Project Plan ("SPP") since 2017 with the OPUC. The purpose of the annual SPP is to demonstrate NW Natural's commitment to safety, to provide insight into NW Natural's safety activities, and to identify when major regulatory changes may drive new safety program priorities or modify existing safety programs.

Each SPP filing includes updated capital and O&M safety projects for the next calendar year in the Company's Oregon service territory.

Each of the Company's SPP filings describes the Company's historical capital expenditures related to safety projects in Oregon. Historical capital expenditures related to safety projects include:

i. Repairs and replacements due to excavation damages.
ii. Repairs and replacements due to pipe material, weld or joint failures.
iii. Repairs and replacements due to corrosion.
iv. Repairs and replacements due to leakage.
v. Replacements of pipelines with vintage pipeline materials such as bare steel.

vi. Work to remove and replace non-piggable fittings on transmission pipelines to accept inline inspection devices (only the first project to make the pipeline piggable is capitalized).
vii. Work to perform transmission pipeline material verification, where records are missing.
viii. Work to re-pressure test transmission pipelines with missing hydrotest records.
ix. Distribution Integrity Management Plan (DIMP) Accelerated Action programs such as vintage plastic material replacements, guard post installations, and proactive excess flow valve (EFV) installations.
x. Work to rework underground storage wells and perform well integrity assessments (only the first assessment is capitalized).
xi. Replacements of pipelines due to natural forces threats, such as landslides, flooding, erosion, or riverbed scouring.
xii. Development of transmission integrity management risk models and distribution integrity management risk models.
xiii. Company participation in a Public Awareness program.

Also described in the Company's annual SPP filings are the Company's planned capital safety project investments for the upcoming year in Oregon. Section 6.7 of the Company's annual SPP filings lists the Company's historical capital expenditures related to safety-related projects since 2015. Section 7 of the Company's annual SPP filings describes the forecasted O&M expenses for the upcoming year for safety-related activities in the state of Oregon.

i. Please refer to UG 527 OPUC DR 47 Attachment 1 for the 2026 SPP.
ii. Please refer to UG 527 OPUC DR 47 Attachment 2 for the 2025 SPP.
iii. Please refer to UG 527 OPUC DR 47 Attachment 3 for the 2024 SPP.
iv. Please refer to UG 527 OPUC DR 47 Attachment 4 for the 2023 SPP.
v. Please refer to UG 527 OPUC DR 47 Attachment 5 for the 2022 SPP.

b. Misc. Safety Projects

The Company performed numerous safety-related capital projects between 2005 and 2019 throughout the Company's Oregon service territory. Please refer to UG 527 OPUC DR 47 Attachment 6.

1 Introduction

In compliance with the Oregon Public Utility Commission ("Commission" or "OPUC") Order No. 17-084 ("Order") in Docket UM 1722, this Safety Project Plan ("SPP") outlines NW Natural's safety project investments for 2026. The SPP includes updated capital and O&M projects and programs and projects that carry over from 2025.

This SPP demonstrates NW Natural's commitment to pipeline safety by providing insight into NW Natural's safety activities and identifies NW Natural's response to regulatory changes that may drive safety program priorities or modify existing programs. In the future if NW Natural seeks approval for a Safety Cost Recovery Mechanism (SCRM), this SPP is intended to expedite the review process of safety investments.

Safety is a core value at NW Natural and we appreciate the opportunity to present this information to the Commission.

2 Background Information

NW Natural is a regulated natural gas utility conducting business in Oregon and southwest Washington. The Company serves ~802,000 customers and owns and operates ~660 miles of natural gas transmission pipeline, and ~14,500 miles of distribution pipelines. In addition, NW Natural operates three energy storage facilities in Oregon – Portland and Newport LNG Plants and Mist Underground Storage.

NW Natural's pipelines and storage facilities are governed by the following sections of the Code of Federal Regulations (CFR):

- 49 CFR Part 192 – Minimum Safety Standard – Transmission & Distribution Systems
- 49 CFR Part 193 – LNG Safety Standards
- 49 CFR Part 196 – Protection of Underground Pipelines from Excavations Activity
- Additional OARs (OAR 860-024 – Safety, OAR 860-031 – Pipeline Inspections), and ORSs such as ORS 757.039 – Regulation of hazardous substance distribution and storage operations, and ORS 757.542-993 – One call notification. -

In addition to the federal and state regulations identified above, NW Natural's safety program considers the findings of past Oregon legislative actions directing the Oregon Seismic Safety Policy Advisory Commission to prepare the Oregon Resiliency Plan. Consequently, the Oregon Resilience Plan Implementation Task Force issued a report recommending that the Commission require regulated energy providers to conduct seismic assessments of regulated facilities and allow cost recovery for prudent investments related to assessments and mitigation of vulnerabilities identified during those assessments.

The State of Oregon has since continued to advance resiliency planning efforts, including the "Resiliency 2025" plan. A key strategy of the plan is to improve the energy

infrastructure to prevent and mitigate catastrophic failure and ensure fuel supplies and alternate energy sources are available to responders and the public.

3 Threat Identification

NW Natural's four highest ranking threats, as identified in the DIMP (Distribution Integrity Management Program) Plan are:

3.1 Excavation Damage

Excavation damage continues to be the principal threat to NW Natural's gas distribution system, comprising approximately 86 percent of all recorded leak repairs. Excavation damage is a system-wide threat brought on predominantly by improper excavation practices. NW Natural's efforts to reduce excavation damages are described below.

3.1.1 Excavation Training and Education:

NW Natural actively engages in training and education for contractors, general public, and other utilities, to promote safe excavation procedures and practices. These efforts include classes on Oregon dig laws, displays at public events, and the use of media including print, radio, television, and internet to promote safety, best practices, and the use of 811.

NW Natural's Damage Prevention Department works to reduce the number of excavation damages through investigation, cause analysis, locate ticket risk modeling, and proactively works to identify and support contractors engaging in high-risk construction activity.

3.1.2 One-Call Notification Practices:

NW Natural actively participates in local and state-level Utility Coordinating Councils as well as the One Call Utility Notification board. A primary function of these organizations is to reduce damages to underground utilities through excavation best practices, public awareness, and the use of the Oregon One-call system (811).

NW Natural also maintains a robust Public Awareness Program based on the American Petroleum Institute (API) Recommended Practice (RP) 1162, which includes advertising, direct mailing, and public event outreach to increase awareness of One-call notification.

3.1.3 Locating Practices:

NW Natural is an active member of Oregon's One-call system and responds to all locate requests. Due to the high volume of locate requests this work is contracted. All locating is performed by qualified personnel and oversight is performed by Company contract management personnel. In addition, locating

activity is included in NW Natural's Quality Assurance program to minimize the incidences of errors, mismarks, and missed due dates.

3.1.4 Incorrect Facility Marking:

Incorrectly marked facilities may be due to underground interference, equipment issues, inaccurate facility maps, or procedural issues. Locating personnel responsible for a mismark receive additional training and are required to re-qualify prior to being allowed to locate gas facilities. Review of mismarks are conducted by supervisor or other qualified personnel and the results are used to identify deficiencies, correct facility maps, and ensure the facilities can be reliably located.

3.2 Material, Weld or Joint Failure

Material, weld, or joint failure is the second largest threat to the NW Natural gas distribution system, comprising approximately 9 percent of all recorded leak repairs. NW Natural is proactive in its efforts to reduce these occurrences, as described below.

3.2.1 Plastic Pipe Installed from 1960s to 1980s:

NW Natural makes every effort to identify all pre-1982 plastic pipe installations, analyze leak histories, evaluate any conditions that may threaten integrity of the pipe, and take appropriate remedial action, including replacement, to mitigate risks to public safety.

3.2.2 Plexco Service Tee Celcon Caps:

NW Natural is aware of industry issues regarding Plexco Service Tee Celcon Caps possibly leaking when over-tightened during installation. These caps exist within the gas distribution system and are replaced as found and scheduled for replacement when leaks are identified.

3.2.3 Polyethylene ("PE") Fusion Failure:

NW Natural has a robust training and Quality Assurance/Quality Control program in place to ensure proper PE fusion quality. This program includes testing, biannual qualification, and ongoing training. All PE fusions are visually inspected, and pressure tested prior to being placed in service.

3.2.4 Flat Back Risers:

In 2012 NW Natural identified a type of riser stop valve, internally known as a "Flat Back Riser," that contained components prone to atmospheric corrosion in the coastal areas of NW Natural's service territory. NW Natural identified that corrosion-related failure on a retaining pin could result in a hazardous leak. NW Natural developed an Accelerated Action Plan to replace these valves in coastal areas.

3.3 Equipment Failure

Equipment Failure is the third largest threat to the NW Natural gas distribution system, comprising approximately 1 percent of all recorded leak repairs. NW Natural's efforts to reduce these occurrences are described below.

3.3.1 Valves:

Valves are vital to the safe operation of a gas distribution system. NW Natural has in place a key operating valve inspection and maintenance program to ensure key valves are operable and available for use. Valves that are found to be inoperable, inaccessible, and/or paved over are identified and remediated as necessary.

3.3.2 Pressure Control / Relief Equipment:

NW Natural has an established inspection and maintenance program in place for pressure control/relief equipment to ensure reliable and safe operation.

3.3.3 Mechanical Couplings:

Pipe may pull out from compression couplings due to tensile forces including excavation damage, cyclic fatigue from changes in the temperature of natural gas as a result of the Joule-Thomson effect, ground movement from earthquakes or after heavy rains. Mechanical fitting failures are investigated, tracked, and reported per PHMSA and OPUC requirements.

In the past as an alternative to welding small diameter steel fittings, mechanical couplings were sometimes used to install valves and service tees. These types of fittings may develop leaks through the elastomer seal between the coupling and the pipe. NW Natural replaces these fittings with welded steel fittings or polyethylene as discovered during routine operations and maintenance activity.

3.3.4 Other:

Other types of material or equipment failure may occur in the gas distribution system. Failure reports are reviewed to detect trends or patterns that may affect the distribution system.

Many of the safety projects identified in this plan are in direct response to the above threats, and to maintain compliance with safety codes and regulations.

3.4 Corrosion

Corrosion is the fourth largest threat to the NW Natural's gas distribution system, comprising less than 1 percent of all recorded leak repairs. NW Natural's efforts to reduce these occurrences are described below.

NW Natural®

3.4.1 Pipe Replacement:

The driver of external corrosion system-wide is steel pipe. At this time NW Natural's distribution system in Oregon is 45 percent coated and cathodically protected steel and 55 percent polyethylene. During all pipe replacement projects consideration is given to replacing existing steel pipes, valves, and fittings with polyethylene to mitigate the threat of corrosion. In 2015 NW Natural completed the replacement of all known un-coated bare steel pipe eliminating the single largest corrosion threat.

3.4.2 Pipe Casings:

Steel casings are primarily used to protect or facilitate the installation of mains and services underground and are fitted with seals to prevent water intrusion, spacers to prevent contact between the casing and gas carrying pipe, and vents.

NW Natural inspects steel casings annually to identify problems such as contact between the casing and gas pipe, or water intrusion. If a "short" or other anomaly is identified a work order is created to address the concern.

At NW Natural the installation of casings has been largely replaced by HDD (Horizontal Directional Drilling) installation. During pipeline improvement projects existing casings are evaluated for replacement by HDD or alternatives.

3.4.3 Atmospheric Corrosion:

NW Natural's system includes facilities such as risers, regulators, station piping, bridge crossings and other above ground facilities that are susceptible to atmospheric corrosion.

NW Natural's atmospheric corrosion mitigation plan includes replacement of facilities when appropriate as well as protective coatings such as epoxies, paint, wax, other corrosion resistant materials, and enhanced inspections in locations with an elevated risk of corrosion.

3.4.4 Exposed Pipe Inspections

During normal operations when a buried pipeline is exposed crews inspect the pipe and protective coating for evidence of corrosion, or coating anomalies that can lead to future corrosion. Coating repairs or pipe replacements are completed before the pipe is backfilled and placed back in service.

4 Safety Activities Performed by NW Natural

Safety activities at NW Natural can be divided into categories:

4.1 Prescriptive Regulatory Actions – Includes actions which must be performed to meet minimum federal safety standards.

49 CFR 192 includes multiple prescriptive activities, intended to safeguard public safety, and fall into broad categories such as "operations" (Subpart L) and "maintenance" (Subpart M). Most of these activities require inspections at prescribed intervals to confirm that a facility or asset is meeting operational requirements prescribed by federal code. These activities provide the baseline data for other performance-based activities and include, but are not limited to:

- Atmospheric corrosion surveys
- Leakage surveys
- Cathodic protection surveys
- Right of way ("ROW") patrols
- Valve maintenance
- Water crossing inspections
- Odorization
- Odorometer Reads
- Line Marking
- Pressure Regulation Inspection
- Large Meter Inspections
- Record Keeping
- Control Room Management
- Bridgeline Inspections
- Equipment Calibration
- Houseboat Inspections

The safety activities from this category are prescriptive in nature and are not driven by risk analysis alone. Because these activities are required, they are not discussed further in this SPP, which instead focuses on projects and/or programs identified by NW Natural as essential to enhancing safety and reliability.

4.1.1 Transmission Integrity (TIMP)

Transmission Integrity refers to 49 CFR 192 Subpart O-Gas Transmission Pipeline Integrity Management. This federally mandated program covers natural gas transmission pipelines located in High Consequence ("HCA") and Moderate Consequence ("MCA") areas. NW Natural exceeds code requirements in TIMP to include pipelines and conditions outside of HCA and MCAs.

Activities in this category include baseline (initial) assessments and reassessments of transmission lines using in-line inspection ("ILI") and other direct assessment methods. They may also include pipeline replacements and

modifications in compliance with integrity management rules, best practices, and relocation of facilities to mitigate threats posed by natural forces such as flooding, land movement, and erosion.

4.2 Proactive, Performance-Based Actions

Other sections of 49 CFR 192 include more proactive performance-based risk reduction activities, such as Subpart P – Distribution Integrity Management Program ("DIMP"), Damage Prevention, and Public Awareness. These programs utilize a performance-based approach to mitigate risk and ensure that mitigation efforts are effective, drawing on operational experience and best practices.

4.2.1 Distribution Integrity (DIMP)

Distribution Integrity is outlined in 49 CFR 192 Subpart P- Gas Distribution Pipeline Integrity Management. This federally mandated program requires operators to create a written Distribution Integrity Management Program that takes into consideration: system knowledge, threat identification, evaluation and risk ranking, identification and implementation of measures to address risk, measurement of results, and reporting.

Activities in this category include projects warranting Accelerated Action ("AA") to address a system integrity risk. These AA projects are identified through risk modeling, industry identified threats, and by subject matter experts within the Company, and include:

- Replacement of vintage plastic services,
- Relocation of facilities under structures,
- Remediation of idle risers,
- Replacement of valves, fittings, and materials susceptible to leakage,
- Protection of above grade gas facilities,
- Crossbore investigation, and
- Relocation of distribution gas lines to mitigate threats posed by natural forces such as:
    - Flooding
    - Land movement, and
    - Erosion.
- Proactive EFV (Excess Flow Valve) Installation – installation of EFVs on services that were installed prior to the EFV rule issued in 2006.
- Dithiazine – a sulfur compound found in natural gas that has been known to cause equipment failure especially in district regulators.
- Valves separating MAOPs – These are single valves in the NW Natural distribution system that separate pipelines that operate at two different Maximum Allowable Operating Pressures (MAOPs). These valves present an Incorrect Operations threat because improper operation could allow pressure to equalize between the two systems, potentially creating an

overpressure condition. The Company is reviewing those installations and remediating areas where those valves have been installed.

- Ongoing assessment and relocation of meters inside of building to exteriors.

4.3 Safety Policy and Practices

NW Natural also implements risk reduction activities not explicitly required by the federal code. These actions have been identified as prudent safety practices intended to enhance public safety, improve system reliability, and maintain the safe operation of NW Natural's above and below-ground facilities including LNG Plants and underground natural gas storage facilities. These risk reduction actions include:

- Seismic vulnerability assessments of LNG Plants, the Mist Underground Storage Facility, and Transmission Pipeline System as recommended by SB 33 (2013) and consistent with the Governor's Resiliency 2025 Plan
- Accelerated replacement of vintage materials
- In line assessment of Transmission pipelines outside of high and moderate consequence areas.
- Development of a PSMS (Pipeline Safety Management System)
- Proactive EFV installation.
- Locate ticket risk modeling.
- Natural forces assessments of NW Natural's transmission system as part of NW Natural patrol and surveillance programs.
- Installation of guard posts and traffic barricades to protect above ground facilities from vehicular damage.

5 Projected and Preliminary Costs Presented in this Plan

The 2026 Capital and O&M costs presented in this plan are projected based on current expenditures for each of the identified projects through the end of the year. Costs presented for the significant safety initiatives are preliminary for planning purposes and do not include NW Natural overhead costs. Costs for safety projects under consideration will be presented in future SPPs.

6 2026 Capital Safety Investment

In 2026, NW Natural estimates it will invest $16.6 MM in capital to comply with DIMP, TIMP, and other regulations. Significant projects in this category include:

6.1 P09.06 & .07 St. Helens Trans (2025-26 estimate of $4.5MM)

This project involves the first inline inspection assessment of the 8-inch and 6-inch St. Helens Trans line which was primarily built in 1961 to support Scappoose and St. Helens. This pipeline is an approximately 12-mile transmission pipeline that initiates at the Sauvie Island Gate station and runs north through Sauvie Island and Scappoose. Inline assessment of this line will terminate at a location north of

Scappoose where the line transitions from 6-inch to 12-inch in diameter. Design work on this project will begin in 2025 with planned completion in 2026.

6.2 GP Wauna (2025-26 estimate of $1 MM):

During standard maintenance activities it was identified that the 8-inch transmission main that provides natural gas to the GP Wauna facility was located at a depth that did not meet current standards and was at risk due to ditch clearing activities that occur as the pipeline crosses US Highway 30. NW Natural has coordinated with the Operations department at GP Wauna to relocate a section of pipe to a proper depth while minimizing disruption at the GP Wauna facility. Work on this project is scheduled to begin in 2025 with planned completion in 2026.

6.3 Pro-active EFV Installations (2026 estimate of $1MM):

On October 14, 2016, the U.S. Department of Transportation's ("DOT's") Pipeline and Hazardous Materials Safety Administration ("PHMSA") adopted code requiring the installation of EFVs or shut-off valves on all new or replaced branched service lines (Docket No. PHMSA-2011-009). While the code requires EFV installation on all new or replaced branched service lines, it did not require retrofitting EFVs on existing services.

NW Natural believes a proactive EFV installation program is a prudent action that can mitigate the consequence of a gas release resulting from excavation damage to a gas service line. NW Natural is implementing a policy to retrofit EFVs on existing gas service lines when the buried portion of the service line is exposed, and the work involves the interruption of gas service.

This proactive EFV program was initiated in 2020 and will continue to be a safety program.

6.4 Sewer Crossbore Inspections (2026 estimate of $2.4MM):

The sewer crossbore program involves the visual inspection of sanitary sewers for incidences of gas line crossbores. In installations where trenchless technology was used to install polyethylene pipe, there exists the possibility the gas line was bored through a sewer main or lateral. NW Natural's policy is to expose all foreign line crossings when performing trenchless work. Sewer crossbores typically occur when facility owners fail to locate their pipe, creating a situation where NW Natural is unable to expose facilities during construction. This is an industry-wide threat. Although sewer crossbores are not isolated to gas operators, the consequence when gas lines are involved can be high. This program identifies existing trenchless polyethylene installations and inspects the sewers in the vicinity to identify crossbores. In addition to the field work for this program, NW Natural plans to implement risk modeling to better identify where sewer crossbores are located in the system. This risk modeling will use past data and industry information to

identify high-risk areas for sewer crossbores and allow crews to focus visual inspections in high-risk areas.

6.5 Underground Storage – Well Integrity (2026 estimate of $1.95MM)

On December 19, 2016, PHMSA issued an interim final rule (IFR) establishing regulations for underground natural gas storage facilities (UNGSF). The IFR incorporated by reference RP 1171, "Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs" (First Edition, September 2015). The IFR implemented PHMSA's authority to regulate underground gas storage and the Congressional mandate in section 12 of the PIPES Act to establish minimum safety standards.

The final rule published on February 12, 2020, modified compliance timelines, clarified regulatory roles, reduced recordkeeping and reporting requirements, and formalized integrity management practices. In accordance with the final rule, NW Natural has completed baseline casing inspection logs on each of its active gas storage wells prior to the March 13, 2027, deadline.

Work in 2026 will involve the plug and abandonment of one gas storage well and the reassessment of the production casing of two gas storage wells.

6.6 Other safety projects and programs (2026 estimate of $1.5 MM):

Pipeline Replacement due to Seismic/Natural Forces

Portions of NW Natural's distribution and transmission system cross through landslide faults, seismic faults, sensitive areas, and waterways. Due to significant weather events or the passage of time, the integrity of these pipelines may be compromised. When identified during patrols, routine maintenance, or other stakeholders, the Integrity Team develops plans to remediate these at-risk pipelines as they are identified.

Valve Isolation Plans

NW Natural is working to develop a strategy for identifying and installing additional valves in the distribution system to assist in the isolation of portions of the distribution system in case of an emergency or third-party damage.

Meter Protection Installation

NW Natural will continue installation of guard posts adjacent to meter sets that are determined to be at risk of damage due to vehicle or equipment contact.

Pipeline Modification due to ROW Encroachment

Patrols of NW Natural Pipelines may discover structures or other encroachments built over or adjacent to pipelines that can impact the safe operation of or access to a pipeline. This program works with landowners to remediate these encroachments.

Pipeline Material Identification (PMI)
At selected transmission pipeline anomaly remediation sites, NW Natural has instituted a process using technology to non-destructively test and acquire data regarding pipe material properties. In addition, when the Transmission Integrity rule went into effect over twenty years ago, NW Natural began keeping short (18-inch-24-inch long) sections of pipe for future reference. These spools were destructively tested to obtain pipe material properties that were not required as part of the original installation documentation. The material data obtained through this program are being stored in the permanent record for each pipe segment.

Non-hazardous Leakage Projects
As part of NW Natural's continued efforts to reduce fugitive methane emissions, actions are being taken to proactively replace facilities identified as producing non-hazardous leaks. Per NW Natural Standard Practices these facilities are reevaluated and monitored on a routine basis until the leak classification changes or the facility is repaired or replaced. To address these frequent revaluations and reduce fugitive methane emissions a more proactive approach is being taken towards these facilities and projects are being developed to accelerate replacements.

Removal of Class A Services
NW Natural has performed work to eliminate a low-pressure system and transition to a full distribution system. During this transition to eliminate the low-pressure system a small number of Class A services still exist in the system. These Class A services have an MAOP of 12 inches of water column and are a legacy from the low-pressure system. NW Natural has initiated DIMP project to work with these customers to eliminate these Class A services from the system.

Idle Risers
Idle risers are the above ground portion of a service line that remains after meter removal when a customer closes their account, or a home or business is vacated. In these cases NW Natural maintains the service (idle) riser above ground where it is capped/plugged and tagged as idle. These idle risers are maintained in accordance with code requirements in the event a customer or a new tenant requests gas service. Over extended periods of time and in some instances these idle risers may present an elevated risk of damage. In 2025 NW Natural will develop a process to identify at-risk idle risers and begin development of a program to remove them and abandon the service line.

6.7 Historical Capital Expenditure – Safety Project Plan (System Integrity)

The Historical Capital Expenditures below are actual expenditures for each of the presented years.

Year	Expenditure
2015	$17,190,356*
2016	$ 7,772,763
2017	$ 5,925,409
2018	$ 9,699,814
2019	$10,231,431
2020	$ 8,900,000
2021	$ 8,200,000
2022	$ 9,000,000
2023	$13,000,000
2024	$14,500,000
2025	$18,300,000

*Final year of known bare steel main replacement

Historical capital expenditures include:

- Work to modify pipelines to accept inline inspection devices, including removal or replacement of non-piggable fittings and facilities required to launch and receive inline inspection devices.
- Pipeline relocation to mitigate threats including outside forces and natural forces. This work does not include relocations due to utility conflicts, or third-party improvement projects.
- Pipe replacements and testing in compliance with federal and state regulations.
- Ongoing DIMP AA programs/projects such as Vintage Plastic, Guard post installations, Proactive EFV installations, etc.

7 2026 O&M Expenditures

In 2026 NW Natural expects to spend $5.7MM in O&M to address and comply with DIMP, TIMP, damage prevention, and public awareness.

Activities that reflect expenditures in this category include costs for supplies (office/field), reference materials, education (conferences/workshops), vendor and contract costs associated with transmission assessments, public awareness program materials, advertisements and mailings, and natural forces investigation and remediation. Additionally, this category covers the development, initiation, and execution of studies and consulting fees related to integrity requirements, such as class location studies and third-party geotechnical site evaluations to address and mitigate risk.

O&M also includes some non-capital internal labor in support of NW Natural's system integrity program ("SIP"). These costs include the Integrity Management staff (7 FTE), damage prevention staff (4.5 FTE) involved in damage prevention/investigation, and a

public information officer for safety outreach, training, and program administration. The Integrity Management group may also utilize other internal resources in support of SIP activities which include GIS analysts, Customer Service, Construction, and other subject matter experts. Significant O&M projects include:

7.1 Transmission Inline and Direct Assessment Reassessment and Remediation (2026 estimate of $3.3MM):

This work includes the federally prescribed seven-year reassessment of transmission pipelines in HCAs and is comprised of both inline inspection and direct assessment of transmission assets and associated repairs.

7.2 Natural Forces (2026 estimate of $125,000):

Where the threat of natural forces can be mitigated without pipe replacement or rerouting, NW Natural may choose to address the threat through site work. This option is necessary in situations where a reroute is not feasible due to environmental restrictions or where a pipeline serves a critical customer or provides a single feed to a distribution system. Work may include armoring of slopes, re-grading of sites, culvert improvements, and retaining structures to address land movement and drainage issues.

7.3 Damage Prevention (2026 estimate of $1MM):

In compliance with DIMP regulations, and to address the single largest threat to gas facilities, NW Natural maintains a damage prevention department. The department consists of a supervisor and 4.5 FTE damage prevention specialists whose responsibilities include damage prevention through high risk locate ticket intervention, training, attendance at pre-construction meetings, participation in Utility Coordinating Councils, and support of the 811 One-call system. Damage prevention specialists are also responsible for the investigation, enforcement, and contractor training related to excavation and third-party damage.

7.4 Public Awareness (2026 estimate of $950,000):

NW Natural's Public Awareness program meets the requirements mandated in API RP 1162, adopted by reference by PHMSA into Part 192.616(a), (b), and (c). This program promotes public safety through communication and outreach focused on educating customers and the public about natural gas safety. The program includes customer correspondence, mailers, advertisements, community events, mobile phone applications, and brochures to excavators, contractors, public officials, residences and businesses along pipeline rights-of-way and in high consequence areas, and floating homes.

The Public Awareness Plan utilizes television and radio advertising, bill inserts, social media, and events to promote natural gas safety awareness. Targeted outreach and public awareness materials are provided annually to customers near transmission pipelines, as well as contractors, excavators, and first responders within NW Natural's service territory.

NW Natural®

7.5 Right-of-Way Encroachments (2026 estimate of $100,000):

Pipeline patrols are used to identify changes in site conditions. An example of such a change is the installation of structures over pipelines, and inside dedicated pipeline rights-of-way, or easements. In some instances, the remediation may involve the relocation of structures and other non-gas facilities.

7.6 Probabilistic Distribution Risk Model ($1.5MM between 2025 and 2030):

In 2023 NW Natural initiated a project to partner with a data analysis consultant to implement a Probabilistic Risk Model to assess the NW Natural distribution system. A probabilistic risk model is a model that determines the probability of failure in the system and quantifies the consequences of a failure per threat. Probabilistic Risk models have been identified by PHMSA as a best practice to proactively manage threats to the natural gas distribution system. This risk model is a 5-year program that began implementation in 2025.

7.7 Historical O&M Expenditure – Safety Project Plan (System Integrity):

The historical O&M expenditures below are actual expenditures for each of the presented years (not including PSMS, damage prevention or public awareness expenditures).

Year	Expenditure
2015	$4,034,218
2016	$4,889,618
2017	$4,771,267
2018	$4,000,000
2019	$3,052,000
2020	$3,100,000
2021	$2,900,000
2022	$2,800,000
2023	$3,000,000
2024	$ 700,000
2025	$3,300,000

Historical O&M expenditure included:

- Regulatory transmission assessments including the investigation and remediation of identified anomalies resulting from inline inspection and external corrosion direct assessment (ECDA).
- Investigation and remediation of natural forces including landslides, flooding, erosion, etc.
- Buildover remediation where structures encroach into pipeline right-of-way.
- Remediation of difficult to operate valves.
- Maintenance of Integrity Risk model as a result of geographical and system changes.

These above costs do not reflect those related to ongoing maintenance of facilities including right-of-way clearing, patrols, leakage, cathodic protection, and other ongoing routine O&M work.

8 2026 Significant Safety Initiatives

8.1 Changes in TIMP Assessment Methodology

In 2026, NW Natural will extend the use of inline inspection (ILI) for integrity assessment of transmission pipelines assessed at seven-year intervals. Inline inspection tools have the advantage over direct assessment and pressure testing because they assess the entire pipeline maintaining constant contact with the inner wall providing data allowing for the identification of interacting anomalies such as pipe deformation and metal loss. In 2026, NW Natural will change the assessment methodology of the following pipelines.

- P09.06 & .07 St. Helens Trans – Approximately 12-mile transmission pipeline that provides gas from Sauvie Island to Scappoose.

8.2 Pro-active EFV Installations

NW Natural has installed EFVs on all new single-family residential services since February of 1999. In 2006, the Federal Code was modified to require the installation of EFVs on all new residential and small commercial services. NW Natural will continue and expand the program installing EFVs on existing residential and small commercial services when the buried portion of the service line is exposed and service to the customer is interrupted. NW Natural believes proactive installation of EFVs is a prudent and pragmatic approach that can mitigate the consequence of excavation damage to a service line.

9 Transmission Material Verification

In compliance with recent Regulatory Mandates involving material verification of steel transmission pipelines, NW Natural has implemented a non-destructive material verification program to collect material property data on transmission pipeline assets. This program involves material testing of in-service pipelines during planned work to collect material data including metallurgy that was not required at the time of installation.

NW Natural has also developed a program to destructively test segments of pipeline that were removed from past transmission projects to collect the material property information. Collecting material information from the in-service transmission mains and the destructive tests from the historical transmission mains will allow NW Natural to develop a library of pipeline material property data.

10 Cost Benefit Analyses & Alternative Analysis

The performance of a cost benefit analysis and alternatives analysis is difficult in the context of safety programs mandated by regulation. As a result, a cost benefit analysis has not been a primary consideration in this report because these safety projects are mandated by CFR, dictated by industry best practices, or driven by operational requirements. The assigned risk and prioritization for implementing these projects are based on in-depth studies and analysis of NW Natural's transmission and distribution systems as well as plant and storage assets. Studies performed as part of normal operations provide measurable and continual feedback needed to perform safety related work for which there are few practicable alternatives.

Alternative analysis and in-depth studies are useful when they identify threats and risks that can be mitigated or eliminated through the application of performance-based best practices, engineering analysis, operational knowledge, and subject matter experts. Where the CFR prescribes compliance activity or mandate programs, the use of cost benefit, or alternative, analysis is not warranted.

When a pipeline safety initiative requires a cost benefit or alternative analysis, NW Natural may select a qualified external resource to perform the analysis.

11 Legislative Update

11.1 PHMSA Rulemaking Docket No. PHMSA-2011-0023;

Amendment No. 192-132 - RIN 2137-AF39 Pipeline Safety: Safety of Gas Transmission Pipelines: Repair Criteria, Integrity Management Improvements, Cathodic Protection, Management of Change, and Other Related Amendments. PHMSA published this rule on August 24, 2022. NW Natural is in compliance with the rule as published.

11.2 Docket No. PHSMA-2021-0039 Pipeline Safety NPRM: Gas Pipeline Leak Detection and Repair

On May 18, 2023, PHSMA issued a Notice of Proposed Rule Making: Gas Pipeline Leak Detection and Repair. The NPRM colloquially referred to as the LDAR rule is intended to reduce methane emissions from new and existing gas transmission and distribution pipelines, gas gathering pipelines, and underground natural gas storage facilities. NW Natural is reviewing the NPRM and will comply with the final rule when it is published in the Federal Register.

11.3 Docket No. PHSMA-2021-0046 Pipeline Safety NPRM: Safety of Gas Distribution Pipelines and Other Pipeline Safety Initiatives

On September 7, 2023, PHSMA issued a Notice of Proposed Rule Making: Safety of Gas Distribution Pipelines and Other Pipeline Safety Initiatives. PHMSA proposes revisions to the pipeline safety regulations to require operators of gas distribution

pipelines to update their distribution integrity management programs (DIMP), emergency response plans, operations and maintenance manuals, and other safety practices. These proposals implement provisions of the Leonel Rondon Pipeline Safety Act—part of the Protecting our Infrastructure of Pipelines and Enhancing Safety Act of 2020. NW Natural is reviewing the NPRM and will comply with the final rule when it is published in the Federal Register.

12 Completed Projects

Below is the list of projects scheduled to be completed in 4th quarter of 2024 and 2025.

12.1 Underground Storage – Well Integrity ($1.1MM – Actual)

This project involved the re-work and reassessment of two wells in the Mist storage field. The 2025 project represents year eight of NW Natural's well integrity baseline assessment work that includes down hole assessment of production casing and replacement of select tubulars, downhole equipment, and wellhead components. The reassessments include a downhole assessment of production casing and replacement of select tubulars, downhole equipment, wellhead components, and/or mechanical integrity testing. The program was developed to meet compliance with PHMSA's adoption of APR RP 1171 - Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs. The reassessment intervals are determined by risk assessment and information from the baseline assessments. This project has been completed.

12.2 S03 Salem Bypass Trans ILI (~2025 actual $3.5M)

This project involves the first inline inspection assessment of the 8-inch Salem Bypass Trans line which was primarily built in 1958 to support north Salem and Keizer. This pipeline is an approximately 5.5-mile transmission pipeline that initiates at a station near the Marion St. Bridge in downtown Salem and runs north and east to a valve station at Hwy 99E and Blossom Rd. NE. Design work on this project started in 2024 with construction completed in the spring of 2025. Cleaning and inline assessment of this pipeline will start in the fall of 2025 with data analysis, remediation and repairs continuing into 2026.

12.3 Willis Creek (~ 2025 actual $4.7M):

This project involves the replacement of approximately 3700' of the P30 Central Coast Feeder east of Lincoln City, Oregon. This section of the P30 Central Coast Feeder is a 12-inch 600 psig MAOP pipeline that supports the communities in Lincoln County from Lincoln City to Newport. In the winter of 2021/2022 an inactive landslide identified in 2001 has become high risk landslide due to wildfires in the summer of 2020 followed by heavy rains which created a new landslide and increased the risk of an inactive landslide becoming reactivated. After review of the area it was determined that the pipe is at high risk and needed to be relocated. The project will involve a 2700' section installed using Horizontal Directional Drilling

(HDD) technology and 900’ section installed via direct bury to relocate the pipeline in a stable location. Project is anticipated to be completed in 2025.

12.4 Highway 212 (~2025 Actual $3.9M):

This project involves the relocation of approximately 2500 feet of 12-inch transmission main located on the south side of Hwy 212 in Clackamas. During routine pipeline patrols in 2023 it was discovered that increased flow in the Clackamas River adjacent to the 12-inch transmission main had caused erosion to the northern bank of the river near the pipeline. Further monitoring through the winter of 2023-24 resulted in an increased observation of this erosion that posed an increased risk to the pipeline such that relocation was recommended. Work on this project began in 2024 with planned completion in the fall of 2025.

12.5 Perrydale Weld Repairs (~2025 Actual $1.0M):

This project involves the discovery of existing welds at the Perrydale Regional Station that were discovered to have lack of penetration. These welds are located on a valve that separates MAOPs at this station and is subject to external forces due to the location near a highway. Due to the risk associated with these welds, the valve is going to be replaced and the station redesigned to eliminate the single valve between MAOPs.

13 Conclusion

This SPP provides an overview of NW Natural’s pipeline safety initiatives and commitment to the safe and reliable delivery of natural gas to the communities we serve. Through its more-than 165-year history, NW Natural has been committed to identifying threats to pipeline safety and taking steps to address and mitigate those threats. Looking forward to the role natural gas will play in our energy future, and as members of the communities we serve, NW Natural recognizes the trust placed on us by our neighbors and customers. NW Natural will continually work to ensure public safety and maintain the integrity of our natural gas system.

1 Introduction

In compliance with the Oregon Public Utility Commission ("Commission" or "OPUC") Order No. 17-084 ("Order") in Docket UM 1722, this Safety Project Plan (SPP) outlines NW Natural's safety project investments for 2025. The SPP includes updated capital and O&M projects and programs and projects that carry over from 2024.

This SPP demonstrates NW Natural's commitment to pipeline safety by providing insight into NW Natural's safety activities and identifies NW Natural's response to regulatory changes that may drive safety program priorities or modify existing programs. In the future if NW Natural seeks approval for a Safety Cost Recovery Mechanism (SCRM), this SPP is intended to expedite the review process of safety investments.

Safety is a core value at NW Natural and we appreciate the opportunity to present this information to the Commission.

2 Background Information

NW Natural is a regulated natural gas utility conducting business in Oregon and southwest Washington. The Company serves ~790,000 customers and owns and operates ~660 miles of natural gas transmission pipeline, and ~14,400 miles of distribution pipelines. In addition, NW Natural operates three energy storage facilities in Oregon – Portland and Newport LNG Plants and Mist Underground Storage.

NW Natural's pipelines and storage facilities are governed by:

- 49 CFR Part 192 – Minimum Safety Standard – Transmission & Distribution Systems
- 49 CFR Part 193 – LNG Safety Standards
- 49 CFR Part 196 – Protection of Underground Pipelines from Excavations Activity
- Additional OARs (OAR 860-024 – Safety, OAR 860-031 – Pipeline Inspections), and ORSs such as ORS 757.039 – Regulation of hazardous substance distribution and storage operations, and ORS 757.542-993 – One call notification.

In addition to the federal and state regulations identified above, NW Natural's safety program considers the findings of Oregon House Resolution 3 (HR 3, 2011) which directed the Oregon Seismic Safety Policy Advisory Commission to prepare the Oregon Resiliency Plan with the purpose of identifying recommendations for how Oregon's critical energy infrastructures could be made seismically resilient against a Cascadia subduction zone earthquake. Upon completion of that work on February 28, 2013, the Oregon Senate passed Senate Bill 33 (SB 33, 2013), which established the Governor's Task Force on Oregon Resilience Plan ("ORP") Implementation ("Task Force"). In October 2014, the Task Force issued a report recommending that the Commission require regulated energy providers to conduct seismic assessments of regulated facilities and recommended that the Commission allow cost recovery for prudent investments related to assessments and mitigation of vulnerabilities identified during those assessments. In October 2018, Governor Kate Brown presented the "Resiliency 2025" plan,

titled “Improving Our Readiness for the Cascadia Earthquake and Tsunami” (“Resiliency 2025 Plan”). The Resiliency 2025 Plan follows the 2013 ORP and outlines six key strategies for the State of Oregon. Its vision is to “protect all Oregonians by ensuring we are prepared to survive and recover from the expected 9.0 magnitude Cascadia earthquake and ensuing tsunami.” The key strategy of the Resiliency 2025 Plan to improve the energy infrastructure is to “develop a plan for the Critical Energy Infrastructure Hub to prevent and mitigate catastrophic failure and ensure fuel supplies and alternate energy sources are available to responders and the public.”

3 Threat Identification

NW Natural’s four highest ranking threats, as identified in the DIMP (Distribution Integrity Management Program) Plan are:

3.1 Excavation Damage

Excavation damage continues to be the principal threat to NW Natural’s gas distribution system, comprising approximately 86 percent of all recorded leak repairs. Excavation damage is a system-wide threat brought on predominantly by improper excavation practices. NW Natural’s efforts to reduce excavation damages are described below.

3.1.1 Excavation Training and Education:

NW Natural actively engages in training and education for contractors, general public, and other utilities, to promote safe excavation procedures and practices. These efforts include classes on Oregon dig laws, displays at public events, and the use of media including print, radio, television, and internet to promote safety, best practices, and the use of 811.

NW Natural’s Damage Prevention Department works to reduce the number of excavation damages through investigation, cause analysis, and proactively works to identify and support contractors engaging in high-risk construction activity.

3.1.2 One-Call Notification Practices:

NW Natural actively participates in local and state-level Utility Coordinating Councils as well as the One Call Utility Notification board. A primary function of these organizations is to reduce damages to underground utilities through excavation best practices, public awareness, and the use of the Oregon one call system (811).

NW Natural also maintains a robust Public Awareness Program based on the American Petroleum Institute (API) Recommended Practice (RP) 1162, which includes advertising, direct mailing, and public event outreach to increase awareness of One-call notification.

3.1.3 Locating Practices:

NW Natural is an active member of Oregon’s one call system and responds to all locate requests. Due to the high volume of locate requests this work is contracted. All locating is performed by NW Natural qualified personnel and oversight is performed by Company

contract management personnel. In addition, locating activity is included in NW Natural's Quality Assurance program to minimize the incidences of errors, mismarks, and missed due dates.

3.1.4 Incorrect Facility Marking:

Incorrectly marked facilities may be due to underground interference, equipment issues, inaccurate facility maps, or procedural issues. Locating personnel responsible for a mismark receive additional training and are required to re-qualify prior to being allowed to locate gas facilities. Review of mismarks are conducted by supervisor or other qualified personnel and the results are used to identify deficiencies, correct facility maps, and ensure the facilities can be reliably located.

3.2 Material, Weld or Joint Failure

Material, weld, or joint failure is the second largest threat to the NW Natural gas distribution system, comprising approximately 9 percent of all recorded leak repairs. NW Natural is proactive in its efforts to reduce these occurrences, as described below.

3.2.1 Plastic Pipe Installed from 1960s to 1980s:

NW Natural makes every effort to identify all pre-1982 plastic pipe installations, analyze leak histories, evaluate any conditions that may threaten integrity of the pipe, and take appropriate remedial action, including replacement, to mitigate risks to public safety.

3.2.2 Plexco Service Tee Celcon Caps:

NW Natural is aware of industry issues regarding Plexco Service Tee Celcon Caps possibly leaking when over-tightened during installation. These caps exist within the gas distribution system and are replaced as found and scheduled for replacement when leaks are identified.

3.2.3 Polyethylene ("PE") Fusion Failure:

NW Natural has a robust training and Quality Assurance/Quality Control program in place to ensure proper PE fusion quality. This program includes testing, biannual qualification, and ongoing training. All PE fusions are visually inspected, and pressure tested prior to being placed in service.

3.2.4 Flat Back Risers:

In 2012 NW Natural identified a type of riser stop valve, internally known as a "Flat Back Riser," that contained components prone to atmospheric corrosion in the coastal areas of NW Natural's service territory. NW Natural identified that corrosion-related failure on a retaining pin could result in a hazardous leak. NW Natural developed an Accelerated Action Plan to replace these valves in coastal areas.

3.3 Equipment Failure

Equipment Failure is the third largest threat to the NW Natural gas distribution system, comprising approximately 1 percent of all recorded leak repairs. NW Natural's efforts to reduce these occurrences are described below.

3.3.1 Valves:

Valves are vital to the safe operation of a gas distribution system. NW Natural has in place a key operating valve inspection and maintenance program to ensure key valves are operable and available for use. Valves that are found to be inoperable, inaccessible, and/or paved over are identified and remediated as necessary.

3.3.2 Pressure Control / Relief Equipment:

NW Natural has an established inspection and maintenance program in place for pressure control/relief equipment to ensure reliable and safe operation.

3.3.3 Mechanical Couplings:

Pipe may pull out from compression couplings due to tensile forces including excavation damage, cyclic fatigue from changes in the temperature of natural gas as a result of the Joule-Thomson effect, ground movement from earthquakes or after heavy rains. Mechanical fitting failures are investigated, tracked, and reported per PHMSA and OPUC requirements.

In the past as an alternative to welding small diameter steel fittings, mechanical couplings were sometimes used to install valves and service tees. These types of fittings may develop leaks through the elastomer seal between the coupling and the pipe. NW Natural replaces these fittings with welded steel fittings or polyethylene as discovered during routine operations and maintenance activity.

3.3.4 Other:

Other types of material or equipment failure may occur in the gas distribution system. Failure reports are reviewed to detect trends or patterns that may affect the distribution system.

Many of the safety projects identified in this plan are in direct response to the above threats, and to maintain compliance with safety codes and regulations.

3.4 Corrosion

Corrosion is the fourth largest threat to the NW Natural's gas distribution system, comprising less than 1 percent of all recorded leak repairs. NW Natural's efforts to reduce these occurrences are described below.

3.4.1 Pipe Replacement:

The driver of external corrosion system-wide is steel pipe. At this time NW Natural's distribution system in Oregon is 49.8 percent coated and cathodically protected steel and 50.2 percent polyethylene. During all pipe replacement projects consideration is given to replacing existing steel pipes, valves, and fittings with polyethylene to mitigate the threat of corrosion. In 2015 NW Natural completed the replacement of all known un-coated bare steel pipe eliminating the single largest corrosion threat.

3.4.2 Pipe Casings:

Steel casings are primarily used to protect or facilitate the installation of mains and services underground and are fitted with seals to prevent water intrusion, spacers to prevent contact between the casing and gas carrying pipe, and vents.

NW Natural inspects steel casings annually to identify problems such as contact between the casing and gas pipe, or water intrusion. If a "short" or other anomaly is identified a work order is created to address the concern.

At NW Natural the installation of casings has been largely replaced by HDD (Horizontal Directional Drilling) installation. During pipeline improvement projects existing casings are evaluated for replacement by HDD or alternatives.

3.4.3 Atmospheric Corrosion:

NW Natural's system includes facilities such as risers, regulators, station piping, bridge crossings and other above ground facilities that are susceptible to atmospheric corrosion.

NW Natural's atmospheric corrosion mitigation plan includes replacement of facilities when appropriate as well as protective coatings such as epoxies, paint, wax, other corrosion resistant materials, and enhanced inspections in locations with an elevated risk of corrosion.

3.4.4 Exposed Pipe Inspections

During normal operations when a buried pipeline is exposed crews inspect the pipe and protective coating for evidence of corrosion, or coating anomalies that can lead to future corrosion. Coating repairs or pipe replacements are completed before the pipe is backfilled and placed back in service.

4 Safety Activities Performed by NW Natural

Safety activities at NW Natural can be divided into categories:

4.1 Prescriptive Regulatory Actions – Includes actions which must be performed to meet minimum federal safety standards.

49 CFR 192 includes multiple prescriptive activities, intended to safeguard public safety, and fall into broad categories such as "operations" (Subpart L) and "maintenance" (Subpart M). Most of these activities require inspections at prescribed intervals to confirm that a facility or asset is meeting operational requirements prescribed by federal code. These activities provide the baseline data for other performance-based activities and include, but are not limited to:

- Atmospheric corrosion surveys
- Leakage surveys
- Cathodic protection surveys
- Right of way ("ROW") patrols
- Valve maintenance
- Water crossing inspections
- Odorization
- Odorometer Reads
- Line Marking
- Pressure Regulation Inspection
- Large Meter Inspections
- Record Keeping
- Control Room Management
- Bridgeline Inspections
- Equipment Calibration
- Houseboat Inspections

The safety activities from this category are prescriptive in nature and are not driven by risk analysis alone. Because these activities are required, they are not discussed further in this SPP, which instead focuses on projects and/or programs identified by NW Natural as essential to enhancing safety and reliability.

4.1.1 Transmission Integrity (TIMP)

Transmission Integrity refers to 49 CFR 192 Subpart O-Gas Transmission Pipeline Integrity Management. This federally mandated program covers natural gas transmission pipelines located in High Consequence ("HCA") and Moderate Consequence ("MCA") areas. NW Natural exceeds code requirements in TIMP to include pipelines and conditions outside of HCA and MCAs.

Activities in this category include baseline (initial) assessments and reassessments of transmission lines using in-line inspection ("ILI") and other direct assessment methods.

They may also include pipeline replacements and modifications in compliance with integrity management rules, best practices, and relocation of facilities to mitigate threats posed by natural forces such as flooding, land movement, and erosion.

4.2 Proactive, Performance-Based Actions

Other sections of 49 CFR 192 include more proactive performance-based risk reduction activities, such as Subpart P – Distribution Integrity Management Program ("DIMP"), Damage Prevention, and Public Awareness. These programs utilize a performance-based approach to mitigate risk and ensure that mitigation efforts are effective, drawing on operational experience and best practices.

4.2.1 Distribution Integrity (DIMP)

Distribution Integrity is outlined in 49 CFR 192 Subpart P- Gas Distribution Pipeline Integrity Management. This federally mandated program requires operators to create a written Distribution Integrity Management Program that takes into consideration: system knowledge, threat identification, evaluation and risk ranking, identification and implementation of measures to address risk, measurement of results, and reporting.

Activities in this category include projects warranting Accelerated Action ("AA") to address a system integrity risk. These AA projects are identified through risk modeling, industry identified threats, and by subject matter experts within the Company, and include:

- Replacement of vintage plastic services,
- Relocation of facilities under structures,
- Remediation of idle risers,
- Replacement of valves, fittings, and materials susceptible to leakage,
- Protection of above grade gas facilities,
- Crossbore investigation, and
- Relocation of distribution gas lines to mitigate threats posed by natural forces such as:
  - Flooding
  - Land movement, and
  - Erosion.
- Enhanced EFV (Excess Flow Valve) Installation – installation of EFVs on services that were installed prior to the EFV rule issued in 2006.
- Dithiazine – a sulfur compound found in natural gas that has been known to cause equipment failure especially in district regulators.

4.3 Safety Policy and Practices

NW Natural also implements risk reduction activities not explicitly required by the federal code. These actions have been identified as prudent safety practices intended to enhance public safety, improve system reliability, and maintain the safe operation of NW Natural's above and below-ground facilities including LNG Plants and underground natural gas storage facilities. These risk reduction actions include:

- Seismic vulnerability assessments of LNG Plants, the Mist Underground Storage Facility, and Transmission Pipeline System as recommended by SB 33 (2013) and consistent with the Governor's Resiliency 2025 Plan
- Accelerated replacement of vintage materials
- In line assessment of Transmission pipelines outside of high and moderate consequence areas.
- Development of a PSMS (Pipeline Safety Management System)
- Proactive EFV installation.
- Locate ticket risk modeling.
- Natural forces assessments of NW Natural's transmission system as part of NW Natural patrol and surveillance programs.
- Installation of guard posts and traffic barricades to protect above ground facilities from vehicular damage.

5 Projected and Preliminary Costs Presented in this Plan

The 2025 Capital and O&M costs presented in this plan are projected based on current expenditures for each of the identified projects through the end of the year. Costs presented for the significant safety initiatives are preliminary for planning purposes and do not include NW Natural overhead costs. Costs for safety projects under consideration will be presented in future SPPs.

6 2025 Capital Safety Investment

In 2025, NW Natural estimates it will invest $18.8 MM in capital to comply with DIMP, TIMP, and other regulations. Significant projects in this category include:

6.1 S03 Salem Bypass Trans ILI (2024-25 estimate of $5.1MM)

This project involves the first inline inspection assessment of the 8" Salem Bypass Trans line which was primarily built in 1958 to support north Salem and Keizer. This pipeline is an approximately 5.5-mile transmission pipeline that initiates at a station near the Marion St. Bridge in downtown Salem and runs north and east to a valve station at Hwy 99E and Blossom Rd. NE. Work on this project will begin in 2024 with planned completion in the fall of 2025.

6.2 S18 Willamette Valley Trans ILI (2024-25 estimate of $800k):

This project involves the first inline inspection assessment of the 12" Granger Trans line which is an approximately 4 miles of transmission pipeline that supports the city of Keizer and Salem. This pipeline initiates at the Brooks regional station in Brooks, OR and runs south along Hwy 99E where it terminates at a valve station at Hwy 99E and Blossom Dr. NE. Work on this project will begin in 2024 with planned completion in the fall of 2025.

6.3 Hwy 212 (2024-25 estimate of $2 MM):

This project involves the relocation of approximately 2500 ft. of 12" transmission main located on the south side of Hwy 212 in Clackamas. During routine pipeline patrols in 2023 it was discovered that increased flow in the Clackamas River adjacent to the 12" transmission main had caused erosion to the northern bank of the river near the pipeline. Further monitoring through the winter of 2023-24 resulted in an increased observation of this erosion that posed an increased risk to the pipeline such that relocation was recommended. Work on this project will begin in 2024 with planned completion in the fall of 2025.

6.4 GP Wauna (2024-25 estimate of $1 MM):

During standard maintenance activities it was identified that the 8" transmission main that provides natural gas to the GP Wauna facility was located at a depth that did not meet current standards and was at risk due to ditch clearing activities that occur as the pipeline crosses US Highway 30. NW Natural has coordinated with the Operations department at GP Wauna to relocate a section of pipe to a proper depth while minimizing disruption at the GP Wauna facility. Work on this project is scheduled to begin in 2024 with a completion in 2025.

6.5 Pro-active EFV Installations (2025 estimate of $1MM):

On October 14, 2016, the U.S. Department of Transportation's ("DOT's") Pipeline and Hazardous Materials Safety Administration ("PHMSA") adopted code requiring the installation of EFVs or shut-off valves on all new or replaced branched service lines (Docket No. PHMSA-2011-009). While the code requires EFV installation on all new or replaced branched service lines, it did not require retrofitting EFVs on existing services.

NW Natural believes a proactive EFV installation program is a prudent action that can mitigate the consequence of a gas release resulting from excavation damage to a gas service line. NW Natural is implementing a policy to retrofit EFVs on existing gas service lines when the buried portion of the service line is exposed, and the work involves the interruption of gas service.

This pro-active EFV program was initiated in 2020 and will continue to be a safety program.

6.6 Sewer Crossbore Inspections (2025 estimate of $1.2MM):

The sewer crossbore program involves the visual inspection of sanitary sewers for incidences of gas line crossbores. In installations where trenchless technology was used to install polyethylene pipe, there exists the possibility the gas line was bored through a sewer main or lateral. NW Natural's policy is to expose all foreign line crossings when performing trenchless work. Sewer crossbores typically occur when facility owners fail to locate their pipe, creating a situation where NW Natural is unable to expose facilities during construction. This is an industry-wide threat. Although sewer crossbores are not isolated to gas operators, the consequence when gas lines are involved can be high. This program identifies existing trenchless polyethylene installations and inspects the sewers in the vicinity to identify crossbores.

6.7 Underground Storage – Well Integrity (2025 estimate of $6.2 MM)

On December 19, 2016, PHMSA issued an interim final rule ("IFR") establishing regulations for underground natural gas storage facilities (UNGSF). The IFR incorporated by reference RP 1171, "Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs" (First Edition, September 2015). The IFR implemented PHMSA's authority to regulate underground gas storage and the Congressional mandate in section 12 of the PIPES Act to establish minimum safety standards.

The final rule published on February 12, 2020, modified compliance timelines, clarified regulatory roles, reduced recordkeeping and reporting requirements, and formalized integrity management practices. In accordance with the final rule, NW Natural is running baseline casing inspection logs on each of its active gas storage wells prior to the March 13, 2027, deadline.

Work in 2025 will involve one evaluation for potential plug and abandonment and replacement of three separators.

6.8 Other safety projects and programs (2025 estimate of $1.5 MM):

Pipeline Replacement due to Seismic/Natural Forces

Portions of NW Natural's distribution and transmission system cross through landslide faults, seismic faults, sensitive areas, and waterways. Due to significant weather events or the passage of time, the integrity of these pipelines may be compromised. When identified during patrols, routine maintenance, or other stakeholders, the Integrity Team develops plans to remediate these at-risk pipelines as they are identified.

Valve Isolation Plans

NW Natural is working to develop a strategy for identifying and installing additional valves in the distribution system to assist in the isolation of portions of the distribution system in case of an emergency or third-party damage.

Meter Protection Installation

NW Natural will continue installation of guard posts adjacent to meter sets that are determined to be at risk of damage due to vehicle or equipment contact.

Pipeline Modification due to ROW Encroachment

Patrols of NW Natural Pipelines may discover structures or other encroachments built over or adjacent to pipelines that can impact the safe operation of or access to a pipeline. This program works with landowners to remediate these encroachments.

Pipeline Material Identification (PMI)

At selected transmission pipeline anomaly remediation sites, NW Natural has instituted a process using technology to non-destructively test and acquire data regarding pipe material properties. In addition, when the Transmission Integrity rule went into effect over twenty years ago, NW Natural began keeping short (18"-24" long) sections of pipe for future reference. These spools were destructively tested to obtain pipe material properties that were not required as part of the original installation documentation. The material data

obtained through this program are being stored in the permanent record for each pipe segment.

Non-hazardous Leakage Projects
As part of NW Natural's continued efforts to reduce fugitive methane emissions, actions are being taken to proactively replace facilities identified as producing non-hazardous leaks. Per NW Natural Standard Practices these facilities are reevaluated and monitored on a routine basis until the leak classification changes or the facility is repaired or replaced. To address these frequent revaluations and reduce fugitive methane emissions a more proactive approach is being taken towards these facilities and projects are being developed to accelerate replacements.

Removal of Class A Services
NW Natural has performed work to eliminate a low-pressure system and transition to a full distribution system. During this transition to eliminate the low-pressure system a small number of Class A services still exist in the system. These Class A services have an MAOP of 12 inches of water column and are a legacy from the low-pressure system. NW Natural has initiated DIMP project to work with these customers to eliminate these Class A services from the system.

Idle Risers
Idle risers are the above ground portion of a service line that remains after meter removal when a customer closes their account, or a home or business is vacated. In these cases NW Natural maintains the service (idle) riser above ground where it is capped/plugged and tagged as idle. These idle risers are maintained in accordance with code requirements in the event a customer or a new tenant requests gas service. Over extended periods of time and in some instances these idle risers may present an elevated risk of damage. In 2025 NW Natural will develop a process to identify at risk idle risers and begin development of a program to remove them and abandon the service line.

6.9 Historical Capital Expenditure – Safety Project Plan (System Integrity)

The Historical Capital Expenditures below are actual expenditures for each of the presented years.

Year	Expenditure
2015	$17,190,356*
2016	$ 7,772,763
2017	$ 5,925,409
2018	$ 9,699,814
2019	$10,231,431
2020	$ 8,900,000
2021	$ 8,200,000
2022	$ 9,000,000

2023 $13,000,000
2024 $14,500,000
*Final year of known bare steel main replacement

Historical capital expenditures include:

- Work to modify pipelines to accept inline inspection devices, including removal or replacement of non-piggable fittings and facilities required to launch and receive inline inspection devices.
- Pipeline relocation to mitigate threats including outside forces and natural forces. This work does not include relocations due to utility conflicts, or third-party improvement projects.
- Pipe replacements and testing in compliance with federal and state regulations.
- Ongoing DIMP AA programs/projects such as Vintage Plastic, Guard post installations, Proactive EFV installations, etc.

7 2025 O&M Expenditures

In 2025 NW Natural expects to spend $6.425MM in O&M to address and comply with DIMP, TIMP, damage prevention, and public awareness.

Activities that reflect expenditures in this category include costs for supplies (office/field), reference materials, education (conferences/workshops), vendor and contract costs associated with transmission assessments, public awareness program materials, advertisements and mailings, and natural forces investigation and remediation. Additionally, this category covers the development, initiation, and execution of studies and consulting fees related to integrity requirements, such as class location studies and third-party geotechnical site evaluations to address and mitigate risk.

O&M also includes some non-capital internal labor in support of NW Natural's system integrity program ("SIP"). These costs include the Integrity Management staff (7 FTE), damage prevention staff (4.5 FTE) involved in damage prevention/investigation, and a public information officer for safety outreach, training, and program administration. The Integrity Management group may also utilize other internal resources in support of SIP activities which includes GIS analysts, Customer Service, Construction, and other subject matter experts. Significant O&M projects include:

7.1 Transmission Inline and Direct Assessment Reassessment and Remediation (2025 estimate of $3MM):

This work includes the federally prescribed seven-year reassessment of transmission pipelines in HCAs and is comprised of both inline inspection and direct assessment of transmission assets and associated repairs.

7.2 Natural Forces (2025 estimate of $125,000):

Where the threat of natural forces can be mitigated without pipe replacement or rerouting, NW Natural may choose to address the threat through site work. This option is necessary in situations where a reroute is not feasible due to environmental restrictions or where a pipeline serves a critical customer or provides a single feed to a distribution system. Work may include armoring of slopes, re-grading of sites, culvert improvements, and retaining structures to address land movement and drainage issues.

7.3 Damage Prevention (2025 estimate of $850,000):

In compliance with DIMP regulations, and to address the single largest threat to gas facilities, NW Natural maintains a damage prevention department. The department consists of a supervisor and 4.5 FTE damage prevention specialists whose responsibilities include damage prevention through high risk locate ticket intervention, training, attendance at pre-construction meetings, participation in Utility Coordinating Councils, and support of the 811 One-call system. Damage prevention specialists are also responsible for the investigation, enforcement, and contractor training related to excavation and third-party damage.

7.4 Public Awareness (2025 estimate of $850,000):

NW Natural's Public Awareness program meets the requirements mandated in API RP 1162, adopted by reference by PHMSA into Part 192.616(a), (b), and (c). This program promotes public safety through communication and outreach focused on educating customers and the public about natural gas safety. The program includes customer correspondence, mailers, advertisements, community events, mobile phone applications, and brochures to excavators, contractors, public officials, residences and businesses along pipeline rights-of-way and in high consequence areas, and floating homes.

The Public Awareness Plan utilizes television and radio advertising, bill inserts, social media, and events to promote natural gas safety awareness. Targeted outreach and public awareness materials are provided annually to customers near transmission pipelines, as well as contractors, excavators, and first responders within NW Natural's service territory.

7.5 Right-of-Way Encroachments (2025 estimate of $100,000):

Pipeline patrols are used to identify changes in site conditions. An example of such a change is the installation of structures over pipelines, and inside dedicated pipeline rights-of-way, or easements. In some instances, the remediation may involve the relocation of structures and other non-gas facilities.

7.6 Probabilistic Distribution Risk Model ($1.5MM between 2025 and 2030):

In 2023 NW Natural initiated a project to partner with a data analysis consultant to implement a Probabilistic Risk Model to assess the NW Natural distribution system. A probabilistic risk model is a model that determines the probability of failure in the system and quantifies the consequences of a failure per threat. Probabilistic Risk models have been identified by PHMSA as a best practice to proactively manage threats to the natural gas

distribution system. This risk model is a 5-year program that is scheduled to begin implementation in 2025.

7.7 Historical O&M Expenditure – Safety Project Plan (System Integrity):

The historical O&M expenditures below are actual expenditures for each of the presented years (not including PSMS, damage prevention or public awareness expenditures).

Year	Expenditure
2015	$4,034,218
2016	$4,889,618
2017	$4,771,267
2018	$4,000,000
2019	$3,052,000
2020	$3,100,000
2021	$2,900,000
2022	$2,800,000
2023	$3,000,000
2024	$ 700,000

Historic O&M expenditure included:

- Regulatory transmission assessments including the investigation and remediation of identified anomalies resulting from inline inspection (ILI re-inspections not conducted in 2024) and external corrosion direct assessment (ECDA).
- Sewer crossbore inspection program (not conducted in 2024).
- Investigation and remediation of natural forces including landslides, flooding, erosion, etc.
- Buildover remediation where structures encroach into pipeline right-of-way.
- Remediation of difficult to operate valves.
- Maintenance of Integrity Risk model as a result of geographical and system changes.

These above costs do not reflect those related to ongoing maintenance of facilities including right-of-way clearing, patrols, leakage, cathodic protection, and other ongoing routine O&M work.

8 2025 Significant Safety Initiatives

8.1 Changes in TIMP Assessment Methodology

In 2025, NW Natural will extend the use of inline inspection (ILI) for integrity assessment of transmission pipelines assessed at seven-year intervals. Inline inspection tools have the advantage over direct assessment and pressure testing because they assess the entire pipeline maintaining constant contact with the inner wall providing data allowing for the

identification of interacting anomalies such as pipe deformation and metal loss. In 2025, NW Natural will change the assessment methodology of the following pipelines.

- S18 Willamette Valley Trans – Approximately 4-mile transmission pipeline that provides gas the P30 – Central Coast Feeder to Keizer and north Salem.
- S03 Salem Bypass – Approximately 5.5 miles of transmission pipeline that supports the city of Salem and Keizer.

8.2 Pro-active EFV Installations

NW Natural has installed EFVs on all new single-family residential services since February of 1999. In 2006, Federal Code was modified to require the installation of EFVs on all new residential and small commercial services. NW Natural will continue and expand the program installing EFVs on existing residential and small commercial services when the buried portion of the service line is exposed and service to the customer is interrupted. NW Natural believes proactive installation of EFVs is a prudent and pragmatic approach that can mitigate the consequence of an excavation damage to a service line.

9 Transmission Material Verification

In compliance with recent Regulatory Mandates involving material verification of steel transmission pipelines, NW Natural has implemented a non-destructive material verification program to collect material property data on transmission pipeline assets. This program involves material testing of in-service pipelines during planned work to collect material data including metallurgy that was not required at the time of installation.

NW Natural has also developed a program to destructively test segments of pipeline that were removed from past transmission projects to collect the material property information. Collecting material information from the in-service transmission mains and the destructive tests from the historical transmission mains will allow NW Natural to develop a library of pipeline material property data.

10 Cost Benefit Analyses & Alternative Analysis

The performance of a cost benefit analysis and alternatives analysis is difficult in the context of safety programs mandated by regulation. As a result, a cost benefit analysis has not been a primary consideration in this report because these safety projects are mandated by CFR, dictated by industry best practices, or driven by operational requirements. The assigned risk and prioritization for implementing these projects are based on in-depth studies and analysis of NW Natural's transmission and distribution systems as well as plant and storage assets. Studies performed as part of normal operations provide measurable and continual feedback needed to perform safety related work for which there are few practicable alternatives.

Alternative analysis and in-depth studies are useful when they identify threats and risks that

can be mitigated or eliminated through the application of performance-based best practices, engineering analysis, operational knowledge, and subject matter experts. Where the Code of Federal Regulations prescribe compliance activity or mandate programs, the use of cost benefit, or alternative, analysis is not warranted.

When a pipeline safety initiative requires a cost benefit or alternative analysis, NW Natural may select a qualified external resource to perform the analysis.

11 Legislative Update

11.1 PHMSA Rulemaking Docket No. PHMSA-2011-0023;

Amdt. No. 192-132] RIN 2137-AF39 Pipeline Safety: Safety of Gas Transmission Pipelines: Repair Criteria, Integrity Management Improvements, Cathodic Protection, Management of Change, and Other Related Amendments. PHMSA published this rule on August 24, 2022. NW Natural is in compliance with the rule as published.

11.2 Docket No. PHSMA-2021-0039 Pipeline Safety NPRM: Gas Pipeline Leak Detection and Repair

On May 18, 2023, PHSMA issued a Notice of Proposed Rule Making: Gas Pipeline Leak Detection and Repair. The NPRM colloquially referred to as the LDAR rule is intended to reduce methane emissions from new and existing gas transmission and distribution pipelines, gas gathering pipelines, and underground natural gas storage facilities. NW Natural is reviewing the NPRM and will comply with the final rule when it is published in the Federal Register.

11.3 Docket No. PHSMA-2021-0046 Pipeline Safety NPRM: Safety of Gas Distribution Pipelines and Other Pipeline Safety Initiatives

On September 7, 2023, PHSMA issued a Notice of Proposed Rule Making: Safety of Gas Distribution Pipelines and Other Pipeline Safety Initiatives. PHMSA proposes revisions to the pipeline safety regulations to require operators of gas distribution pipelines to update their distribution integrity management programs (DIMP), emergency response plans, operations and maintenance manuals, and other safety practices. These proposals implement provisions of the Leonel Rondon Pipeline Safety Act—part of the Protecting our Infrastructure of Pipelines and Enhancing Safety Act of 2020. NW Natural is reviewing the NPRM and will comply with the final rule when it is published in the Federal Register.

12 Completed Projects

Below is the list of projects scheduled to be completed in 4th quarter of 2023 and 2024.

12.1 Underground Storage – Well Integrity ($2.6MM – Actual)

This project involved the re-work and baseline assessments of two wells and reassessment of four wells in the Mist storage field. The 2024 project represents year seven of NW Natural's well integrity baseline assessment work that includes down hole assessment of production casing and replacement of select tubulars, downhole equipment, and wellhead components. The reassessments include down hole assessment of production casing and replacement of select tubulars, downhole equipment, wellhead components, and/or mechanical integrity testing. The program was developed to meet compliance with PHMSA's adoption of APR RP 1171 - Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs. The baseline assessments represent a multiyear project planned for completion in 2025. The reassessment intervals are determined by risk assessment and information from the baseline assessments. This project has been completed.

12.2 Albany Trans ILI (~2024 actual $1.3M):

This project involves the transition of the Albany Trans transmission line from ECDA to ILI assessment. The Albany transmission line is a 10" transmission main that connects to the Albany Gate in the eastern part of Albany and runs west 12 miles to serve the residential and industrial customers of Albany and Corvallis. The transmission main terminates in North Corvalis. Design work to modify the pipeline began in 2023 with construction starting in 2024; cleaning and ILI assessment, data analysis, and remediation activities will continue through the fall of 2024.

12.3 Mid-Willamette Valley Trans (~2024 Actual $1.5M):

This project involves the transition of the Mid-Willamette Valley transmission line from ECDA to ILI assessment. The Mid-Willamette Valley Transmission line is a 31 mile long 12" transmission line that connects to the P30 Central Coast Feeder near Perrydale. The line runs south where it terminates at US Hwy 20. This pipeline serves the residential and commercial customers in Monmouth and provides a connection from the Central Coast feeder to Albany/Corvallis. Design and preliminary construction work was completed in 2024. Cleaning and ILI assessment activities will continue through 2024 with data analysis and remediation/repairs completed in 2025.

12.4 Granger (~2024 Actual $1.5M):

This project involves the transition of the Granger transmission line from ECDA to ILI assessment. The Granger Transmission line is a 4.5 mile long 6" transmission line that connects to the end of the Albany Transmission main and runs north and east along US Highway 20 where it terminates near US Hwy 20 and Independence Hwy. This pipeline serves the residential and commercial customers in North Albany. Design and preliminary construction work was completed in 2024. Cleaning and ILI assessment activities will continue through 2024 with data analysis and remediation/repairs completed in 2025.

13 Conclusion

This SPP provides an overview of NW Natural's pipeline safety initiatives and commitment to the safe and reliable delivery of natural gas to the communities we serve. Through its more-than 165-year history, NW Natural has been committed to identifying threats to pipeline safety and taking steps to address and mitigate those threats. Looking forward to the role natural gas will play in our energy future, and as members of the communities we serve, NW Natural recognizes the trust placed on us by our neighbors and customers. NW Natural will continually work to ensure public safety and maintain the integrity of our natural gas system.

1 Introduction

In compliance with the Oregon Public Utility Commission ("Commission" or "OPUC") Order No 17-084 ("Order") in Docket UM 1722, this Safety Project Plan ("SPP") outlines NW Natural's safety project investments for 2024. The SPP includes updated capital and O&M projects and programs and projects that carry over from 2023.

This SPP demonstrates NW Natural's commitment to pipeline safety by providing insight into NW Natural's safety activities and identifies NW Natural's response to regulatory changes that may drive safety program priorities or modify existing programs. In the future if NW Natural seeks approval for a Safety Cost Recovery Mechanism (SCRM), this SPP is intended to expedite the review process of safety investments.

Safety is a core value at NW Natural and we appreciate the opportunity to present this information to the Commission.

2 Background Information

NW Natural is a regulated natural gas utility conducting business in Oregon and southwest Washington. The Company serves ~790,000 customers and owns and operates ~660 miles of natural gas transmission pipeline, and ~14,200 miles of distribution pipelines. In addition, NW Natural operates three energy storage facilities in Oregon – Portland and Newport LNG Plants and Mist Underground Storage.

NW Natural's pipelines and storage facilities are governed by:

- 49 CFR Part 192 – Minimum Safety Standard – Transmission & Distribution Systems
- 49 CFR Part 193 – LNG Safety Standards
- 49 CFR Part 196 – Protection of Underground Pipelines from Excavations Activity
- Additional OARs (OAR 860-024 – Safety, OAR 860-031 – Pipeline Inspections), and ORSs such as ORS 757.039 – Regulation of hazardous substance distribution and storage operations, and ORS 757.542-993 – One call notification.

In addition to the federal and state regulations identified above, NW Natural's safety program considers the findings of Oregon House Resolution 3 (HR 3, 2011) which directed the Oregon Seismic Safety Policy Advisory Commission to prepare the Oregon Resiliency Plan with the purpose of identifying recommendations for how Oregon's critical energy infrastructures could be made seismically resilient against a Cascadia subduction zone earthquake. Upon completion of that work on February 28, 2013, the Oregon Senate passed Senate Bill 33 (SB 33, 2013), which established the Governor's Task Force on Oregon Resilience Plan ("ORP") Implementation ("Task Force"). In October 2014, the Task Force issued a report recommending that the Commission require regulated energy providers to conduct seismic assessments of

regulated facilities and recommended that the Commission allow cost recovery for prudent investments related to assessments and mitigation of vulnerabilities identified during those assessments. In October 2018, Governor Kate Brown presented the "Resiliency 2025" plan, titled "Improving Our Readiness for the Cascadia Earthquake and Tsunami" ("Resiliency 2025 Plan"). The Resiliency 2025 Plan follows the 2013 ORP and outlines six key strategies for the State of Oregon. Its vision is to "protect all Oregonians by ensuring we are prepared to survive and recover from the expected 9.0 magnitude Cascadia earthquake and ensuing tsunami." The key strategy of the Resiliency 2025 Plan to improve the energy infrastructure is to "develop a plan for the Critical Energy Infrastructure Hub to prevent and mitigate catastrophic failure and ensure fuel supplies and alternate energy sources are available to responders and the public."

3 Threat Identification

NW Natural's four highest ranking threats, as identified in the DIMP Plan are:

3.1 Excavation Damage

Excavation damage continues to be the principal threat to NW Natural's gas distribution system, comprising approximately 86 percent of all recorded leak repairs. Excavation damage is a system-wide threat brought on predominantly by improper excavation practices. NW Natural's efforts to reduce excavation damages are described below.

3.1.1 Excavation Training and Education:

NW Natural actively engages in training and education for contractors, general public, and other utilities, to promote safe excavation procedures and practices. These efforts include classes on Oregon dig laws, displays at public events, and the use of media including print, radio, television, and internet to promote safety, best practices, and the use of 811.

NW Natural's Damage Prevention Department works to reduce the number of excavation damages through investigation, cause analysis, and proactively works to identify and support contractors engaging in high-risk construction activity.

3.1.2 One-Call Notification Practices:

NW Natural actively participates in local and state-level Utility Coordinating Councils as well as the One Call Utility Notification board. A primary function of these organizations is to reduce damages to underground utilities through excavation best practices, public awareness, and the use of the Oregon one call system (811).

NW Natural also maintains a robust Public Awareness Program which includes advertising, direct mailing, and public event outreach to increase this awareness.

3.1.3 Locating Practices:

NW Natural is an active member of Oregon's one call system and responds to all locate requests. Due to the high volume of locate requests this work is contracted. All locating is performed by NW Natural qualified personnel and oversight is performed by Company contract management personnel. In addition, locating activity is included in NW Natural's Quality Assurance program to minimize the incidences of errors, mismarks, and missed due dates.

3.1.4 Incorrect Facility Marking:

Incorrectly marked facilities may be due to underground interference, equipment issues, inaccurate facility maps, or procedural issues. Locating personnel responsible for a mismark receive additional training and are required to re-qualify prior to being allowed to locate gas facilities. Review of mismarks are conducted by supervisor or other qualified personnel and the results are used to identify deficiencies, correct maps, and ensure the facility can be reliably located.

3.2 Material, Weld or Joint Failure

Material, weld, or joint failure is the second largest threat to the NW Natural gas distribution system, comprising approximately 9 percent of all recorded leak repairs. NW Natural is proactive in its efforts to reduce these occurrences, as described below.

3.2.1 Plastic Pipe Installed from 1960s to 1980s:

NW Natural makes every effort to identify all pre-1982 plastic pipe installations, analyze leak histories, evaluate any conditions that may threaten integrity of the pipe, and take appropriate remedial action, including replacement, to mitigate risks to public safety.

3.2.2 Plexco Service Tee Celcon Caps:

NW Natural is aware of industry issues regarding Plexco Service Tee Celcon Caps possibly leaking when over-tightened during installation. These caps exist within the gas distribution system and are replaced as found and scheduled for replacement if leaks are identified.

3.2.3 Polyethylene ("PE") Fusion Failure:

NW Natural has a robust training and Quality Assurance/Quality Control program in place to ensure proper PE fusion quality. This program includes testing, biannual qualification, and ongoing training. All PE fusions are visually inspected, and pressure tested prior to being placed in service.

3.2.4 Flat Back Risers:

In 2012 NW Natural identified a type of riser stop valve, internally known as a "Flat Back Riser," that contained components prone to atmospheric corrosion in the coastal areas of NW Natural's service territory. NW Natural identified that corrosion failure on a

retaining pin could result in a hazardous leak. NW Natural developed an Accelerated Action Plan to replace these valves in coastal areas.

3.3 Corrosion

Corrosion is the third largest threat to the NW Natural's gas distribution system, comprising less than 2 percent of all recorded leak repairs. NW Natural's efforts to reduce these occurrences are described below.

3.3.1 Pipe Replacement:

The primary driver for external corrosion system-wide is steel pipe. At this time NW Natural's distribution system in Oregon is approximately 50% coated and cathodically protected steel and 50% polyethylene. During all pipe replacement projects consideration is given to replacing existing steel pipes, valves, and fittings with polyethylene to mitigate the threat of corrosion. In 2015 NW Natural completed the replacement of all known un-coated bare steel pipe eliminating the single largest corrosion threat.

3.3.2 Pipe Casings:

Steel casings are primarily used to protect or facilitate the installation of mains and services underground and are fitted with seals to prevent water intrusion, spacers to prevent contact between the casing and gas carrying pipe, and vents.

NW Natural inspects steel casings annually to identify problems such as contact between the casing and gas pipe, or water intrusion. If a "short" or other anomaly is identified a work order is created to address the concern.

At NW Natural the installation of casings has been largely replaced by HDD (Horizontal Directional Drilling) installation. During pipeline improvement projects existing casings are evaluated for replacement by HDD or alternatives.

3.3.3 Atmospheric Corrosion:

NW Natural's system includes facilities such as risers, regulators, station piping, bridge crossings and other above ground facilities that are susceptible to atmospheric corrosion.

NW Natural's atmospheric corrosion mitigation plan includes replacement of facilities when appropriate as well as protective coatings such as epoxies, paint, wax, other corrosion resistant materials, and enhanced inspections in locations with an elevated risk of corrosion.

3.3.4 Exposed Pipe Inspections

During normal operations when a buried pipeline is exposed crews inspect the pipe and protective coating for evidence of corrosion, or coating anomalies that can lead to future corrosion. Coating repairs or pipe replacements are completed before the pipe backfilled and placed back in service.

3.4 Equipment Failure

Equipment Failure is the fourth largest threat to the NW Natural gas distribution system, comprising approximately 1 percent of all recorded leak repairs. NW Natural's efforts to reduce these occurrences are described below.

3.4.1 Valves:

Valves are vital to the safe operation of a gas distribution system. NW Natural has in place a key operating valve inspection and maintenance program to ensure key valves are operable and available for use. Valves that are found to be inoperable, inaccessible, and/or paved over are identified and remediated as necessary.

3.4.2 Pressure Control / Relief Equipment:

NW Natural has an established inspection and maintenance program in place for pressure control/relief equipment to ensure reliable and safe operation.

3.4.3 Mechanical Couplings:

Pipe may pull out from compression couplings due to tensile forces including excavation damage, cyclic fatigue from changes in the temperature of natural gas as a result of the Joule-Thomson effect, ground movement from earthquakes or after heavy rains. Mechanical fitting failures are investigated, tracked, and reported per PHMSA and OPUC requirements.

In the past as an alternative to welding small diameter steel fittings, mechanical couplings were sometimes used to install valves and service tees. These types of fittings may develop leaks through the elastomer seal between the coupling and the pipe. NW Natural replaces these fittings with welded steel fittings or polyethylene as discovered during routine operations and maintenance activity.

3.4.4 Other:

Other types of material or equipment failure may occur in the gas distribution system. Failure reports are reviewed to detect trends or patterns that may affect the distribution system.

Many of the safety projects identified in this plan are in direct response to the above threats, and to maintain compliance with safety codes and regulations.

4 Safety Activities Performed by NW Natural

Safety activities at NW Natural can be divided into categories:

4.1 Prescriptive Regulatory Actions – Includes actions which must be performed to meet minimum federal safety standards.

49 CFR 192 includes multiple prescriptive activities, intended to safeguard public safety, and fall into broad categories such as "operations" (Subpart L) and "maintenance" (Subpart M). Most of these activities require inspections at prescribed intervals to confirm that a facility or asset is meeting operational requirements prescribed by federal code. These activities provide the baseline data for other performance-based activities and include, but are not limited to:

- Atmospheric corrosion surveys
- Leakage surveys
- Cathodic protection surveys
- Right of way ("ROW") patrols
- Valve maintenance
- Water crossing inspections
- Odorization
- Odorometer Reads
- Line Marking
- Pressure Regulation Inspection
- Large Meter Inspections
- Record Keeping
- Control Room Management
- Bridgeline Inspections
- Equipment Calibration
- Houseboat Inspections
- Transmission Integrity

The safety activities from this category are prescriptive in nature and are not driven by risk analysis alone. Because these activities are required, they are not discussed further in this SPP, which instead focuses on projects and/or programs identified by NW Natural as essential to enhancing safety and reliability.

4.1.1 Transmission Integrity (TIMP)

Transmission Integrity refers to 49 CFR 192 Subpart O-Gas Transmission Pipeline Integrity Management. This federally mandated program covers natural gas transmission pipelines located in High Consequence ("HCA") and Moderate Consequence ("MCA") areas. NW Natural exceeds code requirements in TIMP to address conditions outside of HCA and MCA's

Activities in this category include baseline assessments and reassessments of transmission lines using in-line inspection ("ILI") and other direct assessment methods. They may also include pipeline replacements and modifications in compliance with integrity management rules, best practices, and relocation of facilities to mitigate threats posed by natural forces such as flooding, land movement, and erosion.

4.2 Proactive, Performance-Based Actions

Other sections of 49 CFR 192 include more proactive performance-based risk reduction activities, such as Subpart P – Distribution Integrity Management Program ("DIMP"), Damage Prevention, and Public Awareness. These programs focus on mitigating pipeline safety risk.

4.2.1 Distribution Integrity (DIMP)

Distribution Integrity is outlined in 49 CFR 192 Subpart P- Gas Distribution Pipeline Integrity Management. This federally mandated program requires operators to create a written Integrity Management Program that takes into consideration: system knowledge, threat identification, evaluation and risk ranking, identification, and implementation of measures to address risk, measurement of results, and reporting.

Activities in this category include projects warranting Accelerated Action ("AA") to address a system integrity risk. These AA projects are identified through risk modeling, industry identified threats, and by subject matter experts within the Company, and include:

- Replacement of vintage plastic services,
- Relocation of facilities under structures,
- Replacement of valves and fittings susceptible to leakage,
- Protection of above grade gas facilities,
- Crossbore investigation, and
- Relocation of distribution gas lines to mitigate threats posed by natural forces such as:
  - Flooding
  - Land movement, and
  - Erosion.
- Enhanced EFV Installation – installation of EFVs on services that were installed prior to the EFV rule issued in 2006.
- Dithiazine – a sulfur compound found in natural gas that has been known to cause equipment failure especially in district regulators.

4.3 Safety Policy and Practices

NW Natural also implements risk reduction activities not explicitly required by the federal code. These actions have been identified as prudent safety practices intended to enhance public safety, improve system reliability, and maintain the safe operation of NW Natural's

above and below-ground facilities including LNG Plants and underground natural gas storage facilities. These risk reduction actions include:

- Seismic vulnerability assessments of LNG Plants, the Mist Underground Storage Facility, and Transmission Pipeline System as recommended by SB 33 (2013) and consistent with the Governor's Resiliency 2025 Plan
- Accelerated replacement of vintage materials
- In line assessment of Transmission pipelines outside of high and moderate consequence areas.
- Development of a PSMS (Pipeline Safety Management System)
- Proactive EFV installation
- Locate ticket risk modeling.
- Natural forces assessments of NW Natural's transmission system as part of NW Natural patrol and surveillance programs.
- Installation of Rupture Mitigation Valves (RMVs) in areas susceptible to land movement due to natural forces.
- Installation of guard posts and traffic barricades to protect above ground facilities from vehicular damage.

5 Projected and Preliminary Costs Presented in this Plan

The 2024 Capital and O&M costs presented in this plan are projected based on current expenditures for each of the identified projects through the end of the year. Costs presented for the significant safety initiatives are preliminary for planning purposes and do not include NW Natural overhead costs. Costs for safety projects under consideration will be presented in future SPPs.

6 2024 Capital Safety Investment

In 2024, NW Natural estimates it will invest $17.5 MM in capital to comply with DIMP, TIMP, and other regulations. Significant projects in this category include:

6.1 S36 Mid-Willamette Valley Trans (2023-24 estimate of $1.5 MM):

This project involves the first inline inspection assessment of the 12" Mid-Willamette Valley Trans line which was built in multiple stages beginning in 2005 as part of a bare main replacement project in the area. This pipeline is an approximately 32-mile transmission pipeline that provides gas from the Newport LNG facility to communities in the Mid-Willamette Valley including Albany and Corvallis. Work on this project will begin in 2023 with planned completion in the fall of 2024.

6.2 S24 Granger (2023-24 estimate of $1.5 MM):

This project involves the inline inspection assessment of the 6" Granger Trans line which is an approximately 4.5 miles of transmission pipeline that supports the city of Albany. This pipeline initiates at the Corvallis Granger station north of Corvallis and is routed along US Hwy 20 where it terminates at a valve station on the north side of US Hwy 20 when it transitions to an 8" high pressure distribution main. Work on this project will begin in 2023 with planned completion in the fall of 2024.

6.3 S22 10" Albany Trans (2023-24 estimate of $1.5 MM):

This project involves the inline inspection assessment of the 10" Albany Trans line which is approximately 12-mile transmission pipeline that initiates from a gate station east of Albany and is routed through Albany where it terminates at the Corvallis Granger Regional Station north of Corvallis. This pipeline is the primary feed for the Albany Corvallis area include Oregon State University. Work on this project will begin in 2023 with planned completion in the fall of 2024.

6.4 Seismic/RMV Projects (2023-24 estimate of $1.2 MM):

In 2023 NW Natural worked with an Engineering consultant to develop a risk model of the NW Natural transmission and high-pressure distribution system utilizing the regulations in the PHMSA Rupture Mitigation Valve ("RMV") Rule and a seismic study created in 2020. This risk model prioritized transmission and high-pressure distribution segments based on a risk score. NW Natural is working to implement the results of this risk analysis to select critical valve locations that need RMV technology based on risk.

6.5 Probabilistic Distribution Risk Model (2023-24 estimate of $1.6MM):

In 2023 NW Natural initiated a project to partner with a data analysis consultant to implement a Probabilistic Risk Model to assess the NW Natural distribution system. A probabilistic risk model is a model that determines the probability of failure in the system and quantifies the consequences of a failure per threat. Probabilistic Risk models have been identified by PHMSA as a best practice to proactively manage threats to the natural gas distribution system. This risk model is a 5-year program that is schedule to begin implementation in 2024.

6.6 Pro-active EFV Installations (2024 estimate of $3MM):

On October 14, 2016, the U.S. Department of Transportation's ("DOT's") Pipeline and Hazardous Materials Safety Administration ("PHMSA") adopted code requiring the installation of EFVs or shut-off valves on all new or replaced branched service lines (Docket No. PHMSA-2011-009). While the code requires EFV installations be installed in all new or replaced branched service lines, it did not require retrofitting EFVs on existing services.

NW Natural believes a proactive EFV installation program is a prudent action that can mitigate the consequence of a gas release resulting from excavation damage to a gas service line. NW Natural is implementing a policy to retrofit EFVs on existing gas service lines when the buried portion of the service line is exposed, and the work involves the interruption of gas service.

This pro-active EFV program was initiated in 2020 and will continue to be a safety program.

6.7 Underground Storage – Well Integrity (2024 estimate of $5.7 MM)

On December 19, 2016, PHMSA issued an interim final rule ("IFR") establishing regulations for underground natural gas storage facilities (UNGSF). The IFR incorporated by reference RP 1171, "Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs" (First Edition, September 2015). The IFR implemented PHMSA's authority to regulate underground gas storage and the Congressional mandate in section 12 of the PIPES Act to establish minimum safety standards.

The final rule published on February 12, 2020, modified compliance timelines, clarified regulatory roles, reduced recordkeeping and reporting requirements, and formalized integrity management practices. In accordance with the final rule, NW Natural is running baseline casing inspection logs on each of its active gas storage wells prior to the March 13, 2027, deadline.

Work in 2024 will involve assessments of the production casings. The assessments will include downhole wireline logging of the production casing strings using both multi-arm caliper and magnetic flux tools to identify deformations and metal loss features.

6.8 Other safety projects and programs (2024 estimate of $1.5 MM):

Pipeline Replacement due to Seismic/Natural Forces

Portions of NW Natural's distribution and transmission system cross through landslide faults, seismic faults, sensitive areas, and waterways. Due to significant weather events or the passage of time, the integrity of these pipelines may become at risk. When identified during patrols, routine maintenance, or other stakeholders, the Integrity Team develops plans to remediate these at-risk pipelines as they are identified.

Valve Isolation Plans

NW Natural is working to develop a strategy for identifying and installing additional valves in the distribution system to assist in the isolation of portions of the distribution system in case of an emergency or third-party damage.

Meter Protection Installation

NW Natural will continue installation of guard posts adjacent to meter sets that are determined to be at risk of damage due to vehicle or equipment contact.

Pipeline Modification due to ROW Encroachment
Patrols of NW Natural Pipelines may discover structures or other encroachments built over or adjacent to pipelines that can impact the safe operation of or access to a pipeline. This program works with landowners to remediate these encroachments.

Pipeline Material Identification (PMI)
At selected transmission pipeline anomaly remediation sites, NW Natural has instituted a process using technology to non-destructively test and acquire data regarding pipe material properties. In addition, when the Transmission Integrity rule went into effect over twenty years ago, NW Natural began keeping short (18"-24" long) sections of pipe for future reference. These spools will be destructively tested to obtain pipe material properties that were not required as part of the original installation documentation. The material data obtained through this program will be stored in the permanent record for each pipe segment.

Non-hazardous Leakage Projects
As part of NW Natural's continued efforts to reduce fugitive methane emissions an approach has been taken to proactive replace facilities that have been identified as producing non-hazardous leaks. Per NW Natural Standard Practices these facilities previously could be reevaluated on a more frequent basis until the leak classification changes or the facility is repaired or replaced. In order to address these frequent revaluations and reduce fugitive methane emissions a more proactive approach is being taken towards these facilities and projects are being developed to accelerate replacements.

Removal of Class A Services
NW Natural in recent history performed work to eliminate a low-pressure system and transition to a full distribution system. During this transition to eliminate the low-pressure system a small number of Class A services still exist in the system. These Class A services have an MAOP of 12 inches of water column and are a legacy from the low-pressure system. NW Natural has taken on a DIMP project to work with these customers to eliminate these Class A services from the system.

6.9 Historical Capital Expenditure – Safety Project Plan (System Integrity)

The Historical Capital Expenditures below are actual expenditures for each of the presented years.

Year	Expenditure
2015	$17,190,356*
2016	$ 7,772,763
2017	$ 5,925,409
2018	$ 9,699,814
2019	$10,231,431
2020	$ 8,900,000
2021	$ 8,200,000

2022 $ 9,000,000
2023 $13,000,000

*Final year of known bare steel main replacement

Historical capital expenditures include:

- Work to modify pipelines to accept inline inspection devices, including removal or replacement of non-piggable fittings and facilities required to launch and receive inline inspection devices.
- Pipeline relocation to mitigate threats including outside forces and natural forces. This work does not include relocations due to utility conflicts, or third-party improvement projects.
- Pipe replacements and testing in compliance with federal and state regulations.
- Ongoing DIMP AA programs/projects such as Vintage Plastic, Guard post installations, Proactive EFV installations, etc.

7 2024 O&M Expenditures

In 2024 NW Natural expects to spend $4.7MM in O&M to address and comply with DIMP, TIMP, damage prevention, and public awareness.

Activities that reflect expenditures in this category include costs for supplies (office/field), reference materials, education (conferences/workshops), vendor and contract costs associated with transmission assessments, sewer crossbore investigations and remediation, public awareness program materials, advertisements and mailings, and natural forces investigation and remediation. Additionally, this category covers the development, initiation, and execution of studies and consulting fees related to integrity requirements, such as class location studies and third-party geotechnical site evaluations to address and mitigate risk.

O&M also includes some non-capital internal labor in support of NW Natural's system integrity program ("SIP"). These costs include the Integrity Management staff (7 FTE), damage prevention staff (5 FTE) involved in damage prevention/investigation, and a public information officer for safety outreach, training, and program administration. The Integrity Management group may also utilize other internal resources in support of SIP activities which includes GIS analysts, Customer Service, Construction, and other subject matter experts. Significant O&M projects include:

7.1 Sewer Crossbore Inspections (2024 estimate of $1.2MM):

The sewer crossbore program involves the visual inspection of sanitary sewers for incidences of gas line crossbores. In installations where trenchless technology was used to install polyethylene pipe, there exists the possibility the gas line was bored through a sewer main or lateral. NW Natural's policy is to expose all foreign line crossings when performing trenchless

work. Sewer crossbores typically occur when facility owners fail to locate their pipe, creating a situation where NW Natural is unable to expose facilities during construction. This is an industry-wide threat. Although sewer crossbores are not isolated to gas operators, the consequence when gas lines are involved can be high. This program identifies existing trenchless polyethylene installations and inspects the sewers in the vicinity to identify crossbores.

7.2 Transmission Inline and Direct Assessment Reassessment and Remediation (2024 estimate of $1.3MM):

This work includes the federally prescribed seven-year reassessment of transmission pipelines in HCAs and is comprised of both inline inspection and direct assessment of transmission assets and associated repairs.

7.3 Natural Forces (2024 estimate of $300,000):

Where the threat of natural forces can be mitigated without pipe replacement or rerouting, NW Natural may choose to address the threat through site work. This option is necessary in situations where a reroute is not feasible due to environmental restrictions or where a pipeline serves a critical customer or provides a single feed to a distribution system. Work may include armoring of slopes, re-grading of sites, culvert improvements, and retaining structures to address land movement and drainage issues.

7.4 Damage Prevention (2024 estimate of $800,000):

In compliance with DIMP regulations, and to address the single largest threat to gas facilities, NW Natural maintains a damage prevention department. The department consists of a supervisor and 4 FTE damage prevention specialists whose responsibilities include damage prevention through high risk locate ticket intervention, training, attendance at pre-construction meetings, participation in Utility Coordinating Councils, and support of the 811 One-call system. Damage prevention specialists are also responsible for the investigation, enforcement, and contractor training related to excavation and third-party damage.

7.5 Public Awareness (2024 estimate of $1,000,000):

NW Natural's Public Awareness program meets the requirements mandated in API RP 1162, adopted by reference by PHMSA into Part 192.616(a), (b), and (c). This program promotes public safety through communication and outreach focused on educating customers and the public about natural gas safety. The program includes customer correspondence, mailers, advertisements, community events, mobile phone applications, and brochures to excavators, contractors, public officials, residences and businesses along pipeline rights-of-way and in high consequence areas, and floating homes.

The Public Awareness Plan utilizes television and radio advertising, bill inserts, social media, and events to promote natural gas safety awareness. Targeted outreach and public awareness materials are provided annually to customers near transmission pipelines, as well as contractors, excavators, and first responders within NW Natural's service territory.

7.6 Right-of-Way Encroachments (2024 estimate of $100,000):

Pipeline patrols are used to identify changes in site conditions. An example of such a change is the installation of structures over pipelines, and inside dedicated pipeline rights-of-way, or easements. In some instances, the remediation may involve the relocation of structures and other non-gas facilities.

7.7 Historical O&M Expenditure – Safety Project Plan (System Integrity):

The historical O&M expenditures below are actual expenditures for each of the presented years (not including PSMS, damage prevention or public awareness expenditures).

Year	Expenditure
2015	$4,034,218
2016	$4,889,618
2017	$4,771,267
2018	$4,000,000
2019	$3,052,000
2020	$3,100,000
2021	$2,900,000
2022	$2,800,000
2023	$3,000,000

Historic O&M expenditure included:

- Regulatory transmission assessments including the investigation and remediation of identified anomalies resulting from inline inspection and external corrosion direct assessment (ECDA).
- Sewer crossbore inspection program.
- Investigation and remediation of natural forces including landslides, flooding, erosion, etc.
- Buildover remediation where structures encroach into pipeline right-of-way.
- Remediation of difficult to operate valves.
- Maintenance of Integrity Risk model as a result of geographical and system changes.

These above costs do not reflect those related to ongoing maintenance of facilities including right-of-way clearing, patrols, leakage, cathodic protection, and other ongoing routine O&M work.

8 2024 Significant Safety Initiatives

8.1 Changes in TIMP Assessment Methodology

In 2024, NW Natural will extend the use of inline inspection (“ILI”) for integrity assessment of transmission pipelines assessed at seven-year intervals. Inline inspection tools have the advantage over direct assessment and pressure testing because they assess the entire

pipeline maintaining constant contact with the inner wall providing data allowing for the identification of interacting anomalies such as pipe deformation and metal loss. In 2024, NW Natural will change the assessment methodology of the following pipelines.

- S36 Mid-Willamette Valley Trans – Approximately 32-mile transmission pipeline that provides gas from the Newport LNG facility to communities in the Mid-Willamette Valley including Albany and Corvallis
- S24 Granger – Approximately 4.5 miles of transmission pipeline that supports the city of Albany.
- S22 Albany Trans – Approximately 12-mile transmission pipeline that initiates from a gate station east of Albany and is routed through Albany and supports the City of Corvallis and Oregon State University.

8.2 Pro-active EFV Installations

NW Natural has installed EFVs on all new single-family residential services since February of 1999. In 2006, Federal Code was modified to require the installation of EFVs on all new residential and small commercial services. NW Natural will continue and expand the program installing EFVs on existing residential and small commercial services when the buried portion of the service line is exposed and service to the customer is interrupted. NW Natural believes proactive installation of EFVs is a prudent and pragmatic approach that can mitigate the consequence of an excavation damage to a service line.

9 Transmission Material Verification

In compliance with recent Regulatory Mandates involving material verification of steel transmission pipelines, NW Natural has implemented a non-destructive material verification program to collect material property data on transmission pipeline assets. This program involves material testing of in-service pipelines during planned work to collect material data including metallurgy that was not required at the time of installation.

NW Natural has also developed a program to destructively test segments of pipeline that were removed from past transmission projects to collect the material property information. Collecting material information from the in-service transmission mains and the destructive tests from the historical transmission mains will allow NW Natural to develop a library of material property data.

10 Cost Benefit Analyses & Alternative Analysis

The performance of a cost benefit analysis and alternatives analysis is difficult in the context of safety programs mandated by regulation. As a result, a cost benefit analysis has not been a primary consideration in this report because these safety projects are mandated by CFR, dictated by industry best practices, or driven by operational requirements. The assigned risk and prioritization for implementing these projects are based on in-depth studies and analysis

of NW Natural's transmission and distribution systems as well as plant and storage assets. Studies performed as part of normal operations provide measurable and continual feedback needed to perform safety related work for which there are few practicable alternatives.

Alternative analysis and in-depth studies are useful when they identify threats and risks that can be mitigated or eliminated through the application of performance-based best practices, engineering analysis, operational knowledge, and subject matter experts. Where the Code of Federal Regulations prescribe compliance activity or mandate programs, the use of cost benefit, or alternative, analysis is not warranted.

When a pipeline safety initiative requires a cost benefit or alternative analysis, NW Natural may select a qualified external resource to perform the analysis.

11 Legislative Update

11.1 PHMSA Docket No. PHMSA-2013-0255

[Amdt. Nos. 192-130; 195-105] RIN 2137-AF06
Pipeline Safety: Requirement of Valve Installation and Minimum Rupture Detection Standards Published in April 2022 this rule revised requirements for the installation of rupture-mitigation valves (i.e., remote-control or automatic shut-off valves) or alternative equivalent technologies to prevent or mitigate the public safety and environmental consequences of pipeline ruptures. The rule also requires operators to contact 911 emergency call centers immediately upon notification of a potential rupture and conduct post-rupture investigations and reviews. Operators must also incorporate lessons learned from such investigations and reviews into training and qualifications programs, and in design, construction, testing, maintenance, operations, and emergency procedure manuals and specifications. NW Natural is in compliance with the rule at this time.

11.2 PHMSA Docket No. PHMSA-2011-0023

RIN 2137-AF38
Pipeline Safety: Safety of Gas Gathering Pipelines: Extension of Reporting Requirements, Regulation of Large, High-Pressure Lines, and Other Related Amendments. This rule was published in November of 2021. At this time NW Natural does not operate gas gathering lines and is in compliance with the published rule.

11.3 PHMSA Rulemaking Docket No. PHMSA-2011-0023;

Amdt. No. 192-132] RIN 2137-AF39 Pipeline Safety: Safety of Gas Transmission Pipelines: Repair Criteria, Integrity Management Improvements, Cathodic Protection, Management of Change, and Other Related Amendments. PHMSA published this rule on August 24, 2022. NW Natural is in compliance with the rule as published.

11.4 Docket No. PHMSA-2016-0016 – Underground Storage Facilities for Natural Gas

On February 12, 2020, the Final Rule incorporating API Recommended Practice 1171 referred to as the Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs by reference was published. NW Natural developed a storage well integrity program in compliance with API 1171 incorporating all required provisions into operations at Mist. NW Natural program is in compliance with the final rule as published.

11.5 Docket No. PHSMA-2021-0039 Pipeline Safety NPRM: Gas Pipeline Leak Detection and Repair

On May 18, 2023, PHSMA issued a Notice of Proposed Rule Making: Gas Pipeline Leak Detection and Repair. The NPRM colloquially referred to as the LDAR rule is intended to reduce methane emissions from new and existing gas transmission and distribution pipelines, gas gathering pipelines, and underground natural gas storage facilities. NW Natural is reviewing the NPRM and will comply with the final rule when it is published in the Federal Register.

11.6 Docket No. PHSMA-2021-0046 Pipeline Safety NPRM: Safety of Gas Distribution Pipelines and Other Pipeline Safety Initiatives

On September 7, 2023, PHSMA issued a Notice of Proposed Rule Making: Safety of Gas Distribution Pipelines and Other Pipeline Safety Initiatives. PHMSA proposes revisions to the pipeline safety regulations to require operators of gas distribution pipelines to update their distribution integrity management programs (DIMP), emergency response plans, operations and maintenance manuals, and other safety practices. These proposals implement provisions of the Leonel Rondon Pipeline Safety Act—part of the Protecting our Infrastructure of Pipelines and Enhancing Safety Act of 2020. NW Natural is reviewing the NPRM and will comply with the final rule when it is published in the Federal Register.

12 Completed Projects

Below is the list of projects scheduled to be completed in 4th quarter of 2022 and 2023.

12.1 Underground Storage – Well Integrity ($3.8MM – Actual)

This project involved the re-work and baseline assessments of four wells and reassessment of six wells in the Mist storage field. The 2024 project represents year seven of NW Natural's

well integrity baseline assessment work that includes down hole assessment of production casing and replacement of select tubulars, downhole equipment, and wellhead components. The reassessments include down hole assessment of production casing and replacement of select tubulars, downhole equipment, wellhead components, and/or mechanical integrity testing. The program was developed to meet compliance with PHMSA's adoption of APR RP 1171 - Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs. The baseline assessments represent a multiyear project planned for completion in 2025. The reassessment intervals are determined by risk assessment and information from the baseline assessments. This project has been completed.

12.2 McMinnville/Lafayette ILI (2023 actual $4.5M):

This project involves the transition of the McMinnville/Lafayette transmission line from ECDA to ILI assessment. The McMinnville/Lafayette transmission line is a 6" transmission main that connects to the Central Coast feeder near Amity, OR and runs north 13 miles to serve the residential and industrial customers of McMinnville. The transmission main terminates in the town of Lafayette north of McMinnville. Design work to modify the pipeline will begin in 2021 with construction starting in 2022; cleaning and ILI assessment, data analysis, and remediation activities will continue through the fall of 2022. This project has been completed.

12.3 North Eugene Industrial Trans (–2023 Actual $3.2M):

This project involves the transition of the North Eugene Industrial transmission line from ECDA to ILI assessment. The North Eugene Transmission line is a 5 mile long 6" and 8" transmission line primarily serving the residential and industrial customers located along the Randy Pape Beltline highway. The line terminates at the Northwest Expressway. Design and preliminary construction work coordinated with City of Eugene public works projects will be done in 2021. Cleaning and ILI assessment activities will continue through 2022 with data analysis and remediation/repairs completed in 2023. This project has been completed.

13 Conclusion

This SPP provides an overview of NW Natural's pipeline safety initiatives and commitment to the safe and reliable delivery of natural gas to the communities we serve. Through its more-than 164-year history, NW Natural has been committed to identifying threats to pipeline safety and taking steps to address and mitigate those threats. Looking forward to the role natural gas will play in our energy future, and as members of the communities we serve, NW Natural recognizes the trust placed on us by our neighbors and customers. NW Natural will continually work to ensure public safety and maintain the integrity of our natural gas system.

NW Natural®

1. Introduction

In compliance with the Oregon Public Utility Commission ("Commission" or "OPUC") Order No 17-084 ("Order") in Docket UM 1722, this Safety Project Plan (SPP) outlines NW Natural's safety project investments for 2023. The SPP includes updated capital and O&M projects and programs and projects that carry over from 2022.

This SPP demonstrates NW Natural's commitment to pipeline safety by providing insight into NW Natural's safety activities and identifies NW Natural's response to regulatory changes that may drive safety program priorities or modify existing programs. In the future if NW Natural seeks approval for a Safety Cost Recovery Mechanism (SCRM), this SPP is intended to expedite the review process of safety investments.

Safety is a core value at NW Natural and we appreciate the opportunity to present this information to the Commission.

2. Background Information

NW Natural is a regulated natural gas utility conducting business in Oregon and southwest Washington. The Company serves ~780,000 customers and owns and operates ~660 miles of natural gas transmission pipeline, and ~14,200 miles of distribution pipelines. In addition, NW Natural operates three energy storage facilities in Oregon – Portland and Newport LNG Plants and Mist Underground Storage.

NW Natural's pipelines and storage facilities are governed by:

- 49 CFR Part 192 – Minimum Safety Standard – Transmission & Distribution Systems
- 49 CFR Part 193 – LNG Safety Standards
- 49 CFR Part 196 – Protection of Underground Pipelines from Excavations Activity
- Additional OARs (OAR 860-024 – Safety, OAR 860-031 – Pipeline Inspections), and ORSs such as ORS 757.039 – Regulation of hazardous substance distribution and storage operations, and ORS 757.542-993 – One call notification.

In addition to the federal and state regulations identified above, NW Natural's safety program considers the findings of Oregon House Resolution 3 (HR 3, 2011) which directed the Oregon Seismic Safety Policy Advisory Commission to prepare the Oregon Resiliency Plan with the purpose of identifying recommendations for how Oregon's critical energy infrastructures could be made seismically resilient against a Cascadia subduction zone earthquake. Upon completion of that work on February 28, 2013, the Oregon Senate passed Senate Bill 33 (SB 33, 2013), which established the Governor's Task Force on Oregon Resilience Plan ("ORP") Implementation ("Task Force"). In October 2014, the Task Force issued a report recommending that the Commission require regulated energy providers to conduct seismic assessments of regulated facilities and recommended that the Commission allow cost recovery for prudent

investments related to assessments and mitigation of vulnerabilities identified during those assessments. In October 2018, Governor Kate Brown presented the "Resiliency 2025" plan, titled "Improving Our Readiness for the Cascadia Earthquake and Tsunami" ("Resiliency 2025 Plan"). The Resiliency 2025 Plan follows the 2013 ORP, and outlines six key strategies for the State of Oregon. Its vision is to "protect all Oregonians by ensuring we are prepared to survive and recover from the expected 9.0 magnitude Cascadia earthquake and ensuing tsunami." The key strategy of the Resiliency 2025 Plan to improve the energy infrastructure is to "develop a plan for the Critical Energy Infrastructure Hub to prevent and mitigate catastrophic failure and ensure fuel supplies and alternate energy sources are available to responders and the public."

3. Threat Identification

NW Natural's four highest ranking threats, as identified in the DIMP Plan, are:

3.1 Excavation Damage

Excavation damage continues to be the principal threat to NW Natural's gas distribution system, comprising approximately 86 percent of all recorded leak repairs from 2010 to 2020. Excavation damage is a system-wide threat brought on predominantly by improper excavation practices. NW Natural's efforts to reduce excavation damages are described below.

3.1.1 Excavation Training and Education:

NW Natural actively engages in training and education for contractors, general public, and other utilities, to promote safe excavation procedures and practices. These efforts include classes on Oregon dig laws, displays at public events, and the use of media including print, radio, television, and internet to promote safety, best practices, and the use of 811.

NW Natural's Damage Prevention Department works to reduce the number of excavation damages through investigation, cause analysis, and proactively works to identify and support contractors engaging in high-risk construction activity.

3.1.2 One-Call Notification Practices:

NW Natural actively participates in local and state-level Utility Coordinating Councils as well as the One Call Utility Notification board. A primary function of these organizations is to reduce damages to underground utilities through excavation best practices, public awareness, and the use of the Oregon one call system (811).

NW Natural also maintains a robust Public Awareness Program which includes advertising, direct mailing, and public event outreach to increase this awareness.

3.1.3 Locating Practices:

NW Natural is an active member of Oregon's one call system and responds to all locate requests. Due to the high volume of locate requests, this work is contracted. All locating is performed by NW Natural qualified personnel and oversight is performed by Company contract management personnel. In addition, locating activity is included in NW Natural's Quality Assurance program to minimize the incidences of errors, mismarks, and missed due dates.

3.1.4 Incorrect Facility Marking:

Incorrectly marked facilities may be due to underground interference, equipment issues, inaccurate facility maps, or procedural issues. Locating personnel responsible for a mismark receive additional training and are required to re-qualify prior to being allowed to locate gas facilities. Review of mismarks are conducted by supervisor or other qualified personnel and the results are used to identify deficiencies, correct maps, and ensure the facility can be reliably located.

3.2 Material, Weld or Joint Failure

Material, weld, or joint failure is the second largest threat to the NW Natural gas distribution system, comprising approximately 9 percent of all recorded leak repairs from 2010 to 2020. NW Natural is proactive in its efforts to reduce these occurrences, as described below.

3.2.1 Plastic Pipe Installed from 1960s to 1980s:

NW Natural makes every effort to identify all pre-1982 plastic pipe installations, analyze leak histories, evaluate any conditions that may threaten integrity of the pipe, and take appropriate remedial action, including replacement, to mitigate risks to public safety.

3.2.2 Acrylonitrile-Butadiene-Styrene ("ABS"):

NW Natural used ABS in the 1960s to reline or renew existing steel services. These services have been identified for replacement. NW Natural's use of ABS was limited to ½" pipe inserted into existing steel service lines mitigating the industry-identified risk of rock impingement and slow crack growth related to unsuitable backfill material and construction practices.

3.2.3 Plexco Service Tee Celcon Caps:

NW Natural is aware of industry issues regarding Plexco Service Tee Celcon Caps possibly leaking when over-tightened during installation. These caps exist within the gas distribution system and are replaced as found and scheduled for replacement if leaks are identified.

3.2.4 Polyethylene ("PE") Fusion Failure:

NW Natural has a robust training and Quality Assurance/Quality Control program in place to ensure proper PE fusion quality. This program includes testing, biannual

qualification, and ongoing training. All PE fusions are visually inspected, and pressure tested prior to being placed in service.

3.2.5 Flat Back Risers:

In 2012, NW Natural identified a type of riser stop valve, internally known as a "Flat Back Riser," that contained components prone to atmospheric corrosion in the coastal areas of NW Natural's service territory. NW Natural identified that corrosion failure on a retaining pin could result in a hazardous leak. NW Natural developed an Accelerated Action Plan to replace these valves in coastal areas.

3.3 Corrosion

Corrosion is the third largest threat to the NW Natural's gas distribution system, comprising less than 2 percent of all recorded leak repairs from 2010 to 2020. NW Natural's efforts to reduce these occurrences are described below.

3.3.1 Pipe Replacement:

The primary driver for external corrosion system-wide is steel pipe. At this time, NW Natural's distribution system in Oregon is approximately 50% coated and cathodically protected steel and 50% polyethylene. During all pipe replacement projects, consideration is given to replacing existing steel pipes, valves, and fittings with polyethylene to mitigate the threat of corrosion. In 2015, NW Natural completed the replacement of all known un-coated bare steel pipe eliminating the single largest corrosion threat.

3.3.2 Pipe Casings:

Steel casings are primarily used to protect or facilitate the installation of mains and services underground and are fitted with seals to prevent water intrusion, spacers to prevent contact between the casing and gas carrying pipe, and vents.

NW Natural inspects steel casings annually to identify problems such as contact between the casing and gas pipe, or water intrusion. If a "short" or other anomaly is identified, a work order is created to address the concern.

At NW Natural, the installation of casings has been largely replaced by HDD (Horizontal Directional Drilling) installation. During pipeline improvement projects, existing casings are evaluated for replacement by HDD or alternatives.

3.3.3 Atmospheric Corrosion:

NW Natural's system includes facilities such as risers, regulators, station piping, bridge crossings and other above ground facilities that are susceptible to atmospheric corrosion.

NW Natural's atmospheric corrosion mitigation plan includes replacement of facilities when appropriate as well as protective coatings such as epoxies, paint, wax, other corrosion resistant materials, and enhanced inspections in locations with an elevated risk of corrosion.

3.3.4 Exposed Pipe Inspections

During normal operations when a buried pipeline is exposed, crews inspect the pipe and protective coating for evidence of corrosion or coating anomalies that can lead to future corrosion. Coating repairs or pipe replacements are completed before the pipe is backfilled and placed back in service.

3.4 Equipment Failure

Equipment Failure is the fourth largest threat to the NW Natural gas distribution system, comprising approximately 1 percent of all recorded leak repairs from 2010 to 2020. NW Natural's efforts to reduce these occurrences are described below.

3.4.1 Valves:

Valves are vital to the safe operation of a gas distribution system. NW Natural has in place a key operating valve inspection and maintenance program to ensure key valves are operable and available for use. Valves that are found to be inoperable, inaccessible, and/or paved over are identified and remediated as necessary.

3.4.2 Pressure Control / Relief Equipment:

NW Natural has an established inspection and maintenance program in place for pressure control/relief equipment to ensure reliable and safe operation.

3.4.3 Mechanical Couplings:

Pipe may pull out from compression couplings due to tensile forces including excavation damage, cyclic fatigue from changes in the temperature of natural gas as a result of the Joule-Thomson effect, ground movement from earthquakes or after heavy rains. Mechanical fitting failures are investigated, tracked, and reported per PHMSA and OPUC requirements.

In the past as an alternative to welding small diameter steel fittings, mechanical couplings were sometimes used to install valves and service tees. These types of fittings may develop leaks through the elastomer seal between the coupling and the pipe. NW Natural replaces these fittings with welded steel fittings or polyethylene as discovered during routine operations and maintenance activity.

3.4.4 Other:

Other types of material or equipment failure may occur in the gas distribution system. Failure reports are reviewed to detect trends or patterns that may affect the distribution system.

Many of the safety projects identified in this plan are in direct response to the above threats, and to maintain compliance with safety codes and regulations.

4. Safety Activities Performed by NW Natural

Safety activities at NW Natural can be divided into categories:

4.1 Prescriptive Regulatory Actions – Includes actions which must be performed to meet minimum federal safety standards.

49 CFR 192 includes multiple prescriptive activities, intended to safeguard public safety, and fall into broad categories such as “operations” (Subpart L) and “maintenance” (Subpart M). Most of these activities require inspections at prescribed intervals to confirm that a facility or asset is meeting operational requirements prescribed by federal code. These activities provide the baseline data for other performance-based activities and include, but are not limited to:

- Atmospheric corrosion surveys
- Leakage surveys
- Cathodic protection surveys
- Right of way (“ROW”) patrols
- Valve maintenance
- Water crossing inspections
- Odorization
- Odorometer Reads

- Line Marking
- Pressure Regulation Inspection
- Large Meter Inspections
- Record Keeping
- Control Room Management
- Bridgeline Inspections
- Equipment Calibration
- Houseboat Inspections
- Transmission Integrity

The safety activities from this category are prescriptive in nature and are not driven by risk analysis alone. Because these activities are required, they are not discussed further in this SPP, which instead focuses on projects and/or programs identified by NW Natural as essential to enhancing safety and reliability.

4.1.1 Transmission Integrity (TIMP)

Transmission Integrity refers to 49 CFR 192 Subpart O- Transmission Integrity Management Program ("TIMP"). This federally mandated program covers natural gas transmission pipelines located in High Consequence Areas (HCA) and Moderate Consequence Areas (MCA). NW Natural exceeds code requirements in TIMP to address conditions outside of HCAs and MCAs.

Activities in this category include baseline assessments and reassessments of transmission lines using in-line inspection ("ILI") and other direct assessment methods. They may also include pipeline replacements and modifications in compliance with integrity management rules, best practices, and relocation of facilities to mitigate threats posed by natural forces such as flooding, land movement, and erosion.

4.2 Proactive, Performance-Based Actions

Other sections of 49 CFR 192 include more proactive performance-based risk reduction activities, such as Subpart P – Distribution Integrity Management Program ("DIMP"), Damage Prevention, and Public Awareness.

4.2.1 Distribution Integrity (DIMP)

Distribution Integrity is outlined in 49 CFR 192 Subpart P- Gas Distribution Pipeline Integrity Management. This federally mandated program requires operators to create a written Integrity Management Program that takes into consideration: system knowledge, threat identification, evaluation and risk ranking, identification, and implementation of measures to address risk, measurement of results, and reporting.

Activities in this category include projects warranting Accelerated Action ("AA") to address a system integrity risk. These AA projects are identified through risk modeling, industry identified threats, and by subject matter experts within the Company, and include:

- Replacement of vintage plastic services,
- Relocation of facilities under structures,
- Replacement of valves and fittings susceptible to leakage,
- Protection of above grade gas facilities,
- Crossbore investigation, and
- Relocation of distribution gas lines to mitigate threats posed by natural forces such as:
  - Flooding
  - Land movement, and
  - Erosion.
- Enhanced electronic flow valve ("EFV") Installation – installation of EFVs on services that were installed prior to the EFV rule issued in 2006
- Dithiazine – a sulfur compound found in natural gas that has been known to cause equipment failure especially in district regulators.

4.3 Safety Policy and Practices

NW Natural also implements risk reduction activities not explicitly required by the federal code. These actions have been identified as prudent safety practices intended to enhance public safety, improve system reliability, and maintain the safe operation of NW Natural's above- and below-ground facilities including LNG Plants and underground natural gas storage facilities. These risk reduction actions include:

- Seismic vulnerability assessments of LNG Plants, the Mist Underground Storage Facility, and Transmission Pipeline System as recommended by SB 33 (2013) and consistent with the Governor's Resiliency 2025 Plan
- Accelerated replacement of vintage materials
- Transmission inspection outside of HCAs and MCAs.
- Development of a PSMS (Pipeline Safety Management System)
- Proactive EFV installation
- Locate ticket risk modeling
- Natural forces assessments of NW Natural's transmission system as part of NW Natural patrol and surveillance programs.

5. Projected and Preliminary Costs Presented in this Plan

The 2023 Capital and O&M costs presented in this plan are projected based on current expenditures for each of the identified projects through the end of the year. Costs presented for the significant safety initiatives are preliminary for planning purposes and do not include NW Natural overhead costs. Costs for safety projects under consideration will be presented in future SPPs.

6. 2023 Capital Safety Investment

In 2023, NW Natural estimates it will invest $8.4 MM in capital to comply with DIMP, TIMP, and other regulations. Significant projects in this category include:

6.1 SP Newsprint ILI (2022-23 estimate $1.5MM):

This project involves transition of the SP Newsprint transmission line from direct assessment to ILI. The SP Newsprint transmission line is a 7-mile transmission pipeline that supports the City of Newberg and Dundee. This is a dual diameter pipeline (12" & 16") which initiates at the south end of Sherwood and is routed along Hwy 99W where it terminates at the former site of SP Newsprint. Work on this project will begin in 2022 with planned completion in the fall of 2023.

6.2 Pro-active EFV Installations (2023 estimate $1MM):

On October 14, 2016, the U.S. Department of Transportation's ("DOT's") Pipeline and Hazardous Materials Safety Administration ("PHMSA") adopted code requiring the installation of EFVs or shut-off valves on all new or replaced branched service lines (Docket No. PHMSA-2011-009). While the code requires EFV installations be installed in all new or replaced branched service lines, it did not require retrofitting EFVs on existing services.

NW Natural believes a proactive EFV installation program is a prudent action that can mitigate the consequence of a gas release resulting from excavation damage to a gas service line. NW Natural is implementing a policy to retrofit EFVs on existing gas service lines when the buried portion of the service line is exposed and the work involves the interruption of gas service.

This pro-active EFV program was initiated in 2020 and will continue to be a safety program.

6.3 Underground Storage – Well Integrity (2023 estimate $3.3MM)

On December 19, 2016, PHMSA issued an interim final rule (IFR) establishing regulations for underground natural gas storage facilities (UNGSF). The IFR incorporated by reference American Petroleum Institute ("API") Recommended Practice ("RP") 1171, "Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs" (First Edition, September 2015). The IFR implemented PHMSA's authority to regulate underground gas storage and the Congressional mandate in section 12 of the PIPES Act to establish minimum safety standards.

The final rule published on February 12, 2020 modified compliance timelines, clarified regulatory roles, reduced recordkeeping and reporting requirements, and formalized integrity management practices. In accordance with the final rule, NW Natural is running baseline casing inspection logs on each of its active gas storage wells prior to the March 13, 2027 deadline.

Work in 2023 will involve assessments of the production casings of four storage wells. The assessments will include downhole wireline logging of the production casing strings using both multi-arm caliper and magnetic flux tools to identify deformations and metal loss features.

6.4 Other safety projects and programs (2023 estimate $2.9MM):

Pipeline Replacement due to Seismic/Natural Forces

Portions of NW Natural's distribution and transmission system cross through landslide faults, seismic faults, sensitive areas, and waterways. Due to significant weather events or the passage of time, the integrity of these pipelines may become at risk. When identified during patrols, routine maintenance, or other stakeholders, the Integrity Team develops plans to remediate these at-risk pipelines as they are identified.

Valve Isolation Plans

NW Natural is working to develop a strategy for identifying and installing additional valves in the distribution system to assist in the isolation of portions of the distribution system in case of an emergency or third-party damage.

Meter Protection Installation

NW Natural will continue installation of guard posts adjacent to meter sets that are determined to be at risk of damage due to vehicle or equipment contact.

Pipeline Modification due to ROW Encroachment

Patrols of NW Natural Pipelines may discover structures or other encroachments built over or adjacent to pipelines that can impact the safe operation of or access to a pipeline. This program works with landowners to remediate these encroachments.

Pipeline Material Identification (PMI)

At selected transmission pipeline anomaly remediation sites, NW Natural has instituted a process using technology to non-destructively test and acquire data regarding pipe material properties. In addition, when the Transmission Integrity rule went into effect over twenty years ago, NW Natural began keeping short (18"-24" long) sections of pipe for future reference. These spools will be destructively tested to obtain pipe material properties that were not required as part of the original installation documentation. The material data obtained through this program will be stored in the permanent record for each pipe segment.

6.5 ASV/RCV Installation (2023 estimate $500,000)

To assist in the timely and efficient closure of valves on the transmission system, NW Natural is continually identifying locations where ASV/RCV valves can reasonably be installed, or existing valves retrofitted, in order to facilitate isolation of the transmission system.

6.6 Historical Capital Expenditure - Safety Project Plan (System Integrity)

The Historical Capital Expenditures below are actual expenditures for each of the presented years.

Year	Expenditure
2015	$ 17,190,356*
2016	$ 7,772,763
2017	$ 5,925,409
2018	$ 9,699,814
2019	$ 10,231,431
2020	$ 8,900,000
2021	$ 8,200,000
2022	$ 9,000,000

*Final year of known bare steel main replacement

Historical capital expenditures include:

- Work to modify pipelines to accept inline inspection devices, including removal or replacement of non-piggable fittings and facilities required to launch and receive inline inspection devices.
- Pipeline relocation to mitigate threats including outside forces and natural forces. This work does not include relocations due to utility conflicts, or third-party improvement projects.
- Pipe replacements and testing in compliance with federal and state regulations.
- Ongoing DIMP AA programs/projects such as Vintage Plastic, Guardpost installations, Proactive EFV installations, etc.

7. 2023 O&M Expenditures

In 2023 NW Natural expects to spend $4.95MM in O&M to address and comply with DIMP, TIMP, damage prevention, and public awareness.

Activities that reflect expenditures in this category include costs for supplies (office/field), reference materials, education (conferences/workshops), vendor and contract costs associated with transmission assessments, sewer crossbore investigations and remediation, public awareness program materials, advertisements and mailings, and natural forces investigation and remediation. Additionally, this category covers the development, initiation, and execution of studies and consulting fees related to integrity requirements, such as class location studies and third-party geotechnical site evaluations to address and mitigate risk.

O&M also includes some non-capital internal labor in support of NW Natural's system integrity program ("SIP"). These costs include the Integrity Management staff (7 FTE), damage

prevention specialists (4 FTEs) involved in damage prevention/investigation, and a public information officer for safety outreach, training, and program administration. The Integrity Management group may also utilize other internal resources in support of SIP activities which includes GIS analysts, Customer Service, Construction, and other subject matter experts. Significant O&M projects include:

7.1 Sewer Crossbore Inspections (2023 estimate $1.4MM):

The sewer crossbore program involves the visual inspection of sanitary sewers for incidences of gas line crossbores. In installations where trenchless technology was used to install polyethylene pipe, there exists the possibility the gas line was bored through a sewer main or lateral. NW Natural's policy is to expose all foreign line crossings when performing trenchless work. Sewer crossbores typically occur when facility owners fail to locate their pipe, creating a situation where NW Natural is unable to expose facilities during construction. This is an industry-wide threat. Although sewer crossbores are not isolated to gas operators, the consequence when gas lines are involved can be high. This program identifies existing trenchless polyethylene installations and inspects the sewers in the vicinity to identify crossbores.

7.2 Transmission Inline and Direct Assessment Reassessment and Remediation (2023 estimate $1.3MM):

This work includes the federally prescribed seven-year reassessment of transmission pipelines in HCAs and is comprised of both inline inspection and direct assessment of transmission assets and associated repairs.

7.3 Natural Forces (2023 estimate $300,000):

Where the threat of natural forces can be mitigated without pipe replacement or rerouting, NW Natural may choose to address the threat through site work. This option is necessary in situations where a reroute is not feasible due to environmental restrictions or where a pipeline serves a critical customer or provides a single feed to a distribution system. Work may include armoring of slopes, re-grading of sites, culvert improvements, and retaining structures to address land movement and drainage issues.

7.4 Damage Prevention (2023 estimate $800,000):

In compliance with DIMP regulations, and to address the single largest threat to gas facilities, NW Natural maintains a damage prevention department. The department consists of a supervisor and 4 FTE damage prevention specialists whose responsibilities include damage prevention through high risk locate ticket intervention, training, attendance at pre-construction meetings, participation in Utility Coordinating Councils, and support of the 811 One-call system. Damage prevention specialists are also responsible for the investigation, enforcement, and contractor training related to excavation and third-party damage.

7.5 Public Awareness (2023 estimate $1,050,000):

NW Natural's Public Awareness program meets the requirements mandated in API RP 1162, adopted by reference by PHMSA into Part 192.616(a), (b), and (c). This program promotes public safety through communication and outreach focused on educating customers and the public about natural gas safety. The program includes customer correspondence, mailers, advertisements, community events, mobile phone applications, and brochures to excavators, contractors, public officials, residences and businesses along pipeline rights-of-way and in high consequence areas, floating homes, and schools.

The Public Awareness Plan utilizes television and radio advertising, bill inserts, social media, and events to promote natural gas safety awareness. Targeted outreach and public awareness materials are provided annually to customers near transmission pipelines, as well as contractors, excavators, and first responders within NW Natural's service territory.

7.6 Right-of-Way Encroachments (2023 estimate $100,000):

Pipeline patrols are used to identify changes in site conditions. An example of such a change is the installation of structures over pipelines, and inside dedicated pipeline rights-of-way, or easements. In some instances, the remediation may involve the relocation of structures and other non-gas facilities.

7.7 Historical O&M Expenditure - Safety Project Plan (System Integrity):

The historical O&M expenditures below are actual expenditures for each of the presented years (not including PSMS, damage prevention or public awareness expenditures).

Year	Expenditure
2015	$4,034,218
2016	$4,889,618
2017	$4,771,267
2018	$4,000,000
2019	$3,052,000
2020	$3,100,000
2021	$2,900,000
2022	$2,800,000

Historic O&M expenditure included:

- Regulatory transmission assessments including the investigation and remediation of identified anomalies resulting from inline inspection and external corrosion direct assessment (ECDA).
- Sewer crossbore inspection program.
- Investigation and remediation of natural forces including landslides, flooding, erosion, etc.
- Buildover remediation where structures encroach into pipeline right-of-way.
- Remediation of difficult to operate valves.

- Maintenance of Integrity Risk model as a result of geographical and system changes.

These above costs do not reflect those related to ongoing maintenance of facilities including right-of-way clearing, patrols, leakage, cathodic protection, and other ongoing routine O&M work.

8. 2023 Significant Safety Initiatives

8.1 Changes in TIMP Assessment Methodology

In 2023, NW Natural will extend the use of inline inspection (ILI) for integrity assessment of transmission pipelines assessed at seven-year intervals. Inline inspection tools have the advantage over direct assessment and pressure testing because they assess the entire pipeline maintaining constant contact with the inner wall providing data allowing for the identification of interacting anomalies such as pipe deformation and metal loss. In 2023, NW Natural will change the assessment methodology of the following pipelines.

The SP Newsprint transmission pipeline supporting the City of Newberg, Dundee and surrounding areas. The 7-mile long pipeline is routed along Oregon Highway 99W.

8.2 Pro-active EFV Installations

NW Natural has installed EFVs on all new single-family residential services since February of 1999. In 2006, Federal Code was modified to require the installation of EFVs on all new residential and small commercial services. NW Natural will continue and expand the program installing EFVs on existing residential and small commercial services when the buried portion of the service line is exposed and service to the customer is interrupted. NW Natural believes proactive installation of EFVs is a prudent and pragmatic approach that can mitigate the consequence of an excavation damage to a service line.

9. Transmission Material Verification

In compliance with recent regulatory mandates involving material verification of steel transmission pipelines, NW Natural has implemented a non-destructive material verification program to collect material property data on transmission pipeline assets. This program involves material testing of in-service pipelines during planned work to collect material data including metallurgy that was not required at the time of installation.

NW Natural has also developed a program to destructively test segments of pipeline that were removed from past transmission projects to collect the material property information. Collecting material information from the in-service transmission mains and the destructive tests from the historical transmission mains will allow NW Natural to develop a library of material property data.

10. Cost Benefit Analyses & Alternative Analysis

The performance of a cost benefit analysis and alternatives analysis is difficult in the context of safety programs mandated by regulation. As a result, a cost benefit analysis has not been a primary consideration in this report because these safety projects are mandated by CFR, dictated by industry best practices, or driven by operational requirements. The assigned risk and prioritization for implementing these projects are based on in-depth studies and analysis of NW Natural's transmission and distribution systems as well as plant and storage assets. Studies performed as part of normal operations provide measurable and continual feedback needed to perform safety related work for which there are few practicable alternatives.

Alternative analysis and in-depth studies are useful when they identify threats and risks that can be mitigated or eliminated through the application of performance-based best practices, engineering analysis, operational knowledge, and subject matter experts. Where the Code of Federal Regulations prescribe compliance activity or mandate programs, the use of cost benefit, or alternative, analysis is not warranted.

When a pipeline safety initiative requires a cost benefit or alternative analysis, NW Natural may select a qualified external resource to perform the analysis.

11. Legislative Update

11.1 PHMSA Docket No. PHMSA-2013-0255

[Amdt. Nos. 192-130; 195-105] RIN 2137-AF06
Pipeline Safety: Requirement of Valve Installation and Minimum Rupture Detection Standards. This rule was published in April 2022. It revises requirements for the installation of rupture-mitigation valves (i.e., remote-control or automatic shut-off valves) or alternative equivalent technologies to prevent or mitigate the public safety and environmental consequences of pipeline ruptures. The rule also requires operators to contact 911 emergency call centers immediately upon notification of a potential rupture and conduct post-rupture investigations and reviews. Operators must also incorporate lessons learned from such investigations and reviews into training and qualifications programs, and in design, construction, testing, maintenance, operations, and emergency procedure manuals and specifications. NW Natural is in compliance with the rule at this time.

11.2 PHMSA Docket No. PHMSA-2011-0023

RIN 2137-AF38
Pipeline Safety: Safety of Gas Gathering Pipelines: Extension of Reporting Requirements, Regulation of Large, High-Pressure Lines, and Other Related Amendments. This rule was published in November of 2021. At this time, NW Natural does not operate gas gathering lines.

11.3 PHMSA Rulemaking Docket No. PHMSA-2011-0023

[Amdt. No. 192-132] RIN 2137-AF39
Pipeline Safety: Safety of Gas Transmission Pipelines: Repair Criteria, Integrity Management Improvements, Cathodic Protection, Management of Change, and Other Related Amendments. PHMSA published this rule on August 24, 2022. The effective date of the final rule is nine months after date of publication in the Federal Register. NW Natural is currently evaluating the rulemaking and anticipates updates to standards and procedures to document compliance with the rulemaking.

11.4 Docket No. PHMSA-2016-0016 – Underground Storage Facilities for Natural Gas

On February 12, 2020, the Final Rule incorporating API Recommended Practice 1171 referred to as the Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs by reference was published. NW Natural developed a storage well integrity program in compliance with API 1171 incorporating all required provisions into operations at Mist. NW Natural program is in compliance with the final rule as published.

12. Completed Projects

Below is the list of projects completed in 4th quarter of 2021 or 2022 or expected to be completed in the 4th quarter of 2022.

12.1 Springfield Transmission (ILI) (2022 estimate $1MM):

This project involves transition of the Springfield transmission line from direct assessment to ILI. The Springfield transmission line is the primary feed to downtown Springfield and large industrial customers in the area. This pipeline is approximately three miles and routed along Harlow Road, which is a major thoroughfare between the cities of Eugene and Springfield. Work on this project has a planned completion in the fall of 2022.

12.2 Underground Storage - Well Integrity ($3.3MM – Actual):

This project involved the re-work and baseline assessment of five wells in the Mist storage field. The 2022 project represents year four of NW Natural's well integrity baseline assessment work that includes down hole assessment of production casing and replacement of select tubulars, downhole equipment, and wellhead components. The program was developed to meet compliance with PHMSA's adoption of APR RP 1171 - Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs. This is a multiyear project planned for completion in 2027.

12.3 South Eugene Transmission (ILI) ($2.0MM - Actual):

This project involved transition of the South Eugene transmission line from direct assessment to ILI. The South Eugene transmission line is a transmission line from the South Eugene gate that primarily serves the IP Springfield facility and is approximately 6.5 miles in length. Work including station upgrades was completed in 2021. The ILI assessment and remediation of any identified anomalies was completed in 2022.

12.4 McMinnville/Lafayette ILI (2022 Estimate $3MM):

This project involves the transition of the McMinnville/Lafayette transmission line from ECDA to ILI assessment. The McMinnville/Lafayette transmission line is a 6" transmission main that connects to the Central Coast feeder near Amity, OR and runs north 13 miles to serve the residential and industrial customers of McMinnville. The transmission main terminates in the town of Lafayette north of McMinnville. Design work to modify the pipeline will begin in 2021 with construction starting in 2022; cleaning and ILI assessment, data analysis, and remediation activities will continue through the fall of 2022.

12.5 North Eugene Industrial Trans (2022 Estimate $2.1M):

This project involves the transition of the North Eugene Industrial transmission line from ECDA to ILI assessment. The North Eugene Transmission line is a 5 mile long 6" and 8" transmission line primarily serving the residential and industrial customers located along the Randy Pape Beltline highway. The line terminates at the Northwest Expressway. Design and preliminary construction work coordinated with City of Eugene public works projects was completed in 2021. Cleaning and ILI assessment activities will continue through 2022 with data analysis and remediation/repairs completed in 2023.

13. Conclusion

This SPP provides an overview of NW Natural's pipeline safety initiatives and commitment to the safe and reliable delivery of natural gas to the communities we serve. Through its more-than 160-year history, NW Natural has been committed to identifying threats to pipeline safety and taking steps to address and mitigate those threats. Looking forward to the role natural gas will play in our energy future, and as members of the communities we serve, NW Natural recognizes the trust placed on us by our neighbors and customers. NW Natural will continually work to ensure public safety and maintain the integrity of our natural gas system.

NW Natural®

1. Introduction

In compliance with the Oregon Public Utility Commission ("Commission" or "OPUC") Order No 17-084 ("Order") in Docket UM 1722, this 2021 Safety Project Plan (SPP) outlines NW Natural's safety project investments for 2022. The SPP includes updated capital and O&M projects and programs and projects that carry over from 2021.

This SPP demonstrates NW Natural's commitment to pipeline safety by providing insight into NW Natural's safety activities and identifies NW Natural's response to regulatory changes that may drive safety program priorities or modify existing programs. In the future if NW Natural seeks approval for a Safety Cost Recovery Mechanism (SCRM), this SPP is intended to expedite the review process of safety investments.

Safety is a core value at NW Natural and we appreciate the opportunity to present this information to the Commission.

2. Background Information

NW Natural is a regulated natural gas utility conducting business in Oregon and southwest Washington. The Company serves ~770,000 customers and owns and operates ~660 miles of natural gas transmission pipeline, and ~14,000 miles of distribution pipelines. In addition, NW Natural operates three energy storage facilities in Oregon – Portland and Newport LNG Plants and Mist Underground Storage.

NW Natural's pipelines and storage facilities are governed by:

- 49 CFR Part 192 – Minimum Safety Standard – Transmission & Distribution Systems
- 49 CFR Part 193 – LNG Safety Standards
- 49 CFR Part 196 – Protection of Underground Pipelines from Excavations Activity
- Additional OARs (OAR 860-024 – Safety, OAR 860-031 – Pipeline Inspections), and ORSs such as ORS 757.039 – Regulation of hazardous substance distribution and storage operations, and ORS 757.542-993 – One call notification.

In addition to the federal and state regulations identified above, NW Natural's safety program considers the findings of Oregon House Resolution 3 (HR 3, 2011) which directed the Oregon Seismic Safety Policy Advisory Commission to prepare the Oregon Resiliency Plan with the purpose of identifying recommendations for how Oregon's critical energy infrastructures could be made seismically resilient against a Cascadia subduction zone earthquake. Upon completion of that work on February 28, 2013, the Oregon Senate passed Senate Bill 33 (SB 33, 2013), which established the Governor's Task Force on Resilience Plan Implementation ("Task Force"). In October 2014, the Task Force issued a report recommending that the Commission require regulated energy providers to conduct seismic assessments of regulated facilities and recommended that the Commission allow cost recovery for prudent investments related to

assessments and mitigation of vulnerabilities identified during those assessments. In October 2018, Governor Kate Brown presented the "Resiliency 2025" plan, titled "Improving Our Readiness for the Cascadia Earthquake and Tsunami" ("Resiliency 2025 Plan"). The Resiliency 2025 Plan follows the 2013 ORP, and outlines six key strategies for the State of Oregon. Its vision is to "protect all Oregonians by ensuring we are prepared to survive and recover from the expected 9.0 magnitude Cascadia earthquake and ensuing tsunami." The key strategy of the Resiliency 2025 Plan to improve the energy infrastructure is to "develop a plan for the Critical Energy Infrastructure Hub to prevent and mitigate catastrophic failure and ensure fuel supplies and alternate energy sources are available to responders and the public."

3. Threat Identification – NW Natural's four highest ranking threats, as identified in the DIMP Plan are:

3.1 Excavation Damage

Excavation damage continues to be the principal threat to NW Natural's gas distribution system, comprising approximately 86 percent of all recorded leak repairs. Excavation damage is a system-wide threat brought on predominantly by improper excavation practices. NW Natural's efforts to reduce excavation damages are described below.

3.1.1 Excavation Training and Education:

NW Natural actively engages in training and education for contractors, general public, and other utilities, to promote safe excavation procedures and practices. These efforts include classes on Oregon dig laws, displays at public events, and the use of media including print, radio, television, and internet to promote safety, best practices, and the use of 811.

NW Natural's Damage Prevention Department works to reduce the number of excavation damages through investigation, cause analysis, and proactively works to identify and support contractors engaging in high-risk construction activity.

3.1.2 One-Call Notification Practices:

NW Natural actively participates in local and state-level Utility Coordinating Councils as well as the One Call Utility Notification board. A primary function of these organizations is to reduce damages to underground utilities through excavation best practices, public awareness, and the use of the Oregon one call system (811).

NW Natural also maintains a robust Public Awareness Program which includes advertising, direct mailing, and public event outreach to increase this awareness.

3.1.3 Locating Practices:

NW Natural is an active member of Oregon's one call system and responds to all locate requests. Due to the high volume of locate requests this work is contracted. All locating

is performed by NW Natural qualified personnel and oversight is performed by Company contract management personnel. In addition, locating activity is included in NW Natural's Quality Assurance program to minimize the incidences of errors, mismarks, and missed due dates.

3.1.4 Incorrect Facility Marking:

Incorrectly marked facilities may be due to underground interference, equipment issues, inaccurate facility maps, or procedural issues. Locating personnel responsible for a mismark receive additional training and are required to re-qualify prior to being allowed to locate gas facilities. Review of mismarks are conducted by supervisor or other qualified personnel and the results are used to identify deficiencies, correct maps, and ensure the facility can be reliably located.

3.2 Material, Weld or Joint Failure

Material, weld, or joint failure is the second largest threat to the NW Natural gas distribution system, comprising approximately 9 percent of all recorded leak repairs. NW Natural is proactive in its efforts to reduce these occurrences, as described below.

3.2.1 Plastic Pipe Installed from 1960s to 1980s:

NW Natural makes every effort to identify all pre-1982 plastic pipe installations, analyze leak histories, evaluate any conditions that may threaten integrity of the pipe, and take appropriate remedial action, including replacement, to mitigate risks to public safety.

3.2.2 Acrylonitrile-Butadiene-Styrene ("ABS"):

NW Natural used ABS in the 1960s to reline or renew existing steel services. These services have been identified for replacement. NW Natural's use of ABS was limited to ½" pipe inserted into existing steel service lines mitigating the industry-identified risk of rock impingement and slow crack growth related to unsuitable backfill material and construction practices.

3.2.3 Plexco Service Tee Celcon Caps:

NW Natural is aware of industry issues regarding Plexco Service Tee Celcon Caps possibly leaking when over-tightened during installation. These caps exist within the gas distribution system and are replaced as found and scheduled for replacement if leaks are identified.

3.2.4 Polyethylene ("PE") Fusion Failure:

NW Natural has a robust training and Quality Assurance/Quality Control program in place to ensure proper PE fusion quality. This program includes testing, biannual qualification, and ongoing training. All PE fusions are visually inspected, and pressure tested prior to being placed in service.

3.2.5 Flat Back Risers:

In 2012 NW Natural identified a type of riser stop valve, internally known as a "Flat Back Riser" that contained components prone to atmospheric corrosion in the coastal areas of NW Natural's service territory. NW Natural identified that corrosion failure on a retaining pin could result in a hazardous leak. NW Natural developed an Accelerated Action Plan to replace these valves in coastal areas.

3.3 Corrosion

Corrosion is the third largest threat to the NW Natural's gas distribution system, comprising less than 2 percent of all recorded leak repairs. NW Natural's efforts to reduce these occurrences are described below.

3.3.1 Pipe Replacement:

The primary driver for external corrosion system-wide is steel pipe. At this time NW Natural's distribution system is approximately 51% coated and cathodically protected steel and 49% polyethylene. During all pipe replacement projects consideration is given to replacing existing steel pipes, valves, and fittings with polyethylene to mitigate the threat of corrosion. In 2015 NW Natural completed the replacement of all known un-coated bare steel buried pipe eliminating the single largest corrosion threat.

3.3.2 Pipe Casings:

Steel casings are primarily used to protect or facilitate the installation of mains and services underground and are fitted with seals to prevent water intrusion, spacers to prevent contact between the casing and gas carrying pipe, and vents.

NW Natural inspects steel casings annually to identify problems such as contact between the casing and gas pipe, or water intrusion. If a "short" or other anomaly is identified a work order is created to address the concern.

At NW Natural the installation of casings has been largely replaced by HDD (Horizontal Directional Drilling) installation. During pipeline improvement projects existing casings are evaluated for replacement by HDD or alternatives.

3.3.3 Atmospheric Corrosion:

NW Natural's system includes facilities such as risers, regulators, station piping, bridge crossings and other above ground facilities that are susceptible to atmospheric corrosion.

NW Natural's atmospheric corrosion mitigation plan includes replacement of facilities when appropriate as well as protective coatings such as epoxies, paint, wax, other corrosion resistant materials, and enhanced inspections in locations with an elevated risk of corrosion.

3.3.4 Exposed Pipe Inspections

During normal operations when a buried pipeline is exposed crews inspect the pipe and protective coating for evidence of corrosion, or coating anomalies that can lead to future corrosion. Coating repairs or pipe replacements are completed before the pipe backfilled and placed back in service.

3.4 Equipment Failure

Equipment Failure is the fourth largest threat to the NW Natural gas distribution system, comprising approximately 1 percent of all recorded leak repairs. NW Natural's efforts to reduce these occurrences are described below.

3.4.1 Valves:

Valves are vital to the safe operation of a gas distribution system. NW Natural has in place a key operating valve inspection and maintenance program to ensure key valves are operable and available for use. Valves that are found to be inoperable, inaccessible, and/or paved over are identified and remediated as necessary.

3.4.2 Pressure Control / Relief Equipment:

NW Natural has an established inspection and maintenance program in place for pressure control/relief equipment to ensure reliable and safe operation.

3.4.3 Mechanical Couplings:

Pipe may pull out from compression couplings due to tensile forces including excavation damage, cyclic fatigue from changes in the temperature of natural gas as a result of the Joule-Thomson effect, ground movement from earthquakes or after heavy rains. Mechanical fitting failures are investigated, tracked, and reported per PHMSA and OPUC requirements.

In the past as an alternative to welding small diameter steel fittings mechanical couplings were sometimes used to install valves and service tees. These types of fittings may develop leaks through the elastomer seal between the coupling and the pipe. NW Natural replaces these fittings with welded steel fittings or polyethylene as discovered during routine operations and maintenance activity.

3.4.4 Other:

Other types of material or equipment failure may occur in the gas distribution system. Failure reports are reviewed to detect trends or patterns that may affect the distribution system.

Many of the safety projects identified in this plan are in direct response to the above threats, and to maintain compliance with safety codes and regulations.

4. Safety Activities Performed by NW Natural

Safety activities at NW Natural can be divided into categories:

4.1 Prescriptive Regulatory Actions – Includes actions which must be performed to meet minimum federal safety standards.

49 CFR 192 includes multiple prescriptive activities, intended to safeguard public safety, and fall into broad categories such as “operations” (Subpart L) and “maintenance” (Subpart M). Most of these activities require inspections at prescribed intervals to confirm that a facility or asset is meeting operational requirements prescribed by federal code. These activities provide the baseline data for other performance-based activities and include, but are not limited to:

- Atmospheric corrosion surveys
- Leakage surveys
- Cathodic protection surveys
- Right of way (“ROW”) patrols
- Valve maintenance
- Water crossing inspections
- Odorization
- Odorometer Reads
- Line Marking

- Pressure Regulation Inspection
- Large Meter Inspections
- Record Keeping
- Control Room Management
- Bridgeline Inspections
- Equipment Calibration
- Houseboat Inspections
- Transmission Integrity

The safety activities from this category are prescriptive in nature and are not driven by risk analysis alone. Because these activities are required, they are not discussed further in this SPP, which instead focuses on projects and/or programs identified by NW Natural as essential to enhancing safety and reliability.

4.2 Proactive, Performance-Based Actions

Other sections of 49 CFR 192 include more proactive performance-based risk reduction activities, such as Subpart O – Transmission Integrity Management Program ("TIMP") and Subpart P – Distribution Integrity Management Program ("DIMP"), Damage Prevention, and Public Awareness. These programs focus on mitigating pipeline safety risk.

4.2.1 Transmission Integrity (TIMP)

Transmission Integrity refers to 49 CFR 192 Subpart O-Gas Transmission Pipeline Integrity Management. This federally mandated program covers natural gas transmission pipelines located in High Consequence (HCA) and Moderate Consequence (MCA) areas. NW Natural exceeds code requirements in TIMP to address conditions outside of HCA and MCA's

Activities in this category include baseline assessments and reassessments of transmission lines using in-line inspection ("ILI") and other direct assessment methods. They may also include pipeline replacements and modifications in compliance with integrity management rules, best practices, and relocation of facilities to mitigate threats posed by natural forces such as flooding, land movement, and erosion.

4.2.2 Distribution Integrity (DIMP)

Distribution Integrity is outlined in 49 CFR 192 Subpart P- Gas Distribution Pipeline Integrity Management. This federally mandated program requires operators to create a written Integrity Management Program that takes into consideration: system knowledge, threat identification, evaluation and risk ranking, identification, and implementation of measures to address risk, measurement of results, and reporting.

Activities in this category include projects warranting Accelerated Action ("AA") to address a system integrity risk. These AA projects are identified through risk modeling, industry identified threats, and by subject matter experts within the Company, and include:

- Replacement of vintage plastic services,
- Relocation of facilities under structures,
- Replacement of valves and fittings susceptible to leakage,
- Protection of above grade gas facilities,
- Crossbore investigation, and
- Relocation of distribution gas lines to mitigate threats posed by natural forces such as:
  - Flooding
  - Land movement, and
  - Erosion.
- Enhanced EFV Installation – installation of EFVs on services that were installed prior to the EFV rule issued in 2006
- Dithiazine – a sulfur compound found in natural gas that has been known to cause equipment failure especially in district regulators.

4.3 Safety Policy and Practices

NW Natural also implements risk reduction activities not explicitly required by the federal code. These actions have been identified as prudent safety practices intended to enhance public safety, improve system reliability, and maintain the safe operation of NW Natural's above and below-ground facilities including LNG Plants and underground natural gas storage facilities. These risk reduction actions include:

- Seismic vulnerability assessments of LNG Plants, the Mist Underground Storage Facility, and Transmission Pipeline System as recommended by SB 33 (2013) and consistent with the Governor's Resiliency 2025 Plan
- Accelerated replacement of vintage materials
- Transmission inspection outside of high and moderate consequence areas.
- Development of a PSMS
- Proactive EFV installation
- Locate ticket risk modeling
- Natural forces assessments of NW Natural's transmission system as part of NW Natural patrol and surveillance programs.

5. Projected and Preliminary Costs Presented in this Plan

The 2021 Capital and O&M costs presented in this plan are projected based on current expenditures for each of the identified projects through the end of the year. Costs presented for the significant safety initiatives are preliminary for planning purposes and do not include NW Natural overhead costs. Costs for safety projects under consideration will be presented in future SPPs.

6. 2022 Capital Safety Investment

In 2022, NW Natural estimates it will invest $12 MM in capital to comply with DIMP, TIMP, and other regulations. Significant projects in this category include:

6.1 Springfield Transmission (ILI) (2021-22 estimate of $1.2 MM):

This project involves transition of the Springfield transmission line from direct assessment to ILI. The Springfield transmission line is the primary feed to downtown Springfield and large industrial customers in the area. This pipeline is approximately 3 miles and routed along Harlow Road, which is a major thoroughfare between the cities of Eugene and Springfield. Work on this project in 2021 with planned completion in 2022.

6.2 Pro-active EFV Installations (2022 estimate of $600,000):

On October 14, 2016, the U.S. Department of Transportation's ("DOT's") Pipeline and Hazardous Materials Safety Administration ("PHMSA") adopted code requiring the installation of EFVs or shut-off valves on all new or replaced branched service lines (Docket No. PHMSA-2011-009). While the code requires EFV installations be installed in all new or replaced branched service lines, it did not require retrofitting EFVs on existing services.

NW Natural believes a proactive EFV installation program is a prudent action that can mitigate the consequence of a gas release resulting from excavation damage to a gas service line. NW Natural is implementing a policy to retrofit EFVs on existing gas service lines when the buried portion of the service line is exposed and the work involves the interruption of gas service.

This pro-active EFV program was initiated in 2020 and will continue to be a safety program.

6.3 McMinnville/Lafayette ILI (2022 estimate of $2.6MM):

This project involves the transition of the McMinnville/Lafayette transmission line from ECDA to ILI assessment. The McMinnville/Lafayette transmission line is a 6" transmission main that connects to the Central Coast feeder near Amity, OR and runs north 13 miles to serving the residential and industrial customers of McMinnville. The transmission main terminates in the town of Lafayette north of McMinnville. Design work to modify the pipeline will begin in 2021 with construction starting in 2022; cleaning ILI assessment, data analysis, and remediation activities will continue through 2022.

6.4 North Eugene Industrial Trans (2022 estimate of $2.1M)

This project involves the transition of the North Eugene Industrial transmission line from ECDA to ILI assessment. The North Eugene Transmission line is a 5 mile long 6" and 8" transmission line primarily serving the residential and industrial customers located along the Randy Pape Beltline highway. The line terminates at the Northwest Expressway. Design and preliminary construction work coordinated with City of Eugene public works projects will be done in 2021. Cleaning and ILI assessment activities will continue through 2022 with data analysis and remediation/repairs completed in 2022.

6.5 Underground Storage – Well Integrity (2022 estimate of $3.0 MM)

PHMSA has issued an Interim Final Rule incorporating by reference American Petroleum Institute ("API") Recommended Practice 1171 referred to as the Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs by reference. NW Natural developed a Mist UGS Risk Management plan and has begun work on the program. Work in 2022 will involve assessments of the production casings of 6 storage wells. The assessments will include downhole wireline logging of the production casing strings using both multi-arm caliper and magnetic flux tools to identify deformations and metal loss features.

6.6 Other safety projects and programs (2022 estimate of $2 MM):

Pipeline Replacement due to Seismic/Natural Forces

Portions of NW Natural's distribution and transmission system cross through landslide faults, seismic faults, sensitive areas, and waterways. Due to significant weather events or the passage of time, the integrity of these pipelines may become at risk. When identified during patrols, routine maintenance, or other stakeholder the Integrity Team develops plans to remediate these at-risk pipelines as they are identified.

Valve Isolation Plans

NW Natural is working to develop a strategy for identifying and installing additional valves in the distribution system to assist in the isolation of portions of the distribution system in case of an emergency or third party damage.

Meter Protection Installation

NW Natural will continue installation of guard posts adjacent to meter sets that are determined to be at risk of damage due to vehicle or equipment contact.

Pipeline Modification due to ROW Encroachment

Patrols of NW Natural Pipelines may discover structures or other encroachments built over or adjacent to pipelines that can impact the safe operation or access to a pipeline. This program works with landowners to remediate these encroachments.

Pipeline Material Identification (PMI)
At selected transmission pipeline anomaly remediation sites NW Natural has instituted a process using technology to non-destructively test and acquire data regarding pipe material properties. In addition, when the Transmission Integrity rule went in to effect over twenty years ago NW Natural began keeping short (18"-24" long) sections of pipe for future reference. These spools will be destructively tested to obtain pipe material properties that were not required as part of the original installation documentation. The material data obtained through this program will be stored in the permanent record for each pipe segment.

6.7 ASV/RCV Installation (2022 estimate of $700k)

To assist in the timely and efficient closure of valves on the transmission system, NW Natural is continually identifying locations where ASV/RCV valves can reasonably be installed, or existing valves retrofitted in order to facilitate isolation of the transmission system.

6.8 Historical Capital Expenditure - Safety Project Plan (System Integrity)

The Historical Capital Expenditures below are actual expenditures for each of the presented years.

Year	Expenditure
2015	$17,190,356*
2016	$ 7,772,763
2017	$ 5,925,409
2018	$ 9,699,814
2019	$ 10,231,431
2020	$ 8,900,000
2021	$8,200,000

*Final year of known bare steel main replacement

Historical capital expenditures include:

- Work to modify pipelines to accept inline inspection devices; including removal or replacement of non-piggable fittings and facilities required to launch and receive inline inspection devices.
- Pipeline relocation to mitigate threats including outside forces and natural forces. This work does not include relocations due to utility conflicts, or third-party improvement projects.
- Pipe replacements and testing in compliance with federal and state regulations.

- Ongoing DIMP AA programs/projects such as Vintage Plastic, Guardpost installations, Proactive EFV installations, etc.

7. 2022 O&M Expenditures

In 2022 NW Natural expects to spend $3.4 in O&M to address and comply with DIMP, TIMP, damage prevention, and public awareness.

Activities that reflect expenditures in this category include costs for supplies (office/field), reference materials, education (conferences/workshops), vendor and contract costs associated with transmission assessments, sewer crossbore investigations and remediation, public awareness program materials, advertisements and mailings, and natural forces investigation and remediation. Additionally, this category covers the development, initiation, and execution of studies and consulting fees related to integrity requirements, such as class location studies and third-party geotechnical site evaluations to address and mitigate risk.

O&M also includes some non-capital internal labor in support of NW Natural's system integrity program ("SIP"). These costs include the Integrity Management staff (7 FTE), damage prevention specialists (4 FTEs) involved in damage prevention/investigation, and a public information officer for safety outreach, training, and program administration. The Integrity Management group may also utilize other internal resources in support of SIP activities which includes GIS analysts, Customer Service, Construction, and other subject matter experts. Significant O&M projects include:

7.1 Sewer Crossbore Inspections (2022 estimate of $1.6MM):

The sewer crossbore program involves the visual inspection of sanitary sewers for incidences of gas line crossbores. In installations where trenchless technology was used to install polyethylene pipe, there exists the possibility the gas line was bored through a sewer main or lateral. NW Natural's policy is to expose all foreign line crossings when performing trenchless work. Sewer crossbores typically occur when facility owners fail to locate their pipe, creating a situation where NW Natural is unable to expose facilities during construction. This is an industry-wide threat. Although sewer crossbores are not isolated to gas operators, the consequence when gas lines are involved can be high. This program identifies existing trenchless polyethylene installations and inspects the sewers in the vicinity to identify crossbores.

7.2 Transmission Inline and Direct Assessment Reassessment and Remediation (2022 estimate of $1.3MM):

This work includes the federally prescribed seven-year reassessment of transmission pipelines in HCAs and is comprised of both inline inspection and direct assessment of transmission assets and associated repairs.

7.3 Natural Forces (2022 estimate of $300,000):

Where the threat of natural forces can be mitigated without pipe replacement or rerouting, NW Natural may choose to address the threat through site work. This option is necessary in situations where a reroute is not feasible due to environmental restrictions or where a pipeline serves a critical customer or provides a single feed to a distribution system. Work may include armoring of slopes, re-grading of sites, culvert improvements, and retaining structures to address land movement and drainage issues.

7.4 Damage Prevention (2022 estimate of $800,000):

In compliance with DIMP regulations, and to address the single largest threat to gas facilities, NW Natural maintains a damage prevention department. The department consist of a supervisor and 4 FTE damage prevention specialists whose responsibilities include damage prevention through high risk locate ticket intervention, training, attendance at pre-construction meetings, participation in Utility Coordinating Councils, and support of the 811 One-call system. Damage prevention specialists are also responsible for the investigation, enforcement, and contractor training related to excavation and third-party damage.

7.5 Public Awareness (2022 estimate of $1,050,000):

NW Natural's Public Awareness program meets the requirements mandated in API RP 1162, adopted by reference by PHMSA into Part 192.616(a),(b), and (c). This program promotes public safety through communication and outreach focused on educating customers and the public about natural gas safety. The program includes customer correspondence, mailers, advertisements, community events, mobile phone applications, and brochures to excavators, contractors, public officials, residences and businesses along pipeline rights-of-way and in high consequence areas, floating homes, and schools.

The Public Awareness Plan utilizes television and radio advertising, bill inserts, social media, and events to promote natural gas safety awareness. Targeted outreach and public awareness materials are provided annually to customers near transmission pipelines, as well as contractors, excavators, and first responders within NW Natural's service territory.

7.6 Right-of-Way Encroachments (2022 estimate of $100,000):

Pipeline patrols are used to identify changes in site conditions. An example of such a change is the installation of structures over pipelines, and inside dedicated pipeline rights-of-way, or easements. In some instances, the remediation may involve the relocation of structures and other non-gas facilities.

7.7 Historical O&M Expenditure - Safety Project Plan (System Integrity):

The historical O&M expenditures below are actual expenditures for each of the presented years (not including PSMS, damage prevention or public awareness expenditures).

Year	Expenditure
2015	$4,034,218
2016	$4,889,618
2017	$4,771,267
2018	$4,000,000
2019	$3,052,000
2020	$3,100,000
2021	$2,900,000

Historic O&M expenditure included:

- Regulatory transmission assessments including the investigation and remediation of identified anomalies resulting from inline inspection and external corrosion direct assessment (ECDA).
- Sewer crossbore inspection program.
- Investigation and remediation of natural forces including landslides, flooding, erosion, etc.
- Buildover remediation where structures encroach into pipeline right-of-way.
- Digital conversion of historical facility records to facilitate system knowledge.
- Remediation of difficult to operate valves.
- Maintenance of Integrity Risk model as a result of geographical and system changes.

These above costs do not reflect those related to ongoing maintenance of facilities including right-of-way clearing, patrols, leakage, cathodic protection, and other ongoing routine O&M work.

8. 2022 Significant Safety Initiatives

8.1 Changes in TIMP Assessment Methodology

In 2022 NW Natural will extend the use of inline inspection (ILI) for integrity assessment of transmission pipelines assessed at seven-year intervals. Inline inspection tools have the advantage over direct assessment and pressure testing because they assess the entire pipeline maintaining constant contact with the inner wall providing data allowing for the identification of interacting anomalies such as pipe deformation and metal loss. In 2022 NW Natural will change the assessment methodology of the following pipelines.

The McMinnville/Lafayette Transmission line supporting the City of McMinnville and surrounding areas. The 13-mile-long pipeline is routed along Oregon Highway 99W.

The Springfield transmission line is the primary feed to downtown Springfield and large industrial customers in the area. The 3-mile-long pipeline is routed along Harlow Road.

The north Eugene Industrial Transmission line serving industrial, commercial, and residential customers in north Eugene. The 5-mile-long line pipeline is routed along the Randy Pape Beltline Highway.

.

8.2 Pro-active EFV Installations

NW Natural has installed EFVs on all new single-family residential services since February of 1999. In 2006, Federal Code was modified to require the installation of EFVs on all new residential and small commercial services. NW Natural will continue and expand the program installing EFVs on existing residential and small commercial services when the buried portion of the service line is exposed and service to the customer is interrupted. NW Natural believes proactive installation of EFVs is a prudent and pragmatic approach that can mitigate the consequence of an excavation damage to a service line.

9. Safety Projects/Programs Being Evaluated at this Time – Tracking and Traceability

NW Natural is developing a roadmap to meet the proposed requirements of the Plastic Pipe Rule (Docket No. PHMSA–2014–0098). The DOT has designated the Plastic Pipe Rule a "significant rulemaking" due to economic impact; compliance with the Plastic Pipe Rule will require new equipment, software, and process changes by NW Natural to meet tracking and traceability requirements.

When the final rule is issued and the impact of the rule on current operations is understood, the Company will develop a program that will be included in future SPPs.

In compliance with recent Regulatory Mandates involving material verification of steel transmission pipelines NW Natural has implemented a non-destructive material verification program to collect material property data on transmission pipeline assets. This program involves material testing of in-service pipelines during planned work to collect material data including metallurgy that was not required at the time of installation.

NW Natural has also developed a program to destructively test segments of pipeline that were removed from past transmission projects to collect the material property information. Collecting material information from the in-service transmission mains and the destructive tests from the historical transmission mains will allow NW Natural to develop a library of material property data.

10. Cost Benefit Analyses & Alternative Analysis

The performance of a cost benefit analysis and alternatives analysis is difficult in the context of safety programs mandated by regulation. As a result, a cost benefit analysis has not been a primary consideration in this report because these safety projects are mandated by CFR, dictated by industry best practices, or driven by operational requirements. The assigned risk and prioritization for implementing these projects are based on in-depth studies and analysis of NW Natural's transmission and distribution systems as well as plant and storage assets. Studies performed as part of normal operations provide measurable and continual feedback needed to perform safety related work for which there are few practicable alternatives.

Alternative analysis and in-depth studies are useful when they identify threats and risks that can be mitigated or eliminated through the application of performance-based best practices, engineering analysis, operational knowledge, and subject matter experts. Where the Code of Federal Regulations prescribe compliance activity or mandate programs, the use of cost benefit, or alternative, analysis is not warranted.

When a pipeline safety initiative requires a cost benefit or alternative analysis NW Natural may select a qualified external resource to perform the analysis.

11. Legislative Update

11.1 Docket No. PHMSA-2011-0023 - the Safety of Gas Transmission and Gathering Lines

11.1.1 Rulemaking No. 1

Regulatory Mandate – involves MAOP reconfirmation, expansion of assessment requirements outside of high consequence areas, material verification, seismicity, reporting requirements, other related items. This rulemaking was published in October of 2019. NW Natural is in compliance with the rule at this time.

11.1.2 Rulemaking No. 2

Non-Regulatory Mandate – involves repair criteria, integrity management improvements, cathodic protection, and management of change, risk modeling requirements, external corrosion, internal corrosion, risk assessment requirements, safety of launchers and receivers, surveillance after weather events, and other related rules. This rulemaking is on currently on hold.

11.1.3 Rulemaking No. 3

Safety of Gas Gathering Pipelines – involves gathering lines. The rule is currently on hold.

NW Natural will assess the full impact of all new or amended rules once published to understand the impact on operations and engineering practices. NW Natural will update programs and existing safety projects as needed to comply with new mandated requirements.

11.2 Docket No. PHMSA-2016-0016 – Underground Storage Facilities for Natural Gas

On February 12, 2020 the Final Rule incorporating API Recommended Practice 1171 referred to as the Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs by reference was published. NW Natural developed a storage well integrity program in compliance with API 1171 incorporating all required provisions into operations at Mist. NW Natural program is in compliance with the final rule as published.

12. Completed Projects (or scheduled to be completed in 2021)

12.1 Eugene Transmission (ILI) ($3.3 MM - Actual):

This project involved the transition of the Eugene transmission line from direct assessment to ILI. The Eugene transmission line is the primary feed to downtown Eugene and the University of Oregon. This pipeline is approximately 4 miles and is routed along Coburg Road. Work on this pipeline was completed in 2021.

12.2 Underground Storage - Well Integrity ($3.5MM – Actual)

This project involved the re-work and baseline assessment of seven wells in the Mist storage field. The 2021 projects are included in year three of NW Natural's well integrity baseline assessment work that includes down hole assessment of production casing and re-work of well tubing as at regular intervals. The program was developed to meet compliance with PHMSA's adoption of APR RP 1171 - Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs. This is a multiyear project planned for completion in 2027.

12.3 South Eugene Transmission (ILI) ($1.4 MM - Actual):

This project involves transition of the South Eugene transmission line from direct assessment to ILI. The South Eugene transmission line is a transmission line from the South Eugene gate that primarily serves the IP Springfield facility and is approximately 6.5 miles in length. Work including station upgrades was completed in 2021. The ILI assessment and remediation of any identified anomalies will be completed in 2021.

12.4 Seismic Vulnerability Assessment and Study of NW Natural's Transmission Line System (2021 estimate of $1MM):

The performance of this assessment and study was completed in compliance with the recommendations of SB 33 (2013) published on October 1, 2014. SB 33 (2013) and in furtherance of the Governor's Resiliency 2025 Plan.

Results of the study will be used to identify projects to replace and/or fortify facilities determined to be vulnerable during events such as a Cascadia subduction zone earthquake. As identified and prioritized, these projects will be included in future SPPs. Future projects will complement existing TIMP mitigation programs, including but not limited to: installation of automatic shut-off valves ("ASVs") or remote control valves ("RCVs"), elimination of bridge crossings, natural forces mitigation work, system reinforcement, and valve installation.

12.5 Underground Storage Integrity – Mist Reliability ($2.2M - Actual):

As part of a mist reliability study and in anticipation of PHMSA's adoption of RP 1171, NW Natural performed inline inspection of four transmission pipelines that transport natural gas between storage wells at Mist into the NW Natural transmission system.

12.6 Labish Shallow Pipe Remediation ($1M - Actual):

As a result of NW Natural's regularly scheduled patrols of the transmission system a 1200' long section of 12" transmission pipe north of Salem was identified as having insufficient ground cover. Due to the depth of the pipe and the farming activities in the area the pipe was replaced. Work was completed in the fall of 2020.

12.7 12" Willamette River Crossing ($1.6M - Actual):

In 2014 an inline inspection was performed on Pipeline S02 from Aurora to Tualatin. This pipeline was primarily 12" in diameter and included a 10" Willamette River Crossing. During the inspection at the river crossing the geometry of the 10" pipe damaged the inspection tool. This project replaced the unpiggagle 10" section with a 12" river crossing allowing the line to be inline inspected. This crossing was installed, and successful ILI assessment completed in 2020.

13. Conclusion

This SPP provides an overview of NW Natural's pipeline safety initiatives and commitment to the safe and reliable delivery of natural gas to the communities we serve. Through its 160-year history, NW Natural has been committed to identifying threats to pipeline safety and taking steps to address and mitigate those threats. Looking forward to the role natural gas will play in our energy future, and as members of the communities we serve, NW Natural recognizes the trust placed on us by our neighbors and customers. NW Natural will continually work to ensure public safety and maintain the integrity of our natural gas system.

NW Natural Pipeline System Safety Capital Projects 2005-2018

1. **Project Name: Navy Heights**
   Year: 2006
   This pipeline safety project's scope of work remediated a natural forces threat and included the replacement of 3,470 feet of 6-inch Class D pipe via horizontal directional drilling (HDD) technology for a pipeline that serves as the single source of natural gas to Astoria. In 2006 a landslide in this area exposed the pipe and caused undo stress on the pipe. Replacement of the pipe facing the landslide hazard via HDD allowed the pipe to be installed at a deeper depth in stable soils.

2. **Project Name: P11 Westside Feeder ILI Conversion**
   Year: 2007
   The P11 Westside Feeder is a 16-inch 400 MAOP, 12.7 mile-long transmission pipeline that serves the west side of Portland, between the Bethany area north of Highway 26 and South Beaverton. In response to the 2003 Transmission Integrity Management rule the Company initiated a program to make all transmission lines capable of inline assessment. This was the first pipeline that NW Natural made capable of inline assessment. This pipeline safety project's scope of work included the removal and replacement of fittings that would not allow passage of inline inspection tools, as well as pipeline cleaning and inspection of the pipeline with inline inspection tools. Post-assessment digs and pipeline repairs were performed to address anomalies identified during the pipeline assessment inspection.

3. **Project Name: P25.02 ILI Conversion**
   Year: 2008
   This was one of the first transmission pipelines that NW Natural made capable of inline assessment. This pipeline safety project's scope of work included the removal and replacement of fittings that would not allow passage of inline inspection tools from multiple locations along the P25.02 pipeline along Columbia Blvd in North Portland, as well as pipeline cleaning and inspection of the pipeline with inline inspection tools. Post-assessment digs and pipeline repairs were performed to address anomalies identified during the pipeline assessment inspection.

4. **Project Name: Young's Bay Pipeline Replacement**

Year: 2008

This pipeline safety project's scope of work remediated a natural forces threat and included the replacement of 4,500 feet of 8-inch Class D transmission pipe via HDD, for a pipeline that is the single source of natural gas from Warrenton to Seaside and Cannon Beach. The original 1966 8-inch pipeline was dredged in place along the bottom of Young's Bay. The pipeline was replaced due to the discovery that the original pipeline had become exposed due to tidal erosion in the bottom of the bay. The 8-inch pipeline exposure was discovered during annual maintenance inspections where Company contract divers inspect legacy dredged river and water body crossings.

5. **Project Name: Salmon River / Highway 18 Pipeline Replacement, Central Coast Feeder**
   Year: 2008

   This pipeline safety project's scope of work remediated a natural forces threat and included the replacement of 5,200 feet of 12-inch Class E transmission main that crossed the Salmon River in three locations, with a new pipeline that reduced the number of Salmon River crossings to one location in the Van Duzer Corridor, east of Rose Lodge. The original 1965 pipeline was installed via open trench across the Salmon River and was found to be exposed due to riverbed erosion. The new pipeline was installed at a deeper depth below the Salmon River riverbed and State Highway 18 via HDD technology.

6. **Project Name: Sullivan's Gulch Bare Main Replacement Project**
   Year: 2010
   This pipeline safety project's scope of work remediated a vintage material threat and included the replacement of 4,400 feet of 8-inch bare steel main with 8-inch coated steel pipeline. The project eliminated a significant segment of bare main in the Portland metro area, including a bare main crossing over Interstate 84 near SE 12th Avenue.

7. **Project Name: Calapooia River**
   Year: 2010

   This pipeline safety project's scope of work remediated a natural forces threat and included the replacement of 900 feet of 10-inch Class D transmission main across the Calapooia River near Albany. The original pipeline was installed in 1960 by dredging a trench across the Calapooia River, and supplied gas to the Corvallis and Philomath communities. During an underwater pipeline inspection the pipeline was found to be

exposed due to riverbed erosion. The new pipeline was installed at depth below the riverbed via HDD.

8. **Project Name: Rock Creek Replacement, Central Coast Feeder**
   Year: 2010

   This pipeline safety project's scope of work remediated a natural forces threat and included the replacement of 3,000 feet of 12-inch Class E transmission main along the Central Coast Feeder, which is the primary source of gas for Lincoln City, Toledo and Newport. The original pipeline crossing had become exposed due to riverbed erosion. The new pipeline was installed at depth below the riverbed via HDD technology.

9. **Project Name: SW Vermont Street Bare Steel Replacement**
   Year: 2011

   This pipeline safety project's scope of work remediated a vintage material threat and included the replacement of 1,850 feet of 6-inch bare steel main in SW Portland.

10. **Project Name: Windsor Island River Crossing Pipeline Replacement**
    Year: 2012

    This pipeline safety project's scope of work remediated a natural forces threat and included the replacement of 1,500 feet of 10-inch Class E transmission pipeline across the Willamette River north of Keizer. The original pipeline was installed in 1964 by dredging a trench across the Willamette River and had become exposed due to riverbed erosion. The new pipeline was installed at depth below the riverbed via HDD.

11. **Project Name: South Yamhill River Crossing Pipeline Replacement, McMinnville**
    Year: 2012

    This pipeline safety pipeline safety project's scope of work remediated a natural forces threat and included the replacement of 1,740 feet of 6-inch Class D transmission pipeline across the South Yamhill River south of McMinnville. The original pipeline was installed in 1964 by dredging a trench across the river and had become exposed due to riverbed erosion. The new pipeline was installed at depth below the riverbed via HDD.

12. **Project Name: South of Monmouth Bare Steel Replacement**
    Year: 2013

    This pipeline safety project's scope of work remediated a vintage material threat and included the replacement of 12 miles of 6-inch bare steel main south of Monmouth and

Independence. The purpose of the project was to eliminate the 6-inch bare steel main installed in 1931.

13. Project Name: P30 South Yamhill River Crossing Fort Hill, Central Coast Feeder
Year: 2014

This pipeline safety project's scope of work remediated a natural forces threat and included the replacement of 915 feet of 12-inch Class E transmission main across the South Yamhill River east of Grand Ronde. The original 1965 pipeline was installed via open trench across the South Yamhill River. The pipeline was found to be exposed due to riverbed erosion. The new pipeline was installed at a deeper depth below the riverbed via HDD technology.

14. Project Name: Ellendale Avenue Bare Steel Replacement
Year: 2015

This pipeline safety project's scope of work remediated a vintage material threat and included the replacement of 8,900 feet of 6-inch bare steel main along Ellendale Avenue east of Dallas. The purpose of the project was to eliminate the 6-inch bare steel main. 2015 was the last year of the Company's bare steel main replacement safety project program.

15. Project Name: Nevada Street Bare Steel Replacement
Year: 2015

This pipeline safety project's scope of work remediated a vintage material threat and included the replacement of 500 feet of 6-inch bare steel main along the Nevada Street right-of-way crossing of Interstate 5 near the Terwilliger Curves in Portland. The purpose of the project was to eliminate the 6-inch bare steel main. 2015 was the last year of the Company's bare steel main replacement safety project program.

16. Project Name: SW Gaarde Road and Highway 99W Transmission Pipeline Replacement
Year: 2015

This pipeline safety project's scope of work included the replacement of 1,430 feet of 10-inch transmission main in Tigard due to shallow depth of cover in advance of an ODOT roadway project.

17. Project Name: SE Transmission Rehydro
Year: 2015

This pipeline safety project's scope of work included the hydrotesting of approximately 8 miles of the P20 10-inch transmission main installed in 1956 between SE Gate in Clackamas and Bell Rd. Station in SE Portland. The purpose of the project was to accomplish a successful hydrostatic pressure test due to missing hydrotest records from the pipeline's original construction in 1956.

18. Project Name: North Coast ILI Conversion
Year: 2018

This pipeline safety project's scope of work included the removal and replacement of non-piggable fittings along approximately 49 miles of 16-inch and 10-inch North Coast Feeder transmission mains between the Deer Island Gate Station and the Wicks Road Regional Station east of Astoria and Warrenton. Removal of the non-piggable fittings allowed the Company to perform its first inline inspection of these transmission pipelines originally installed in 1965. Post-assessment digs and pipeline repairs were performed to address anomalies identified during the pipeline assessment inspection.

19. Project Name: Central Coast Feeder ILI Conversion
Years: 2018 and 2019

This pipeline safety project's scope of work included the removal and replacement of non-piggable fittings along approximately 91 miles of 10-inch and 12-inch Central Coast Feeder transmission mains between the McMinnville-Amity Gate northeast of Salem and the Toledo Regional Station. Removal of the non-piggable fittings allowed the Company to perform its first inline inspection of these transmission pipelines originally installed in 1964 and 1965. Post-assessment digs and pipeline repairs were performed to address anomalies identified during the transmission pipeline assessment inspection.

20. Project Name: South Santiam River Pipe Replacement
Year: 2018

This pipeline safety project's scope of work remediated a natural forces threat and included the replacement of 1,200 feet of 4-inch high pressure distribution main crossing the South Santiam River north of Lebanon. The pipeline was found to be exposed due to riverbed erosion. The new pipeline was installed at a deeper depth below the riverbed via HDD technology.

Data Request Response

Request No.: ADV 1789 CUB IR 6

Please provide the estimated useful life remaining on the existing Coos County pipeline in years.

Response:

The existing Coos County pipeline was placed into service in 2005 and the classification of pipeline assets would be FERC Account 367 – Mains. The current OR approved depreciable life of FERC 367 is 50 years (100/accrual rate of 1.99). The purchase price of $1 would be placed into service in FERC account 367.

ADV 1789

NW NATURAL ADVICE NO. 25-23 SCHEDULE 160 TSA COOS COUNTY

Data Request Response

Request No.: ADV 1789 CUB IR 17

Is it correct that there will be no work on the pipeline until rate recovery is resolved? If this is incorrect please explain the work that will be done and under what circumstances. Please itemize the expected costs from that work.

Response:

The Company assumes that the work asked about refers to the three landslide mitigation projects discussed in ADV 1789, as well as the general operations and maintenance of the Coos County pipeline that the Company previously performed on behalf of Coos County.

The Company will not perform any of the landslide risk prevention work identified in ADV 1789 until the Company receives regulatory certainty regarding its decision to purchase the Coos County Pipeline for the nominal sum of one dollar. To be clear, NW Natural is not seeking pre-approval of any costs to operate and maintain the pipeline or the investments it will need to make upon transfer of ownership. Rather, NW Natural is seeking to ensure that it will not be held to a heightened cost recovery standard simply because it decided to acquire the Coos County Pipeline and pursue a more conventional regulatory framework for the operation of the pipeline. If NW Natural were to maintain the status quo and not assume ownership of the Coos County Pipeline, landslide risks would not be addressed, potentially leading to unplanned service interruptions that could put Oregonians' lives at risk, and that would be costly for NW Natural's industrial and commercial customers. Therefore, cost recovery should be subject to the same standard as any other cost that the Company incurs to maintain its system.

As noted in the third paragraph of page 6 of NWN OPUC Advice 25-23 (ADV 1789), the Company has filed a deferral application to allow it to track O&M costs and would defer recovery of these costs until a future rate proceeding.

Data Request Response

Request No.: ADV 1789 OPUC IR 12

Please clarify if the landslide mitigation work referred to in this filing represents a complete solution to the issue. Or does the Company think additional landslide mitigation, or any other extraordinary O&M expense, will be necessary in future years?

Response:

For the landslide mitigation work referred to in this filling listed below are the specific solutions that the Company has determined will address each landslide event:

Mile 98: The Company's geotechnical engineering consultant has recommended relocation of the 12-inch transmission main to a deeper depth, below the identified slide plane elevation. The intention is that the MP 98 Transmission Pipeline Relocation Project will address the current threat to the existing 12-inch transmission main at mile post 98 and no further mitigation work will be necessary.

Coquille River: The Company's geotechnical engineering consultant has recommended relocation of the 4-inch transmission main away from the Coquille River riverbank area to an upland area closer to the state highway. The intention is that the Coquille River Transmission Pipeline Relocation Project will resolve the current threat to the existing 4-inch transmission main along the Coquille River and no further mitigation work will be necessary.

Lookingglass: The Company has received approval from Coos County to hire a geotechnical engineering consultant to evaluate the soil and groundwater conditions at the Lookingglass Slide location and to provide the Company with a recommendation solution to address groundwater movement along the pipeline and restoration of soils. The intent is that this restoration effort will fully address the Lookingglass Slide area but the Company does not know if further O&M expenses will be necessary in the future at this location to augment or make adjustments to the employed solution.

Remaining High Risk Sites: The Company's geotechnical engineering consultant has recommended that the Company continue to frequently monitor these remaining high-risk sites. The Company will follow the recommendation of the Company's geotechnical consultant which states that high risk sites require Frequent Monitoring. Frequent Monitoring is defined as once a month between October and April along with specific criteria for additional monitoring due to weather conditions. Landslide mitigation could necessitate pipeline relocation to address any of these high-risk sites.

Has Coos County applied for any outside funding to support landslide remediation work? Please list all funding sources applied for and whether or not it was awarded.

Response:

Yes, the County has applied for outside funding to support landslide remediation work from multiple sources.

Coos County applied for and was granted American Rescue Plan Act (ARPA) funds as owner of the pipeline. The County has allocated $1.45 million in these ARPA funds to be spent on the Coquille River project to mitigate the risk of a riverbank washout.

Coos County has also attempted to obtain a FEMA Building Resilient Infrastructure and Communities (BRIC) grant, but funding for this program was cancelled by the federal government in 2025, and its status is currently under judicial review. The County further attempted to obtain a grant through the United States Department of Transportation but were informed that grant eligibility is limited to distribution lines, not transmission lines such as the Coos County Pipeline. Finally, the County has requested a Congressionally Directed Spending (CDS) grant to fund landslide mitigation on the Coquille River. The County is currently waiting for a response to this request.

Additionally, Coos County has federal disaster assistance funds made available after the Federal Emergency Management Agency (FEMA) declared a presidential disaster on July 22, 2025, related to storms in March 2025. The County has inquired with FEMA regarding the eligibility of these funds for landslide-related damage remediation to the Lookingglass portion of the pipeline. FEMA informed the County that grant funds from the disaster declaration cannot be used to relocate the Coos County Pipeline away from the slide area. The County is continuing to evaluate whether any of these funds are eligible for restoration work at the Lookingglass damage site.

Finally, note that Coos County has a pipeline fund that remains available to fund landslide mitigation work. Per a letter Coos County sent to the Commission dated January 9, 2026, the proceeds in this fund at that time were over $600 thousand.

For each area of the Coos Pipeline that requires replacement (e.g. Mile 98, Coquille River, and all additional areas marked as high risk and needing replacements), what is the estimated useful life of each of these replacements?

Response:

FERC account 376 has a 67 year group survivor curve based on the Company's last depreciation study settlement in UM 2363.

The Coos County Pipeline replacement projects will be constructed with API 5L grade X52 high-strength carbon coated steel pipe that is cathodically protected.

The steel pipeline industry predicts a useful service life of 80-100 years for properly maintained cathodically protected buried steel pipelines.

Data Request Response

Request No.: ADV 1789 OPUC IR 16

Regarding the Second Stipulation Relating to the Coos County Distribution System in docket UG 152 (Order No. 03-236):

a. What was the modeled gas volume on which the TSA agreement rate was based?
b. What was the actual average gas volume?
c. Please explain why the forecasted gas volumes on the pipeline were not realized.

Response:

a. NW Natural projected a load for residential and commercial customers of 1,326,316 therms in year 1, growing to 7,935,975 therms in year twenty (with year twenty being 2025). Please see UG 152 Exhibit Staff-NWN-CUB-NWIGU-Coos County/1515, Tatom-Henderson-Jenks-Schoenbeck-Whitty for further detail.

b. The average actual total throughput for Coos County customers for the three years 2022 through 2024 was roughly 5.9 million therms annually (including sales and transportation customers).

c. Economic growth in the region, especially in the forest products sector, has not materialized as originally expected since the pipeline entered service.[1]

APPENDIX F: WORK GROUP MEMBER COMMENTS F1

Executive Summary

Despite strong growth of natural gas customers in Oregon, many Oregonians still lack access to natural gas service. Every city with a population of more than 10,000 has natural gas service, but many communities remain unserved due to the cost to extend natural gas pipelines and distribution systems. These unserved areas generally have populations of less than 1,000 or are located more than 15 miles from a natural gas pipeline.

The Public Utility Commission of Oregon (PUC) allows natural gas utilities to recover investments to extend their distribution systems that are commensurate with the projected revenue from the new customers. These amounts, however, are generally not sufficient to cover the cost of expansion when the facilities needed are considerable and the pool of potential customers in the proposed expansion area is small.

At the direction of the 2015 Oregon Legislature, the PUC formed a Senate Bill 32 Work Group to explore potential mechanisms to increase funding for the expansion of natural gas service. The SB 32 Work Group examined mechanisms both within the PUC's current statutory authority as well as legislative proposals to tap other funding sources.

The SB 32 Work Group made the following findings:

Finding 1: The cost of natural gas expansion into unserved areas is a major obstacle to expansion.

Finding 2: Because the determination of whether expansion will benefit existing customers is based on the comparison of costs to benefits of the expansion, proper accounting for all appropriate benefits is essential.

Finding 3: New customers located within a previously unserved area will receive benefits from expansion (access to new service) and should be charged accordingly.

Finding 4: There are multiple potential funding sources to fill the economic gap for natural gas service expansion.

Finding 5: Multiple funding sources should be bundled when possible. Best practices for bundling multiple revenue sources should be studied and implemented.

Finding 6: If the legislature chooses to create funding sources for the expansion of natural gas service to realize economic, societal, or environmental benefits, it should create transparent subsidies.

The SB 32 Work Group concluded that the distribution extension policies of natural gas utilities could be modified to increase the amount of ratepayer funds to support natural gas service expansion. The SB 32 Work Group concluded, however, that any additional ratepayer revenues resulting from these modifications would not likely be sufficient to fully fund expansion to any city in Oregon that currently does not have natural gas service.

The SB 32 Work Group also identified potential legislative actions that could provide additional revenue to support natural gas expansion. These actions include using general funds or redirecting monies used for local air quality improvement to fill the funding gap for the cost of natural gas expansion. The diverse members of the SB 32 Work Group, however, could not agree on any specific legislative proposals to create these additional revenues.

Introduction

The 2015 Legislature passed SB 32 to address the expansion of natural gas service in Oregon. The bill directed the PUC to form a work group to study ways to expand natural gas service to unserved areas, and to report the work group's findings and conclusions, as well as any recommendations for legislation, by September 15, 2016.

Following meetings with a broad range of stakeholders, the PUC created a SB 32 Work Group comprised of Senator Doug Whitsett, Representative Bill Kennemer, and representatives from utilities, ratepayers, propane dealers, and local governments. The SB 32 Work Group met on four occasions and, as directed by the legislature, evaluated the following issues in its study of natural gas service expansion:

(a) The PUC's policies regarding the extension of natural gas mains;

(b) Mechanisms for funding the expansion of natural gas services, including the use of tariffs, the imposition of charges and fees, the use of unclaimed refunds and the establishment of accounts dedicated to the expansion of natural gas services;

(c) Recommendations by Oregon's natural gas utilities for reforms to expand natural gas service;

(d) Possible processes for including in a utility's rates the cost of projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas;

(e) Possible selection criteria for projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas; and

(f) The potential rate cap for projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas.

This report documents the efforts of the SB 32 Work Group. For context, the report begins with background information on the availability of natural gas service in Oregon, the policies used by the PUC to address extension of service, and the application of those policies to three case studies.

The report then provides the SB 32 Work Group's findings and conclusions on methods by which a natural gas utility may expand its distribution facilities to unserved communities. These findings and conclusions are solely those of the SB 32 Work Group. The SB 32 Work Group did not agree on recommendations regarding legislative action, so no recommendations are included. However, this report does present the legislative proposals that were considered.

Natural Gas Service in Oregon

Three natural gas utilities – Northwest Natural Gas, dba NW Natural; Cascade Natural Gas; and Avista Corporation, dba Avista Utilities – supply gas to more than 800,000 Oregon households and businesses. Currently, NW Natural serves 640,171 Oregonians, including 579,129 households; Avista serves 99,065 Oregonians, including 87,328 households; and Cascade serves 70,083 Oregonians, including 60,114 households.

Over the past 20 years, the number of Oregon customers served by natural gas utilities has doubled. Figure 1 shows the growth from 1975 to 2013 in the number of Oregon homes and businesses that use natural gas.

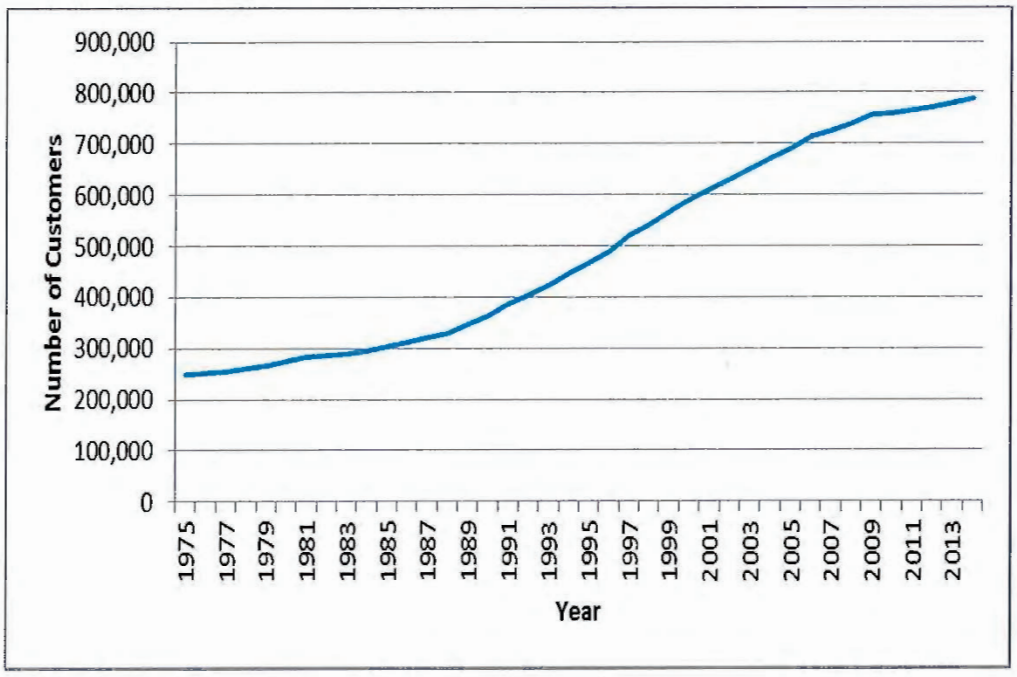

Figure 1: Natural Gas Customers in Oregon

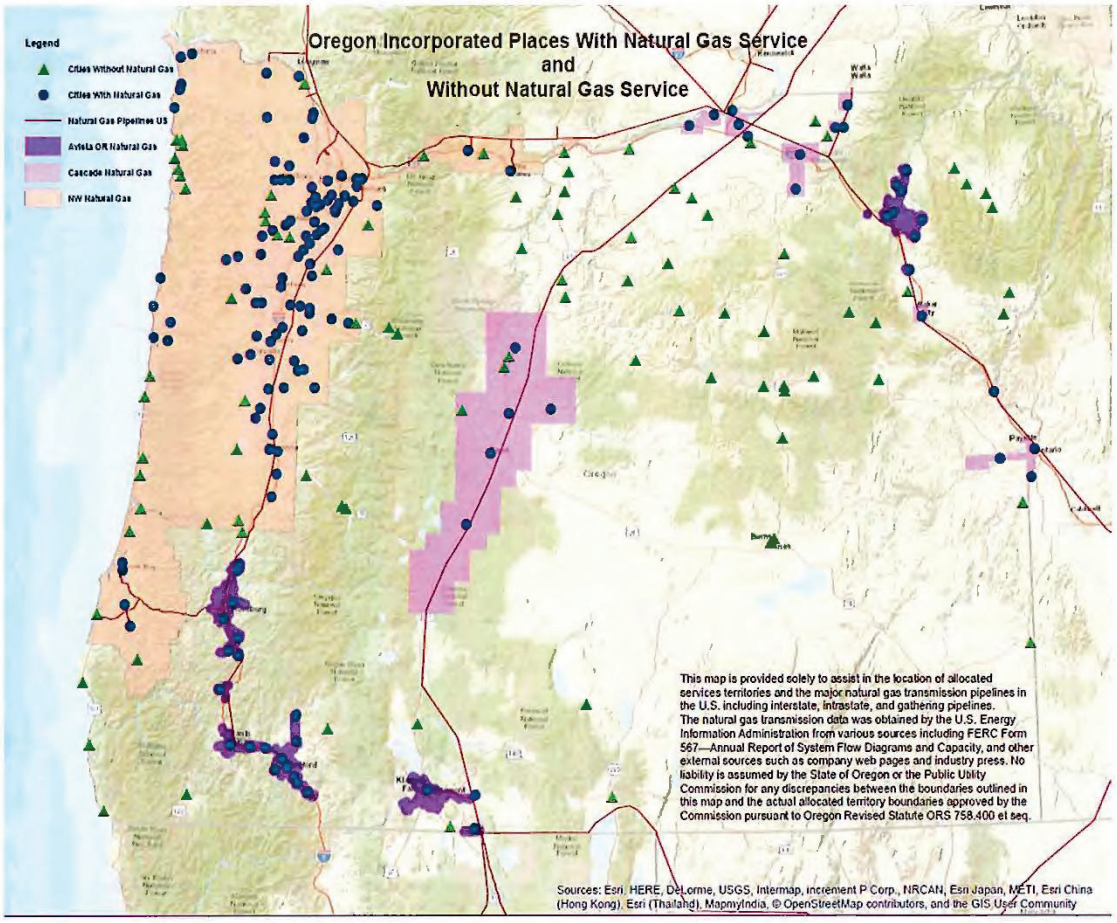
The increase in natural gas customers stems from four primary causes: (1) new construction; (2) conversion from oil and other energy sources; (3) extensions to new

customers in a utility's existing service territory; and (4) new extensions into previously unserved areas.

Over time, Oregon's natural gas utilities have systematically expanded their service areas in more densely populated areas and in areas near natural gas pipelines. Today, a majority of the residents of Oregon's incorporated areas have access to natural gas.

The map below shows the natural gas service status of Oregon's incorporated cities.



Map 1: Oregon Incorporated Cities with and without Natural Gas Service

Two key factors affect an area's access to natural gas service. The first is population size. Figure 2 shows that larger communities have greater access to natural gas service than smaller ones.

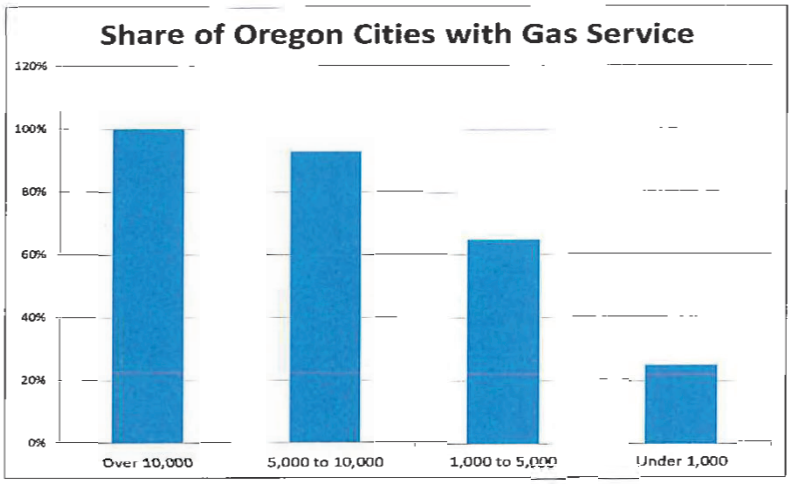


Figure 2: Share of Oregon Cities with Natural Gas

Every city with a population greater than 10,000 has natural gas service. All but two with populations between 5,000 and 10,000 (Florence and Brookings) have service. Most cities with populations between 1,000 and 5,000 have service. In contrast, most cities with populations under 1,000 have no natural gas service.

The second key factor affecting availability of natural gas service is the city's proximity to a natural gas pipeline. Natural gas is transported through a network of intrastate and interstate pipelines, which are subject to regulation by both the PUC and the Federal Energy Regulatory Commission (FERC). Oregon's natural gas utilities receive their gas supply from these pipelines, and build their own pipelines and distribution systems to deliver the gas to customers.

The longer the distance between a city and a natural gas pipeline, the more costly it is for a natural gas utility to serve that area. For this reason, many remote communities remain unserved. Almost all unserved cities with populations over 1,000 are located more than 10 miles from an existing natural gas pipeline. These cities include Bay City, Brookings, Burns, Carlton, Cave Junction, Culver, Dayton, Dunes City, Enterprise,

Estacada, Florence, Gold Beach, Heppner, Hines, John Day, Joseph, Lakeside, Lowell, Oakridge, Port Orford, Reedsport, Rockaway Beach, Sisters, Tillamook, Waldport, Yamhill, and Veneta.

The impact of pipeline proximity is even more dramatic on smaller communities. No city with a population of less than 1,000 that is located more than 15 miles from a natural gas pipeline has natural gas service. Figure 3 shows that all cities with populations under 1,000 that have access to natural gas are near interstate pipelines.

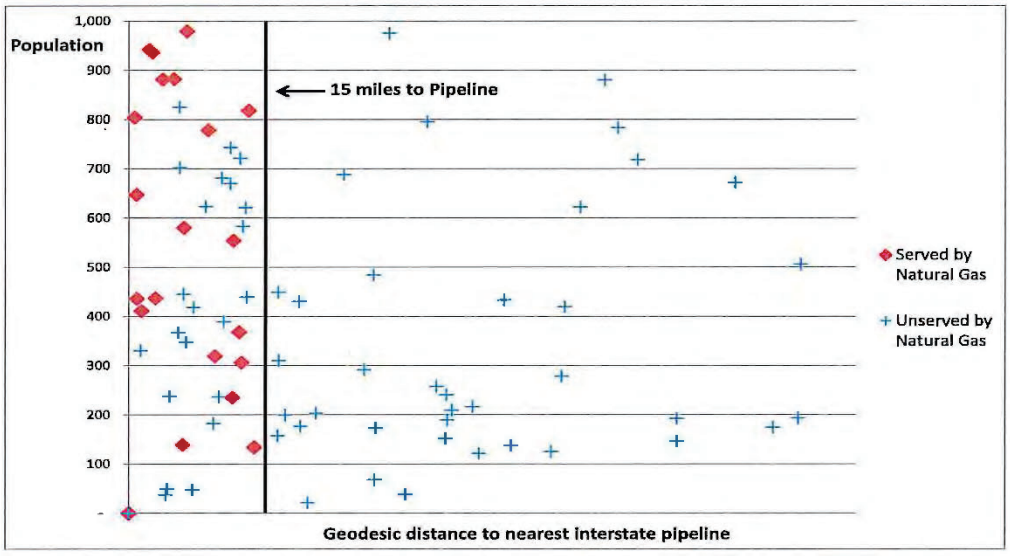

Figure 3: Cities with Population Under 1000 with Natural Gas Service

Extension Policies and Case Studies

The natural gas utilities decide whether to build pipelines and extend their distribution systems into unserved areas, subject to the PUC's review. The utilities also establish their own distribution extension policies, which the PUC reviews and approves to help ensure that the rates paid by all ratepayers for these extensions are fair, just, and reasonable.

The PUC does not require new customers to pay all the costs associated with an extension. Rather, extension policies allow the utility to recover a portion of the extension costs from all customers (usually referred to as a construction allowance), to recognize the increased revenue the new customer will provide through the rates they will pay in the future. Any costs above the construction allowance must be paid by new customers through a surcharge or through other funds secured by the utility or others to fund the expansion.

Each utility currently calculates this allowance for new residential customers differently. NW Natural's construction allowance is five times the annual average margin expected from new customers. Avista's allowance is three times the estimated gross revenue expected from the new customers. Cascade's allowance is 4.5 times the estimated gross margin (gross revenue less cost of gas) to be derived from the new customer.

At any time, a natural gas utility may file a tariff to change its construction allowance formula. The utility must justify the change and show that the formula results in fair and reasonable rates for all ratepayers.

Recent proposals for natural gas expansions into unserved areas provide insight into the conditions for successful expansions. They generally involve a combination of broader taxpayer funding of uneconomic expansion costs, combined with some level of utility ratepayer support. Three expansion projects are discussed below.

Coos County

NW Natural's expansion of service to Coos Bay, North Bend, Myrtle Point, and Coquille is the most notable natural gas service expansion in Oregon over the past 20 years. The expansion project consisted of (1) the building of a 60 mile pipeline from the Roseburg area, and (2) the development of a natural gas distribution system throughout Coos County.

In this case the pipeline was built with the help of state and county bond funds. The 1999 Oregon Legislature approved $20 million in lottery bond funding for construction of the pipeline. Coos County voters authorized general obligation bonds up to $27 million to finance costs of construction not covered by the lottery bond funding.

NW Natural's extension policy, filed and approved by the PUC, addressed the expansion of the distribution system (main and line extensions). The utility was authorized to recover $10 million in distribution-level project costs through existing customer rates. NW Natural was also authorized to recover another $2 million by charging the new customers in Coos County an additional 2 cents per therm for 20 years. After 20 years, this surcharge could be extended if the $2 million was not fully recouped. The company also used $400,000 in shareholder funds to help pay for the new distribution system.

The project went forward and service to Coos County began in January 2005.

Estacada

In 2005, NW Natural examined extending service to Estacada, a city with a population of about 3,000 near Portland.

NW Natural estimated that the extension would cost about $7.5 million, but that only $750,000, or just 10 percent of project costs, could be recovered from ratepayers. Because of a funding gap, NW Natural did not pursue the project.

Lakeview

In 2015, Avista examined extending service into Lakeview, a city with a population of about 2,300 in south-central Oregon.

Avista estimated that the extension would cost about $9 million, but that only $1 million, or less than 15 percent of the total project costs, could be recovered from ratepayers. Because of the need for large amounts of external funding to cover project costs, Avista did not pursue the project.

SB 32 Work Group

Work Group Formation

In September 2015, the PUC solicited stakeholder interest in participating on the SB 32 Work Group. PUC Staff met with representatives from utilities, natural gas pipelines, ratepayers, propane dealers, and local governments to help identify individuals to serve on the work group.

In January 2016, the PUC appointed 11 members to the SB 32 Work Group. Both Senator Doug Whitsett and Representative Bill Kennemer generously agreed to participate. A complete list of the SB 32 Work Group members is set forth below:

SB 32 Work Group Members		
Member Name	**Company/ Organization**	**Representing**
Senator Doug Whitsett	Oregon State Senate	
Representative Bill Kennemer	Oregon House of Representatives	
Clackamas County Commissioner Martha Schrader	Clackamas County	
Lake County Commissioner Ken Kestner	Lake County	
City Administrator Ric Ingham	City of Veneta	
Danelle Romain	Oregon PUD Association	Consumer-Owned Utilities
Joe Westby	Ferrellgas/Blue Rhino	Propane Companies
Dan Kirschner	Northwest Gas Association	Natural Gas Companies (LDC)
Etta Lockey	Pacific Power	Electric Companies
Bob Jenks	Citizens' Utility Board	Residential Customers
Ed Finklea	Northwest Industrial Gas Users (NWIGU)	Industrial Customers

Work Group Activity

Meetings

The SB 32 Work Group met on four occasions in January, March, May, and June 2016. All meetings were open to the public, and other stakeholders were allowed to offer input. Copies of the formal presentations given at the meetings are included in the appendices to this report.

At the January meeting, the SB 32 Work Group heard presentations on energy facility siting, PUC extension authority and policies, and the distribution extension policies and activities of Avista, Cascade, and NW Natural.

At the March meeting, the SB 32 Work Group heard presentations on the Coos County expansion, the proposed Lakeview expansion project, the Oregon propane industry, and natural gas expansion developments in other states.

At the May meeting, the PUC staff facilitated a discussion among the SB 32 Work Group members to address the following questions:

1. Who should invest in natural gas infrastructure in unserved areas in Oregon, and what sources of revenue exist outside of utility ratepayers?
2. What criteria should be used to determine the viability of expansion?
3. Should existing ratepayers help fund expansion of natural gas to new communities? If so, how should the subsidy rate for economic development be determined?
4. How can analytical approaches be improved to increase the forecast adoption rate?
    a. Should we study electric avoided costs due to natural gas conversions?
    b. Should projects advance without anchor customers?

5. Should recovery for expansions be allowed outside of a rate case? If yes:
    a. How should the application process for proposing expansions work?
    b. Should there be a rate cap? If yes, how should the rate cap be applied?
    c. Should there be a surcharge for ratepayers in newly expanded areas? If yes, how should the surcharge be applied (i.e. per therm surcharge, flat monthly surcharge, etc.)?

In addition to this discussion, the natural gas utilities also presented recommendations for actions to enhance the expansion of natural gas into unserved areas. The natural gas utilities' proposals, as well as the propane industry's written response, are attached as Appendices A and B, respectively.

At the final June meeting, the SB 32 Work Group discussed the findings, conclusions, and recommendations it would present to the PUC and to the legislature.

Drafts and Comments

The SB 32 Work Group circulated two drafts for comments. First, it circulated its draft "Findings and Conclusions" among its members for purposes of discussion during its last meeting. Portland General Electric Company (PGE) and the Northwest Gas Association (NWGA) filed comments in response to this first draft.

Second, following its final meeting, the SB 32 Work Group circulated a draft report titled "Study of Natural Gas Expansion to Unserved Areas." Comments were received from NWGA, Senator Whitsett, Lake County Commissioner Kestner, NWIGU, Consumer-Owned Utilities, and the Pacific Propane Gas Association.

All comments are attached in Appendix F.

SB 32 Work Group Findings

The SB 32 Work Group had a robust discussion on a variety of topics. At a very high level, there was general agreement on the following findings:

Finding 1: The cost of natural gas expansion into unserved areas is a major obstacle to expansion.

Case studies of recent and planned natural gas expansion efforts show that the large amounts of additional funding is necessary to cover the costs of gas service extensions into unserved areas.

Finding 2: Because the determination of whether expansion will benefit existing customers is based on the comparison of costs to benefits of the expansion, proper accounting for all appropriate benefits is essential.

Construction allowances may not reflect the full amount of benefits that an expansion of service to unserved areas may provide existing customers. Distribution expansions may be evaluated over too short a time period and other benefits may not be captured in construction allowance formulas.

Finding 3: New customers located within a previously unserved area will receive benefits from expansion (access to new service) and should be charged accordingly.

New customers in a recently-expanded service territory should pay for project costs commensurate with the direct and long-term benefits they receive from getting access to natural gas service. New customer surcharges should be considered a legitimate source of funds for service extension projects.

Finding 4: There are multiple potential funding sources to fill the economic gap for natural gas service expansion.

There are many potential funding sources other than revenue from ratepayers to support the expansion of natural gas service. Obtaining funds from these sources, however, requires action from outside the PUC. Moreover, not all SB 32 Work Group members agree that all the funding sources set out below should be used to fund expansion of natural gas service.

- Economic development grants[1]
- Local taxes and bonds
- Utility shareholder funds
- Lottery revenue
- Community in-kind contributions
- Oregon Health Authority funds related to environmental quality
- Local and county funds to comply with federal and state air-shed standards
- Partial funding by industrial customers or pipelines
- State General Fund

Finding 5: Multiple funding sources should be bundled when possible. Best practices for bundling multiple revenue sources should be studied and implemented.

Because new, large pipeline and distribution extension projects will likely require a significant amount of additional funding to cover project costs, it is important to promote ways to identify and coordinate funding for proposed projects. Any effort to facilitate the expansion of natural gas service should capitalize on the work of existing entities that coordinate economic development in communities.

[1] One example are grants for rural development offered by the United States Department of Agriculture: http://www.rd.usda.gov/programs-services

Finding 6: If the legislature chooses to create funding sources for the expansion of natural gas service to realize economic, societal, or environmental benefits, it should create transparent subsidies.

Although there is no consensus that statutory subsidies should be used for the expansion of natural gas service, any subsidies enacted to promote the extension of natural gas service into unserved areas for social, environmental, or economic reasons should be transparent and collected from all taxpayers—not just utility ratepayers.

SB 32 Work Group Potential Actions

Although the SB 32 Work Group could not reach agreement on specific legislative recommendations to help facilitate the expansion of natural gas service, its members identified three potential actions to encourage service expansion into unserved areas.

1. Establish more liberal distribution extension policies in which existing customers pay for a larger share of the costs of a service extension project.

In general, the SB 32 Work Group agrees that construction allowance formulas should reflect the system benefits that accrue to existing customers over the life of a project. The natural gas utilities have the ability to seek changes to their extension policies and provide justification for those changes. These projects would not affect pipeline extensions but could provide additional distribution-level expansion.

2. Impose surcharges on new customers commensurate with the benefits they receive from getting access to natural gas service.

In general, the SB 32 Work Group agrees that new customers in a previously unserved area should help pay for a distribution expansion consistent with the benefits they receive from getting access to natural gas service.

3. Seek alternative sources of funds for projects.

Funding beyond what legitimately can be picked up by new and existing customers will be necessary to cover the costs of large, new gas service extensions. As listed above, the SB 32 Work Group identified a number of potential untapped sources that could be used to help fund projects.

The SB 32 Work Group also believes that service extension projects would greatly benefit from an individual or organization responsible for identifying and securing external funding for the projects. Without such a coordinated effort to secure outside funding, most projects will be shelved.

Although the SB 32 Work Group did not reach a consensus on possible legislative actions to provide additional funding, its members did discuss the following possible proposals:

1. Allocating general fund or lottery funds to natural gas system expansions.
2. Redirecting some portion of Oregon Health Authority funds to natural gas system expansions.[2]
3. Redirecting funding used for air quality improvement such as reducing emissions from wood stoves to natural gas system expansions.
4. Providing state loan or bond guarantees for expansion projects.[3]
5. Directing Business Oregon to identify and coordinate other sources of funding for natural gas system expansion projects.

[2] This redirection of funds might be justified based on the premise that the availability of natural gas will promote economic development, which, in turn, will reduce poverty and promote overall health in the region. Also, because the expansion of gas service would likely reduce wood heating, the redirection of funds might also be justified based on the purported link between air quality and health.
[3] These guarantees, which would result in decreased interest rates on loans or bonds, could be justified to improve economic development. Funding sources may include local bonds, Business Oregon loan/bond guarantees, lottery bonds, industrial development bonds, new natural gas public purpose charge funds, general fund moneys, lottery funds, Oregon Health Authority funds, etc.

SB 32 Work Group Conclusions

The SB 32 Work Group reached two primary conclusions:

Conclusion 1:

Potential changes to distribution expansion policies could increase the amount of ratepayer revenue to support the expansion of natural gas service territory. Although the PUC could approve such changes within its current statutory authority, these additional revenues are not likely to be sufficient to fully fund expansion to any city in Oregon that currently does not have natural gas service.

Conclusion 2:

Potential legislative action could provide additional revenue to support natural gas expansion. These actions include using funds from existing sources, such as the general fund, or creating new funding mechanisms, such as a service territory expansion surcharge on all natural gas customers. The diverse members of the SB 32 Work Group, however, do not agree on any legislative action to create this additional revenue. If such legislative action is taken, the SB 32 Work Group agrees such measures operate in a transparent manner.

Appendix A: Natural Gas Utilities' Proposal for Funding Mechanisms

September 15, 2016

Senate Bill 32
Study of Natural Gas Expansion to
Unserved Areas
2016 Report to the Legislative Assembly

EXPANSION OF NATURAL GAS IN OREGON – REGULATORY INITIATIVES/MECHANISMS

Through Senate Bill 32, the Legislative Assembly "finds and declares that having access to natural gas is in the public interest and that the extension of natural gas pipelines and other infrastructure necessary for providing natural gas to areas that do not have access to natural gas is necessary for the communities of this state to preserve local economies, enlarge tax bases and generate additional economic opportunities." (emphasis added)

In an effort to effectuate the findings of the legislature, and consistent with the authority already held by the Public Utility Commission of Oregon (PUC), **the LDCs recommend that the PUC adopt the legislative policy statement listed above as its own policy.**

The LDCs further recommend that the Commission support the following items, understanding that a combination of those items may be necessary to fulfill legislative intent:

1. **Line Extension Policy Modification** – Recognizing the benefits that natural gas can provide to areas that don't have natural gas today, filings from the natural gas Local Distribution Companies (LDCs) which use allowable investment methodologies may take into consideration the longevity of new customers on the system (such as the Perpetual Net Present Value methodology). Such filings would be expected to increase the level of allowable LDC investment above the current level, which hamper potential expansion opportunities.

2. **Natural Gas Expansion Tariff Rider** – Filings from the LDCs may be developed to include mechanisms through which amounts could be accumulated for the purpose of funding any shortfall that may exist between the estimated cost to provide service to a new community or development, and the allowable investment as calculated in the LDC's tariff. The determination of the level of funding, collection and allocation of funds, etc. would be included in the LDCs filing.

3. **Portfolio Treatment of Allowable Investment** – Some natural gas line extensions cost less than what the maximum allowable investment supports. To that end, filings by the LDCs may include an application of "banked" amounts of any unused portions of line extension allowances to help, in conjunction with other funding sources, to make uneconomic line extensions financially viable.

4. **Geographical Surcharges** – LDC filings may request geographic-specific surcharges or tariff riders applicable only to customers in communities where natural gas expansions have been made. These surcharges would be in addition to the LDC's Commission-approved rates. The additional revenue from the surcharge rate would be applied towards the revenues expected from a system expansion, and would assist in making the economics of the expansion more favorable.

5. **Customer Assistance** – Not only are the costs associated with providing service to new communities a matter that requires special attention and consideration, the costs on the

customer side of the meter also need to be addressed. To that end, the LDCs recommend that the Commission encourage LDC filings to assist customers with the cost of conversion. Below are two examples that provide customer assistance, and which have been employed in similar form by other jurisdictions:

a. Excess Line Extension Allowance – LDC filings may include programs to make available to new customers any excess line extension allowance in order to help offset the cost of natural gas space and water heating equipment.

b. Fuel Conversions & Electric Avoided Costs – Energy efficiency incentives promoting the conversion of space and/or water heat to natural gas, if cost-effective as measured under the total resource and utility cost tests. Any potential rebates would further help to offset the costs associated with the conversion to natural gas consistent with legislative intent.

Appendix B: Pacific Propane Gas Association Comments

September 15, 2016

Senate Bill 32
Study of Natural Gas Expansion to
Unserved Areas
2016 Report to the Legislative Assembly

Comments of the Pacific Propane Gas Association
On Proposal by the Northwest Gas Association

The Pacific Propane Gas Association (PPGA) appreciates the opportunity to present its views on the issues being considered by the Senate Bill 32 natural gas work group. PPGA here offers specific comments on the proposal distributed by the Northwest Gas Association (NWGA) at the meeting of the work group on May 5, 2016.

PPGA disagrees with the reading given to Senate Bill 32 by NWGA. NWGA essentially argues that the legislature has already determined that Oregon's natural gas systems should be expanded and that the Public Utility Commission is charged with making it happen. Instead, the legislature has recognized the benefits of natural gas as a fuel and required the Public Utility Commission to convene a work group to solicit input and to explore means by which natural gas service might be made more available to consumers. A number of issues are identified for the work group to address, and the final product is a report to the legislature—not a plan for expanding the natural gas network. Had the legislature intended to mandate that the state's natural gas system be expanded and that the Public Utility Commission be the instrumentality for doing so, it certainly could have, and would have, stated this.

Line Extension Policy Modification. As the work group knows, PPGA believes that natural gas expansions that are not economic run counter to sound public policy if they are subsidized by either taxpayers or existing captive natural gas customers. Utility shareholders, who have decided not to deploy their own capital, should not be subsidized by either taxpayers or captive utility customers. On the other hand if utility shareholders do desire to put their capital at risk in financing an expansion, then PPGA can interpose no objection.

In one fashion or another determining whether a proposed expansion is economic requires comparing anticipated delivery revenue from the expansion with the costs of constructing and operating it. There are a number of analytical tools for doing so, but they all essentially compare the delivery revenue stream with the costs.

PPGA does not offer any specific guidance with respect to modifying existing line extension policy, but it should not be used as a tool to predetermine the outcome of line extension proposals. The apparent suggestion by NWGA that the revenue stream in perpetuity be used as the basis for analysis would appear to be a mechanism to predetermine the outcome. Business decision-makers do not make investment decisions on the basis of possible perpetual revenue streams for assets. Rather, any line extension policy should track the models that managers employ in determining whether it is economic for the utility to deploy its shareholders' capital. Utilities should not be permitted to use one form of analysis for its shareholder investments and a different one for assessing potential line extensions.

Natural Gas Expansion Tariff Rider. NWGA speaks of methods by which funds "could be accumulated" to cover any future shortfall in revenues from a proposed expansion. The NWGA paper is vague on this point, but presumably such a mechanism would include surcharging existing customers in order to develop a pot of dollars to fund line extensions. Or it might include directing pipeline and supplier refunds or refunds ordered by the Public Utility

Commission itself to a reserve to fund line extensions. Any such mechanism would be a wolf in sheep's clothing, as such refunds would ordinarily be distributed to the customers that paid these costs in the first instance. Again, although the NWGA paper is vague, in all likelihood these mechanisms would be shell games, played with other peoples' money.

Portfolio Treatment of Allowable Investment. Admittedly where significant numbers of prospective customers are involved it may not be efficient to assess the economics of serving each new customer down to the nickels and cents. Nevertheless, a portfolio approach can result in material subsidization between different groups of prospective new customers. Should a portfolio approach be adopted the Commission should design it carefully so that cost-causation principles are observed.

Geographic Surcharges. NWGA suggests that "geographic surcharges" might be employed to promote system expansion. PPGA does not oppose surcharges to new customers so that the total revenue from those customers covers the total cost of serving them. PPGA would, however, object to a "geographic surcharge" under which existing utility customers in a geographic area would subsidize service to new utility customers in that or another region.

Customer Assistance. NWGA suggests that the Commission consider assistance to new customers in making a conversion to natural gas. In most circumstances this would address piping in the home and either conversion or replacement of appliances. The Commission should not entertain any suggestions of this nature, which call for yet a further customer subsidy. Experience has shown that customer conversion/replacement costs can run in the vicinity of $4,000-10,000 per home. The existing customers of the utility (some of which have certainly paid for their own conversion costs) should not be assisting new customers to install piping and appliances in their homes. Should the Commission entertain such a proposal, it should also extend it to the customers of competing energy sources such as propane.

NWGA speaks of making "excess line extension allowances" available to new customers to fund piping and appliances. Line extension allowances are essentially grants from existing customers to new customers. Making them available to new customers for conversion costs would simply represent one more tax on existing natural gas customers to subsidize both new customers and utility shareholders.

NWGA also speaks of using energy efficiency credits to fund conversion costs. Propane, like natural gas, when employed in direct flame applications, is more efficient than comparable electric applications. If the Commission entertains utilizing energy efficiency credits for natural gas conversion, it should also adopt a similar program for new and existing propane customers, who help reduce the state's demand for electricity.

Appendix C: First Meeting Presentations

September 15, 2016

Senate Bill 32
Study of Natural Gas Expansion to
Unserved Areas
2016 Report to the Legislative Assembly

Gas Distribution Development

Prepared by the Oregon Public Utility Commission

SB 32 Work Group Shall Study

a) The commission's policies regarding the extension of natural gas mains;

b) Mechanisms for funding the expansion of natural gas services, including the use of tariffs, the imposition of charges and fees, the use of unclaimed refunds and the establishment of accounts dedicated to the expansion of natural gas services;

c) The submission of recommendations by public utilities that furnish natural gas;

d) Possible processes for including in a public utility's rates the cost of projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas;

e) Possible selection criteria for projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas; and

f) The potential rate cap for projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas.

Unserved Communities

- Oregon has many communities without access to natural gas
  - Small population
  - Low housing density
  - Far from existing transmission or distribution
- These communities rely on alternate energy sources for heating and industry

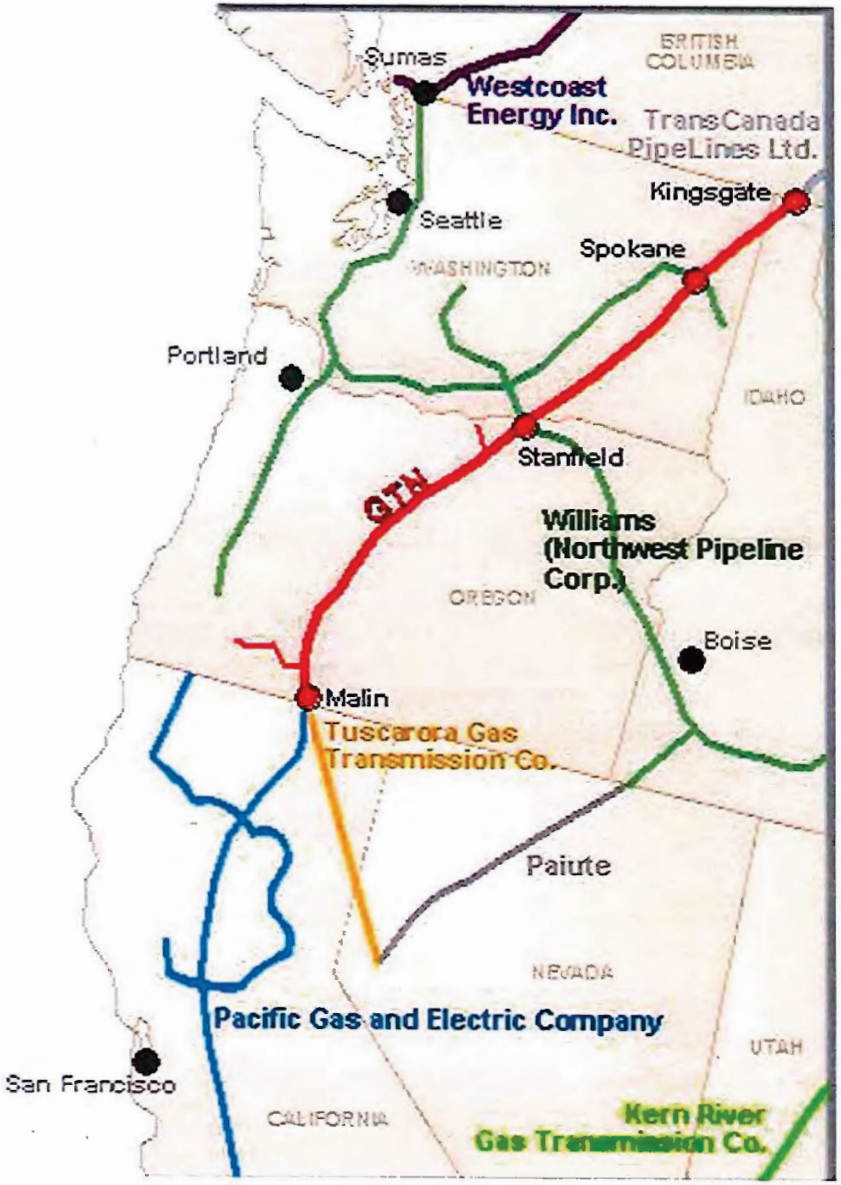
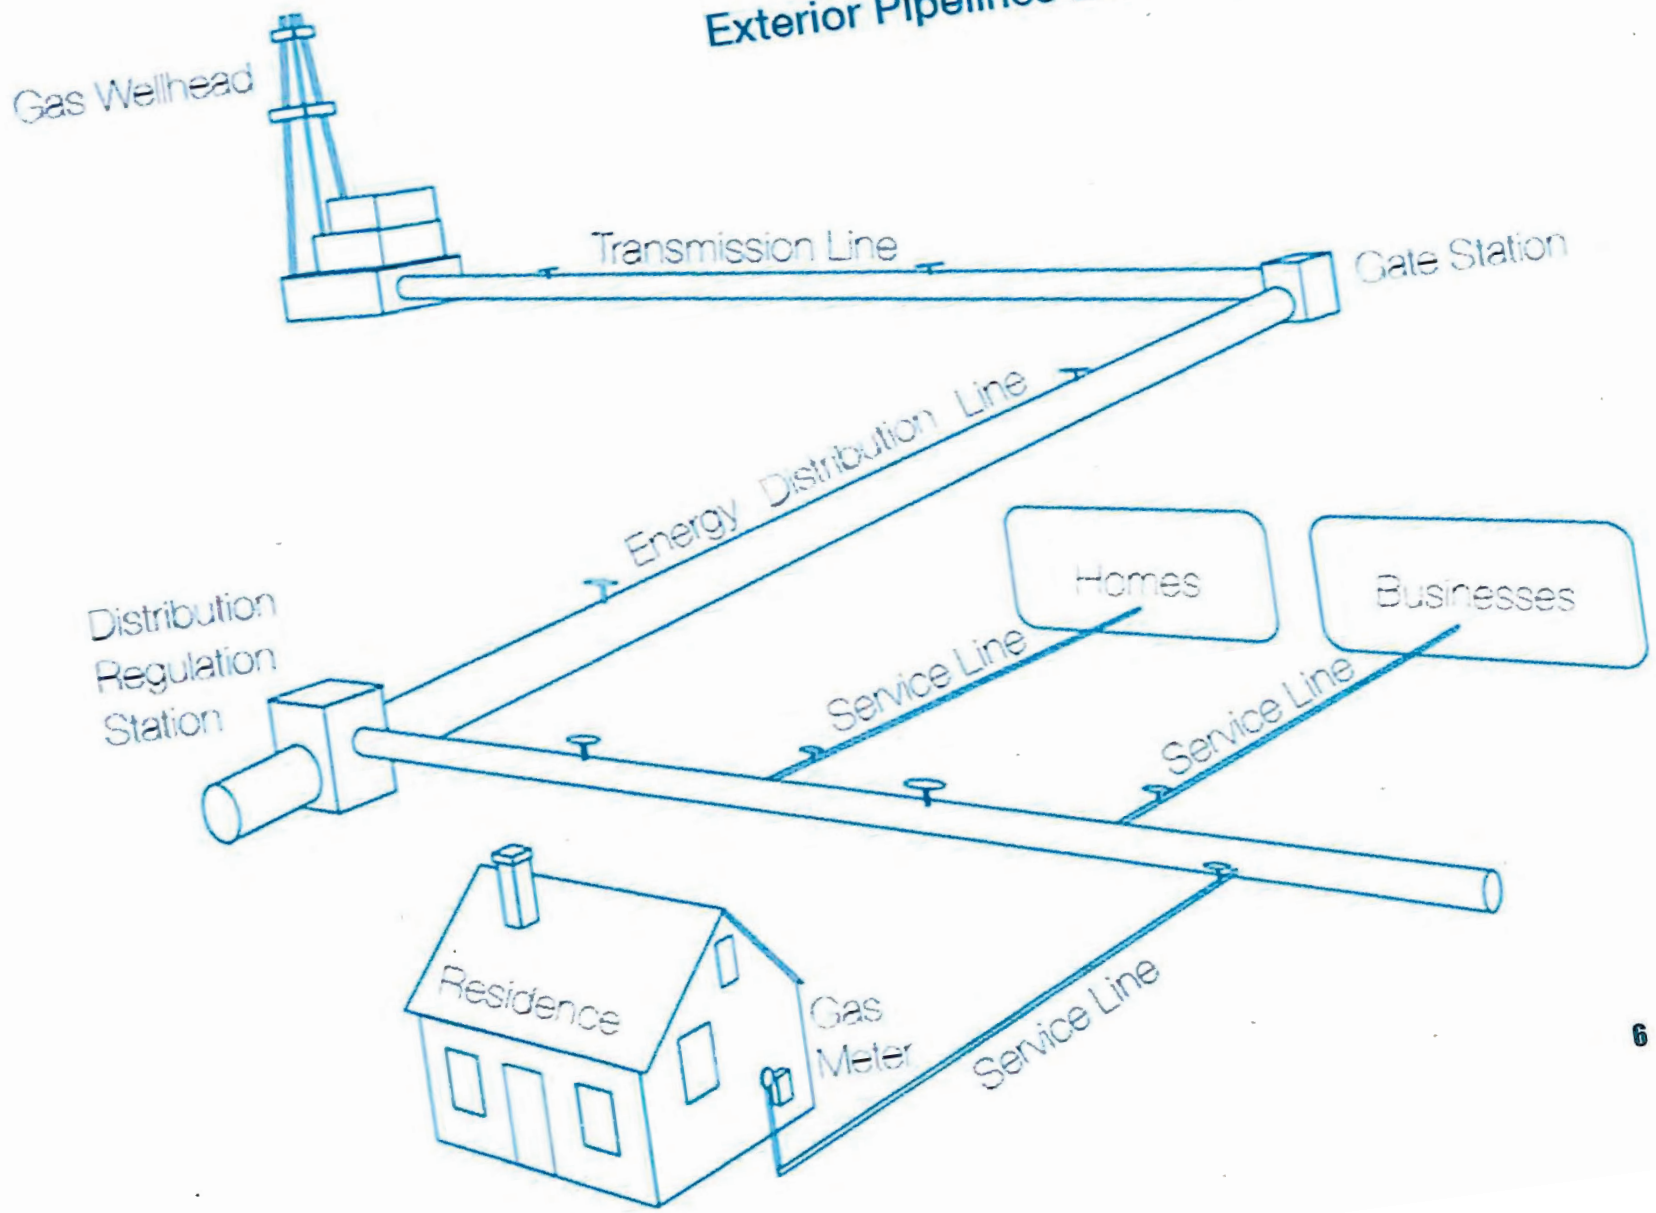
Western Pipeline Grid Map

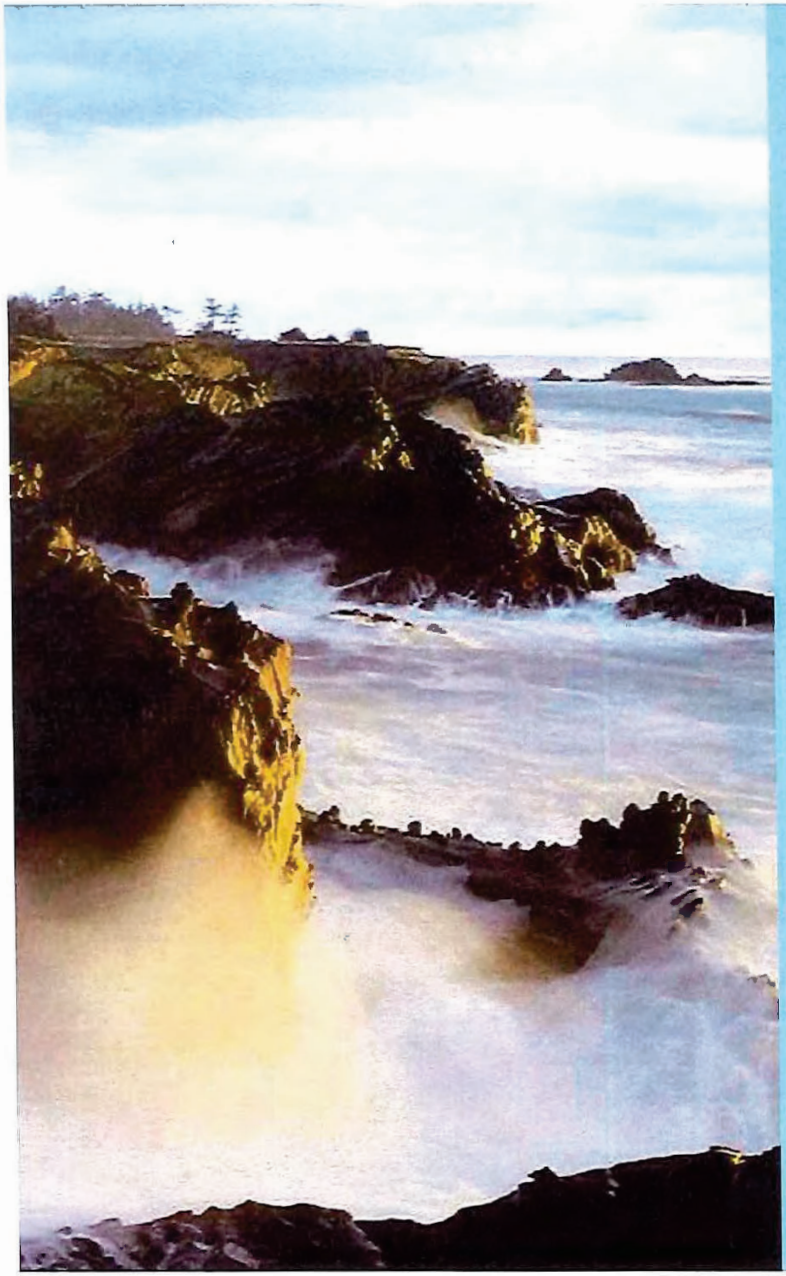


Exterior Pipelines Leading to the Home



SB 32 2(1)(a) Commission Policy

- General expansion of the system
  - Large project to build in new communities
  - Addressed in general rate case
  - Investment subject to prudency review
  - E.G. Coos Bay
- Extensions to specific properties
  - Small incremental investment within existing community
  - Governed by line extension policy in LDC Tariff
  - E.G. Industrial and residential service connection



General Expansion:

Coos County

- Community Financed Pipeline
- NWN Financed Local Distribution
  - NWN Rates Increase in next GRC
- Coos Customers Pay Surcharge

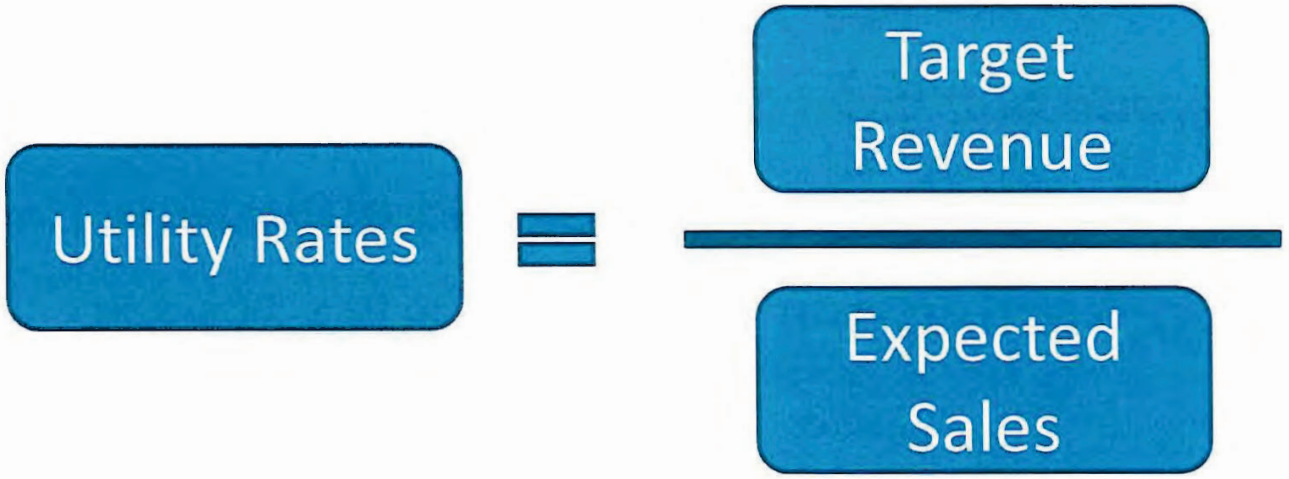
Specific Property Extension:

- Utility pays share of cost based on expected revenue
- Applicant covers remaining cost
- Applicant is reimbursed as neighbors connect
- Utility's share of costs are incorporated into rates in next GRC

General Rate Case

- Review expected annual expenses for utility
- Determine fair return for utility investors
  - Identify value of used, useful, and prudent investment
  - Identify market based cost of equity
- Set utility rates such that utility earns the fair return

Target Revenue
=
Expected Cost
+
Fair Return

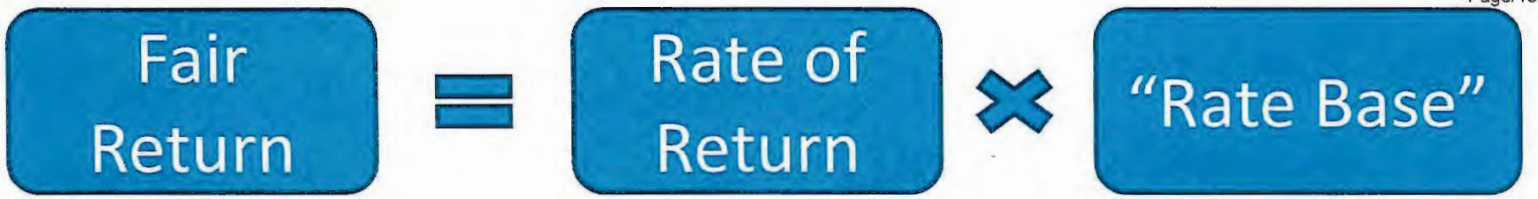


Utility Rates
=
Target Revenue
Expected Sales

Expected Costs

- Labor
- Transmission charges
- Storage Expenses
- Maintenance and Repairs
- Overhead
- Depreciation

❖Natural Gas Cost is Pass Through Expense

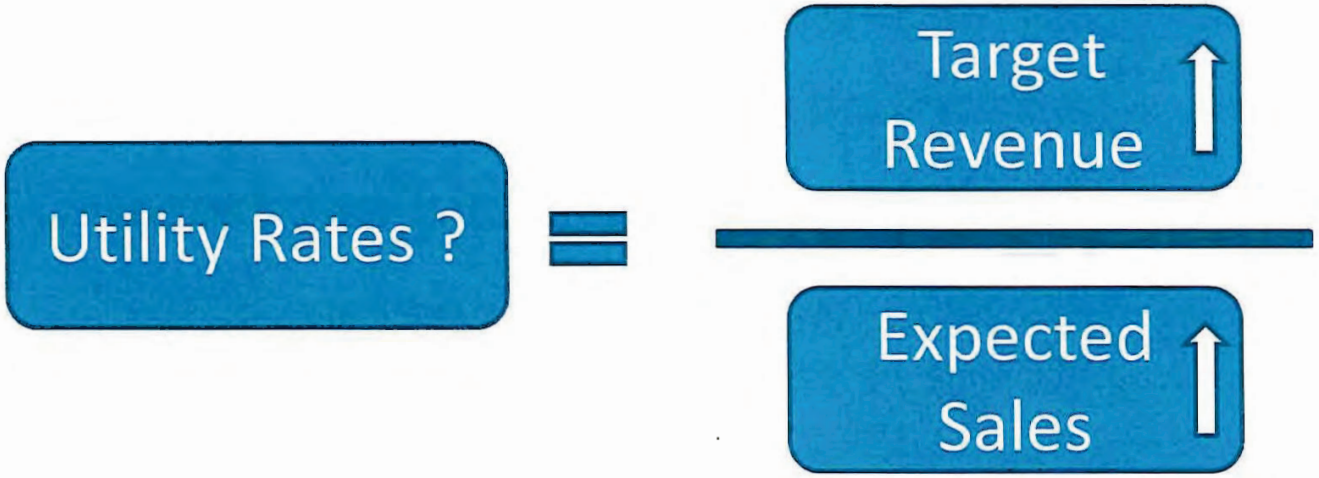


- Rate of Return is a market estimate for investments of equivalent risk
- Rate Base is the amount of investment that is allowed to earn a return
  - Includes used and useful assets
  - E.G. Transmission Pipe and Combustion Turbines
  - Costs for assets must be prudent
  - Total amount excludes accumulated depreciation

Rate Effects of Prudent Expansion

- Sales increase over time
- Ratebase increases
  - Return to shareholder increases
- Operating Expense Increases
- Impact on existing customers is ambiguous

Target Revenue
=
Expected Cost
+
Fair Return



Utility Rates ?
=
Target Revenue
Expected Sales

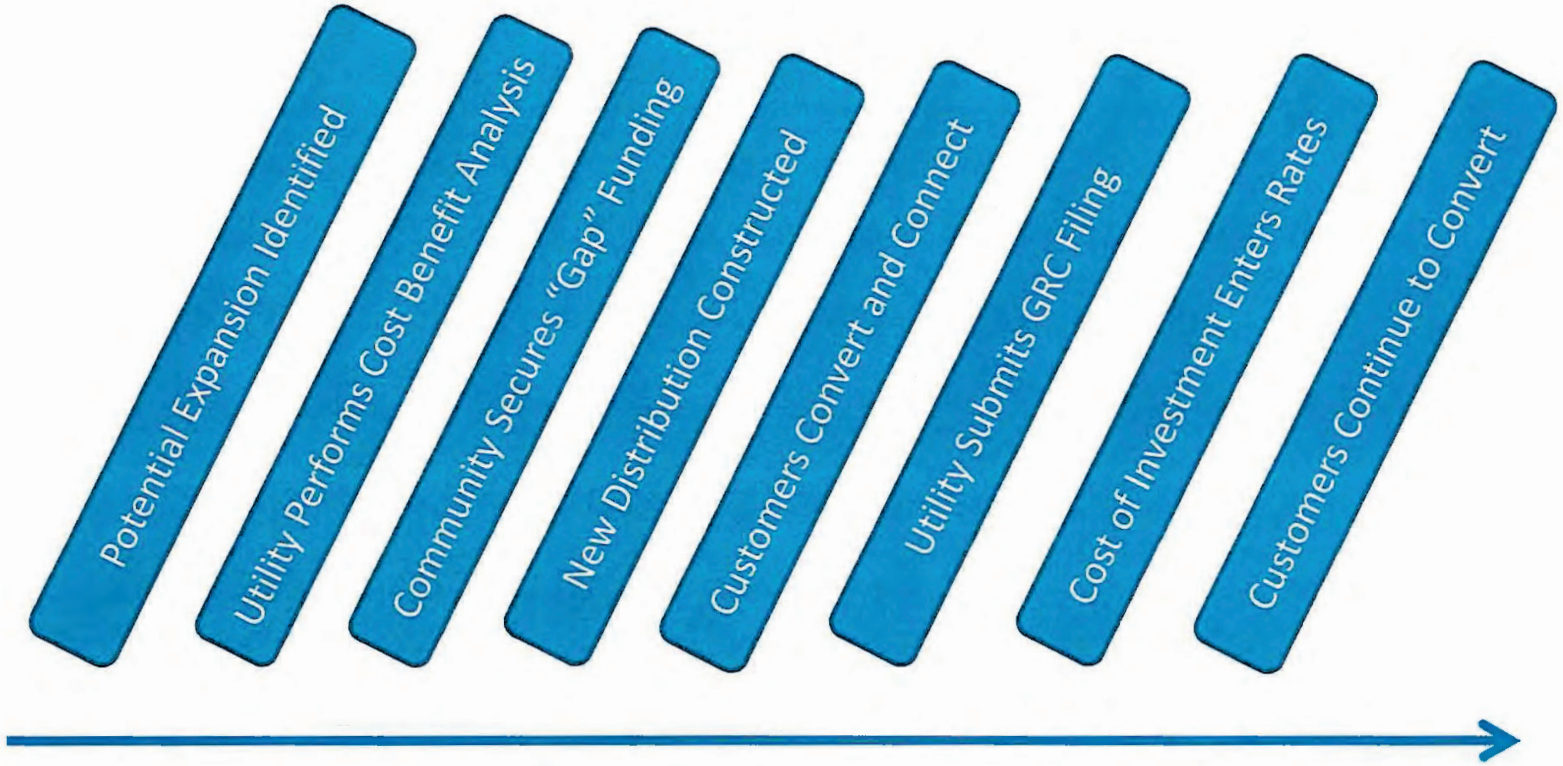
Goals of Regulation

- Provide safe and reliable service
- Reproduce efficiencies of competitive markets
  - Utilities operate in efficient, least cost method
- Customers are responsible for the costs that they cause (I.E. avoid subsidies)

Prudency Review

- Promote efficient operations and investments
- Given the information available at the time, the investment was in the best interest of ratepayers:
  - Benefits (as gas customers) exceed costs
  - Existing customers are not harmed
  - Does not weaken the financial stability of Utility
- Construction costs were properly managed
- Does not evaluate external costs and benefits

Timeline for Distribution Expansion



When the "utility" pays for expansion:

- Shareholders bear the annualized cost until the next rate filing.
  - Utility shareholders bear timing risk.
- Existing customers bear the cost of approved investment after the next rate filing.
  - Utility shareholders earn return on approved investment.
  - Any associated increase in rates represents a subsidy of new customers by existing customers.

Economical Distribution Project

- Distribution projects are economical if the present value of all the future benefits is greater than the present value of costs.

- If the costs of a project are high and the benefits are low, the project will not add value to society.

Example of inefficient expansion

- Potential customer has a long driveway that crosses a stream.
- Annual savings for natural gas vs propane: $1000
- NPV of savings @ 10% discount rate: $10,000
- Cost to connect and convert to natural gas: $15,000*
- Value of expansion: Loss of $5,000

* After accounting for contribution to fixed cost imbedded in utility rates.

Cost Causer Cost Payer

- Efficient
  - If customer expansion is subsidized the cost may be more than the benefit
- Fair
  - If customer expansion is subsidized by existing customers, existing customers pay twice

Expansion Question Implicates Additional Societal Impacts

- Environmental Impacts
- Economical Development
- Impact on Existing Energy Providers
- Effect on State Agencies
- Long Term Gas Supply and Interstate Pipeline Capacity

Avista Line Extension Policy

January 26, 2016

Current Line Extension Policy

Allowances – How much can Avista invest in a line extension

- Present Methodology - 3x estimated annual revenue from customers
- Allowance is approximately $2,000 for residential customers; C&I allowances determined on a "site-specific" basis.
- Allowance starts at the service line to the premise, and then is applied "upstream".
- Analysis for serving new communities factors in all of the various potential allowances for financial feasibility studies

Current Line Extension Policy

Costs – there are many costs that affect line extension economics:

- New development or existing streets (e.g., pavement cuts)
- Type of soil (sandy, basalt, etc.)
- Distance to existing natural gas infrastructure
  - Distance to natural gas main
  - Distance to support personnel, local reps, office space, etc.
- Is an interstate pipeline tap required

Current Line Extension Policy

Line Extension Allowance Discussion – should new customers:

- Subsidize existing customers
  - Less allowance to new customers
  - New customer revenue helps cover costs of existing customers

- Be rate neutral
  - Could justify a larger allowance (Avista's Washington filing – Perpetual Net Present Value Methodology)

- Be subsidized by existing natural gas &/or electric customers
  - Environmental benefits of natural gas
  - Direct Use vs. Turbine – more efficient
  - Regional View - Natural Gas is the incremental electric resource.
  - Avista electric DSM in Washington & Idaho provides conversion incentives

NW Natural – Oregon
Schedule X Applicant requested gas service

RESIDENTIAL:

- Existing main:
  - Fixed revenue allowance based on installed equipment per Tariff
  - System average service line installation cost
  - Applicant pays any difference ("contribution") between revenue allowance and installation cost
    - Installs for gas furnace typically do not require contribution
  - No refund on any construction contribution payments

- Main Extension:
  - Company uses same revenue allowance as existing main installations
  - Installation cost based on site-specific cost estimate
  - Applicant pays any difference between revenue allowance and estimated installation cost
    - Revenue allowance typically does not cover any main extension costs
  - Customer receives potential refund should additional hook ups occur on the main extension within three years from install date

NON-RESIDENTIAL:

- Revenue allowance based on 5X estimated gas use for installed equipment type and equipment operational ratings
- Site-specific costs for both main extension and service installations
-

NEW COMMUNITIES:

- Investment decision would be based on a financial model that would estimate the average return on the investment given cost and estimated potential revenue to be expected from the investment
- Service line and in-community main extensions would use Schedule X criteria for each actual customer hook-up.

Current Line Extension Policy

- Service Lines at No Direct Cost
  - Space Heat Only — 20 Feet
  - Space and Water Heat — 40 Feet
  - Large C/I with >150,000 BTU load — 40 Feet

- Mains Extensions
  - The Company provides an allowance based on 4.5 times the customer's forecasted annual margin (distribution revenue and basic charge)
  - Costs beyond this allowance must be paid upfront by the customer
  - If the customer forecasted load does not develop in six months, the Company shall bill the Company for the costs of the main extension.

CASCADE NATURAL GAS CORPORATION®
A Subsidiary of MDU Resources Group, Inc.

Line Extension Costs

- Average length of service line
  - 43 feet
- Average cost for a new service line (not main)
  - $1666
- Note: This is a system average for customers who did not find first costs to be prohibitive.

CASCADE NATURAL GAS CORPORATION®
A Subsidiary of MDU Resources Group, Inc.

Unintended Consequences

The Policy upholds the principles of cost causation, ensuring installed pipe is "used and useful", and in doing so creates the following barriers to connecting to gas:

- Prohibitive first cost barrier to connect (service line, main extension, and appliances)
- Lost opportunities to serve areas. Pockets of unserved areas in urban communities develop that are difficult and costly to backfill.
- The policy is designed to look at one customer at a time rather than the potential of a community.
- Serving isolated communities is nearly impossible without a signed commitment to connect and unique cost recovery through a property tax or city-specific rate.

CASCADE NATURAL GAS CORPORATION®
A Subsidiary of MDU Resources Group, Inc.

State Energy Facility Siting

SB 32 - Workgroup

January 26, 2016

Todd Cornett, Assistant Director
Oregon Department of Energy

OREGON DEPARTMENT OF ENERGY

State Energy Siting Basics

- Energy Facility Siting Council (EFSC)
- Oregon Department of Energy Staff
- Consolidated Review Process
- Standards Based Process
- Site Certificate
- Application Fees

OREGON DEPARTMENT OF ENERGY

Jurisdiction

- State - ORS 469.300(11) "Energy Facility" definition – creates state threshold
- Local: facilities smaller than state "Energy Facility" definition
- Federal: Federal Energy Regulatory Commission (FERC)

OREGON DEPARTMENT OF ENERGY

Gas Pipeline Energy Facilities

- 469.300(11)(a)(E) A pipeline that is:

(i) .....

(ii) At least 16 inches in diameter, and five or more miles in length, used for the transportation of natural or synthetic gas, but excluding:

(I) A pipeline proposed for construction of which less than five miles of the pipeline is more than 50 feet from a public road, as defined in ORS 368.001; or

(II) A parallel or upgraded pipeline up to 24 inches in diameter that is constructed within the same right of way as an existing 16-inch or larger pipeline that has a site certificate, if all studies and necessary mitigation conducted for the existing site certificate meet or are updated to meet current site certificate standards; or

(iii) .....

OREGON DEPARTMENT OF ENERGY

Gas Pipeline Exemptions

- OAR 345-015-0350(2) – A site certificate is not required for construction or expansion of any interstate natural gas pipeline or associated underground natural gas storage facility authorized by and subject to the continuing regulation of the Federal Energy Regulatory commission or successor agency.
- OAR 345-015-0370 – Consideration of Request for Exemption

OREGON DEPARTMENT OF ENERGY

EFSC Process

- Applicant submits a **Notice of Intent (NOI)**
- ODOE issues a **Project Order**
- Applicant submits an **Application (pASC)**
- ODOE deems the application complete
- ODOE issues a **Draft Proposed Order (DPO)**
- **DPO Hearing**
- ODOE issues a **Proposed Order (PO)**
- **Contested Case**
- EFSC issues a **Final Order/Site Certificate**
- **Appeal to Oregon Supreme Court**

OREGON DEPARTMENT OF ENERGY

Siting Division Staffing

- Fee for service – Staff increases and decreases based on volume of applications.

- Lead time for hiring new staff
  - E-Board or Budget Process
  - Recruitment
  - 6 – 12 Months to train Siting Analysts to function efficiently and independently.

OREGON DEPARTMENT OF ENERGY

Appendix D: Second Meeting Presentations

September 15, 2016

Senate Bill 32
Study of Natural Gas Expansion to
Unserved Areas
2016 Report to the Legislative Assembly

SB32
Coos Bay Extension Review

Presented to SB 32 Workgroup
March 31, 2016

NW Natural®

Overview of Presentation

- Project drivers and funding streams
- Stipulation
- Timeline of project
- System development priorities
- Economic factors
- Customer growth
- Lessons learned

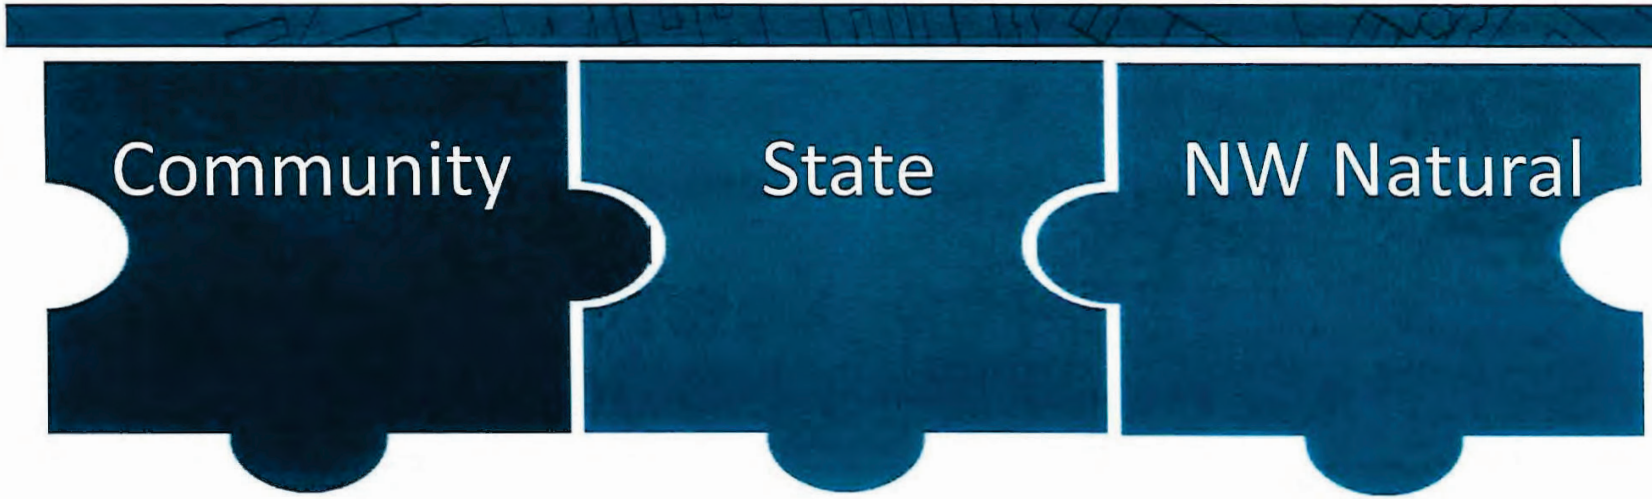
NW Natural®

Project Drivers

- Community needed economic development tools
  - Unable to attract new large commercial/industrials without natural gas service
  - Wanted to help businesses be competitive
- State wanted to support economic development
  - South Coast area had been economically depressed for years
- OPUC wanted to support expansion efforts while minimizing cross subsidization
- NW Natural wanted to support expansion to a new community

NW Natural®

Funding Streams



- $27M in local bonds
- $0.02/therm rider paid for by each new gas customer

- $20M lottery bonds
- $4M in studies to support project

- $12M approved by OPUC
- $500,000 shareholder contribution

NW Natural®

OPUC Stipulation Summary

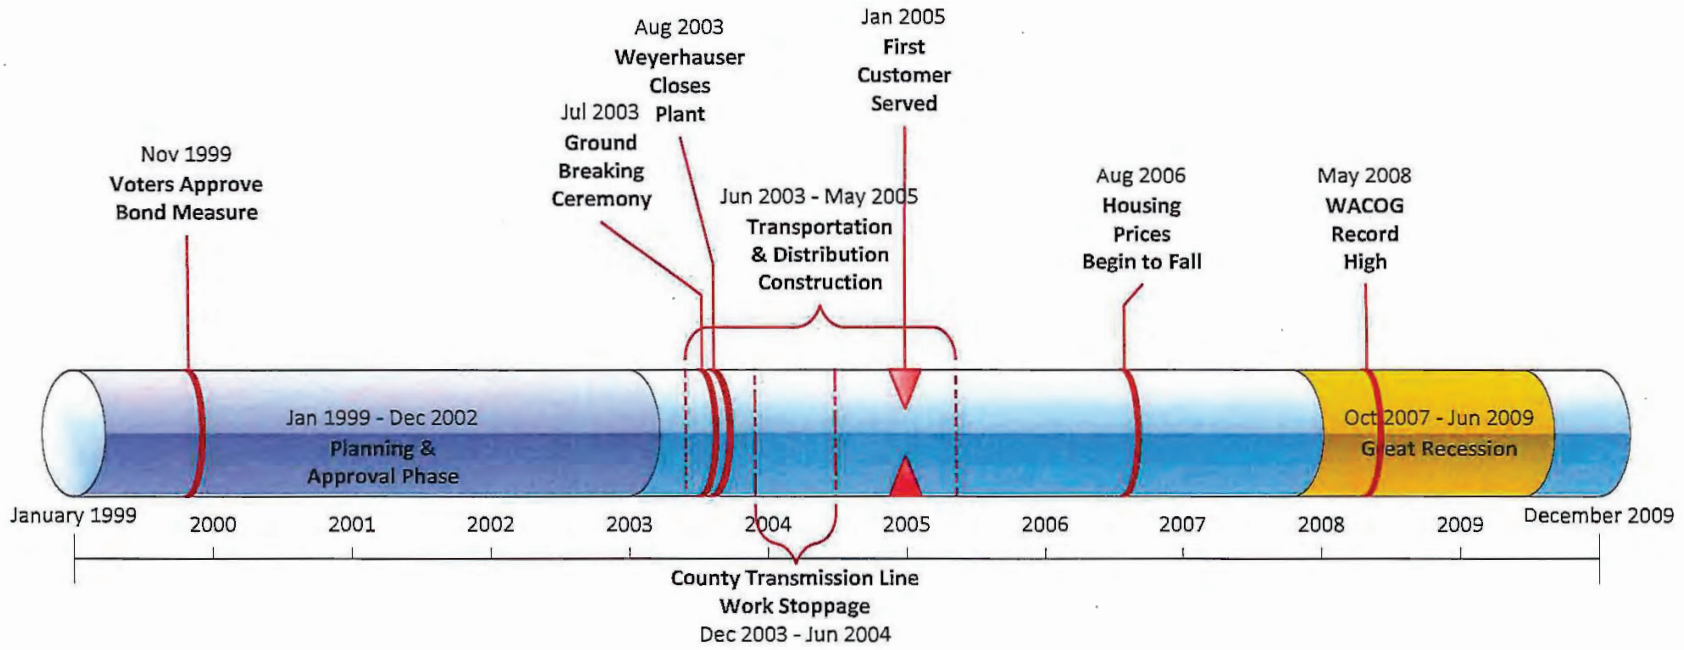
- Project capital limit of $12 million
- Defined construction period
- Company capital contribution of $400,000
- 2 cent per therm adder
- Evaluation term of 20 years

System Development

- Top priority: Build system backbone to serve commercial and industrials
  - Used field surveys to locate commercial and industrial prospects, which drove backbone investment
  - Residential was secondary, when feasible
- Local team used a combination of marketing and advertising support
  - Public meetings to describe project and answer questions
  - Mail surveys - dual purpose of generating pre-construction interest and assessing consumer willingness to convert to gas
  - Direct mail, print and radio advertising and media outreach
- System backbone largely in place by end of 2005
  - 97% of $12 million budget spent
  - 88% (64 miles) of planned distribution main constructed

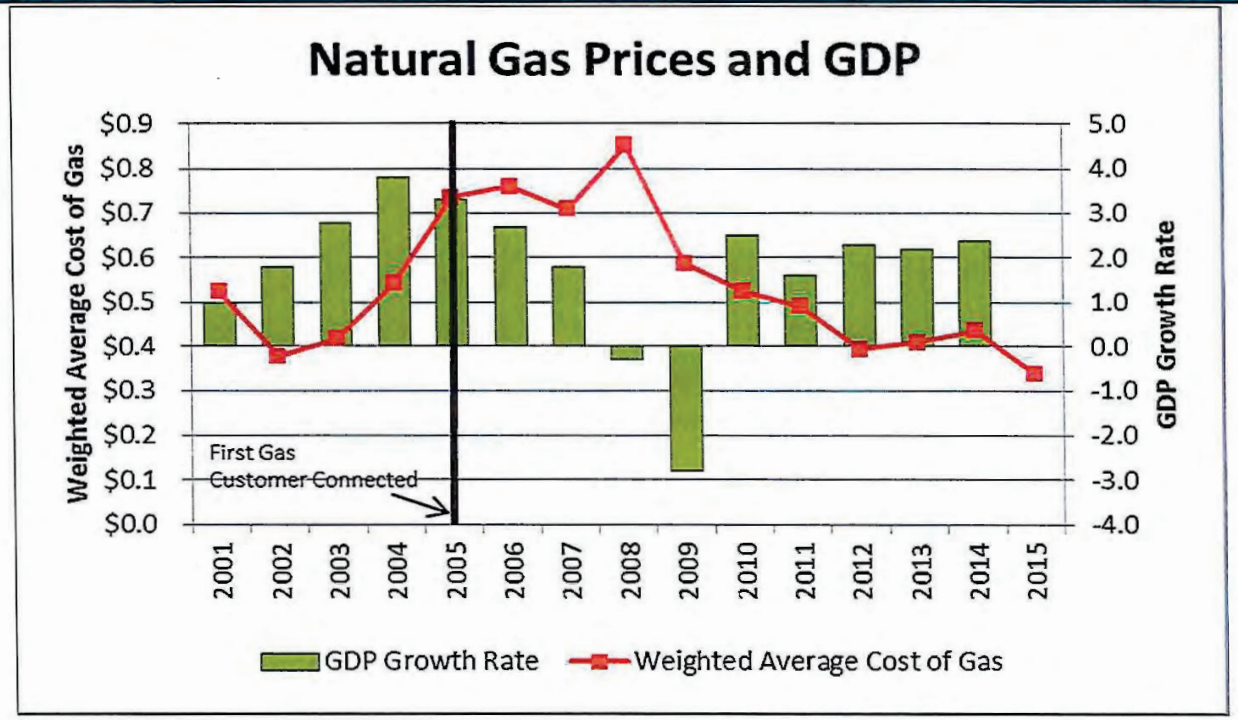
NW Natural®

Timeline Factors



NW Natural®

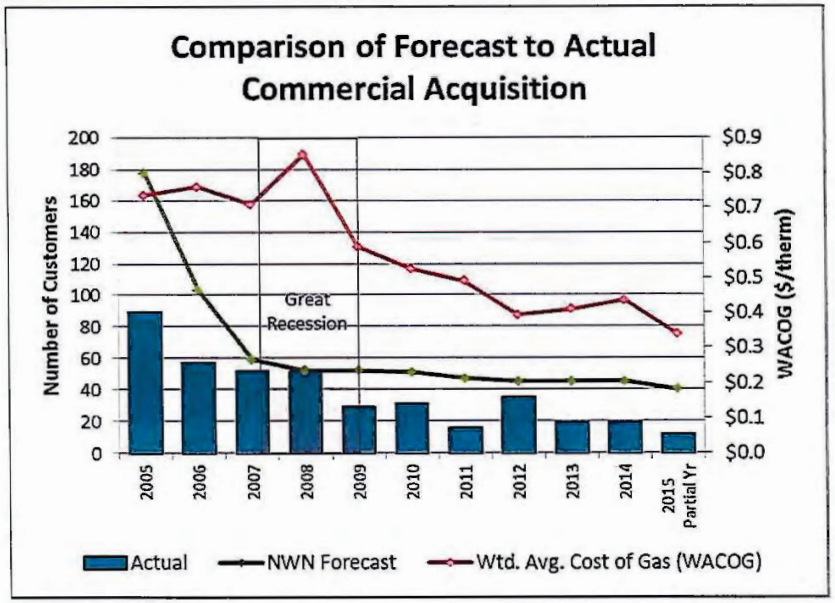
Gas Prices and the Economy

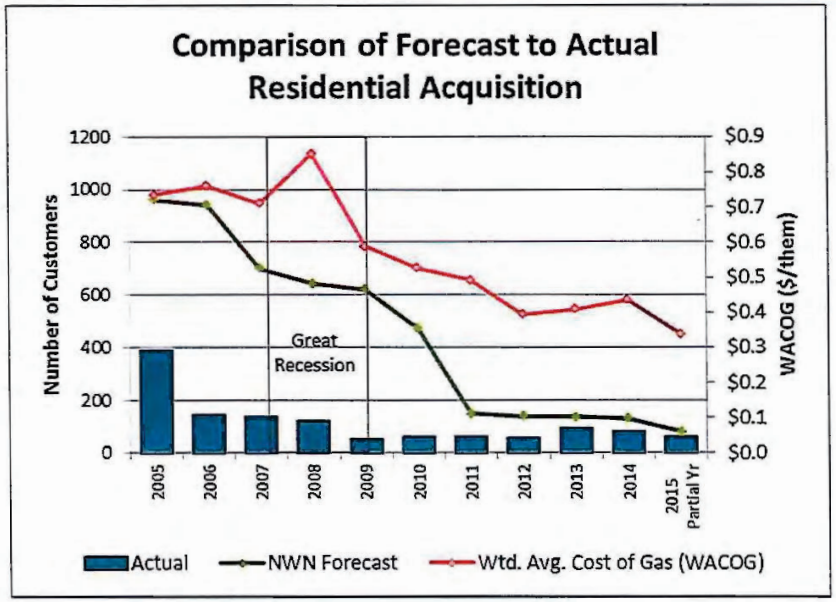


- Natural gas prices spike to record levels
- Great Recession hits, followed by slow recovery

NW Natural®

Forecast to Actuals





- Penetration of commercial and industrials largely tracks to forecast – coinciding with the strategic focus of economic development.
- First cost barrier significant for residential conversions, given traditional service line policy and economic demographics.

NW Natural®

County Conditions Still Difficult

- Coos County's lagging local recovery
  - Coos County household income 76% of Oregon average
  - Jan. 2016 unemployment of 6.5% vs. Oregon rate of 5.1%
    - Coos County unemployment rate peaked at 13.8% during the Great Recession in 2009
- Many existing businesses and houses small, often un-ducted
  - Wood is primary heating fuel in roughly 20% of homes
  - Electric wall furnaces prevalent
  - Economics of unsubsidized conversions that also require a service line contribution not viable
- Low volume construction and conversion work mean few qualified contractors and higher per unit costs for consumers

NW Natural®

On-Main Market Share: 2005–2014

- Commercial new construction - 50%
  - Smaller buildings hard to serve unless right on main with no adverse construction issues
- Existing commercial - 29%
  - First-cost prohibitive; hard to cost justify with small loads
- Single family new construction - 69%
  - 25% of new construction is < 1,400 sq. ft.
- Existing residential - 22%
  - First cost prohibitive

Gas Share of Businesses and Square Feet

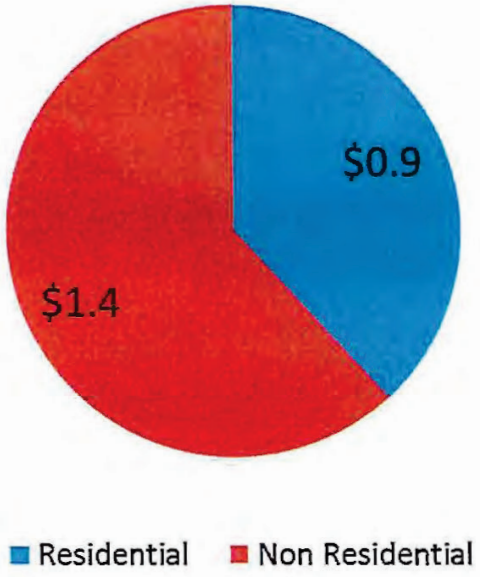
- Gas customers are twice as energy intensive as on-main non-customers
  - Gas customers tend to both larger and more energy intensive per square foot.
  - Gas serves a much larger percentage of business square footage than number of businesses.
- Conversion economics are more difficult for businesses with low potential gas usage per square foot

	Percent of Businesses		Percent of Square Feet	
	Non-Customers	Customers	Non-Customers	Customers
Commercial Schools	49%	51%	28%	72%
Commercial Hospitals	67%	33%	7%	93%
Commercial Other	70%	30%	68%	32%
Industrial	78%	22%	49%	51%

NW Natural®

Annual Energy Cost Savings

- Annual direct benefits from lower energy bills estimated at $2.3 million
  - Increased disposable income to residential customers
  - Higher profits for non-residential customers
- Does not include indirect benefits
  - Additional local spending by households and businesses results in higher local employment and incomes beyond the gas customer base.



NW Natural®

Lessons Learned

- Diversified funding streams coupled with regulatory support can make expansions happen.
- Expansions to promote economic development take a long-term view.
- Energy savings contribute to economic health of depressed communities.
- Early success can be affected by large anchor customers
  - Residential loads can grow slowly, and may not be enough
  - Contractual obligations could help bolster chances of achieving adoption rates
- An ongoing, coordinated economic development plan supported by all stakeholders may be beneficial
- Trade allies are a crucial link to customers
- Changes in the economy have a significant impact
- Conversions need robust first-cost reduction tools, and a longer-term view
- Looking at avoided costs may provide a new economically justified funding stream

NW Natural®

Thank you.

Lakeview, OR Natural Gas Expansion

March 31, 2016

Lakeview, Oregon

Quick Review from January Meeting

Allowances – How much can Avista invest in a line extension

- Present Methodology - 3x estimated annual revenue from customers
- Allowance is approximately $2,000 for residential customers; C&I allowances determined on a "site-specific" basis.
- Analysis for serving new communities incorporates all of the various potential allowances for financial feasibility studies

Current Line Extension Policy

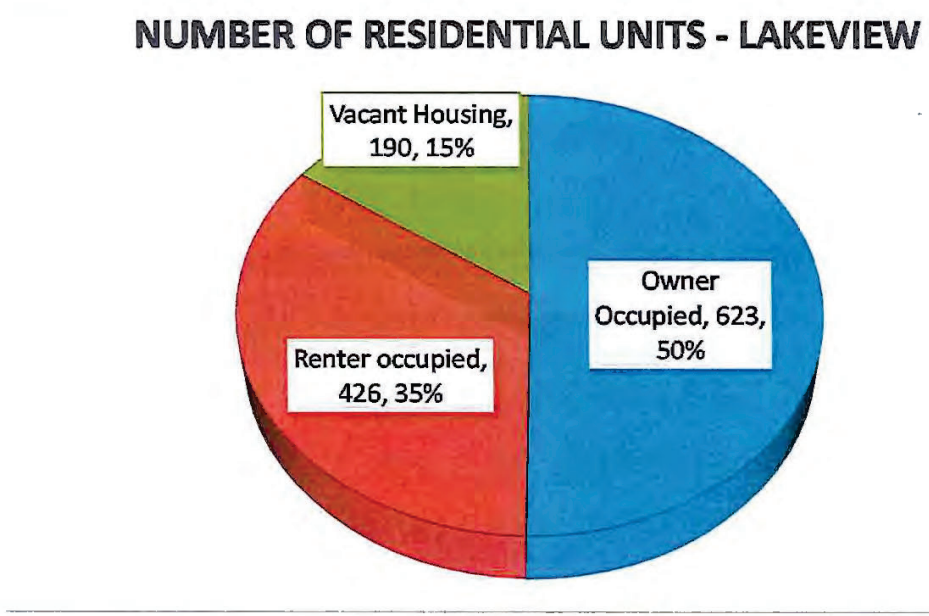
Costs – there are many costs that affect line extension economics:

- New development or existing streets (e.g., pavement cuts)
- Type of soil (sandy, basalt, etc.)
- Distance to existing natural gas infrastructure
  - Distance to natural gas main
  - Distance to support personnel, local reps, office space, etc.
- Is an interstate pipeline tap required?

Lakeview Economics under present Line Extension Policy

Residential Hookup Estimates

Median Housing Value	$ 89,216.00
Average Housing Value	$ 121,744.00



Avista Estimate – 125 homes out of 1,239 homes.

Lakeview Economics under present Line Extension Policy

Lakeview	Projected Customers	Total Therms Per Month Customer Class	Projected Annual therms 360 days	Rate per Therm	Total Annual Revenue
Residential Homes	125	46	69,000	$ 1.05307	$ 86,162
Commercial	50	194	116,400	$ 0.94626	$ 120,345
Large Commercial	3	5,000	180,000	$ 0.94626	$ 170,939
Totals	**178**	**5,240**	**365,400**		**$ 377,445**

3 Times Annual Revenue = $1.132 million allowance

Estimated Cost to Serve Lakeview

Cost to Build Project				
	Footage	Type	Total Cost	
Tap		Ruby	$	-
Regulation, Heating, Odorizing		Gate Stn & Reg Stn	$	606,586
High Pressure	10000	6" Steel	$	1,041,816
Distribution	42760'	6", 4" & 2" PE	$	6,340,039
Total cost to build Natural Gas System in Lakeview (including Tap)			**$**	**7,988,441**

Summary of Lakeview Economics

Cost to build based on Avista Engineering estimates	$	7,988,441
Revenue allowance based on OPUC Tarriff	$	(1,132,336)
Cost for Avista Local Rep. in Community (3 year offset)	$	750,000
State Contribution	$	-
Annual Reservation fees on Ruby Pipeline	$	106,331
Short on Contruction/Costs vs Revenue	**$**	**7,712,437**

How do we fill the gap?

Revised line extension tariffs:

Allowance Methodology Eff 3/1/2016 (WA)			
Residential Allowance	$	3,836	per customer
Commercial Allowance	$	5.10	per therm
Residential Allowance	$	479,500	
Commercial Allowace	$	1,511,640	
Total Allowance	**$**	**1,991,140**	

Result – 76% increase in allowance

How do we fill the gap?

Use a Long Term Time Horizon – factor in all housing?

Allowance Methodology Eff 3/1/2016 (WA)			
Residential Allowance	$	3,836	per customer
Commercial Allowance	$	5.10	per therm
Residential Allowance	$	4,756,640	
Commercial Allowace	$	1,511,640	
Total Allowance	**$**	**6,268,280**	

How do we fill the gap?

- Revised Allowance Methodology
  - approved in WA effective 3/1/2016
  - Incorporate Hookups Beyond 5 years
- State/Local Funding to Offset Capital Costs
- Locality Specific Surcharges
  - Need to be set at an appropriate level given fuel switching economics
- Electric to Natural Gas Fuel Switching Rebates
  - Behind the meter financial assistance
  - Changes in Avoided costs
  - Efficiency of Generation vs. Direct Use

Outline:

- Energy Source Overview
- Avista – Lakeview
- NW Natural – Coos County
- Key Takeaways

PUC Staff Observations

Energy Source Overview

- Census Bureau survey asks about residential primary fuel source for heating. Nationally about:
- 4% heat primarily with propane
- 5% heating oil
- 39% electricity
- 2% wood
- ~50% natural gas

EIA, "Short-Term Energy Outlook," March 8, 2016

Avista
Lakeview, OR Natural Gas Expansion

Economies of Scale with Population Density

Customer	Residential Households	Commercial	Large Commercial
Projected annual therms 360 days	69,000	116,400	180,000
Share of total	19%	32%	49%
		81%	

- **Lakeview projection**: Residential = **19%** of throughput
- **2014 Oregon Actuals**[1]: Residential = **36%** of throughput

[1](UG 288, Avista/700, Forsyth/5)

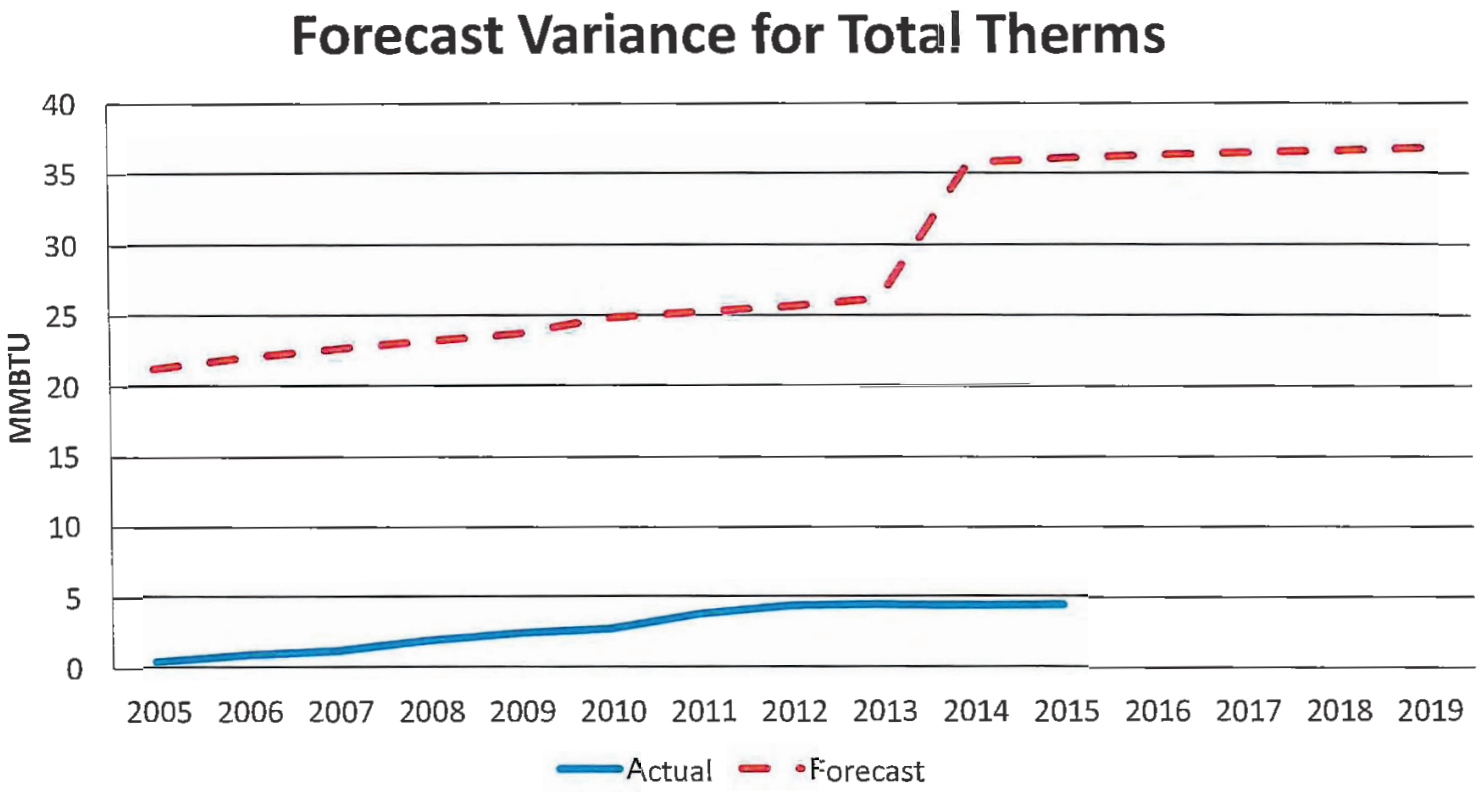
Forecasting Large Customers

- Importance of ensuring throughput
  - *The Oregonian/Oregon Live*, "Iberdrola Renewables told stakeholders in Lake County Wednesday that it would stop working on its planned $100 million biomass plant in Lakeview"[3] (Red Rock commits funds 2013)
- Customers may not immediately switch
  - Many wait until replacing equipment
- Attractiveness of switching depends on current fuel source
  - *Oregon Public Broadcasting*, Geothermal heating system in Lakeview heats four schools and hospital[4]
  - Warner Creek Correctional Facility
    - Geothermal system with propane backup
    - 2008 Oregon SEED award

[3]October 13, 2011
[4]December 13, 2013

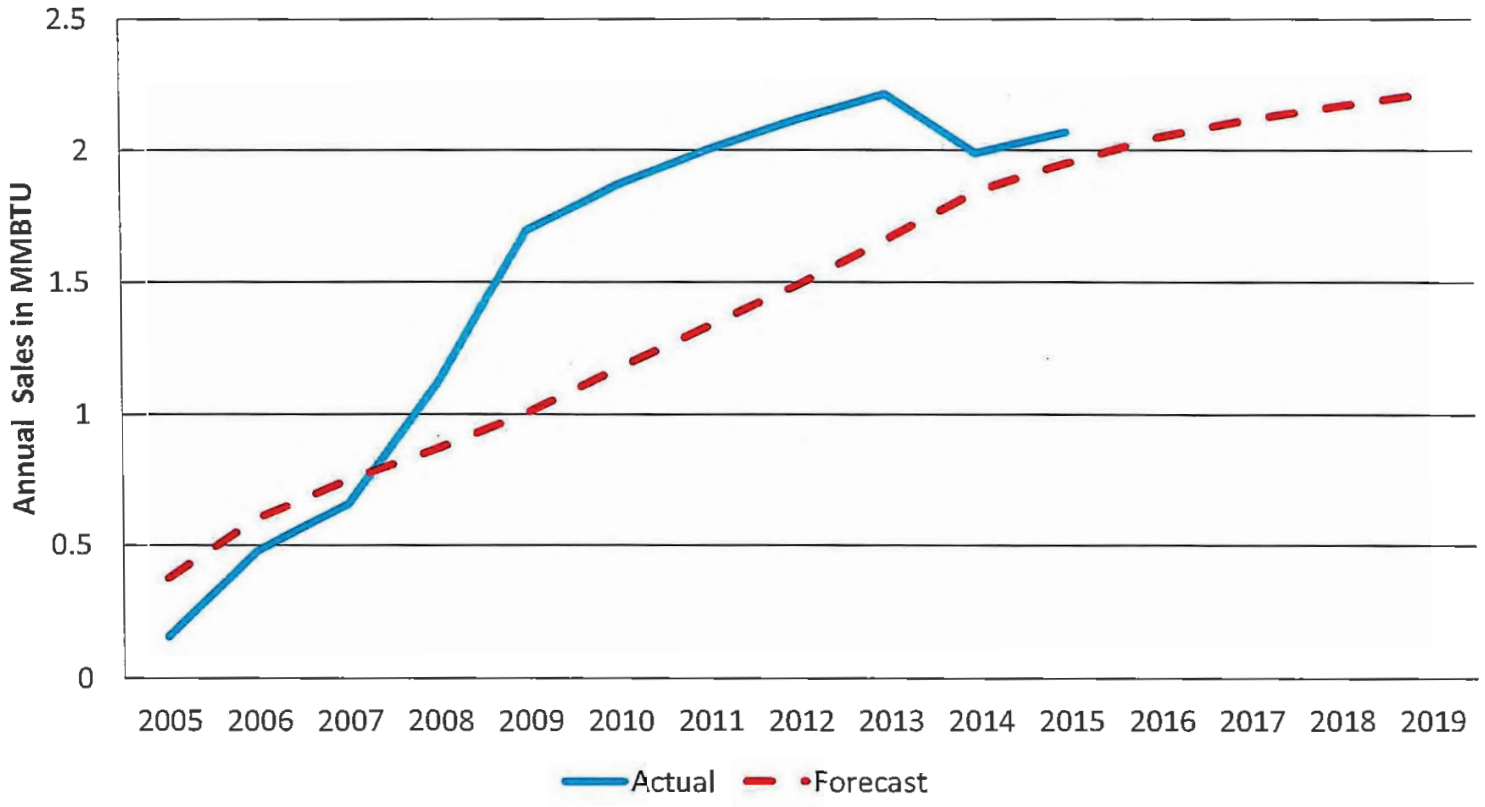
NW Natural
Coos County, OR Natural Gas Expansion

NW Natural, Coos County

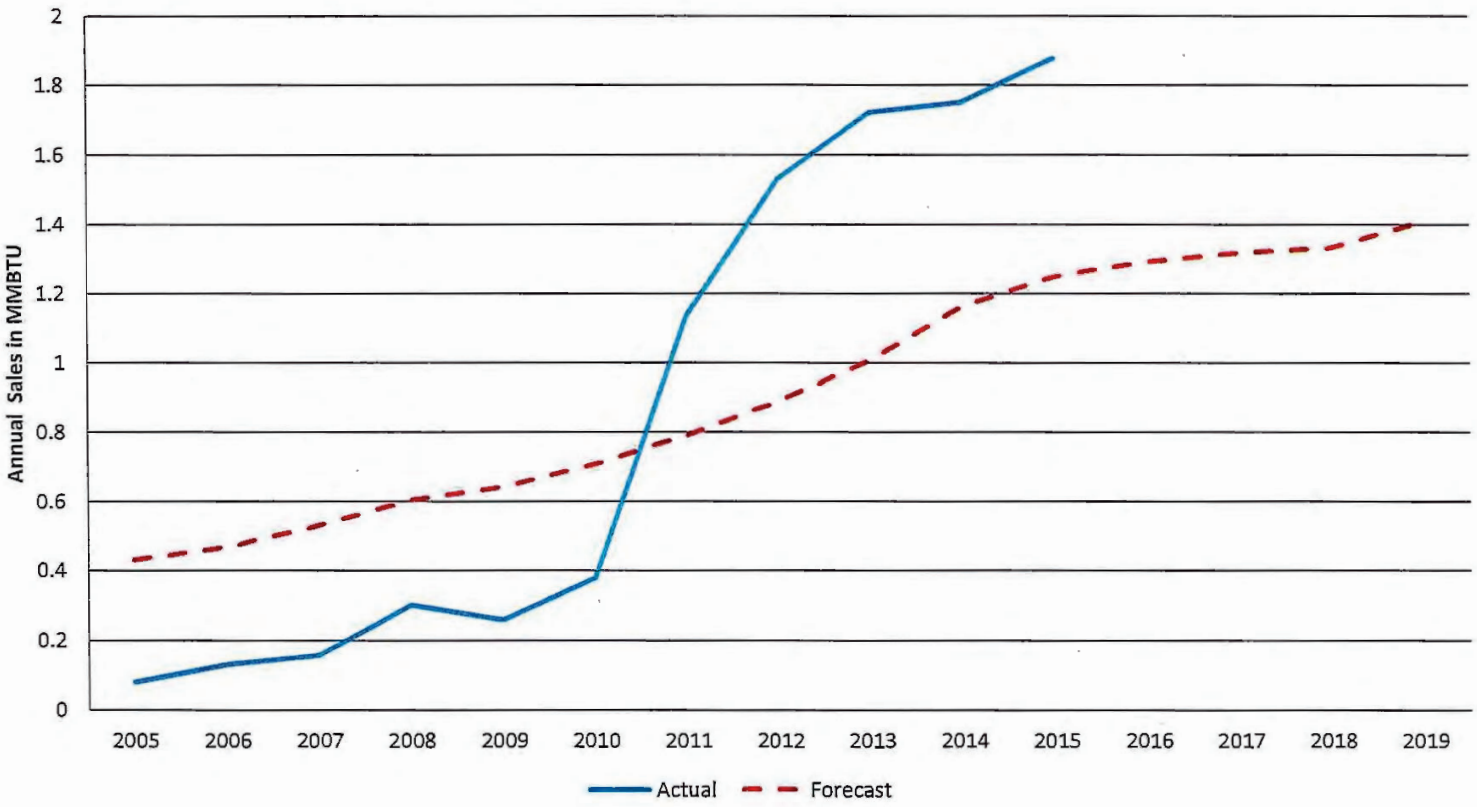


First Year Sales Forecast
94% Weyerhaeuser

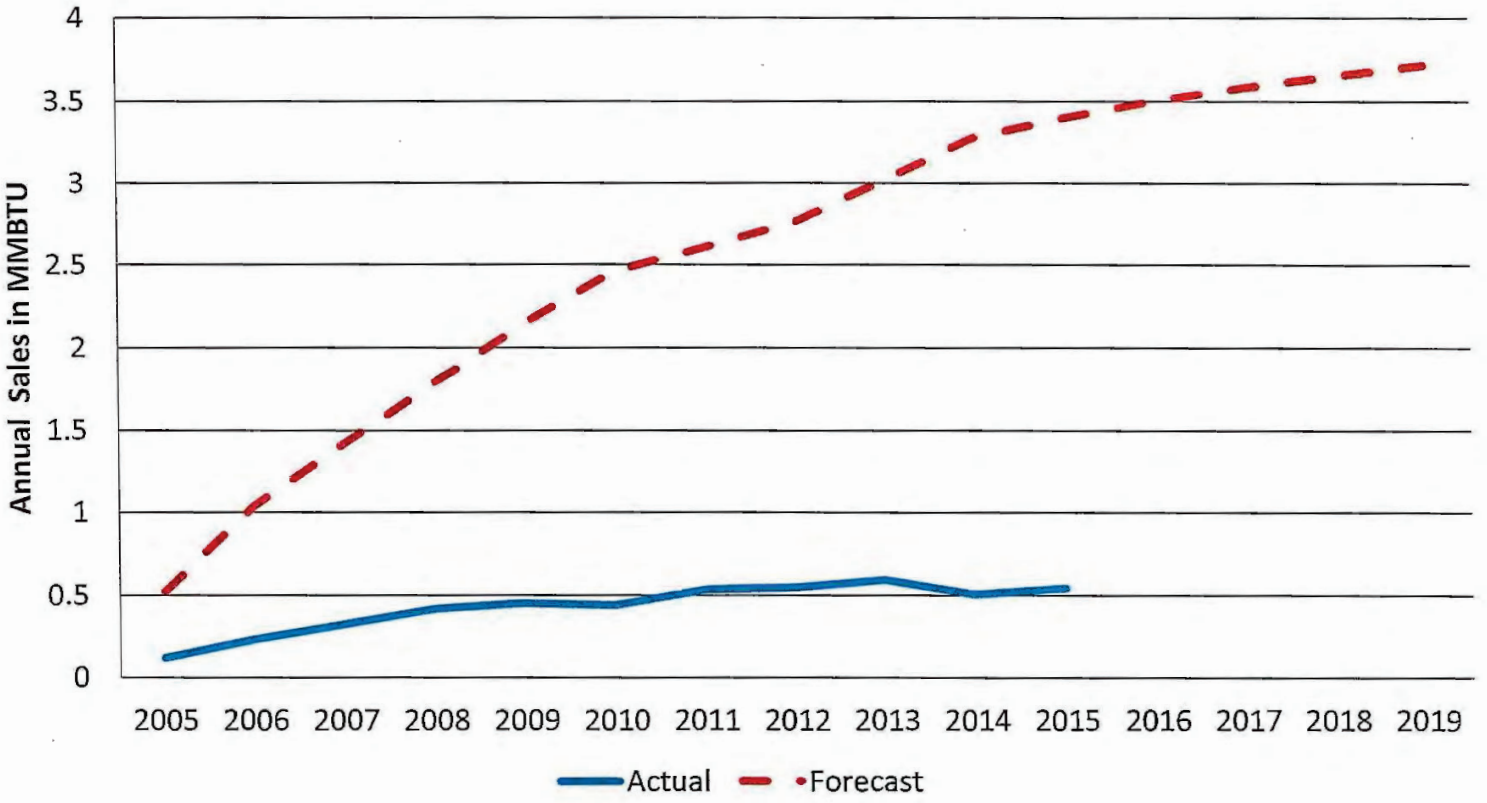
Forecast Variance for Commercial Therms



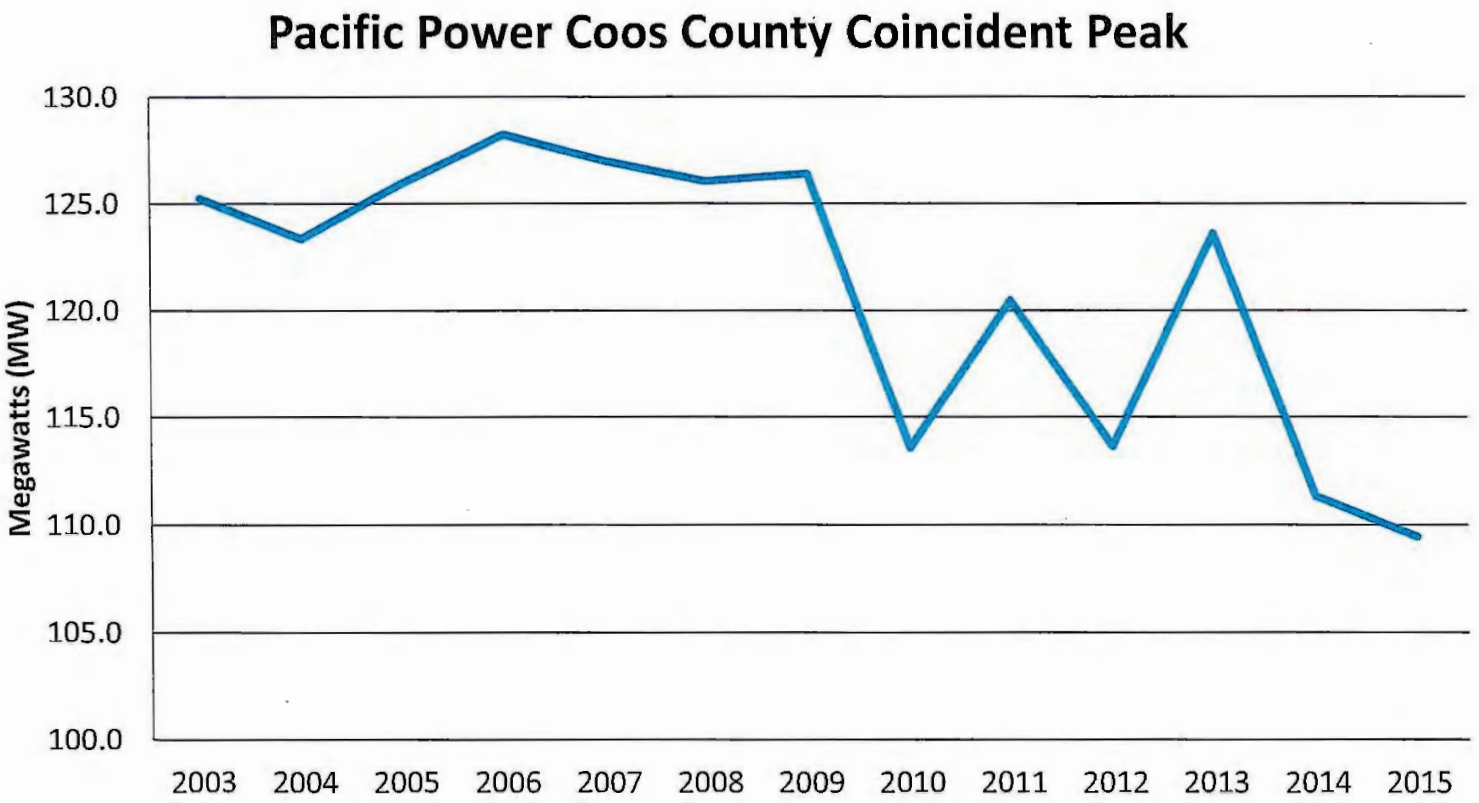
Forecast Variance for Small Industrial Therms



Forecast Variance for Residential Therms



Four Month Coincident Peak



New Distribution is Expensive

- Present Value Of Subsidy: $111 Million
  - Initial Distribution Investment $30 Million
  - Initial Pipeline Investment $78 Million
  - Ongoing Transport Cost Subsidy $3 Million
- Identified Annual Benefit: $2.4 Million

Key Takeaways

One size does **NOT** fit all

Areas unserved by natural gas can have very different profiles that include but are not limited to:

- Population (overall adoption potential).
- Interest in becoming a natural gas customer.
- Proximity to interstate pipeline.
- Local economy.
- Housing stock.
- Existing customer base to help subsidize expansion.

These potential variances impact the economic feasibility of each unserved area when calculating the financial viability of an expansion project.

Without large incentives or subsidies behind the customer meter, natural gas uptake will be slow.

Natural gas conversion can be very expensive for potential customers with regard to:

- Customer line extension costs beyond the allowance.
- Cost of ducting a home for natural gas heat.
- Cost of natural gas furnace.
- Cost of gas water heater.

Economic feasibility for gas expansion to unserved areas will be difficult if not impossible without bridging this gap.

Local financial commitment is important for gas expansion to unserved areas to be financially viable.

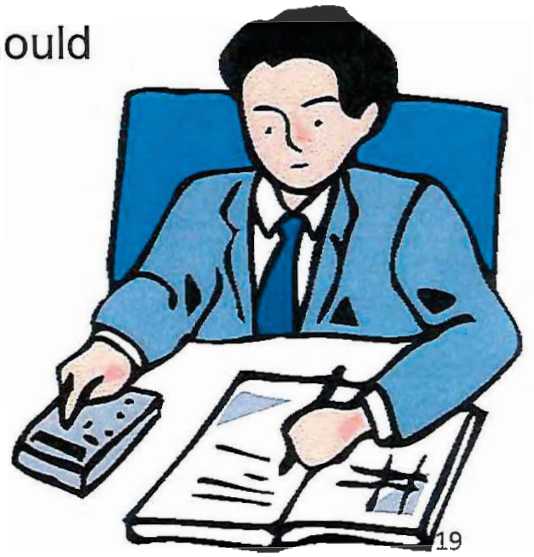
- Tax breaks for anchor customers.
- Local bond measures.
- Surcharge to new customers.
- Waive future franchise fees to offset upfront investment for expansion.
- Other local government funds.

Potential funding sources beyond those of the local government for the expansion area

- State business development funds.
- Legislative derived funds directly for the purpose of natural gas expansion.
- Air quality funds.
- State or Federal grants.
- Costs absorbed by all utility customers through rate base.
- Coordination of construction projects to reduce costs.

Thorough Financial Analysis is Critical

- New rural gas distribution is much more expensive than existing gas distribution.
- Future projects will require substantial subsidies.
- Subsidy of alternative energy sources should considered.



NPGA
NATIONAL PROPANE GAS ASSOCIATION

Introduction to the Propane Industry

Oregon Public Utility Commission
Salem, Oregon
March 31, 2016

Jeffrey M. Petrash
National Propane Gas Association
Washington, D.C.

NPGA
NATIONAL PROPANE GAS ASSOCIATION

National Propane Gas Association

- **3000 members**
- **Producers**
- **Service providers**
- **Equipment suppliers**
- **Marketer/retailers**
  - Three large national
  - Several large regional
  - Thousands of small, local
- **38 state and regional associations**

NPGA
NATIONAL PROPANE GAS ASSOCIATION

"THE OTHER WHITE MEAT"

- C_3H_8 (versus CH_4 for natural gas)
- Nontoxic, colorless, odorless
- 75% derived from the natural gas stream
- 25% derived from petroleum refining
- 100% percent American
- "Portable natural gas"
- Greenhouse gas emissions (GHG) similar to natural gas
- Criteria pollutants emissions similar to natural gas
- Fugitive propane is not a GHG (unlike natural gas)
- Propane not a groundwater contaminant (unlike fuel oil)
- Two percent of America's primary energy

NPGA
NATIONAL PROPANE GAS ASSOCIATION

PROPANE AND NATURAL GAS ARE COMPLEMENTARY FUELS

NPGA
NATIONAL PROPANE GAS ASSOCIATION

BEYOND THE BARBEQUE

Odorized propane

- Only 3% is used in barbeques
- Residential
- Commercial
- Agricultural
- Industrial
- Vehicles

Non-odorized propane

- Approximately half the market
- Petrochemical feedstock
- Exports

NPGA
NATIONAL PROPANE GAS ASSOCIATION

USES OF ODORIZED PROPANE

- More than 5.5 million U.S. households are heated with propane
- Residential—5 billion gallons—54%
- Commercial—1.8 billion gallons—18%
- Vehicles—0.6 billion gallons—7%
- Industrial—0.5 billion gallons—5%
- Agricultural—1.1 billion gallons—12%

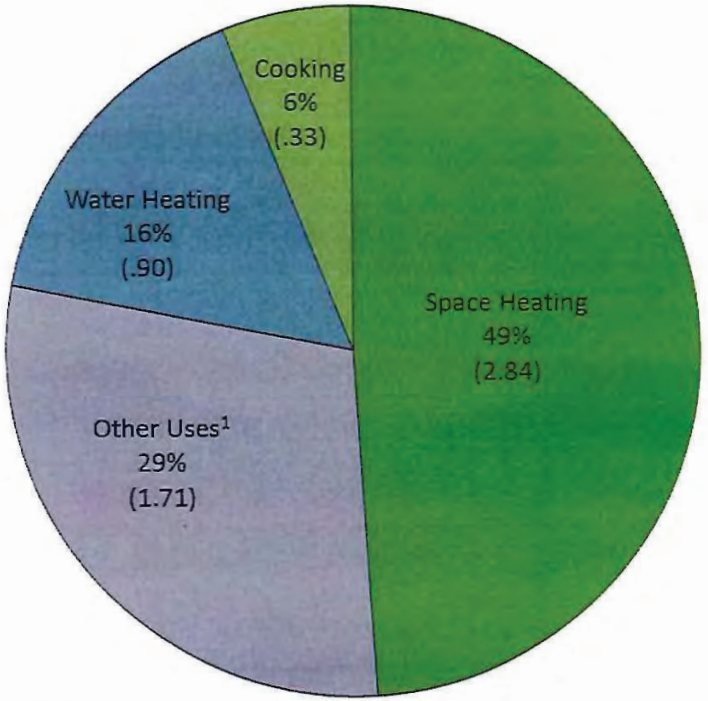
NPGA
NATIONAL PROPANE GAS ASSOCIATION

How do households use propane?

While propane is mainly used for home heating, it has many other uses as a residential heat and energy source.

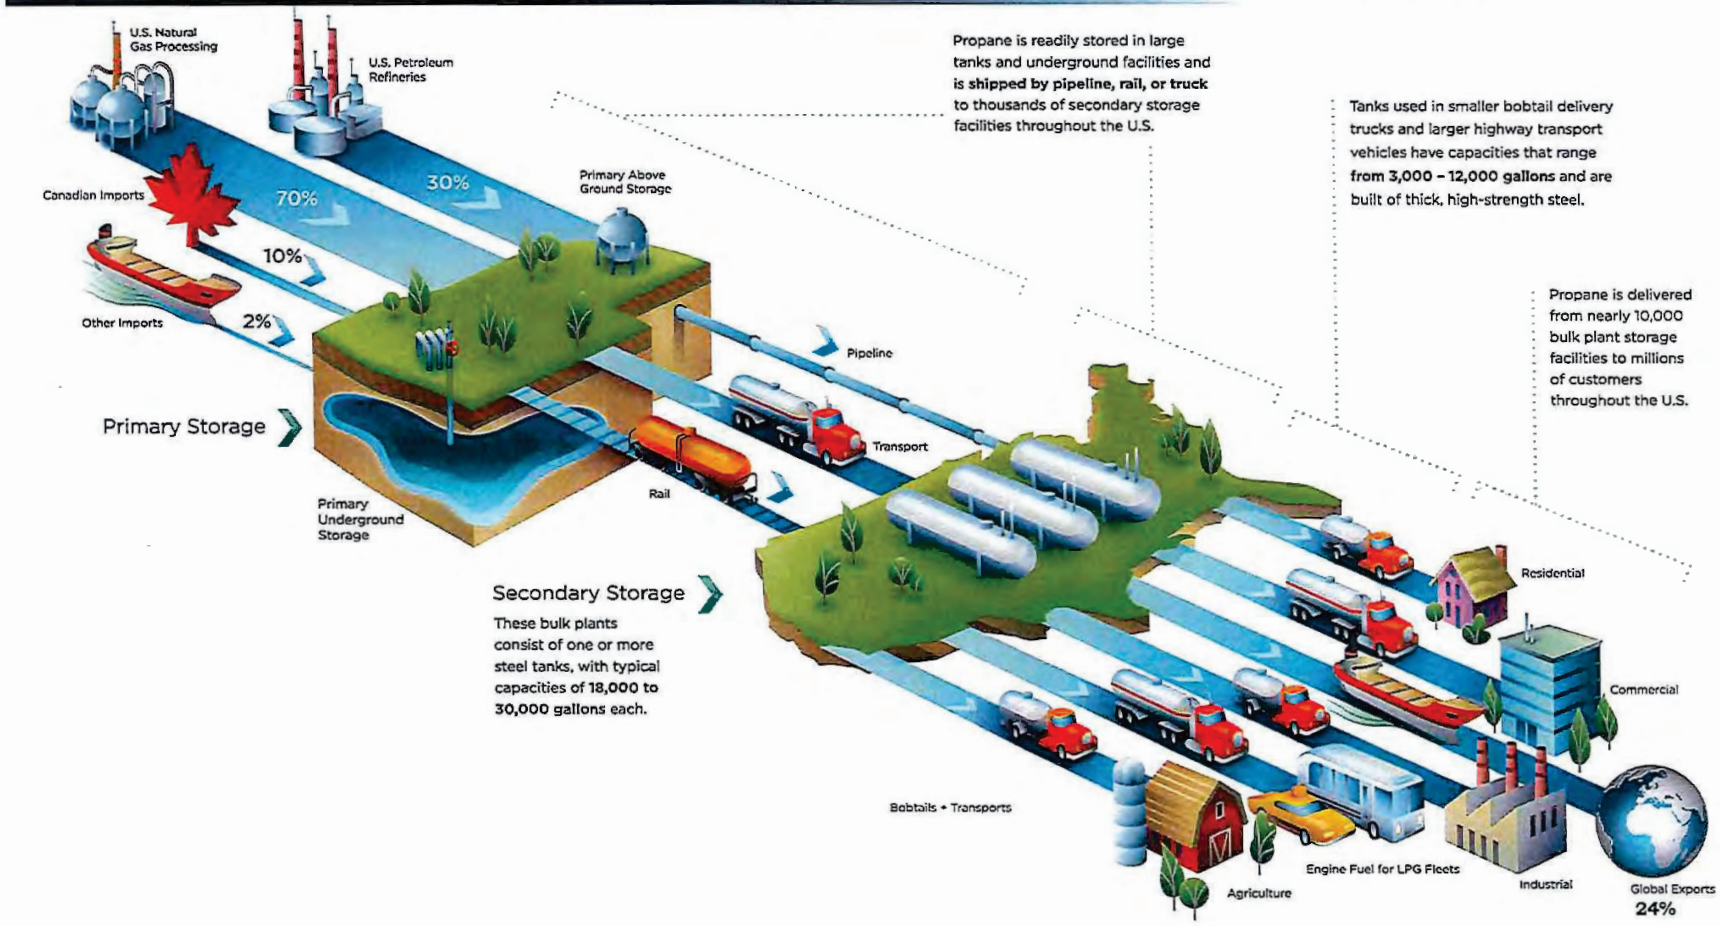
Five percent of U.S. households heat with propane.

Residential Propane Consumption by End-User
(billion gallons)



[1] Other uses include clothes drying, outdoor grills, mosquito traps, etc.
Source: EIA

NPGA
NATIONAL PROPANE GAS ASSOCIATION



Propane is readily stored in large tanks and underground facilities and **is shipped by pipeline, rail, or truck** to thousands of secondary storage facilities throughout the U.S.

Tanks used in smaller bobtail delivery trucks and larger highway transport vehicles have capacities that range **from 3,000 – 12,000 gallons** and are built of thick, high-strength steel.

Propane is delivered from nearly 10,000 bulk plant storage facilities to millions of customers throughout the U.S.

NPGA
NATIONAL PROPANE GAS ASSOCIATION

PROPANE IN OREGON

- Total: 63 million gallons
- Residential: 16 million gallons
- Commercial: 15 million gallons
- Cylinders: 4 million gallons
- Vehicles: 10 million gallons
- Industrial: 14 million gallons
- Agricultural: 4 million gallons
- Market value: $112 million
- Jobs: $9-10 million

NATIONAL PROPANE GAS ASSOCIATION

IT'S ALL ABOUT SHALE!

(NATURAL GAS AND PROPANE)

NPGA
NATIONAL PROPANE GAS ASSOCIATION

LET'S CONNECT EVERYONE!

NPGA
NATIONAL PROPANE GAS ASSOCIATION

NATURAL GAS $4

SHIPPING AND HANDLING $9

NPGA
NATIONAL PROPANE GAS ASSOCIATION

THE REALITIES

- Facilities built today are much more expensive than facilities built in the past
- $1 million per mile is a benchmark
- Population density is necessary to make natural gas service economical
- In most circumstances rates for new service would have to be significantly higher than old service to be economic
- Conversion costs $3,500-$10,000

NPGA
NATIONAL PROPANE GAS ASSOCIATION

SUBSIDIZED NATURAL GAS SERVICE COMPETES UNFAIRLY WITH OTHER ENERGY SOURCES

NPGA
NATIONAL PROPANE GAS ASSOCIATION

THE ECONOMIC TEST

- Costs: building and operating the new infrastructure
- Revenues: delivery revenues for new service
- Revenues ≥ costs = economic expansion
- Revenues < costs = uneconomic expansion

NPGA
NATIONAL PROPANE GAS ASSOCIATION

UNDERPRICED NATURAL GAS SERVICE

- ECONOMICALLY INEFFICIENT
- CAUSES MISALLOCATION OF RESOURCES
- ARTIFICIALLY CREATES DEMAND FOR THE SERVICE

NPGA
NATIONAL PROPANE GAS ASSOCIATION

MOST EXPANSION PROPOSALS DO NOT MAKE SENSE

- **Revenues will not cover costs**
- **Utility is unwilling to deploy its capital for the expansion**
- **Utility seeks a subsidy to make the expansion**
  - Tax revenues
  - Charging existing customers (rolled-in pricing)
- **Existing customers receive no benefit or minimal benefit**
- **Why should existing customer subsidize utility shareholders**
- **Natural gas service is not a public good**

Gas Distribution Development in Other States

Prepared by the Oregon Public Utility Commission

At a minimum, the work group shall study:

(a) The commission's policies regarding the extension of natural gas mains;

(b) Mechanisms for funding the expansion of natural gas services, including the use of tariffs, the imposition of charges and fees, the use of unclaimed refunds and the establishment of accounts dedicated to the expansion of natural gas services;

(c) The submission of recommendations by public utilities that furnish natural gas;

(d) Possible processes for including in a public utility's rates the cost of projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas;

(e) Possible selection criteria for projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas; and

(f) The potential rate cap for projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas.

Minnesota

Vermont

Delaware

Indiana

Maryland

At a minimum, the work group shall study:
(b) Mechanisms for funding the expansion of natural gas services, including ... the imposition of charges and fees,

- **Minnesota**: New Area Surcharge Rider
  - Introduced in the 1990s to mitigate an adverse effect on existing customers.
  - New gas service can be brought to communities where it is not economically justified.
  - Recovers Company's revenue deficiency from customers willing to pay more to receive natural gas service.
    - The Minnesota Legislature specifically authorized such rates in Minn. Stat. § 216B.16, subd. 13, enacted in 1992[1]
    - Update enacted in 2015: up to 33% of the costs spread to all customers in Minn. Stat. § 216B.1638[2] No dockets approved, one pending[3]

WELCOME
TO
Minnesota

Minnesota New Area Surcharges

- Extensions to entire towns in remote areas
- New customers pay a share of the existing system's costs in base rates, plus incremental cost of the new extension in the surcharge, repaid over multiple years[4]

- CenterPoint Energy
  - Alexandria Lakes area
- Xcel Energy
  - Brainerd Lakes area project
  - Barnesville, Holdingford and Pillager
- Minnesota Energy Resources Corporation
  - Ely Lake

e.g. Ely Lake, Minnesota

- 2014, Commission approves monthly New Area Surcharge of **$25.45/month**, up to 20 years[5]
- The surcharge calculated in similar fashion as loan
  - Incremental cost of the new extension is principal, interest rate is rate specified in the tariff and term is length of the surcharge in years[6]
- Monthly surcharge is in addition to the regular bill for gas service.
  - Appears on bill as separate line item.

WELCOME TO
VERMONT
GREEN
MOUNTAIN
STATE

(b) … the use of unclaimed refunds and the establishment of accounts dedicated to the expansion of natural gas services;

- **Vermont**: 2011, Vermont Gas establishes the System Expansion and Reliability Fund for the purpose of facilitating further build-out of its system.
  - Substitutes for an about 5.4% rate reduction.
  - Expected to generate approximately $4.4 million annually[7]
  - Defers & escrows cost savings from quarterly Purchased Gas Adjustment (declines in the wholesale cost of natural gas)[8]
- Withdraw from The Fund for expansion

  withdrawal = cost of service – generated revenues

  associated with the expansion[9]
- e.g. 43 mile expansion into the Vergennes and Middlebury, Vermont, market areas. Commission certificate issued 2013[10]
  - $55 million estimated withdrawals.[11] Initial filing estimated costs at $87 million - updated to $154 million[12]

Welcome to
DELAWARE
SMALL WONDER
THE FIRST STATE

(d) Possible processes for <u>including in a public utility's rates</u> the cost of projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas;

- **Delaware:** 2012, Chesapeake Utilities proposed to recover $1.25 from all ratepayers monthly for purpose of expansion.
- Delaware's Division of the Public Advocate argued it would result in current customers subsidizing future customers[13]
- 2013, Parties settled at charging only customers within proposed expansion areas:

RS-1 Residential customer charge	ERS-1 Expansion area residential customer charge
$11.75 per month	$16.50 per month[14]

Welcome to
Indiana
Crossroads of America
Lincoln's Boyhood Home

(e) Possible selection criteria for projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas;

- **Indiana:** Enacted 2013, Chapter 39. Transmission, Distribution, and Storage System Improvement Charges and Deferrals (TDSIC):

  Indiana Code § 8-1-39-11 (c) allows gas utilities to extend service in rural areas without requiring a deposit if the extension of service results in a positive contribution to the utility's overall cost of service over a 20-year period.

- e.g. So far, Lizton Indiana (population <2,000) ruled to qualify, several unincorporated areas proposed[15]
- Cost cap: may not increase utility's total retail revenues by more than 2% in a year (exception: projects with Indiana economic development corporation)[16]

MARYLAND
WELCOMES YOU
ENJOY YOUR VISIT!

(f) The potential rate cap for projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas.

- **Maryland**: February, 2016 Senate Bill 778
  - Under consideration, concerns Natural Gas Infrastructure Expansion and Reinforcement
  - Proposes to create expansion investment regulatory asset, which gas utility later incorporates into rate base[17]

... incremental eligible expansion costs added to the [expansion investments]regulatory asset for each year the gas company defers those costs may not increase by more than 0.5% of the gas company's net rate base...

NPGA
NATIONAL PROPANE GAS ASSOCIATION

A Propane Primer

Propane is a naturally occurring hydrocarbon commonly found in the production stream of oil and natural gas wells. With the chemical formula C_3H_8, it is one of the least complex hydrocarbons (technically an alkane). It is closely related to methane (natural gas), which, with the chemical formula CH_4, is the least complex of the hydrocarbons. Chemically, only ethane (C_2H_6) separates natural gas and propane. More complex hydrocarbons include butane, pentane, hexane, and octane. The molecular proximity of propane to methane has important real-world consequences, as we will discuss below.

Like natural gas, propane is colorless, odorless, and tasteless. (For both products the smell that people associate with them is artificially added at the retail level.) Both are gaseous at normal temperatures and pressures. As a result, both are readily usable as fuels in a number of applications. While natural gas liquefies at -162 Centigrade, propane liquefies at -42 Centigrade. With pressure, propane becomes a liquid at somewhat higher temperatures—hence "liquefied petroleum gas" (LPG), another name for propane. An important consequence of the difference in the temperatures at which the two compounds liquefy is that propane can be stored and transported in relatively lightweight containers and with much greater ease and economy than natural gas (in either a gaseous or liquefied state). While large volumes of propane are transported by petroleum products pipelines, it is also commercially feasible to transport it by rail, truck, ship, and barge. Technically those modes are possible for natural gas, but they are not generally economically feasible—on a retail basis—because natural gas, whether compressed or liquefied, requires much heavier storage containers and higher pressure or lower temperature. At ordinary temperatures and pressures natural gas is lighter than air, while propane is heavier than air.

Propane is produced (as with other more complex hydrocarbons) through two processes. First, it can be extracted from natural gas streams in natural gas processing plants. Second, it can be produced by refiners as part of the crude oil cracking process. Today the former method of production accounts for more than seventy percent of domestic supply. North American supplies of propane are adequate to meet the entire U.S. demand. Unlike customers of gasoline, diesel fuel, and heating oil, propane customers are not dependent upon supplies from foreign nations. (Although some propane is imported, the volume is dramatically less than the volume of exports.) Propane is in essence a byproduct, and, from a commercial perspective, production varies not so much with the demand for propane as the demand for the products of which it is a byproduct (natural gas and refinery products).

NPGA
NATIONAL PROPANE GAS ASSOCIATION

The nation is in the midst of a boom in natural gas production, largely involving the production of natural gas from shale formations. Because natural gas liquids draw higher prices in the market than natural gas on a British thermal unit (Btu) basis, producers are aggressively seeking shale gas that is rich in hydrocarbon liquids. As a result, domestic supplies of propane will be plentiful for the indefinite future.

Propane has applications in residential and commercial markets for heating (furnaces, boilers, and gas logs), water heating, cooking, and clothes drying. It is well known across America, even among those who do not use it as a primary home fuel, as a fuel source for barbecues, outdoor stoves, heaters, and the like. About fourteen million American families use propane for these various applications. Approximately six million households heat with propane. Similarly, propane has wide usage as a cooking fuel in recreational vehicles and boats. Additionally, propane commands a significant market as a transportation fuel, for forklifts, buses, vans, trucks, and cars. Indeed, there are more propane vehicles on the road than either electric or natural gas vehicles. Propane is also used as a fuel in the industrial sector both for space heating and process applications. Propane is used on nearly one million farms for irrigation pumps, grain dryers, standby generators, and other farm equipment.

Propane is a low-carbon fuel. At the point of combustion it produces 62 kg of CO_2/MMBtu, compared to 53 kg for natural gas, 71 kg for gasoline, and 93 kg for bituminous coal. Factoring in upstream emissions, propane produces 74 kg of CO_2/MMBtu, compared to 65 kg for natural gas, 91 kg for gasoline, and 221 kg for electricity. (The large number for electricity reflects the significant thermal loss in generation and the thermal loss in transmission and distribution.) A key fact in regard to carbon emissions is that when propane is released (*i.e.*, fugitive) into the atmosphere, it has essentially no greenhouse gas (GHG) effect because it deteriorates rapidly. In contrast, natural gas released into the atmosphere is approximately 25 times more potent than CO_2 as a GHG.

Propane accounts for approximately two percent of the primary energy consumed in the United States, compared to 29 percent for natural gas, 28 percent for coal, and 41 percent for petroleum products. Yet propane accounts for only one percent of the nation's GHG emissions.

Propane is essentially "portable natural gas." Most propane today is produced alongside natural gas. It is used in the same applications as natural gas. Propane has an emissions profile similar to natural gas but with the added benefit of not being a GHG itself. Propane has the important benefit of being easily transportable to areas where there is no natural gas infrastructure.

RE: PGE's SB 32 Work Group Recommendations

PGE appreciates this opportunity to offer comments on the draft Findings and Conclusions of the Senate Bill (SB) 32 Work Group concerning Natural Gas Expansion to Unserved Areas - 2016 Report to the Legislative Assembly. SB 32 directs the PUC to form a work group to conduct a study on methods by which a natural gas utility may expand the utility's service to areas that do not have access to natural gas. The legislation further directs the work group to review the Commission's authority and policies to authorize the expansion of natural gas services. PGE appreciates the work of Commission staff and the work group and offers the following comments in response to the draft Findings and Conclusions:

- Generally, PGE recommends the Workgroup articulate the factual bases of each finding within the discussion section of each finding.

- In the discussion for the second finding, it states:

  "A natural gas utility's expansion into unserved areas does provide service-related benefits to the utility's existing customers and the Commission can allocate costs associated with these benefits to the utility's existing ratepayers."

  - The declaration that expansion into unserved areas provides benefits to existing customers seems at odds with the Commission's review and treatment of the River District development (PGE Advice No. 97-15) in the PGE service territory. In that case, the burden rested with the company to demonstrate benefits to existing customers—it was not presumed. As I discussed at the May 5 meeting of the Work Group, the River District involved the company covering the initial costs of trenching, conduit and vaults, essentially the necessary service backbone in the NW Portland area described in our Tariff, Rule I. As customers connect to the system they each pay a per square foot charge to connect. For a standard 200 x 200 foot block, the initial fee was $33,280. After 2007, the connection fee was adjusted based on PGE's cost of capital.

At the time that the matter was pending before the Commission, PUC staff expressed the interest that existing ratepayers not be burdened by any of the costs. There was no finding or presumption that the expansion into the unserved area provides service related benefits to the utility's existing customers. The burden was clearly placed on the utility to demonstrate such benefit to existing customers in that instance.

- SB 32's finding and declaration that "access to natural gas is in the public interest" does not alter the Commission's previous treatment that a utility has the burden to demonstrate such benefits. Instead, the legislation requires the commission to study its policies related to expansion and "methods" for expansion. One of those methods is to allow the utility to make a showing that existing customers would benefit.

- PGE recommends that the discussion of this finding be amended to state that the gas utility may make a showing that the expansion provides benefits to existing customers or to change the referenced sentence to the conditional: "*If* a natural gas utility's expansion into unserved areas provides service-related benefits to the utility's existing customers, the Commission may allocate costs associated with those benefits to the utility's existing ratepayers."

- Finding #3 seems to be inconsistent with finding #2. Finding #3 describes how the Commission would determine whether expansion into unserved territory will result in benefits to existing customers. Finding #2 presumes that those benefits exist.

- The discussion in finding #4 repeats the statement that "expansion will have system benefits that accrue to all the utility's customers." PGE does not oppose the ability of a utility to attempt to make such a showing, but believes that the burden is on the utility to do so.

Thank you for the opportunity to comment. We look forward to reviewing the Draft Report.

Re: NWGA Comments on SB 32 Report to the Legislature

Dear Ms. Gorsuch,

Thank you for facilitating the meetings of the SB 32 Work Group chartered by the Legislature. As you develop the final draft of the Oregon Public Utilities Commission (PUC) report to the Legislature, the Northwest Gas Association (NWGA) offers the following comments for consideration.

In passing and signing SB 32, the Legislature and the Governor found and declared, "[T]hat having access to natural gas is in the public interest and… is necessary for the communities of this state to preserve local economies, enlarge tax bases and generate additional economic opportunities."

In order to fulfill the Legislature's expectations of the SB 32 Work Group, the final report must chart a clear path by which natural gas service will be extended to certain currently unserved areas of the state. Toward the objective of providing the Legislature with a report that responds to its intent and holds the promise of meaningful progress, the NWGA makes the following suggestions:

1) The SB 32 report should detail the specific actions the PUC intends to actively pursue in order to promote the extension of natural gas service to unserved areas of the state.

2) Recommendations for legislative action necessary to ensure that natural gas service is extended to unserved areas of the state ought to be included in the SB 32 report.

3) The Legislature would benefit from a summary in the SB 32 report of the successful efforts of other states in implementing policies to extend natural gas service to unserved areas. The report should break down the mechanisms each state is employing to good effect. We suggest the report include summaries of the Georgia STRIDE program, Mississippi's Supplemental Growth Rider and Pennsylvania's GETGAS program.

4) Most importantly, per Section 2(1)(c) of SB 32, the report to the Legislature should incorporate recommendations made by the NWGA (representing the natural gas utilities) during the work group process. The NWGA's recommendations include:

a. Modifying Line Extension Policies.
b. Allowing Natural Gas Expansion Tariff Riders.
c. Enabling Portfolio Treatment of Allowable Investments.
d. Approving Geographical Surcharges.
e. Providing for Customer Assistance.
    i. Permitting the use of surplus line extension allowances;
    ii. Authorizing fuel conversions & consideration of electric avoided costs.

The NWGA believes that a report incorporating the elements listed above will be responsive to the task set forth by the Legislature: to create a practical road map that will deliver natural gas to a number of Oregon communities currently just out of reach.

Thank you for your consideration,

DAN S. KIRSCHNER
EXECUTIVE DIRECTOR

Re: NWGA Comments on SB 32 Report to the Legislature, Final Draft – UM 1748

Dear Ms. Gorsuch,

Thank you for the opportunity to comment on the final draft of the Public Utility Commission of Oregon (OPUC) report to the Legislature regarding extending natural gas service to unserved communities in Oregon. The Northwest Gas Association (NWGA) offers the following comments for consideration.

We appreciate the time and effort that OPUC Staff, and all members of the Work Group put into this process. NWGA believes that the process provided an opportunity for meaningful conversation, and led to a greater mutual understanding of the important issues surrounding the topic of extending the natural gas system in Oregon. Although NWGA is disappointed in some aspects of the report, as described below, the process also points to positive opportunities.

To reiterate our prior comments, it is important that in passing SB 32 in 2015 the Legislature found and declared, "…that having access to natural gas is in the public interest and… is necessary for the communities of this state to preserve local economies, enlarge tax bases and generate additional economic opportunities." These findings and declaration provide a clear legislative emphasis on creating solutions to get natural gas to currently unserved communities.

NWGA's general takeaway from the Work Group process is that the OPUC Staff and customer representatives feel that, although the OPUC has some role to play in this regard, its role is limited and it may lack the authorities necessary to ensure that this system expansion happens. If that is accurate, we believe that the report should more clearly articulate this conclusion, given that it was the legislative genesis for requesting this report.

The NWGA's primary objective throughout this process has been to provide input and recommendations that would help the PUC be responsive to the Legislature's request by charting a clear path by which natural gas service could be extended to unserved communities that desperately need and want it. For instance, we submitted a proposal identifying a number of levers that would help facilitate service extensions including:

1) Modifying Line Extension Policies.
2) Allowing Natural Gas Expansion Tariff Riders.
3) Enabling Portfolio Treatment of Allowable Investments.
4) Approving Geographical Surcharges.
5) Providing for Customer Assistance.
    a. Permitting the use of surplus line extension allowances;
    b. Authorizing the use of electric energy efficiency incentives for fuel conversions.

The NWGA also offered the following suggestions to strengthen the PUC's initial draft report:

1) Incorporate recommendations of natural gas utilities per Section 2(1)(c) of SB 32;
2) Summarize successful efforts of other states.
3) Detail specific actions the PUC intends to actively pursue relative to extending service;
4) Include specific recommendations for legislative action to authorize new tools.

Although the final draft of the PUC's report includes these recommendations, it neither analyzes the NWGA's specific proposals, nor makes any recommendation or otherwise offers guidance to the Legislature or the utilities concerning how practically to extend natural gas service to Oregon's unserved communities. We believe the report could be improved by noting the following items:

1) There appeared to be a broad consensus that the OPUC should consider allowing utilities to modify their line extension policies to better take into consideration the longevity of customers on the gas system. This could help facilitate line extensions that both allow expansion of the system, and appropriately protect current customers.

2) The Work Group discussed that legislative action may be required to accomplish some of the recommendations offered by NWGA and its members, and that a broad effort among state agencies and other contributors may be a necessary part of accomplishing the stated goals of SB 32.

Finally, although we recognize that there was not unanimity among the work group, NWGA would like to note that we believe the OPUC may be able to take further steps to implement our recommended approaches within its existing authorities than is currently outlined in the report. We look forward to continued work on these topics to determine if some of these approaches can be implemented through discussions with the OPUC Staff and other stakeholders in the future.

Having commented on the substance of the PUC's final draft report to the Legislature, the NWGA respectfully offers a few edits for clarity and/or to correct mischaracterizations:

1) On page 6, the narrative states: "Today, more than 95 percent of the residents of Oregon's incorporated areas have access to natural gas." NWGA believes it would be appropriate to identify what the source for this statement is, as that was not discussed at the Work Group.
2) On page 6: "Two key factors ~~affect~~ correlate highly with an incorporated area's access to natural gas service. The first is population size."
3) On page 9, a number of edits which more accurately portray the principles in question:

   Subject to the Commission's review, Oregon's natural gas utilities ~~decide~~ make decisions about whether or not to extend service into unserved areas. The utilities also establish ~~their own~~ line extension policies, which the Commission reviews and approves to help ensure that the rates paid by all ratepayers are fair, just , and reasonable.

   The Commission and the utilities ~~does~~ do not require ~~a~~ new customers to pay all the costs associated with a line extension up front. Rather, ~~the Commission seeks to equitably divide these costs between new and existing customers based on the benefit that the line extension will provide to the utility system, including increased revenue generated by new customers~~line extension policies allow the utility to invest some amount without a direct charge to the customer (usually referred to as a construction allowance), in light of the increased revenue the

new customer will generate through the rates they will pay in the future. The new customer pays for expected costs above the construction allowance through a direct charge (usually referred to as a contribution). Line extension policies are generally designed to ensure that new customers pay the construction and other costs associated with securing natural gas service, either through an up-front contribution or through their rates over time.

~~The amount of line extension costs recouped through the rates of existing customers is called a "construction allowance." The construction allowance is a cap on how much of the costs of a line extension is covered by all ratepayers. Any costs above the construction allowance must be paid by the new customers through a surcharge or through other funds secured by the utility or others to fund the expansion.~~

Subject to review and approval by the Commission, each utility sets its own formula for calculating the construction allowance. Each utility currently calculates this allowance differently. NW Natural's construction allowance for new residential customers is ~~three~~ five times the annual average ~~revenue~~ margin expected from a new customer. Avista 's construction allowance for new residential customers is "three (3) times the estimated gross revenue as determined by the Company to be derived from bonafide applicants for such service[.]"Cascade's construction allowance for new residential customers is 4.5 times the estimated gross margin (gross revenue less cost of gas) to be derived from the new customer.

At any time, each utility can file a tariff to change its construction allowance formula. The utility must justify the change and show that the formula results in fair and reasonable rates for all ratepayers.

4) On page 11, under Estacada: "In ~~2015~~2005, Northwest Natural…"

5) On page 15, first bullet: "The natural gas utilities ~~argue~~ stated that the current construction allowance formulas likely fail to ~~capture all system benefits that accrue to existing ratepayers over the life of extension projects~~account for the longevity of new customers on the system. The utilities recommend that other construction allowance methodologies - such as the Perpetual Net Present Value Methodology - should be ~~used~~ considered to calculate ~~the share of project costs paid by existing customers~~construction allowances."

6) On page 15, third bullet: "…unused line extension allowances from successful line extensions ~~should~~ could effectively be banked…"

7) On page 15, fourth bullet: "Utility filings for rate recovery ~~should~~ could include targeted surcharges, as necessary, to cover shortfalls in project funding."

8) On page 16, first bullet (continued from previous page): "Use ratepayer funds to assist conversions to natural gas for specific end-uses. The gas utilities recommend that the funds dedicated for energy efficiency incentives or tied to unused line extension allowances ~~should~~ be used to help cover the cost of ~~conversions to natural gas space heat and water heating from other sources of energy~~converting from electric space and water heating to natural gas, where these conversions result in cost effective energy efficiency savings~~;~~"."

9) On page 17: " The SB 32 Workgroup ~~adopted~~ had a robust discussion on a variety topics. At a very high level, there was general agreement on the following findings and conclusions:"

10) On page 17, under Finding 2 Discussion: "Construction allowances may not reflect the full ~~benefits to ratepayers of service extensions~~amount that can be invested in extending service to new customers, while holding existing customers neutral over time. Line extensions may be evaluated over too short a time period and other benefits may not be captured in construction allowance formulas."

11) On page 18, Finding 3: *"Customers located within the area that is served after expansion will receive different benefits from expansion (access to new service) than customers outside the newly-served area (access to existing service), and both sets of customers may be charged accordingly."* (these changes attempt to specify the differences which are mostly a matter of order, timing, etc.)

In conclusion, NWGA appreciates the efforts put into the Work Group by all involved. We view it as unfortunate, however, that the final draft of the PUC's SB 32 Report to the Legislature does not provide substantive recommendations that the Commission or the utilities can undertake to extend natural gas to unserved and underserved areas as directed by the legislature.

We think the report could be improved by noting there was a broad openness to modifying utilities' line extension policies, but do not believe that this will be sufficient to accomplish the legislative goals expressed in SB 32. The report should also make the apparent conclusions about the limited role the OPUC believes it can play in expanding the natural gas system more clear. In our view, doing so will help provide the legislature more clarity about the context that seems to underlie the approach taken in the OPUC's report.

Thank you for your consideration,

DAN S. KIRSCHNER
Executive Director

Senator Whitsett
SB 32 Comments
July 12, 2016

1.) Senate Bill 32 states in part that the Legislative Assembly "*finds and declares that having access to natural gas is in the public interest and that the extension of natural gas pipelines and other infrastructure necessary for providing natural gas to areas that do not have access to natural gas is necessary for the communities of this state to preserve local economies, enlarge tax bases an generate additional economic opportunities,*" That statement would appear to direct OPUC to determine and delineate pathways for natural gas service expansion both under existing statutory authority and under OPUC recommended amendments to existing law. The draft report appears to do neither.

2.) To my knowledge, Avista has not abandoned their efforts to extend natural gas service to Lakeview. They appear to be remain actively engaged in that effort.

3.) What other history of natural gas expansion to underserved or unserved areas has occurred in Oregon. For instance, how and when did 21 of 43 small towns located within 15 miles of a natural gas pipeline acquire natural gas service? How and when did 15 of 32 small towns located within approximately 10 miles of a natural gas pipeline acquire natural gas service?

4.) Why has OPUC not addressed questions regarding the existing expansion of natural gas service to Shady Cove? Under what authority and economic reasoning was that expansion authorized by the Commission? Will Commission staff provide an Appendix E type table for the Avista Shady Cove expansion project?

5.) Regarding alternative funding sources, why would only "new" revenue from the investor owned natural gas utilities public purpose charge be considered? Does OPUC have statutory prohibitions or Commission objection by rule that would prevent existing public purpose charge moneys collected from investor owned natural gas utility customers to be expended toward expansion of natural gas services to unserved or underserved areas?

6.) The text of the draft report suggests that investor owned natural gas utilities are authorized to file for a change in tariff pretty much at will. However, it is my understanding that OPUC must approve such an application. What history can OPUC describe of utilities applying for such tariff changes? What has been the Commission's history of approval or denial of such tariff change requests?

Response To

SB 32, 2016 OPUC Draft Report to Legislative Assembly

Ken Kestner, Lake County Commissioner

26 July 2016

1. I'll reiterate the points made by Senator Doug Whitsett.

2. I'll emphasize the strategy of collaborative/coordinated & bundling multi-funding scenario, as local, multiple state agencies/depts., LDCs, etc.
   On the State's behalf, as others have emphasized, I encourage the 'transparency', which should apply to all other state-funded endeavors.

3. Likewise, I emphasize in the 'construction allowance' that multi-benefits AND long-term benefits be considered.
   I recognize that PERPETUITY means 'forever' and the objection by some providers, so therein I stress emphasis on a reasonable LONG-TERM approach, which might encompass several decades. *(I understand that "Reasonable" is interpreted differently by different people; that's where Legislative Assembly can embody an interpretation.)*

4. LDCs' recommendation of OPUC adopting the legislative policy statement in SB 32 is noteworthy.
   Having such policy embodied in OPUC gives a tone of emphasis to further facilitate LDCs efforts to expand Nat Gas, as facilitate changes in tariff, etc.

5. On surcharges, as reasonable new customers' surcharges, such would contribute to the local funding contribution.
   I'm a little reserved, though not fully opposed, on the Geographical Surcharges concept. A small percentage with possible long-term return to existing customers would be palatable for me.

6. On subject of 'customers' assistance', if considered, I agree such should be applicable & fair to all energy providers.

7. I do like the notion of "banked" amounts of any unused portions of line extension allowances.

Re: SB 32 –Northwest Industrial Gas Users' Comments on Draft Report

Dear Ms. Gorsuch:

Per your request to the members of the SB 32 Workgroup, I am providing comments to you on the Draft Report to the Legislative Assembly ("Draft Report").

At the outset, I want to thank Staff for sharing this draft and for capturing the discussion that occurred during the workshops. I do not have any suggested changes to the Draft Report.

The initial sections of the Draft Report do a good job reflecting the history of the extension of natural gas service. In both the description of how line extensions work and in the case study section, the common principle is that line extensions are primarily paid for by the customers who seek the new service and that existing ratepayers contribute only to the extent that they will benefit from an expanded system. Natural gas service and electric service are often viewed as similar services simply using a different fuel, but the reality is that there are fundamental differences in these services and how they have evolved. Natural gas service has traditionally been developed as the result of customers deliberately choosing that fuel source. As such, expansions of a natural gas system have occurred only when it makes economic sense for the customer to pay for that service, including the costs of expanding a system to provide the service.

As the Coos County case study similarly demonstrates, sometimes it is a broader community that makes the economie deeision to obtain new service, in which case other public funds (i.e. bond revenue or lottery funds) may be appropriate for use to expand the system.

The specific findings included in the Draft Report also accurately capture the limits of, and opportunities for, system expansion. For example, if construction allowances do not accurately reflect all of the benefits to the existing system, there may be opportunity to revise line extension policies for that purpose. This is not anathema to the existing system, which contemplates that all customers will pay for the benefits they receive. Similarly, there may be opportunities for having surcharges to multiple customers in an expanded area as described in Finding 3. This approach of having a community pay for incremental capacity is precisely how all interstate pipeline expansions have been priced by FERC since the mid-1990s and it is reasonable to model a state system after this federal approach.

I look forward to reviewing the comments of other Workgroup members and assisting the PUC in developing the final report.

Sincerely,

/s

Edward A. Finklea

Re: Joint Consumer-Owned Utility Comments on OPUC Docket 1748, Access to Natural Gas Infrastructure in Underserved Areas

Oregon's Consumer-Owned Utilities (COUs) appreciate the opportunity to comment on the OPUC draft report to the 2016 Legislature on SB 32, Access to Natural Gas Infrastructure in Underserved Areas. Our comments are focused on the mechanism for funding the expansion of natural gas service.

The draft report concludes that large amounts of funding will be necessary to cover the cost of gas service extension to underserved areas. (Draft Report, Page 18.) In a cost versus benefits analysis, Oregon's COUs do not support using Oregon General Fund dollars to provide gas service in COU territories. Oregon's COUs already deliver safe, reliable, and affordable carbon-free electricity to our customers. Oregon COU's obtain the majority of their power from the Bonneville Power Administration (BPA). We follow a regional electric power plan to guarantee adequate and reliable energy at the lowest economic and environmental cost to the Northwest. COU customers are already benefitting from at-cost power that is largely carbon-free. Spending state taxpayer dollars to extend natural gas services to areas served by consumer-owned utilities would do little, if anything, to reduce carbon emissions in our electric system or reduce global CO2 levels. In fact, extending natural gas services to these areas likely would increase CO2 emissions as customers switch from largely carbon-free electricity to natural gas.

We do not support using taxpayer or lottery revenue to fund natural gas service expansion. We have a fundamental objection to using taxpayer dollars to subsidize a private for-profit company when the customers are already being well-served by a non-profit utility providing at-cost, clean, renewable power.

We appreciate being part of this process. Thank you for the opportunity to comment.

Ted Case, ORECA Beth Vargas-Duncan, OMEU Danelle Romain, OPUDA

PACIFIC PROPANE GAS ASSOCIATION

Representing the Propane Gas Industry for

Alaska, Hawaii, Oregon and Washington

Comments of the Pacific Propane Gas Association
On the SB 32 Work Group 2016 Draft Report to the Legislative Assembly
July 20, 2016

The Pacific Propane Gas Association (PPGA) once again appreciates the opportunity to be heard with respect to its views on the issues being considered by the Senate Bill 32 natural gas working group. PPGA particularly appreciates the manner in which Staff has conducted the working group sessions and has heard the varying viewpoints of the different stakeholders in the process. PPGA commends Staff for its even-handed presentation of these views in the draft report.

PPGA endorses the reading given to Senate Bill 32 by Staff. The legislature has certainly recognized the benefits of natural gas as a fuel and has required the Oregon Public Utility Commission to convene a work group to solicit input from stakeholders and to explore means by which natural gas service might be made available to more consumers. The end result of this process is a report to the Legislature, not a plan to expand natural gas service to all citizens of Oregon. As Staff appears to have concluded, the reading of the statute championed by the natural gas utilities includes an element that is simply not there.

PPGA appreciates the recognition by Staff of its views on these issues. The types of expansions of natural gas service in Oregon that were addressed by the working group all appear to be uneconomic—delivery revenues for the service will not cover the costs of providing the service. Indeed, were the delivery revenues sufficient to cover the cost of service these expansions would already have occurred, as Northwest Natural, Avista, and Cascade presently have the means to undertake them, with no necessary change in policy or law. And there is no doubt that they have ready access to capital markets to fund such expansions. As the draft report points out, 95 percent of Oregonians in incorporated areas already have access to natural gas service.

As PPGA has expressed previously, natural gas expansions that are not economic run counter to sound public policy if they are subsidized by either taxpayers or existing captive natural gas customers. Utility shareholders, who have decided not to deploy their own capital, should not be subsidized by either taxpayers or captive utility customers. On the other hand if utility shareholders do desire to put their capital at risk in financing an expansion, then PPGA would have no objection. Subsidized natural gas expansion is wrong for many reasons, including:

- It violates the fundamental utility regulatory principle that costs should be allocated to those who cause them to be incurred
- It underprices the service to those who receive it, resulting in an inflated demand for the service
- By underpricing the service and inflating the demand, it causes an inefficient allocation of resources

- Natural gas service is not a public good such as parks and highways, where the costs involved are shared among all citizens
- Even if natural gas service were a public good, citizens would benefit more from funding any number of more worthy ventures
- It is unfair to the captive customers who are compelled to subsidize new customers and utility shareholders and who receive little, if any, benefit from the expansion
- It unfairly, and without justification, tilts the competitive playing field against competing energy sources such as electricity, propane, fuel oil, and wood.

PPGA recognizes that natural gas expansion can benefit existing natural gas customers. This is, however, an inherently fact-specific analysis, of the type for which utility regulators have great experience. Broad generalizations have no place in assigning expansion costs to existing customers. Clearly there will be instances in which existing customers receive benefits in terms of system reliability, but these will be fact specific. In contrast, benefits associated only with increased throughput (for example, spreading general and administrative costs over more units of throughput) will usually be so modest as to be difficult to measure. Additionally, benefits for existing natural gas customers are to be found in the numbers in the utility's books—not hypothetical and unverifiable economic development and environmental "benefits".

At the heart of this inquiry is the cold fact that expanding a natural gas network is an exceedingly expensive venture, with system costs hovering around $1 million per mile. As the report points out, two factors are determinative—population and distance to a natural gas distribution or transmission line. The result is that high population density near natural gas lines leads to affordable expansion; low population density remote from a natural gas line leads to unaffordable expansion. Most of Oregon that is unserved falls in the latter category; it is the unavoidable fact. Natural gas service to these communities will simply not be possible without significant wealth transfers. Neither the Oregon Public Utility Commission nor the Legislature have it within their powers to change these facts. As the report concludes, the cost of natural gas expansion is a major impediment.

February 2, 2026, Regular Public Meeting of the Oregon Public Utility Commissioner

Audio Transcription

1

00:00:02.830 --> 00:00:15.170

Chair Letha Tawney - Oregon PUC: Good morning! Today is, February 3rd, 2026, and this is a regular public meeting of the Public Utility Commission of Oregon, and all commissioners are present this morning.

2

00:00:16.010 --> 00:00:24.909

Chair Letha Tawney - Oregon PUC: We take time at the beginning of each meeting to provide the public an opportunity to comment on issues not listed on the written agenda.

3

00:00:25.030 --> 00:00:32.500

Chair Letha Tawney - Oregon PUC: And so, if anyone wishes to comment, you can use the raise your hand feature, or press star 9 if you're dialed in.

4

00:00:32.689 --> 00:00:44.629

Chair Letha Tawney - Oregon PUC: And if you, can't find either of those, you can unmute yourself and just speak up. So I'll pause and see if there's any public comment on items not on the agenda this morning.

5

00:00:46.860 --> 00:00:49.989

Chair Letha Tawney - Oregon PUC: Excuse me.

6

00:00:50.510 --> 00:00:59.550

Chair Letha Tawney - Oregon PUC: Okay, I'm not seeing anyone this morning, so let's move on to the consent agenda. Do I have a motion to approve the consent agenda?

7

00:01:01.280 --> 00:01:03.499

Comm. Karin Power - Oregon PUC (she/her): I'll move to approve the consent agenda.

8

00:01:03.500 --> 00:01:04.330

Comm. Les Perkins - OPUC: I'll second.

9

00:01:05.000 --> 00:01:10.090

Chair Letha Tawney - Oregon PUC: I concur, and the consent agenda is adopted. Excellent.

10

00:01:10.490 --> 00:01:19.130

Chair Letha Tawney - Oregon PUC: Let's move on to the regular agenda. This morning, we're starting with RA1, docket number UM1730.

11

00:01:19.530 --> 00:01:24.840

Chair Letha Tawney - Oregon PUC: And I believe Ryan Bain from staff is introducing this.

12

00:01:25.820 --> 00:01:27.099

Chair Letha Tawney - Oregon PUC: Good morning, Ryan.

13

00:01:27.510 --> 00:01:28.630

Ryan Bain - OPUC: Good morning.

14

00:01:29.060 --> 00:01:33.030

Ryan Bain - OPUC: Good morning, Chair Taney, Commissioner Perkins, and Commissioner Power.

15

00:01:33.270 --> 00:01:43.049

Ryan Bain - OPUC: For the record, my name is Ryan Bain. I'm an analyst in the OPUC. I'm joined today by Staff Manager Curtis Deloie and Staff Council Stephanie Andrews.

16

00:01:43.420 --> 00:01:57.919

Ryan Bain - OPUC: On January 8th, Idaho Power Company filed its required post-IRP acknowledgement avoided cost update. I'm here today to recommend suspension of the company's update to its standard avoided cost schedule for further investigation.

17

00:01:58.050 --> 00:02:07.170

Ryan Bain - OPUC: Due to staff's need for additional time to complete its review, and to incorporate stakeholder input under the 30-day period granted by statute.

18

00:02:07.660 --> 00:02:15.160

Ryan Bain - OPUC: The company's post-RP acknowledgement of what a cost update includes updates to the sufficiency period.

19

00:02:15.310 --> 00:02:34.179

Ryan Bain - OPUC: Forward on and off peak, electric market prices, natural gas prices, capacity contribution values, updates to solar and wind integration charges based on the company's 2025 variable energy resource integration study, and updates to the on and off-peak hour definitions.

20

00:02:34.450 --> 00:02:42.709

Ryan Bain - OPUC: During its review, staff issued an information request for the company's 2025 EER integration study with a due date of January 30th.

21

00:02:42.930 --> 00:02:48.560

Ryan Bain - OPUC: This necessitated suspension of the filing to ensure time for adequate review.

22

00:02:48.790 --> 00:03:03.609

Ryan Bain - OPUC: Additionally, through communication with stakeholders, staff learned that there is desire amongst QF parties to file comments regarding this avoided cost update, and desire in kind from the company to share comment and response as warranted.

23

00:03:03.870 --> 00:03:18.500

Ryan Bain - OPUC: Staff will use the additional time it has requested to ensure parties have adequate time to file comments and a response, and for staff to incorporate those comments into its memo, and the goal of ensuring that avoided costs reflect the appropriate values.

24

00:03:18.710 --> 00:03:31.579

Ryan Bain - OPUC: Staff now anticipates bringing this filing before the Commission at the March 17th public meeting, and will be posting a comment deadline to parties likely to be the 13th of February, should the filing be suspended.

25

00:03:32.040 --> 00:03:41.789

Ryan Bain - OPUC: So to summarize, staff recommends that the Commission suspend Idaho Power Company's post-RP acknowledgement update to its standard avoided cost schedule for further investigation.

26

00:03:41.950 --> 00:03:44.210

Ryan Bain - OPUC: And I'm available to answer any questions.

27

00:03:45.570 --> 00:03:47.229

Chair Letha Tawney - Oregon PUC: Thank you so much, Ryan.

28

00:03:47.480 --> 00:03:49.510

Chair Letha Tawney - Oregon PUC: Any questions for Ryan?

29

00:03:50.760 --> 00:03:52.200

Chair Letha Tawney - Oregon PUC: Nope? Okay.

30

00:03:53.000 --> 00:03:54.950

Chair Letha Tawney - Oregon PUC: Appreciate the thoroughness.

31

00:03:55.190 --> 00:04:01.560

Chair Letha Tawney - Oregon PUC: Any, so let me call for public comment. Any comments?

32

00:04:01.810 --> 00:04:10.540

Chair Letha Tawney - Oregon PUC: For many stakeholders on... 1730, Idaho powers. Avoided cost.

33

00:04:11.550 --> 00:04:13.169

Chair Letha Tawney - Oregon PUC: You can raise your hand.

34

00:04:14.890 --> 00:04:16.000

Chair Letha Tawney - Oregon PUC: Alright.

35

00:04:16.300 --> 00:04:18.139

Chair Letha Tawney - Oregon PUC: I'm not seeing any.

36

00:04:18.760 --> 00:04:25.929

Chair Letha Tawney - Oregon PUC: So, let's turn to deliberation. Colleagues, perspectives on this?

37

00:04:27.170 --> 00:04:31.770

Comm. Les Perkins - OPUC: Chair Taney, I would just move that we, approve the proposed commission motion.

38

00:04:32.600 --> 00:04:33.599

Comm. Karin Power - Oregon PUC (she/her): And I'll second.

39

00:04:34.300 --> 00:04:39.550

Chair Letha Tawney - Oregon PUC: I concur, and the motion is adopted. Excellent, we'll look forward to seeing that back.

40

00:04:39.790 --> 00:04:41.240

Chair Letha Tawney - Oregon PUC: Shortly.

41

00:04:41.390 --> 00:04:45.110

Chair Letha Tawney - Oregon PUC: Appreciate everyone's, work to get that done quickly.

42

00:04:46.040 --> 00:04:51.690

Chair Letha Tawney - Oregon PUC: Alright, let's move on to RA2, docket UM2427.

43

00:04:52.460 --> 00:04:57.449

Chair Letha Tawney - Oregon PUC: wildfire study, from the, PUC.

44

00:04:57.680 --> 00:04:59.900

Chair Letha Tawney - Oregon PUC: Lara, please.

45

00:05:01.490 --> 00:05:10.299

Laura Tabor, OPUC: Good morning, Chair Taney, Commissioner Perkins, and Commissioner Power. For the record, my name is Lara Tabor, and I'm the Legislative Affairs Director at the PUC.

46

00:05:10.520 --> 00:05:19.950

Laura Tabor, OPUC: Today, I'm presenting staff's recommendation for the PUC to move forward with an expert study on utility wildfire liability and accountability issues.

47

00:05:20.900 --> 00:05:25.329

Laura Tabor, OPUC: As you all know, there has been much policy debate on these topics recently.

48

00:05:25.520 --> 00:05:37.960

Laura Tabor, OPUC: Many are concerned with the length of time that Oregonians impacted by wildfires have gone without compensation. Meanwhile, investors recognize the financial risks that utilities face in Oregon.

49

00:05:38.020 --> 00:05:50.829

Laura Tabor, OPUC: due to our current legal frameworks for wildfire liability. As a result, higher borrowing costs are beginning to impact ratepayers, and power producers see heightened risk in entering contracts with our utilities.

50

00:05:51.130 --> 00:05:59.480

Laura Tabor, OPUC: Consumer-owned and investor-owned utilities alike are both seeing skyrocketing insurance costs, which also fall on ratepayers.

51

00:06:00.120 --> 00:06:12.670

Laura Tabor, OPUC: Identifying a better framework for Oregon will take significant research, engagement, and negotiation across the many interested parties affected by these issues. This agency cannot take all of this on.

52

00:06:12.780 --> 00:06:25.759

Laura Tabor, OPUC: But, as outlined by the recent Oregon State Energy Strategy, released by the Oregon Department of Energy, we can provide valuable information from experts in this field to inform future policy discussions.

53

00:06:26.030 --> 00:06:40.150

Laura Tabor, OPUC: To that end, the motion before you would direct staff to issue a request for proposals via the Department of Administrative Services, or DAS, to engage an expert consultant to develop a report on policy options

54

00:06:40.160 --> 00:06:55.969

Laura Tabor, OPUC: For both investor-owned and consumer-owned utility wildfire liability risk that appropriately balance utility accountability for wildfire risk mitigation, customer needs for reliable and affordable essential services, and timely compensation for wildfire victims.

55

00:06:56.470 --> 00:07:08.560

Laura Tabor, OPUC: This motion also directs PUC staff to retain control of the RFP, the vendor selection, the study scope, process, and final content, regardless of the funding source.

56

00:07:09.170 --> 00:07:22.440

Laura Tabor, OPUC: The PUC's legislatively approved budget for the biennium does not include funds for this expertise necessary to complete this study. Accordingly, staff proposes that Pacific Corp and PGE fund the study.

57

00:07:23.100 --> 00:07:32.990

Laura Tabor, OPUC: Staff has begun preparing for this solicitation in close coordination with DAS, and intend that the study be complete and publicly released before the end of 2026.

58

00:07:33.120 --> 00:07:36.909

Laura Tabor, OPUC: This concludes my presentation, and I am happy to take any questions.

59

00:07:37.980 --> 00:07:43.740

Chair Letha Tawney - Oregon PUC: Thank you so much, Laura. Questions, colleagues, for Lara on the study?

60

00:07:45.370 --> 00:07:49.449

Chair Letha Tawney - Oregon PUC: The memo was... was quite clear, so thank you.

61

00:07:51.110 --> 00:07:57.639

Chair Letha Tawney - Oregon PUC: Alright, I'll ask for a raise of hands from folks who might want to comment on this.

62

00:07:57.770 --> 00:08:02.299

Chair Letha Tawney - Oregon PUC: And I want to start with, Representative Marsh.

63

00:08:02.940 --> 00:08:04.810

Chair Letha Tawney - Oregon PUC: Thanks for joining us this morning.

64

00:08:06.190 --> 00:08:16.949

Pam Marsh: Good morning, Chair Taney and members of the Commission. Thank you so much for the opportunity to offer brief comments. I'm Pam Marsh, State Representative from District 5, which is Southern Jackson County.

65

00:08:17.220 --> 00:08:26.899

Pam Marsh: I am here this morning to strongly urge the Commission to adopt the staff recommendations and move forward with the proposed RFP for a wildfire study.

66

00:08:26.980 --> 00:08:37.869

Pam Marsh: I have been aware of, and frankly, quite worried about, the risk that our wildfire-prone world poses for the state's small and large utilities for a long time.

67

00:08:37.870 --> 00:08:49.469

Pam Marsh: In 2020, my own district experienced a disastrous wildfire, cause unknown, and we know well how vulnerable our landscapes are to these times of drought and increasing temperatures.

68

00:08:49.560 --> 00:08:58.179

Pam Marsh: For utilities with high-risk infrastructure, the threat of wildfire in these conditions is nothing less than an existential crisis.

69

00:08:58.500 --> 00:09:12.180

Pam Marsh: Our utilities are doing everything possible to corral risk, including wildfire mitigation and safety investments. But all the safety investments in the world can't eliminate risk. And those investments are increasingly expensive.

70

00:09:12.500 --> 00:09:27.390

Pam Marsh: That's an issue, since ratepayers are on the hook for those costs. Wildfire mitigation often comes at the expense of reliability and undermines the utility's ability to make critical investments to expand energy supply or to build transmission.

71

00:09:27.740 --> 00:09:35.079

Pam Marsh: Uncorralled wildfire liability risk increases the cost of capital and will threaten the solvency of the utility.

72

00:09:35.440 --> 00:09:44.949

Pam Marsh: And when things go terribly wrong, despite best efforts, Oregonians who are impacted by wildfire, whatever the cause, need support for their recovery.

73

00:09:45.430 --> 00:09:57.839

Pam Marsh: As a concerned legislature, I have been immersed in this issue for the last 18 months. We've made some progress understanding the issue and identifying possible responses, but it is abundantly

74

00:09:57.840 --> 00:10:16.739

Pam Marsh: abundantly clear that we now need third-party guidance to help frame the problem and identify the financial, legal, and policy solutions. And we need to move quickly. If the study you are contemplating recommends legislative action, we need to have proposals ready for the 2027 session.

75

00:10:16.790 --> 00:10:18.669

Pam Marsh: There is no time to waste.

76

00:10:18.780 --> 00:10:25.389

Pam Marsh: Thank you so much for the opportunity to speak to you, but most of all, thank you for moving this work forward.

77

00:10:27.340 --> 00:10:35.459

Chair Letha Tawney - Oregon PUC: Thank you so much, Representative Marsh. I appreciate, how thoughtful you have been on the issue and the complex nuances.

78

00:10:35.760 --> 00:10:40.640

Chair Letha Tawney - Oregon PUC: Particularly given how impacted your community was in 2020.

79

00:10:42.100 --> 00:10:44.780

Chair Letha Tawney - Oregon PUC: Tucker.

80

00:10:47.910 --> 00:10:55.690

Tucker Billman, ORECA: Yeah, thank you, Chair Taney. Good morning, to you and to Commissioner Perkins and Power. I wanna...

81

00:10:55.710 --> 00:11:14.040

Tucker Billman, ORECA: Just start by getting on the record my name, Tucker Billman, I'm the Director of Government Relations for the Oregon Rural Electric Cooperative Association, or ORECA. As you all know, ORECA represents Oregon's 18 not-for-profit electric cooperatives who serve significant portions of Oregon's high-fire risk areas and roughly 500,000 Oregonians.

82

00:11:14.070 --> 00:11:33.550

Tucker Billman, ORECA: Before diving into the study, I want to thank the Commission for this opportunity to provide comment, and I also want to thank Representative Marsh for her continued leadership on this topic. She has been a legislative champion trying to solve one of the state's most challenging issues, and Oregon's electric co-ops are grateful for her work here. We are also grateful for the PUC's leadership and work alongside of her efforts.

83

00:11:33.820 --> 00:11:49.539

Tucker Billman, ORECA: ORECA appreciates the PUC's urgency in implementing this study. We feel strongly that the study should at least have a preliminary report available early in the fall of 2026, if not sooner, to ensure that the legislature has the time needed to make preparations for the 2020 legislative session.

84

00:11:49.750 --> 00:12:07.660

Tucker Billman, ORECA: Oregon's electric cooperatives firmly believe that wildfire liability threatens our solvency. We accept our responsibility to safely, reliably, and affordably serve our communities. It is our job to meet industry standards and to reduce our wildfire risk. We have served high-fire risk areas throughout Oregon for 80-plus years, and we have a track record of success.

85

00:12:07.740 --> 00:12:22.189

Tucker Billman, ORECA: When Senate Bill 762 passed, we codified the practices we utilized over those 80 years and combined them with cutting-edge technology to formalize our wildfire mitigation plans. As you all well know, all 18 electric cooperatives have wildfire mitigation plans filed with the PUC.

86

00:12:22.810 --> 00:12:35.549

Tucker Billman, ORECA: We have not, and will not, take the challenge of mitigating wildfire lightly. However, unbounded wildfire liability poses an existential threat to co-op solvency. Judgments, even in the tens of millions of dollars, could lead to co-op bankruptcy.

87

00:12:35.550 --> 00:12:45.690

Tucker Billman, ORECA: Wildfire insurance won't fix this problem. As Laura so adeptly pointed out, the wildfire insurance market for electric cooperatives is precarious, with shrinking capacity and escalating premiums.

88

00:12:45.690 --> 00:12:56.599

Tucker Billman, ORECA: We encourage the study team to engage directly with Federated Rural Electric Insurance Exchange to fully understand the current coverage constraints, market dynamics, and insurability challenges facing Oregon's electric co-ops.

89

00:12:56.900 --> 00:13:12.040

Tucker Billman, ORECA: Liability pressures are also driving significant annual increases in mitigation investments, which translate into upward rate pressure for member owners. Some cooperatives estimate that the equivalent of two monthly bills per year paid by an average electric co-op member can be attributed to wildfire mitigation work.

90

00:13:12.040 --> 00:13:25.529

Tucker Billman, ORECA: We appreciate that the Commission plans to evaluate this affordability impact, and we encourage the Commission to consult with on-the-ground operators at electric cooperatives across the state to capture practical insights into mitigation spending, operational trade-offs, and rate effects.

91

00:13:26.300 --> 00:13:37.140

Tucker Billman, ORECA: Finally, please keep in view a foundational reality. Electric cooperatives exist where others would not serve nearly a century ago. And candidly, many would still choose not to serve there today.

92

00:13:37.400 --> 00:13:42.990

Tucker Billman, ORECA: Any policy path that overlooks this reality risks destabilizing essential service in rural Oregon.

93

00:13:42.990 --> 00:13:57.549

Tucker Billman, ORECA: We respectfully request that the study's recommendation preserve the cooperative business model, ensure long-term service viability, and align safety, reliability, and affordability for the communities that depend on us. I'm happy to answer any questions, and again, thank you for the time and the leadership on the issue.

94

00:13:59.290 --> 00:14:07.659

Chair Letha Tawney - Oregon PUC: Thank you so much. I appreciate you highlighting, in particular, the challenge of serving your communities. We've struggled with this with telco.

95

00:14:08.000 --> 00:14:15.060

Chair Letha Tawney - Oregon PUC: Enormously, and so the service you provide to rural Oregon is... is absolutely critical.

96

00:14:15.440 --> 00:14:16.379

Tucker Billman, ORECA: Thank you, honey.

97

00:14:16.580 --> 00:14:18.799

Chair Letha Tawney - Oregon PUC: Any questions for... for Tucker?

98

00:14:19.620 --> 00:14:21.870

Chair Letha Tawney - Oregon PUC: No. Okay, thank you.

99

00:14:22.770 --> 00:14:24.260

Chair Letha Tawney - Oregon PUC: Jennifer?

100

00:14:29.990 --> 00:14:31.720

Jennifer Hill-Hart, Oregon CUB (she/her): Good morning, Chair Taney.

101

00:14:31.720 --> 00:14:53.450

Jennifer Hill-Hart, Oregon CUB (she/her): Commissioner Perkins, Commissioner Power, thank you for the opportunity to comment on this, docket. PUB is grateful the Commission is opening up a docket like this. We've been involved in the legislature, having lots of conversations about utility wildfire liability, and it really doesn't... hasn't seemed to create enough time for the important, robust conversation we must have.

102

00:14:53.550 --> 00:15:13.819

Jennifer Hill-Hart, Oregon CUB (she/her): As you know, this issue is really important for ratepayers, because we need to help keep utilities financially solvent, so it doesn't harm ratepayers, as far as, like, increasing costs, and also, you know, make sure that we are adequately providing for

103

00:15:13.820 --> 00:15:17.150

Jennifer Hill-Hart, Oregon CUB (she/her): the needs of the companies, as well, for...

104

00:15:17.330 --> 00:15:32.839

Jennifer Hill-Hart, Oregon CUB (she/her): other investments that they have. And yep, we're really grateful the Commission's taking this on. We need some leadership here, and we just encourage the Commission to make sure that folks who were engaged to this legislature are at the table,

105

00:15:33.380 --> 00:15:45.669

Jennifer Hill-Hart, Oregon CUB (she/her): Just so we can make sure we have this robust conversation that is addressing, you know, as much concerns as we can. And, you know, do want to make sure that we are wrapping this up in time to have

106

00:15:45.950 --> 00:15:49.950

Jennifer Hill-Hart, Oregon CUB (she/her): You know, something ready to go for this session that, you know, we can have,

107

00:15:50.180 --> 00:16:05.269

Jennifer Hill-Hart, Oregon CUB (she/her): as best... as much agreement as we can have, on something to move forward with, because this is an issue that applies to, you know, affects all of our electric utilities, so we need to be prepared. Yeah, thank you so much for your time, and I'm happy to answer any questions if you have.

108

00:16:07.200 --> 00:16:09.669

Chair Letha Tawney - Oregon PUC: Thank you, Jennifer. I appreciate Cubs.

109

00:16:10.150 --> 00:16:17.660

Chair Letha Tawney - Oregon PUC: Thoughtful balancing of ratepayers and the challenges that climate adaptation presents to ratepayers.

110

00:16:18.990 --> 00:16:20.540

Chair Letha Tawney - Oregon PUC: Questions for Jennifer?

111

00:16:21.440 --> 00:16:24.950

Chair Letha Tawney - Oregon PUC: No. Great. Thanks for coming this morning.

112

00:16:26.230 --> 00:16:34.240

Chair Letha Tawney - Oregon PUC: Any other comments on this item? I know we did receive some written comments that we reviewed that are attached to the agenda.

113

00:16:35.360 --> 00:16:36.979

Chair Letha Tawney - Oregon PUC: I appreciate those.

114

00:16:40.170 --> 00:16:40.980

Chair Letha Tawney - Oregon PUC: Okay.

115

00:16:42.110 --> 00:16:52.500

Chair Letha Tawney - Oregon PUC: Well, let's turn to deliberation. I'd like to start... I think this...

116

00:16:53.150 --> 00:17:00.089

Chair Letha Tawney - Oregon PUC: Expert review of the policy options before us, before the state, is really essential.

117

00:17:01.110 --> 00:17:07.200

Chair Letha Tawney - Oregon PUC: the Oregon Energy Strategy laid out... A vision of,

118

00:17:07.369 --> 00:17:10.290

Chair Letha Tawney - Oregon PUC: What decarbonizing the economy will require.

119

00:17:11.130 --> 00:17:14.620

Chair Letha Tawney - Oregon PUC: And, as we've talked about before.

120

00:17:14.859 --> 00:17:21.119

Chair Letha Tawney - Oregon PUC: It's clear that that is lower cost than doing nothing, but requires really substantial capital.

121

00:17:21.490 --> 00:17:24.880

Chair Letha Tawney - Oregon PUC: The set of capital investments in the electric sector.

122

00:17:25.520 --> 00:17:33.079

Chair Letha Tawney - Oregon PUC: And... I think, the interplay of trying to...

123

00:17:33.580 --> 00:17:40.430

Chair Letha Tawney - Oregon PUC: Find, draw into the state at a low cost that scale of capital.

124

00:17:40.570 --> 00:17:45.020

Chair Letha Tawney - Oregon PUC: in order to provide the essential services that Tucker pointed to.

125

00:17:46.070 --> 00:17:49.639

Chair Letha Tawney - Oregon PUC: Is really challenged by the current

126

00:17:49.760 --> 00:17:54.960

Chair Letha Tawney - Oregon PUC: Construct of... of completely uncapped wildfire liability.

127

00:17:56.280 --> 00:18:04.849

Chair Letha Tawney - Oregon PUC: I don't think... That means No wildfire liability is necessary.

128

00:18:05.230 --> 00:18:17.599

Chair Letha Tawney - Oregon PUC: In order to move that capital. But I think some sense of the scale of risk is necessary in order to mobilize the capital Oregon policymakers want to deploy.

129

00:18:17.870 --> 00:18:20.020

Chair Letha Tawney - Oregon PUC: At a reasonable cost to ratepayers.

130

00:18:20.560 --> 00:18:28.429

Chair Letha Tawney - Oregon PUC: And I think getting some expertise around what is... how do you balance

131

00:18:29.360 --> 00:18:32.899

Chair Letha Tawney - Oregon PUC: That need for low-cost capital with the...

132

00:18:33.050 --> 00:18:36.980

Chair Letha Tawney - Oregon PUC: need for accountability? How do you set out

133

00:18:37.500 --> 00:18:42.670

Chair Letha Tawney - Oregon PUC: Boundaries and... and incentives to drive safety.

134

00:18:43.370 --> 00:18:47.720

Chair Letha Tawney - Oregon PUC: But also enable access to essential services.

135

00:18:47.870 --> 00:18:51.659

Chair Letha Tawney - Oregon PUC: We need some guidance on how to do that.

136

00:18:53.960 --> 00:19:00.759

Chair Letha Tawney - Oregon PUC: And I am... Really concerned about the scale of wildfire mitigation spending.

137

00:19:01.140 --> 00:19:06.239

Chair Letha Tawney - Oregon PUC: We've seen in California, That spending really ballooned.

138

00:19:06.610 --> 00:19:13.530

Chair Letha Tawney - Oregon PUC: the utilities last year in California, the large IOUs spent more than $9 billion

139

00:19:13.710 --> 00:19:17.400

Chair Letha Tawney - Oregon PUC: Trying to drive ignitions to zero.

140

00:19:19.450 --> 00:19:26.139

Chair Letha Tawney - Oregon PUC: $9 billion were not spent on any other sort of wildfire mitigation or risk reduction.

141

00:19:26.610 --> 00:19:30.119

Chair Letha Tawney - Oregon PUC: And they still experienced the January fires.

142

00:19:30.680 --> 00:19:37.269

Chair Letha Tawney - Oregon PUC: that were incredibly devastating. And I am very concerned about Oregon sort of following

143

00:19:37.690 --> 00:19:45.589

Chair Letha Tawney - Oregon PUC: That path of just spending to try to drive ignitions from one source to zero.

144

00:19:46.070 --> 00:19:57.739

Chair Letha Tawney - Oregon PUC: And potentially failing. I mean, if the California utilities couldn't drive ignitions to zero, I really worry about whether we will be able to, at any sort of reasonable cost.

145

00:19:58.110 --> 00:20:04.480

Chair Letha Tawney - Oregon PUC: And that's only one source of ignitions. The communities still face enormous risk.

146

00:20:05.120 --> 00:20:10.240

Chair Letha Tawney - Oregon PUC: And fundamentally, we have to reduce that community-level risk.

147

00:20:10.370 --> 00:20:15.940

Chair Letha Tawney - Oregon PUC: to catastrophe, As opposed to being centered exclusively on ignitions.

148

00:20:16.150 --> 00:20:25.589

Chair Letha Tawney - Oregon PUC: I'm really... anxious to see how, sort of, lessons learned from across the West might inform us

149

00:20:25.690 --> 00:20:29.939

Chair Letha Tawney - Oregon PUC: Inform our ability to balance those needs more effectively.

150

00:20:30.650 --> 00:20:34.910

Chair Letha Tawney - Oregon PUC: Oregon can't afford to replicate California.

151

00:20:35.140 --> 00:20:37.829

Chair Letha Tawney - Oregon PUC: Either in the spend by the utilities.

152

00:20:38.210 --> 00:20:42.900

Chair Letha Tawney - Oregon PUC: Or the continued disasters. And we have to arrive at something different.

153

00:20:43.440 --> 00:20:50.289

Chair Letha Tawney - Oregon PUC: Because our communities just can't afford the path that has played out in California.

154

00:20:51.800 --> 00:21:08.180

Chair Letha Tawney - Oregon PUC: So, I'm really looking forward to seeing the options that are brought forward and supporting a conversation amongst the policymakers who can give us direction on how they'd like to balance. In the meantime, we'll keep doubling down.

155

00:21:08.610 --> 00:21:12.280

Chair Letha Tawney - Oregon PUC: On driving of affordable safety outcomes, but...

156

00:21:12.550 --> 00:21:15.270

Chair Letha Tawney - Oregon PUC: I'm really... I'm really supportive of...

157

00:21:15.770 --> 00:21:25.009

Chair Letha Tawney - Oregon PUC: Of bringing some of that external expertise into the conversation so we can better understand what our options and trade-offs are, and how we can get

158

00:21:25.350 --> 00:21:31.249

Chair Letha Tawney - Oregon PUC: What sort of safety outcomes we need in communities where we've really reduced the risk of catastrophe.

159

00:21:31.580 --> 00:21:37.140

Chair Letha Tawney - Oregon PUC: At a more affordable... Price, and retained access to essential services.

160

00:21:37.440 --> 00:21:42.410

Chair Letha Tawney - Oregon PUC: So, I support this effort and really look forward to

161

00:21:43.480 --> 00:21:47.790

Chair Letha Tawney - Oregon PUC: Seeing what it brings into the conversation as we try to find our way through this.

162

00:21:47.910 --> 00:21:51.139

Chair Letha Tawney - Oregon PUC: Through this path, through this, thicket.

163

00:21:51.630 --> 00:22:00.430

Chair Letha Tawney - Oregon PUC: So, I support the motion. I'm, really interested in what, what, how you both see the, the issue.

164

00:22:03.350 --> 00:22:22.670

Comm. Les Perkins - OPUC: Thank you, Chair Taney. Well, first, I just want to thank you, and Representative Marsh, you've both done a lot in this arena, as have many others, Cub, ARECA, like, there's been all kinds of folks trying to figure out how to find a path forward for Oregon. I also just want to appreciate the work that staff did.

165

00:22:22.670 --> 00:22:34.540

Comm. Les Perkins - OPUC: to quickly get this put together, and to be creative, and figure out how to get it together, get it funded, and, keep a process that has integrity and that folks can trust in. So, and...

166

00:22:34.570 --> 00:22:44.540

Comm. Les Perkins - OPUC: The funding side, really appreciate the utilities, being willing to step up, to be able... because there's really not a lot of other options of how we could get this done, especially in the timeframe that we have before us.

167

00:22:44.750 --> 00:22:53.300

Comm. Les Perkins - OPUC: I'm 100%, in support of this moving forward. We just need the clarity of what our options are. Laid on the table.

168

00:22:53.840 --> 00:23:07.510

Comm. Les Perkins - OPUC: fully vetted so that policymakers, regulators, utilities, everybody can have some comfort in what those options are, what the trade-offs are. So, I'm fully, in support.

169

00:23:09.380 --> 00:23:17.550

Comm. Karin Power - Oregon PUC (she/her): And Chair Tani, I think both of you have eloquently laid out the multi-year case, you know, for us taking up the study right now.

170

00:23:17.920 --> 00:23:23.350

Comm. Karin Power - Oregon PUC (she/her): After the public's had an opportunity to weigh in on the state energy strategy, and...

171

00:23:23.490 --> 00:23:34.079

Comm. Karin Power - Oregon PUC (she/her): you know, legislators are eager to see this work move ahead to inform their policy conversations. I think it's an important part of our job as we evaluate

172

00:23:34.160 --> 00:23:43.749

Comm. Karin Power - Oregon PUC (she/her): utility spend and consumer costs, and I, too, am eager to see this work advance, and keep us...

173

00:23:44.070 --> 00:23:49.300

Comm. Karin Power - Oregon PUC (she/her): in line with our colleagues in neighboring states. So, thank you.

174

00:23:52.370 --> 00:23:53.410

Chair Letha Tawney - Oregon PUC: Thanks for that.

175

00:23:53.520 --> 00:23:59.630

Chair Letha Tawney - Oregon PUC: Well, then I'll move. We adopt staff's, proposed commission motion.

176

00:23:59.990 --> 00:24:00.929

Comm. Les Perkins - OPUC: I will second.

177

00:24:01.290 --> 00:24:02.319

Comm. Karin Power - Oregon PUC (she/her): And I'll concur.

178

00:24:02.660 --> 00:24:09.849

Chair Letha Tawney - Oregon PUC: Excellent. The move is adopted, and I'll look forward to the RFP unfolding.

179

00:24:10.570 --> 00:24:21.499

Chair Letha Tawney - Oregon PUC: Thanks, and I'll echo, Commissioner Perkins, thanks to staff for working so hard, and DAS for working so hard to, move this forward in a timely way.

180

00:24:23.360 --> 00:24:24.430

Chair Letha Tawney - Oregon PUC: Okay.

181

00:24:25.480 --> 00:24:29.180

Chair Letha Tawney - Oregon PUC: Let's move on to RA3.

182

00:24:29.370 --> 00:24:32.140

Chair Letha Tawney - Oregon PUC: Docket UM2419.

183

00:24:32.570 --> 00:24:41.489

Chair Letha Tawney - Oregon PUC: Deferred accounting requests related to the Coos County Pipeline. Will, Wheeler, I think you'll introduce it.

184

00:24:42.430 --> 00:24:47.100

Chair Letha Tawney - Oregon PUC: And then we'll take public comments, so I, I, I see you there, Mr. Totland.

185

00:24:47.880 --> 00:24:48.959

Chair Letha Tawney - Oregon PUC: Go ahead, Will.

186

00:24:49.040 --> 00:24:57.619

Will Wheeler - OPUC (he/him): Thank you, and good morning, Chair Taney, Commissioner Perkins, and Commissioner Power. For the record, my name is Will Wheeler, and I am representing PUC staff.

187

00:24:57.640 --> 00:25:11.010

Will Wheeler - OPUC (he/him): I'm joined by Staff Council Stephanie Andrus. Today, I will present staff's recommendation in UM2419 regarding Northwest Natural's application to defer certain costs and revenues associated with the Coos County Pipeline.

188

00:25:11.440 --> 00:25:25.150

Will Wheeler - OPUC (he/him): In its application, Northwest Natural is seeking to defer 2026 Operations and Maintenance, or O&M, costs for the pipeline, along with revenues from Schedule 160, the 2 cent per therm surcharge that Coos County customers pay.

189

00:25:25.410 --> 00:25:35.219

Will Wheeler - OPUC (he/him): The company's plan is to acquire the pipeline from Coos County to perform landslide remediation and mitigation work that Coos County cannot fund as the current owner.

190

00:25:35.390 --> 00:25:51.429

Will Wheeler - OPUC (he/him): Northwest Natural states that the work will require both capital investments and larger-than-typical O&M expenses that cannot be done by it unless it is the owner. The question the Commission is considering today is whether to allow the company to track the O&M expenses through a deferral.

191

00:25:51.940 --> 00:26:03.639

Will Wheeler - OPUC (he/him): To provide a little background, the Coos County Pipeline is a roughly 60-mile pipeline connecting Northwest Natural's Coos County Distribution System to the Williams Interstate Pipeline, and has been in service since 2005.

192

00:26:04.030 --> 00:26:13.310

Will Wheeler - OPUC (he/him): The pipeline was constructed using funds allocated from the state legislature, and a general obligation bond approved by Coos County voters, and is currently owned by Coos County.

193

00:26:13.700 --> 00:26:22.369

Will Wheeler - OPUC (he/him): Over the past 20 years, Northwest Natural has served as operator of the pipeline, and has recovered O&M expenses for the pipeline through an agreement with the county.

194

00:26:22.900 --> 00:26:33.130

Will Wheeler - OPUC (he/him): Northwest Natural has reported that the pipeline is at risk of safety and reliability issues due to landslide activity in the area that urgently needs to be addressed following a 2021 study.

195

00:26:34.100 --> 00:26:50.749

Will Wheeler - OPUC (he/him): Heavy storms in March 2025 exacerbated the landslide risk. Coos County states that it cannot secure the funds necessary to complete the work. In

response, Northwest Natural plans to acquire the pipeline from Coos County for $1 to conduct the mitigation work.

196

00:26:51.670 --> 00:27:10.949

Will Wheeler - OPUC (he/him): This deferral application has received substantial comments from stakeholders. Many local governments and organizations in Coos County filed comments in support of the plan, highlighting the importance of continued safe and reliable natural gas service, economic activity supported by the pipeline, and the high costs of switching to an alternative energy source.

197

00:27:11.520 --> 00:27:32.680

Will Wheeler - OPUC (he/him): The Green Energy Institute at Lewis and Clark Law School, Rogue Climate, and the Sierra Club expressed concern about whether the extent of the costs and repairs necessary match the benefits received by a potentially declining number of customers, and urged the Commission to consider this as an opportunity for zonal electrification and the exploration of non-pipes alternatives.

198

00:27:33.600 --> 00:27:46.219

Will Wheeler - OPUC (he/him): Cubb filed comments arguing that the filing does not satisfy the criteria for a deferral. Cub also expressed concern that this deferral application was being used to provide backdoor approval for Northwest Natural's purchase of the pipeline.

199

00:27:46.470 --> 00:28:00.939

Will Wheeler - OPUC (he/him): Cub encouraged the Commission to deny the deferral request and instead allow normal regulatory lag for these costs, or, if the deferral is

accepted, to make crystal clear that the deferral is not assuring cost recovery for any Coos County pipeline costs.

200

00:28:01.440 --> 00:28:20.839

Will Wheeler - OPUC (he/him): Northwest Natural filed response comments, though time constraints prevented addressing these in the staff memo. It argues that denial of this application would not create normal regulatory lag, because it could not have incorporated these costs into rates, as it is not the current owner, and reiterated its claim that this deferral reduces the frequency of rate changes.

201

00:28:21.090 --> 00:28:30.389

Will Wheeler - OPUC (he/him): Northwest Natural urged the Commission to focus on the safety issues that need to be addressed, and asked that it would not be denied cost recovery solely for acquiring the pipeline.

202

00:28:31.090 --> 00:28:48.509

Will Wheeler - OPUC (he/him): Staff would like to thank all of the stakeholders who participated in this process for their timely and thoughtful feedback provided through meetings and written comments. Staff notes that allocation for costs related to the pipeline has not yet been determined, and will thoroughly explore that issue in the relevant cost recovery dockets.

203

00:28:48.730 --> 00:28:58.259

Will Wheeler - OPUC (he/him): Staff also acknowledges the concerns raised regarding electrification, and is similarly committed to finding viable opportunities to test beneficial electrification models.

204

00:28:58.480 --> 00:29:07.769

Will Wheeler - OPUC (he/him): But worries that electrification proposals here may not be well aligned with local community feedback or near-term timelines for core decisions regarding the pipeline.

205

00:29:09.010 --> 00:29:26.000

Will Wheeler - OPUC (he/him): Staff believes that the Commission should approve Northwest Natural's deferral request. While staff disagrees with Cub's position on statutory criteria, staff agrees that the amounts expected to be deferred are small, and believes that it is improper to approve a deferral simply for containing unforeseen costs.

206

00:29:26.190 --> 00:29:36.429

Will Wheeler - OPUC (he/him): Staff acknowledges that the use of deferrals has increased too much recently, and is committed to addressing the overuse of deferrals in the implementation of HB 3179.

207

00:29:36.930 --> 00:29:48.969

Will Wheeler - OPUC (he/him): However, staff believes that the circumstances here are unique, with Northwest Natural acquiring a pipeline with possibly imminent safety risks from an entity that cannot make the repairs itself.

208

00:29:49.550 --> 00:29:57.329

Will Wheeler - OPUC (he/him): In making this recommendation, staff reiterates that approval of this deferral does not constitute pre-approval of any of the costs that are tracked.

209

00:29:57.490 --> 00:30:02.430

Will Wheeler - OPUC (he/him): Prudence determination will occur at the time that the company requests to recover these costs.

210

00:30:03.060 --> 00:30:15.190

Will Wheeler - OPUC (he/him): To provide guidance to the company regarding that prudence investigation, staff provided in its memo an expectation for the types of information it would closely examine, including exploration of non-pipes alternatives.

211

00:30:15.620 --> 00:30:23.759

Will Wheeler - OPUC (he/him): With that, staff recommends that the Commission approve Northwest Natural's application. This concludes my opening remarks, and I am available for questions.

212

00:30:26.150 --> 00:30:32.890

Chair Letha Tawney - Oregon PUC: Thank you so much, Will. I found the staff memo very, very thorough, and I appreciated the...

213

00:30:33.200 --> 00:30:40.220

Chair Letha Tawney - Oregon PUC: laying out, in particular, procedurally, where we're at in this process. Any questions for... for staff?

214

00:30:42.620 --> 00:30:44.069

Chair Letha Tawney - Oregon PUC: Nope? Okay.

215

00:30:44.820 --> 00:30:46.059

Chair Letha Tawney - Oregon PUC: Thanks so much, Will.

216

00:30:46.480 --> 00:30:53.999

Chair Letha Tawney - Oregon PUC: All right, so let me ask for a show of hands. Raise your hand if you'd like to comment on this issue.

217

00:30:54.460 --> 00:30:59.400

Chair Letha Tawney - Oregon PUC: I see Zach and Bob,

218

00:31:00.550 --> 00:31:04.080

Chair Letha Tawney - Oregon PUC: And I know we had a... somebody from Coos County

219

00:31:04.970 --> 00:31:08.490

Chair Letha Tawney - Oregon PUC: Who popped on earlier, so if you...

220

00:31:08.660 --> 00:31:12.230

Chair Letha Tawney - Oregon PUC: like to comment as well.

221

00:31:12.460 --> 00:31:13.290

jsweet: There we go.

222

00:31:13.560 --> 00:31:15.090

Chair Letha Tawney - Oregon PUC: Commissioner Sweet, I believe?

223

00:31:15.090 --> 00:31:15.940

jsweet: morning.

224

00:31:15.940 --> 00:31:21.970

Chair Letha Tawney - Oregon PUC: Good morning. I'll take you first, since you're from the community, and then we'll loop around to the other stakeholders.

225

00:31:22.210 --> 00:31:27.979

jsweet: Thank you. Well, good morning to Chair Taney and Commissioners Power and Perkins. Can you hear okay?

226

00:31:28.250 --> 00:31:29.020

Chair Letha Tawney - Oregon PUC: Yes, sir.

227

00:31:29.020 --> 00:31:41.619

jsweet: I'm John Sweet, Coos County Commissioner. First, I want to thank the Oregon PUC and Northwest Natural for moving this process ahead. The loss of natural gas service would devastate our county.

228

00:31:41.820 --> 00:31:50.279

jsweet: And yet another thank you is due to Northwest Natural. We could not ask for a better corporate partner than they have been.

229

00:31:50.630 --> 00:32:08.470

jsweet: Natural gas has become a primary source of energy for our county, particularly for those companies that are providing family wage jobs. Its use spans many economic sectors, agriculture, tourism, healthcare, education, manufacturing, and commercial.

230

00:32:08.700 --> 00:32:13.670

jsweet: Some 1,900 family homes now depend on natural gas in the county.

231

00:32:13.970 --> 00:32:21.780

jsweet: Unfortunately, our pipeline is at risk of failure due to landslides and floods caused by heavy rains.

232

00:32:21.960 --> 00:32:33.610

jsweet: As described below, Coos County simply does not have the financial resources to make the lasting repairs needed to protect the pipeline from these events over time.

233

00:32:34.150 --> 00:32:35.570

jsweet: As you know.

234

00:32:35.720 --> 00:32:50.059

jsweet: The pipeline was partially funded by a State of Oregon grant, and in the larger part, by a bond levy approved and paid for by county citizens. The bonds have been paid off in full.

235

00:32:50.200 --> 00:33:06.980

jsweet: After construction was completed, remaining bond revenues and proceeds from a lawsuit against a negligent pipeline contractor were set aside as a maintenance reserve. A rate surcharge was enacted to provide for O&M costs.

236

00:33:07.700 --> 00:33:11.109

jsweet: In fact, the ON cost, ref...

237

00:33:11.610 --> 00:33:23.809

jsweet: or the proceeds of the rate surcharge were fully consumed by O&M costs, leaving nothing to supplement the maintenance reserve.

238

00:33:24.230 --> 00:33:32.109

jsweet: The county did obligate another $1.45 million of ARPA funds to the reserve.

239

00:33:32.260 --> 00:33:41.680

jsweet: Despite that, the reserve has been spent down on major repairs to a current level of roughly $2 million.

240

00:33:42.430 --> 00:33:53.509

jsweet: Northwest Natural projects that $12.5 million of lasting repairs are needed to restore the pipeline to safe working conditions.

241

00:33:54.100 --> 00:33:58.260

jsweet: We have sought grants for repairs, but none have been awarded.

242

00:33:59.160 --> 00:34:05.149

jsweet: Our county is simply not in a position to pay for the needed pipeline maintenance.

243

00:34:05.410 --> 00:34:12.369

jsweet: We are struggling to provide even basic county services such as public safety and voting.

244

00:34:12.920 --> 00:34:17.129

jsweet: Pre-COVID, we were barely able to keep our nose above water.

245

00:34:17.530 --> 00:34:26.659

jsweet: Post-COVID inflation, combined with a limit on property tax increases imposed by measures 5 and 50, has been a killer.

246

00:34:26.969 --> 00:34:32.379

jsweet: For two years now, the county budget has been largely balanced through staff reductions.

247

00:34:32.600 --> 00:34:36.469

jsweet: 50% of our jail capacity has been shut down.

248

00:34:36.600 --> 00:34:43.070

jsweet: Only the more serious crimes are prosecuted due to reductions in DA staffing.

249

00:34:43.350 --> 00:34:48.749

jsweet: I'm anticipating that road patrol will be eliminated in next year's budget.

250

00:34:49.219 --> 00:34:53.780

jsweet: These are but a few examples of our efforts to balance our budget.

251

00:34:54.380 --> 00:34:59.889

jsweet: It's a picture common to many local jurisdictions, and it's not a pretty one.

252

00:35:00.200 --> 00:35:11.110

jsweet: The point for this conversation is that we desperately need to transfer ownership of the county's gas pipeline to a better funded organization.

253

00:35:11.580 --> 00:35:16.300

jsweet: And with that, I conclude my testimony. I'm happy to answer questions.

254

00:35:18.560 --> 00:35:22.600

Chair Letha Tawney - Oregon PUC: Thank you very much, Commissioner Sweet. Any questions for the Commissioner?

255

00:35:24.480 --> 00:35:37.160

Chair Letha Tawney - Oregon PUC: Yeah, thank you. And I, I note we, received a wide range of comments, written comments, as well in the docket from the Coos County, community, so, thank you for that.

256

00:35:37.560 --> 00:35:38.380

jsweet: You're welcome.

257

00:35:39.070 --> 00:35:54.440

Chair Letha Tawney - Oregon PUC: Alright, let me turn to, Bob, Jenks with Cub, and then we'll, we'll end with the company. So if there are other folks who would like to, speak, if you can raise your hand, that would be great.

258

00:35:54.770 --> 00:35:55.880

Chair Letha Tawney - Oregon PUC: Bob.

259

00:35:56.190 --> 00:35:58.499

Bob Jenks, Oregon CUB, he/him: Great, thank you, Commissioner.

260

00:35:58.760 --> 00:36:05.760

Bob Jenks, Oregon CUB, he/him: For the record, my name's Bob Jenks. I'm the Executive Director of Oregon's Citizens Utility Board.

261

00:36:05.760 --> 00:36:27.760

Bob Jenks, Oregon CUB, he/him: Let me start by saying that I personally love Oregon's Bay Area. I have good friends who have moved to both Coos Bay and Coquille, my uncle retired to Bandon, and my mom lived for years in Brookings, which is further south, but we went through Oregon's Bay Area on semi-annual visits. Coos Bay, North Bend, Coquille, Bandon, Charleston are all wonderful communities.

262

00:36:28.120 --> 00:36:40.640

Bob Jenks, Oregon CUB, he/him: The Coos Bay pipeline was built for economic development purposes to bring jobs to the port of Coos Bay. While the demand is below what was anticipated, there are industrial customers and jobs in Coos Bay that are dependent on this pipeline.

263

00:36:40.810 --> 00:36:59.339

Bob Jenks, Oregon CUB, he/him: CUB recognizes that closing the pipeline would cost jobs and have significant negative effects on the entire community. That is not CUB's goal. Though I also recognize that climate change is causing more and more extreme weather events that could threaten this pipeline, and that climate change is also creating the need to phase out fossil fuels.

264

00:37:00.330 --> 00:37:07.840

Bob Jenks, Oregon CUB, he/him: There are 3 important issues before the Commission. The first, and most immediate, is whether a deferral is appropriate rate treatment.

265

00:37:07.840 --> 00:37:24.229

Bob Jenks, Oregon CUB, he/him: The second and more complex, is what happens to the Coos Bay pipeline, and who pays for the costs associated with it. And the third is what we should... is whether we should tear up the stipulation between Northwest Natural Cubs staff and industrial customers and Coos Bay.

266

00:37:24.360 --> 00:37:35.289

Bob Jenks, Oregon CUB, he/him: Coos County, on how to recover the uneconomic costs of the distribution system, and if so, what replaces it? While the deferral is at issue today, these three issues are interrelated.

267

00:37:36.020 --> 00:37:47.770

Bob Jenks, Oregon CUB, he/him: I first want to address the deferral standard. There are two standards for deferrals, and I'm not an attorney, so I'm not trying to give a legal analysis, but I'm speaking from my experience practicing before the Commission.

268

00:37:47.820 --> 00:37:57.599

Bob Jenks, Oregon CUB, he/him: The first is minimizing rate changes. We have been in a major rate proceeding with Northwest Natural every month except two, since December 2023.

269

00:37:57.610 --> 00:38:08.980

Bob Jenks, Oregon CUB, he/him: Over the last year, we invented a new form of rate case called an ARM. With PGE, the arm was a case that was limited to costs and offsets that were negotiated in an MOU between stakeholders and the company.

270

00:38:09.030 --> 00:38:18.359

Bob Jenks, Oregon CUB, he/him: With Northwest Natural, there is no MOU. The utility seems to get to decide what costs and what offsets are included. And they may file another one in November. Why not?

271

00:38:18.560 --> 00:38:21.409

Bob Jenks, Oregon CUB, he/him: So whether we're minimizing rate changes.

272

00:38:21.600 --> 00:38:28.059

Bob Jenks, Oregon CUB, he/him: So rather than minimizing rate changes and cost recovery, we were actually making it easier for the company to change rates.

273

00:38:28.410 --> 00:38:39.410

Bob Jenks, Oregon CUB, he/him: The other criteria is matching costs and benefits. This is not about matching costs and benefits. This is part of a proposal by the company to actually mismatch costs and benefits.

274

00:38:39.610 --> 00:38:57.700

Bob Jenks, Oregon CUB, he/him: The Coos Bay Pipeline was built for economic development purposes. Only 15% of the gas that flowed through it in 2025 was used to serve residential customers. And Northwest Natural is now proposing that we shift these costs to the system with more than 66% of these costs paid by residential customers.

275

00:38:58.300 --> 00:39:03.070

Bob Jenks, Oregon CUB, he/him: The company also wants to mismatch costs and benefits of the distribution system.

276

00:39:03.160 --> 00:39:17.140

Bob Jenks, Oregon CUB, he/him: Expanding gas service is not based on universal service, but based on economics. When the Coos County pipeline was being developed, there was a need for additional load, and Northwest Natural wanted to build a local distribution system.

277

00:39:17.140 --> 00:39:23.390

Bob Jenks, Oregon CUB, he/him: There was a lot of political pressure to accept this, and place the cost primarily on the residential customers of the system.

278

00:39:23.630 --> 00:39:37.420

Bob Jenks, Oregon CUB, he/him: But from Cubs' perspective, an uneconomic expansion of the gas system due to political pressure would have created a terrible president. So we objected. We applied the normal standards to when the system will pay for expanding the system.

279

00:39:37.580 --> 00:39:47.630

Bob Jenks, Oregon CUB, he/him: And ended up with a stipulation that customers of the Northwest Natural System, again, primarily residential, pay the economic costs of expansion, or $10 billion.

280

00:39:47.630 --> 00:40:00.279

Bob Jenks, Oregon CUB, he/him: The costs above the economic expansion were split. Northwest Natural contributed $400,000, and the customers of the new distribution system were assigned $1.6 million through a 2 cent per therm surcharge.

281

00:40:00.490 --> 00:40:04.130

Bob Jenks, Oregon CUB, he/him: Cub was skeptical of Northwest Natural's load forecast, and our current

282

00:40:04.980 --> 00:40:23.700

Bob Jenks, Oregon CUB, he/him: Concerns were addressed by the agreement that said if after 20 years, the surcharge had not provided $1.6 million, within 3 months, Northwest Natural would identify what changes were needed to be made to the surcharge, and how long to collect it for the remaining amount. This stipulation still governs the distribution system.

283

00:40:23.860 --> 00:40:32.170

Bob Jenks, Oregon CUB, he/him: But Northwest Naturals proposed tearing up this agreement and sticking the costs on the system, again, with residential customers paying more than 66%.

284

00:40:32.630 --> 00:40:45.420

Bob Jenks, Oregon CUB, he/him: So we're not trying to match costs and benefits, we're trying to have the residential customers of the system bail out uneconomic investments in Coos County, in the Coos County pipeline and the distribution system.

285

00:40:47.370 --> 00:40:53.480

Bob Jenks, Oregon CUB, he/him: So the deferral does not minimize rate changes, and it does not match costs and benefits.

286

00:40:53.740 --> 00:41:02.870

Bob Jenks, Oregon CUB, he/him: The staff memo seemed to struggle with how do we justify this deferral, and they arrived at a new standard for deferrals that Cub strongly objects to.

287

00:41:05.260 --> 00:41:21.100

Bob Jenks, Oregon CUB, he/him: According to that staff memo, it is unfair to deny Northwest Natural's application to defer the costs of repairs on the grounds that Northwest Natural should have foreseen this cost and accounted for it in current rates, because this is not something Northwest Natural could do.

288

00:41:21.450 --> 00:41:38.880

Bob Jenks, Oregon CUB, he/him: CUB rejects the idea that it is unfair for a utility to make them absorb slightly more than $1 million of unforeseen costs. Utilities always have unforeseen costs, as do state agencies, as do nonprofits, as do households. This is simply an invitation for more deferrals.

289

00:41:39.090 --> 00:41:50.920

Bob Jenks, Oregon CUB, he/him: Ask yourself if it is unfair for a utility to keep $1 million in unforeseen savings, because unforeseen savings also occur, but rarely do we see those get passed through to customers.

290

00:41:51.710 --> 00:42:02.599

Bob Jenks, Oregon CUB, he/him: CUB's recommendation is to urge the Commission to reject deferring the unanticipated costs of Northwest Natural. They do not rise to the level of a deferral.

291

00:42:02.600 --> 00:42:12.770

Bob Jenks, Oregon CUB, he/him: If a deferral is needed to keep the county's surcharge in place, we are okay with deferring the revenues from that surcharge, because the stipulation we all agreed to

292

00:42:12.770 --> 00:42:22.700

Bob Jenks, Oregon CUB, he/him: clearly anticipated keeping the surcharge after 20 years if the cost of the distribution system has not been recovered, and that's the circumstances we're in.

293

00:42:22.880 --> 00:42:38.300

Bob Jenks, Oregon CUB, he/him: Thank you. I'm happy to answer questions, and as a note, CUB's counsel, Claire Valentine-Fossum, is here, if you have legal questions about the

deferral standard, and Emily Dugan from CUB is also here, and she's been taking the lead in analyzing this proposal.

294

00:42:40.740 --> 00:42:53.279

Chair Letha Tawney - Oregon PUC: Bob, I appreciate the history, and I do appreciate that this is... this issue is spread across a variety of dockets, and so I want to appreciate, as well, our AHD team.

295

00:42:53.650 --> 00:43:03.219

Chair Letha Tawney - Oregon PUC: putting notice in those... in those contested case dockets. So we... we can't necessarily engage on the contested case dockets today, but...

296

00:43:04.060 --> 00:43:15.440

Chair Letha Tawney - Oregon PUC: I'm curious... You're, agreeing to the deferral is not agreeing to amortization or, or the allocation of

297

00:43:15.660 --> 00:43:21.970

Chair Letha Tawney - Oregon PUC: Any deferred costs, eventual cost recovery of, of those deferred costs.

298

00:43:22.860 --> 00:43:24.469

Chair Letha Tawney - Oregon PUC: And I'm curious...

299

00:43:24.850 --> 00:43:44.850

Chair Letha Tawney - Oregon PUC: if you think that there is... if we agree to the deferral here, if we are somehow bound on a... on an amortization question, then to spread the costs across Northwest Natural's larger rate base, or if you're worried that that will be the proposal, and you're sort of prevent...

300

00:43:45.690 --> 00:43:48.279

Chair Letha Tawney - Oregon PUC: Preempt... trying to preempt that argument.

301

00:43:48.670 --> 00:43:59.359

Bob Jenks, Oregon CUB, he/him: Well, the two issues. One is that is Northwest Natural's proposal, is to put these costs onto the system and collect them

302

00:43:59.420 --> 00:44:22.960

Bob Jenks, Oregon CUB, he/him: primarily from residential customers. That's the effect of putting these on margin rates on the system. But the question that we're trying to raise is, are these eligible for a deferral? If they're not eligible for a deferral, we don't get to the amortization phase, we don't get to that stage. And the deferral orders from the Commission, from

303

00:44:22.960 --> 00:44:28.329

Bob Jenks, Oregon CUB, he/him: A decade ago, where we had a series of sort of deep dives looking at use of deferrals.

304

00:44:28.330 --> 00:44:46.760

Bob Jenks, Oregon CUB, he/him: clearly laid out sort of a two-step process, and the first step is to consider, is the cost eligible for a deferral? And we're extremely skeptical of that. Again, the standard that they're unforeseen to us is if we start saying unforeseen costs are eligible for a deferral.

305

00:44:46.760 --> 00:44:49.829

Bob Jenks, Oregon CUB, he/him: - we're gonna see more deferrals filed.

306

00:44:52.480 --> 00:45:07.019

Chair Letha Tawney - Oregon PUC: I, I appreciate that and recognize we're in a larger conversation around deferrals and the multi-year rate making, so I, I, it is an issue we have struggled with over the last several years. So, thank you.

307

00:45:07.720 --> 00:45:14.210

Chair Letha Tawney - Oregon PUC: I see, Claire, you've raised your hand. Do you want to add to something to what Bob is, arguing?

308

00:45:14.480 --> 00:45:15.560

Chair Letha Tawney - Oregon PUC: We're raising?

309

00:45:17.440 --> 00:45:20.600

Claire Valentine-Fossum: Yes, thank you, Chair Tommy. Can you hear me okay?

310

00:45:21.610 --> 00:45:39.889

Claire Valentine-Fossum: Great, thank you for that. And, before I wanna... before I do add to address some parts of your question to add a little bit more context to what Bob just said, I just want to first acknowledge that there are, varying count... Varying comments from Coos County residents in the public comments tab, in addition to those that were filed into the docket.

311

00:45:39.960 --> 00:45:56.789

Claire Valentine-Fossum: And as the commissioners know, we encourage engagement in commission proceedings, and we recognize it takes a lot of work to file a comment, and we appreciate the comments from all the residents that were in here. To your point, too, about, I think, kind of focusing on the, is this eligible for a deferral?

312

00:45:57.230 --> 00:46:15.229

Claire Valentine-Fossum: part of our concern, as to what Bob had noted earlier, is that this sets up a new standard whereby... so typically, of course, we're looking at the statute, we're looking at what is allowed, and then there's the discretionary stage, of the commission, and at that point, in that stage of the discretionary stage.

313

00:46:15.230 --> 00:46:31.720

Claire Valentine-Fossum: you're looking at both what is the event that caused the need for the deferral, so is this stochastic? Is this a scenario risk? That's where you're looking at, were these events, were these costs unseen? But you're also looking at the magnitude, and those are interrelated. So if we start to just focus on, is this foreseen.

314

00:46:31.720 --> 00:46:35.309

Claire Valentine-Fossum: Which, according... you know, and according to the staff report, says.

315

00:46:35.320 --> 00:46:43.680

Claire Valentine-Fossum: These are unique circumstances, notwithstanding the magnitude, then we kind of... then we start to get away from this other component of it.

316

00:46:43.680 --> 00:46:57.659

Claire Valentine-Fossum: Which was the focus of CUB's, opposition in here on that second stage, is that regardless of whether this is scenario or stochastic risk, the $1.3 million just... it doesn't get to the impact, the financial impact.

317

00:46:57.770 --> 00:47:04.549

Claire Valentine-Fossum: Component that is part of that deferential, standard. And that's the same thing that

318

00:47:04.670 --> 00:47:21.849

Claire Valentine-Fossum: the same position that the Commission has taken in 1623, when it denied PG's application for a deferred counting, where it said, this is less than 1% of the revenue, you just haven't gotten to the standard that we would need for the financial impact to the, to the utility. So that's sort of a...

319

00:47:21.860 --> 00:47:30.890

Claire Valentine-Fossum: Regardless of whether we're talking about stochastic or scenario, whether this was foreseen, there's an impact of what is the magnitude, to the... to the utility, and

320

00:47:31.570 --> 00:47:37.530

Claire Valentine-Fossum: We just went from a conversation, right, about the impact of cost to customers when we're talking about wildfire.

321

00:47:37.660 --> 00:47:51.209

Claire Valentine-Fossum: Very similarly, we're talking about the impact to costs here for customers, and while I recognize it's not an automatic, entry into rates, right, we have to go through, still through the amortization part of it, this is a part, like, this level.

322

00:47:51.500 --> 00:48:02.059

Claire Valentine-Fossum: of, is this warranted, is part of what the Commission, back when they were looking at deferrals, back in 2024, when the Commission said it would take a stricter stance on these type of mechanisms, like, we don't need to wait for the FAIR Act.

323

00:48:02.180 --> 00:48:05.400

Claire Valentine-Fossum: For this to happen, we can... the Commission could make a decision now on it.

324

00:48:07.190 --> 00:48:08.980

Claire Valentine-Fossum: Thank you for that.

325

00:48:09.940 --> 00:48:17.919

Claire Valentine-Fossum: May I address one more other point that was made in terms of a legal question on the regulatory lag side of things? Sure. I believe there was a statement that,

326

00:48:18.290 --> 00:48:25.959

Claire Valentine-Fossum: this is not applicable for regulatory lag, which, of course, that was one of Cub's arguments, because this was not foreseen, these were not foreseen costs, again.

327

00:48:25.960 --> 00:48:39.009

Claire Valentine-Fossum: That's not the standard for regulatory lag. You can have unforeseen costs that happen between rate cases, that can be taken on as regulatory lag, much like there can be unforeseen earnings, or other revenue that, supports the regulatory lag.

328

00:48:39.010 --> 00:48:41.050

Claire Valentine-Fossum: Of a utility. So, thank you.

329

00:48:42.360 --> 00:48:44.150

Chair Letha Tawney - Oregon PUC: Thanks. I appreciate that.

330

00:48:44.660 --> 00:48:46.660

Chair Letha Tawney - Oregon PUC: Any questions for Cup?

331

00:48:49.430 --> 00:48:50.200

Chair Letha Tawney - Oregon PUC: No?

332

00:48:51.380 --> 00:48:52.190

Chair Letha Tawney - Oregon PUC: Okay.

333

00:48:52.790 --> 00:48:56.760

Chair Letha Tawney - Oregon PUC: Appreciate the, clear argumentation.

334

00:48:57.040 --> 00:48:58.670

Chair Letha Tawney - Oregon PUC: Okay.

335

00:48:59.590 --> 00:49:02.160

Chair Letha Tawney - Oregon PUC: And Zach with the company.

336

00:49:09.390 --> 00:49:17.260

Zach Kravitz (NW Natural): Good morning, Chair Connie, Commissioner Perkins, Commissioner Power, Zach Kravitz, for West Natural,

337

00:49:17.570 --> 00:49:20.269

Zach Kravitz (NW Natural): First off, I do want to,

338

00:49:21.100 --> 00:49:33.029

Zach Kravitz (NW Natural): say thank you and, and appreciate all of staff, and really all of the stakeholders' work in this process. This is a complicated,

339

00:49:33.110 --> 00:49:47.420

Zach Kravitz (NW Natural): process and, transaction, that has a lot of regulatory, aspects to it, and, staff has, and CUB and other, stakeholders have really,

340

00:49:47.570 --> 00:50:04.950

Zach Kravitz (NW Natural): dived in and, and, worked really, well together to... to get us at least to this point. And we appreciate all the stakeholders' views, including the Coos County, community and... and Chair Sweet, who have,

341

00:50:04.950 --> 00:50:12.750

Zach Kravitz (NW Natural): shared their views to support Northwest Natural's actions to ensure that the Coos County Pipeline can continue

342

00:50:12.750 --> 00:50:27.130

Zach Kravitz (NW Natural): To provide safe and reliable service. And just generally, the interest of all stakeholders for the well-being of Coos County residents, our 2,300 customers there, that is a shared goal.

343

00:50:27.580 --> 00:50:46.410

Zach Kravitz (NW Natural): And while there are different points of view in terms of how to resolve this, ultimately, we view this decision as one of a priority safety matter for our friends in Coos County. Northwest Natural will step in, and we will make this pipeline safe.

344

00:50:46.470 --> 00:51:03.720

Zach Kravitz (NW Natural): We understand that this is a deferral docket, and cost recovery is not being decided here, and it is incumbent upon Northwest Natural to demonstrate that these investments that we are going to make, the capital investments, and, the,

345

00:51:03.720 --> 00:51:28.379

Zach Kravitz (NW Natural): repairs that fall into the expense category that would be subject to this deferral, that these are prudent actions. And ultimately, we understand that there will be a conversation as well around the allocation of these costs. Mr. Jenks is correct, we

did have a proposal, but we know that there are multiple... there will be other points of view, and that will be part

346

00:51:28.380 --> 00:51:40.089

Zach Kravitz (NW Natural): of another regulatory proceeding, and we will, engage in that there. And so we're not signaling in any way that anything is predetermined by this particular, application.

347

00:51:40.170 --> 00:51:54.629

Zach Kravitz (NW Natural): We do view this as an important step, in the regulatory process, to move forward, with our plans, to, to make these, repairs in, in the pipeline.

348

00:51:54.630 --> 00:52:06.950

Zach Kravitz (NW Natural): And, to the... with respect to some of the discussion around, the deferrals, we do agree with... with staff's analysis, on.

349

00:52:06.950 --> 00:52:24.430

Zach Kravitz (NW Natural): on this deferral, this does create some unique circumstances, around what can be... what is, foreseen, in particular in a situation where the utility is not the owner of the asset, and subsequent events,

350

00:52:24.660 --> 00:52:32.150

Zach Kravitz (NW Natural): intervene and beca... and... changes some of these circumstances that we are facing, and so...

351

00:52:32.150 --> 00:52:56.839

Zach Kravitz (NW Natural): that is an important aspect to this, and then as it relates to just ongoing regulatory lag, why is it not appropriate for that type of situation here? There's really not any way for Northwest Natural to otherwise recover these costs, because in large part, this is a one-time expense that we are going to be making.

352

00:52:56.930 --> 00:53:01.999

Zach Kravitz (NW Natural): As it relates to certain repairs on the pipe, and it would not...

353

00:53:02.100 --> 00:53:15.770

Zach Kravitz (NW Natural): it would not be appropriate for us to bring that forward in a rate case as some sort of routine annual recovery, which is how we set base rates. This kind of stands apart as a one-time cost, that we have not

354

00:53:16.190 --> 00:53:35.740

Zach Kravitz (NW Natural): previously recovered in base rates, so we do think it is appropriate in that respect. Appreciate all of your time. You've received our application and our written comments. If you have questions, we've got some internal folks here, but I... and obviously, Chair Sweet is here, and I'm happy to answer any questions.

355

00:53:37.540 --> 00:53:38.580

Chair Letha Tawney - Oregon PUC: Thanks, Zach.

356

00:53:39.390 --> 00:53:45.920

Chair Letha Tawney - Oregon PUC: So, Cub is arguing that $1.3 million doesn't meet the

357

00:53:46.170 --> 00:53:53.839

Chair Letha Tawney - Oregon PUC: And that, that, just for clarity, is the O&M part of the repair cost. Capital parts of the repair cost will be...

358

00:53:54.400 --> 00:53:59.249

Chair Letha Tawney - Oregon PUC: Adjudicated elsewhere in a different setting, but don't have the same...

359

00:54:00.540 --> 00:54:05.889

Chair Letha Tawney - Oregon PUC: you have a future opportunity for cost recovery of those.

360

00:54:07.060 --> 00:54:22.209

Chair Letha Tawney - Oregon PUC: you know, Cub is arguing $1.3 million is... is simply not... doesn't... doesn't meet any kind of threshold for the company. Help me understand... I hear you... I hear you saying, well, we couldn't have baked it into base rates, but...

361

00:54:23.100 --> 00:54:29.590

Chair Letha Tawney - Oregon PUC: Why is it, sort of why is it large enough to warrant a deferral?

362

00:54:29.880 --> 00:54:32.139

Chair Letha Tawney - Oregon PUC: Or is that not the way I should think about it?

363

00:54:33.560 --> 00:54:43.219

Zach Kravitz (NW Natural): I guess I would step back a little bit and just consider the circumstances that brought us here. I mean, this is a situation where Northwest Natural

364

00:54:43.420 --> 00:54:51.569

Zach Kravitz (NW Natural): prior to filing this application, we were not intending to incur any of these costs. In fact.

365

00:54:51.590 --> 00:55:08.489

Zach Kravitz (NW Natural): we were encouraging, the county to, make these repairs and, fund this pipeline. And ultimately, it got to a point, and, and, you know, Chair Sweet.

366

00:55:08.550 --> 00:55:19.909

Zach Kravitz (NW Natural): shared the situation in the county, it became clear that there was not the ability for the county to do that. And so.

367

00:55:20.750 --> 00:55:39.129

Zach Kravitz (NW Natural): Northwest Natural is here, not... not necessarily because this was our plan and what we wanted to do to become owners of this pipeline and incur this expense and make the required investments. It's here because we... we're here because, ultimately, our customers are at the end of that line, and we need to make it safe.

368

00:55:39.130 --> 00:55:48.820

Zach Kravitz (NW Natural): As part of that, you know, we are looking for, the Commission's support around the, the,

369

00:55:48.820 --> 00:55:54.610

Zach Kravitz (NW Natural): the financial aspect of that commitment as well. And so, looking...

370

00:55:54.750 --> 00:56:16.980

Zach Kravitz (NW Natural): I don't think necessarily that a materiality threshold is appropriate in this particular circumstance. I think it's really kind of the totality of the circumstance that really requires the... necessitates the approval of this acquisition, or excuse me, application.

371

00:56:18.320 --> 00:56:19.150

Chair Letha Tawney - Oregon PUC: Thank you.

372

00:56:19.290 --> 00:56:21.760

Chair Letha Tawney - Oregon PUC: Any, any other questions for the company?

373

00:56:26.120 --> 00:56:26.890

Chair Letha Tawney - Oregon PUC: No.

374

00:56:27.350 --> 00:56:28.130

Chair Letha Tawney - Oregon PUC: Okay.

375

00:56:30.140 --> 00:56:33.120

Chair Letha Tawney - Oregon PUC: Okay. I don't... I'm not rushing anyone. All right.

376

00:56:33.930 --> 00:56:37.079

Chair Letha Tawney - Oregon PUC: Thank you so much, Zach, I appreciate it.

377

00:56:38.410 --> 00:56:44.209

Chair Letha Tawney - Oregon PUC: I'd love to come back to Will, if I could, with a question.

378

00:56:44.700 --> 00:56:56.539

Chair Letha Tawney - Oregon PUC: And this might be a question for you, or you might want to punt it to, Council, but, you know, CUB is raising, sort of,

379

00:56:56.590 --> 00:57:14.089

Chair Letha Tawney - Oregon PUC: the view that they see you creating a new standard, and that this isn't a big enough cost to justify a deferral. And I see the argumentation in the memo, but I wondered, you know, can you put a finer point on

380

00:57:14.210 --> 00:57:23.000

Chair Letha Tawney - Oregon PUC: how... how you see this impacting the... the standard that the Commission has... has sought to utilize with deferrals?

381

00:57:24.970 --> 00:57:44.619

Will Wheeler - OPUC (he/him): Thank you, Chair Taney. I appreciate the question and the opportunity to... to offer a little bit of refinement. I can confidently say staff's intent is not to lower the standard for deferrals in any way. Staff really sees this particular situation as a very unique situation.

382

00:57:45.000 --> 00:57:53.010

Will Wheeler - OPUC (he/him): And kind of the whole aspect of it means that, in this case, Staff thinks that

383

00:57:53.500 --> 00:57:57.649

Will Wheeler - OPUC (he/him): it warrants a deferral. But I would, I would,

384

00:57:58.040 --> 00:58:03.450

Will Wheeler - OPUC (he/him): I would pass it to Staff Counsel Stephanie Andrus if she wants to add anything on the more legal side.

385

00:58:08.180 --> 00:58:20.799

Chair Letha Tawney - Oregon PUC: Stephanie, certainly as I've worked through deferrals over the years, you've been a vociferous advocate for relatively high bar, so I'm curious how you're thinking about this.

386

00:58:22.770 --> 00:58:23.759

Chair Letha Tawney - Oregon PUC: If you're there.

387

00:58:32.550 --> 00:58:34.240

Chair Letha Tawney - Oregon PUC: I don't see you on here.

388

00:58:35.230 --> 00:58:37.150

Chair Letha Tawney - Oregon PUC: Okay.

389

00:58:41.770 --> 00:58:43.430

Chair Letha Tawney - Oregon PUC: Alright, well...

390

00:58:45.350 --> 00:58:53.320

Chair Letha Tawney - Oregon PUC: DOJ, would someone else like to add anything to Will, or we'll just let Will's comments stand?

391

00:58:56.850 --> 00:58:59.450

Chair Letha Tawney - Oregon PUC: Alright, we'll let Will's comments stand.

392

00:59:00.640 --> 00:59:08.599

Chair Letha Tawney - Oregon PUC: Stephanie often has challenges with her Zoom, so I'm gonna chalk it up to, Zoom has, failed her.

393

00:59:11.840 --> 00:59:24.820

Chair Letha Tawney - Oregon PUC: Or maybe failed all of DOJ. So, okay. Well, I think we have what we need in the memo. Certainly staff's argumentation is there. So I am curious, colleagues.

394

00:59:25.250 --> 00:59:31.639

Chair Letha Tawney - Oregon PUC: How you're thinking about the... the issue and the arguments before us.

395

00:59:34.570 --> 00:59:35.980

Comm. Les Perkins - OPUC: I mean, I'll jump in.

396

00:59:36.210 --> 00:59:40.189

Comm. Les Perkins - OPUC: So I just want to recognize, how complex this issue is.

397

00:59:40.670 --> 00:59:44.400

Comm. Les Perkins - OPUC: In relation to the impact on the community and the pipeline it serves,

398

00:59:44.800 --> 01:00:02.640

Comm. Les Perkins - OPUC: or the community the pipeline serves. The total balance of energy available to serve the community, economic factors, state decarbonization goals, these are all factors, and they don't, necessarily nicely align. But what I keep in the front of my mind is that these are people in a community.

399

01:00:02.930 --> 01:00:14.479

Comm. Les Perkins - OPUC: That's struggling economically, has been struggling for some time, and it's very easy to say we need to shift to alternative energy options, but the reality is that this shift takes time and resources, and it doesn't happen overnight.

400

01:00:14.730 --> 01:00:21.020

Comm. Les Perkins - OPUC: So what we're doing today is allowing some time to address urgent safety issues. We're not allocating costs to any customer class.

401

01:00:21.200 --> 01:00:23.630

Comm. Les Perkins - OPUC: We're not determining prudence for the costs.

402

01:00:23.820 --> 01:00:30.469

Comm. Les Perkins - OPUC: We're giving time for a full record to be developed to allow us to make later determinations on if and how costs can be recovered by the company.

403

01:00:30.750 --> 01:00:44.570

Comm. Les Perkins - OPUC: So I appreciate Cub bringing up the need to be vigilant in how we use deferrals. I agree, we have to be vigilant. But I do find this to be a unique circumstance, and it should be seen as just that, just a unique situation.

404

01:00:44.910 --> 01:00:52.399

Comm. Les Perkins - OPUC: And in no way, precedent-setting. So I'm in support, I look forward to...

405

01:00:53.170 --> 01:01:04.340

Comm. Les Perkins - OPUC: This issue developing more fully, where we have better information to judge the prudence of decisions that are being made, and be able to have better information on

406

01:01:04.610 --> 01:01:18.779

Comm. Les Perkins - OPUC: how this fits into the state strategies. There's a lot to unpack, and I expect us to unpack that in later dockets. So, I would be in favor of the proposed commission motion.

407

01:01:23.550 --> 01:01:27.470

Comm. Karin Power - Oregon PUC (she/her): Chair Taney, I'll preface my... God...

408

01:01:28.390 --> 01:01:34.919

Comm. Karin Power - Oregon PUC (she/her): concerns with... I am also supportive of the staff memo recommendation for right now.

409

01:01:36.000 --> 01:01:39.549

Comm. Karin Power - Oregon PUC (she/her): I think this has been characterized to us.

410

01:01:39.700 --> 01:01:52.010

Comm. Karin Power - Oregon PUC (she/her): Up until I read some of the public comments just now, as a urgent safety landslide-driven issue.

411

01:01:52.540 --> 01:01:58.320

Comm. Karin Power - Oregon PUC (she/her): being addressed in this docket, but I note in some of the public comments submitted by

412

01:01:58.660 --> 01:02:02.420

Comm. Karin Power - Oregon PUC (she/her): For example, the City Administrator of the City of North Bend.

413

01:02:02.850 --> 01:02:09.550

Comm. Karin Power - Oregon PUC (she/her): There's a notation that they have exhausted O&M funds, or about to.

414

01:02:09.760 --> 01:02:20.440

Comm. Karin Power - Oregon PUC (she/her): And that there is... Quote... Roughly $2 million remaining for repairs, estimated at 5 to 6 times that amount.

415

01:02:21.390 --> 01:02:25.650

Comm. Karin Power - Oregon PUC (she/her): And I... Seriously question whether.

416

01:02:26.410 --> 01:02:34.390

Comm. Karin Power - Oregon PUC (she/her): Northwest Natural's rate base should absorb significant Ongoing structural issues.

417

01:02:34.560 --> 01:02:37.670

Comm. Karin Power - Oregon PUC (she/her): I think we heard a comment this morning about

418

01:02:37.810 --> 01:02:41.830

Comm. Karin Power - Oregon PUC (she/her): Some issues with subcontractor work, if I understood that correctly.

419

01:02:42.250 --> 01:02:45.049

Comm. Karin Power - Oregon PUC (she/her): And if there's larger issues with the pipeline.

420

01:02:47.850 --> 01:02:53.480

Comm. Karin Power - Oregon PUC (she/her): I, again, am very keen to see substantiation of those costs.

421

01:02:54.150 --> 01:02:57.539

Comm. Karin Power - Oregon PUC (she/her): In the actual proceeding where we determine prudency.

422

01:03:00.410 --> 01:03:02.480

Comm. Karin Power - Oregon PUC (she/her): It's a beautiful area of the state.

423

01:03:02.830 --> 01:03:06.960

Comm. Karin Power - Oregon PUC (she/her): I also love visiting it, and I deeply appreciated Bob Chenk's comments.

424

01:03:07.640 --> 01:03:09.780

Comm. Karin Power - Oregon PUC (she/her): But I...

425

01:03:16.880 --> 01:03:22.890

Comm. Karin Power - Oregon PUC (she/her): Have concerns about broader... Shareholder utilities stepping in to absorb.

426

01:03:24.210 --> 01:03:27.960

Comm. Karin Power - Oregon PUC (she/her): Locally owned infrastructure that they can no longer maintain on their own.

427

01:03:28.650 --> 01:03:31.650

Comm. Karin Power - Oregon PUC (she/her): And I understand this is a unique circumstance.

428

01:03:31.810 --> 01:03:33.960

Comm. Karin Power - Oregon PUC (she/her): But I think given the fiscal...

429

01:03:34.260 --> 01:03:37.460

Comm. Karin Power - Oregon PUC (she/her): Issues that many of our cities and counties are in.

430

01:03:38.710 --> 01:03:43.969

Comm. Karin Power - Oregon PUC (she/her): I am going to be taking a deep look at that prudency question.

431

01:03:45.240 --> 01:03:46.080

Comm. Karin Power - Oregon PUC (she/her): Thank you.

432

01:03:48.850 --> 01:04:00.390

Chair Letha Tawney - Oregon PUC: Thanks for that. I think, it is a challenge the way this issue crosses a wide range of dockets. We have capital costs and contensed cases. We've got O&M here.

433

01:04:00.980 --> 01:04:10.029

Chair Letha Tawney - Oregon PUC: the county has, O&M funds that come into the picture, there's... Unknowns about the landslide risk.

434

01:04:10.450 --> 01:04:20.469

Chair Letha Tawney - Oregon PUC: and there's a 20-year history of, as Bob pointed to, stipulations about how the distribution system will get paid for, and so on. So it's... it makes for quite the...

435

01:04:22.730 --> 01:04:28.989

Chair Letha Tawney - Oregon PUC: quite the... the knotted ball of, of, issues, I think.

436

01:04:29.140 --> 01:04:34.849

Chair Letha Tawney - Oregon PUC: That are, are really challenging from our, from our typical structured rate-making approach.

437

01:04:36.340 --> 01:04:44.050

Chair Letha Tawney - Oregon PUC: You know, the issue that's here before us right now is...

438

01:04:44.200 --> 01:04:47.440

Chair Letha Tawney - Oregon PUC: is a question of a deferral, and we...

439

01:04:48.270 --> 01:04:58.500

Chair Letha Tawney - Oregon PUC: Have really struggled with what is the standard for deferral, and really holding... holding to a standard, because there are so many

440

01:04:58.890 --> 01:05:01.680

Chair Letha Tawney - Oregon PUC: Unique circumstances that emerge.

441

01:05:02.280 --> 01:05:13.099

Chair Letha Tawney - Oregon PUC: And Cub is not wrong that, we typically see deferrals when it's an increased expense, and not when there's an increased savings out there to harvest for customers.

442

01:05:14.860 --> 01:05:24.389

Chair Letha Tawney - Oregon PUC: I am comfortable with the fact-specific nature of this, and that the, in particular, the cost allocation question remains open.

443

01:05:24.670 --> 01:05:25.670

Chair Letha Tawney - Oregon PUC: the...

444

01:05:25.820 --> 01:05:38.860

Chair Letha Tawney - Oregon PUC: When we come to an amortization decision, the earnings review and 3% test both help protect against over-recovery by the company. If the company can absorb.

445

01:05:39.000 --> 01:05:49.089

Chair Letha Tawney - Oregon PUC: These O&M costs, reasonably, those reviews both, help to ensure that that happens.

446

01:05:49.460 --> 01:06:02.680

Chair Letha Tawney - Oregon PUC: And I am not comfortable with an amortization that would place this on residential customers more broadly. I think that there is a really important role for industrial customers in Coos Bay.

447

01:06:02.850 --> 01:06:03.730

Chair Letha Tawney - Oregon PUC: to play.

448

01:06:04.550 --> 01:06:08.020

Chair Letha Tawney - Oregon PUC: That needs to be, addressed.

449

01:06:09.100 --> 01:06:15.370

Chair Letha Tawney - Oregon PUC: But I don't think we're deciding any of that here.

450

01:06:15.560 --> 01:06:27.710

Chair Letha Tawney - Oregon PUC: And I think how we think about deferrals is in the midst of a really enormous, both, challenge from the capital expansion, the climate mitigation and adaptation.

451

01:06:27.830 --> 01:06:38.570

Chair Letha Tawney - Oregon PUC: is sort of... well, not capital for deferrals, but the O&M impact of climate adaptation and mitigation is layering on customer bills.

452

01:06:39.070 --> 01:06:51.039

Chair Letha Tawney - Oregon PUC: And on the... as we try to reform or move into multi-year rate making, how we think about deferrals is under, really significant pressure.

453

01:06:51.770 --> 01:07:05.819

Chair Letha Tawney - Oregon PUC: And I appreciate Cub's principal perspective on how we navigate that, so that they are used in a balanced manner, and not always only to benefit the company.

454

01:07:06.590 --> 01:07:12.279

Chair Letha Tawney - Oregon PUC: But here, to Commissioner Perkins' point.

455

01:07:12.490 --> 01:07:20.480

Chair Letha Tawney - Oregon PUC: We have a relatively unique issue with, Economically challenged community.

456

01:07:21.240 --> 01:07:33.740

Chair Letha Tawney - Oregon PUC: And, oh, I see this primarily as a route for the community to finance the infrastructure that they cannot access currently through their own bonding authority.

457

01:07:34.230 --> 01:07:35.900

Chair Letha Tawney - Oregon PUC: And...

458

01:07:36.170 --> 01:07:45.450

Chair Letha Tawney - Oregon PUC: Until we navigate our way through this, that's... that's my perspective, is this is a financing mechanism, fundamentally, for the community.

459

01:07:46.260 --> 01:07:50.830

Chair Letha Tawney - Oregon PUC: And we'll deal with how that might play out in the cost allocation questions.

460

01:07:51.430 --> 01:07:55.250

Chair Letha Tawney - Oregon PUC: I... I...

461

01:07:55.860 --> 01:08:04.579

Chair Letha Tawney - Oregon PUC: I think that commenters have raised a host of complex questions about what the pathway to decarbonization looks like.

462

01:08:04.720 --> 01:08:07.449

Chair Letha Tawney - Oregon PUC: And I am worried that...

463

01:08:07.730 --> 01:08:25.489

Chair Letha Tawney - Oregon PUC: the cost of the natural gas commodity fuel under the CPP will really become a burden to Coos County, industrial customers, and that there really needs to be some serious conversation in that community about what

464

01:08:25.700 --> 01:08:32.899

Chair Letha Tawney - Oregon PUC: natural gas costs that are more like $13 an MMBTU instead of $4 really means.

465

01:08:33.149 --> 01:08:42.140

Chair Letha Tawney - Oregon PUC: It may be that they need to think about how to wean off more generally, given the decarb trajectory, but that's not the question before us today.

466

01:08:44.000 --> 01:09:03.179

Chair Letha Tawney - Oregon PUC: So, I am comfortable taking this step, knowing we're looking at this in a wide range of other places, and this is primarily a financing mechanism

for the community as we think about how to manage through their ability to retain their economic base for the moment.

467

01:09:03.850 --> 01:09:07.340

Chair Letha Tawney - Oregon PUC: Recognizing there's some future challenges coming to that base.

468

01:09:07.479 --> 01:09:10.209

Chair Letha Tawney - Oregon PUC: As... as natural gas is decarbonized.

469

01:09:10.460 --> 01:09:18.079

Chair Letha Tawney - Oregon PUC: So, I'll move we adopt staff's motion as proposed, and look for a second.

470

01:09:19.109 --> 01:09:38.819

Comm. Les Perkins - OPUC: I will second, and just, one more brief comment. Please. I'll just say, having been in county government for 24 years, having been through the economic struggles of trying to figure out how to fund services for a community and being out of... counties that find themselves in a place

471

01:09:38.969 --> 01:09:45.539

Comm. Les Perkins - OPUC: of needing to pay for things, but not having the mechanisms to do it. And so, I appreciate your comments, Chair Taney.

472

01:09:45.739 --> 01:09:54.259

Comm. Les Perkins - OPUC: about... this is also just a funding mechanism, and and I appreciate your comments to, Commissioner Power, about...

473

01:09:54.639 --> 01:10:06.279

Comm. Les Perkins - OPUC: how much we have to weigh the needs of a specific community with the needs of the total system. So, not an easy issue, very complicated, but also, I think, quite unique.

474

01:10:10.810 --> 01:10:11.870

Comm. Karin Power - Oregon PUC (she/her): And I'll concur.

475

01:10:13.420 --> 01:10:24.510

Chair Letha Tawney - Oregon PUC: Well, the motion is adopted, and we'll look forward to continuing to engage this issue, both in its specifics and its more broad implications.

476

01:10:24.890 --> 01:10:30.400

Chair Letha Tawney - Oregon PUC: Let me see if there's anything further to come before us this morning.

477

01:10:31.660 --> 01:10:33.160

Chair Letha Tawney - Oregon PUC: I'm seeing nothing.

478

01:10:33.410 --> 01:10:35.800

Chair Letha Tawney - Oregon PUC: We are adjourned. Thank you all.

UG 152

STAFF TESTIMONY

OF

BONNIE B. TATOM

In the Matter of Northwest Natural Gas Company's Application for a General Rate Revision

Coos County

March 7, 2003

DOCKETED

CASE: UG 152
WITNESS: Bonnie B. Tatom

PUBLIC UTILITY COMMISSION OF OREGON

RECEIVED
MAR 07 2003
Public Utility Commission of Oregon
Administrative Hearings Division

STAFF EXHIBIT 100

Direct Testimony on Coos County

DOCKETED

March 7, 2003

Staff/100
Tatom/1

Q. PLEASE STATE YOUR NAME, YOUR POSITION AT THE PUC, BUSINESS ADDRESS AND BUSINESS TELEPHONE NUMBERS.

A. My name is Bonnie B. Tatom. I am employed as the Program Manager for the Natural Gas Rates & Planning Section of the Electric & Natural Gas Division, Public Utility Commission of Oregon (OPUC or Commission). My telephone number is (503) 378-8225. My qualifications are listed in Exhibit Staff/101, Tatom/1.

Q. WHAT WAS YOUR ASSIGNMENT IN THIS PROCEEDING?

A. My assignment in this proceeding covers the policy issues in the bifurcated UG 152 docket regarding Northwest Natural Gas Company's (NW Natural or company) filing seeking a Commission order allowing rolled-in rate recovery for its costs in developing a distribution system in Coos County.

Q. HOW IS YOUR TESTIMONY ORGANIZED?

A. My testimony is organized into four major areas: (1) Staff's summary recommendation(s); (2) a brief history of the Commission's involvement in the company's current effort to bring natural gas service to Coos County; (3) Staff's position on the company's rate proposal with specific discussion on use of the company's main extension policy as a method of determining the contribution customers should make in the Coos County investment and the rate impact of the company's rate proposal, and finally, (4) discussion of an alternative to Staff's position the Commission might consider.

/

Summary Recommendations

Q. WHAT ARE YOUR SUMMARY RECOMMENDATIONS REGARDING NW NATURAL'S FILING SEEKING AN ORDER FROM THE COMMISSION?

A. Staff recommends the Commission deny the company's request for rolled-in rate treatment of the initial distribution system (defined beginning on page 8 of the company's direct testimony, UG 152/NWN/1500, Henderson) because the proposal is not prudent under the company's main extension policy. However, Staff's alternative proposal, discussed later in this testimony, provides circumstances under which the Commission could approve rolled-in rate treatment. If the Commission approves the company's proposal or Staff's alternative, then Staff recommends the Commission approve the company's cost recovery proposals for the cost of transportation on the Coos County pipeline, i.e., the per-therm surcharge on all gas sales in Coos County and the collection of any balance of transportation costs not collected from the Coos County surcharge from all other customers in conjunction with the Purchased Gas Adjustment (PGA) mechanism. These recommendations are explored in depth later in this testimony.

/

Staff/100
Tatom/3

Brief History of the Commission's Involvement in Bringing Natural Gas to Coos County

Q. BRIEFLY, WHAT HAS TRANSPIRED TO DATE TO BRING NATURAL GAS SERVICE TO THE SOUTH COAST AREA?

A. As NW Natural indicates in its testimony, the company has attempted to bring natural gas to the South Coast region of the state since the mid 1960's under a number of regulatory schemes with the cooperation of varying numbers of potential industrial customers. The most recent (and current) proposal has been under consideration since the late 1990's and involves the building of a pipeline connecting Williams Pipeline with the South Coast by Coos County, and the nearly simultaneous building of a distribution system to serve communities in the region by NW Natural.

Q. HAS THE COMMISSION BEEN INVOLVED IN THE COMPANY'S PURSUIT TO SERVE COOS COUNTY COMMUNITIES?

A. Yes, the Commission has weighed in on three separate, but interrelated dockets since 1999. The first was UA 76, which ultimately resulted in the exclusive allocation of service territory in Coos County [1] to NW Natural so that the company could construct a distribution system to extend service from the proposed County pipeline to the communities of Coos Bay, North Bend, Coquille and Myrtle Point.

/

/

[1] With the exception of the City of Bandon, which chose to leave open the option of ultimately providing natural gas service to its citizens as a municipal utility.

Staff/100
Tatom/4

Q. BRIEFLY DESCRIBE THE OTHER TWO DOCKETS IN WHICH THE COMMISSION HAS BEEN INVOLVED.

A. Docket UA 93 was the company's application to allow Coos County to serve customers directly in some cases. DR 30 was the company's request for a declaratory ruling to allow the investment in the distribution system to be rolled-in to the rates of all NW Natural customers.

Q. WHAT WERE THE COMMISSION'S RULINGS IN THESE TWO DOCKETS?

A. In Order No. 02-678, entered October 4, 2002, the Commission denied the company's application in UA 93, citing the lack of authority to allocate customers rather than territory. NW Natural has since proposed legislation, introduced as SB 321, which if signed into law, will allow the Commission to approve a contract authorizing Coos County to serve certain customers in the service territory allocated to NW Natural. In Order No. 02-863, entered December 11, 2002, the Commission closed Docket DR 30 without issuing a final decision on the merits, citing the fact that the issues in the request for the declaratory ruling had been subsumed in the general rate case filed by the company on November 29, 2002.

/

/

/

Staff's Positions

Use of Main Extension Policy

Q. HOW WOULD NW NATURAL TYPICALLY DETERMINE WHETHER OR NOT TO EXTEND SERVICE TO NEW CUSTOMERS?

A. In its response to DR #288,[2] the company states that it would "not extend service to a new community if projected loads and costs result in an expectation of an uneconomic investment." This analysis of the projected loads and costs is done using the company's main extension policy, embodied in Schedule X.[3] Schedule X is the vehicle for determining whether or not extending service to new customers is prudent, i.e., if the anticipated margins from committed and expected customers, along with applicable customer contributions, provides an internal rate of return at or above the company's allowed rate of return.

Q. EXPLAIN HOW SCHEDULE X WORKS.

A. A main extension is the piping and associated facilities required to extend service from the company's existing main facilities into an area not previously supplied to serve an applicant.[4] Schedule X states how the construction allowance is determined for applicants and therefore, what construction contribution will be required to serve the applicant. If the allowance is greater than the cost of construction, the installation is performed at no charge to the applicant. If the cost of construction is greater than the

[2] See Exhibit Staff/102, Tatom/1.
[3] See Exhibit Staff/102, Tatom/2-7.
[4] See NW Natural's Tariff, General Rules and Regulations, Sheet 00.5

construction allowance, the applicant must pay a construction contribution equal to the difference between the cost of construction and the construction allowance. In some cases, the company may perform an Infill/Exfill Potential Analysis" in addition to an analysis under Schedule X. An infill/exfill analysis gives economic and financial consideration to the potential for customer growth along or beyond the main extension to the applicant.

Q. IN DOCKET DR 30, STAFF PROPOSED THAT THE COMMISSION USE SCHEDULE X AS A MEANS TO DETERMINE UNDER WHAT TERMS NW NATURAL SHOULD EXTEND SERVICE TO COOS COUNTY. WHAT WERE THE IMPLICATIONS OF STAFF'S DR 30 PROPOSAL?

A. Under even a conservative approach using Schedule X, Coos County customers would have to pay a construction contribution of roughly $6.1 million [5] for the investment to serve the communities with the initial distribution system.

Q. HAS STAFF CHANGED ITS VIEW ON THE USE OF SCHEDULE X IN THIS CASE?

A. No. Staff believes it is an appropriate way of evaluating the construction contribution expected from Coos County customers. After determining the

/

/

[5] $12 million investment less (5 * 1,184,936) or $6,075,320, where $1,184,936 is the 5-year Coos County annualized margin revenue (from Exhibit 3 of the DR 30 Stipulation filed April 18, 2002), using 5 times annualized margin revenue as a proxy for the amount allowed by the company's Schedule X in determining the construction allowance.

County's construction allowance, the Coos County customers should pay the construction contribution to be served. Using the main extension policy, as Staff has recommended, requires a construction contribution from Coos County customers in order for NW Natural's investment in Coos County to be a prudent one. Staff believes that although this contribution is generally expected prior to commencement of construction, NW Natural could make an exception to its requirement of advance payment for good cause.[6]

Q. NW NATURAL ASSERTS THAT USING SCHEDULE X TO DETERMINE THE CONSTRUCTION CONTRIBUTION IS NOT APPROPRIATE IN COOS COUNTY. WHY NOT?

A. NW Natural believes that Coos County customers would be unwilling to make the greater than $5 million construction contribution and that because Coos County citizens are already contributing to the transmission pipeline through their property taxes, a greater contribution required by the main extension policy would significantly discourage customer connections. Further, the company believes that because the extension of service to Coos County is dissimilar from extension of service contemplated by Schedule X, using Schedule X is not appropriate.

/

/

/

[6] NW Natural's Tariff allows for such exceptions to advance payment specifically for manufactured housing developments, mobile home developments or houseboat moorage developments. See Schedule X, Sheet X-4.

Staff/100
Tatom/8

Q. HAS THE COMPANY USED SCHEDULE X IN THE PAST TO DETERMINE WHETHER OR NOT AN EXTENSION OF SERVICE TO A NEW COMMUNITY IS APPROPRIATE?

A. Yes. In response to DR #289, the company included an example of such a request to extend service to the community of Gates, Oregon. In that case from 1997, the company said it was not economically sound to extend service to Gates due to the large amount of aid in construction contribution that would be expected of the person(s) requesting natural gas service, and the low potential for future growth in the community. See Exhibit Staff/102, Tatom/8-11. In addition, the company also noted "[o]ften, it is the community that makes the election not to extend service based on the company's required contribution-in-aid-of construction." The company has also evaluated extending service to the City of Monroe and the City of Vernonia. Of these, the company serves only Vernonia.

Q. DO OTHER LOCAL DISTRIBUTION COMPANIES REGULATED BY THE COMMISSION USE THEIR MAIN EXTENSION POLICIES TO DETERMINE WHETHER OR NOT TO EXTEND SERVICE TO UNSERVED COMMUNITIES?

A. Yes. Both Avista Utilities and Cascade Natural Gas Corporation use their respective main extension policies to make such a determination. See Exhibit Staff/102, Tatom/12-15 for these LDCs' responses to Staff's information request regarding the LDCs' extension of service to new communities.

Q. IS STAFF CONCERNED BY THE COMPANY'S PROPOSAL IN UG 152 TO SERVE COOS COUNTY IN SPITE OF THE RESULTS OF THE SCHEDULE X IMPLICATIONS?

A. Yes. Staff believes that not using the company's long-standing main extension policy embodied in Schedule X could lead to additional requests for natural gas service by unserved communities. Staff is concerned that ignoring the main extension policy sets a precedent for future extensions to unserved communities that would result in rates for all customers in the future that would not be fair or reasonable, i.e., a number of rate increases, each of which by itself was "not an unreasonable burden," [7] for extensions to unserved communities could very well add up to unfair and unreasonable exactions from customers.

Q. ARE THERE MANY INCORPORATED COMMUNITIES IN NW NATURAL'S SERVICE TERRITORY THAT ARE CURRENTLY NOT SERVED BY NATURAL GAS?

A. Yes. In response to DR #287 (see Exhibit Staff/102, Tatom/16-17), NW Natural listed 24 communities in its service territory (other than the South Coast area) that are not currently served by natural gas. In addition, the company listed 10 communities in its service territory in Coos, Lane and Douglas Counties that are not currently served by natural gas. It's impossible to predict which, if any, of these communities would ask NW Natural

/

[7] See Exhibit UG 152/NWN/1500, Henderson/15, line 19.

to ignore its tariffed Schedule X (as the company proposes with the construction of the distribution system in Coos County).

Q. HAS NW NATURAL PROPOSED A DIFFERENT RATEMAKING SCHEME TO SERVE THESE OTHER UNSERVED COMMUNITIES IN THE EVENT ONE OR MORE REQUESTS SERVICE?

A. Yes. In general, the company indicates that it will use its main extension policy to determine whether or not it should extend service to new communities. The company has stated that the extension of service to Coos County is unique and that only those unique circumstances warrant a departure from its main extension policy.

Rate Impact Issues

Q. HAS THE COMPANY EVALUATED THE RATE IMPACT OF ITS PROPOSAL TO ROLL IN RATES TO ITS ENTIRE CUSTOMER BASE RATHER THAN JUST THOSE POTENTIAL CUSTOMERS IN COOS COUNTY?

A. Yes. In its request for a declaratory ruling last year, the company included several exhibits that illustrated a range of possible rate impacts of its rolled-in rate proposal when applied to all customers, not merely the smaller-load customers as the UG 152 filing proposes. The UG 152 proposal would apply the entire increase in revenue requirement to Schedules 1, 2, and 3 with a rate impact of $0.00283 per therm.

/

/

Staff/100
Tatom/11

Q. ACCORDING TO THE DR 30 EXHIBITS, WHAT IS THE RANGE OF POSSIBLE IMPACTS ON RATES IF THE COMMISSION WERE TO APPROVE ROLLED-IN RATE TREATMENT FOR THE COMPANY'S COOS COUNTY INVESTMENT ACROSS ALL CUSTOMERS?

A. Under the company's proposal in DR 30, depending on the assumptions for participation by industrial customers, the range of rate impacts is from $0.00053 per therm (about $0.03 per month for a typical residential customer using 54.1 therms per month) with an estimated Coos County industrial load of 19,836,000 therms (in the first five years) to approximately $0.00110 per therm for the same residential customer with a considerably smaller estimated Coos County industrial load of 240,000 therms (again, just over the first five years). Exhibits Staff/102, Tatom/18-19 demonstrate in graphical form the load growth forecasted by the company over a 30-year period (Tatom/18) and the company's projected revenues and revenue requirement over the same time period (Tatom/19). These graphs demonstrate several points: (1) the critical nature of the company's load projections, especially with regard to industrial sector participation, (2) the relative stability of the expected residential and commercial load, and (3) the shortfall of revenues even over a thirty-year period.

Q. BRIEFLY DISCUSS ANY CAVEATS THE COMMISSION SHOULD CONSIDER WHEN EXAMINING THE ROBUSTNESS OF THIS RANGE OF POSSIBLE RESULTS.

A. The biggest concern to Staff regarding these estimates is that the company has assumed a sizeable load associated with the inclusion of several large industrial customers in the area, which results in the lower rate impact the company adopts in its testimony. Participation by these customers is dependent on far too many factors to rely on this growth. For example, these customers would have to convert to natural gas from other energy sources and more importantly, the proximity of the Coos County pipeline certainly is an invitation to bypass NW Natural's distribution system in favor of taking service directly from the County. The Commission should consider the potential impact of industrial bypass on the remaining residential and other smaller load customers who would have to bear the burden of the investment, along with all of the company's other customers throughout its service territory. In its testimony, the company suggests the severity of the risk of industrial bypass in Coos County does depend on the extent to which high-volume commercial and industrial gas users, defined as "Eligible Customers" in the Transportation Service Agreement between the County and NW Natural, locate in Coos County.[8]

Q. IS THE RATE IMPACT UNDER THE COMPANY'S PROPOSAL JUST AND REASONABLE?

A. If the load projections actually materialize over the course of the company's analysis, then the rate impact is not burdensome. Under the company's proposal, if the load projections are too optimistic, other NW Natu-

[8] See Staff/102, Tatom/20.

ral customers could pay even more than currently forecasted. While charging its smaller-load customers $0.003 a therm may not be unreasonable, a greater charge may be. However, the reverse is also true. If the load projections are actually conservative as the company suggests in its testimony,[9] then the rate impact could be less than the company's or Staff's estimates.

Q. OVER WHAT PERIOD OF TIME HAS THE COMPANY EVALUATED ITS INVESTMENT IN COOS COUNTY?

A. The company evaluated its investment over thirty years.

Q. IN THAT TIME, DOES THE INVESTMENT BECOME COST-EFFECTIVE, i.e., ARE CUSTOMERS INDIFFERENT TO THE INVESTMENT?

A. No, customers are not indifferent to the company's investment under its current ratemaking proposal until nearly fifty years have passed.[10]

Q. NOTWITHSTANDING THE OVERALL RATE IMPACTS, IS THE PROPOSED RATE SPREAD OF THIS INVESTMENT APPROPRIATE?

A. No. Staff believes that the company's proposal in UG 152 to spread the entire requested increases only to residential and smaller load commercial customers on Schedules 1, 2 and 3 is entirely inappropriate. The company's proposal does not spread the cost of the distribution system to industrial customers.

/

/

[9] See Exhibit UG 152/NWN/1500, Henderson/8, lines 6-8.
[10] In response to DR #292, the company stated that the investment is cost-effective over a 49-year period.

Q. WHY IS THIS PROPOSAL INAPPROPRIATE?

A. The company's proposed investment in Coos County is clearly designed to promote economic growth in the county by, as HB 2153 [11] proposed, attracting "significant *industries* to locate in the area, thereby increasing opportunities for employment and additional economic activities that will be generated as a result of such industries." [Emphasis added]. In addition, the company's analysis of load potential in Coos County is heavily influenced by the amount of industrial load expected to be served by natural gas.

Q. WHAT IS STAFF'S PROPOSAL FOR SPREADING THE REVENUE REQUIREMENT THAT MAY RESULT FROM THE COMPANY'S INVESTMENT IN THE INITIAL DISTRIBUTION SYSTEM?

A. Staff believes that the ultimate revenue requirement, for the Coos County investment, allowed in rates at October 1, 2003 (or at the time of the Commission's order in UG 152), should be spread on an equal percentage of margin basis across all rate classes. This rate spread treatment equitably shares the cost of the investment between all customer classes, including industrial customers for whom the 1999 Legislature determined a natural gas pipeline was necessary.

/

/

/

[11] HB 2153 was signed into law in July 1999, and provided for $20 million in lottery bonds to Coos County to cover part of the cost of a natural gas transmission pipeline to the coast.

Does Economic Development Play a Role in the Commission's Mission?

Q. HAS NW NATURAL SOUGHT ROLLED-IN RATE TREATMENT ON THE GROUND THAT THE COOS COUNTY DISTRIBUTION SYSTEM WILL PROMOTE ECONOMIC DEVELOPMENT?

A. According to the company's testimony, the Commission should review the company's proposal for rolled-in rate treatment as a separate issue from the legislature's motivation in partially funding the County's transmission pipeline. However, the company continues to make references to "economic development" as a reason to bring natural gas to the region's potential customers. For example, in UG 152/NWN/100, DeBolt/14, the company makes it clear that "natural gas service has long been a goal for the Coos Bay area as a matter of *state economic development policy*." [Emphasis added].

Q. DOES THE COMMISSION'S AUTHORITY EXTEND TO ENCOURAGING, THROUGH ITS RATEMAKING PROCESS, ECONOMIC DEVELOPMENT?

A. The legislature has given the Commission broad authority to do all things necessary to supervise and regulate public utilities. However, the statutory scheme under which the Commission operates does not suggest that the Commission's authority extends to setting rates to encourage economic development.[12] While NW Natural might interpret the law to

/

[12] In ORS 756.040, the Commission is authorized to make use of the jurisdiction and powers of the office to protect customers of public utilities, and the public generally, from unjust and unreasonable exactions and practices and to obtain for them adequate service at fair and reasonable rates.

require the Commission to obtain service for customers, the second part of the phrasing is "at fair and reasonable rates," not "at rates designed to encourage economic development." NW Natural has proposed rolled-in ratemaking treatment specifically because the company does not expect to earn its rate of return or enjoy profitable growth in the County without sharing the costs of the distribution system among its entire customer base, i.e., with Coos County rates higher than those proposed by the company, the economic development will not occur.

Alternative Proposal

Q. SHOULD THE COMMISSION EXAMINE A DEPARTURE FROM STAFF'S RECOMMENDED PROPOSAL THAT THE COMPANY USE ITS MAIN EXTENSION POLICY TO DETERMINE THE APPROPRIATE CUSTOMER CONTRIBUTION FOR THE INVESTMENT IN COOS COUNTY?

A. Yes. NW Natural, in its response to DR #296, stated that the investment in Coos County "is a prudent one because of the unique circumstances presented by this investment." The company further states that the investment is also financially prudent because only $12 million (for the distribution system) is to be supported by NW Natural's customers throughout its service territory, while the remainder of the total investment, including the County's transmission pipeline, of roughly $50 is to be borne by Coos County taxpayers.

NW Natural is correct that the circumstances underlying its proposal are unique. The County is willing to make a huge investment to build a transmission pipeline to the coast and there is potential for economic growth, which may result in optimistic customer growth. Although Schedule X sets out what is prudent in terms of the effect on other customers, the Commission could allow the company a longer recovery or payback period (the 49-year analysis) than generally permitted. In addition, the Commission could conclude the company need not adhere to its main extension policy given the expected small rate impact of rolling in the costs of the distribution pipeline to non-Coos County customers and the other unique circumstances in Coos County.

Q. DOES STAFF HAVE AN ALTERNATIVE TO ITS RECOMMENDATION THAT THE COMMISSION NOT ALLOW ROLLED-IN RATE TREATMENT IN THE MANNER PROPOSED BY NW NATURAL?

A. Yes. Staff proposes an alternative under which we could support rolled-in rate treatment of the costs associated with the initial distribution system.

Q. WHAT IS STAFF'S ALTERNATIVE PROPOSAL?

A. Staff proposes that NW Natural's shareholders take additional risk in the extension of service to Coos County. As the company states in its testimony, Coos County customers are already paying for the transmission pipeline so "requiring a greater contribution from citizens in Coos County would significantly discourage customer connections and defeat the pur-

pose in developing a distribution system in that area." [13] NW Natural then proposes that its smaller-load customers pay for the distribution system with a "very small" [14] charge of $0.00283 per therm. The only other "partner" in this venture--NW Natural—isn't assuming any risk, other than the typical risk all utilities have that costs and revenues will be different from what is used to set rates. Looked at another way, under the company's proposal, Coos County citizens pay for the transmission pipeline—roughly $27 million, NW Natural's Coos County customers pay for the transportation charges on the pipeline—approximately $200,000 per year, NW Natural's customers pay for any balance of the transportation charges and the rolled-in rate effect of the $12 million investment, while NW Natural has only the risk of regulatory lag, which the company can influence to some extent by the filing of another rate proposal.

Q. HOW WOULD STAFF'S PROPOSAL WORK?

A. Under NW Natural's proposal, with the exception of the surcharge to Coos County customers, all residential and smaller load commercial customers will pay for the prudently-incurred costs of the initial distribution system over a long period of time. Of course, there is some risk to NW Natural were the Commission to disallow any of the expected $12 million investment. Beyond that risk, NW Natural's shareholders are not at risk in the development of the distribution system in Coos County. Staff proposes

/

[13] See Exhibit UG 152/NWN/1500, Henderson/14, lines 7-9.
[14] See Exhibit UG 152/NEW/1500, Henderson/10, line 6.

that the Commission only allow 90% of the prudently incurred investment in rates, i.e., that the company's shareholders assume 10% of the initial investment found to be prudent. If the prudently-incurred initial investment were $12 million, then only a maximum of $10.8 million would be spread to NW Natural's customers. Under Staff's proposal, Coos County citizens will still pay for the $27 million transmission pipeline, NW Natural's Coos County customers still pay for the $200,000 per year transportation charges on the pipeline, NW Natural's customers pay for any balance of the transportation charges and the rolled-in rate effect of, for example, the $10.8 million investment, and NW Natural still maintains the risk of revenue variances (up or down) in Coos County and pays the balance of the initial investment of, in Staff's example, only $1.2 million, less than 2% of the total outlay for "economic development" in Coos County.

Q. WHAT RATE TREATMENT WOULD STAFF SUPPORT UNDER ITS ALTERNATIVE PROPOSAL?

A. Under this alternative, Staff would support rolled-in rate treatment for the initial distribution system, up to $10.8 million, recognizing that only that portion of the prudently-incurred costs for facilities in service on October 1, 2003, may appropriately be applied to all customers' rates.

Q. WHAT IS THE GENERAL RATE EFFECT OF STAFF'S ALTERNATIVE PROPOSAL?

A. Under Staff's alternative proposal, because the revenue requirement is less than the company's proposal, the overall rate impact would also be

less than $0.00283 per therm. In addition, all customer classes would see some small impact, not just the Schedule 1, 2 and 3 customers.

Q. IS THERE ANY PRECEDENT TO CONSIDER IN TAKING THIS APPROACH?

A. Yes. The Commission has ruled in at least three electric utility dockets that not all prudently-incurred power costs must be allowed in rates.[15]

Q. ARE THERE ADDITIONAL COSTS OF PROVIDING GAS SERVICE TO COOS COUNTY NOT INCLUDED IN THE COMPANY'S INITIAL CONSTRUCTION COSTS THAT NW NATURAL HAS PROPOSED TO RECOVER?

A. Yes. NW Natural has also proposed a surcharge on Coos County customers to pay the pipeline transportation charges.

Q. WHAT IS THE COMPANY'S PROPOSAL?

A. As the company indicates in its testimony, it proposes a $0.01 per therm surcharge on Coos County customers across all sales rate schedules.

Q. WILL THIS SURCHARGE PAY THE TRANSPORTATION CHARGE IN ITS ENTIRETY?

A. Not likely in the very near term. However, the company does expect that as load increases in Coos County, the one-penny surcharge will cover

/

/

[15] In UE 116, the Commission approved a stipulation allowing only 83% of PacifiCorp's prudently-incurred power costs over approximately a nine-month period to be recovered in rates. In UE 115, the Commission allowed a sharing mechanism whereby PGE and its customers shared the difference between an amount in rates and actual power costs. In addition, the Commission approved various mechanisms for sharing excess power costs for all three IOUs in 2001.

transportation charges. Until that time, NW Natural proposes that any balance of transportation charges remaining after the surcharge to Coos County customers be collected from all applicable NW Natural customers in Oregon in conjunction with the PGA mechanism (much like upstream pipeline demand charges).

Q. WHAT IS STAFF'S RECOMMENDATION WITH REGARD TO THE COMPANY'S SURCHARGE PROPOSALS?

A. Staff agrees with the company's surcharge proposals. Staff believes that the collection of a $0.01 per therm charge on Coos County customers' bills to pay for the pipeline charges is not arbitrary; it represents the company's cost of transportation on the Coos County pipeline. In addition, Staff agrees that any remainder of the pipeline charges be assessed on the bills of all NW Natural customers through the PGA mechanism. The rate effect on all customers is extremely small—about $0.00031 per therm.

Q. HAS NW NATURAL SUGGESTED IT WOULD NOT BUILD THE DISTRIBUTION SYSTEM UNDER STAFF'S RECOMMENDED PROPOSAL THAT USES THE COMPANY'S MAIN EXTENSION POLICY?

A. Yes. In its testimony, the company stated that it would not proceed with construction if Staff's main extension policy scenario were accepted by the

Commission. Under that scenario, only $6.4 [16] million would be allowed-into rates. The company has not indicated whether or not any alternative proposal would be acceptable.

Q. HAS THE COMPANY COMMITTED TO BUILDING THE DISTRIBUTION SYSTEM WITH A FAVORABLE ORDER IN THIS DOCKET?

A. Yes. NW Natural signed an agreement with Coos County on July 30, 2001 that requires the company to complete the initial phase of the distribution system "so that it is operational no later than 30 days following completion of the" Coos County pipeline. To that end, it appears that NW Natural has only "a couple of items to clear up with the PUC"[17] before *Pipeline Solutions*, the contractors for the Coos County transmission pipeline starts construction on April 15, 2003.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes.

---

[16] The company's testimony indicated that using an approximate ratio of 60/40 as the split between NW Natural and Coos County customers for the $12 million proposed investment, that only $7.2 million would be allowed to be recovered in rates. Using a more accurate ratio of 54/46 means that Staff's use of the company's Commission-approved main extension policy would allow only $6.4 million of the company's $12 million proposed investment.

[17] See Exhibit Staff/102, Tatom/21, a newspaper article in the Valley Sentinel (Coquille), quoting Steve Shute, the Project Coordinator.

NAME: Bonnie B. Tatom

EMPLOYER: Public Utility Commission Of Oregon

TITLE: Program Manager

ADDRESS: 550 Capitol St NE, Suite 215, Salem, OR 97301-2551

EDUCATION: Bachelor of Arts degree in Economics from Washington State University (1978).

National Association of Regulatory Utility Commissioners' (NARUC) Annual Regulatory Studies Program administered by the Michigan State University Graduate School of Business Administration (1990). NARUC Western Utility Rate School administered by Florida State University (1995).

RELEVANT WORK EXPERIENCE: *Program Manager* for the Natural Gas Rates & Planning Section, Electric and Natural Gas Division, Utility Program, Public Utility Commission of Oregon (OPUC) since March 1999. From September 1994 to March 1999 I was primarily responsible for the analysis of natural gas utility least-cost plans, energy utility tariff filings, and demand-side resource activities. Prepared staff recommendations in UE 94 and PGE's Rate Plan (1996) regarding appropriate CIS, wage & salary, memberships, dues & donations, and customer account expenses. Prepared testimony in UE 102 regarding workforce and consumer protection issues, including certification of energy service suppliers and environmental disclosure. Prepared testimony in UG 132 (NW Natural) regarding memberships, dues and donations, miscellaneous operating revenues, and workforce. Prepared staff recommendations in UE 115 and UE 116 (2001) regarding wages & salaries, memberships, dues & donations, miscellaneous A & G expenses, materials & supplies, SERP, bonuses, and overtime. Prepared testimony in UG 143, NW Natural's request for a decoupling mechanism.

Public Utility Analyst with the Electric and Natural Gas Division of the OPUC from May 1990 through August 1994. Responsibilities included review of natural gas utility integrated resource plans, energy utility tariff filings, and participation in Commission rulemaking proceedings.

Company Response to UG 152 Staff Requests

January 27, 2003

288. In general, why would NW Natural not extend service to a new community?

Response:

The term "new community" is assumed to mean a city or town within NW Natural's exclusive service territory that is not served by natural gas.

In general, and under usual circumstances, NW Natural would not extend service to a new community if projected loads and costs result in an expectation of an uneconomic investment.

Respondent: C. Alex C. Miller, General Manager Rates & Regulatory Affairs

NORTHWEST NATURAL GAS COMPANY
P.U.C. Or. 22 Original Sheet X-1

SCHEDULE X

DISTRIBUTION FACILITIES EXTENSIONS
FOR APPLICANT-REQUESTED SERVICES AND MAINS

AVAILABLE:
In all territory served by the Company under the Tariff of which this schedule is a part.

APPLICABLE:
To the installation of Distribution Facilities to a bona fide Applicant(s), including Service Lines, meters, Main Extensions, and other facilities. For purposes of this schedule, the term Applicant will apply to both new and existing Customers.

APPLICANT QUALIFICATIONS AND RESPONSIBILITIES:
An Applicant may be required to sign a Distribution Facilities Extension Agreement or other Service Agreement, as deemed appropriate by Company, before commencement of construction.

All Applicants must meet the credit criteria set forth in **RULE 2** before construction and activation of any Distribution Facilities, and Applicant must agree to take and pay for service in accordance with all applicable schedules, General Rules and Regulations of this Tariff, and in accordance with the provisions and conditions of the rate schedule under which service will be provided by the Company.

A large Commercial, Industrial, or Institutional Applicant, defined as one whose estimated usage is more than 20,000 Therms per year, will be required to provide at least twelve (12) months written notice prior to the desired service delivery date. Service may be provided before the twelve (12) month period expires, at Company discretion.

Applicant is responsible for the installation and maintenance of appliances and House Line, and is responsible for assuring that all equipment and House Line installations conform with applicable laws, codes, and ordinances of all governmental authorities having jurisdiction. See **RULE 18** for additional information.

Applicant/Customer shall be responsible for notifying the Company of any equipment installations or removals at the Premise during the three-year period following the construction of facilities for the purpose of determining whether or not an adjustment to the original Allowance is appropriate, to determine if a refund situation exists, or to determine if a change in rate schedule is warranted.

If after three (3) months following the date the Company is first ready to serve the site the Applicant fails to take service, or fails to install and connect equipment previously committed, the Company may bill the Applicant for actual construction costs and expenses of the installation, less any Construction Contribution paid. This amount may be subject to refund under this schedule. See **REFUNDS OF CONSTRUCTION CONTRIBUTIONS**.

SCHEDULE X

DISTRIBUTION FACILITIES EXTENSIONS
FOR APPLICANT-REQUESTED SERVICES AND MAINS
(continued)

LOCATION OF FACILITIES:
The Company reserves the right to designate the location of the Distribution Facilities required to serve an Applicant, including but not limited to, the location of the Service Line, meter(s), and regulators.

Rights-of-way or easements may be required by the Company if any of the Distribution Facilities must cross property owned by Applicant or third parties.

MAIN LINE FACILITIES.
The length and normal route of a Main Extension will be determined by the Company and considered as the distance along the shortest, most practical, available, and acceptable route that is clear of obstructions from the nearest permanent and available Main to the point that the Service Line(s) will be connected.

The Company, in its sole discretion, may select an alternate route, or may extend a Main beyond the point required to serve an Applicant(s) where Company considers it to be in the public or the Company's interest.

SERVICE LINE FACILITIES.
The length of the Service Line will be determined by the Company as the distance along the shortest, most practical, available and acceptable route, that is clear of obstructions from the Main to the meter location. In most instances, the Service Line footage will be measured from the Applicant's property line to the meter location.

The Company shall install excess flow valves on service lines as dictated by the Company's Standard Practices. (N) (N)

METER FACILITIES.
The gas meter installation will be at a location of Company's designation, as dictated by the Company's Standard Practices governing meter location.

Where separate meters are installed to measure gas supplied to multi-family dwellings or to separate tenants in Commercial buildings, the property owner will be responsible for identifying the Premise or address for the House Line to be served by each meter.

SCHEDULE X

DISTRIBUTION FACILITIES EXTENSIONS
FOR APPLICANT-REQUESTED SERVICES AND MAINS
(continued)

CONSTRUCTION COSTS AND SCHEDULING: (C)(D)
(N)

Construction costs for Main Extension and/or Service Line installations are determined utilizing a best construction practices approach. Construction cost calculations will include all costs associated with the extension of the Company's Distribution Facilities, up to and including the installation of the meter. Site-specific cost estimating will be used by the Company when, in the Company's sole determination, such cost-estimating practices are warranted. Construction and construction-related costs are determined according to the Company's Engineering Procedures Cost Estimating Guide, as updated from time to time.

Scheduling for the construction of main extensions shall be at the dates and times determined by the Company, in its sole discretion. When scheduling the construction of new main extensions, the Company will consider several factors, including but not necessarily limited to, crew availability, type of construction, weather conditions, time of year, and number of bona fide gas service applicants.

Generally, the construction of Residential service line extensions from an existing main will be scheduled within thirteen (13) working days of the date an application for service is approved, but may be subject to change for reasons including, but not necessarily limited to, crew availability, weather conditions, and type of construction. The Company will accommodate an approved Residential Applicant's request for a specific installation date whenever regular-time construction crews are available, at no charge. Applicants whose situation is such that their health or well being would be at risk if the installation is not completed in five days or less will be given first priority in the company's construction schedule and no charge will be assessed. In all other instances, in the event a priority request cannot be accommodated with the use of regular-time construction crews, the company will offer residential applicants a "for fee" priority scheduling option. Applicants who choose to pay the $200 priority fee will receive a firm installation date within five (5) working days of the date the application for service is approved. The priority fee will be used to cover the costs associated with over-time installation, or the hiring of contract construction crews. The company will not accommodate a "for fee" priority request if it would adversely affect the quality, or timing, of installations for other customers or prospective customers. The priority scheduling option is only available between September 1 and January 31. The payment of the priority fee shall be due prior to the construction of the service line extension, unless other payment arrangements acceptable to the Company are made. In the event the company fails to complete installation by the priority date, the priority charge will be waived or refunded. The fee paid for priority installation is not subject to refund under the Refunds of Construction Contributions section of this Schedule X.

Non-Residential service line extensions from an existing main will be scheduled as soon as practicable following the date an application for service is approved, based on the size of the project and type of construction required. The Company will make its best effort to accommodate any special scheduling needs on a project by project basis. (N)

CONSTRUCTION ALLOWANCE:

Except as specifically noted otherwise in this section, an Applicant will receive a Construction Allowance equal to 5.0 times the Base Distribution Rate stated in the applicable rate schedule, times the standard

CONSTRUCTION ALLOWANCE (continued):
consumption factor(s) associated with the specific equipment committed to be installed. The standard consumption factor(s) assume usage in a permanent structure occupied twelve (12) months per Year, and may be adjusted where service is requested to vacation homes, rental homes, or any seasonally operated establishment where occupancy is known or expected to be less than twelve (12) months per Year. The consumption factors shall be set forth in the Guide Book.

For Non-Residential equipment and uses not specifically identified in the Guide Book, the Construction Allowance calculation will use a consumption factor based on the nameplate rating of the equipment, or the Construction Allowance may be based on equipment consumption comparisons of like Customers, whichever is determined by the Company to most accurately reflect the revenue expected to be derived from the Applicant(s).

Applicants requesting service for new residential housing tracts, Commercial shopping, or similar new developments, will receive a Construction Allowance based on the margin revenue estimated to be derived from the development by the end of the third Year following installation.

A large Non-Residential Applicant will receive a Construction Allowance based upon a Customer-specific financial analysis that will incorporate the Customer's Contract terms and conditions.

Applicants requesting service for equipment served under **SCHEDULE 1**, for equipment to be used for Standby or emergency purposes, or for temporary service installations, will not receive a Construction Allowance.

CONSTRUCTION CONTRIBUTION:
The estimated cost to construct the Distribution Facilities required to serve an Applicant(s) will be offset by the Applicant's Construction Allowance. If the Allowance is greater than the cost of construction, the installation will be performed at no charge. If the cost of construction is greater than the Construction Allowance, the Applicant must pay a Construction Contribution equal to the difference between the cost of construction and the Construction Allowance, plus the tax effects on the Construction Contribution amount at 33.75%, calculated by multiplying the Construction Contribution by 1.3375. (C) (C)

Applicants requesting service for equipment served under **SCHEDULE 1**, for equipment to be used only for Standby or emergency purposes, or for temporary service installations under **RULE 22**, will be required to pay the entire cost of constructing Distribution Facilities to serve the location.

Where service is requested for manufactured housing developments, mobile home developments or house boat moorage developments, the Applicant shall be required to pay the entire cost of constructing Distribution Facilities to serve the location before commencement of construction, subject to refund as specified in this Schedule. The Company may make exceptions to the advance payment requirement where, in the Company's sole judgment, good cause exists. The conditions for such exceptions will be specified in the service installation agreement.

Construction Contributions must be received prior to commencement of construction, and may be refundable. See **REFUNDS OF CONSTRUCTION CONTRIBUTIONS**.

(continued)

INFILL/EXFILL POTENTIAL ANALYSIS: (M)
At Company's sole discretion, an Infill/Exfill-Potential Analysis may be performed in conjunction with an Applicant's request for service when a Main Extension is required. If an Infill/Exfill-Potential Analysis is performed, and it results in a reduction in the required Construction Contribution, the Applicant(s) will choose to either pay the reduced Construction Contribution and waive the right to any refunds, or pay the larger Construction Contribution, subject to possible future refund. (M)

REFUNDS OF CONSTRUCTION CONTRIBUTIONS:
Construction Contributions may be subject to refund for a period of three years following the date the Distribution Facilities are first ready to serve the Applicant. The Company will automatically review those accounts involving a Main Extension on the anniversary date of the third Year to determine if a refund situation exists. Upon request, or upon notification by Customer of a change of service address, the Company will review the Customer account for possible refunds prior to the end of the third year. Any amounts not refunded within the three (3) year period will be retained by the Company.

All refunds will be calculated using construction costs, consumption factors, and Base Distribution Rates in effect at the time the initial application was accepted by the Company. In no event will the refund exceed the amount of the original contribution. All refunds are payable to the original contributor or their designee.

Customer may be eligible for a full or partial refund at any time during the three (3) year refund period where one or more of the following conditions applies:

1. A CHANGE IN RATE SCHEDULE QUALIFICATIONS
   A refund may be available if the initial application was for service to equipment served under **SCHEDULE 1**, or for service to equipment for Standby or emergency purposes served under **SCHEDULE 3** or **SCHEDULE 4**, and equipment is subsequently installed that eliminates the Standby-only status, or that qualifies Customer for service under a different schedule.
2. APPLIANCE ADDITIONS.
   A refund may be available if additional equipment is subsequently installed by Customer and Company determines that the associated increase in estimated revenue from the service site is sufficient to cause a refund. This does not apply to the addition of equipment of the type stated under **SCHEDULE 1**.
3. TEMPORARY INSTALLATIONS.
   A refund may be available where the initial application was classified as a temporary service installation and the Company changed the status to permanent on or before the end of the thirty-sixth (36) month following the date the service was activated.

(continued)

REFUNDS OF CONSTRUCTION CONTRIBUTIONS (continued):

4. **SERVICE LINE CONNECTIONS FROM A MAIN EXTENSION.**
A refund may be available if subsequent Service Line connections are constructed from a Main Extension for which a Construction Contribution was paid, and for which an outstanding amount is subject to refund. The refund will be dependent on the amount of additional Allowance the subsequent service connection(s) provide to offset the Construction Contribution of the original contributor(s).

5. **MAIN EXTENSION.**
A refund may be available if the actual cost of constructing a Main Extension is less than the site-specific cost estimate. In such case, the refund will be the difference between the actual and the estimated cost.

6. **SERIES OF MAIN EXTENSIONS.**
A refund may be available where there are a series of Main Extensions, commencing with a Main Extension having a Construction Contribution subject to refund, and each additional Main Extension is dependent upon the previous Main Extension as a direct source of supply and is installed at no charge to Applicant(s), a series refund will be made as follows:

a) Additional connections supplied from a Main Extension on which there is a refundable amount will provide refunds first to the extension to which they are connected; and
b) When the amount subject to refund on an extension in a series is fully refunded, the excess refundable amount will provide refunds to the extension having the oldest outstanding amount subject to refund in the series.

GENERAL RULES AND REGULATIONS:
Service under this schedule is subject to the General Rules and Regulations contained in this Tariff and to those prescribed by regulatory authorities, as amended from time to time.

Company Response to UG 152 Staff Requests

January 28, 2003

289. Are there communities in your service territory that NW Natural, despite interest from potential customers, has elected not to extend service? Please discuss each community in detail, e.g., why has NW Natural not extended distribution service to Estacada?

Response:

Yes. There are communities where NW Natural has not extended service based on the company's analysis of the investment. One such decision known to have occurred was in 1997, where the company conducted an analysis regarding the extension of service to Gates, Oregon and that extension did not take place. A copy of that analysis is attached.

There are a number of potential extensions currently under review, but no final decision regarding the investment has been made. These include, but are not necessarily limited to the extension of distribution service to Estacada, Dayton, Dallesport, Veneta and Damascus. Other extensions under consideration include expansions of the company's distribution system within currently served communities to accommodate recent or future expected growth in those areas. Often these expansion areas adopt unique names, but are part of a larger city or town. For example, Youngs River, which is a small community located in Astoria, Oregon.

The company does not extend service when the investment cannot be supported by the amount of prospective load available under reasonable conversion and economic growth criteria. The conversion criteria we use includes the following: the ages and fuel type of existing equipment, the types of equipment to be installed in the target facilities, the size and age of the target facilities, discretionary income levels, and costs of competing fuels. Economic growth criteria include the plans of residential, commercial and industrial property developers. The company's analysis determines how much, if any contribution-in-aid-of construction must be collected from customers to support the investment. Often, it is the community that makes the election not to extend service based on the company's required contribution-in-aid-of construction.

Although the extension is still under review, NW Natural has not extended service to Estacada as our analysis indicates it is not economic for us to do so at this time given the current cost and load estimates. Residents of Estacada with whom NWN has met with regarding extending service to Estacada have indicated that they would not be

Respondent: Dennis L. Henderson, General Manager ICOM

willing to make a contribution in aid of construction payment that would help make it cost effective. Future expansion to Estacada has not been ruled out given the expected expansion of the urban growth boundary over the next few years that will require expansion of the distribution system toward Estacada. As the distribution system is expanded to meet Portland's growth plans, the economics of serving Estacada may improve.

NW Natural regularly studies system expansion opportunities and looks for the most opportune time to reach new areas in the most cost effective manner. For example, the south coast region (Coos County) represents a unique opportunity to extend our distribution system, chiefly because the County and the State of Oregon have funded the cost of a transmission line that will bring gas to gate stations located at each of the County's major municipalities.

Re: ***Cost to Serve Analysis - City of Gates, Oregon***

Dear Mr. and Mrs. Stevens:

The analysis of the cost to bring natural gas service into the City of Gates, Oregon has been completed. A detailed cost breakdown is enclosed for your information.

The total cost to bring service into the area is estimated at $342,639. The analysis of the estimated revenue that could be expected from future potential residential and commercial customer additions was factored into the cost to serve equation to derive the construction contribution required to bring natural gas service into the city. This revenue analysis is based on the best information available at this time, which includes 106 houses of about 800 square feet in size, one high school, two churches, one motel, ten small businesses and three small restaurants in the Gates area. The analysis indicates that a construction contribution in the amount of $156,960 would be required before construction could begin.

The construction contribution was determined in accordance with the Company's Infill Potential Analysis, which allows the company to take into consideration the potential for all customer additions at the time of the original request. This means several things. First, the information provided includes all potential customer hook-ups available in the area at this time. Second, by considering all potential customers in the initial cost to serve calculation, there are no possibilities for a refund of any construction contribution paid for the main extension into the city. The Infill Potential Analysis process is explained on Sheet RR-13 of Rule 12, enclosed for your information.

There are a number of factors that impact the revenue side of the calculation. The most significant are the size of the potential homes and the current home heating source. Our canvass of the area indicates that most of the homes are 800 square feet in size and are heated with electric baseboard, propane or wood. This means that the probability of these customers converting to natural gas at some point in the future is very small, primarily because the cost of doing so far exceeds the benefits that would be derived from the conversion. Other factors include the number of individuals who are ready to commit to converting at this time, and the future growth of the community.

Although our canvass of the area revealed interest in natural gas coming to the community, in nearly every instance, budget constraints prevented anyone from committing to converting to natural gas at this time. And, because there is no evidence of future growth in the area, the analysis must be limited to existing residential homes and commercial establishments.

Please call me at (503) 226-4211, extension 3582, or Dave Williams, District Manager of our Salem office at (503) 585-6611 should you have any questions about this information.

Very truly yours,

Richard J. DeFerrari,
Assistant to Vice President's of
Marketing and Regulatory Affairs

RE: Extension of Utility Distribution System Information Request

In regards to your recent information request on company policies and procedures associated with extension of our utility distribution system into new communities, we provide the following responses:

1. Please discuss how the company has supported and justified extending its distribution system to new communities over the last 20 years.

   Response: The policies and procedures that Avista follows for its main extensions in Oregon are outlined in Rule No. 15-Gas Main Extensions, contained in its approved tariffs. In summary extensions are calculated using our line extension tariff of three (3) times estimated annual gross revenues as determined by the Company. From time to time, extensions have become cost effective due to changing circumstances, such as PGT going through Keno in Klamath County, or mint processing plant conversions bringing our system closer to Cove and Summerville in Union County.

2. Please name the incorporated communities in your service territory that are currently not served by natural gas.

   Response: In Jackson County: Shady Cove, Ruch, Prospect, and Butte Falls; in Douglas County: Glide; in Klamath County: Chiloquin, and Bonanza; and in Union County: Enterprise/Joseph.

3. In general, why would your company not extend service to a new community?

   Response: Any communities not served are due to financial limitations on capital investment relative to the revenue forecast for that community. It has not been our practice to attempt to expand to new towns that will put rate pressure on existing customers. Communities have the option of contributing capital dollars to proposed projects to make them more cost effective.

4. Are there communities in your service territory that you, despite interest from potential customers, have elected not to extend service? Please discuss each community in detail.

   Response: Two examples are Shady Cove in Jackson County and Chiloquin in Klamath County.

In the case of both, the dwellings are spread out so that our revenue allowance would cover connections within the towns, but would be insufficient to provide for the lateral line to the towns. In Chiloquin, the PGT mainline is 14 miles east of town. There is not sufficient revenue within the town to justify a lateral of that length. In Shady Cove, our nearest facilities are about 9 miles distant, and are insufficient at that point to serve the town without backtracking another 3 miles to obtain high-pressure gas.

5. Over what time period is the investment by the company expected to be cost effective?

   Response: Our revenue requirements model considers the entire depreciable life cycle of the plant installed, usually 40 years on a levelized basis.

6. Does the company complete extensive marketing studies when making a decision to extend service into a new community?

   Response: When considering a new town, a team of construction and financial people are sent to the town to complete an infrastructure model of the town to ascertain construction costs. Customer connects are estimated based on the proportion of competing fuel users expected to convert. Much of this analysis is based on price differential, with the balance based on estimates of disposable income.

7. How does the company determine that extending its distribution system to a new community is a prudent decision?

   Response: We will typically run our estimated construction costs, as well as revenue data through a revenue requirements model, estimating the revenue requirement based on our authorized rate of return and capital structure. For an extension to be determined prudent, the resulting present value cash flow analysis must generate a return equal to or in excess of our weighted average cost of capital.

These responses are being supplied for informational purposes as to how Avista has operated historically for our Oregon natural gas properties.

Sincerely,

Don Falkner

Below is Cascade's response to your request for information regarding Cascade's extension of its distribution system over the past 20 years.

1. Please discuss how the company has supported and justified extending its distribution system to new communities over the last 20 years.

   Cascade has justified extending its distribution system to new communities over the last 20 years by adhering to its Rule 8 tariff - Main Extensions. The communities Cascade has extended service to over the past 20 years typically have one or more major industrial customers that have provided a large portion of the margin required to justify the extension investment. These communities include Irrigon, Boardman, Vale and LaPine.

2. Please name the incorporated communities in your service territory that are currently not served by natural gas.

   The Oregon communities not currently served by Cascade include Ione, Haines, Helix, Adams, Echo, Tumalo, Sisters and Culver.

3. In general, why would your company not extend service to a new community?

   Cascade would not extend service to a new community if the community is not willing to pay the incremental costs required to provide natural gas distribution facilities and services.

4. Are there communities in your service territory that you, despite interest from potential customers, have elected not to extend service? Please discuss each community in detail.

   No.

5. Over what time period is the investment by the company expected to be cost-effective?

   Cascade expects an investment to be cost effective (meet minimum return on investment) within 38 years.

6. Does the company complete extensive marketing studies when making a decision to extend service into a new community?

   Cascade completes a market study by surveying a new community to determine how many new customers can be expected within the first ten years.

7. How does the company determine that extending its distribution system to a new community is a prudent decision?

   Cascade would consider an extension of its distribution system a prudent decision if the anticipated margins from committed and projected customers, along with applicable customer contributions provides an IRR in a discounted cash flow analysis at or above our last allowed rate of return.

Company Response to UG 152 Staff Requests

January 27, 2003

290. How severe is the threat of industrial bypass in the Coos County service territory?

Response:

In Coos County, NW Natural's distribution system would be bypassed by a connection to the County pipeline as opposed to the Williams-West system. The threat of industrial bypass in the Coos County service territory for any given customer is different from the risk faced by NW Natural elsewhere in its service territory, for two reasons. .

First, although the County pipeline is not state or federally regulated, it terminates within territory exclusively allocated to NW Natural, and it thus falls within the Commission's authority to regulate under Oregon's Territory Allocation Law. That law would prohibit the County from serving customers through direct bypass.

Second, the partnership between Coos County and NW Natural to bring natural gas to the region allowed the Company to negotiate exceptions to the bypass prohibition described above. Specifically, the bypass provisions contained in Article 8 of the Transportation Service Agreement represent the parties' attempt to strike a balance between protecting NW Natural's Coos County investment from bypass risk while still allowing the County to provide a direct connect to capture economic development opportunities, but only under very limited market circumstances.

If the Commission approves the Transportation Service Agreement as a contract to allocate service territory, then that agreement will be enforceable and Article 8 will contractually control the risk of bypass. A copy of the Transportation Service Agreement is attached to the Company's filed testimony as Exhibit NWN/1501. The severity of the risk, therefore, depends on (1) the language of Article 8 and (2) the extent to which high-volume commercial and industrial gas users (designated as "Eligible Customers" under the Agreement) locate in Coos County.

Gas pipeline construction to begin April 15

By Robert Jump 5019

Construction of a natural gas pipeline to be built from Roseburg to Coos Bay is scheduled to begin in Douglas County on April 15.

According to Steve Shute, Pipeline Solutions project coordinator, the pipeline will most likely be started in Douglas County due to climactic conditions. Bidding documents were posted on Coos County's Internet web site on Jan. 22 and have been mailed to contractors who participated in a walking inspection of the pipeline's route.

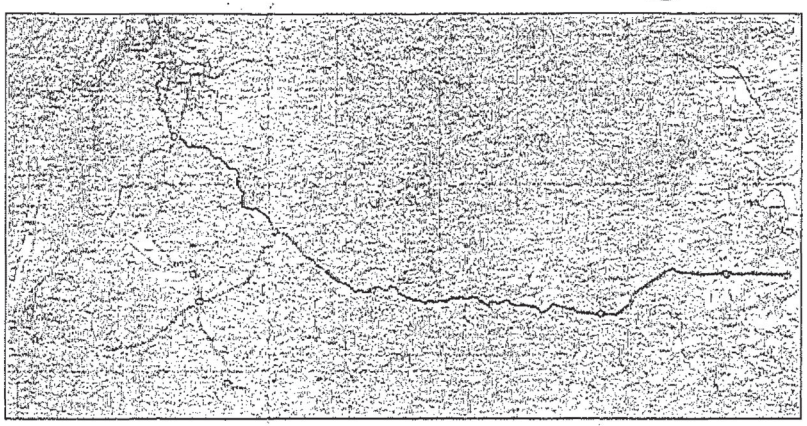
"Northwest Natural has a couple of items to clear up with the PUC (Public Utilities Commission)," Shute told *The Sentinel* Monday. "The construction date coincides with that."

According to the bidding documents, the 12 inch pipeline will be buried a minimum of 36 inches and where it will cross railroad right of ways or streams, will be a minimum of 72 inches from the surface. All welds are to be examined using x-ray technology. In addition, the pipeline will be pressure tested for leaks before gas is transported through the line.

The approximately 55 miles of pipeline will connect to Williams Gas Pipeline at a meter facility southwest of Roseburg. From there, the pipeline route follows about 12 miles of existing rights-of-way for public roads or for Pacific Power & Light and Bonneville Power Administration transmission powerlines. The route traverses the settlements of Lookingglass and Flournoy Valley to a crossroad called Reston to the Coos/Douglas County line. The pipeline will cross Brewster Canyon and go through Dora, Sitkum, McKinley and Fairview. The pipeline will then travel through the Blue Ridge area to Isthmus Slough on to Englewood and Coos Bay. About 4.5 miles of the pipeline will cross Bureau of Land Management land.

In 1999, a study leading up to the County referendum election proposed the route follow Highway 42. The pipeline would have connected to Williams at Winston, then run through Myrtle Point and Coquille to Coos Bay. However, the proposed route was 25 miles longer than the Coos Bay Wagon Road route.

The Highway 42 route would have placed the pipeline entirely within the highway right-of-way following Shields Creek and the Middle Fork of the Coquille River. The route would also have to cross along more flowing streams and was much longer. The pipeline along the Highway 42 route would have been about 70 miles along streams versus about 14 miles for the current route.



Map shows the route of the gas pipeline. Main pipeline route is in blue and yellow with laterals in red.
(Map taken from Environmental Impact Statement.)

County officials decided that the Highway 42 route was infeasible because of difficult construction. Numerous settlements and towns along the route where it would run would be difficult to traverse within the highway right-of-way, according to Coos County documents. In addition, there are about 38 miles of canyon, where crews would have a difficult time building the pipeline.

According to county documents, a 12-inch pipeline is the break between large diameter and small diameter projects and contractors usually ask for at least 50 to 75 feet in working space. The pipeline would have to be placed in a slot between pavement and highway guardrails or rock faces that narrow to two-three feet wide. An active fiber optic cable is already buried on each side of the highway. In addition, there would have been about seven miles of rock that would have needed to be excavated. The Oregon Department of Transportation expected to maintain normal traffic access for more than 20,000 cars per day during the pipeline's construction.

Pipeline laterals will be constructed of either four or six inch pipe for gas service to Coquille and Myrtle Point. A lateral could also be built to Bandon. The lateral routes are expected to follow powerline, state highway, Railroad and county road right-of-ways.

According to Shute, pipeline officials are now discussing easements with private landowners along the lateral routes. However, the final lateral route has not been established.

"We're trying to get a feel for landowner sentiments for the project," Shute said. "It seems to be going pretty well."

According to Shute, Pipeline Solutions has contacted "quite a few landowners."

Blasting and construction seasonal restrictions are in place to protect spotted owls and marbled murrelets. In addition, monitoring for archeological and tribal artifacts will be instituted.

The cost of the project is estimated at $51 million instate and local funding.

Shute estimates the pipeline system will cost about $200,000 per year to operate. The figure includes the full cost of labor, liability insurance, communications and other costs. The County plans to recover the full cost of operation with transportation fees charged to gas shippers. During the beginning of operation, the transport fees will be set at the estimated annual cost of operations. As the amount of gas transported grows, the transport fee will be charged on gas volumes actually transported. Excess fees received can be used to pay interest and debt, within the limits of tax exempt financing.

According to Shute, Coos County has the largest population of any county in the U.S. without natural gas service.

PUBLIC UTILITY COMMISSION OF OREGON

SECOND STIPULATION CONCERNING THE COOS COUNTY DISTRIBUTION SYSTEM

Staff, NW Natural, CUB, NWIGU, Coos County

Joint Direct Testimony of
Bonnie Tatom, Dennis L. Henderson, Bob Jenks,
Donald W. Schoenbeck, and Nikki Whitty

DOCKETED

April 2003

Staff-NWN-CUB-NWIGU-Coos County/1515
Tatom-Henderson-Jenks-Schoenbeck-Whitty/1

Q. Please state your names and positions.

A. My name is Bonnie Tatom. I am a member of Staff of the Oregon Public Utility Commission. I have previously filed testimony in this docket.

My name is Nikki Whitty. I am one of three elected County Commissioners for Coos County, Oregon. I have previously filed testimony in this docket in support of the Stipulation Relating to the Coos County Distribution System (the "First Stipulation").

My name is Bob Jenks. I am executive director of the Citizens' Utility Board ("CUB"). I have previously filed testimony in this docket.

My name is Dennis L. Henderson. I am employed by Northwest Natural Gas Company ("NW Natural") as the General Manager of the company's Industrial-Commercial Business Solutions Department. I have previously filed testimony in this docket.

My name is Donald W. Schoenbeck. I am a principal of Regulatory & Cogeneration Services, Inc., which is employed as a consultant in this docket by the Northwest Industrial Gas Users ("NWIGU"). I have previously filed testimony in this docket in support of the First Stipulation.

PURPOSE AND BACKGROUND

Q. What is the purpose of your testimony?

A. The purpose of our joint testimony is, first, to describe and support the Second Stipulation Relating to the Coos County Distribution System (the "Second Stipulation") between Commission Staff, NW Natural, CUB, NWIGU, and Coos County (together, the "Parties"). Second, our testimony will address the nine questions posed by the Commission following the oral argument on March 20, 2003.

Q. Please describe the background for this Second Stipulation.

Staff-NWN-CUB-NWIGU-Coos County/1515
Tatom-Henderson-Jenks-Schoenbeck-Whitty/2

A. With the exception of the City of Bandon, Coos County is within NW Natural's exclusive service territory. The company presently provides propane service in Coos County. In 1999, the state approved lottery bonds and Coos County voters authorized general obligation bonds to cover the cost of a sixty-mile gas transmission pipeline that would route natural gas from the Williams pipeline, at a point near Roseburg, to the south coast (the "County pipeline").

In July 2001, NW Natural and Coos County entered into a Transportation Service Agreement (the "Transportation Agreement") under which NW Natural agreed to construct certain minimum distribution facilities, through which the company will serve distribution customers by transporting its own gas through the interstate pipeline, purchasing gas transportation services on the County pipeline, and then delivering gas on its local distribution system to customers under appropriate tariffs. NW Natural may also provide local gas transportation services to industrial customers, from the County pipeline to the customers' facilities. The Transportation Agreement contains several conditions precedent to NW Natural's obligation to construct a distribution system, including Commission approval of the company's proposal concerning statewide rate treatment of the initial investment in Coos County distribution. NW Natural requested such approval from the Commission in a declaratory ruling docket, DR 30. While that decision was pending, however, NW Natural filed an application for a general rate revision, including its Coos County rate proposal. The DR 30 docket was closed and an expedited schedule for the Coos County issue was established in this rate case on January 10, 2003.

At the end of February 2003, NW Natural, NWIGU, and Coos County entered into the First Stipulation resolving, between those parties, issues relating to the rate

treatment of NW Natural's investment in the Coos County Distribution System (the "CCDS"). In settlement conferences in March and April 2003, the Parties to this Second Stipulation reached agreement concerning rate treatment of NW Natural's investment in the CCDS. This Second Stipulation supersedes the First Stipulation.

THE SECOND STIPULATION

Q. Please summarize the proposal for cost-sharing set forth in the Second Stipulation.

A. The Second Stipulation defines the scope of NW Natural's proposed initial investment in the CCDS, which totals an estimated $12 million and which, for purposes of the rate proposal set forth in the Second Stipulation, is capped at that amount. The Second Stipulation describes a cost-sharing mechanism for the initial investment that is based on NW Natural's main extension policy in Tariff P.U.C. Or. 22, Schedule X. Specifically, the main extension allowance is five times projected annual margin revenue. In the case of the CCDS, the Parties now agree that the projected annual margin revenue is $2 million and the main extension allowance is $10 million.

Normally, Schedule X would require Coos County to pay amounts in excess of the main extension allowance — that is, $2 million — in advance of construction. However, because of the contributions both the County and the State have already made to finance the sixty-mile County pipeline, the Parties believe it is reasonable in this case to include the entire $12 million in statewide rates and allow the County to repay its $2 million share through the mechanisms specified in the Second Stipulation.

Q. Are the cost-sharing ratios specified in the Second Stipulation the same as Staff's original proposal based on application of Schedule X?

A. No. The original calculation of the main extension allowance under Schedule X resulted in a cost-sharing ratio of approximately 50/50. However, that calculation did not include

demand charges in projected revenues, and the Parties agree those charges should be included under the terms of Schedule X. When NW Natural recalculated projected margin revenues to include demand charge revenues, the resulting cost-sharing was $10 million/$2 million as described above, or approximately an 83/17 percent split.

Q. Please describe the repayment mechanism proposed in the Second Stipulation.

A. The initial investment in the CCDS, not to exceed $12 million, will be placed into rate base and the revenue requirement will be included in rates effective with the distribution system's in-service date, subject to audit and review procedures. However, the amount of the CCDS investment in excess of the main extension allowance of $10 million will be repaid to statewide customers over time, through (1) collection of a separate charge from Coos County customers, (2) a $400,000 credit adjustment by NW Natural, and (3) revisions to the Transportation Agreement reducing NW Natural's charges for transportation on the County pipeline.

First, NW Natural will impose a charge on Coos County natural gas sales service customers (the "Coos County Charge") of $0.02 per therm during the first twenty years of service. The Coos County Charge will be applied first to pay NW Natural's costs of transportation services on the County pipeline (as described below), and second to repay to statewide customers the Coos County Share. The "Coos County Share" means the amount of NW Natural's initial investment (capped at $12 million), minus the $10 million main extension allowance, minus NW Natural's $400,000 credit adjustment.

Second, NW Natural will record a credit adjustment to its Oregon customers of $100,000 per year for four years, plus carrying charges, for a net present value of $400,000. This amount will be refunded to statewide customers through NW Natural's

purchased gas adjustment. The credit will be allocated generally to the customer classes expected to contribute toward repayment of the Coos County Share.

Third, Coos County has offered to amend the Transportation Agreement to effectively reduce NW Natural's transportation rate. The Transportation Agreement now specifies a cents/MMBtu rate for transportation on the County pipeline, but the County will change those provisions to cap its transportation charges at an amount equal to NW Natural's volumetric share of operational and maintenance expenses for each year of the first twenty years of the agreement. Those expenses are estimated at approximately $200,000 annually. Once proceeds from the $0.02/therm Coos County Charge exceed the annual O&M amount, the excess will go toward repayment of the Coos County Share. After twenty years, if the Coos County Charge proceeds, combined with contributions of transportation customers, as described below, have not repaid the Coos County Share, then NW Natural will calculate the balance remaining and establish, with the Commission's approval, an appropriate surcharge for Coos County customers until the entire balance has been paid. The Commission will determine at that time the period necessary for recovery of the remainder of the Coos County Share and the allocation of the charge to customer classes.

During the initial years when the Coos County Charge may not be adequate to meet O&M expenses on the County pipeline, the Second Stipulation provides that the balance will be recovered statewide in NW Natural's annual purchased gas adjustment until the Coos County Charge is adequate.

Q. Does the Second Stipulation include contributions by industrial transportation customers?

Staff-NWN-CUB-NWIGU-Coos County/1515
Tatom-Henderson-Jenks-Schoenbeck-Whitty/6

A. Yes, transportation customers will make both a direct and an indirect contribution. First, each transporter on the County pipeline pays its volumetric share of pipeline O&M expenses. For transporters other than NW Natural, transportation charges in excess of this O&M amount will be applied toward repayment of the Coos County Share. Second, industrial customers will have an indirect, positive effect on repayment of the Coos County Share because each additional transporter will proportionately reduce NW Natural's volumetric share of O&M on the County pipeline. This increases the amount of the Coos County Charge that becomes available for repayment.

In addition, for any transportation customer eligible to bypass the CCDS, NW Natural can negotiate a special anti-bypass rate which must be approved by the Commission. At that time, the Commission will consider whether the customer is contributing sufficient amounts to fixed costs, including repayment of the Coos County Share.

Q. Do the Parties predict that the Coos County Share will be entirely repaid within twenty years?

A. Given the degree of uncertainty — of factors such as industrial load growth, for example — it is difficult to predict when repayment will occur. However, given NW Natural's load projections and assuming (1) a $0.02/therm charge on sales service customers and (2) a $0.01/therm transportation charge on the County pipeline for transportation customers, the Parties calculate that the unpaid balance of the Coos County Share would be $73,669 in year twenty.

Q. What assurance do ratepayers have that the roll-in of CCDS costs will be confined to the initial $12 million investment?

A. NW Natural has agreed that, for rate purposes, it will cap its initial CCDS investment at $12 million. The Company has also agreed that, following the initial investment, further extensions of service will be governed by Schedule X.

Q. What other terms does the Second Stipulation include?

A. The Second Stipulation represents a negotiated compromise among the Parties. Thus, the Parties have agreed that no Party shall be deemed to have approved the facts, principles, methods, or theories employed by any other in arriving at the Second Stipulation, and that the terms incorporated in the Second Stipulation should not be viewed as precedent in subsequent proceedings. In addition, the Parties have the right to withdraw from the Second Stipulation if any material part is rejected by the Commission, and the Parties remain free to pursue any appropriate course of action with respect to any issue or matter in this proceeding that is not covered by the Second Stipulation.

Q. Does the Second Stipulation resolve the issue of how rates will be spread among customer classes?

A. No. Each Party retains its original position with regard to rate spread, and the Second Stipulation does not address the issue at all. The exact statewide rate effect of the proposal in the Second Stipulation will depend upon the determination of rate spread in this docket.

Q. What do the Parties recommend regarding the Second Stipulation?

A. We recommend that the Commission admit the Second Stipulation into the UG 152 record and adopt the Second Stipulation in its entirety in determining the rate treatment of NW Natural's initial investment in a Coos County distribution system.

Staff-NWN-CUB-NWIGU-Coos County/1515
Tatom-Henderson-Jenks-Schoenbeck-Whitty/8

ANSWERS TO QUESTIONS POSED BY THE COMMISSION

Q. Please explain how the Parties are responding to the Commissioners' interrogatories.

A. Following the oral argument held on March 20, 2003, the Commissioners forwarded nine interrogatories to all parties in UG 152. The deadline for responses to these interrogatories has been extended to April 9, 2003 in order to allow the Parties to the Second Stipulation to provide answers in this supporting joint testimony. Not all Parties will respond to all nine interrogatories; therefore, the name of the responding witness is provided where only one Party offers a response. In such cases, the Commission should not consider the response indicative of the position of any other Party.

Q. Will the Coos County pipeline be built if no industrial customer chooses to take transportation services from Coos County?

A. *Whitty*: Coos County will build its gas transmission pipeline whether or not any industrial customer arranges for gas transportation services beforehand. The County anticipates that most industrial customers will begin transportation and use of natural gas following construction of the pipeline and the CCDS.

Q. Under what conditions, if any, will Northwest Natural Gas (NNG) build the distribution system in Coos County if no industrial customer chooses to take transportation service from NNG?

A. *Henderson*: NW Natural is obligated, under its Transportation Service Agreement with Coos County, to construct the distribution system, assuming fulfillment of certain conditions. Therefore the Company will construct the CCDS without knowing beforehand which industrial customers, if any, will be served.

Staff-NWN-CUB-NWIGU-Coos County/1515
Tatom-Henderson-Jenks-Schoenbeck-Whitty/9

Q. What are the expected costs of serving residential, commercial, and industrial customers in Coos County?

A. *Henderson*: By the end of the second year of service, when construction of the intial CCDS will be completed, the cost of serving residential, commercial, and industrial customers in Coos County is estimated to be $2,470,712. Detailed costs are provided in the spreadsheet attached as Exhibit 1516.

Q. What is a reasonable allocation of the costs of the distribution system between industrial customers and all other Coos County customers?

A. *All*: Under the proposal set forth in the Second Stipulation, all sales customers, regardless of class, pay $0.02 per therm toward repayment of the Coos County Share. Transporters on the County pipeline will contribute transportation charges in excess of their volumetric share of pipeline O&M expense. In addition, any transportation customer eligible for a special contract must pay rates that have been approved by the Commission. When the Commission approves such contracts, one factor it will consider is whether the customer is contributing sufficient amounts to fixed costs, including repayment of the Coos County Share. To the extent these contributions have not fully repaid the Coos County Share after the first twenty years of service, NW Natural will calculate the remaining balance and the Commission will establish an appropriate level of surcharge, if one is necessary, to effect repayment. The Parties believe that this general method of cost allocation is reasonable under the circumstances.

Q. Have economic studies been done on the number of residential and commercial customers in Coos County likely to switch to natural gas in the first five years, besides the Forefront Economics study? What is a reasonable assumption for that

switch, given the price of alternative fuels, the cost to customers of new equipment, customer payment for line extensions from the "backbone" distribution system, etc.?

A. *Henderson*: NW Natural has developed its own models and load projections, both in the DR 30 docket and in this case. NW Natural's assumptions for load growth are more conservative than those presented in the Forefront Economics study. Specifically, NW Natural projects a load for residential and commercial customers of 1,326,316 therms in year 1, growing to 7,935,975 therms in year twenty. NW Natural believes its projections constitute reasonable forecasts of residential and commercial load, given factors such as fuel cost, conversion expense, and contributions under Schedule X.

Q. How would the market in Coos County respond to a 2 cent per therm, 3 cent per therm, 5 cent per therm, and 10 cent per therm surcharge on NWN gas sold in Coos County to residential and commercial customers?

A. *All*: The Parties believe the 2-cent-per-therm charge, with a potential adjustment after twenty years, is the appropriate level to balance gas marketing efforts with the repayment mechanism proposed in the Second Stipulation. NW Natural and Coos County believe that a higher initial charge would have an adverse affect on load growth on commercial and residential schedules and could compromise efforts to repay the Coos County Share. Conversely, keeping the charge to Coos County customers at a modest level in the early years may be an important factor in creating a healthy customer base as the system gets established, and a healthier customer base will in turn help accelerate repayment of the Coos County Share.

Q. In the first years of operation, there may not be enough customers to support even half of the cost of the Coos County distribution system. How could rates be designed, and costs accounted for, such that Coos County natural gas customers

eventually pay their share of the costs of the distribution system under the main extension policy?

A. *All*: The Parties believe that the cost-sharing proposal in the Second Stipulation represents the best mechanism for support of the CCDS, consistent with NW Natural's line extension policy.

Q. **What customers will the North Spit spur serve when rates go into effect? If there are no customers served, explain how the line meets the used and useful test under ORS 757.355.**

A. *Henderson*: The status of potential customers on the North Spit is unknown at present. NW Natural plans to include a pipeline to the North Spit in its initial construction of the CCDS because the costs of building the line along with the rest of the system are far less than the costs of building it later, and having the line in place will facilitate NW Natural's efforts to market gas to potential North Spit customers. NW Natural acknowledges that it must demonstrate that the North Spit pipeline is used and useful in order to retain that investment in rate base.

Q. **If NNG builds the distribution system, will it continue to provide propane service to Coos County customers? If yes, how will it price propane?**

A. *Henderson*: NW Natural intends to phase out propane service in Coos County in areas served by the CCDS. The details of that transition are still under review at NW Natural.

Q. **Does this conclude your joint testimony?**

A. Yes.

Re: *UG 152/Coos County*

Dear Judge Arlow,

Enclosed for filing please find the original and five copies of Exhibit 1516. Exhibit 1516 should be attached to the Joint Testimony submitted by the Parties to the Second Stipulation Relating to the Coos County Distribution System. I inadvertently omitted this exhibit when I filed the Second Stipulation and Joint Testimony yesterday.

Thank you for your attention.

Sincerely,

Stephanie Andrus
Assistant Attorney General

EXHIBIT 1516

NW Natural
Coos Bay Analysis

		Year 1	Year 2
1	Construction Cost	$7,487,811	$4,512,189
2	Rate Base Gross Plant Only	$3,743,906	$9,743,906
3	Depreciation @ 3 % (1/2 year for incremental)	$112,317	$292,317
4	Rate Base Net Plant Only	$7,375,494	$11,595,366
5	Rate Base - net of depreciation & deferred tax	$6,459,808	$10,067,477
6	Depreciation	$112,317	$292,317
7	Property Taxes	$100,307	$157,697
8	Operations & Maintenance	$715,500	$715,500
	Taxes on Equity Return		
9	State	$36,713	$57,216
10	Federal	$181,840	$283,393
11	Total Taxes	$218,552	$340,609
	Return on Rate Base		
12	Debt	$237,852	$370,687
13	Preferred Equity	$21,800	$33,975
14	Common Equity	$315,902	$492,327
15	Total Return	$575,554	$896,989
16	Subtotal Cost of Service	$1,722,230	$2,403,112
17	Revenue Sensitive Costs	$48,446	$67,600
18	Total Cost of Service	$1,770,677	$2,470,712

By the end of year 2, when the full system will have been built, the cost of serving residendial, commercial and industrial commercial customer in Coos Co. will be $2,470,712.

Any effort to partition the cost of serving customers between the classes quickly becomes complicated by the difficulty of allocating shared costs. Looking only at the cost of meters and services, the investment necessary to serve a residential customer is $671; a commercial meter and service costs $1,540 and the average industrial meter and service costs $10,250.

Electricity

Foreword to Electric Utilities

Three investor-owned electric utilities operate in Oregon. Investor-owned electric utilities provide service to approximately 74 percent of the customers in the state.

The average annual kilowatt hour (kWh) consumption of residential customers for Oregon operations of investor-owned electric utilities is as follows:

	2024	2023	2022	2021	2020
Investor-Owned Electric Utilities	9,859	10,320	10,606	10,554	10,304

The following types of electric suppliers served electric customers in Oregon on December 31, 2024:

Type of Electricity Supplier	Number	MWh Sales in Oregon (%)[3]	Customers in Oregon (%)[3]
Investor-Owned	3	57.2	74.1
Electricity Service Suppliers (ESS)[1]	6	4.9	< 0.1
Cooperative[2]	19	21.3	10.4
Municipal-Owned[2]	12	8.0	9.7
People's Utility District[2]	6	8.6	5.7

[1] Since March 1, 2002, all retail electricity consumers of Portland General Electric Company and PacifiCorp, except residential consumers, may elect to purchase electricity from an entity other than the distribution utility. (See ORS 757.600 et seq.)
[2] Cooperatives, Municipal-Owned Utilities, and People's Utility Districts (PUDs), are not regulated by the Oregon Public Utility Commission, except for safety, area allocation, transmission lines, and curtailment. Reports submitted by Cooperatives, Municipal-Owned Utilities, and PUDs are not audited by the Commission. Some companies may report duplicate customers. An example of a duplicate is a customer whose household service is billed under a residential rate schedule and whose security lighting outside the home is billed under a lighting schedule. When duplicate customers are known and measurable, they have been footnoted. Summary data are provided for informational purposes only.
[3] Percentages are subject to rounding.

[A] ESS - Electricity Service Suppliers.

[B] Includes $142,473 of unbilled revenues.

[C] Includes $1,191,815 of unbilled revenues.

[D] Includes $328,006,000 of unbilled revenues.

[E] Includes $31,947,329 in revenue related to the delivery of 2,423,910 megawatt hours ESS customers.

[F] Includes $41,005,000 of unbilled revenues.

Natural Gas

Foreword to Natural Gas Utilities

There are three investor-owned natural gas utilities operating in Oregon. They reported sales of approximately 913.5 million therms in Oregon during 2024 resulting in total operating revenues of approximately $1.21 billion.

Northwest Natural Gas Company, dba NW Natural, is the largest natural gas distribution utility operating in Oregon. During 2024, NW Natural's Oregon total operating revenues comprised approximately 79 percent of the total for the state. The company's operating expenses, excluding depreciation, amortization, and taxes, represented approximately 78 percent of the total expenses for the three utilities. NW Natural's delivered therm volumes, excluding transportation, accounted for approximately 79 percent of Oregon natural gas utility therm sales.

Telecommunications

Foreword to Telecommunications Utilities and Cooperatives

This section contains Oregon telecommunications data from annual reports filed by 30 Incumbent Local Exchange carriers (ILECs).[1] The ILECs consist of telecommunications utilities and cooperatives. Eleven of the thirty ILECs are Telecommunication Cooperatives, fourteen are Small Telecommunication Utilities, and five are classified as Large Telecommunication Utilities since they are either affiliated with CenturyLink or Ziply Fiber.

The ILECs' total 2024 Gross Oregon Operating Revenues were $736 million, a 2.0 percent decrease from the $751 million they generated in 2023. As measured by Gross Oregon Operating Revenues, CenturyLink (including affiliates) had a 57.9 percent share of the ILEC market and Ziply Fiber (including affiliates) had 25.0 percent. The remaining ILECs had 17.1 percent of the ILEC market. As measured by Total lines, CenturyLink provisioned 71.3 percent of the market served by ILECs and Ziply Fiber served 18.6 percent. The remaining ILECs served 10.1 percent. Because CenturyLink and Ziply Fiber account for the majority of the lines and revenues, they strongly influence the graphs and statistical data.

The Oregon Public Utility Commission implemented the Oregon Universal Service Fund (OUSF) program in 2001 to ensure that basic service is available to customers at reasonable and affordable rates in high-cost areas. In 2021, the OUSF expanded to include both wireless and VoIP providers, and in 2024, a total of 326 certificated providers (TSPs) contributed $28.4 million. For that same year, the fund distributed $27.9 million to 32 eligible TSPs that provide basic local telephone service in the high-cost areas.

[1] CenturyTel of Eastern Oregon and CenturyTel of Oregon are treated as one entity - CenturyTel, Inc.

[A] Total revenues are shown net of uncollectibles and include billing and collection, network access, directories, and miscellaneous revenues. Adjustments have been made for changes in accounting methods regarding collections of OUSF and imputed directory revenue.

[B] The Residential line count is taken directly from the Annual Report Form O, Schedule S-1. The Business line count is taken from the Annual Report Form O and is the total of Business Lines, PBX Trunks, Centrex-Co Lines, and ISDN "B" Channels. The Unbundled Network Elements (UNE) Network Access Channels (NACS) line count is taken directly from the "UNE NACs" of Form O.

[C] Universal Service includes both State and Federal support as reported on the annual Form O.

[D] Other Revenues include Federal USF Collections, Directory Revenue, Carrier Billing & Collections, Non Regulatory Revenues, Misc. Revenues, and Uncollectible Revenues.

[A] Total revenues are shown net of uncollectibles and include billing and collection, network access, directories, and miscellaneous revenues. Adjustments have been made for changes in accounting methods regarding collections of OUSF and imputed directory revenue.

[B] The Residential line count is taken directly from the Annual Report Form O, Schedule S-1. The Business line count is taken from the Annual Report Form O and is the total of Business Lines, PBX Trunks, Centrex-Co Lines, and ISDN "B" Channels. The Unbundled Network Elements (UNE) Network Access Channels (NACS) line count is taken directly from the "UNE NACs" of Form O.

[C] Universal Service includes both State and Federal support as reported on the annual Form O.

[D] Other Revenues include Federal USF Collections, Directory Revenue, Carrier Billing & Collections, Non Regulatory Revenues, Misc. Revenues, and Uncollectible Revenues.

[E] Eleven telecommunications cooperatives serve Oregon, as identified in the "Index to Telecommunications Utilities & Cooperatives."

[F] Restated.

Telecommunications Utilities and Cooperatives

Notes to Financial and Statistical Data

[A] The statistics of the small utilities are heavily weighted by Cascade Utilities, which serves 37 percent of Oregon's small telecommunications utility customers excluding Ziply Fiber of Oregon, LLC. For this report, Ziply Fiber of Oregon, LLC is included with its affiliate in the Large Telecommunications Utilities and Affiliates category.

[B] The statistics of the cooperatives are heavily weighted by Pioneer Telephone Cooperative, which serves 52 percent of Oregon's telecommunications cooperatives members.

[C] For this report, Ziply Fiber of Oregon, LLC is included with its affiliate in the Large Telecommunications Utilites and Affiliates category.

[D] Oregon Universal Service Fund amounts are as recorded in the Oregon Public Utility Commission's OUSF system.

[E] Federal Universal Service Fund amounts are as recorded in the USAC system.

Water

Foreword to Water Utilities

In general, only investor-owned water utilities and some water associations (when regulation is requested by 20 percent of membership) are regulated by the Oregon Public Utility Commission (OPUC). The Commission regulates water rates if: 1) the utility serves 500 or more customers; 2) the utility has an average monthly residential rate exceeding $42 for unmetered systems or $45 for metered systems and 20 percent or more of its customers petition the Commission requesting regulation of rates; or 3) the utility requests to be regulated.

During 2024, there were approximately 85 water utilities subject to OPUC jurisdiction, however, only rate-regulated water utilities are required to file annual reports with the Commission.

For accounting purposes, water utilities are classified as A, B, and C, according to the level of water operating revenues.

Class A water utilities consistently have annual water operating revenues of $1,000,000 or more. There were five Class A water utilities in 2024, for a list of the companies, see the index on the following pages.

Class B water utilities consistently have annual water operating revenues between $200,000 and $999,999. There were six Class B water utilities in 2024, for a list of the companies, see the index on the following pages.

Class C water utilities consistently have annual water operating revenues of less than $200,000. There were twenty-two Class C water utilities in 2024, for a list of the companies, see the index on the following pages.

Note: The name of the Department of Human Resources has been changed to the Department of Human Services and the title of the Director of Human Resources to the Director of Human Services. The name and title changes become operative on July 1, 2000. See sections 10 and 11, chapter 421, Oregon Laws 1999. References to the department and the director in this chapter use the name and the title that become operative on July 1, 2000.

Note: 285A.010 contains definitions for ORS chapter 285B.

BUSINESS DEVELOPMENT PROJECTS

285B.050 Definitions for ORS 285B.050 to 285B.098. As used in ORS 285B.050 to 285B.098, unless the context requires otherwise:

(1) "Business development project" means the acquisition, engineering, improvement, rehabilitation, construction, operation or maintenance of any property, real or personal, that is used or is suitable for use by an economic enterprise and that will result in, or will aid, promote or facilitate, development of one or more of the following activities:

(a) Manufacturing or other industrial production;

(b) Agricultural development or food processing;

(c) Aquacultural development or seafood processing;

(d) Development or improved utilization of natural resources;

(e) Convention facilities and trade centers;

(f) Transportation or freight facilities; and

(g) Other activities that represent new technology or type of economic enterprise the Oregon Economic and Community Development Commission determines is needed to diversify the economic base of an area but not including:

(A) Construction of office buildings, including corporate headquarters; and

(B) Retail businesses, shopping centers or food service facilities.

(2) "Commission" means the Oregon Economic and Community Development Commission established under ORS 285A.040.

(3) "Fund" means the Oregon Business Development Fund.

(4) "Collateral" means property subject to a security interest, as defined in ORS 79.1050.

(5) "Municipality" means any city, municipal corporation or quasi-municipal corporation.

(6) "Person" means any individual, association of individuals, joint venture, partnership or corporation.

(7) "Local development group" means any public or private corporation which has as one of its primary purposes, as stated in its articles of incorporation, charter or bylaws, the promotion of economic development in any part of the State of Oregon.

(8) "Applicant" means any county, municipality, person or any combination of counties, municipalities or persons applying for a loan from the Oregon Business Development Fund under ORS 285B.050 to 285B.098.

(9) "Owned and operated by women and minorities" means, with regard to any specific business enterprise, the ownership or control of more than 50 percent of the units of proprietary or ownership interest in that business enterprise by individuals who are women or members of minorities, as defined by ORS 430.347 (2).

(10) "Emerging small business" has the meaning given that term by ORS 200.005.

(11) "County" means any county or federally recognized Oregon Indian tribe. [Formerly 285.403]

285B.053 Borrowing money from Oregon Business Development Fund for projects. (1) Any county, municipality, person or any combination of counties, municipalities and persons may file with the Oregon Economic and Community Development Commission an application to borrow money from the Oregon Business Development Fund for a business development project as provided in ORS 285B.050 to 285B.098. The application shall be filed in such a manner and contain or be accompanied by such information as the commission may prescribe.

(2) Any applicant receiving a loan from the Oregon Business Development Fund shall annually report to the Economic and Community Development Department the estimated number of jobs created as a result of the business development project financed under ORS 285B.050 to 285B.098. The reporting requirement under this section shall continue for five years following the receipt of the loan proceeds or for the life of the loan, whichever period is longer. Agreement to comply with the requirements of this section shall be a condition for obtaining a loan from the Oregon Business Development Fund. [Formerly 285.405]

285B.056 Evaluation of project; fee. (1) Upon receipt of an application under ORS 285B.053, the Oregon Economic and Community Development Commission shall determine whether the plans and specifications for the proposed business development project set forth in or accompanying the application are satisfactory. If the commission determines that the plans and specifications are not satisfactory, it shall:

(a) Reject the application with a written statement of the reason for that rejection; or

(b) Require the applicant to submit additional information of the plans and specifications as may be necessary.

(2) The commission shall charge and collect from the applicant, at the time the application is filed, a fee not to exceed $100. Moneys referred to in this subsection shall be paid into the Oregon Business Development Fund. [Formerly 285.410]

285B.059 Conditions for commission approval of project; preferences; limits. (1) The Oregon Economic and Community Development Commission may approve a business development project proposed in an application filed under ORS 285B.050 to 285B.098 if, after investigation, it finds that:

(a) The proposed business development project is feasible and a reasonable risk from practical and economic standpoints, and the loan has reasonable prospect of repayment.

(b) The applicant can provide good and sufficient collateral for the loan.

(c) Moneys in the Oregon Business Development Fund are or will be available for the proposed business development project.

(d) There is a need for the proposed business development project, and the applicant's financial resources are adequate to assure success of the project.

(e) If the proposed project is to be located in an incorporated city, the governing body of that city has executed a resolution recommending the proposed project.

(f) If the proposed project is to be located outside any incorporated city, the governing body of the county in which the project is to be located has executed a resolution recommending the proposed project.

(g) The Housing and Community Services Department received notification of the proposed project and any related workforce increase at the time the application was received by the commission.

(h) The applicant has not received or entered into a contract or contracts exceeding $500,000 with the commission, under authority of ORS 285B.050 to 285B.098, for the previous 365 days, nor is there an amount equal to 20 percent of the total value of the fund in outstanding loans with the commission at any one time for business development projects located in the same county as the proposed project. However, nothing in this paragraph prevents the commission from making a loan to an emerging small business, as provided in subsection (6) of this section, or making a loan of less than $100,000, as provided in ORS 285B.080.

(2) Preference shall be given to a business development project which has a high ratio of employment to the amount of money sought to be borrowed from the Oregon Business Development Fund, which benefits businesses with fewer than 50 employees or which is located within a rural area of the state. Consideration also shall be given to the extent of participation by local development groups, and the availability and cost of money to the applicant from, or through, commercial lending or financial institutions, or other financial sources, inasmuch as the Oregon Business Development Fund is intended to complement, not supplant, other sources of money for economic development.

(3) The total amount of moneys loaned from the fund for any business development project shall not exceed 50

percent of the cost of the project. Working capital equity contributed by the applicant or a related party shall not be included in the calculation of total project costs.

(4) Except in cases where the applicant is a county or municipality, no money shall be loaned from the fund for any business development project unless there exists a commitment from a commercial or private lender, or a local development group, to participate in the financing of the project.

(5) To encourage private sector and local development group participation in the financing of business development projects, the commission may subordinate the security position of the fund to that of other lenders.

(6) In each fiscal year of a biennium, not less than 15 percent of all moneys available for lending from the Oregon Business Development Fund are reserved for loans to certified emerging small business enterprises which are located in or draw their workforces from within distressed communities as determined by the Economic and Community Development Department in cooperation with the Employment Department of this state. Any amounts reserved for loans to such businesses that are not loaned in one fiscal year shall be added to the amount reserved for loans to such businesses in the subsequent fiscal year. If the Economic and Community Development Department is unable to obtain a sufficient number of approvable applications to meet the requirements of this subsection, it may, notwithstanding the limitations imposed by ORS 285B.050 (1)(g)(B), make loans to service and retail businesses operated by certified emerging small business enterprises.

(7) In the operation of the Oregon Business Development Fund, the commission and the department shall, to the maximum extent feasible and consistent with constitutional limitations, seek to assure that an amount equal to that specified in subsection (6) of this section be loaned to businesses owned and operated by women and minorities. [Formerly 285.413; 1999 c.509 s.27]

285B.062 Agreement for project loan; required provisions; interest rate; discount for early repayment. If the Oregon Economic and Community Development Commission approves the business development project, the commission, on behalf of the state, and the applicant may enter into a loan contract of not more than $500,000, secured by good and sufficient collateral, which shall set forth, among other matters:

(1) A plan for repayment by the applicant to the Oregon Business Development Fund moneys borrowed from the fund used for the business development project with interest charged on those moneys at the rate of not less than one percentage point more than the prevailing interest rate on United States Treasury bills, notes or bonds of a comparable term, as determined by the commission. However, the commission may make such loans to emerging small businesses, as defined in ORS 200.005, at a rate of not less than one percentage point less than such prevailing interest rate. The repayment plan, among other matters:

(a) Shall provide for commencement of repayment by the applicant of moneys used for the business development project and interest thereon no later than one year after the date of the loan contract or at such other time as the commission may provide.

(b) May provide for reasonable extension of the time for making any repayment in emergency or hardship circumstances if approved by the commission.

(c) Shall provide for such evidence of debt assurance of, and security for, repayment by the applicant as is considered necessary by the commission.

(d) Shall set forth a schedule of payments and the period of loan which shall not exceed the usable life of the contracted project or 20 years from the date of the contract, whichever is less, and shall also set forth the manner of determining when loan payments are delinquent. The payment schedule shall include repayment of interest which accrues during any period of delay in repayment authorized by paragraph (a) of this subsection, and the payment schedule may require payments of varying amounts for collection of accrued interest.

(e) Shall set forth a procedure for formal declaration of default of payment by the commission, including formal notification of all relevant federal, state and local agencies; and further, a procedure for notification of all relevant federal, state and local agencies that declaration of default has been rescinded when appropriate.

(f) May offer a discount not to exceed 10 percent of the outstanding principal for the early repayment of the entire outstanding principal of any loan. The commission by rule shall adopt policies that provide for greater discounts for earlier repayments and that provide for greater discounts for firms that have created at least one job per each $15,000 loaned to the firm from the Oregon Business Development Fund.

(2) Provisions satisfactory to the commission for field engineering and inspection, the commission to be the final judge of completion of the contract.

(3) That the liability of the state under the contract is contingent upon the availability of moneys in the Oregon Business Development Fund for use in the business development project.

(4) Such further provisions as the commission considers necessary to insure expenditure of the funds for the purposes set forth in the approved application.

(5) That the commission may institute appropriate action or suit to prevent use of the facilities of a business development project financed by the Oregon Business Development Fund if the applicant is delinquent in the repayment of any moneys due the fund. [Formerly 285.415]

285B.065 Loans in distressed areas exempt from requirements of ORS 285B.059 and 285B.062. The Economic and Community Development Department may make loans in distressed areas, as defined by the department, without regard to the requirements for security and collateral under ORS 285B.059 and 285B.062 that are otherwise applicable. [Formerly 285.416]

285B.068 Payment of moneys for project; applicant to pay percentage of loan principal to Oregon Business Development Fund. (1) If the Oregon Economic and Community Development Commission approves a loan for a business development project and the applicant has received all necessary permits required by federal, state and local agencies, the commission shall pay moneys for the project from the Oregon Business Development Fund, in accordance with the terms of the loan contract as prescribed by the commission.

(2) Immediately upon receiving the loan proceeds, the applicant shall pay to the commission one and one-half percent of the principal amount of the loan, to be paid back to the Oregon Business Development Fund. A maximum of three percent of the principal amount of the loan may be paid from the fund to local development groups for the purposes set forth in ORS 285B.092 (1)(a). [Formerly 285.417]

285B.071 Authority to obtain moneys to repay fund. Any county or municipality that enters into a contract with the Oregon Economic and Community Development Commission for a business development project and repayment as provided in ORS 285B.062 may obtain moneys for repayment to the Oregon Business Development Fund under the contract in the same manner as other moneys are obtained for purposes of the county or municipality or other moneys available to the developer. [Formerly 285.420]

285B.074 Contract for loan service; fee. The Economic and Community Development Department may, by contract, provide for local business development funds to service outstanding loans from the Oregon Business Development Fund. The department may provide for a fee of up to two percent of the outstanding loan balance on such loans to compensate local business development funds for services provided under this section. [Formerly 285.425]

285B.077 Report required. The Oregon Economic and Community Development Commission shall submit to the Legislative Assembly and the Governor a biennial report of the transactions of the Oregon Business Development Fund in such detail as will adequately indicate the condition of the fund. [Formerly 285.430]

285B.080 Director as agent; limitation on authority. (1) The Oregon Economic and Community Development Commission may appoint the Director of the Economic and Community Development Department as its representative and agent in all matters pertaining to ORS 285B.050 to 285B.098.

(2) The director shall ensure that all provisions of ORS 285B.050 to 285B.098 are complied with and that appropriately trained personnel are employed to properly administer the fiscal and other portions of ORS 285B.050 to 285B.098.

(3) The director shall have the authority in the director's sole discretion to approve loans for business development projects in the amount of $100,000 or less and to disburse funds for such projects. [Formerly 285.433]

285B.083 Use of refinancing and other financial assistance. Except as provided in ORS 285B.086, if any business development project is refinanced or financial assistance is obtained from other sources after the execution of the loan from the state, those shall be first used to repay the state, unless provided otherwise by the committee, if the refinancing or financial assistance applies only to the business development project authorized and does not include any subsequent addition, expansion, improvement or further development. [Formerly 285.435]

285B.086 Authority to lend funds for joint governmental projects or match money; form of loan application; loan limit. (1) The Oregon Economic and Community Development Commission may authorize funds from the Oregon Business Development Fund to be used in appropriate joint governmental participation projects or as match

money with any municipally, county, state or federally funded business development project authorized within a county or city, subject to the stipulations of ORS 285B.050 to 285B.098.

(2) Any application for a loan under this section shall be in such form as the commission prescribes and shall furnish such proof of federal, state or local approval as appropriate for funding of the business development project.

(3) The total amount of moneys loaned from the fund for federal, state or local joint business development project purposes shall not exceed $500,000 per project. [Formerly 285.437]

285B.089 Loan contract; required provisions. If the Oregon Economic and Community Development Commission approves an application for the loan of moneys authorized by ORS 285B.086, the commission shall enter into a loan contract, secured by good and sufficient collateral, with the applicant that provides, among other matters:

(1) That the loan bear interest at the same rate of interest as provided in ORS 285B.062 (1).

(2) That the contract shall set forth a schedule of payments including interest and principal for the period of the loan, which shall not exceed the usable life of the contracted project or 25 years from the date of the contract, whichever is less, and shall set forth the manner of determining when loan payments are delinquent. The same schedule shall include repayment of interest which accrues during any period of delay in repayment authorized by ORS 285B.050 to 285B.098, and the repayment schedule may require payments of varying amounts for collection of that accrued interest. However, the commission may make provisions for extensions of time in making repayment if the delinquencies are caused by acts of God or other conditions beyond the control of the applicant and the security will not be impaired thereby.

(3) Such provisions as the commission considers necessary to insure expenditure of the moneys loaned for the purposes provided in ORS 285B.086, including all provisions of ORS 285B.059. [Formerly 285.440]

285B.092 Oregon Business Development Fund; uses. (1) There is created within the State Treasury a revolving fund known as the Oregon Business Development Fund, separate and distinct from the General Fund. Interest earned by the fund shall be credited to the fund. Moneys in this fund are continuously appropriated to the Oregon Economic and Community Development Commission for the following purposes:

(a) Administrative expenses of the commission in marketing public business finance, processing applications, investigating proposed business development projects and servicing outstanding loans. In any one year, administrative expenses charged under this paragraph may not be greater than the total revenues received in that year from fees provided for in subsection (2)(a) of this section, plus four percent of the total asset value of the fund.

(b) Payment of loans to applicants under ORS 285B.050 to 285B.098.

(c) Transfers of moneys as provided in ORS 285B.374 (4)(a).

(d) Purchase or buy out of superior or prior liens or mortgages on or a security interest in any business development project financed in part by a loan from the fund, when the commission determines:

(A) A loan from the fund is in default and is in liquidation or at risk of being forced into liquidation by another creditor to the project;

(B) Such action is necessary to maintain or enhance the value of the commission's collateral in the project; and

(C) The amount of the purchase or buyout of superior or prior liens or mortgages on that project does not exceed $500,000.

(2) The fund created by subsection (1) of this section shall consist of:

(a) Fees required by ORS 285B.056 (2) and 285B.068 (2).

(b) Repayment of moneys loaned to counties, municipalities or persons from the Oregon Business Development Fund, including interest on those moneys.

(c) Payment of such moneys as may be appropriated to the fund by the Legislative Assembly.

(d) Moneys obtained from any interest accrued from funds.

(e) Moneys from any grant made to the fund by any federal agency.

(3) Notwithstanding any other law, if at any time there are insufficient funds in the Oregon Entrepreneurial Development Loan Fund established by ORS 285B.758, the Director of the Economic and Community Development Department may direct the transfer of unobligated funds from the Oregon Business Development Fund to the Oregon Entrepreneurial Development Loan Fund. Transfers under this subsection shall be in amounts necessary to meet the reasonably foreseeable demand for participation in the entrepreneurial loan program. [Formerly 285.443; 1999 c.247 s.3; 1999 c.509 s.28]

285B.093 Oregon Targeted Development Account; purpose. (1) The Oregon Economic and Community

Development Commission may establish the Oregon Targeted Development Account as an account within the Oregon Business Development Fund.

(2) If the account is established, the purpose of the Oregon Targeted Development Account is to promote cooperation and foster partnership among the commission, the Economic and Community Development Department and financial institutions in Oregon to encourage investment in distressed areas, as defined by the department.

(3) The Economic and Community Development Department may make loans from the Oregon Targeted Development Account in distressed areas without regard to the minimum rate of interest that is otherwise applicable under ORS 285B.062. The department may make loans in distressed areas at an interest rate that is determined by the Oregon Economic and Community Development Commission.

(4) ORS 285B.059 (1)(e) to (g), (2) and (5) does not apply to business development projects financed wholly or in part with moneys from the Oregon Targeted Development Account. [1999 c.247 s.1]

285B.095 Retention and use of payments, receipts and interest. All payments, receipts and interest from outstanding indebtedness or any other source shall be retained and accumulated in the Oregon Business Development Fund and shall be used for the purposes of the fund. [Formerly 285.445]

285B.098 Status of loan to county or municipality. A loan made to a county or municipality under ORS 285B.050 to 285B.098 shall not be a general obligation of that county or municipality, nor a charge upon the tax revenues of that county or municipality, nor a charge upon any other revenues or property of that county or municipality not specifically pledged thereto. A loan made to a county or municipality under ORS 285B.050 to 285B.098 may be secured by the business development project for which the loan is made, as well as by any revenues derived from that project, and any nontax-derived revenues or property of the county or municipality not otherwise pledged or committed for other purposes. A county or municipality may repay any portion of a loan incurred under ORS 285B.050 to 285B.098 from any funds available to it. [Formerly 285.447]

SMALL BUSINESS DEVELOPMENT

(Generally)

285B.120 Oregon Small Business Development Act. ORS 271.510, 271.520, 285B.092, 285B.123, 285B.165 to 285B.171, 285B.320 to 285B.326, 285B.335, 285B.341, 285B.344, 285B.350, 285B.365, 285B.371 to 285B.377, 657.471, 659.027 and 777.250 shall be known as the Oregon Small Business Development Act of 1983. [Formerly 285.500]

285B.123 Policy. (1) The Legislative Assembly finds that:

(a) Small businesses comprise more than 97 percent of the business entities in this state.

(b) Small businesses provide more than three-quarters of the private sector jobs in this state.

(c) The small business contribution to the economy of this state exceeds the national average contribution and its continuance is vital to the economic health and growth of this state.

(d) All national economic indicators establish that the greatest source of future new jobs is in the small business sector of the economy.

(2) The purpose of the Oregon Small Business Development Act of 1983 is to encourage and assist the development and continued growth of small business in this state.

(3) As used in the Oregon Small Business Development Act of 1983, “small business” means a manufacturing business having 200 or fewer employees and all other forms of business having 50 or fewer employees.

(4) The provisions of ORS 285B.120 and 657.471 are intended to assist in carrying out the Oregon Small Business Development Act of 1983. [Formerly 285.503]

(Capital Access for Small Businesses)

285B.126 Definitions for ORS 285B.126 to 285B.147. As used in ORS 285B.126 to 285B.147, unless the context requires otherwise:

(1) “Financial institution” means a financial institution, as defined in ORS 706.008.

(2) “Loss reserve account” means an account in the State Treasury or any financial institution which is established

and maintained by the Economic and Community Development Department for the benefit of a financial institution participating in the capital access program established under ORS 285B.126 to 285B.147.

(3) "Qualified business" means any person, conducting business for profit or not for profit, that is authorized to conduct business in the State of Oregon.

(4) "Qualified loan" means a loan or portion of a loan made by a financial institution to a qualified business for any business activity that has its primary economic effect in Oregon. The term does not include:

(a) A loan for the construction or purchase of residential housing.

(b) A loan for purchase of real property that is not used for the business operations of the borrower.

(c) A loan for the refinancing of an existing loan when and to the extent that the outstanding balance is not increased. [Formerly 285.507]

285B.129 Policy. (1) The Legislative Assembly finds that:

(a) There is a persistent shortage of equity capital available to small businesses in Oregon.

(b) Small businesses make important contributions to economic growth and vitality in this state.

(c) Many financial institutions in Oregon are limited in their ability to provide financing to small but rapidly growing businesses.

(2) It is the purpose of ORS 285B.126 to 285B.147 to establish a capital access program under which the State of Oregon will provide public fiscal resources to assist Oregon financial institutions to overcome obstacles and constraints in meeting the full range of economically sound financing needs of Oregon businesses. [Formerly 285.510]

285B.132 Contracts with financial institutions for capital access; contents of contract; status of information. (1) The Economic and Community Development Department may contract with any financial institution for the purpose of allowing the financial institution to participate in the capital access program established by ORS 285B.126 to 285B.147.

(2) A contract between the Economic and Community Development Department and a financial institution under this section shall provide:

(a) For the creation of a loss reserve account by the department for the benefit of the financial institution.

(b) That the financial institution, qualified business and the department will deposit moneys to the credit of the institution's loss reserve account when the financial institution makes a qualified loan to a qualified business.

(c) That the department will pay moneys in the loss reserve account, not exceeding an amount equal to the total amount credited to the loss reserve account, to the financial institution to reimburse the institution for any financial loss incurred as a result of any qualified loan made under the capital access program established by ORS 285B.126 to 285B.147.

(d) That the liability of the State of Oregon and the Economic and Community Development Department to the financial institution under the contract is limited to the amount of money credited to the loss reserve account of the institution.

(e) That the financial institution shall provide such information as the department may require, including financial information that is identifiable with, or identifiable from, the financial records of a particular customer who is the recipient of a qualified loan.

(f) For such other terms as the department may require.

(3) A financial institution is not subject to ORS 192.555 (1) when the financial institution provides information to the Economic and Community Development Department as required by subsection (2)(e) of this section. [Formerly 285.513]

285B.135 Loss reserve accounts; limitation on amount. (1) The Economic and Community Development Department shall establish a loss reserve account for each financial institution with which the department makes a contract under ORS 285B.132.

(2) The loss reserve account for a financial institution shall consist of moneys paid as fees by borrowers and the financial institution under ORS 285B.138 and moneys transferred to the account from the Capital Access Fund under ORS 285B.138.

(3) Notwithstanding ORS chapter 293 or 295, the department may establish and maintain loss reserve accounts with any financial institution under such policies as the department may adopt.

(4) All moneys in a loss reserve account established under ORS 285B.126 to 285B.147 are the property of the State of Oregon.

(5) The amounts transferred from the Capital Access Fund to a loss reserve account on behalf of any single qualified business shall not exceed $150,000. [Formerly 285.515]

285B.138 Enrollment of qualified loan in program; procedure; fee; transfers to loan reserve account. (1) When a financial institution participates in the capital access program established by ORS 285B.126 to 285B.147, if the financial institution decides to enroll a qualified loan under the capital access program in order to obtain the protection against loss provided by its loss reserve account, the financial institution shall notify the Economic and Community Development Department of the loan within 30 days after the loan is made. The notification shall be in writing on a form prescribed by the department.

(2) When making a qualified loan that will be enrolled under the capital access program, the financial institution shall require the qualified business to which the loan is made to pay a fee of not less than one and one-half percent of the principal amount of the loan but not more than three and one-half percent of such principal amount. The financial institution shall also pay a fee in an amount equal to the fee paid by the borrower. The financial institution shall deliver the fees collected under this subsection to the department for deposit in the loss reserve account for the institution.

(3) When depositing fees collected under subsection (2) of this section to the credit of the loss reserve account for a financial institution, the department shall transfer an amount that is not less than the total amount of the fees paid by the borrower and the financial institution from the Capital Access Fund to the loss reserve account for the institution. [Formerly 285.517]

285B.139 Exception to minimum amount required for transfer to loss reserve account. Notwithstanding the provisions of ORS 285B.138 (3), the Economic and Community Development Department shall adopt rules that provide that, for qualified loans to businesses in distressed areas, as defined by the department, or for use in the evaluation of brownfields, as defined in ORS 285A.185, the department shall transfer an amount that is not less than 150 percent of the total amount of the fees paid by the borrower and the financial institution from the Capital Access Fund to the loss reserve account of the institution. However, the total amount transferred under this section shall not exceed 40 percent of the moneys appropriated to the Capital Access Fund. [1991 c.688 s.15; 1993 c.765 s.80; 1995 c.71 s.1; 1997 c.738 s.4; 1999 c.247 s.5]

285B.141 Claims for reimbursement of losses; amounts subject to reimbursement. (1) The Economic and Community Development Department shall establish procedures under which financial institutions participating in the capital access program established by ORS 285B.126 to 285B.147 may submit claims for reimbursement for losses incurred as a result of qualified loan defaults.

(2) Costs for which a financial institution may be reimbursed from its loss reserve account include loan principal, accrued interest on the principal, actual and necessary costs of seeking recovery of the principal amount and interest thereon and any other related costs.

(3) A financial institution may seek reimbursement of loan losses prior to the liquidation of collateral from defaulted loans. The financial institution shall repay its loss reserve account for any moneys received as reimbursement under this section if the financial institution recovers moneys from the borrower or from the liquidation of collateral for the defaulted loan. [Formerly 285.520]

285B.144 Financial report of Capital Access Fund. (1) The Economic and Community Development Department shall annually prepare a report conforming to generally accepted accounting principles that describes the financial condition of the Capital Access Fund.

(2) The reports required under this section shall be submitted to the Governor and to the Joint Legislative Committee on Trade and Economic Development. [Formerly 285.525]

285B.147 Capital Access Fund; use; investment earnings; administrative expenses. (1) There is established in the State Treasury, separate and distinct from the General Fund, the Capital Access Fund. All moneys in the fund are continuously appropriated to the Economic and Community Development Department for the purpose of making payments to loss reserve accounts established under ORS 285B.126 to 285B.147.

(2) Moneys in the Capital Access Fund, with the approval of the State Treasurer, may be invested as provided by ORS 293.701 to 293.820, and the earnings from such investment shall be credited to the Capital Access Fund.

(3) The Capital Access Fund shall consist of:

(a) Moneys appropriated to the fund by the Legislative Assembly.

(b) Interest earned on moneys in the fund.

(c) Moneys returned to the fund from loss reserve accounts or other sources.

(4) The Economic and Community Development Department may charge administrative costs to the fund to pay for actual and necessary administrative expenses incurred by the department in administering the fund and establishing and maintaining loss reserve accounts under ORS 285B.126 to 285B.147. [Formerly 285.527]

285B.150 Transfers to Capital Access Fund when insufficient funds available. (1) Notwithstanding any other law, if at any time there are insufficient funds in the Capital Access Fund established by ORS 285B.147 to continue the operation of the program authorized by ORS 285B.126 to 285B.147, the Director of the Economic and Community Development Department may direct the transfer of unobligated funds from the Oregon Business Development Fund to the Capital Access Fund. Such transfers shall be in amounts necessary to meet the reasonably foreseeable demand for participation in the capital access program.

(2) Notwithstanding any other law, if at any time after the transfer of funds provided for in subsection (1) of this section, there are insufficient funds in the Capital Access Fund established by ORS 285B.147 to continue the operation of the program authorized by ORS 285B.126 to 285B.147, the Director of the Economic and Community Development Department may direct the transfer of unobligated funds from the Credit Enhancement Fund to the Capital Access Fund. Such transfers shall be in amounts necessary to meet the reasonably foreseeable demand for participation in the capital access program. The use of funds so transferred shall continue to be governed by ORS 285B.215 (3). [Formerly 285.528]

Note: 285B.150 was enacted into law by the Legislative Assembly but was not added to or made a part of ORS chapter 285B or any series therein by legislative action. See Preface to Oregon Revised Statutes for further explanation.

285B.153 Reservation of Oregon Business Development Fund for small loans. In each fiscal year of a biennium, not less than 17 percent of all moneys available for lending from the Oregon Business Development Fund is reserved for loans to businesses receiving loans in aggregate original principal amount not exceeding $50,000. Any amounts reserved for loans to such businesses that are not loaned in one fiscal year shall be added to the amount reserved for loans to such businesses in the subsequent fiscal year. [Formerly 285.530]

285B.156 [Formerly 285.533; repealed by 1999 c.509 s.61]

(Local Business Development)

285B.159 "Local business development fund" defined. As used in this section and ORS 285B.074 and 285B.162, unless the context requires otherwise, "local business development fund" means a private nonprofit corporation or other nonprofit entity, a public corporation or public agency that makes loans or provides other financial assistance to businesses in this state for the purpose of promoting economic development. [Formerly 285.535]

285B.162 Coordination of marketing and finance programs. The Economic and Community Development Department shall work with local business development funds to strengthen the coordination in the marketing of finance programs for small business, the review and analysis of loan applications and the operation of publicly operated business finance programs. [Formerly 285.537]

(Small Business Development Center)

285B.165 Purpose of ORS 285B.165 to 285B.171. (1) The purpose of ORS 285B.165 to 285B.171 is to establish a statewide network of community college-based small business development centers.

(2) The Legislative Assembly finds that it is in the state's interest to help small businesses develop and improve skills in such areas as marketing, management and capital formation through a network of small business development centers because:

(a) Small business employers create most of the new jobs in Oregon and are vital to Oregon's long term economic recovery;

(b) Community colleges present the possibility of a statewide network able to link small business with college

resources, expert resource people in the business community and with other training resources throughout the state; and

(c) While many factors affect the vitality of small business, training assistance in a form, location and time directly related to the problem to be solved is chief among them. [Formerly 285.540]

285B.168 Grants; application; prohibited uses; eligibility. (1) The Economic and Community Development Department may make available to community college and community college service districts on a justified need basis grants to assist in the formation and improvement of small business development centers. The grant application shall include:

(a) Evidence of the potential demand for assistance;

(b) Plans for involving other training resources and expert resource people from the business community in the program;

(c) An outline of training options to be available, including, but not limited to, time of day, length of training, training location and other considerations important to the small business community;

(d) A budget for the year for which a grant is requested, including college, client and Economic and Community Development Department grant shares; and

(e) A plan for evaluating the effect of the program on small business clients served.

(2) The grants made under subsection (1) of this section are to be used by the community college or community college service district to:

(a) Provide funds for small business development center staff and support staff;

(b) Provide funds to retain expert resource persons from the business community;

(c) Provide funds to retain other training resources as necessary to enhance the training capability of the centers in certain skill areas or areas of the state in instances where the college or district can demonstrate it does not have the capacity or expertise to provide such resources; and

(d) Provide funds for other costs related to operation of the centers and provision of training to small business clients.

(3) In no case shall the grants made under subsection (1) of this section be used for the establishment, maintenance or expansion of other public or private institutions providing similar education services or to establish, maintain or expand satellite centers or business assistance programs operated by other public or private educational institutions.

(4) In order to be eligible for grants under subsection (1) of this section, existing programs shall be required to provide funds or in-kind contributions or some combination of funds and contributions in accordance with rules adopted by the Economic and Community Development Department. [Formerly 285.543]

285B.171 Short title. ORS 285B.165 to 285B.171 shall be known and may be cited as the "Small Business Training Assistance Act." [Formerly 285.547]

(Miscellaneous)

285B.174 Programs to assist businesses in procuring contracts and grants. In cooperation with other state and public agencies, community colleges may develop programs to assist Oregon businesses with the procurement of government contracts and grants. The small business development centers established under ORS 285B.165 to 285B.171 may assist with these programs. [Formerly 285.550]

285B.177 [Formerly 285.553; repealed by 1999 c.509 s.61]

285B.180 [Formerly 285.555; repealed by 1999 c.509 s.61]

CREDIT ENHANCEMENT FUND

285B.200 Definitions for ORS 285B.200 to 285B.218. As used in ORS 285B.200 to 285B.218:

(1) "Department" means the Economic and Community Development Department.

(2) "Eligible project costs" includes productive equipment and machinery, working capital for operations and export transactions and such other costs as the department, by rule, may provide.

(3) "Emerging small business" has the meaning given that term in ORS 200.005.

(4) "Financial institution" includes institutions listed in ORS 706.008 and such other institutions defined by rule of the Economic and Community Development Department as financial institutions for purposes of ORS 285B.200 to 285B.218.

(5) "Qualified business" means any existing or proposed business entity with an average annual employment not exceeding 200 employees that, except when located within a distressed area, as defined by the Economic and Community Development Department, sells goods or services in markets for which national or international competition exists or that owns, occupies, operates or has entered into an agreement to own, occupy or operate real property containing a brownfield, as defined in ORS 285A.185. The term includes professional services companies providing services to traded sector industries and other entities within and outside of this state.

(6) "Value-added agricultural products" means agricultural products that have been processed, transformed or refined to the point where they may be distributed to a final consumer without further processing, transformation or refining. The term also includes agricultural products that are processed, transformed or refined for distribution to other than final consumers when such processing, transformation or refining represents a substantial increment in value as determined by the Economic and Community Development Department in consultation with the State Department of Agriculture. [Formerly 285.466; 1999 c.247 s.4]

Note: 285B.200 to 285B.218 were enacted into law by the Legislative Assembly but were not added to or made a part of ORS chapter 285B by legislative action. See Preface to Oregon Revised Statutes for further explanation.

285B.203 Legislative findings; purpose. (1) The Legislative Assembly finds that:

(a) Small and medium sized businesses in general, and firms that produce value-added agricultural products in particular, are adversely affected by the current credit crisis.

(b) Small companies have historically had a difficult time obtaining credit, especially on terms that allow them to grow and to create jobs.

(c) The limited availability of credit for export transactions limits the ability of small and medium sized businesses in Oregon to compete in international markets.

(d) The challenge for the public economic sector is to design programs, in conjunction with lending institutions in the private economic sector, that fill the gaps in credit availability and export finance.

(e) Without substantial financial assistance to promote redevelopment, properties containing brownfields, as defined in ORS 285A.185, often remain abandoned or underutilized because of the uncertainty concerning environmental contamination at the sites and the cost of reducing or eliminating the contamination.

(2) The Legislative Assembly declares that it is the purpose of the Credit Enhancement Fund established under ORS 285B.215 (1) and (2) to:

(a) Create incentives and assistance to increase the flow of private capital to the value-added agriculture industries.

(b) Promote industrial modernization and technology adoption.

(c) Encourage the retention and creation of family wage jobs.

(d) Encourage the export of goods and services by Oregon businesses in international markets.

(e) Encourage and promote the redevelopment of brownfields, as defined in ORS 285A.185, by providing assistance to perform environmental evaluations of brownfield sites. [Formerly 285.468]

Note: See note under 285B.200.

285B.206 Duties of department under ORS 285B.200 to 285B.218. (1) The Economic and Community Development Department shall develop a program under which the department, under contracts with financial institutions, shall provide loan guarantees, insurance, coinsurance in conjunction with other providers of loan guarantee programs or other forms of credit guarantees for qualified businesses for eligible project costs.

(2) In administering the program created by ORS 285B.200 to 285B.218, the department shall consult and cooperate with financial institutions in this state. The program shall be administered so that administrative procedures and application procedures are as responsive to the needs of qualified businesses and financial institutions as practicable, consistent with prudent investment and lending practices and criteria.

(3) The department shall prescribe by rule the loan or credit guarantee application procedure for a financial institution on behalf of a qualified business.

(4) When the department approves a loan or credit guarantee, the department shall enter into a loan or credit guarantee agreement with the financial institution. The agreement shall specify:

(a) The fee to be charged to the financial institution;

(b) The evidence of debt assurance of, and security for, the loan or credit guarantee;

(c) A loan guarantee or credit guarantee which does not exceed 15 years; and

(d) Such other terms and conditions considered necessary or desirable by the department.

(5) The department may adopt procedures for loan or credit guarantees whereby a qualified business may apply directly to the department for a preliminary guarantee commitment. Such preliminary guarantee commitments may be issued by the department subject to the qualified business securing a commitment for financing from a financial institution. The procedures adopted by the department shall specify the process by which a financial institution may obtain a final loan or credit guarantee. [Formerly 285.474]

Note: See note under 285B.200.

285B.209 Fees and terms for loan and credit guarantees for program under ORS 285B.206 and under ORS 285B.200 to 285B.218. (1) When making loan or credit guarantees under the program established under ORS 285B.206, the Economic and Community Development Department shall establish fees and other terms for loan or credit guarantees that are calculated to reasonably assure that businesses with access to other forms of private capital will find it economical not to participate in the program.

(2) The department, with due regard for the possibility of losses and administrative costs, shall set fees and other terms at levels sufficient to reasonably assure that the program is self-financing.

(3) When making loan or credit guarantees under the program established under ORS 285B.200 to 285B.218, the department shall establish fees and other terms for loan or credit guarantees that are calculated to reasonably assure that qualified businesses with access to other forms of private capital will find it economical not to participate in the program.

(4) With due regard for the possibility of losses and administrative costs, the department shall set fees and other terms at levels sufficient to reasonably assure that the program is self-financing.

(5) For a preliminary guarantee commitment issued under ORS 285B.206 (5), the department may charge the qualified business an application fee. The fee shall be in addition to any other fees charged by the department under this section and may not exceed $250 for each application. [Formerly 285.476]

Note: See note under 285B.200.

285B.212 Commission to advise and make recommendations to department concerning specified programs. The Economic and Community Development Department shall consider the advice and recommendations of the Oregon Economic and Community Development Commission in developing and implementing the programs provided for in ORS 285B.126 to 285B.147, 285B.150 and 285B.200 to 285B.218. [Formerly 285.478]

Note: See note under 285B.200.

285B.215 Credit Enhancement Fund; sources; uses. (1) There is established in the State Treasury, separate and distinct from the General Fund, the Credit Enhancement Fund. All moneys in the fund are continuously appropriated to the Economic and Community Development Department for the following purposes:

(a) Payment of claims pursuant to contracts for loan or credit guarantees under ORS 285B.200 to 285B.218.

(b) Payment of administrative costs of the department for actual and necessary administrative expenses incurred by the department in administering the fund and establishing and maintaining the program established under ORS 285B.200 to 285B.218.

(c) Repayment of transfers of funds required or authorized by law.

(d) Purchase or buyout of superior or prior liens, mortgages or security interests.

(2) Moneys in the Credit Enhancement Fund shall consist of:

(a) Moneys appropriated to the fund by the Legislative Assembly, including moneys derived from the Administrative Services Economic Development Fund.

(b) Proceeds from collateral assigned to the department.

(c) Interest earned on moneys in the fund.

(d) Transfers of moneys to the fund.

(e) Fees assessed for guarantees, as determined by the department.

(f) Moneys from gifts.

(g) Moneys from any grant made to the fund by any federal agency.

(h) Proceeds of insurance provided by the Export-Import Bank of the United States or by any other provider of insurance for export transactions.

(3) In each biennium, not less than 20 percent of all moneys available for loan guarantees from the Credit Enhancement Fund is reserved for loan guarantees to emerging small businesses. [Formerly 285.471]

Note: See note under 285B.200.

285B.218 Pledge to assure repayment of loans or other credit. (1) The Economic and Community Development Department is authorized to pledge up to $75 million to assure the repayment of loan guarantees or other extensions of credit made to or on behalf of qualified businesses for eligible projects costs.

(2) If the balances in the Credit Enhancement Fund are insufficient to cover any claims by financial institutions that arise from loan and credit guarantees made under ORS 285B.200 to 285B.218, the Oregon Department of Administrative Services is directed to transfer in the fiscal year as often as appropriate any funds from the Administrative Services Economic Development Fund to cover such principal, interest and claims, subject to the condition that no such transfer shall be made prior to the satisfaction of the allocation under ORS 391.130 to the Regional Light Rail Extension Construction Fund and the allocation to the Department of Environmental Quality for the debt services described in section 1, chapter 537, Oregon Laws 1993. [Formerly 285.481]

Note: See note under 285B.200.

REGIONAL ECONOMIC DEVELOPMENT

285B.230 Definitions for ORS 285B.230 to 285B.248 and 285B.269. As used in ORS 285B.230 to 285B.248 and 285B.269, unless the context requires otherwise:

(1) “Region” means groups of counties designated by the Economic and Community Development Department or recognized in a regional partnership as provided in ORS 285B.236 (3).

(2) “Regional board” means a board comprised of individuals described in ORS 285B.242 (1) and jointly appointed by the county governing bodies of each county in the region to develop, fund, implement and monitor the achievement of the regional investment plan.

(3) “Regional investment plan” is a long-term economic and community development plan, updated each biennium, that focuses on the economic and community development priorities of each region, including but not limited to:

(a) Supporting communities and populations that have been left out of Oregon's economic expansion and diversification;

(b) Helping companies that are starting up or are already doing business in Oregon to compete globally;

(c) Ensuring that economic strategies reinforce Oregon's long-term prosperity and livability; and

(d) Coordinating efforts of economic and community development, education, workforce development, natural resource management and other civic activities.

(4) “Regional partnership” means a group of regional and economic development partners, including but not limited to cities, counties, ports, Indian tribes, special districts, nonprofit organizations and private organizations, that join together as a regional partnership in a memorandum of understanding between the members of the partnership and the directors of the Department of Transportation, the Economic and Community Development Department, the Housing and Community Services Department, the Department of Land Conservation and Development and the Department of Environmental Quality to provide a forum for coordination of economic and community development planning and investments so that strategies and processes for economic and community development are leveraged to the greatest extent possible to meet agreed-upon priority issues, challenges and goals. [Formerly 285.630; 1999 c.509 s.47]

285B.233 Legislative finding; purpose. (1) The Legislative Assembly finds that regional investment plans are essential to the state's economic and community development goals and that to be effective regional investment plans must have the coordinated support of available resources.

(2) The Legislative Assembly declares that the purpose of ORS 285B.230 to 285B.248 and 285B.269 is:

(a) To encourage the development of regional investment plans that address the economic and community development priorities of each region of the state;

(b) To identify and coordinate regional economic and community development priorities;

(c) To ensure that economic and community development plans reinforce the long-term prosperity and livability of Oregon;

(d) To effectively utilize available resources through a regional investment program; and

(e) To coordinate private and public resources to support economic and community development. [Formerly 285.633; 1999 c.509 s.48]

285B.236 Guidelines for regional investment plans. (1) The Economic and Community Development Department, by rule, shall adopt guidelines for submission of regional investment plans and distribution of funds.

(2) The guidelines shall provide that the regional investment plans are approved in accordance with criteria reflecting the economic and community benefits to the state. Each regional investment plan must at a minimum set forth in measurable terms the extent to which the plan will accomplish the economic and community development priorities of the region.

(3) The department, in collaboration with counties, shall establish regions, based on information and advice received from county governing bodies and on historical, cultural and economic links among counties. A region shall consist of at least two contiguous counties. For any area in which a regional partnership is established, the department may accept the regional boundaries designated by the partnership.

(4) The department shall require each region to examine its economic and community development needs. [Formerly 285.635; 1999 c.509 s.49]

285B.239 Regional investment plan content. Regional investment plans shall serve as a basis for state financial assistance to projects to meet regional economic and community development priorities. Each group of counties that form a region shall submit a regional investment plan that at a minimum shall include the following elements:

(1) An identification of short-term and long-term regional economic and community development priorities;

(2) An analysis of the unique or significant resources that provide the foundation for the regional investment plan;

(3) An analysis of barriers to implementation of the regional investment plan and an identification of the means to overcome those barriers;

(4) A long-term plan to implement the regional investment plan, including necessary actions by:

(a) Local governments;

(b) The private sector;

(c) State government; and

(d) Federal government;

(5) A two-year implementation plan with a prioritized list of projects and activities to be undertaken or funded by the state from lottery proceeds and other sources;

(6) A plan for involvement of disadvantaged and minority groups in the region;

(7) Performance measurements for meeting the objective set forth in ORS 285B.236 (2). Each region shall develop an evaluation plan, as part of its regional investment plan, for measuring and monitoring regional investment plan performance. The evaluation plan shall include regional benchmarks for monitoring achievement of the regional investment plans and priorities. When regional benchmarks are established, interim indicators of performance shall be determined after negotiation between the regional board and the Oregon Economic and Community Development Commission. The regional board shall periodically submit performance reports to the county governing bodies in the region, the Oregon Economic and Community Development Commission, the Governor and the Legislative Assembly; and

(8) An overall strategy management and project implementation plan that demonstrates that a region has the capacity to allocate resources and insures that such resources are effectively used. [Formerly 285.637; 1999 c.509 s.50]

285B.242 Adoption of regional investment plan; regional boards; hearing; review; approval. (1) The governing body of each county of this state shall be responsible for the submission of a regional investment plan as provided in ORS 285B.239. The governing body of a county shall designate a regional board to develop the regional investment plan. The regional board shall consist of individuals who represent various local interests including cities, counties, ports, special districts and Indian tribes and significant representation from the private economic sector. The regional board shall include members who are representatives of rural interests, including local government.

(2) The regional board shall be responsible for developing the regional investment plan for the region.

(3) The regional board shall hold a public hearing in each county in the region prior to a vote by the governing bodies of the counties to recommend to the Governor the regional investment plan described in ORS 285B.239.

(4) In developing the list provided for in ORS 285B.239 (5), a regional board shall consult with industries, cities, ports, special districts, regional workforce committees and federally recognized Oregon Indian tribes located in the region.

(5) A region shall submit the regional investment plan to the Economic and Community Development Department for review by the Oregon Economic and Community Development Commission. The department shall work with regions to refine regional investment plans and ensure compliance with the requirements of ORS 285B.230 to 285B.248 and 285B.269. The Oregon Economic and Community Development Commission shall make recommendations on approval of the plan to the Governor for final approval or shall return the plan to the regional board for further modification.

(6) The Economic and Community Development Department shall be responsible for identifying common issues among regions, developing statewide strategies and organizing opportunities for regions to address them.

(7) After a regional investment plan is developed by a regional board, adopted by the governing bodies of the counties and approved by the Governor, the regional board, in each biennium, shall update the plan and recommend a two-year implementation plan. The implementation plan shall be adopted by the governing bodies of the counties after input from the cities, ports, special districts, Indian tribes, private economic sector and other parties in the region, shall be reviewed by the Oregon Economic and Community Development Commission and must be approved by the Governor before taking effect.

(8) The Governor may delegate responsibility for review and approval of a regional investment plan to a regional partnership. [Formerly 285.640; 1999 c.509 s.51]

285B.245 Governor to adopt investment plan; modification; coordination with other economic development efforts. (1) After considering the recommendations submitted, the Governor may adopt a proposed regional investment plan or return the plan to the affected counties for modification.

(2) The Economic and Community Development Department shall coordinate adopted regional investment plans with existing state and local economic development efforts to support a state strategy for economic development. Regions using regional investment funds for tourism or industrial marketing projects must, as a condition for receiving the funds, demonstrate that the projects complement and are consistent with existing statewide marketing campaigns. The department shall work with regions to ensure coordination among statewide marketing efforts and regional tourism and industrial marketing projects funded through the regional investment program established under ORS 285B.230 to 285B.248 and 285B.269.

(3) The department shall discourage competition among regions for existing Oregon businesses and economic activity. [Formerly 285.643; 1999 c.509 s.52]

285B.248 All counties to be included in region. In carrying out the provisions of ORS 285B.230 to 285B.248 and 285B.269, the Economic and Community Development Department shall work to ensure that all counties are included in a region with an adopted regional investment plan and that each regional investment plan is approved for implementation. [Formerly 285.645; 1999 c.509 s.53]

285B.251 [Formerly 285.647; repealed by 1999 c.509 s.61]

285B.254 Rural Investment Fund. (1) There is created a Rural Investment Fund, separate and distinct from the General Fund, to consist of all moneys credited thereto, including moneys from the Administrative Services Economic Development Fund, and all interest earned on the Rural Investment Fund. The Rural Investment Fund is created to provide a flexible funding source for financing those locally determined programs and projects that may not be eligible for financing through other state and federal funding sources. The moneys in the fund are continuously appropriated to the Economic and Community Development Department to be used to promote economic and community development in rural communities.

(2) The department may use moneys in the Rural Investment Fund to pay for the administrative expenses of operating the economic development programs under ORS 285B.257.

(3) After consulting with regional boards and representatives of rural communities, the department, by rule, shall adopt standards, objectives and criteria for the use and distribution of moneys in the Rural Investment Fund. [Formerly

285.648; 1999 c.509 s.54]

Note: 285B.254 and 285B.257 were enacted into law by the Legislative Assembly but were not added to or made a part of ORS chapter 285B or any series therein by legislative action. See Preface to Oregon Revised Statutes for further explanation.

285B.257 Rural action plans; distribution of Rural Investment Fund to implement plans; biennial reports; prohibited uses of fund. (1) Moneys in the Rural Investment Fund shall be distributed to regional boards designated under ORS 285B.242 for economic development programs and projects designed to benefit rural communities.

(2) Each regional board shall update the regional investment plan prepared under ORS 285B.239 to include a rural action plan consistent with the purpose and objectives of the Rural Investment Fund. A rural action plan must be reviewed by the Oregon Economic and Community Development Commission and approved by the Governor before any moneys from the Rural Investment Fund may be distributed for implementing any program or project described in the rural action plan. Moneys from the Rural Investment Fund shall not be used to retire any debt or pay for expenditures made or expenses incurred prior to the approval of a rural action plan.

(3) In each biennium, a regional board may dedicate a portion of the moneys distributed to the board from the Rural Investment Fund for technical assistance and staff support for updating the rural action plan and for developing programs and projects under the rural action plan. The regional board shall determine the amount of moneys dedicated to such purposes. Notwithstanding subsection (2) of this section, the Economic and Community Development Department may distribute moneys from the Rural Investment Fund for technical assistance and staff support prior to approval of the rural action plan.

(4) In each biennium, each regional board shall submit a report on the expenditure of moneys received under this section and shall indicate the success of the programs and projects financed with moneys from the Rural Investment Fund. The success of programs and projects shall be defined by specific performance measurements developed by the regional board. The report required by this subsection shall be made part of the biennial report submitted to the Governor and the Legislative Assembly under ORS 285B.263.

(5) Moneys from the Rural Investment Fund shall not be used to substitute for local government expenditures for existing and continuing public services. The Economic and Community Development Department shall adopt rules to carry out the provisions of this subsection. [Formerly 285.649; 1999 c.509 s.55]

Note: See note under 285B.254.

285B.260 Regional Investment Fund. (1) There is created a Regional Investment Fund, separate and distinct from the General Fund, to consist of all moneys credited thereto, including moneys from the Administrative Services Economic Development Fund, and all interest earned on the Regional Investment Fund. The fund is continuously appropriated to the Economic and Community Development Department to be used for grants to implement ORS 171.845, 280.518 and 285B.230 to 285B.269.

(2) The department may use moneys in the Regional Investment Fund to pay for the administrative expenses of operating the regional investment program under ORS 285B.230 to 285B.248 and 285B.269.

(3) The fund shall not be used to retire any debt or to reimburse any person or municipality for expenditures made or expenses incurred prior to the adoption of a regional investment plan. [Formerly 285.650; 1999 c.509 s.56]

285B.263 Expenditure of Regional Investment Fund; distribution. (1) In each biennium, the Economic and Community Development Department shall expend moneys from the Regional Investment Fund for:

(a) Technical assistance and staff support for preparation and update of regional investment plans;

(b) Projects and activities implementing an approved regional investment plan and implementing priorities described in the plan; and

(c) Personnel necessary to administer the plans and projects.

(2) In each biennium, the Oregon Economic and Community Development Commission, by rule and in agreement with the Association of Oregon Counties, League of Oregon Cities and Oregon Public Ports Association, may provide funds, either centrally or to regional boards or both, for multiregion projects that implement the approved regional investment plans of two or more regions with common economic and community development priorities. Funding for multiregion projects under this subsection shall be awarded, at the discretion of the commission, according to the quality of the defined projects.

(3) In each biennium, a regional board may dedicate a portion of regional investment funds for technical assistance and staff support for regional investment plan development and refinement and development and administration of regional partnerships. The portion of funds so dedicated shall be determined by the commission. The commission shall provide regional boards with these funds prior to approval of regional investment plans.

(4) In each biennium, a regional board may dedicate a portion of regional investment funds to provide grants or loans to individual private businesses for fixed asset acquisition. Such funds must be used to make grants and loans that are consistent with the regional investment plan and that support the regional priorities included in the regional investment plan. The terms and conditions of grants or loans to be made under this subsection must be contained in the regional investment plan at the time it is submitted for state review.

(5) After a regional investment plan is adopted, the department in each calendar quarter shall provide regional investment funds, less any moneys used for technical assistance and staff support for regional investment plan development, to the region. Moneys received under this subsection shall be used for development of projects based upon an evaluation by the regional board of the merit and readiness of the projects. Projects that receive such financial assistance must be consistent with the priorities of the approved regional investment plan.

(6) In each biennium, each regional board shall submit a report to the Governor and the Legislative Assembly that describes the expenditure of moneys received under this section and indicates the success, as defined by specified performance measurements, of the funded projects in achieving the regional economic and community development priorities described in ORS 285B.236 (2). Future grants to a regional board may be based on the performance of the board. [Formerly 285.651; 1999 c.509 s.57]

Note: 285B.263 was enacted into law by the Legislative Assembly but was not added to or made a part of ORS chapter 285B or any series therein by legislative action. See Preface to Oregon Revised Statutes for further explanation.

285B.266 Strategic Reserve Fund; sources; uses. (1) There is created a Strategic Reserve Fund, separate and distinct from the General Fund, to consist of all moneys credited thereto, including moneys from the Administrative Services Economic Development Fund, and all interest earned on the Strategic Reserve Fund. The fund is continuously appropriated to the Economic and Community Development Department to be used to implement statewide strategies for economic development.

(2) The fund shall not be used to retire any debt or, except upon approval of the Joint Ways and Means Committee or, if the Legislative Assembly is not in session, the Emergency Board, to pay administrative expenses of the department. Expenses that are project related shall not be considered to be administrative expenses of the department.

(3) The department is directed to place particular emphasis on investments that assist communities, businesses or industries in cost-effective projects that assist the creation, expansion and preservation of the principal traded sector industries of Oregon and encourage diversification and preservation of regional economies. The fund shall be used to assist economic and community development projects of public entities, industry groups or businesses with significant long-term, regional or statewide economic impacts, to provide interim financing mechanisms to augment existing public or private sector programs or to analyze statewide, long-term economic issues and opportunities. [Formerly 285.653; 1999 c.509 s.19]

285B.269 Short title. ORS 285B.230 to 285B.248 and 285B.269 shall be known as the Regional Economic Development Act. [Formerly 285.655]

INDUSTRY DEVELOPMENT PROJECTS

285B.280 Definitions for ORS 285B.280 to 285B.286. As used in ORS 285B.280 to 285B.286, unless the context requires otherwise:

(1) “Flexible networks” means groups of three or more private sector firms working cooperatively to manufacture, sell or market products, develop technologies or create or disseminate information.

(2) “High performance manufacturing practices” means methods for organizing work which devolve greater decision-making responsibility onto front-line workers, including but not limited to employee involvement, total quality control, just-in-time production and other related innovations.

(3) “Key industries” means traded sector industries that make a major contribution to the economy of Oregon, including but not limited to, forest products, agricultural products, high technology, primary and fabricated metals,

fisheries, interstate and international tourism, film and video production, graphic communications, biotechnology, software, environmental services, plastics and aerospace.

(4) "Network brokers" means persons who are trained to assist private sector firms to form flexible networks and make other similar efforts to provide for joint manufacturing, marketing, technology development, information dissemination and other activities.

(5) "Traded sector" means industries in which member firms sell their goods or services into markets for which national or international competition exists. [Formerly 285.765]

285B.283 Policy. (1) The Legislative Assembly declares that it is the policy of the State of Oregon, working with private firms, industry associations and others, to encourage cooperative sector-based strategies to promote industrial competitiveness.

(2) The Legislative Assembly declares that it is also the policy of this state that programs to develop particular sectors of this state's economy, to the maximum extent feasible, include firms of all sizes. To promote that policy, the Economic and Community Development Department shall undertake such efforts as are necessary to assure representative participation by small firms under ORS 285B.280 to 285B.286.

(3) The Legislative Assembly further declares that it is the policy of this state to emphasize industry development in those sectors of the economy in which Oregon firms face national and international competition. [Formerly 285.767]

285B.286 Industry development activities. For traded sector industries, the Economic and Community Development Department shall undertake industry development activities which may include, but are not limited to, all of the following:

(1) Focus groups and other meetings and related studies to identify traded sector industry members and issues of common concern within an industry.

(2) State technical and financial support for formation of industry associations, publication of association directories and related efforts to create or expand the activities of industry associations.

(3) Helping establish research consortia.

(4) Joint training and education programs and curricula related to the specific needs of traded sector industries.

(5) Cooperative market development activities.

(6) Analysis of the need, feasibility and cost for establishing product certification and testing facilities and services. [Formerly 285.770; 1999 c.509 s.20]

285B.289 [Formerly 285.773; repealed by 1999 c.509 s.61]

285B.292 [Formerly 285.775; repealed by 1999 c.509 s.61]

285B.295 [Formerly 285.777; repealed by 1999 c.509 s.61]

285B.298 [Formerly 285.780; repealed by 1999 c.509 s.61]

STATE REVENUE BONDS FOR INDUSTRIAL, COMMERCIAL, RESEARCH AND DEVELOPMENT USES

285B.320 Policy. The Legislative Assembly finds that by use of the powers and procedures described in ORS 285B.320 to 285B.377 for the assembling and financing of lands for industrial, commercial and research and development uses and for the construction and financing of facilities for such uses, financed through the issuance of bonds secured solely by the properties, loan payments, rentals or other financing payments thus made available, the state may be able to reduce substantially in various counties the occurrence of economic conditions requiring more expensive remedial action. It is the purpose of ORS 285B.320 to 285B.377 to authorize the exercise of powers granted by ORS 285B.320 to 285B.377 by this state in addition to and not in lieu of any other powers it may possess. [Formerly 285.310; 1999 c.509 s.29]

285B.323 Definitions for ORS 285B.320 to 285B.377. As used in ORS 285B.320 to 285B.377, unless the context requires otherwise:

(1) "Bond" means any evidence of indebtedness, including but not limited to any bond, note, obligation, loan agreement, financing agreement, contracts for leasing, rental or financing of real or personal property, including

contracts for rental, long term leases under an optional contract for purchase, financing agreements with vendors, financial institutions or others or for purchase of any property secured by revenues or from other financing sources as provided in ORS 285B.320 to 285B.377. A bond, as defined in this subsection and issued under ORS 285B.320 to 285B.377, shall be considered a revenue bond for purposes of ORS 286.031.

(2) "Economic development project" includes any properties, real or personal, used or useful in connection with a revenue producing enterprise. "Economic development project" shall not include any facility or facilities designed primarily for the generation, transmission, sale or distribution of electrical energy.

(3) "Eligible project" means an economic development project found by the Oregon Economic and Community Development Commission to meet standards of the commission adopted under ORS 285A.110. The commission may treat as a single eligible project for bonding purposes any number of economic development projects determined to be eligible projects. [Formerly 285.315; 1999 c.509 s.30]

285B.326 Determination of eligibility of projects for financing; fees. (1) Upon determining an economic development project an "eligible project," the Oregon Economic and Community Development Commission shall forward the application to the State Treasurer, who shall determine whether to issue the bonds.

(2) The commission shall collect the fees set forth in subsection (3) of this section from an applicant that seeks to have an economic development project declared eligible for financing. The fee may be collected even though the project has not been determined to be eligible for financing. Moneys collected under this subsection are continuously appropriated to the commission for the purpose of administration or funding of any program it is authorized to operate. Participation fees received on bonds issued pursuant to ORS 285B.377 may be paid to local development groups for administration expenses related to investigating proposed economic development projects and assisting the commission in processing applications pursuant to ORS 285B.377.

(3) The fees described in subsection (2) of this section are as follows:

(a) $250 for an application of not to exceed $500,000.

(b) $500 for an application of more than $500,000.

(c) A closing fee of not to exceed one-half of one percent of the total bond issue for the project, as determined by the commission.

(d) A one-time participation fee, not to exceed one-half of one percent of the total bond issue or an annual participation fee not to exceed one one-sixteenth of one percent of the outstanding principal of the bond issue as determined by the commission.

(e) For bonds issued under ORS 285B.374 and 285B.377, insurance assessments in amounts and payable at such times as are required by rules adopted pursuant to ORS 285A.110. [Formerly 285.320; 1999 c.509 s.31]

285B.329 Review by Oregon Economic and Community Development Commission. The state, acting through the State Treasurer, shall not undertake to finance any economic development project pursuant to ORS 285B.320 to 285B.377 before the Oregon Economic and Community Development Commission has reviewed the project pursuant to standards adopted under ORS 285A.110. [Formerly 285.325; 1999 c.509 s.32]

285B.332 Request by county governing body. (1) The undertaking of any eligible project must be requested by official action of the governing body of the county taken at a regular or duly called special meeting thereof by the affirmative vote of a majority of its members.

(2) The governing body of any Oregon county is encouraged to forward appropriate prospective eligible projects to the Oregon Economic and Community Development Commission for processing pursuant to ORS 285B.326.

(3) For purposes of this section, for projects located on a federally recognized Oregon Indian reservation, the governing body of a county shall be considered to be the governing body of the federally recognized Oregon Indian tribe.

(4) If the governing body is requesting the undertaking of an eligible project under ORS 285B.386, it may impose additional reasonable requirements on the applicant. [Formerly 285.330; 1999 c.509 s.33]

285B.335 Powers of State Treasurer. In addition to any other powers granted by law or by charter, in relation to an eligible project, the state, acting through the State Treasurer or a designee thereof may:

(1) Enter into agreements to finance the costs of an eligible project by loaning or otherwise making available the proceeds of bonds authorized by ORS 285B.374 and 285B.377 to any person, firm or public or private corporation or federal or state governmental subdivision or agency under such terms and with such security as the state may approve;

(2) Lease and sublease eligible projects to any person, firm or public or private corporation or federal or state governmental subdivision or agency in such manner that rents to be charged for the use of such projects shall be established, and revised from time to time as necessary, so as to produce income and revenue sufficient to provide for the prompt payment of principal of and interest on all bonds issued under this section when due, and the lease or financing agreement shall also provide that the lessee, borrower or financing party shall be required to pay all expenses of the operation and maintenance of the project including, but without limitation, adequate insurance thereon and insurance against all liability for injury to persons or property arising from the operation thereof, and all taxes and special assessments levied upon or with respect to the leased premises and payable during the term of the lease, during which term ad valorem taxes in the same amount and to the same extent as though the lessee were the owner of all real and personal property comprising the project;

(3) Pledge and assign to the holders of such bonds or a trustee therefor all or any part of the revenues of one or more eligible projects owned or to be acquired by the state, and define and segregate such revenues or provide for the payment thereof to a trustee;

(4) Mortgage or otherwise encumber eligible projects in favor of the holders of such bonds or in favor of any escrow agent, vendor, lender, other financing party or trustee therefor. However, in creating any such mortgages or encumbrances the state can not obligate itself except with respect to the project;

(5) Make all contracts, execute and deliver all instruments, and do all things necessary or convenient in the exercise of the powers granted by this section, or in the performance of its covenants or duties, or in order to secure the payment of its bonds; including a contract entered into prior to the construction, acquisition and installation of the eligible project authorizing the lessee, borrower or other financing party, subject to such terms and conditions as the state shall find necessary or desirable and proper, to provide for the construction, acquisition and installation of the buildings, improvements and equipment to be included in the project by any means available to the lessee, borrower or other financing party, and in the manner determined by the lessee, borrower or other financing party, and without advertisement for bids as may be required for the construction, acquisition or installation of other public facilities;

(6) Enter into and perform such contracts and agreements with political subdivisions and state agencies as the respective governing bodies of the same may consider proper and feasible for or concerning the planning, construction, installation, lease, or other acquisition, and the financing of such facilities, which contracts and agreements may establish a board, commission or such other body as may be deemed proper for the supervision and general management of the facilities of the eligible project; and

(7) Accept from any authorized agency of the state or federal government loans or grants for the planning, construction, acquisition, leasing, or other provision of any eligible project, and enter into agreements with such agency respecting such loans or grants. [Formerly 285.335; 1999 c.509 s.34]

285B.338 Powers of Oregon Economic and Community Development Commission. In carrying out its duties under ORS 285B.320 to 285B.377, the Oregon Economic and Community Development Commission, acting for and in behalf of the state as its duly authorized agency, may:

(1) Acquire, construct and hold in whole or in part any lands, buildings, easements, water and air rights, improvements to lands and buildings and capital equipment to be located permanently or used exclusively on such lands or in such buildings, which are deemed necessary in connection with an eligible project to be situated within the state, and construct, reconstruct, improve, better and extend such projects, and enter into contracts therefor; and

(2) Sell and convey all properties acquired in connection with eligible projects, including without limitation the sale and conveyance thereof subject to any mortgage and the sale and conveyance thereof under an option granted to the lessee of the eligible project, for such price, and at such time as the state may determine. However, no sale or conveyance of such properties shall ever be made in such manner as to impair the rights of interests of the holder, or holders, or any bonds issued under the authority of ORS 285B.320 to 285B.377. [Formerly 285.340; 1999 c.509 s.35]

285B.341 Limitation on state power. Except as provided in ORS 285B.338 (2), the state shall not have power to operate any eligible project as a business or in any manner whatsoever, and except as provided in ORS 285B.374 and 285B.377, nothing in ORS 285B.320 to 285B.377 authorizes the state to expend any funds on any eligible project, other than the revenues of such projects, or the proceeds of revenue bonds issued hereunder, or other funds granted to the state for the purposes of an eligible project. [Formerly 285.345]

285B.344 Authority to issue bonds. (1) If the State Treasurer determines that bonds should be issued:

(a) The State Treasurer may authorize and issue in the name of the State of Oregon bonds secured by revenues

from eligible economic development projects or from other financing sources, and where applicable, secured as provided in ORS 285B.374 and 285B.377, to finance or refinance in whole or part the cost of acquisition, construction, reconstruction, improvement or extension of projects. The bonds shall be identified by project and issued in the manner prescribed by ORS 286.010, 286.020 and 286.105 to 286.135, and refunding bonds may be issued to refinance such bonds.

(b) The State Treasurer shall designate the underwriter, trustee, bond counsel, vendor, lender or other financing party, if any, and enter into appropriate agreements with each to carry out the provisions of ORS 285B.320 to 285B.377.

(2) Any escrow agent, bond registrar, paying agent or trustee, if any, designated by the State Treasurer to carry out all or part of the powers specified in ORS 285B.335 must agree to furnish financial statements and audit reports for each bond issue. [Formerly 285.350; 1999 c.509 s.36]

285B.347 Issuance of bonds; determining factors. In determining whether to issue bonds under ORS 285B.320 to 285B.377, the State Treasurer shall consider:

(1) The market for the types of bonds proposed for issuance.

(2) The terms and conditions of the proposed issue.

(3) Such other relevant factors as the State Treasurer considers necessary to protect the financial integrity of the state. [Formerly 285.355; 1999 c.509 s.37]

285B.350 Method of issuing bonds. Bonds authorized under ORS 285B.320 to 285B.377 shall be issued in accordance with the provisions of ORS 288.515 to 288.550. [Formerly 285.360]

285B.353 Administration expenses. The administrative expenses of the State Treasurer shall be charged against bond proceeds or project revenues. [Formerly 285.365]

285B.356 Refunding bonds. The State Treasurer shall have the power, whenever the treasurer deems refunding expedient, to refund any bonds by the issuance of new bonds, whether the bonds to be refunded have or have not matured. The refunding bonds may be exchanged for bonds to be refunded and the proceeds applied to the purchase, redemption or payment of such bonds. [Formerly 285.370]

285B.359 Validity of bonds. The validity of bonds issued under ORS 285B.320 to 285B.377 shall not be dependent on nor be affected by the validity or regularity of any proceeding relating to the acquisition, purchase, construction, installation, reconstruction, improvement, betterment or extension of the eligible project for which the bonds are issued. The official action authorizing such bonds may provide that the bonds shall contain a recital that they are issued pursuant to ORS 285B.320 to 285B.377 and such recital shall be conclusive evidence of their validity and of the regularity of their issuance. [Formerly 285.375]

285B.362 Covenants in bonds. The official action authorizing the issuance of bonds under ORS 285B.320 to 285B.377 to finance or refinance in whole or in part, the acquisition, construction, installation, reconstruction, improvement, betterment or extension of any eligible project may contain covenants, notwithstanding that such covenants may limit the exercises of powers conferred by ORS 285B.320 to 285B.377 in the following respects and in such other respects as the state, acting through the State Treasurer, or the designee of the treasurer may decide:

(1) The rents to be charged for the use of properties acquired, constructed, installed, reconstructed, improved, bettered or extended under the authority of ORS 285B.320 to 285B.377;

(2) The use and disposition of the revenues of such projects;

(3) The creation and maintenance of sinking funds and the regulation, use and disposition thereof;

(4) The creation and maintenance of funds to provide for maintaining the eligible project and replacement of properties depreciated, damaged, destroyed or condemned;

(5) The purpose or purposes to which the proceeds of sale of bonds may be applied and the use and disposition of such proceeds;

(6) The nature of mortgages or other encumbrances on the eligible project made in favor of the holder or holders of such bonds or in favor of any escrow agent, vendor, lender, other financing party or trustee therefor;

(7) The events of default and the rights and liabilities arising thereon and the terms and conditions upon which the holders of any bonds may bring any suit or action on such bonds or on any coupons appurtenant thereto;

(8) The issuance of other or additional bonds or instruments payable from or constituting a charge against the revenue of the eligible project;

(9) The insurance to be carried upon the eligible project and the use and disposition of insurance moneys;

(10) The keeping of books of account and the inspection and audit thereof;

(11) The terms and conditions upon which any or all of the bonds shall become or may be declared due before maturity and the terms and conditions upon which such declaration and its consequences may be waived;

(12) The rights, liabilities, powers and duties arising upon the breach by the municipality or redevelopment agency of any covenants, conditions or obligations;

(13) The appointing of and vesting in a trustee or trustees of the right to enforce any covenants made to secure or to pay the bonds; the powers and duties of such trustee or trustees, and the limitation of their liabilities;

(14) The terms and conditions upon which the holder or holders of the bonds, or the holders of any proportion or percentage of them, may enforce any covenants made under ORS 285B.320 to 285B.377;

(15) A procedure by which the terms of any official action authorizing bonds or of any other contract with bondholders, including but not limited to an indenture of trust or similar instrument, may be amended or abrogated, and the amount of bonds the holders of which may consent thereto, and the manner in which such consent may be given; and

(16) The subordination of the security of any bonds issued under ORS 285B.320 to 285B.377 and the payment of principal and interest thereof, to the extent deemed feasible and desirable by the state, to other bonds or obligations of the state issued to finance the eligible project or that may be outstanding when the bonds thus subordinated are issued and delivered. [Formerly 285.380; 1999 c.509 s.38]

285B.365 Limitations of bonds; recitals. (1) Revenue bonds issued under ORS 285B.320 to 285B.377:

(a) Shall not be payable from nor charged upon any funds other than the revenue pledged to the payment thereof, except as provided in this section and ORS 285B.374 and 285B.377, nor shall the state be subject to any liability thereon. No holder or holders of such bonds shall ever have the right to compel any exercise of the taxing power of the state to pay any such bonds or the interest thereon, nor to enforce payment thereof against any property of the state except those projects or portions thereof, mortgaged or otherwise encumbered under the provisions and for the purposes of ORS 285B.320 to 285B.377.

(b) Shall not constitute a charge, lien or encumbrance, legal or equitable, upon any property of the state, except those eligible projects, or portions thereof, mortgaged or otherwise encumbered, under the provisions and for the purposes of ORS 285B.320 to 285B.377 and except as provided in ORS 285B.374 and 285B.377.

(2) Each bond issued under ORS 285B.320 to 285B.377 shall recite in substance that the bond, including interest thereon, is payable solely from the revenue pledged to the payment thereof and as provided in ORS 285B.374 and 285B.377. No such bond shall constitute a debt of the state or a lending of the credit of the state within the meaning of any constitutional or statutory limitation. However, nothing in ORS 285B.320 to 285B.377 is intended to impair the rights of holders of bonds to enforce covenants made for the security thereof as provided in ORS 285B.368. [Formerly 285.385]

285B.368 Powers and rights of bondholders. Subject to any contractual limitation binding upon the holders of any issue of bonds, or any escrow agent, vendor, lender, other financing party or trustee therefor, including but not limited to the restriction of the exercise of any remedy to a specified proportion or percentage of such holders, any holder of bonds, or any trustee therefor, for the equal benefit and protection of all bondholders similarly situated, may:

(1) By action or proceeding for legal or equitable remedies, enforce their rights against the state and any of its officers, agents and employees, and may require and compel the state or any such officers, agents or employees to perform and carry out its and their duties and obligations under ORS 285B.320 to 285B.377 and its and their covenants and agreements with bondholders;

(2) By action require the state to account as if it was the trustee of an express trust;

(3) By action enjoin any acts or things which may be unlawful or in violation of the right of the bondholders;

(4) Bring action upon the bonds;

(5) Foreclose any mortgage or lien given under the authority of ORS 285B.320 to 285B.377 and cause the property standing as security to be sold under any proceedings permitted by law or equity; and

(6) Exercise any right or remedy conferred by ORS 285B.320 to 285B.377 without exhausting and without regard to any other right or remedy conferred by ORS 285B.320 to 285B.377 or any other law of this state, none of which rights and remedies is intended to be exclusive of any other, and each is cumulative and in addition to every other

right and remedy. [Formerly 285.390; 1999 c.509 s.39]

285B.371 Loans to eligible projects when state holds no interest. The state, acting through the State Treasurer and the Oregon Economic and Community Development Commission, or either of them, may loan the proceeds of the bonds authorized by ORS 285B.320 to 285B.377 for eligible projects without the necessity of the state having any ownership or leasehold interest in the eligible projects. Loans made pursuant to this section shall be secured, if at all, to the extent deemed necessary or desirable by the State Treasurer and the Oregon Economic and Community Development Commission. [Formerly 285.393; 1999 c.509 s.40]

285B.374 Oregon Economic and Community Development Fund; uses; sources; Economic Development Insurance Account. (1) There is created within the State Treasury a revolving trust fund known as the Oregon Economic and Community Development Fund, separate and distinct from the General Fund. Interest earned by the fund shall be credited to the fund. Moneys in this fund shall be used in accordance with agreements made by the state, acting through the State Treasurer or the State Treasurer's designee, for the benefit of the holders of bonds issued under ORS 285B.377, but only to pay:

(a) Principal of, interest and redemption premium, if any, on bonds issued under ORS 285B.377;

(b) Insurance premiums for bonds issued under ORS 285B.377; and

(c) Repayment of any transfers authorized by subsection (4) of this section.

(2) The following moneys shall be credited to the Oregon Economic and Community Development Fund:

(a) Reserve funds established for bonds issued under ORS 285B.377.

(b) Such moneys as may be appropriated to the fund by the Legislative Assembly.

(c) Payments made in respect of eligible projects under loan agreements, financing agreements, notes, obligations, indentures, leases or subleases that are dedicated to payments of bond principal, interest and redemption premium, if any.

(d) Earnings from investment of moneys in the fund.

(e) Any grant made to the fund by any federal agency.

(f) Any other moneys required to be placed in the fund pursuant to any agreement authorized by ORS 271.510, 271.520, 285B.092, 285B.320 to 285B.326, 285B.335, 285B.341, 285B.344, 285B.350, 285B.365, 285B.371 to 285B.377 and 777.250.

(3) There is created a trust account within the Oregon Economic and Community Development Fund to be known as the Economic Development Insurance Account. Fees authorized under ORS 285B.326 (3)(e) and other moneys required to be placed in the account pursuant to any agreement authorized by ORS 271.510, 271.520, 285B.092, 285B.320 to 285B.326, 285B.335, 285B.341, 285B.344, 285B.350, 285B.365, 285B.371 to 285B.377 and 777.250 and such other assets as may be required pursuant to ORS 285B.377 (4) and earnings in the account shall be credited to the Economic Development Insurance Account. Fees authorized under ORS 285B.326 (3)(d) shall be credited to the Economic Development Insurance Account, unless otherwise required as repayment for transfers provided for in subsection (4)(b) of this section. Moneys in the Economic Development Insurance Account shall be used only to replenish reserves established in the Oregon Economic and Community Development Fund or to pay principal and interest due on bonds authorized under ORS 285B.377 and to pay insurance premiums for such bonds, in accordance with rules adopted by the state, acting through the State Treasurer or the State Treasurer's designee.

(4) If, at any time, there are insufficient moneys in the Oregon Economic and Community Development Fund available for timely payment of the bonds authorized by ORS 285B.377, then the conditions precedent to a transfer of moneys under ORS 293.210 from the Oregon Business Development Fund to the Oregon Economic and Community Development Fund shall be deemed to be met for:

(a) A transfer of any liquid assets in the Oregon Business Development Fund which are not then required to meet obligations against that fund; and

(b) A maximum transfer of $3 million from any other state funds having excess money, but only under terms for repayment which are approved by the State Treasurer. [Formerly 285.395; 1999 c.509 s.41]

285B.377 Issuance of bonds secured by Oregon Economic and Community Development Fund. (1) In addition to bonds authorized by ORS 285B.320 to 285B.377, the state may issue bonds to finance eligible projects which are secured in part by the assets of the Oregon Economic and Community Development Fund, as provided in this section.

(2) The aggregate principal amount of bonds issued pursuant to this section which are outstanding at any time shall not exceed $20 million.

(3) Bonds issued pursuant to this section shall be secured in the manner provided in rules adopted by the Oregon Economic and Community Development Commission and approved by the State Treasurer.

(4) The commission may require participants to agree to such arrangements as it and the State Treasurer deem necessary to secure the payment of the principal of, and interest on, the bonds, and redemption premium, if any. Such arrangements may include, but are not limited to, establishment of a debt service reserve, creation of a self-insurance program, the purchase of insurance or other similar devises ensuring the payment of the principal of, and interest on, the bonds issued pursuant to this section.

(5) Within 30 days following the closing of each fiscal quarter, the commission shall report on its operations to the Governor, State Treasurer and the Legislative Assembly. The report shall include a summary of the activities of the commission relating to bonds issued under this section.

(6) Notwithstanding the provisions of ORS 285B.365, the state may pledge to the payment of bonds authorized by this section any funds or revenues specifically set forth in this section, as well as any other funds or revenues which may be used for such purposes under any other provision of state law.

(7) Except to the extent they are inconsistent with the provisions of this section or the rules adopted under ORS 271.510, 271.520, 285B.092, 285B.320 to 285B.326, 285B.335, 285B.341, 285B.344, 285B.350, 285B.365, 285B.371 to 285B.377 and 777.250, the provisions of ORS 285B.320 to 285B.377 apply to the bonds issued under ORS 271.510, 271.520, 285B.092, 285B.320 to 285B.326, 285B.335, 285B.341, 285B.344, 285B.350, 285B.365, 285B.371 to 285B.377 and 777.250 and the loans made pursuant to this section. [Formerly 285.397; 1999 c.509 s.42]

285B.380 Definitions for ORS 285B.383 to 285B.392 and 307.110. As used in ORS 285B.383, 285B.386, 285B.389, 285B.392 and 307.110, unless the context requires otherwise, "eligible project" has the meaning given that term in ORS 285B.323. [Formerly 285.398]

285B.383 Determination of projects for financing; first-source hiring agreements; invested cost of project. (1) If an eligible project directly benefits a traded sector industry, as defined in ORS 285B.280 (3), and if the total cost of the eligible project exceeds $100 million, the State of Oregon, acting through the Oregon Economic and Community Development Commission, may determine that the real and personal property constituting the eligible project is eligible for the tax exemption provided in ORS 307.123, and the State of Oregon, acting through the State Treasurer, may authorize and issue revenue bonds in accordance with ORS 285B.320 to 285B.377 to finance the costs of the eligible project.

(2) Nothing in this section authorizes the Oregon Economic and Community Development Commission to determine that an existing eligible project is eligible for the tax exemption provided in ORS 307.123.

(3) A business firm that will be benefited by an eligible project shall enter into a first-source hiring agreement with a publicly funded job training provider that will remain in effect until the end of the tax exemption period.

(4) If an eligible project is leased or subleased to any person, the lessee shall be required to pay property taxes levied upon or with respect to the leased premises only in accordance with ORS 307.123.

(5) For purposes of determining the assessment and taxation of the eligible project in ORS 307.123 and the calculation of the community services fee in ORS 285B.386 (4)(b), in addition to the requirements set out in ORS 285B.323 (3), the invested cost of all real and personal property to be included in the eligible project shall be established by the Oregon Economic and Community Development Commission when it determines that the project is an eligible project. [Formerly 285.399; 1999 c.509 s.26]

285B.386 Request by county governing body; approval of tax exemption; community services fee. (1) The undertaking of any eligible project must be requested by official action of the governing body of the county taken at a regular or duly called special meeting thereof by the affirmative vote of a majority of its members.

(2) The governing body of any Oregon county is encouraged to forward appropriate prospective eligible projects to the Economic and Community Development Department for processing.

(3) For purposes of this section, for projects located on a federally recognized Oregon Indian reservation, the governing body of a county shall be considered to be the governing body of the federally recognized Oregon Indian tribe.

(4) The county shall not request an eligible project to be determined to be eligible for a tax exemption under ORS 307.123 unless, after a public hearing:

(a) The county and, if the proposed eligible project will be located within a city, the city have approved the special provisions related to the property tax exemption.

(b) As consideration for the county requesting determination that the eligible project is eligible for a property tax exemption under ORS 307.123, the business firm that will be benefited by the eligible project enters into an agreement with the county for payment to the county of an annual fee for community services support in an amount equal to 25 percent of the property taxes exempted in each assessment year, but not exceeding $2 million in any year. The fee shall be paid annually during the tax exemption period. For purposes of this paragraph, the property tax exempted in a year shall be calculated as the effective tax rate after any constitutional limits on the taxable portion of the value of the project multiplied by the assessed value of the exempt portion of the project.

(c) The applicant has reached agreement with the county on any other requirements related to the project. The agreement shall include provisions for the date of payment of the fee required under paragraph (b) of this subsection, for refunding or crediting overpayments, for interest on late payments or underpayments and for the manner in which an appeal of the assessed value of the property included in the project will affect the payment of the fee.

(5) The fee collected under subsection (4)(b) of this section shall be distributed by the county based on an agreement entered into at the time of application between the county and the city, if any, in which the eligible project is located. [Formerly 285.400]

285B.389 Application fees; amount; disposition of fees. (1) The Oregon Economic and Community Development Commission shall collect the fees set forth in subsection (2) of this section from an applicant that seeks to have the real and personal property constituting the eligible project declared eligible for the tax exemption provided in ORS 307.123. The fee may be collected even though the project has not been determined to be eligible for the tax exemption.

(2) The fees described in subsection (1) of this section are as follows:

(a) $10,000 upon application to the commission; and

(b) $50,000 when the eligible project is determined by the commission to be eligible for the tax exemption provided in ORS 307.123. The commission shall pay 50 percent of this fee to the Department of Revenue for the purpose of administration of ORS 307.123.

(3) The fees collected under subsection (2) of this section shall be deposited in the Financial Programs Account created by ORS 285A.212. [Formerly 285.401; 1999 c.509 s.21]

Note: 285A.212 was repealed by section 61, chapter 509, Oregon Laws 1999. The text of 285B.389 was not amended by enactment of the Legislative Assembly to reflect the repeal. Editorial adjustment of 285B.389 for the repeal of 285A.212 has not been made.

285B.392 Confidentiality of project information. Notwithstanding ORS 192.410 to 192.505, the identity of an applicant for an eligible project designation under ORS 285B.383, the application form submitted to the county governing body and the Oregon Economic and Community Development Commission and the negotiations conducted between the applicant and the county shall be confidential, until the county governing body gives notice of its intent to take official action on the application. [Formerly 285.402]

INFRASTRUCTURE PROJECTS

(Generally)

285B.410 Definitions for ORS 285B.410 to 285B.479. As used in ORS 285B.410 to 285B.479, unless the context requires otherwise:

(1) "Municipality" means a city, a county, a port incorporated under ORS 777.010 and 777.050, the Port of Portland created by ORS 778.010, a metropolitan service district organized under ORS chapter 268, a domestic water supply district organized under ORS chapter 264, a water authority or sanitary authority organized under ORS 450.600 to 450.989, a water improvement district organized under ORS chapter 552, a water control district organized under ORS chapter 553, a sanitary district organized under ORS 450.005 to 450.245, a county service district organized under ORS chapter 451 or a tribal council of an Indian tribe in this state.

(2) "Infrastructure project" means:

(a) A project for the construction of sewage treatment works, solid waste disposal sites, water supply works, roads, public transportation, railroad industrial spurs or sidings or other facilities that comprise the physical foundation for industrial and commercial activity. The costs of property acquisition directly related to the infrastructure project and

acquisition of easements or rights of way necessary to accomplish construction of the infrastructure project are eligible for assistance under ORS 285B.410 to 285B.479. The costs of activities related to performing an environmental evaluation of a brownfield are eligible for assistance under ORS 285B.416 (2) and 285B.455 (5). Purchases of off-site property for project-related purposes such as wetland mitigation or other uses not directly related to the infrastructure are not eligible for assistance. As used in this paragraph, "brownfield" and "environmental evaluation" have the meanings given those terms respectively in ORS 285A.185 and 285A.188.

(b) A project, in consultation with the Department of Transportation and other affected agencies, for the acquisition, reconstruction or rehabilitation of an abandoned railroad line or railroad line that has been designated by the owner and operator thereof as subject to abandonment within a three-year period pursuant to federal law and regulations governing abandonment of common carrier railroad lines. The project may include operation or maintenance costs if the project also includes acquisition, reconstruction or rehabilitation.

(c) A safe drinking water project, in consultation with the Water Resources Department, the Health Division of the Department of Human Services or the Department of Land Conservation and Development, for improving a drinking water system for the purpose of achieving or maintaining compliance with applicable state or federal drinking water quality regulations.

(d) A project for the acquisition, construction or development of community facilities, including the acquisition of land, the construction, acquisition, renovation or reconstruction of buildings, structures and other real property and the acquisition or construction of related equipment and fixtures. "Community facilities" includes facilities that are owned by a municipality and are operated by either the municipality or a person under a management contract or operating agreement with the municipality.

(3) "Public transportation" includes public depots, public parking, public docks, public wharves, railroads and airport facilities.

(4) "Roads" includes:

(a) Ways described as streets, highways, throughways or alleys;

(b) Road related structures that are in the right of way such as tunnels, culverts or similar structures; and

(c) Structures that provide for continuity of the right of way such as bridges.

(5) "Sewage treatment works" includes all facilities necessary for collecting, pumping, treating and disposing of sanitary or storm sewage.

(6) "Solid waste disposal site" has the meaning given to the term "disposal site" by ORS 459.005.

(7) "Water supply works" includes all facilities necessary for tapping natural sources of domestic and industrial water, treating and protecting the quality of the water and transmitting it to the point of sale to any public or private agency for domestic, municipal and industrial water supply service.

(8) "Urban infrastructure projects" includes all those projects located in whole or in part within the acknowledged Portland Metropolitan Area Regional Urban Growth Boundary, and the acknowledged urban growth boundaries of the cities of Eugene, Springfield, Salem, Keizer or Medford or projects that will principally benefit these areas. The Director of the Economic and Community Development Department is authorized to resolve situations left in question by this definition.

(9) "Nonurban infrastructure projects" includes all those projects which do not meet the definition of urban infrastructure projects. [Formerly 285.700; 1999 c.509 s.43]

285B.413 Legislative findings. (1) The Legislative Assembly finds that:

(a) The improvement, expansion and new construction of the state's sewage treatment works, water supply works, roads and public transportation provides the basic framework for continuing and expanding economic activity in this state, thereby providing jobs and economic opportunity for the people of Oregon.

(b) It is essential to maintain usable and developable industrial and commercial lands in Oregon.

(2) Since municipalities in this state often suffer from a lack of available financing for such projects, it is the purpose of ORS 285B.410 to 285B.479 to provide financial assistance in order that they may construct, improve and repair those facilities that are essential for supporting continuing and expanded economic activity. It is the intent of the Legislative Assembly, by providing that assistance, to stimulate industrial growth and commercial enterprise and to promote employment opportunities in Oregon.

(3) The money in the Special Public Works Fund shall be used primarily to provide loans to municipalities for infrastructure projects. Grants shall be given only when loans are not feasible due to the economic need of the applicant municipality and special circumstances of the project. The Director of the Economic and Community Development Department is authorized to determine the level of grant or loan funding, if any, on a case-by-case basis.

[Formerly 285.703]

285B.416 Allowable project costs. (1) For purposes of ORS 285B.410 to 285B.479, the total project costs of an infrastructure project may include costs for preliminary planning or legal, fiscal and economic investigations, reports and studies to determine the economic and engineering feasibility of the project. Such planning costs may be paid for with a loan or grant from the Special Public Works Fund, by technical assistance grants or loans awarded to eligible municipalities, or by a municipality itself.

(2) The engineering and architectural reports, studies, surveys, designs, plans, working drawings and specifications necessary in the construction of the infrastructure project shall be eligible for financial assistance under ORS 285B.410 to 285B.479. Proposals for technical assistance grants shall be processed under ORS 285B.419, 285B.428 (2)(a), 285B.437 (2) and 285B.440 (2) in the same manner as other project proposals. [Formerly 285.705]

285B.419 Criteria for project priority; administration by department. (1) The Economic and Community Development Department shall adopt rules and policies for the administration of the Special Public Works Fund. Insofar as practicable, the department's rules shall provide that infrastructure projects that meet the following criteria receive priority for financial assistance:

(a) Provide for the establishment or enlargement of economically viable industries, with reasonable long term growth prospects, including opportunities for innovative new industries or for continuance of existing basic industries.

(b) Result in a net benefit to the state in the long term and not require continuing state subsidies.

(c) Utilize existing public and private assets, including infrastructure, human resources and plant and equipment.

(d) Improve the conditions of the economically disadvantaged and increase the number of jobs that increase average incomes.

(e) Support the development of businesses owned by women and members of minority groups.

(f) Harness Oregon's comparative advantage with emphasis on the growth and development of existing, in-state businesses, especially small businesses.

(g) Direct assistance to projects that assist businesses selling goods and services in markets for which national or international competition exists and prohibit assistance to infrastructure projects that primarily focus on relocating business or economic activity from one part of the state to another.

(h) Result in the economic revitalization of communities.

(i) Are funded and otherwise supported to the maximum extent possible by private resources.

(j) Result in business growth or expansion which would not occur in Oregon without an investment from the Special Public Works Fund.

(2)(a) The Economic and Community Development Department shall manage the Special Public Works Fund and any expenditures from its accounts and transfers between its accounts so that the fund value shall be equal to at least 50 percent of lottery revenues actually transferred to the fund plus interest on such amounts compounded annually at five percent. The fund value shall be determined by summing the cash reserves and the outstanding principal amount of loans to municipalities. Any principal amounts of loans forgiven shall be subtracted from the value of the fund. The value of the fund shall include moneys in the fund that are pledged to the repayment of state bonds.

(b) The department shall quarterly certify the value of the fund to the State Treasurer.

(c) If necessary to insure repayment of bonds issued under ORS 285B.410 to 285B.479, the Economic and Community Development Department is authorized to reduce the value of the fund to less than the limit provided in paragraph (a) of this subsection if the department:

(A) Finds that without such a reduction in fund value, bonds secured by the fund are likely to be in default; and

(B) Imposes a moratorium on grants until the requirements of paragraph (a) of this subsection are met.

(3) Not more than 100 percent of the total cost of any infrastructure project shall be financed from the Special Public Works Fund.

(4) The department may commit moneys in the Special Public Works Fund or reserve future income to the fund for disbursal in future years under ORS 285B.440 (4). The department shall commit or reserve moneys under this subsection only after:

(a) Allowing for contingencies;

(b) Finding that there will be sufficient unobligated net income to the fund to make such future payments. Such a finding shall be based on financial plans which are consistent with the financial requirements of subsections (2) and (4) of this section; and

(c) Providing in any contract for such commitment that the liability of the state to make such annual payments shall

be contingent on the availability of moneys in the Special Public Works Fund.

(5) In assisting local governments with infrastructure projects, the department shall cooperate to the maximum extent possible with other state agencies financing infrastructure projects, including but not limited to the Department of Environmental Quality, the Water Resources Department and the Department of Transportation.

(6) The department shall notify the Housing and Community Services Department of any proposed Special Public Works Fund project with a related workforce increase at the time the department receives the completed application for the project. [Formerly 285.707; 1999 c.509 s.22]

(Community Facilities Projects)

285B.422 Funding of community facilities projects; criteria for project funding; source of assistance limited; application of other laws. (1) The Economic and Community Development Department may provide financial assistance to municipalities for infrastructure projects that are community facilities projects as described in ORS 285B.410 (2)(d).

(2) Before providing financial assistance for a community facilities project, the Economic and Community Development Department must find that:

(a) The municipality has demonstrated that the community facilities project will provide long term benefits to the municipality;

(b) The community facilities project will benefit a broad cross-section of the municipality;

(c) There is a substantial local commitment to the community facilities to be financed; and

(d) There is a need for the proposed community facilities project, and the municipality's financial resources are adequate to provide the working capital needed to ensure success of the project.

(3) Notwithstanding any other provision of ORS 285B.410 to 285B.479, community facilities projects shall be eligible only for loans made with moneys derived from the sale of revenue bonds issued under ORS 285B.467 or for loans made from the Special Public Works Fund. No grants shall be made from the Special Public Works Fund for the costs of a community facilities project. Loans or grants from the Special Public Works Fund and loans from the proceeds of revenue bonds issued under ORS 285B.467 may be used to pay issuance costs and for the funding of any debt service reserve for any revenue bonds issued under ORS 285B.467 to finance community facilities.

(4) ORS 285B.413 (1) and (2), 285B.419 (1), 285B.434 (2), (4) and (5), 285B.464 and 285B.467 (2) and (8) do not apply to a municipality applying for financial assistance for a community facilities project. [1997 c.800 s.12; 1999 c.509 s.44]

Note: 285B.422 and 285B.425 were added to and made a part of 285B.410 to 285B.479 by legislative action but were not added to any smaller series therein. See Preface to Oregon Revised Statutes for further explanation.

285B.425 Community Facilities Account; purpose; sources; use. (1) There is established within the Special Public Works Fund an account to be known as the Community Facilities Account. All moneys in the Community Facilities Account are continuously appropriated to the Economic and Community Development Department for the purpose of providing financial assistance to municipalities for community facilities projects.

(2) The Community Facilities Account shall consist of:

(a) Moneys appropriated to the Community Facilities Account by the Legislative Assembly.

(b) Moneys transferred to the Community Facilities Account from the federal government, other state agencies or local governments.

(c) Repayment of financial assistance provided to municipalities.

(d) Earnings on moneys in the Community Facilities Account.

(e) Any gifts or donations made to the State of Oregon for deposit in the Community Facilities Account.

(3) Moneys in the Community Facilities Account shall be used to provide financial assistance to municipalities for community facilities projects by means of loans, the purchase of the bonds or other obligations of municipalities or the guaranty of all or any portion of the obligations of a municipality that are issued to finance a community facilities project. [1997 c.800 s.13]

Note: See note under 285B.422.

(Financial Assistance for Projects)

285B.428 Application for funds. (1) Any municipality may file an application with the Economic and Community Development Department to obtain financial assistance from the Special Public Works Fund. The application shall be filed in such manner and contain or be accompanied by such information as the department may require.

(2) In addition to other requirements prescribed by the department, an application filed under this section shall:

(a) Describe the nature and purposes of the proposed infrastructure project, including the need for the project and the reasons why the project is in the public interest.

(b) Set forth or be accompanied by a feasibility study of the proposed infrastructure project and an estimate of the costs of construction.

(c) State whether any moneys other than those in the Special Public Works Fund are proposed to be used for the infrastructure project and whether any other moneys are available or have been sought for the project. [Formerly 285.710]

285B.431 Review of feasibility study. Upon receipt of an application filed as provided in ORS 285B.428, the Economic and Community Development Department shall determine whether the feasibility study set forth in or accompanying the application is satisfactory, and if the department determines that it is not satisfactory it may:

(1) Reject the application;

(2) Require the municipality to submit additional information as may be necessary; or

(3) Make, with the agreement of the municipality, such revisions of the feasibility study as it considers necessary to make the plans for the proposed project satisfactory. [Formerly 285.713]

285B.434 Application approval. The Economic and Community Development Department shall not approve financial assistance from the Special Public Works Fund for an infrastructure project proposed in an application filed under ORS 285B.428 unless, after investigation, the department finds that:

(1) The proposed infrastructure project is feasible, and the municipality has certified to the department that there will be adequate funds available to repay any loans made to the municipality under ORS 285B.410 to 285B.479;

(2) The proposed infrastructure project is situated in an area in which economic development is prevented or substantially restricted by a lack of adequate sewage treatment works, solid waste disposal sites, water supply works, roads, public transportation or other facilities that comprise the physical foundation for industrial and commercial activity;

(3) The proposed infrastructure project is situated in a city or county with a comprehensive land use plan that allows industrial and commercial development of a type and scale that is sufficient to repay the costs of the project;

(4) A high probability exists for industrial or commercial development, or both, of the properties served by the infrastructure project;

(5) The municipality has provided as part of the security for repayment of loans or bonds made available through ORS 285B.410 to 285B.479, provisions for payments from any owners of property specially benefited by the infrastructure project which are sufficient when considered with other security to assure repayment of bonds and loans made available through ORS 285B.410 to 285B.479;

(6) Moneys in the appropriate accounts of the Special Public Works Fund are or will be available for the infrastructure project;

(7) The municipality is willing and able to enter into a contract with the department for repayment as provided in ORS 285B.437 (1)(a) to (e); and

(8) The proposed infrastructure project is consistent with rules adopted under ORS 285B.419. [Formerly 285.715]

285B.437 Contract with municipality. (1) If the Economic and Community Development Department approves financial assistance from the Special Public Works Fund for an infrastructure project, the department, on behalf of the state, and the municipality may enter into a contract, which shall set forth, among other matters:

(a) An estimate of the reasonable cost of the infrastructure project.

(b) An agreement by the municipality to proceed expeditiously with, and complete, the project in accordance with plans reviewed and approved by the department.

(c) None of the financial assistance provided by the state shall be used for administrative purposes by the municipality.

(d) A statement that the liability of the state under the contract is contingent upon the availability of moneys in the Special Public Works Fund for use in the infrastructure project.

(e) Such other provisions as the department considers necessary to insure expenditure of the moneys for the purposes set forth in the approved application.

(2) When the department approves financial assistance under ORS 285B.410 to 285B.479 for an infrastructure project, the department shall pay moneys for the project from the Special Public Works Fund in accordance with the terms of the contract.

(3) The department shall determine and approve a maximum amount of a loan for an infrastructure project under ORS 285B.410 to 285B.479 based upon a reasonable and prudent expectation of the municipality's ability to repay any amount borrowed. [Formerly 285.717]

285B.440 Maximum amounts of grants; standards. (1) The maximum amount of any grant to a municipality made from the Special Public Works Fund under ORS 285B.419 shall not exceed $1 million.

(2) No grant to a municipality shall be made for a project in an amount that exceeds 85 percent of total project costs.

(3) The Economic and Community Development Department shall develop standards for determining the maximum proportion of any project which can be funded by grants. Such standards shall at a minimum provide grants equaling a larger percentage of total project costs for projects with greatest economic need.

(4) A grant contract under ORS 285B.437 (1)(a) to (e) and this section may provide for grants on behalf of the municipality on an annual basis in the form of partial repayment to bondholders of amounts owed them. In such cases, the contract shall provide that moneys are or will be available in the Special Public Works Fund for such annual payments. [Formerly 285.720]

285B.443 Conditions for loans or purchase of municipal bonds. (1) Any contract under ORS 285B.437 (1)(a) to (e) that includes provisions for a loan of state moneys to a municipality or the purchase of a bond of a municipality by the state shall include a plan for repayment by the municipality of moneys borrowed from the Special Public Works Fund for an infrastructure project and interest on those moneys at a rate specified in the contract. The repayment plan:

(a) Shall provide for such evidence of debt assurance of, and security for, repayment by the municipality as is considered necessary by the Economic and Community Development Department.

(b) Shall set forth the allocation of special assessments or contractual responsibility among the owners of benefited properties for repayment to the municipality of the amount of the loan.

(c) Shall provide for repayment during a period which shall not exceed the usable life of the proposed project or 25 years, whichever is less.

(2) Notwithstanding any other provision of law, or any restriction on indebtedness contained in a charter, a municipality may borrow from the Special Public Works Fund by entering into a loan contract with the Economic and Community Development Department. The contract may be payable:

(a) From the revenues of any infrastructure project, including special assessment revenues;

(b) From amounts withheld under ORS 285B.449 (1);

(c) From the general fund of the municipality;

(d) From any combination of paragraph (a), (b) or (c) of this subsection; or

(e) From any other sources.

(3) The loan contracts under subsection (2) of this section shall be authorized by an ordinance which is adopted with not less than 14 days' prior notice. Notice shall be published at least once in a newspaper of general circulation within the municipality. [Formerly 285.723]

285B.446 Guaranty of municipal obligations; status of guaranty. (1) The Economic and Community Development Department may enter into contracts to guaranty all or any portion of the obligations of a municipality which are issued to finance an infrastructure project and are not sold to the State of Oregon.

(2) Notwithstanding subsection (1) of this section, guaranty contracts shall be payable solely from money in the Special Public Works Fund, and shall not constitute a debt or obligation of the State of Oregon. The department may, on behalf of the state, establish a special account in the fund, and commit to deposit into the account, specified portions of existing and future allocations to the fund. Such commitments shall be made by rule of the department and shall constitute covenants of the state for the benefit of the owners of obligations guaranteed by the state pursuant to this section. [Formerly 285.725]

285B.449 Effect of failure to comply or default. (1) If a municipality fails to comply with a contract entered into

under ORS 285B.410 to 285B.479, the Economic and Community Development Department may seek appropriate legal remedies to secure any repayment due the Special Public Works Fund. If any municipality defaults on payments due to the Special Public Works Fund under ORS 285B.410 to 285B.479, the State of Oregon may withhold any amounts otherwise due to the municipality to apply to the indebtedness. The department may waive this right to withhold.

(2) Moneys withheld under subsection (1) of this section shall be deposited in the Special Public Works Fund and shall be used to repay any account in the fund from which funds were expended to pay obligations upon which the municipality defaulted. [Formerly 285.727]

285B.452 Other forms of financial assistance. In addition to making loans to municipalities for infrastructure projects and purchasing debt obligations issued to finance an infrastructure project, the Economic and Community Development Department may provide any other form of financial assistance that the department may consider appropriate for the financing of infrastructure projects. [Formerly 285.730]

285B.455 Special Public Works Fund; uses. (1) There is created the Special Public Works Fund, separate and distinct from the General Fund. All moneys credited to the Special Public Works Fund are appropriated continuously and shall be used for the purposes outlined in ORS 285B.410 to 285B.479. There shall be credited to the Special Public Works Fund, money appropriated to the fund by the Legislative Assembly, earnings on the fund, repayment of financial assistance and bond proceeds as authorized under ORS 285B.410 to 285B.479.

(2) Moneys in the Special Public Works Fund, with the approval of the State Treasurer, may be invested as provided by ORS 293.701 to 293.820 and the earnings from such investments shall be credited to the account in the Special Public Works Fund designated by the Economic and Community Development Department.

(3) The Economic and Community Development Department shall be the agency for the State of Oregon for the administration of the Special Public Works Fund.

(4) The department may establish such other accounts within the Special Public Works Fund for the payment of project costs, reserves, debt service payments, credit enhancement, administration and operation expenses or any other purpose necessary to carry out ORS 285B.410 to 285B.479.

(5) Out of moneys in the Special Public Works Fund, the department may make technical assistance grants and loans to municipalities of less than 5,000 residents. A technical assistance grant shall not exceed $10,000. A technical assistance loan shall not exceed $20,000. No more than $250,000 or one percent of the value of the fund, whichever is less, shall be expended on technical assistance grants and loans in any biennium. [Formerly 285.733]

285B.458 Funding of urban and nonurban infrastructure projects. Not less than 33 percent of the funds disbursed from the fund shall be used to provide financial assistance to nonurban infrastructure projects and not less than 33 percent shall be used to provide financial assistance to urban infrastructure projects. [Formerly 285.735]

285B.461 Limit on use of moneys in fund for administrative expenses. Out of the moneys in the Special Public Works Fund the Economic and Community Development Department may expend funds for the purposes of administering ORS 285B.410 to 285B.479. Administrative expenses of the department, that are paid from the Special Public Works Fund, shall not exceed four percent of the moneys allocated to the fund in any biennium. As used in this section, “administrative expenses” includes the department's costs for investigating, approving and monitoring municipalities that apply for funding of infrastructure projects and servicing and collecting outstanding loans and grants made to municipalities. [Formerly 285.737]

285B.464 Certain administrative expenses chargeable to Special Public Works Fund. Notwithstanding any other provision of ORS 285B.410 to 285B.479, the costs of administering infrastructure and community development projects that are related to the purpose of the community development block grant program may be charged to the Special Public Works Fund and used as a match for federal funds available for the administration of community development block grant funds. [Formerly 285.753]

Note: 285B.464 was added to and made a part of ORS chapter 285B by legislative action but was not added to any smaller series therein. See Preface to Oregon Revised Statutes for further explanation.

285B.467 Standards for eligibility for revenue bond financing. (1) The Economic and Community Development Department shall adopt by rule standards by which to determine the eligibility for revenue bond financing under ORS 285B.467 to 285B.479 of infrastructure projects that have qualified under ORS 285B.419 to 285B.437 and 285B.449.

(2) In adopting rules establishing guidelines or criteria for awarding loans or grants for drinking water projects, the department shall coordinate the department's rulemaking process with the Water Resources Department and the Health Division of the Department of Human Services in order to assure that rules adopted under this subsection are consistent with rules adopted under ORS 431.120 and 541.845. The rules adopted under this subsection shall:

(a) Require the installation of meters on all new service connections to any distribution lines funded under ORS 285B.410, 285B.461, 285B.560 to 285B.599, 431.120, 541.700, 541.705, 541.755, 541.765, 541.830, 541.845 and this section; and

(b) Require a plan, to be adopted by the municipality, for installation of meters on all service connections throughout the drinking water system.

(3) Upon determining an infrastructure project eligible for revenue bond financing under ORS 285B.467 to 285B.479, the department shall forward the application to the State Treasurer, who shall determine whether to issue revenue bonds.

(4) Notwithstanding ORS 285B.410 (2)(a) and 285B.416 (1), when an infrastructure project is determined to be eligible for revenue bond financing under ORS 285B.467 to 285B.479, the costs for preliminary planning or legal, fiscal and economic investigations, reports and studies to determine the economic and engineering feasibility of the project are included within the total project costs of the project and may be paid from bond proceeds.

(5) Administrative expenses of the department in processing applications and investigating proposed infrastructure projects and bond sales shall not be derived from bond proceeds.

(6) The department may pledge all or any portion of the existing or future assets and receipts of the Special Public Works Fund to pay debt service on bonds issued pursuant to ORS 285B.410 to 285B.479. Such pledge shall take effect immediately, without delivery of the pledged funds to third parties, and the lien of the pledge shall be superior to all other liens of any nature.

(7) The department is authorized to establish separate accounts within the fund for separate bond issues.

(8) As used in this section, “service connection” does not include fire hydrants, fire sprinkler system connections, line blow-offs and drains, stand-by emergency interties, valve controlled drinking fountains and other similar intermittently used connections. [Formerly 285.740]

285B.470 Powers of department over revenue bond financing. In addition to any other powers granted by law in relation to an infrastructure project, the Economic and Community Development Department, acting through the State Treasurer or designee may:

(1) Make all contracts, execute all instruments and do all things necessary or convenient in the exercise of the powers granted by this section, or in the performance of its covenants or duties, or in order to secure the payment of its bonds;

(2) Enter into and perform such contracts and agreements with municipalities as the department may consider proper and feasible for or concerning the planning, construction, installation, lease or other acquisition, and the financing of infrastructure projects; and

(3) Enter into covenants for the benefit of bond owners regarding the use and expenditure of moneys in the Special Public Works Fund. [Formerly 285.743]

285B.473 Issuance of revenue bonds. If the State Treasurer determines that revenue bonds should be issued:

(1) The State Treasurer may authorize and issue in the name of the State of Oregon revenue bonds secured by moneys paid to the Special Public Works Fund pledged therefor to finance or refinance in whole or part the cost of acquisition, construction, reconstruction, improvement or extension of infrastructure projects. The bonds shall be issued in the manner prescribed by ORS chapter 286, and refunding bonds may be issued to refinance such revenue bonds.

(2) The State Treasurer shall designate the underwriter, trustee and bond counsel and enter into appropriate agreements with each to carry out the provisions of ORS 285B.467 to 285B.479. [Formerly 285.745]

285B.476 Application of law to revenue bonds. (1) ORS 285B.350 to 285B.362 and 285B.368 apply to revenue bonds issued under ORS 285B.467 to 285B.479.

(2) The proceeds of revenue bonds issued and sold under ORS 285B.467 to 285B.479 shall be deposited in the Special Public Works Fund and used for the payment of a loan to a municipality for an infrastructure project and costs of issuing the revenue bonds.

(3) A loan made with money derived from the sale of revenue bonds under this section shall be made as other loans under ORS 285B.419 to 285B.437, 285B.443 and 285B.449 are made, except that the loan contract shall set forth a schedule of payments which shall not exceed the usable life of the contracted infrastructure project. [Formerly 285.747]

285B.479 Terms of revenue bonds. (1) Revenue bonds issued under ORS 285B.467 to 285B.479:

(a) Shall not be payable from nor charged upon any funds other than the revenue pledged to the payment thereof, except as provided in this section, nor shall the state be subject to any liability thereon. No holder or holders of such bonds shall ever have the right to compel any exercise of the taxing power of the state to pay any such bonds or the interest thereon, nor to enforce payment thereof against any property of the state except those moneys pledged therefor in the Special Public Works Fund, under the provisions of ORS 285B.467 to 285B.479.

(b) Shall not constitute a charge, lien or encumbrance, legal or equitable, upon any property of the state, except those moneys paid to the Special Public Works Fund.

(c) Shall not exceed, for all bonds outstanding, a total principal amount of $200 million.

(2) No bond shall constitute a debt of the state or a lending of the credit of the state within the meaning of any constitutional or statutory limitation. [Formerly 285.750]

285B.482 Infrastructure and water bonds as parity bonds; consolidation of bond proceeds; loans and consolidated funds as security for infrastructure and water bonds; limitation on use of moneys in specified funds. (1) Notwithstanding any other law relating to revenue bonds issued and sold under ORS 285B.467 to 285B.479 or ORS 285B.572, 285B.575 and 285B.578, such revenue bonds may be issued and sold as parity bonds.

(2) Proceeds of revenue bonds issued and sold under ORS 285B.467 to 285B.479 or ORS 285B.572, 285B.575 and 285B.578, together with the investment earnings thereon, may be consolidated into one or more funds or accounts and may be pledged to the holders of revenue bonds issued to finance either water projects or infrastructure projects or to the holders of revenue bonds issued to finance both water projects and infrastructure projects.

(3) Any loan to a municipality made pursuant to ORS 285B.467 to 285B.479, 285B.560 to 285B.569 or 285B.572 to 285B.599, including loans funded in whole or in part with the proceeds of revenue bonds and loans funded with moneys in the Water Fund or the Special Public Works Fund, may be pledged to the holders of revenue bonds issued to finance either water projects or infrastructure projects or to the holders of revenue bonds issued to finance both water projects and infrastructure projects.

(4) Funds or accounts established by the Economic and Community Development Department or the State Treasurer in connection with the issuance of revenue bonds under ORS 285B.467 to 285B.479 or ORS 285B.572, 285B.575 and 285B.578 and moneys held in the funds and accounts, together with the investment earnings thereon, may be consolidated into one or more funds or accounts and may be pledged to the holders of revenue bonds issued to finance either water projects or infrastructure projects or to the holders of revenue bonds issued to finance both water projects and infrastructure projects.

(5) Notwithstanding subsections (1) to (4) of this section, moneys held in the Water Fund shall not be used to finance or refinance the cost of an infrastructure project unless the infrastructure project also qualifies as a water project, and moneys held in the Special Public Works Fund shall not be used to finance or refinance the cost of a water project unless the water project also qualifies as an infrastructure project. [1997 c.800 s.14]

Note: 285B.482 was enacted into law by the Legislative Assembly but was not added to or made a part of ORS chapter 285B or any series therein by legislative action. See Preface to Oregon Revised Statutes for further explanation.

INFRASTRUCTURE PROJECTS FOR SOUTHERN OREGON

285B.500 Policy; legislative findings. (1) The Legislative Assembly finds that:

(a) It is a matter of statewide importance to increase the infrastructure capacity of Coos, Jackson and Josephine Counties and the rest of southern Oregon.

(b) The absence of such infrastructure capacity, the lack of inexpensive industrial fuel and inadequate

transportation facilities restrict national and international trade and otherwise hinder the economic development of the region.

(c) State financial assistance to specified local projects in southern Oregon will sustain and increase jobs, foster national and international trade, allow industrial and commercial expansion and eliminate other negative effects caused by infrastructure that is inadequate to support a vibrant and expanding economy.

(d) It is desirable to make a present commitment of lottery revenues that are expected to be received in the 1999-2001 and 2001-2003 biennia. A clear and prompt financial commitment from the State of Oregon will allow the project sponsors, in reliance on that commitment, to make prompt commitments to pay their share. Prompt commitment by the project sponsors will enhance the likelihood that other private or federal funds will be received for the projects.

(2) The Legislative Assembly declares that the purpose of ORS 285B.500 to 285B.512 and section 9, chapter 644, Oregon Laws 1997, is to obligate the State of Oregon to pay the amounts specified in ORS 285B.500 to 285B.512 and section 9, chapter 644, Oregon Laws 1997, from future lottery revenues. The obligation of the state to pay the amounts specified in section 9, chapter 644, Oregon Laws, 1997, and in grant agreements authorized by ORS 285B.506 is limited to, and conditioned solely on, the availability of unobligated net lottery proceeds and any other moneys lawfully credited to the Oregon Unified International Trade Fund. Neither the faith and credit nor any of the taxing power of the State of Oregon are pledged or otherwise committed by ORS 285B.500 to 285B.515 and 777.277 to 777.289 and section 9, chapter 644, Oregon Laws 1997, and the commitments of the State of Oregon under ORS 285B.500 to 285B.515 and 777.277 to 777.289 and section 9, chapter 644, Oregon Laws 1997, and any grant agreement shall not constitute a debt or liability of the state within the meaning of section 7, Article XI of the Oregon Constitution. [1997 c.644 s.7]

Note: 285B.500 to 285B.515 were enacted into law by the Legislative Assembly but were not added to or made a part of ORS chapter 285B by legislative action. See Preface to Oregon Revised Statutes for further explanation.

285B.503 Oregon Unified International Trade Fund; purposes; sources. (1) There is established in the State Treasury, separate and distinct from the General Fund, the Oregon Unified International Trade Fund. The moneys in the fund are continuously appropriated to the Economic and Community Development Department for:

(a) Paying all or a portion of the costs of:

(A) A project for the extension and improvement of Jackson County Airport runway.

(B) A project for the extension of a natural gas pipeline to the Coos Bay and North Bend area from a location near Roseburg.

(C) A project for improvements to the Klamath Falls International Airport maintained by the City of Klamath Falls.

(b) Transfer to the Oregon Port Revolving Fund created by ORS 285A.708.

(2) A separate account within the Oregon Unified International Trade Fund shall be established for each project listed in subsection (1) of this section.

(3) The Oregon Unified International Trade Fund shall consist of moneys allocated to the fund under section 9, chapter 644, Oregon Laws 1997, and such other moneys as may be appropriated to the fund by the Legislative Assembly, including interest on such moneys. [1997 c.644 s.8]

Note: See note under 285B.500.

Note: Section 9, chapter 644, Oregon Laws 1997, provides:

Sec. 9. (1) Commencing with the fifth fiscal quarter of the 1999-2001 biennium and continuing each quarter through the end of the 2001-2003 biennium, the state shall allocate and deposit in the Oregon Unified International Trade Fund not less than $1.25 million each fiscal quarter until $15 million has been deposited into that fund. The deposits shall be made from the first available unobligated net lottery proceeds.

(2) The moneys deposited in the Oregon Unified International Trade Fund under subsection (1) of this section shall be allocated as follows:

(a) To the account for the Jackson County Airport runway project, 53.3 percent.

(b) To the account for the Coos County pipeline project, 26.7 percent.

(c) To the account for the Klamath Falls International Airport improvement project, 13.3 percent.

(d) To the Oregon Community Development Fund created by chapter 620, Oregon Laws 1997 [285A.227], 6.7 percent.

(3) Any earnings on amounts in an account listed in subsection (2) of this section shall be credited to that account. All moneys on deposit from time to time in any account, including investment earnings thereon, and all amounts required by this section to be deposited in any account shall be allocated and are hereby appropriated continuously to the Economic and Community Development Department and shall be transferred by the department to the project sponsor pursuant to a grant agreement under section 10 of this Act [285B.506] for costs of the appropriate project. [1997 c.644 s.9]

Note: Section 2, chapter 702, Oregon Laws 1999, provides:

Sec. 2. (1) Pursuant to sections 1 to 9, chapter 44, Oregon Laws 1999 [286.560 to 286.580 and 348.716], lottery bonds may be issued for the purpose of providing grant moneys to Coos County to be applied by Coos County to the payment of a portion of the costs of designing, acquiring and constructing a natural gas pipeline extending from the existing natural gas pipeline near Roseburg to the Coos Bay and North Bend area, including but not limited to the costs of acquiring all rights of way and interests in real property, machinery, equipment and structures needed for the pipeline.

(2) The use of lottery bond proceeds is authorized based on the following findings:

(a) The economy of Coos County has been depressed in recent years as a result of unfavorable developments in the timber and fishing industries.

(b) The economy of Coos County will benefit from the construction of a natural gas pipeline extending from the existing natural gas pipeline near Roseburg to the Coos Bay and North Bend area because the pipeline will enable Coos County to attract significant industries to locate in the area, thereby increasing opportunities for employment and additional economic activities that will be generated as a result of such industries.

(c) The construction of such a pipeline will therefore promote economic development within this state, and thus the use of net proceeds derived from the operation of the Oregon State Lottery to pay debt service on lottery bonds issued under this section to finance a portion of the costs of such a pipeline is an authorized use of state lottery funds under section 4, Article XV of the Oregon Constitution, and ORS 461.510.

(3) The aggregate principal amount of lottery bonds issued pursuant to subsection (1) of this section shall not exceed the sum of $20 million and an additional amount estimated by the State Treasurer to be necessary to pay bond-related costs. No lottery bonds authorized by this section shall be issued until the date upon which the presiding officer of the Board of County Commissioners of Coos County certifies in writing to the Director of the Economic and Community Development Department and the State Treasurer that the conditions set forth in subsection (5) of this section have been satisfied.

(4) Subject to subsection (3) of this section, the lottery bonds authorized by this section shall be issued in the amounts requested by the presiding officer of the Board of County Commissioners of Coos County and as soon as reasonably practicable after the presiding officer requests issuance of the lottery bonds. All requests for the issuance of lottery bonds authorized by this section shall be in writing and sent to the Director of the Economic and Community Development Department and the State Treasurer.

(5) The lottery bonds authorized by this section may not be issued until the electors of Coos County, in accordance with applicable law, authorize Coos County to issue general obligation bonds in an amount which, when added to the maximum amount of the grant to Coos County under this section and any other funds available to Coos County for such purposes, will be sufficient to pay the estimated costs of designing, acquiring and constructing the pipeline.

(6) The net proceeds from the sale of the lottery bonds authorized by this section shall be deposited in the Oregon Unified International Trade Fund. The moneys so deposited in the Oregon Unified International Trade Fund, including investment earnings thereon, are continuously appropriated to the Economic and Community Development Department for the purpose of making a grant to Coos County in accordance with subsection (7) of this section in an amount not to exceed $20 million.

(7) Prior to the issuance of the lottery bonds authorized by this section, the Economic and Community Development Department shall enter into a grant agreement with Coos County. The grant agreement shall:

(a) Provide that, promptly after issuance of lottery bonds authorized by this section and receipt of the net proceeds thereof, the Economic and Community Development Department shall pay to Coos County the net proceeds of the lottery bonds so issued;

(b) Limit aggregate payments to Coos County under the grant agreement to $20 million;

(c) Provide that Coos County hold the moneys received under the grant agreement, and the investment earnings thereon, until necessary to pay a portion of the costs of designing, acquiring and constructing the pipeline described in subsection (1) of this section;

(d) Authorize Coos County to expend the moneys received under the grant agreement from time to time for the purpose of paying a portion of the costs of designing, acquiring and constructing the pipeline described in subsection (1) of this section;

(e) Set forth procedures under which Coos County will account to the Economic and Community Development Department for the purpose of documenting that the moneys received under the grant agreement and investment earnings thereon have been expended by Coos County for the purpose authorized by this section; and

(f) Contain all additional terms, conditions and provisions that the Economic and Community Development Department considers necessary or desirable to carry out the purposes of this section. [1999 c.702 s.2]

285B.506 Grant agreements; maximum grant amount; terms of agreement; assignment of right to receive grant moneys; agreement not to constitute state debt. (1) After July 25, 1997, the Director of the Economic and Community Development Department shall enter into a grant agreement with the primary sponsor of a project listed in ORS 285B.503 that commits the State of Oregon to make the deposits specified in section 9, chapter 644, Oregon Laws 1997, and commits the Economic and Community Development Department to pay those deposits, plus earnings, to the primary sponsor as soon as funds are available in the appropriate account of the Oregon Unified International Trade Fund and are required by the primary sponsor for payment of project costs. Notwithstanding any other law, the commitment of the State of Oregon and the department under this section shall be conditioned solely on receipt by this state of unobligated net lottery proceeds sufficient to make the deposits specified in section 9, chapter 644, Oregon Laws 1997.

(2) The total amount paid to the primary sponsor under the grant agreement shall not exceed the amount deposited in the appropriate account for the sponsor's project in the Oregon Unified International Trade Fund, plus any interest earnings on the amounts in the account. The grant agreement shall:

(a) Pledge the unobligated net lottery proceeds to pay the amounts due to the primary sponsor under the grant agreement;

(b) Specify the administrative procedures for making payments to the primary sponsor;

(c) Provide for notification to the director if the primary sponsor determines that it is unable to undertake the project;

(d) Allow assignment of the right to receive amounts payable under the grant agreement to third parties;

(e) Obligate the primary sponsor to remit any unexpended grant funds and any earnings thereon to the State of Oregon after the sponsor's project is complete and all its costs have been paid; and

(f) Contain other terms and conditions that are necessary or appropriate, as determined by the Director of the Economic and Community Development Department, to implement ORS 285B.500 to 285B.512 and section 9, chapter 644, Oregon Laws 1997, to protect the interests and investments of the State of Oregon in the projects specified in ORS 285B.503.

(3) The grant agreement, when executed by the director and accepted by the primary sponsor shall be a valid, binding and irrevocable contractual obligation of the State of Oregon in accordance with its terms. However, amounts due under the grant agreement shall be payable solely from the unobligated net lottery proceeds required by section 9, chapter 644, Oregon Laws 1997, to be deposited in the appropriate account in the Oregon Unified International Trade Fund.

(4) The primary sponsor may pledge or assign its right to receive amounts due under the grant agreement as security for any contractual obligation the primary sponsor undertakes to pay or finance costs of the project. Any pledge or assignment authorized by ORS 285B.500 to 285B.515 and 777.277 to 777.289 and section 9, chapter 644, Oregon Laws 1997, shall be valid and binding upon the primary sponsor, the Economic and Community Development Department, the State of Oregon and all other persons from the date it is made. The unobligated net lottery proceeds so pledged shall be immediately subject to the lien of the pledge without physical delivery, filing or other act, and the lien of the pledge shall be superior to all other claims and liens of any kind whatsoever. Upon notice from the primary sponsor that it has pledged the unobligated net lottery proceeds or assigned the right to receive amounts due under the grant agreement, the department shall fully cooperate with the primary sponsor and the pledgee or assignee to give effect to the pledge or assignment, including but not limited to acknowledging in writing to the primary sponsor and the pledgee or assignee the existence and validity of the pledge or assignment and agreeing that amounts due under the grant agreement shall be paid to the pledgee or assignee or into the custodial accounts established for the benefit of the

pledgee or assignee.

(5) The grant agreement shall not contain provisions or be construed or enforced in any manner that may cause the grant agreement to constitute a debt or liability of the state that violates section 7, Article XI of the Oregon Constitution. [1997 c.644 s.10]

Note: See note under 285B.500.

285B.509 Agreements between primary sponsor and United States. The primary sponsors of projects listed in ORS 285B.503 are authorized to enter into agreements with agencies of the United States for the project and, notwithstanding any other provision of law, may each agree to be bound by any requirement imposed by an Act of the United States Congress as a condition of federal participation in the project. [1997 c.644 s.11]

Note: See note under 285B.500.

285B.512 End of lottery allocations upon certification by Director of Economic and Community Development Department. (1) The deposit of unobligated net lottery proceeds to an account in the Oregon Unified International Trade Fund shall cease if and when the Director of the Economic and Community Development Department certifies in writing that deposits are no longer required because:

(a) Sufficient funds are on hand in the account to pay all amounts required to be paid under the grant agreement;

(b) All amounts required to be paid under the grant agreement have been paid; or

(c) The primary sponsor has notified the director pursuant to the grant agreement that the primary sponsor is unable to undertake the project.

(2) Upon receipt of the director's written certification pursuant to subsection (1) of this section, the State Treasurer shall thereafter credit any amounts remaining in the account that are not required to pay amounts due under the grant agreement, and any lottery revenues that otherwise would have been deposited in the account under section 9, chapter 644, Oregon Laws 1997, to the Administrative Services Economic Development Fund. In addition, any unexpended grant funds and earnings which are remitted to the State of Oregon pursuant to the grant agreement shall be credited to the Administrative Services Economic Development Fund. [1997 c.644 s.12]

Note: See note under 285B.500.

285B.515 "Primary sponsor" defined for ORS 285B.500 to 285B.512. As used in ORS 285B.500 to 285B.512 and section 9, chapter 644, Oregon Laws 1997, "primary sponsor" or "project sponsor" means a city, county, agency or person who acts as a financial contributor to a project listed in ORS 285B.503, as determined by the Economic and Community Development Department in a grant agreement under ORS 285B.506. [1997 c.644 s.13]

Note: See note under 285B.500.

LOTTERY BONDS FOR INFRASTRUCTURE PROJECTS

285B.530 Definitions for ORS 285B.530 to 285B.548. As used in ORS 285B.530 to 285B.548, unless the context requires otherwise:

(1) "Infrastructure lottery bonds" means the bonds authorized to be issued under ORS 285B.533 for the purpose of financing infrastructure projects.

(2) "Infrastructure projects" includes:

(a) A water project defined in ORS 285B.560; and

(b) Payment of any state financial obligations to the federal government under the Safe Drinking Water Act. [1997 c.800 s.16; 1999 c.44 s.24]

Note: 285B.530 to 285B.548 were enacted into law by the Legislative Assembly but were not added to or made a part of ORS chapter 285B by legislative action. See Preface to Oregon Revised Statutes for further explanation.

285B.533 Issuance of infrastructure lottery bonds; amount; use of bond proceeds. (1) Infrastructure lottery bonds shall be issued under ORS 286.560 to 286.580 and 348.716 only at the request of the Director of the Economic

and Community Development Department. Infrastructure lottery bonds may be issued in an amount sufficient to provide no more than $6 million of net proceeds to pay costs of infrastructure projects, plus the amounts required to pay bond-related costs.

(2) The net proceeds from the sale of the infrastructure lottery bonds shall be allocated to the Economic and Community Development Department for the State of Oregon's match of federal moneys under the Safe Drinking Water Act.

(3) The net proceeds from the sale of the infrastructure lottery bonds that are available to pay costs of infrastructure projects shall be credited to the Water Fund created by ORS 285B.563. All such net proceeds are appropriated continuously to the Economic and Community Development Department only for payment of costs of infrastructure projects described in subsection (2) of this section and for payment of bond-related costs that are allocable to infrastructure lottery bonds.

(4) The Economic and Community Development Department and any municipality receiving proceeds of infrastructure lottery bonds shall, if so directed by the Oregon Department of Administrative Services, take any action specified by the Oregon Department of Administrative Services that is necessary to maintain the excludability of lottery bond interest from gross income under the United States Internal Revenue Code. [1997 c.800 s.17; 1999 c.44 s.25]

Note: See note under 285B.530.

285B.536 [1997 c.800 s.18; repealed by 1999 c.44 s.29]

285B.539 [1997 c.800 s.19; repealed by 1999 c.44 s.29]

285B.542 [1997 c.800 s.20; repealed by 1999 c.44 s.29]

285B.545 [1997 c.800 s.21; repealed by 1999 c.44 s.29]

285B.548 Amount of infrastructure lottery bonds. (1) Notwithstanding ORS 286.505 to 286.545, infrastructure lottery bonds may be issued during the 1997-1999 biennium in an aggregate principal amount that produces net proceeds for infrastructure projects that shall not exceed $6 million, plus an amount that the State Treasurer estimates will be required to pay bond-related costs.

(2) In future biennial periods, the amount of infrastructure lottery bonds that may be issued shall be authorized under ORS 286.505 to 286.545. [1997 c.800 s.22]

Note: See note under 285B.530.

285B.551 Issuance of additional lottery bonds; amount; use of bond proceeds; Economic Infrastructure Project Fund. (1) Pursuant to ORS 286.560 to 286.580 and 348.716, lottery bonds may be issued:

(a) To provide financial and other assistance, including but not limited to loans and grants, to municipalities, ports and other persons and entities in accordance with the laws governing use of moneys in the Special Public Works Fund created by ORS 285B.455, the Water Fund created by ORS 285B.563, the Safe Drinking Water Revolving Loan Fund created by ORS 285A.213, the Oregon Port Revolving Fund created by ORS 285A.708, the Brownfields Redevelopment Loan Fund created by ORS 285A.188 and the Marine Navigation Improvement Fund created by ORS 777.267.

(b) To fund Oregon's share of the costs of the Columbia River channel deepening project.

(2) The use of lottery bond proceeds is authorized based on the following findings:

(a) The financial and other assistance to municipalities, ports and other persons and entities will assist in the construction, improvement and expansion of infrastructure, community and port facilities and other facilities that comprise the physical foundation for industrial and commercial activity and provide the basic framework for continued and expanded economic opportunities and quality communities throughout Oregon.

(b) The Columbia River channel deepening project is necessary to allow newer, larger steamships access to Oregon and Washington deep draft ports. A deeper shipping channel will allow the Columbia River to continue as a world leader in agricultural exports and as a key trade corridor for farms and businesses throughout Oregon and the region.

(c) Such financial and other assistance to municipalities, ports and other persons and entities and the deepening of

the Columbia River channel will therefore promote economic development within this state, and thus the use of net proceeds derived from the operation of the Oregon State Lottery to pay debt service on lottery bonds issued under this section to provide such financial and other assistance to municipalities, ports and other persons and entities and to pay a portion of the costs of deepening the Columbia River channel is an authorized use of state lottery funds under section 4, Article XV of the Oregon Constitution, and ORS 461.510.

(3) The aggregate principal amount of lottery bonds issued pursuant to subsection (1)(a) of this section for financial and other assistance to municipalities, ports and other persons and entities shall not exceed the sum of $45 million and an additional amount estimated by the State Treasurer to be necessary to pay bond-related costs. The aggregate principal amount of lottery bonds issued pursuant to subsection (1)(b) of this section for the Columbia River channel deepening project shall not exceed the sum of $17.7 million and an additional amount estimated by the State Treasurer to be necessary to pay bond-related costs. Lottery bonds issued pursuant to this section shall be issued only at the request of the Director of the Economic and Community Development Department. The director shall not request the issuance of lottery bonds pursuant to subsection (1)(b) of this section until a final environmental impact statement has been issued and a record of decisions has been submitted to Congress by the United States Army Corps of Engineers, Congress has authorized the Columbia River channel deepening project, and the Washington sponsors' shares of the costs of the Columbia River channel deepening project have been committed.

(4) The net proceeds of lottery bonds issued pursuant to this section shall be deposited in the Economic Infrastructure Project Fund, which is hereby established in the State Treasury separate and distinct from the General Fund. All moneys in the Economic Infrastructure Project Fund are continuously appropriated to the Economic and Community Development Department for any purpose for which moneys in the Special Public Works Fund created by ORS 285B.455 may be used, any purpose for which moneys in the Water Fund created by ORS 285B.563 may be used, any purpose for which moneys in the Safe Drinking Water Revolving Loan Fund created by ORS 285A.213 may be used, any purpose for which moneys in the Oregon Port Revolving Fund created by ORS 285A.708 may be used, any purpose for which moneys in the Brownfields Redevelopment Loan Fund created by ORS 285A.188 may be used and any purpose for which moneys in the Marine Navigation Improvement Fund created by ORS 777.267 may be used. The Director of the Economic and Community Development Department shall allocate the moneys deposited in the Economic Infrastructure Project Fund for the purposes described in this subsection in accordance with the policies developed by the Oregon Economic and Community Development Commission in accordance with ORS 285A.045. However, the director shall transfer from the Economic Infrastructure Project Fund to the Marine Navigation Improvement Fund the proceeds of any lottery bonds sold to finance a portion of the costs of the Columbia River channel deepening project. Upon determining the relative allocation of moneys deposited in the Economic Infrastructure Project Fund among the purposes described in this subsection, the director shall transfer from the Economic Infrastructure Project Fund, and deposit into each of the other funds described in this subsection, the amounts so allocated. Notwithstanding any other provision of law governing the funds described in this subsection, the funds described in this subsection may be credited with moneys transferred from the Economic Infrastructure Project Fund by the director in accordance with this subsection.

(5) The proceeds of lottery bonds issued pursuant to this section shall be used only for the purposes set forth in subsection (4) of this section and for bond-related costs. [1999 c.702 s.1]

Note: 285B.551 was enacted into law by the Legislative Assembly but was not added to or made a part of ORS chapter 285B or any series therein by legislative action. See Preface to Oregon Revised Statutes for further explanation.

Note: Sections 6 and 8 (2), chapter 702, Oregon Laws 1999, provide:

Sec. 6. (1) Pursuant to sections 1 to 9, chapter 44, Oregon Laws 1999 [286.560 to 286.580 and 348.716], lottery bonds may be issued to fund projects for the development and improvement of systems, facilities and equipment of the Oregon Garden in Silverton.

(2) The use of lottery bond proceeds is authorized based on the following findings:

(a) The activities of the Oregon Garden promote Oregon's horticultural industry and its products;

(b) The promotion of horticultural products expands markets, which in turn creates jobs and stimulates economic development of the industry; and

(c) The Oregon Garden will attract tourists from throughout the nation and world and thereby generate substantial economic activity for Marion County.

(3) The aggregate principal amount of lottery bonds issued pursuant to this section shall not exceed the sum of $1 million and an additional amount estimated by the State Treasurer to be necessary to pay bond-related costs. Lottery bonds issued pursuant to this section shall be issued only at the request of the Director of the Economic and Community Development Department.

(4) The net proceeds of lottery bonds issued pursuant to this section shall be deposited in the Economic Infrastructure Project Fund established under section 1 of this 1999 Act [285B.551].

(5) The proceeds of lottery bonds issued pursuant to this section shall be used only for the purposes set forth in subsection (1) of this section and for bond-related costs. [1999 c.702 s.6]

Sec. 8. (2) The Economic and Community Development Department shall pay amounts required for debt service on lottery bonds issued during the 1999-2001 biennium under sections 1 [285B.551], 2, 3 [458.720] and 6 of this 1999 Act from moneys allocated to the department from the Administrative Services Economic Development Fund. [1999 c.702 s.8(2)]

SAFE DRINKING WATER PROJECTS

(Generally)

285B.560 Definitions for ORS 285B.560 to 285B.599. As used in ORS 285B.560 to 285B.599:

(1) “Department” means the Economic and Community Development Department.

(2) “Fund” means the Water Fund.

(3) “Municipality” has the meaning given that term in ORS 285B.410.

(4) “Safe drinking water project” means a project for constructing or improving a drinking water system or a water development project, as defined in ORS 541.700 (6)(a), (b) and (d) to (f), that is owned and operated by a municipality.

(5) “Waste water system improvement project” means a project for constructing or improving a system for waste water collection or treatment, including storm drainage systems.

(6) “Water project” means a safe drinking water project or a waste water system improvement project. [Formerly 285.755]

285B.563 Water Fund; uses; sources; maintenance of fund value; coordination with other agencies on safe drinking water projects. (1) There is established in the State Treasury, separate and distinct from the General Fund, the Water Fund. All moneys in the fund are continuously appropriated to the Economic and Community Development Department to provide financing for water projects.

(2)(a) Moneys in the Water Fund may be obligated to water projects.

(b) Moneys shall be used primarily to make loans to municipalities. The department may make a loan only if:

(A) The municipality applying for the loan certifies to the department that adequate funds will be available to repay the loan; and

(B) The department determines that the amount of the loan applied for is based on a reasonable and prudent expectation of the municipality's ability to repay the loan.

(c) The department may award a grant only if a loan is not feasible due to:

(A) Financial hardship to the municipality, as determined by the department, based on consideration of anticipated water service charges or anticipated waste water service charges that exceed the statewide average for such charges, the per capita income of the municipality and such other factors as the department by rule may establish; and

(B) Special circumstances of the water project.

(d) The department may determine the amount of grant or loan funding on a case-by-case basis.

(3) The moneys in the fund may also be used to assist the department in selling revenue bonds on behalf of municipalities in order to carry out the purposes of ORS 285B.560 to 285B.599.

(4) With the approval of the State Treasurer, moneys in the Water Fund may be invested as provided by ORS 293.701 to 293.820. The earnings from such investments and other program income shall be credited to the Water Fund.

(5) The Water Fund shall consist of:

(a) Moneys appropriated to the fund by the Legislative Assembly.

(b) Moneys transferred to the fund by the Economic and Community Development Department from the Special

Public Works Fund created by ORS 285B.455.

(c) Moneys transferred to the fund by the Water Resources Commission from the Water Development Fund created by Article XI-I(1) of the Oregon Constitution.

(d) Moneys from any federal, state or other grants.

(e) Proceeds of revenue bonds issued under ORS 285B.575.

(f) Earnings on the fund.

(6) The department shall administer the fund.

(7) The department shall adopt rules and policies for the administration of the fund. The department shall coordinate its rulemaking regarding safe drinking water projects with the Water Resources Department and the Health Division of the Department of Human Services. The rules adopted under this subsection for safe drinking water projects shall:

(a) Require the installation of meters on all new service connections to any distribution lines funded with moneys from the fund or from the proceeds of revenue bonds issued under ORS 285B.572 to 285B.578.

(b) Require a plan, to be adopted by a municipality receiving financial assistance from the fund, for installation of meters on all service connections throughout the drinking water system not later than two years after the completion of a safe drinking water project.

(8)(a) The Economic and Community Development Department shall manage the Water Fund and any expenditures from accounts in the fund and transfers between accounts so that the fund value shall be equal to at least 50 percent of lottery revenues actually transferred to the fund plus interest on such amounts compounded annually at five percent. The fund value shall be determined by adding the cash reserves and the outstanding principal amount of loans to municipalities. Any amount of loan principal that is forgiven shall be subtracted from the value of the fund. The value of the fund shall include moneys in the fund that are pledged to the repayment of state bonds.

(b) The department shall certify to the State Treasurer in each quarter the value of the fund.

(c) If necessary to ensure repayment of bonds issued under ORS 285B.560 to 285B.599, the department may reduce the value of the fund to less than the limit established in paragraph (a) of this subsection when the department:

(A) Finds that without such a reduction in fund value, bonds secured by the fund are likely to be in default; and

(B) Imposes a moratorium on grants until the requirements of paragraph (a) of this subsection are satisfied.

(9)(a) The department may charge administrative costs to the fund, but not to moneys segregated in the account created by subsection (11) of this section, to pay for administrative expenses incurred by the department for processing applications, investigating water projects, monitoring recipients of financing for water projects and servicing and collecting outstanding financial awards made for water projects.

(b) To the extent permitted by federal law, administrative expenses of the department as limited in paragraph (a) of this subsection that are paid from the fund shall not exceed four percent of the moneys allocated to the fund in any biennium. Administrative expenses of the department as limited in paragraph (a) of this subsection may be paid from bond proceeds.

(10) The department may establish other accounts within the Water Fund for the payment of water projects costs, reserves, debt service payments, credit enhancements, costs of issuing revenue bonds, administrative and operating expenses or any other purpose necessary to carry out ORS 285B.560 to 285B.599.

(11) There is created within the Water Fund a separate and distinct account for the proceeds from the sale of water development general obligation bonds issued for safe drinking water projects and credited to the special account under this section. Any investment earnings thereon shall be segregated in and continuously appropriated to a special, separately accounted for subaccount of this account. Moneys credited to this account shall be maintained separate and distinct from moneys credited to subaccounts created under subsection (10) of this section. Notwithstanding ORS 285B.566 or subsection (4) of this section, all repayments of moneys loaned from the account created by this subsection, including interest on such moneys, shall be credited to the Water Development Administration and Bond Sinking Fund created by ORS 541.830. [Formerly 285.757; 1999 c.509 s.45]

285B.566 Use of receipts from projects. All payments, receipts and interest from financial awards made for water projects shall be retained and accumulated in the Water Fund and used to finance water projects including payments to holders of revenue bonds issued under ORS 285B.575. [Formerly 285.760]

285B.569 When constitutional restrictions apply to use of certain funds. If moneys are transferred to the Water Fund from the sources described in ORS 285B.563 (5)(b) to (e), all constitutional restrictions, statutes and rules regulating the use of the moneys transferred from these funds shall apply to the use of those moneys in the Water

Fund. [Formerly 285.763]

(Revenue Bond Financing of Safe Drinking Water Projects)

285B.572 Standards for eligibility of water projects; determination to issue bonds. (1) The Economic and Community Development Department shall adopt by rule standards to determine the eligibility of a water project for revenue bond financing under ORS 285B.560 to 285B.599.

(2) Upon determining that a water project is eligible for revenue bond financing, the department shall forward a description of the project to the State Treasurer. The State Treasurer shall determine whether to issue revenue bonds. [Formerly 285.950]

285B.575 Duties of State Treasurer. If the State Treasurer determines that revenue bonds shall be issued:

(1) The State Treasurer may authorize and issue in the name of the State of Oregon revenue bonds secured by moneys paid to the Water Fund and pledged to finance or refinance in whole or in part the cost of a water project. The revenue bonds issued under this section shall be issued in the manner prescribed by ORS chapter 286, and refunding bonds may be issued to refinance the revenue bonds.

(2) The State Treasurer shall designate and enter into agreements with the underwriter, trustee and bond counsel to carry out the provisions of ORS 285B.560 to 285B.599. [Formerly 285.952]

285B.578 Nature of revenue bonds. (1) Revenue bonds issued under ORS 285B.575:

(a) Shall not be payable from nor charged upon any fund other than the revenue pledged to the payment of the revenue bonds, except as provided in this section, nor shall the state be subject to any liability on the bonds. No holder of revenue bonds shall ever have the right to compel any exercise of the taxing power of the state to pay any such bonds or the interest on the bonds, nor to enforce payment of the bonds against any property of the state except those moneys pledged in the Water Fund, under the provisions of ORS 285B.560 to 285B.599.

(b) Shall not constitute a charge, lien or encumbrance, legal or equitable, upon any property of the state, except those moneys paid to the Water Fund.

(c) Shall not exceed, for all bonds outstanding, a total principal amount of $200 million.

(2) A revenue bond issued under ORS 285B.575 shall not constitute a debt of the state or a lending of the credit of the state within the meaning of any constitutional or statutory limitation. [Formerly 285.954]

285B.581 Repayment plans for loan; authority of municipalities. (1) Any loan of moneys to a municipality by the state shall include a plan for repayment by the municipality of moneys borrowed from the Water Fund for a water project and interest on those moneys at a rate expressly specified. The repayment plan:

(a) Shall provide for such evidence of debt assurance of, and security for, repayment by the municipality as is considered necessary by the Economic and Community Development Department.

(b) May set forth the allocation of special assessments or contractual responsibilities among the owners of benefited properties for repayment to the municipality of the amount of the loan.

(c) Shall provide for repayment during a period that shall not exceed the usable life of the proposed project or 25 years, whichever is less.

(2) Notwithstanding any other provision of law or any restriction on indebtedness contained in a charter, a municipality may borrow from the fund by entering into a loan contract with the Economic and Community Development Department. Moneys borrowed from the fund shall be repaid:

(a) From the revenues of any water project, including special assessment revenues;

(b) From amounts withheld under ORS 285B.599;

(c) From the general fund of the municipality;

(d) From any combination of the provisions of paragraphs (a) to (c) of this subsection; or

(e) From any other sources.

(3) A loan contract under subsection (2) of this section may provide that a portion of the proceeds of the loan be applied to fund a reserve fund to secure the repayment of the loan or secure the repayment of revenue bonds issued to fund the loan.

(4) A loan contract under subsection (2) of this section shall be authorized by an ordinance or resolution that is adopted with prior notice of at least 14 days. Notice shall be published at least once in a newspaper of general circulation within the municipality. [Formerly 285.956]

285B.584 Authority of department. In addition to any other powers granted by law in relation to a water project, the Economic and Community Development Department, acting through the State Treasurer or the State Treasurer's designee, may:

(1) Make all contracts, execute all instruments and do all things necessary or convenient for the exercise of the powers granted by this section, or for the performance of its covenants or duties, or in order to secure the payment of its bonds;

(2) Enter into and perform such contracts and agreements with municipalities as the department may consider proper and feasible for or concerning the planning, construction, installation, lease or other acquisition, and the financing of water projects; and

(3) Enter into covenants for the benefit of bond owners regarding the use and expenditure of moneys in the Water Fund. [Formerly 285.958]

285B.587 Deposit and use of bond proceeds. (1) Proceeds of revenue bonds issued and sold under ORS 285B.572 to 285B.578 that are to be used to fund loans to municipalities for water projects shall be deposited in the Water Fund.

(2) Proceeds of revenue bonds issued and sold under ORS 285B.572 to 285B.578 that are to be used to pay the costs of issuing the revenue bonds or that are to be applied to fund a reserve fund for the revenue bonds shall be deposited either in the Water Fund or in a trust account or fund held by any trustee for the revenue bonds. Moneys on deposit in the Water Fund may be transferred to any trustee for the revenue bonds to be applied to the payment of the costs of issuing the revenue bonds or to be applied to fund a reserve fund for the revenue bonds. [Formerly 285.960]

285B.590 Other forms of financial assistance. In addition to making loans to municipalities for water projects, the Economic and Community Development Department may provide any other form of financial assistance that the department may consider appropriate for the financing of water projects. [Formerly 285.962]

285B.593 Technical assistance grants and loans; eligibility; purpose; amount. Out of the moneys in the Water Fund, the Economic and Community Development Department may make technical assistance grants and loans to municipalities with fewer than 5,000 residents. Technical assistance grants and loans shall be for the purpose of completing preliminary planning, legal, fiscal and economic investigations, reports and studies to determine the economic and engineering feasibility of water projects. A technical assistance grant shall not exceed $10,000. A technical assistance loan shall not exceed $20,000. [Formerly 285.964]

285B.596 Use of moneys in Water Fund. Not less than 33 percent of the moneys appropriated to the Water Fund shall be used to provide financial assistance to nonurban water projects and not less than 33 percent shall be used to provide financial assistance to urban water projects. [Formerly 285.966]

285B.599 Repayment to Water Fund. (1) If a municipality fails to comply with a contract entered into under ORS 285B.581, the Economic and Community Development Department may seek appropriate legal remedies to secure any repayment due the Water Fund. If any municipality defaults on payments due the fund, the State of Oregon may withhold any amounts otherwise due the municipality to apply to the indebtedness. The department may waive the right to withhold moneys under this subsection.

(2) Moneys withheld under subsection (1) of this section shall be deposited in the fund and shall be used to repay any account in the fund from which funds were expended to pay obligations upon which the municipality defaulted. [Formerly 285.968]

ENTERPRISE ZONES

(Generally)

285B.650 Definitions for ORS 285B.650 to 285B.728. As used in ORS 285B.650 to 285B.728, unless the context requires otherwise:

(1) “Business firm” means a person operating or conducting one or more trades or businesses but does not include any governmental agency, municipal corporation or nonprofit corporation.

(2) "Eligible business firm" means a firm engaged in an activity described under ORS 285B.707 which may file an application for precertification under ORS 285B.719.

(3) "Employee" means a person who works more than 32 hours per week, but does not include persons with temporary or seasonal jobs or persons hired solely to construct qualified property.

(4) "Enterprise zone" means one of the 30 areas designated or terminated and redesignated by order of the Governor under ORS 284.160 (1987 Replacement Part) before October 3, 1989, one of the 17 areas designated by the Director of the Economic and Community Development Department under ORS 285B.653, areas designated under ORS 285B.677 and areas designated under ORS 285B.689.

(5) "First-source hiring agreement" means an agreement between a precertified business firm and a publicly funded job training provider whereby the job training provider refers qualified candidates to the firm for new jobs and job openings in the firm.

(6) "Modification" means modernization, renovation or remodeling of an existing building or structure.

(7) "Nonurban enterprise zone" means an enterprise zone located outside a regional or metropolitan urban growth boundary.

(8) "Precertified business firm" means an eligible business firm whose application for precertification has been approved under ORS 285B.719 and which may apply for a property tax exemption under ORS 285B.722.

(9) "Publicly funded job training provider" includes but is not limited to, community colleges, Job Training Partnership Act service providers, and other similar programs.

(10) "Qualified business firm" means a business firm described in ORS 285B.704 whose application for a property tax exemption has been approved under ORS 285B.722.

(11) "Qualified property" means property described under ORS 285B.713.

(12) "Sponsor" means the city or county that applied for and received approval of an enterprise zone under ORS 284.150 and 284.160 (1987 Replacement Part), under ORS 285B.656 and 285B.659, under ORS 285B.677 or 285B.686 or under ORS 285B.689.

(13) "Urban enterprise zone" means an enterprise zone in a metropolitan statistical area, as defined by the most recent federal decennial census, located inside a regional or metropolitan urban growth boundary. [Formerly 285.560; 1999 c.460 s.1]

Note: Section 22, chapter 1015, Oregon Laws 1989, and sections 31 to 33, chapter 835, Oregon Laws 1997, provide:

Sec. 22. ORS 285B.650, 285B.665, 285B.668, 285B.671, 285B.674, 285B.677, 285B.680, 285B.686, 285B.692, 285B.695, 285B.698, 285B.704, 285B.707, 285B.710, 285B.713, 285B.716, 285B.719, 285B.722, 285B.728 and 285B.731 are repealed on June 30, 2009. [1989 c.1015 s.22; 1995 c.747 s.5]

Sec. 31. ORS 285B.653, 285B.656, 285B.659, 285B.662, 285B.683, 285B.689, 285B.701 and 285B.725 and section 2 of this 1999 Act [285B.723] are repealed on June 30, 2009.
[1997 c.835 s.31; 1999 c.1104 s.9]

Sec. 32. Notwithstanding ORS 285B.686, all enterprise zones terminate on the date on which the statutes listed in section 31 of this Act and in section 22, chapter 1015, Oregon Laws 1989, are repealed. [1997 c.835 s.32]

Sec. 33. Notwithstanding the repeal of the statutes listed in section 31 of this Act and in section 22, chapter 1015, Oregon Laws 1989, and notwithstanding the termination of an enterprise zone under section 32 of this Act, precertified or qualified business firms in an enterprise zone on the date of repeal or termination shall receive the tax exemptions provided under ORS 285B.686 (2) or 285B.719 (5) and (6). [1997 c.835 s.33]

285B.653 Nonurban enterprise zones; designation. (1) The Director of the Economic and Community Development Department may approve the designation of up to 17 areas as nonurban enterprise zones as provided in ORS 285B.656 and 285B.659.

(2) Areas designated as enterprise zones under this section shall be in addition to the 30 areas designated or redesignated as enterprise zones by order of the Governor under ORS 284.160 (1987 Replacement Part) before October 3, 1989, and areas designated under ORS 285B.677 and 285B.689 and shall terminate in accordance with ORS 285B.686 (3). [Formerly 285.562; 1999 c.460 s.2]

Note: Sections 4 and 5, chapter 460, Oregon Laws 1999, provide:

Sec. 4. (1) As used in this section, "eastern Oregon" has the meaning given that term in ORS 321.405 but also includes Hood River County.

(2) Of the 10 additional enterprise zones provided for in the amendments to ORS 285B.653 by section 2 of this 1999 Act and initially designated after the effective date of this 1999 Act [October 23, 1999], at least four of the enterprise zones must be located in eastern Oregon.

(3) The designation of any enterprise zone provided for in the amendments to ORS 285B.653 by section 2 of this 1999 Act is not effective unless made on or before January 1, 2004.

(4) When requesting a change to the boundary of an enterprise zone under ORS 285B.680, the zone sponsor and any other city or county that seeks to become a sponsor as part of the boundary change proceeding may request a waiver of the distance limit imposed under ORS 285B.683 (1)(c). The Director of the Economic and Community Development Department shall grant the waiver and order the change to the enterprise zone boundary, if:

(a) The proposed boundary change satisfies all other requirements for a boundary change; and

(b) The director makes a determination, consistent with rules adopted by the Economic and Community Development Department, that designation of a separate enterprise zone is not a practical option under the particular circumstances, that the overall distances involved can be effectively administered and that the waiver will further the goals and purposes of applicable state policies. [1999 c.460 s.4]

Sec. 5. Section 4 of this 1999 Act is repealed on January 1, 2008. [1999 c.460 s.5]

Note: See note under 285B.650.

285B.656 Application for designation of enterprise zones; contents of application. (1) Any city or county may apply to the Director of the Economic and Community Development Department for designation of an area within that city or county as an enterprise zone. With the prior consent of the governing body of the city, a county may apply to the Economic and Community Development Department on behalf of a city for designation of any area within that city as an enterprise zone.

(2) One or more cities and counties may apply to the director for designation of an area situated partly within each city and partly in unincorporated territory within the counties as an enterprise zone.

(3) Any area proposed for designation as an enterprise zone must consist of a total area of not more than 12 square miles in size with 12 miles or less as the greatest distance between any two points within the zone. The area of the zone shall be calculated by excluding that portion of the zone which lies below the ordinary high water mark of a navigable body of water, and any road, railroad, electric transmission line or pipeline rights of way that connect otherwise unconnected areas of an enterprise zone. Such areas shall not be more than five miles apart.

(4) An application for designation of an enterprise zone shall be in the form and contain such information as the department, by rule, may require. However, the application shall:

(a) Be submitted on behalf of one or more local government units as described in subsections (1) and (2) of this section by action of the governing body of each applicant;

(b) Contain a description of the area sought to be designated as an enterprise zone;

(c) Contain information sufficient to allow the department to determine if the criteria established in ORS 285B.662 are met;

(d) State that the applicant will give priority to the use in the proposed enterprise zone of any economic development or job training funds received from the federal government; and

(e) Declare that the applicant will comply with ORS 285B.671.

(5) When applying for designation of an enterprise zone within its boundaries under this section, the applicant may include in the application proposals to enhance the level or efficiency of local public services within the proposed enterprise zone including, but not limited to, fire-fighting and police services.

(6) When applying for designation of an enterprise zone within its boundaries under this section, the applicant may include in the application proposals for local incentives and local regulatory flexibility to precertified or qualified business firms.

(7) In the case of joint applications by more than one local government unit, each city or county joining in the application may include proposals for enhanced local public services, local incentives or local regulatory flexibility to

be effective within the boundaries of that local government unit.

(8) Proposals under subsection (5), (6) or (7) of this section for enhanced local public services, local incentives or local regulatory flexibility included in the application by a city or county for an enterprise zone are binding upon the city or county if an enterprise zone is designated wholly or partly within its boundaries.

(9) Notwithstanding ORS 285B.716 (1), when applying for designation of an enterprise zone, an applicant may choose to exempt qualified property owned or leased and operated by a business firm as a hotel, motel or destination resort, for any business firm that is precertified in the proposed zone after its designation, if the exemption is requested by resolution of each city or county sponsoring the application. [Formerly 285.563]

Note: See note under 285B.650.

285B.659 Review of applications by department; approval; reapplication upon denial. (1) The Economic and Community Development Department shall review each application for designation of an enterprise zone, and shall secure any additional information that the department considers necessary for the purpose of determining whether the area described in the application qualifies for designation as an enterprise zone.

(2) The department shall complete review of the application within 60 days of the last date designated for receipt of an application. After review of the applications, the department shall forward those qualified applications to the Director of the Economic and Community Development Department. The director shall determine which applications have the greatest potential for accomplishing the purposes of ORS 285B.650 to 285B.728.

(3) As authorized under ORS 285B.653 or 285B.689, the director may approve the designation of one or more enterprise zones. The determination by the director as to the areas designated enterprise zones shall be final.

(4) If an application for enterprise zone designation is denied, the governing body of the cities or counties submitting the application shall be informed of that fact together with the reasons for the denial. Cities or counties may reapply to the department for designation of an area as an enterprise zone. [Formerly 285.564]

Note: See note under 285B.650.

285B.662 Requirements for area designated as enterprise zone. A proposed enterprise zone must be located in a local area in which:

(1) Fifty percent or more of the households have incomes below 80 percent of the median income of this state, as defined by the most recent federal decennial census;

(2) The unemployment rate is at least 2.0 percentage points greater than the comparable unemployment rate for this entire state, as defined by the most recently available data published or officially provided and verified by the United States Government, the Employment Department of this state, the Portland State University Center for Population Research and Census or special studies conducted under a contract with a regional academic institution; or

(3) The Economic and Community Development Department determines on a case-by-case basis using evidence provided by the cities or counties applying for designation of the proposed enterprise zone that there exists a level of economic hardship at least as severe as that described in subsection (1) or (2) of this section. Such evidence shall be based on the most recently available data from official sources and may include, but is not limited to, a contemporary decline of the population in the proposed enterprise zone, the percentage of persons in the proposed enterprise zone below the poverty level relative to the percentage of the entire population of this state below the poverty level or the unemployment rate for the county or counties in which the proposed enterprise zone is located. [Formerly 285.565]

Note: See note under 285B.650.

285B.665 Legislative findings. The Legislative Assembly finds and declares that the health, safety and welfare of the people of this state are dependent upon the continued encouragement, development, growth and expansion of employment, business, industry and commerce throughout all regions of the state, but especially in those communities at the center of or outside major metropolitan areas for which geography may act as an economic hindrance. The Legislative Assembly further declares that there are areas in the state that need the particular attention of government to help attract private business investment into these areas and to help resident businesses to reinvest and grow and that many local governments wish to have tax incentives and other assistance available to stimulate sound business investments that support and improve the quality of life. Therefore, it is declared to be the purpose of ORS 285B.650 to 285B.728 to stimulate and protect economic success in such areas of the state by providing tax incentives for

employment, business, industry and commerce and by providing adequate levels of complementary assistance to community strategies for such interrelated goals as environmental protection, growth management and efficient infrastructure. [Formerly 285.573; 1999 c.460 s.6]

Note: See note under 285B.650.

285B.668 Duties of department. In addition to any other powers granted by law, for the purpose of administering ORS 285B.650 to 285B.728, the Economic and Community Development Department shall:

(1) Adopt any rules the department considers necessary to administer ORS 285B.650 to 285B.728.

(2) Assist a sponsor of an enterprise zone in its efforts to retain, expand, start or recruit eligible business firms.

(3) Assist an eligible business firm doing business within an enterprise zone to obtain the benefits of applicable incentive or inducement programs authorized by Oregon law.

(4) Take action necessary to participate in the federal enterprise zone program under ORS 285B.677.

(5) Process sponsor requests for boundary amendments under ORS 285B.680.

(6) Take action necessary to terminate or designate zones under ORS 285B.686 or 285B.689.

(7) Assist in implementing first-source hiring agreements by publicly funded job training providers with precertified and qualified business firms. [Formerly 285.575]

Note: See note under 285B.650.

285B.671 Duties of zone sponsor. (1) The sponsor of an enterprise zone shall:

(a) Appoint a local zone manager. Upon appointment of the local zone manager, the sponsor shall provide written notice thereof to the Economic and Community Development Department, the county assessor and the Department of Revenue.

(b) Provide enhanced local public services, local incentives and local regulatory flexibility included in the application for designation of the enterprise zone or in the resolution under ORS 285B.680 (6) to precertified or qualified business firms.

(c) Process applications from eligible business firms for precertification under ORS 285B.719.

(d) Assist the county assessor in reviewing tax exemption applications under ORS 285B.722.

(e) Prepare, implement and annually update a plan for marketing the enterprise zone including strategies for retention, expansion, start-up and recruitment of eligible business firms.

(f) Manage the enterprise zone in accordance with ORS 285B.650 to 285B.728.

(g) Identify property available for sale or lease to eligible business firms under ORS 285B.674.

(h) Prepare indices of street addresses, tax lot numbers or other information to facilitate the identification of land inside of an urban enterprise zone.

(2) A sponsor of an enterprise zone may require that an application for precertification be accompanied by a filing fee of $200 or up to one-tenth of one percent of the value of the proposed investment in qualified property at the time of the precertification.

(3) If more than one city or county sponsors an enterprise zone, they shall act jointly in performing the duties imposed on a sponsor under ORS 285B.650 to 285B.728.

(4) Notwithstanding ORS 285B.719 (3), the sponsor of an urban enterprise zone may require an eligible business firm seeking precertification under ORS 285B.719 within that zone to satisfy other conditions for precertification that the zone sponsor may impose that are reasonably related to the public purpose of providing opportunities for groups of persons, as defined by the zone sponsor, to obtain employment, including but not limited to provisions for training and procedures for monitoring and verifying compliance with the conditions. Such conditions may be imposed only pursuant to a policy adopted by the zone sponsor that establishes standards for the imposition of the conditions. Conditions imposed by a zone sponsor under this subsection shall be in addition to, and not in lieu of, conditions and requirements imposed under ORS 285B.650 to 285B.728 and shall not affect the duties of the Department of Revenue under ORS 285B.692 or of the county assessor under ORS 285B.695.

(5) A sponsor of an enterprise zone that imposes conditions for precertification on eligible business firms under subsection (4) of this section shall submit a written report every four years to the Legislative Assembly concerning the application and effects of such conditions on the eligible businesses within the enterprise zone. A report required by this subsection shall first be submitted to the Seventieth Legislative Assembly. [Formerly 285.577]

Note: See note under 285B.650.

285B.674 Availability of public property. Subject to the requirements of the Oregon Constitution and any applicable law, the State of Oregon and municipal corporations that own any real property within an enterprise zone that is zoned for use by eligible businesses and that is not used or designated for some public purpose shall make that real property available for lease or purchase by precertified or qualified business firms. Real property shall be leased or sold under this section only upon the condition that an eligible business firm promptly develop the real property for a use which has been precertified under ORS 285B.719. [Formerly 285.580]

Note: See note under 285B.650.

285B.677 Department as agency for state participation in federal enterprise zone program. (1) As used in this section, "federal enterprise zone" means any discrete area wholly or partially within this state that is designated as an empowerment zone, an enterprise community, a renewal community or some similar designation for purposes of improving the economic and community development of the area.

(2) The Economic and Community Development Department shall be the lead agency for state participation in a federal enterprise zone program. The Director of the Economic and Community Development Department may take action necessary for such participation to the extent allowed by state law.

(3) Any area designated as a federal enterprise zone by an agency of the federal government may be designated as a state enterprise zone by the director at the request of a city or county within whose jurisdiction some or all of the federal enterprise zone is located, without regard to any limitation contained in ORS 285B.656 (3) or 285B.662.

(4) The boundary of an existing state enterprise zone may be amended by the director at the request of the sponsor to include the entire area of a federal enterprise zone without regard to any limitation contained in ORS 285B.680 (2). A change in the boundary of an existing state enterprise zone under this subsection shall not change the termination date of the enterprise zone under ORS 285B.686 (3).

(5) A request by a city or county under subsection (3) or (4) of this section shall be in such form and include such information as required by the department, but the request must:

(a) Include a resolution adopted by the governing body of the city or county; and

(b) Provide that all areas within both the federal enterprise zone and the city or county are included in a state enterprise zone.

(6) The termination under federal law of a federal enterprise zone shall not affect the existence or dimensions of a state enterprise zone, except when, as determined by the director, the termination is for nonperformance or for violations of federal guidelines. [Formerly 285.583; 1999 c.460 s.7]

Note: See note under 285B.650.

285B.680 Change of zone boundaries. (1) The sponsor of an enterprise zone may submit a request to the Economic and Community Development Department to change the boundary of the enterprise zone. A request shall include:

(a) A resolution of the governing body of the sponsor requesting the change;

(b) A map clearly indicating the existing boundary and the proposed change thereto;

(c) A legal description of each area to be withdrawn from or added to the existing enterprise zone; and

(d) Other information required by the department.

(2) The amended enterprise zone shall:

(a) Add land zoned for use by eligible business firms:

(A) Which has or will have infrastructure facilities available; or

(B) Where road access exists or will be provided, water is or will be available on-site, sewage disposal is or will be provided on-site and necessary utility services are or will be provided;

(b) Continue to include any precertified or qualified business firms within the enterprise zone;

(c) Add residential areas only if the level of economic hardship therein is at least as severe as the original enterprise zone;

(d) Retain at least 50 percent of the lands in the original enterprise zone;

(e) Consist of a total area of not more than 12 square miles in size. The area of the zone shall be calculated by excluding that portion of the zone which lies below the ordinary high water mark of a navigable body of water, and

any road, railroad, electric transmission line or pipeline rights of way that connect otherwise unconnected areas of an enterprise zone. Such areas shall not be more than five miles apart; and

(f) Have 12 miles or less as the greatest distance between any two points within a zone amended under this section.

(3) A request under subsection (1) of this section may include a proposal to:

(a) Remove residential areas or land not zoned or available for use by eligible business firms; or

(b) Change the name of the enterprise zone.

(4) The boundary of an urban enterprise zone shall not be modified to include land located outside a regional or metropolitan urban growth boundary.

(5) A request to modify the boundary of a nonurban enterprise zone to include land located outside an urban growth boundary shall satisfy the requirements of subsections (1) and (2) of this section and shall include such other criteria as the department may adopt by rule.

(6) If an area to be added to an enterprise zone is under the jurisdiction of a city or county that is not a sponsor of the enterprise zone, the governing body of that city or county shall submit a resolution requesting the change and that it become a sponsor. The resolution may include a binding proposal for enhanced local public services, local incentives or local regulatory flexibility to be effective within the portion of the enterprise zone to be under the jurisdiction of that city or county.

(7) The department shall review the request for a boundary change. If the request is incomplete or does not satisfy the requirements of this section, the department shall seek additional information as necessary or shall return the request to the sponsor. If the request is returned, the sponsor may submit a revised request at any time. If the request is complete and does satisfy the requirements of this section, the Director of the Economic and Community Development Department shall order a change in the boundary of an enterprise zone based on the request of the sponsor and specify the effective date of the boundary change, which shall not be earlier than the receipt of a completed request.

(8) A change in the boundary of an enterprise zone under this section shall not change the termination date of the enterprise zone under ORS 285B.686 (3). [Formerly 285.585]

Note: See note under 285B.650.

285B.683 Change in boundaries of nonurban enterprise zone. (1) Notwithstanding ORS 285B.656 (3) and 285B.680 (2)(e) and (f), a nonurban enterprise zone may be designated under ORS 285B.659 or 285B.689 or have its zone boundary changed under ORS 285B.680 so that:

(a) A separate area of the zone may be as far as 15 miles from another area of the zone, when the separate area is entirely contained within a sparsely populated county;

(b) The zone may have 20 or fewer miles as the greatest distance between any two points within the zone, when only a portion of the zone is contained within a sparsely populated county; or

(c) The zone may have 25 or fewer miles as the greatest distance between any two points within the zone, when the zone is entirely contained within a sparsely populated county or within two or more sparsely populated counties.

(2) If the population density of a county increases to more than 100 persons per square mile, any existing enterprise zone located wholly or partly within that county that was designated or that had its zone boundary changed under subsection (1) of this section shall continue to exist with that zone boundary until terminated or until a subsequent boundary change under ORS 285B.680. However, any subsequent boundary change under ORS 285B.680 shall not add an area to the zone that:

(a) Is a separate area farther than five miles from the nearest point on the existing boundary;

(b) Increases the distance between the two points in the zone that are the farthest apart; or

(c) Creates a new line of distance to the farthermost opposite point in the zone that is longer than the greatest distance between any two existing points in the zone.

(3) Subsection (2) of this section does not limit the maximum distance within an enterprise zone to less than what is otherwise specifically allowed under subsection (1) of this section or ORS 285B.677 or 285B.680.

(4) Nothing in this section allows an enterprise zone to be more than 12 square miles in total area except as provided under ORS 285B.677.

(5) As used in this section, “sparsely populated county” means a county with a density of 100 or fewer persons per square mile, based on the most recently available population figure for the county from the Portland State University Center for Population Research and Census. [1997 c.835 s.2]

Note: See note under 285B.650.

285B.686 Zone termination. (1) Enterprise zones designated under ORS 284.110 to 284.260 (1987 Replacement Part) by order of the Governor before October 3, 1989, are declared valid and shall continue to exist until terminated under this section.

(2) When the termination of an enterprise zone occurs under this section:

(a) The termination of the enterprise zone shall not affect the continuation of a qualified business firm's property tax exemption for which the firm qualified before the effective date of the termination of the enterprise zone.

(b) Notwithstanding ORS 285B.698 (5)(e) and 285B.719 (6), a business firm that is currently precertified or qualified in the enterprise zone shall be allowed until 10 years after the effective date of the termination of the enterprise zone to apply for precertification under ORS 285B.719 and subsequently for property tax exemptions under ORS 285B.722 for any qualified property that is located inside the former enterprise zone boundaries at the time of termination and entirely outside of the boundaries of any current enterprise zone. Construction, modification or installment of qualified property must commence prior to the end of an exemption of the precertified or qualified business firm under ORS 285B.698 or 285B.710 and be completed in accordance with ORS 285B.719 (5)(b) and (c). The precertified or qualified business firm must comply with the requirements under ORS 285B.692 to 285B.728 in effect at the time of the termination of the enterprise zone.

(c) Disqualification under ORS 285B.728 of an entire property tax exemption after the date of the termination of the enterprise zone shall prohibit and terminate all precertifications and qualifying property tax exemptions that would not otherwise be allowed except for paragraph (b) of this subsection. Such termination shall not result in repayment of property taxes exempted before the tax year in which the disqualification takes effect.

(3) An enterprise zone previously designated by order of the Governor or designated by the Director of the Economic and Community Development Department under ORS 285B.653, 285B.677 or 285B.689 shall terminate when 10 years plus that number of days necessary to delay the date of termination to the June 30 next following have elapsed since the enterprise zone was originally designated by order of the Governor or the director.

(4) An enterprise zone shall terminate prior to the time specified in subsection (3) of this section only as provided in subsection (5) or (6) of this section.

(5) The governing body of the sponsor may submit a resolution requesting termination of the enterprise zone to the Economic and Community Development Department. The sponsor shall provide copies of the resolution to the county assessor and the Department of Revenue. After receipt of the request, the director shall order termination of the enterprise zone and shall specify the effective date of such termination.

(6) If a sponsor is unable or unwilling to carry out its responsibilities under ORS 285B.671, the director shall order termination of the enterprise zone and shall specify the effective date of such termination. However, in the case of failure to provide enhanced local public services, local incentives or local regulatory flexibility included in the application for designation as an enterprise zone or in the resolution under ORS 285B.680 (6), termination is not required if the sponsor provides new enhanced local public services, local incentives or local regulatory flexibility that have similar value, as determined by the department, to precertified or qualified business firms. A sponsor may reduce the time within which it will provide enhanced local public services, local incentives and local regulatory flexibility to a time period equal to the amount of time allowed for an exemption under ORS 285B.698 or 285B.710, without causing termination under this section. [Formerly 285.587]

Note: Section 4, chapter 1104, Oregon Laws 1999, provides:

Sec. 4. Notwithstanding ORS 285B.686 (2)(b), sections 2 [285B.723] and 3c of this 1999 Act and the amendments to ORS 285B.701 and 285B.704 by sections 3 and 3a of this 1999 Act are effective for any exemption granted under ORS 285B.650 to 285B.728. [1999 c.1104 s.4]

Note: See note under 285B.650.

285B.689 Designation of new zones after termination. (1) Within a reasonable period of time prior to the termination of enterprise zones under ORS 285B.686 (3), the Director of the Economic and Community Development Department shall competitively designate the same number of enterprise zones effective immediately after termination of the previous enterprise zones. The determination by the director as to the areas designated as enterprise zones shall be final.

(2) When an enterprise zone is terminated under ORS 285B.686 (5) or (6), the director may competitively

designate a new enterprise zone. The sponsor of the enterprise zone terminated under ORS 285B.686 (5) or (6) is not eligible to apply for a new enterprise zone, except for a county government when the terminated zone was also jointly sponsored by one or more cities.

(3) Sponsors of existing enterprise zones are eligible to reapply for designation under subsection (1) of this section.

(4) Any city or county may apply to the director for designation of an enterprise zone in accordance with the criteria set forth in ORS 285B.656 and 285B.662. In addition, the Economic and Community Development Department by rule shall determine the minimum level of economic hardship in any area to be included within an enterprise zone, any other criteria necessary to evaluate the need for the enterprise zone and the potential for accomplishing the purposes of ORS 285B.650 to 285B.728.

(5) All enterprise zones designated under this section shall terminate in accordance with ORS 285B.686 (3).

(6) When the director designates enterprise zones under this section, there is no limit on the relative number of urban or nonurban enterprise zones designated.

(7) The director may determine when to accept applications for any enterprise zone that terminates under subsection (2) of this section or is not designated under subsection (1) of this section for lack of qualified applicants. [Formerly 285.588]

Note: See note under 285B.650.

(Tax Exemptions)

Note: Sections 3c and 4a, chapter 1104, Oregon Laws 1999, provide:

Sec. 3c. (1) If an eligible business firm completes an investment of $25 million or more in the enterprise zone in qualified property confined entirely within an established operating division of the firm that would be an eligible business firm if it were separately incorporated, the firm may elect to have the division treated as a separate eligible business firm for purposes of applicable requirements under ORS 285B.692 to 285B.728. The election described in this subsection may only be made with respect to an application for the exemption of qualified property under ORS 285B.722 that was filed on or before January 1, 1999.

(2) For purposes of ORS 285B.704 (2) or (3), if the eligible business firm makes a total investment in the enterprise zone of $50 million or more in qualified property that initially qualifies for not more than three consecutive years, the governing body of the sponsor may also provide for one or more of the following as documented in the resolution under ORS 285B.704:

(a) That, notwithstanding ORS 285B.701 (3) or 285B.719 (1), this subsection and the application for precertification includes qualified property in the zone, for which construction, modification or installation commenced prior to the application, if the firm is precertified prior to use or occupancy of the qualified property;

(b) That the exemption shall be granted without regard to the cost of any portion of the investment that initially qualifies in any single year; or

(c) That the firm is not bound by any election under subsection (1) of this section or ORS 285B.707 (5) in effect at the time at which the zone terminated, in the case of a precertification and exemption that is otherwise allowed under ORS 285B.686 (2). [1999 c.1104 s.3c]

Sec. 4a. Section 3c of this 1999 Act is repealed on December 31, 2005. [1999 c.1104 s.4a]

Note: Sections 36 to 40 and 42 to 44, chapter 835, Oregon Laws 1997, provide:

Sec. 36. As used in sections 36 to 40, chapter 835, Oregon Laws 1997:

(1) "County with chronically low income or chronic unemployment" means, based on the most recently revised annual average unemployment rate or annual per capita income levels available, a county in which:

(a) The median ratio of the per capita personal income of the county to the equivalent annual personal income figure of the entire United States for each year, as reported by the Bureau of Economic Analysis of the United States Department of Commerce, is equal to or less than 0.75 over the last 10 years;

(b) Both of the following criteria are satisfied:

(A) The median ratio of the unemployment rate of the county to the equivalent rate of the entire United States for each year is at least 1.3 over the last 20 years or over the last 10 years; and

(B) The current unemployment rate of the county is at least one percentage point higher than the unemployment rate of the county for the immediately prior year or at least 50 percent higher than the current unemployment rate of this state; or

(c) The population of the county has experienced a negative net migration, irrespective of natural population change, since the most recent federal decennial census occurring three or more years prior to the current estimated population figure for the county, based on available population statistics.

(2) "Nonurban enterprise zone" has the meaning given that term in ORS 285B.650.

(3) "Taxing unit" means the State of Oregon or any county, city, municipal corporation, district or other government unit that has the power to tax. [1997 c.835 s.36; 1999 c.1104 s.10]

Sec. 37. (1) Any business firm proposing to apply for the tax exemption provided under section 38 (1), chapter 835, Oregon Laws 1997, shall, before the commencement of construction or installation of property or improvements at a facility in a nonurban enterprise zone and before the hiring of employees, apply for certification with the sponsor of the zone and with the county assessor of the county or counties in which the zone is located. The application shall be made on a form prescribed by the Department of Revenue.

(2) The application shall contain the following information:

(a) A description of the firm's business operations and facility in the nonurban enterprise zone;

(b) A description and estimated cost or value of the property or improvements to be constructed or installed at the facility in the nonurban enterprise zone;

(c) An estimate of the number of employees at the facility that will be hired by the firm;

(d) A commitment to meet all requirements of subsection (8) of this section;

(e) A commitment to satisfy all additional conditions for certification that are imposed by the nonurban enterprise zone sponsor under subsection (3)(c) of this section; and

(f) Any other information considered necessary by the Department of Revenue.

(3) The sponsor and the county assessor shall certify the business firm by approving the application if the sponsor and the county assessor determine that:

(a) The governing body of the county and city in which the facility is located has adopted a resolution approving the property tax exemption for the facility;

(b) The business firm has committed to meet the requirements of subsection (8) of this section;

(c) The business firm has entered into a written agreement with the sponsor of the nonurban enterprise zone that may include any additional requirements that the sponsor may reasonably request, including but not limited to contributions for local services or infrastructure benefiting the facility; and

(d) The facility is located in a county with chronically low income or chronic unemployment, based on the most recently revised annual data available when the written agreement with the zone sponsor is entered into.

(4) The approval of an application by both the sponsor and the county assessor under subsection (3) of this section shall be prima facie evidence that the business firm will be qualified for the property tax exemption under section 38 (1) and (2), chapter 835, Oregon Laws 1997.

(5) The sponsor or the county assessor shall not be liable in any way if it is determined that the certified business firm has not satisfied the requirements of subsection (8) of this section.

(6) The sponsor and the county assessor shall provide copies of an approved application to the applicant, the Department of Revenue and the Economic and Community Development Department.

(7) If the sponsor or the county assessor fails or refuses to certify the business firm, the business firm may appeal to the Oregon Tax Court under ORS 305.404 to 305.560. The business firm shall provide copies of the firm's appeal to the sponsor, the county assessor, the Economic and Community Development Department and the Department of Revenue.

(8) A business firm shall receive a property tax exemption from the county assessor under section 38 (1), chapter 835, Oregon Laws 1997, for property and improvements at a facility in a nonurban enterprise zone if, except as allowed under section 15 (1), (2) or (3) or section 17 (1) of this 1999 Act, all of the following conditions are met:

(a) By the end of the calendar year in which the facility is placed in service, the total costs of property and improvements at the facility after certification are or will be more than the lesser of:

(A) $50 million; or

(B) A figure equal to one percent of the value of all nonexempt taxable property in the county in which the facility is located, as reported by the Department of Revenue as net real market value at the time that the business firm is certified, and rounded to the nearest $10 million of such value.

(b) The business firm hires or will hire at least 75 full-time employees at the facility by the end of the fifth calendar year following the year in which the facility is placed in service. Unless the decrease in the number of employees is caused by circumstances beyond the taxpayer's control, including force majeure, or is due to a temporary adverse business cycle, after the number of employees required by this paragraph are hired, the number of employees shall not fall below 75.

(c) The annual average compensation for employees, based on payroll, at the business firm's facility is at least 150 percent of the average wage in the county in which the facility is located. This one-time requirement may be met in any year during the first five years after the year in which operation of the facility begins. Unless the decrease in the average compensation is caused by circumstances beyond the taxpayer's control, including force majeure, the average compensation at the taxpayer's facility shall not decrease to less than 150 percent of the average wage in the county in which the taxpayer's facility is located, as determined for the year in which the one-time requirement was met.

(9) Upon meeting the requirements set forth in subsection (8) of this section, the business firm shall notify the county assessor in writing that the requirements of subsection (8) of this section have been met.

(10) The county assessor, for each tax year that the property at the facility is exempt from taxation under section 38 (1) or (2), chapter 835, Oregon Laws 1997, shall:

(a) Enter on the assessment roll, as a notation, the real market value and assessed value of the property as if it were not exempt under section 38 (1) or (2), chapter 835, Oregon Laws 1997.

(b) Enter on the assessment and the tax roll, as a notation, the amount of taxes that would be due if the property were not exempt.

(c) Indicate on the assessment and tax roll that the property is exempt and is subject to potential additional taxes as provided in section 39, chapter 835, Oregon Laws 1997, by adding the notation “enterprise zone exemption (potential additional tax).” [1997 c.835 s.37; 1999 c.1104 s.11]

Sec. 38. (1) All of the property and improvements at the facility of a certified business firm shall be exempt from ad valorem taxation if the facility satisfies the requirements of section 37 (8), chapter 835, Oregon Laws 1997. The exemption allowed under this subsection shall first apply to the ad valorem tax year immediately following the tax year in which the business firm's facility is placed in service.

(2) Prior to the ad valorem tax year specified in subsection (1) of this section, no ad valorem taxes shall be imposed by a taxing unit on or with respect to the facility site and any property thereon owned or leased by the taxpayer, beginning in the tax year that begins in the first calendar year after which the business firm is certified or after which construction or reconstruction of the facility commences, whichever event occurs later.

(3) Any exemption allowed under subsection (1) or (2) of this section shall be 100 percent of the assessed value of the property and improvements at the facility in each of the tax years for which the exemption is available.

(4) The exemption allowed under subsection (1) of this section is available for a period of at least 7 but not more than 15 consecutive tax years, as determined in the written agreement between the business firm and the enterprise zone sponsor under section 37 (3)(c), chapter 835, Oregon Laws 1997.

(5) An exemption allowed under subsection (1) or (2) of this section shall not be allowed for real or personal property that has received a property tax exemption under ORS 285B.698. [1997 c.835 s.38; 1999 c.1104 s.12]

Sec. 39. If a business firm that is certified under section 37, chapter 835, Oregon Laws 1997, does not begin operations or is not reasonably expected to begin operations, as determined by the county assessor consistent with criteria established by rule of the Department of Revenue, or fails to meet the minimum requirements set forth in section 37 (8), chapter 835, Oregon Laws 1997, while receiving an exemption under section 38 (1) or (2), chapter 835, Oregon Laws 1997, the exemption shall terminate on July 1 following the then current tax year and there shall be added to the tax extended against the property on the next general property tax roll, to be collected and distributed in the same manner as the remainder of ad valorem property taxes, an amount equal to the difference between the taxes assessed against the property and improvements and the taxes that would otherwise have been assessed against the property and improvements for each of the consecutive tax years referred to in section 38 (4), chapter 835, Oregon Laws 1997, (or a lesser number of applicable years) and for any tax years under section 38 (2), chapter 835, Oregon Laws 1997, prior to the termination of the exemption under this section. [1997 c.835 s.39; 1999 c.1104 s.13]

Sec. 40. (1) Notwithstanding any law under which a taxing unit may levy or impose any ad valorem taxes on or with respect to a taxpayer located in a nonurban enterprise zone, a taxpayer that is a subchapter C corporation for federal income tax purposes and that owns or leases and is operating a facility in a nonurban enterprise zone that is

exempt from ad valorem property taxes under section 38 (1), chapter 835, Oregon Laws 1997, is entitled to tax credits for each tax year that are equal to 62.5 percent of the taxpayer's payroll and employee benefit costs, including but not limited to workers' compensation insurance and payroll taxes, of the facility for a period of at least 5 but not more than 15 consecutive tax years, as set forth and approved in writing by the Governor.

(2) The 5- to 15-year period referred to in subsection (1) of this section may begin in any tax year designated by the taxpayer in writing to the Department of Revenue, but shall not begin later than the third calendar year after the year in which the taxpayer begins operation of the facility. The entitlement of the taxpayer to the tax credits allowed under this section is not jeopardized solely because the 5- to 15-year period extends beyond the conclusion of the exemption period under section 38 (4), chapter 835, Oregon Laws 1997, if the requirements of section 37 (8), chapter 835, Oregon Laws 1997, continue to be satisfied.

(3) The tax credits authorized by this section may be used in each year during the 5- to 15-year period referred to in subsection (1) of this section to offset any corporate excise taxes, corporate income taxes, gross receipts taxes, sales and use taxes, except vehicle and vehicular fuel taxes, or any other similar taxes levied or imposed by the State of Oregon relating to the facility.

(4) Unless the facility is disqualified under section 39, chapter 835, Oregon Laws 1997, any tax credits allowable under this section during the 5- to 15-year period referred to in subsection (1) of this section that are not used by the taxpayer in a particular tax year during such 5- to 15-year period may be carried forward and used by the taxpayer for a period of five years after the end of the 5- to 15-year period referred to in subsection (1) of this section.

(5) Notwithstanding subsections (3) and (4) of this section:

(a) Tax credits allowable under this section may not be used to offset the first $1 million, or a lesser amount that is allowed under section 15 (4) of this 1999 Act, of corporate excise or income taxes paid by the corporation to this state in any taxable year. The first $1 million paid or any lesser amount that is allowed and paid includes taxes generally attributable to operations of the taxpayer throughout this state.

(b) The Department of Revenue shall distribute annually 30 percent of the taxpayer's annual tax payment of corporate or income taxes to the enterprise zone sponsor and other taxing districts, beginning in the first year for which a tax credit allowable under this section is claimed, and continuing either until the end of the period of five years under subsection (4) of this section, or until no unused tax credit is claimed in a year during that period.

(c) Following distribution to the enterprise zone sponsor and other taxing districts of 30 percent of the first $1 million or any lesser amount that is allowed of corporate income or excise taxes paid, further distribution under paragraph (b) of this subsection shall be limited to 30 percent of the corporation's annual payment of income or excise taxes relating to the facility, if any, that remain following exhaustion of any tax credit allowable and claimed under this section.

(d) The 30 percent of annual tax payment to be distributed under this subsection shall not be considered a part of the budget of the General Fund and shall be held separate and apart from the general tax collections of this state in a suspense account established under ORS 293.445 pending the actual distribution to the zone sponsor and other taxing districts.

(e) For purposes of this subsection, tax credits, other than those allowable under this section:

(A) Are not considered payments; and

(B) May not be used to offset the first $1 million or any lesser amount that is allowed of the corporation's income or excise taxes paid, or any such taxes paid relating to the facility, in any taxable year in which tax credits allowable under this section are claimed.

(6) Notwithstanding subsections (1) to (5) of this section, a taxing unit shall not levy or impose any taxes described in subsection (3) of this section on or with respect to a facility of the taxpayer, or the production therefrom, until the taxable year after the tax year in which the taxpayer's facility is placed into service.

(7) The tax credits allowed under this section are not in lieu of any deductions for depreciation or amortization, for payment of wages or other employee costs or for any other costs or expenses to which the corporation is entitled.

(8) The tax credits allowed under this section may not be transferred to another taxpayer.

(9)(a) For the purposes of calculating corporate income or excise taxes for the tax credits allowed under this section, “income or excise taxes relating to the facility” means income or excise taxes directly attributable to the qualifying facility and its operations at the facility site without regard to the existence of other operations or facilities of the taxpayer, whether within or outside this state.

(b) If the qualifying facility is the only property or operation of the taxpayer within this state, all Oregon income or excise taxes of the taxpayer are income or excise taxes relating to the facility.

(c) If the taxpayer maintains other Oregon property or operations in addition to the qualifying facility, income or

excise taxes relating to the facility are determined by multiplying the total Oregon income or excise taxes by a fraction, the numerator of which is the income of the facility, as determined in accordance with generally accepted accounting principles and reviewed by an independent public accountant in accordance with Statements on Standards for Accounting and Review Services issued by the American Institute of Certified Public Accountants, and the denominator of which is the total Oregon income, as determined in accordance with generally accepted accounting principles and reviewed by an independent public accountant in accordance with Statements on Standards for Accounting and Review Services issued by the American Institute of Certified Public Accountants. If no such data are prepared in accordance with generally accepted accounting principles and reviewed by an independent public accountant in accordance with Statements on Standards for Accounting and Review Services issued by the American Institute of Certified Public Accountants, income or excise taxes are apportioned to the qualifying facility by multiplying the total Oregon income or excise taxes by a fraction, the numerator of which is the sum of the intrastate payroll factor plus the intrastate property factor and the denominator of which is two.

(d) The intrastate payroll factor is a fraction, the numerator of which is the total amount paid for compensation at the qualifying facility during the tax period and the denominator of which is the total amount of compensation paid in Oregon during the tax period.

(e) The intrastate property factor is a fraction, the numerator of which is the average net book value of the real and tangible personal property owned or rented and located at the qualifying facility during the tax period and the denominator of which is the average net book value of the real and tangible personal property owned or rented by the taxpayer in Oregon during the tax period. The average net book value of real and tangible personal property shall be determined using generally accepted accounting principles.

(10)(a) The annual distribution to the enterprise zone sponsor and other taxing districts under subsection (5) of this section of 30 percent of corporate income or excise taxes paid by the corporation to this state shall be distributed by the Department of Revenue to each county treasurer in a single payment for each facility.

(b) If the facility is situated in more than one code area, the county treasurer shall allocate payments to each code area based on the ratio of the real market value of the facility in each code area over the total real market value of the facility in all of the code areas.

(c) The county treasurer shall distribute the moneys allocated to each code area to the taxing districts located within the code area based on the ratio of the operating tax billing rate that each taxing district bears to the total operating tax billing rate of the taxing districts located in the code area as calculated on the most recent tax roll certified under ORS 311.105. However, the distribution to any taxing district under this paragraph may not exceed the amount of property taxes that the district had forgone in the current ad valorem tax year as a result of an exemption on the facility under section 38 (1), chapter 835, Oregon Laws 1997.

(d) If the distribution to taxing districts under paragraph (c) of this subsection is less than the total amount distributed by the Department of Revenue in the current year under paragraph (a) of this subsection, the remainder shall be distributed by the county treasurer to the zone sponsor.

(e) The county treasurer shall distribute moneys under this subsection to taxing districts in a separate distribution within 90 days of receipt or completion of the applicable assessment and tax roll under section 37 (10), chapter 835, Oregon Laws 1997, whichever occurs later.

(f) For purposes of this subsection, a school district, an education service district or a community college district shall not be considered a taxing district. [1997 c.835 s.40; 1999 c.1104 s.14]

Sec. 42. Sections 36, 37, 38, 39 and 40 of this Act are repealed on December 31, 2002. [1997 c.835 s.42]

Sec. 43. Notwithstanding section 42 of this Act, any taxpayer that qualifies for the tax exemptions and tax credits provided for in sections 36 to 40 of this Act prior to December 31, 2002, may continue to receive and use the tax exemptions and tax credits allowed under sections 36 to 40 of this Act after that date as if sections 36 to 40 of this Act had not been repealed. [1997 c.835 s.43]

Sec. 44. (1) Notwithstanding ORS 285B.698 (3) and (5)(c) and 285B.722 (1), if a business firm does not qualify under ORS 285B.704 for a property tax exemption on qualified property solely because the business firm failed to file the application for exemption prior to April 1 of the assessment year for which the exemption is first sought, the business firm may submit an application for tax exemption for the qualified property to the county assessor on or before December 31 of the same assessment year. If the business firm meets the applicable requirements of ORS 285B.698, 285B.701, 285B.704, 285B.707, 285B.710, 285B.713, 285B.716, 285B.719, 285B.722 and 285B.728:

(a) The business firm shall qualify for the remainder of the exemption period that was otherwise available under ORS 285B.698 or 285B.710; and

(b) The county assessor shall take action under ORS 285B.722 (4) that is necessary to allow the qualified property to be exempted from property taxation for the remaining tax years that were otherwise available for exemption under ORS 285B.698 or 285B.710 after the first tax year, regardless of the prior entry of the qualified property on the county assessment roll.

(2) Nothing in this section exempts from ad valorem taxation:

(a) The qualified property in tax years other than those specified in subsection (1)(b) of this section;

(b) Any property that does not meet the requirements of subsection (1) of this section; or

(c) Any qualified property that was in use or occupancy within the enterprise zone for more than 12 months by December 31 preceding the assessment year in which the application for exemption is submitted under subsection (1) of this section.

(3) If the qualified property is leased by the business firm, the owner of the qualified property leased by the business firm shall also join in the application submitted under subsection (1) of this section.

(4) An application may be submitted under subsection (1) of this section regardless of there being grounds for hardship as required for late filing under ORS 307.475. [1997 c.835 s.44; 1999 c.1104 s.19]

Note: Sections 15 to 18, 20, 23, 26 and 27, chapter 1104, Oregon Laws 1999, provide:

Sec. 20. Section 44, chapter 835, Oregon Laws 1997, operates in lieu of section 34, chapter 835, Oregon Laws 1997, for assessment years beginning on or after January 1, 1998. [1999 c.1104 s.20]

Sec. 26. Section 44, chapter 835, Oregon Laws 1997, is repealed on June 30, 2009. [1999 c.1104 s.26]

Sec. 15. (1) Notwithstanding section 37 (8)(b), chapter 835, Oregon Laws 1997, or subsection (2)(b) of this section, the facility of a certified business firm that otherwise meets the requirements of sections 36 to 40, chapter 835, Oregon Laws 1997, shall receive the exemption under section 38 (1), chapter 835, Oregon Laws 1997, if:

(a) The business firm hires or will hire at least 10 full-time employees at the facility by the end of the third calendar year following the year in which the facility is placed in service, and at the time that the business firm is certified, the location of the facility is in a county with a currently estimated population of 10,000 or less; or

(b) The business firm hires or will hire at least 35 full-time employees at the facility by the end of the third calendar year following the year in which the facility is placed in service, and at the time that the business firm is certified, the location of the facility is in a county with a currently estimated population of 40,000 or less.

(2) Notwithstanding section 37 (8)(a) or (b), chapter 835, Oregon Laws 1997, the facility of a certified business firm that otherwise meets the requirements of sections 36 to 40, chapter 835, Oregon Laws 1997, shall receive the exemption under section 38 (1), chapter 835, Oregon Laws 1997, if:

(a) By the end of the calendar year in which the facility is placed in service, the total costs of improvements and property at the facility are or will be equal to more than one-half of one percent of the value of all nonexempt taxable property in the county in which the facility is located, as reported by the Department of Revenue as net real market value at the time that the business firm is certified and rounded to the nearest $10 million of such value;

(b) The business firm hires or will hire at least 50 full-time employees at the facility by the end of the third calendar year following the year in which the facility is placed in service; and

(c) At the time that the business firm is certified, the location of the facility is 10 or more miles from Interstate Highway 5, as measured between the two closest points between the facility site and anywhere along that interstate highway.

(3) Unless the decrease in the number of employees is caused by circumstances beyond the control of the business firm, including force majeure, or is due to a temporary adverse business cycle, after the number of employees required by subsection (1)(a) or (b) or (2)(b) of this section are hired, the number of employees at the facility shall not fall below the required level, for purposes of section 39, chapter 835, Oregon Laws 1997.

(4) A taxpayer that is a subchapter C corporation for federal income tax purposes and that owns or leases and is operating a facility in a nonurban enterprise zone that is exempt from ad valorem taxation under section 38 (1), chapter 835, Oregon Laws 1997, pursuant to subsection (1), (2) or (3) of this section, is entitled to the tax credits in accordance with the provisions of section 40, chapter 835, Oregon Laws 1997, except that for purposes of section 40 (5), chapter 835, Oregon Laws 1997, the minimum of corporate excise or income taxes paid by the corporation to this

state that may not be offset by the tax credits shall be the lesser of the first $1 million or one of the following products, whichever is applicable:

(a) $10,000 multiplied by the number of full-time employees hired at the facility as initially verified by the business firm or by the number of such employees as subsequently verified, if necessary, for purposes of subsection (3) of this section, for a facility receiving the exemption as provided under subsection (1)(a) of this section;

(b) $12,500 multiplied by the number of full-time employees hired at the facility as initially verified by the business firm or by the number of such employees as subsequently verified, if necessary, for purposes of subsection (3) of this section, for a facility receiving the exemption as provided under subsection (1)(b) of this section; or

(c) $15,000 multiplied by the number of full-time employees hired at the facility as initially verified by the business firm or by the number of such employees as subsequently verified, if necessary, for purposes of subsection (3) of this section, for a facility receiving the exemption as provided under subsection (2) of this section.

(5) For purposes of subsection (4) of this section, the business firm may not begin to use the tax credits in accordance with section 40 (2), chapter 835, Oregon Laws 1997, until the firm has initially verified the number of employees hired at the facility to the satisfaction of the county assessor and the Department of Revenue, and any change in the relevant product shall apply to each tax year beginning after the subsequent verification. [1999 c.1104 s.15]

Sec. 16. Section 15 of this 1999 Act is applicable to any business firm certified under section 37, chapter 835, Oregon Laws 1997, after the effective date of this 1999 Act [October 23, 1999]. A business firm or facility that satisfies the applicable requirements of section 15 of this 1999 Act shall be considered to have satisfied the corresponding requirements of section 37 (8), chapter 835, Oregon Laws 1997, as modified under section 15 (1), (2) or (3) of this 1999 Act. [1999 c.1104 s.16]

Sec. 17. (1) Notwithstanding section 37 (8)(a) and (b), chapter 835, Oregon Laws 1997, the facility of a certified business firm that otherwise meets the requirements of sections 36 to 40, chapter 835, Oregon Laws 1997, shall receive the exemption under section 38 (1), chapter 835, Oregon Laws 1997, if:

(a) Within three years either before or after the ad valorem tax year in which the facility is placed in service, the business firm places one or more other facilities in the same or another enterprise zone for which the business firm is certified and otherwise meets the requirements of sections 36 to 40, chapter 835, Oregon Laws 1997;

(b) The total cost of improvements and property at all such facilities are or will be more than $50 million by the end of the calendar year in which the last such facility is placed in service;

(c) The requirement of section 37 (8)(c), chapter 835, Oregon Laws 1997, is satisfied independently by each facility; and

(d) The business firm hires or will hire at least 100 full-time employees at all such facilities by the end of the fifth calendar year following the year in which the first such facility is placed in service. After 100 or more full-time employees are hired as required under this paragraph, the number of employees shall not fall below 100 unless the decrease in the number of employees is caused by circumstances beyond the control of the business firm, including force majeure, or is due to a temporary adverse business cycle.

(2) A taxpayer that is a subchapter C corporation for federal income tax purposes and that owns or leases and operates in a nonurban enterprise zone any facility that is exempt from ad valorem taxation under subsection (1) of this section is entitled to the tax credits under section 40, chapter 835, Oregon Laws 1997, insofar as the Governor's approval specifies the facility and the time period for which the tax credits apply. The tax credit for each tax year for each specified facility:

(a) Shall be calculated based on the taxpayer's total annual payroll and employee benefit costs at that facility; and

(b) May be used to offset only those taxes, as described in section 40 (3), chapter 835, Oregon Laws 1997, relating to that facility, consistent with section 40 (9), chapter 835, Oregon Laws 1997.

(3) If a taxpayer claims or may claim tax credits allowable under section 40, chapter 835, Oregon Laws 1997, for two or more facilities located in more than one nonurban enterprise zone, then the annual distribution to the enterprise zone sponsors and other taxing districts of 30 percent of the first $1 million of corporate income or excise taxes paid by the corporation to this state, under section 40 (5), chapter 835, Oregon Laws 1997, shall be distributed to each zone sponsor and other taxing districts in proportion to the relative size of the intrastate property factor among the facilities for that year under section 40 (9)(e), chapter 835, Oregon Laws 1997. [1999 c.1104 s.17]

Sec. 18. Section 17 of this 1999 Act applies to any business firm certified under section 37, chapter 835, Oregon

Laws 1997, during or after the 1999 assessment year. [1999 c.1104 s.18]

Sec. 27. Section 17 of this 1999 Act is repealed on December 31, 2002. [1999 c.1104 s.27]

Sec. 23. (1) Nothing in the amendments to sections 36, 37, 38, 39 and 40, chapter 835, Oregon Laws 1997, by sections 10, 11, 12, 13 and 14 of this 1999 Act affects the provisions of sections 42 and 43, chapter 835, Oregon Laws 1997.

(2) The amendments to sections 36, 37, 38, 39 and 40, chapter 835, Oregon Laws 1997, by sections 10, 11, 12, 13 and 14 of this 1999 Act apply to any tax exemptions or tax credits under sections 36 to 40, chapter 835, Oregon Laws 1997, except that the normal period for the exemption from ad valorem taxation under section 38 (1), chapter 835, Oregon Laws 1997, or for the tax credits allowed under section 40, chapter 835, Oregon Laws 1997, shall not be less than 15 years for a taxpayer that applied for certification under section 37 (1), chapter 835, Oregon Laws 1997, prior to the effective date of this 1999 Act [October 23, 1999]. [1999 c.1104 s.23]

285B.692 Duties of Department of Revenue. In addition to any other powers granted by law, for the purposes of ORS 285B.692 to 285B.728, the Department of Revenue shall:

(1) Adopt any rules the Department of Revenue considers necessary to implement ORS 285B.692, 285B.695, 285B.698, 285B.713, 285B.719, 285B.722, 285B.725 and 285B.728.

(2) Assist the Economic and Community Development Department, county assessors and the sponsors of enterprise zones in their efforts to precertify or qualify eligible business firms.

(3) Assist an eligible business firm doing business within an enterprise zone to obtain the benefits of applicable tax incentive or inducement programs administered or supervised by the Department of Revenue.

(4) Issue and print forms and worksheets to be used by eligible business firms applying for precertification or by precertified business firms applying for a property tax exemption under ORS 285B.719 or 285B.722.

(5) Submit a written report to the Economic and Community Development Department on or before January 15 in each year. The report shall include the number of jobs created and the value of investments in qualified property made by qualified business firms in the current tax year, and other information considered necessary by the Department of Revenue or required by the Economic and Community Development Department. [Formerly 285.593]

Note: See note under 285B.650.

285B.695 Duties of county assessor. The assessor of a county within which an enterprise zone is located shall:

(1) Assist the local zone manager and eligible or precertified business firms in determining whether property will qualify for a property tax exemption under ORS 285B.698 and 285B.713.

(2) Review and approve or deny applications from eligible business firms for precertification under ORS 285B.719.

(3) Process applications from precertified business firms for property tax exemptions under ORS 285B.722.

(4) Take action necessary under ORS 285B.728 if a business firm or property is no longer qualified for the property tax exemption.

(5) Submit a written report to the Department of Revenue on or before December 1 in each year. The report shall include the number of jobs created and the value of investments in qualified property made by qualified business firms in the current tax year, and other information considered necessary by the assessor or required by the Department of Revenue. The assessor shall provide copies of the report to the sponsors of enterprise zones located within the county and as directed by the Department of Revenue. [Formerly 285.595]

Note: See note under 285B.650.

285B.698 Property tax exemption. (1) Upon compliance with ORS 285B.722, qualified property of a qualified business firm shall be exempt from ad valorem property taxation, if:

(a) The qualified property was constructed, added to, modified or installed in furtherance of the production of income;

(b) The property or portion of the property for which exemption is sought was in use or occupancy no later than April 1 of the assessment year for which exemption is sought;

(c) The total cost of all of the qualified property for which application for exemption is made was at least $25,000;

and

(d) The property satisfies the requirements of ORS 285B.713.

(2) The exemption allowed under this section shall be allowed only for property that is owned or leased by a qualified business firm that satisfies the requirements of ORS 285B.704. If the property is leased by a qualified business firm, the qualified business firm must be required by the terms of the lease to pay or compensate the owner for the entire amount of property taxes assessed against the leased property during the lease term.

(3)(a) The exemption allowed under this section shall first apply to the assessment year immediately following completion of the construction, addition, modification or installation of the property. The exemption shall continue for the two succeeding assessment years if the property continues to be owned or leased by the qualified business firm and located in the enterprise zone.

(b) If qualified property of a qualified business firm is sold or leased to an eligible business firm in the enterprise zone during the period of abatement, the purchasing or leasing firm is eligible to continue the exemption of the selling or leasing firm for the balance of the abatement period, but only if any effects on employment within the zone that result from the sale or lease do not constitute substantial curtailment under ORS 285B.728 (3).

(4) The exemption allowed under this section shall be 100 percent of the assessed value of the qualified property in each of the tax years for which the exemption is available. If the qualified property is an addition to or modification of an existing building or structure, the exemption shall be measured by the increase in value, if any, attributable to the addition or modification.

(5)(a) No exemption shall be granted for property assessed for property tax purposes in the county in which the zone is located on or before the effective date of the:

(A) Designation of the zone; or

(B) Approval of a boundary change for the zone if the property is located in an area added to the zone.

(b) No exemption shall be granted for property constructed, added to, modified or installed in the zone or in the process of construction, addition, modification or installation in the zone on or before the effective date of the:

(A) Designation of the zone; or

(B) Approval of a boundary change for the zone if the property is located in an area added to the zone.

(c) No exemption shall be granted for any qualified property that was in use or occupancy within the zone for more than 12 months by December 31 preceding the first assessment year for which an application for exemption is made.

(d) No exemption shall be granted for any qualified property unless the property was in use or occupancy in the assessment year immediately following completion of construction, addition, modification or installation.

(e) Except as provided in ORS 285B.719 (6), no exemption shall be granted for qualified property constructed, modified or installed after termination of an enterprise zone.

(6) A qualified business firm may apply for a tax exemption for additional qualified property initially occupied or used during or after the first year in which a tax exemption for the firm's initial investment in qualified property was approved if the firm meets the applicable requirements of this section and ORS 285B.701, 285B.704, 285B.707, 285B.710, 285B.713, 285B.716, 285B.719 and 285B.722. [Formerly 285.597]

Note: See note under 285B.650.

285B.701 Exemption allowed for property constructed or modified for lease or sale to precertified business firm. (1) The Legislative Assembly finds that the standard procedure for precertification in an enterprise zone inappropriately deters development or redevelopment of qualified buildings on speculation for subsequent sale or lease to eligible business firms.

(2) Notwithstanding ORS 285B.719 (1), a new building or structure or an addition to or modification of an existing building or structure may qualify for the exemption allowed under ORS 285B.698 or 285B.710 if the qualified property is leased or sold by an unrelated party to one or more precertified business firms after commencement of the construction, addition or modification but prior to use or occupancy of the qualified property.

(3) For purposes of ORS 285B.722, a business firm shall not be considered precertified and is not qualified for the exemption allowed under ORS 285B.698 or 285B.710 if the county assessor discovers prior to initially granting the exemption that the application for precertification was not submitted by the business firm in a timely manner in accordance with ORS 285B.719 (1), except as allowed under subsection (2) of this section or ORS 285B.719 (8).

(4) Records, communications or information submitted to a public body by a business firm for purposes of ORS 285B.650 to 285B.728 that identify a particular qualified property, that reveal investment plans prior to precertification, that are described in ORS 192.502 (16) or that are submitted under ORS 285B.728 are exempt from

disclosure under ORS 192.410 to 192.505 and, as appropriate, shall be shared among the county assessor, the zone sponsor, the Department of Revenue and the Economic and Community Development Department. [Formerly 285.598; 1999 c.1104 s.3]

Note: See note under 285B.650.

285B.704 Qualifications for exemption. (1) A business firm is qualified to receive a property tax exemption under ORS 285B.698 for its qualified property only if:

(a) The firm is an eligible business firm described in ORS 285B.707;

(b) The firm has business operations located inside the enterprise zone;

(c) The firm owns or leases qualified property located inside the enterprise zone;

(d) The employment of the firm, no later than April 1 following the assessment year in which the investment in qualified property was completed, is not less than 110 percent of the average annual employment of the firm, calculated over the 12 months preceding the date of application for precertification;

(e) The firm hired at least one new employee to work within the enterprise zone, under paragraph (d) of this subsection, after precertification and no later than April 1 following the assessment year in which the investment in qualified property was completed;

(f) The firm satisfies the hiring requirements of ORS 285B.710 (1);

(g) The firm did not diminish employment outside the enterprise zone under subsection (4) of this section;

(h) The firm did not substantially curtail employment within the enterprise zone as described in ORS 285B.728;

(i) The firm complies in all material respects with local, Oregon and federal laws applicable to the firm's operations inside the enterprise zone since the application for precertification and throughout the period of exemption, as prescribed by rule; and

(j) The firm complies with all additional conditions for precertification imposed by an enterprise zone sponsor under ORS 285B.671 (4).

(2)(a) Notwithstanding subsection (1)(d), (e) or (h) of this section, an eligible business firm is a qualified business firm if it completes an investment of $25 million or more in qualified property, on or before December 31 preceding the first assessment year for which the exemption is being sought, with less than a 10 percent increase in employment of the firm but without loss of employment of the firm.

(b) Approval to extend the property tax benefit to the eligible business firm under this subsection shall be documented by resolution of the governing body of the sponsor. The resolution shall specify the minimum percentage increase in employment that the eligible business firm must maintain to be a qualified business firm throughout the exemption period. The resolution may include other conditions for the firm to be a qualified business firm. At the request of the eligible business firm, the sponsor may modify the resolution prior to the initial filing by the firm for the property tax exemption. A copy of the resolution shall be attached to the final applications for precertification and for the property tax exemption.

(3)(a) Notwithstanding subsection (1)(d), (e) or (h) of this section, with the approval of the sponsor of the enterprise zone, an eligible business firm is a qualified business firm if it completes an investment of $25 million or more in qualified property, on or before December 31 preceding the first assessment year for which the exemption is being sought, with a loss of employment of the firm.

(b) Approval to extend the property tax benefit to the eligible business firm under this subsection shall be documented by resolution of the governing body of the sponsor. The resolution shall specify the minimum number of employees that the firm must retain for the eligible business firm to be a qualified business firm throughout the exemption period. The resolution may include other conditions for the firm to be a qualified business firm. At the request of the eligible business firm, the sponsor may modify the resolution prior to the firm's initial filing for the property tax exemption. A copy of the resolution shall be attached to the firm's applications for precertification and for the property tax exemption.

(4) Notwithstanding subsections (1) to (3) of this section, a business firm is not qualified to receive a property tax exemption if the firm or any other firm under common control closes or permanently curtails operations in another part of the state more than 30 miles from the nearest boundary of the enterprise zone in which the firm seeks a property tax exemption. This subsection applies to the transfer of any of the business firm's operations to an enterprise zone from another part of the state, if the closure or permanent curtailment in the other part of the state diminished employment in the county and more local labor markets after precertification and before the initial application for the exemption.

(5) An eligible business firm that moves any of its employees from a site or sites within 30 miles from the nearest

boundary of the enterprise zone after precertification and before the initial application for the exemption may qualify to receive a property tax exemption only if the employment of the firm has been increased within the zone and at the site or sites from which the employees were transferred, no later than April 1 following the assessment year in which the investment in qualified property was completed, to not less than 110 percent of the average annual employment of the firm within the zone and the site or sites from which the employees were transferred, calculated over the 12 months preceding the date of application for precertification.

(6) As used in this section and except as provided in subsection (5) of this section, "employment of the firm" means the number of employees working for the firm a majority of their time in eligible operations at locations within the enterprise zone. [Formerly 285.600; 1999 c.1104 s.3a]

Note: See note under 285B.650.

285B.705 Effect on exemption of noncompliance with applicable laws; determination of noncompliance; rules. For purposes of ORS 285B.704 (1)(i), the Economic and Community Development Department shall adopt rules that, notwithstanding ORS 311.205, define the effect of noncompliance on an eligible business firm's continuing exemption in an enterprise zone and that indicate what is necessary to establish such noncompliance in terms of the materiality of the relevant violation, the finality of applicable legal or regulatory proceedings and judgments involving the firm, the failure by the firm to perform or submit to remedial or curative actions and similar factors. [1999 c.1104 s.4b]

Note: 285B.705 was enacted into law by the Legislative Assembly but was not added to or made a part of ORS chapter 285B or any series therein by legislative action. See Preface to Oregon Revised Statutes for further explanation.

285B.707 Eligibility. (1) Except as provided in subsections (3) and (4) of this section, to be an eligible business firm, a business firm must be engaged in the business of providing goods, products or services to other businesses, and not to the general public for personal or household use or consumption, through activities including, but not limited to, manufacturing, assembly, fabrication, processing, shipping or storage.

(2) Businesses significantly engaged in business activities within the enterprise zone such as retail sales or services, child care, housing, retail food service, health care, tourism, entertainment, financial services, professional services, leasing space to others, property management, construction or other similar activities are not eligible business firms.

(3) Notwithstanding subsection (1) or (2) of this section, a business firm that operates a hotel, motel or destination resort is an eligible business firm regardless of the sale of services for personal consumption, if allowed in the enterprise zone under ORS 285B.716.

(4) Notwithstanding any other provision of this section, if a business firm described in subsection (2) of this section engages in an activity described in subsection (1) of this section, the business firm is an eligible business firm if the activity is performed at a location that is separate from the activity of the firm that is described in subsection (2) of this section. For purposes of determining whether a business firm described in this subsection satisfies the requirements of ORS 285B.704, only the operations of the firm that are described in subsection (1) of this section and employees working a majority of their time in those operations shall be considered.

(5) Two or more business firms that otherwise meet the requirements of this section may elect to be treated as one eligible business firm if 100 percent of the equity interest in the business firms is owned by the same person or persons, or if one of the business firms owns 100 percent of the equity interest of the other or others.

(6) Notwithstanding subsection (1) or (2) of this section, a business firm engaged in the activity of providing a retail or financial service is an eligible business firm if:

(a) The activity serves customers by responding to orders or requests received only by telephone, computer, the Internet or similar means of telecommunications; and

(b) Not less than 90 percent of the customers or orders are located and originate in an area from which long distance telephone charges, in the absence of a toll-free number, would apply if the order were placed by telephone.

(7) Notwithstanding subsection (1) or (2) of this section, a business firm that makes an investment in qualified property at a facility that serves statewide, regional, national or global operations of the firm through administrative, design, financial, management, marketing or other activities is an eligible business firm, without regard to the relationship of such activities to any otherwise eligible activities within the enterprise zone if:

(a) In approving the application for precertification, the zone sponsor includes with the application a formal finding

that the facility complies with the requirements of this subsection and that the size of the proposed investment, the employment at the facility or the nature of the activities at the facility will significantly enhance the local economy, in relation to the overall purpose and employment of the zone;

(b) The actual investment and facility of the firm are consistent with the descriptions presented in the precertification application; and

(c) For purposes of ORS 285B.704, all employees at the facility constitute employment of the firm, as defined in ORS 285B.704. [Formerly 285.603; 1999 c.1104 s.5]

Note: See note under 285B.650.

285B.710 First-source hiring agreement; hiring requirements in urban zones; extended period of tax abatement. (1) A precertified business firm shall enter into a first-source hiring agreement with a publicly funded job training provider for the period of property tax exemption.

(2) If a qualified business firm is located in an urban enterprise zone inside a metropolitan statistical area with fewer than 400,000 residents, all new employees hired by the firm must meet all additional conditions imposed under ORS 285B.671 (4).

(3) Notwithstanding ORS 285B.698 (3)(a), if a firm is located in an urban enterprise zone situated inside a metropolitan statistical area of less than 400,000 residents, the sponsor may set a period of abatement of up to five consecutive assessment years if the qualified business firm agrees with the sponsor, in writing, at the time of precertification:

(a) To annually compensate all new employees hired by the firm at an average rate of not less than 150 percent of the county's average annual wage until the end of the tax exemption period. If the zone is in more than one county, the county with the highest average annual wage shall be used; and

(b) To meet any additional requirements that the zone sponsor may reasonably request.

(4) Notwithstanding ORS 285B.698 (3)(a), if an urban enterprise zone is located inside a metropolitan statistical area with more than 400,000 residents, the sponsor may set a longer period of abatement that does not exceed five consecutive assessment years if the qualified business firm agrees with the sponsor, in writing at the time of precertification, to meet any additional requirements that the zone sponsor may reasonably request.

(5) If a firm is located in an urban enterprise zone situated inside a metropolitan statistical area of more than 400,000 residents, all new employees hired by the firm must meet all additional conditions imposed under ORS 285B.671 (4).

(6) Notwithstanding ORS 285B.698 (3)(a), if a firm is located in a nonurban enterprise zone, the sponsor may set a period of abatement up to five consecutive assessment years if the qualified business firm agrees with the sponsor, in writing, at the time of precertification:

(a) To annually compensate all new employees hired by the firm at an average rate of not less than 150 percent of the county's average annual wage until the end of the tax exemption period. If the zone is in more than one county, the county with the highest average annual wage shall be used; and

(b) To meet any additional requirements which the zone sponsor may reasonably request.

(7) As used in this section, “new employees hired by the firm” includes only those employees engaged for a majority of their time in eligible operations. The term does not include individuals employed in a job or position that:

(a) Is filled for the first time after June 30 of the first tax year of the exemption;

(b) Existed prior to the submission of the relevant application for precertification; or

(c) Is performed primarily at locations outside the enterprise zone. [Formerly 285.605]

Note: See note under 285B.650.

285B.713 Qualified property. (1) The property tax exemption provided under ORS 285B.698 shall be available only for qualified property of a qualified business firm.

(2) The following kinds of property are qualified for the exemption allowed under ORS 285B.698:

(a) A new building or structure with a cost of $25,000 or more.

(b) An addition to or modification of an existing building or structure. The total cost of qualifying additions or modifications to an existing building or structure shall be at least $25,000 in one assessment year. In order to satisfy the minimum investment requirement, the cost of two or more additions or modifications made in one assessment year to a single building or structure may be aggregated.

(c) Any real property machinery or equipment, whether new, used or reconditioned, that is newly purchased, leased or transferred into the enterprise zone from outside the county within which the zone is located and installed in property owned or leased by a qualified business firm.

(d) Any single item of personal property machinery or equipment, whether new, used or reconditioned, that is newly purchased, leased or transferred into the enterprise zone from outside the county within which the zone is located and installed in property owned or leased by a qualified business firm and:

(A) That has a cost of at least $1,000 if the property is used exclusively for producing tangible goods; or

(B) That has a cost of at least $50,000.

(e) A new building and associated structures owned by a governmental body that are leased to one or more qualified business firms.

(f) Any property otherwise described in this section that is owned or leased and operated by a business firm operating a hotel, motel or destination resort, to the extent that the property is located on the same site as the hotel, motel or destination resort and is used primarily to serve overnight guests of the hotel, motel or destination resort. For purposes of this paragraph, property is primarily used to serve guests if at least 50 percent of any receipts from such use are paid by guests.

(g) Any property otherwise described in this section that is owned or leased and operated by a business firm described in ORS 285B.707 (4), to the extent that the property is used exclusively in an activity described in ORS 285B.707 (1).

(3) The following property is not qualified for exemption under ORS 285B.698:

(a) Land.

(b) Self-propelled motorized vehicles.

(c) Property excluded under ORS 285B.698 (5). [Formerly 285.607]

Note: See note under 285B.650.

285B.716 When exemption available to hotel, motel or destination resort property. (1) Qualified property owned or leased and operated by a business firm as a hotel, motel or destination resort, including property described in ORS 285B.713 (2)(f), may not receive an exemption under ORS 285B.722, unless:

(a) The business firm that operates the hotel, motel or destination resort is precertified by the sponsor on or before June 30, 1996, under ORS 285B.719 and the sponsor notified the Department of Revenue on or before December 1, 1989, of the sponsor's desire to exempt hotel, motel and destination resort property;

(b) The business firm that operates the hotel, motel or destination resort is precertified by the sponsor after June 30, 1996, under ORS 285B.719, and the sponsor notifies the Economic and Community Development Department and the Department of Revenue in writing on or before June 1, 1996, of the sponsor's desire to exempt hotel, motel and destination resort property; or

(c) The business firm that operates the hotel, motel or destination resort is precertified under ORS 285B.719 not less than 30 days after notification to the Economic and Community Development Department and the Department of Revenue of the desire of the sponsor to exempt hotel, motel and destination resort property, as documented by a resolution adopted by the governing body of the sponsor not later than December 31, 1997.

(2) Only if a zone sponsor exercises its option pursuant to the notification procedures set forth in subsection (1) of this section or ORS 285B.656 (9) to exempt qualified hotel, motel and destination resort property located within the zone may such property of applicable precertified business firms be eligible for an exemption under ORS 285B.722 within that zone.

(3) For purposes of subsection (1)(a) of this section, notifications to the Department of Revenue on or before December 1, 1989, that exercise a sponsor's option of exempting hotel, motel or destination resort property are void on and after September 15, 1997. [Formerly 285.610]

Note: See note under 285B.650.

285B.719 Precertification for exemption. (1) Any eligible business firm proposing to apply for the tax exemption provided under ORS 285B.698 shall, before the commencement of construction, modification or installation of qualified property in an enterprise zone, and before the hiring of eligible employees, apply for precertification with the sponsor of the zone and with the county assessor of the county or counties in which the zone is located. The application shall be made on a form prescribed by the Department of Revenue and the Economic and Community

Development Department.

(2) The application shall contain the following information:

(a) A description of the nature of the firm's business operations in the enterprise zone;

(b) A description and estimated cost or value of the qualified property to be constructed, modified or installed in the enterprise zone;

(c) An estimate of the number of employees that will be hired by the firm;

(d) A commitment to meet all requirements of ORS 285B.704;

(e) A commitment to satisfy all additional conditions for precertification that are imposed by the enterprise zone sponsor under ORS 285B.671 (4); and

(f) Any other information considered necessary by the Department of Revenue and the Economic and Community Development Department.

(3) If the sponsor and county assessor determine that the business firm is eligible under ORS 285B.707 and that the firm has committed to meet the requirements of ORS 285B.704, the sponsor and county assessor shall precertify the business firm by approving the application. The approval of both the sponsor and the county assessor shall be prima facie evidence that the eligible business firm will be qualified for the property tax exemption under ORS 285B.698. Neither the sponsor nor the county assessor shall be liable in any way if the Department of Revenue later determines that a precertified business firm is not qualified for a property tax exemption or if either the county assessor or the Department of Revenue determines that the precertified business firm has not satisfied the requirements of ORS 285B.704. In approving the application, the sponsor and county assessor shall provide proof of approval as directed by the Economic and Community Development Department.

(4) If the sponsor or county assessor fails or refuses to precertify the business firm, the business firm may appeal to the Oregon Tax Court under ORS 305.404 to 305.560. The business firm shall provide copies of the firm's appeal to the sponsor, county assessor, the Department of Revenue and the Economic and Community Development Department.

(5) Notwithstanding the fact that an enterprise zone has terminated under ORS 285B.686 or that a zone boundary has been changed, an eligible business firm that has obtained precertification under this section shall be entitled to a property tax exemption under ORS 285B.698, if, as determined by the Economic and Community Development Department:

(a) The firm's application for precertification has not been withdrawn by the firm or has not expired;

(b) The firm completes construction, modification or installation of the qualified property within a reasonable time and without interruption of construction or installation activity; and

(c) The firm satisfies all other requirements of ORS 285B.704 and the precertification.

(6) If an enterprise zone is terminated under ORS 285B.686, the exemption under ORS 285B.698 shall be granted only if the sponsor and county assessor approve the application for precertification, such that the sponsor, county assessor or both formally granted such approval on or before the effective date of the termination of the zone, and the business firm satisfies subsection (5) of this section. If the sponsor or county assessor refuses or fails to precertify the firm under this subsection, the firm may appeal under subsection (4) of this section and may be granted the exemption.

(7) Precertification under this section shall not ensure that property constructed, modified or installed by the precertified business firm will receive property tax exemption under ORS 285B.698.

(8) Notwithstanding any other provision of this section, if a business firm satisfies the requirements of ORS 285B.704 and has constructed, modified or installed qualified property eligible for exemption under ORS 285B.698, the precertification requirement of subsection (1) of this section or ORS 285B.722 may be waived as specifically provided by rule or for good cause by the Department of Revenue. [Formerly 285.613]

Note: See note under 285B.650.

285B.722 Application for exemption upon completion of construction or modification; effect of exemption. (1) After January 1 and no later than April 1 of the assessment year immediately following completion of construction or modification or the installation of qualified property, a precertified business firm may apply for the exemption allowed under ORS 285B.698. The application shall be made on a form prescribed by the Department of Revenue and shall be filed with the county assessor. If the property for which exemption is sought is leased by the business firm, the application shall be made by both the owner and the lessee of the property.

(2) An application filed under this section shall contain:

(a) A statement that:

(A) The business firm satisfies the requirements of ORS 285B.704 as a qualified business firm; and

(B) The business firm has been precertified by the enterprise zone sponsor and the county assessor.

(b) Any other information required by the Department of Revenue.

(3) The business firm shall be prepared to verify the dates on which its application for precertification was submitted and approved. The statement made pursuant to subsection (2)(a) of this section shall be prima facie evidence that the firm is a qualified business firm.

(4) If the assessor determines the property for which exemption is sought satisfies the requirements of ORS 285B.698, the assessor shall grant the exemption. Thereafter, for each assessment year that the property is exempt from taxation, the assessor shall:

(a) Enter on the assessment roll, as a notation, the assessed value of the property as if it were not exempt under ORS 285B.698.

(b) Enter on the assessment and the tax roll, as a notation, the amount of additional taxes that would be due if the property were not exempt.

(c) Indicate on the assessment and tax roll that the property is exempt and is subject to potential additional taxes as provided in ORS 285B.728, by adding the notation "enterprise zone exemption (potential additional tax)."

(5) If the assessor denies an exemption applied for under this section, the business firm may appeal the denial to the Oregon Tax Court under ORS 305.404 to 305.560.

(6) The assessor shall provide copies of each exemption application filed under this section to the enterprise zone sponsor and as directed by the Department of Revenue.

(7) If an application required by subsection (1) of this section relates to principal or secondary industrial property as defined by ORS 306.126 and is filed with the Department of Revenue within the time required by subsection (1) of this section, the application shall be deemed timely filed with the assessor. [Formerly 285.615]

Note: See note under 285B.650.

285B.723 First-source hiring agreement necessary for exemption; waiver; rules. (1) Except as provided in subsection (3) of this section, the county assessor may not approve an application or grant the exemption under ORS 285B.722 (4) unless a first-source hiring agreement under ORS 285B.710 (1) is in effect and a copy of the agreement is included with the application.

(2) The exemption that a qualified business firm is receiving or has received may not be disqualified retroactively or terminated for failure to meet the requirements of subsection (1) of this section or ORS 285B.710 (1).

(3) In accordance with rules adopted by the Economic and Community Development Department, the Director of the Economic and Community Development Department may waive the requirements of subsection (1) of this section or ORS 285B.710 (1) for a precertified business firm. The rules adopted by the department shall provide for a waiver under this subsection when the director finds that:

(a) The business firm is unable to employ persons referred under the agreement; or

(b) The waiver will further the goals and purposes of applicable state policies. [1999 c.1104 s.2]

Note: See note under 285B.650.

285B.725 Late application for exemption; filing fee. (1) Notwithstanding ORS 285B.722 (1), an application for exemption under ORS 285B.722 may be filed under this section at any time on or before June 1 of the assessment year for which exemption is first sought. However, any application filed after the time for filing specified in ORS 285B.722 (1) must be accompanied by a late filing fee in the greater of the amounts of $200 or one-tenth of one percent of the real market value of the property, determined as of January 1 of the assessment year to which the application pertains, by the assessor for this purpose. If the application is not accompanied by the late filing fee or if the late filing fee is not otherwise paid, no exemption shall be allowed based upon an application filed pursuant to this section.

(2) An application may be filed under this section whether or not there are grounds for hardship as required for late filing under ORS 307.475.

(3) The value of the property used to determine the late filing fee under this section is appealable in the same manner as other acts of the county assessor.

(4) Any filing fee collected under this section shall be deposited to the county general fund. [Formerly 285.616; 1999 c.1104 s.7]

Note: See note under 285B.650.

285B.728 Notice to assessor and sponsor if property or business becomes unqualified for exemption. (1) The county assessor of any county in which an enterprise zone is situated and the sponsor shall be notified in writing by the qualified business firm or by the owner of the qualified property leased by the qualified business firm not later than July 1 following the assessment year for which the exemption is claimed but in which one of the following events occurs:

(a) Property granted exemption from taxation under ORS 285B.722 is sold, exchanged, transported or otherwise disposed of for use outside the enterprise zone or for use by an ineligible business firm;

(b) A qualified business firm closes or substantially curtails the operation of the trade or business in which property granted exemption from taxation under ORS 285B.722 is used, except as allowed by the zone sponsor under ORS 285B.704 (2) or (3);

(c) A qualified business firm fails to meet any of the requirements of ORS 285B.704 (2)(b) or (3)(b);

(d) A qualified business firm fails to meet any of the requirements of ORS 285B.710 (2), (3) or (6);

(e) A qualified business firm fails to meet any of the requirements of ORS 285B.710 (4) or (5); or

(f) A qualified business firm or the applicable activity or operation of the firm fails to meet any of the requirements of ORS 285B.707 or 285B.713 (2)(f) or (g) after it has received a property tax exemption for its qualified property.

(2)(a) When an assessor receives written notice under subsection (1) of this section, the assessor shall disqualify the property for the assessment year following the disqualifying event and 100 percent of the additional taxes calculated under ORS 285B.722 shall be assessed against the property for each year for which the property had been granted exemption.

(b) Notwithstanding paragraph (a) of this subsection, if a qualified business firm fails to meet any of the requirements in ORS 285B.710 (3), (4) or (6) during the exemption, but meets the requirements of ORS 285B.698 during the first three years of the exemption, the qualified business firm is entitled to receive the property tax exemption allowed under ORS 285B.698 (3).

(c) The additional taxes assessed under this subsection shall be reduced by the amount, if any, paid by the qualified business firm to the sponsor under subsection (6) of this section for the same property.

(3) For the purposes of ORS 285B.704 and this section, operation of a business firm shall be considered to be substantially curtailed when:

(a) The number of employees within the enterprise zone is reduced at the end of an assessment year by more than 85 percent from the highest number of such employees at the end of any assessment year during which the business firm received a property tax exemption under ORS 285B.698 or 285B.710;

(b) The number of employees within the enterprise zone at the end of an assessment year has been reduced for a period longer than one year by more than 50 percent from the highest number of such employees at the end of any assessment year during which the firm was receiving a property tax exemption under ORS 285B.698 or 285B.710; or

(c) The average annual number of employees within the enterprise zone is reduced at the end of the first assessment year of exemption and any subsequent qualifying years below 110 percent of the average annual number of employees at facilities of the firm located within the enterprise zone on the date of application for precertification.

(4) If the qualified business firm or owner fails to give the notice on time or at all as required by subsection (1) of this section, upon discovering the property no longer qualifies for the exemption due to a circumstance described in subsections (1) and (3) of this section, the assessor shall:

(a) Compute the amount of taxes described in subsection (2) of this section as though notice had been given, and shall add to that amount an additional penalty equal to 20 percent of the total amount so computed; and

(b) Add the property to the assessment and tax roll without the exemption as if the notice had been given.

(5) The amount determined to be due under subsections (2) and (4) of this section:

(a) May be paid to the tax collector before completion of the next general property tax roll pursuant to ORS 311.370; and

(b) Shall be added to the tax extended against the property on the next general property tax roll to be collected and distributed in the same manner as the remainder of the property taxes.

(6)(a) Notwithstanding subsections (2) and (5) of this section, when an assessor and sponsor receive notice under subsection (1)(b), (c), (d) or (e) of this section and the qualified business firm has not closed its operations, the qualified business firm shall pay the sponsor an amount equal to the property taxes for the qualified property in the assessment year for which the exemption is claimed.

(b) Moneys collected under paragraph (a) of this subsection shall be used by the sponsor to benefit the residents of

the enterprise zone and for the development of jobs, skills and training for residents of the enterprise zone and the zone's immediate vicinity.

(c) This subsection applies only to the first notice under subsection (1)(b), (c), (d) or (e) of this section or for the second notice under subsection (1)(b), (c), (d) or (e) of this section in the case of the final year of an exemption lasting a total of five consecutive years under ORS 285B.710.

(d) If the sponsor does not receive the full amount to be paid by the qualified business firm under paragraph (a) of this subsection, the assessor shall disqualify the property under subsections (2) and (5) of this section.

(7) The assessor is at all times authorized to demand by registered or certified mail reports from owners or lessees concerning the use of the qualified property and the employment status of the qualified business firm for purposes of this section. If the owner or lessee fails after 60 days' notice in writing by certified mail to comply with such demand, the assessor may disqualify the exemption in accordance with subsection (2) of this section, giving written notice of the disqualification to the Department of Revenue and the owners or lessees of the qualified property.

(8) The assessor is under no obligation to verify compliance by qualified business firms with requirements imposed under ORS 285B.710 (2), (3)(b), (4), (5) or (6)(b).

(9) The sponsor of an enterprise zone may initiate procedures in order to verify compliance by qualified business firms with requirements imposed under ORS 285B.692 to 285B.728. The procedures may include written requests to the assessor by the local zone manager or an executive official of the sponsoring jurisdiction in which the qualified business firm is located that the assessor exercise authority under subsection (7) of this section for a particular qualified business firm.

(10) An assessor may not impose the property taxes and penalties specified in subsection (4) of this section for failure by a qualified business firm or an owner of qualified property leased by the qualified business firm to notify the assessor or the enterprise zone sponsor that the qualified business firm does not meet requirements under ORS 285B.710 (2), (3)(b), (4), (5) or (6)(b), without having received written communication from the zone sponsor that demonstrates that the qualified business firm does not meet such requirements.

(11) Additional taxes collected under this section shall be deemed to have been imposed in the year to which the additional taxes relate. [Formerly 285.617; 1999 c.1104 s.8]

Note: See note under 285B.650.

(Miscellaneous)

285B.731 Short title for ORS 285B.650 to 285B.728. ORS 285B.650 to 285B.728 shall be known and may be cited as the Oregon Enterprise Zone Act of 1989. [Formerly 285.620]

Note: See note under 285B.650.

ENTREPRENEURIAL DEVELOPMENT

285B.740 Policy. It is the intent of the Legislative Assembly that in the administration of ORS 285B.740 to 285B.758, the Economic and Community Development Department work closely with regional economic development organizations, community development corporations, small business development centers and organizations that promote and assist small businesses owned and operated by women and minorities, as defined by ORS 285B.050 (9). The Economic and Community Development Department, to the maximum extent feasible and consistent with prudent financial controls, may delegate the administration and operation of the loan program created by ORS 285B.740 to 285B.758 to local and community-based entities. To carry out the policy described in this section:

(1) The Economic and Community Development Department may contract with any nonprofit corporation or agency with experience and expertise in business finance to administer all or any part of the loan program created by ORS 285B.740 to 285B.758.

(2) When entering into an agreement for the administration of the loan program by any nonprofit corporation or agency, the Economic and Community Development Department may agree to waive any claims it may have against such corporation or agency for losses arising out of the normal course of business, so long as the corporation or agency does not act negligently or fraudulently in providing loans under ORS 285B.740 to 285B.758.

(3) When entering into an agreement to have a nonprofit corporation or agency administer the loan program created by ORS 285B.740 to 285B.758, the Economic and Community Development Department may pay loan

origination and loan servicing fees to the corporation or agency. The amount of such fees may be determined in the agreement between the department and the administering corporation or agency. [1991 c.688 s.12]

285B.743 Application for entrepreneurial development loan; eligibility. (1) Any individual or business firm may file with the Economic and Community Development Department an application to borrow money from the Oregon Entrepreneurial Development Loan Fund as provided in ORS 285B.740 to 285B.758. The application shall be filed in such a manner and contain or be accompanied by such information as the department may require.

(2) Upon receipt of an application under this section, the Economic and Community Development Department shall determine whether the applicant is eligible to receive a loan under ORS 285B.139, 285B.740 to 285B.758 and 285B.765. If the department determines that an applicant is not eligible to receive a loan, the department shall:

(a) Reject the application with a written statement of the reason for that rejection; or

(b) Require the applicant to submit additional information concerning the application as may be necessary. [1991 c.688 s.7]

285B.746 Conditions required for loan approval. (1) The Economic and Community Development Department may approve a loan requested in an application filed under ORS 285B.743 if, after investigation, it finds that:

(a) The applicant is enrolled in a small business management program with a small business development center;

(b) The applicant has prepared a business plan for the business, which has been reviewed by a small business development center or other entity certified by the Economic and Community Development Department to review business plans;

(c) The applicant has developed an expenditure plan for the use of the moneys received as a loan for the project under ORS 285B.740 to 285B.758; and

(d) The applicant is not effectively owned or controlled by another business entity or other person that, either by itself or when combined with the applicant, is not eligible for a loan under ORS 285B.740 to 285B.758.

(2) In addition to the requirements for loan approval described in subsection (1) of this section, in order to obtain a loan under ORS 285B.740 to 285B.758, an applicant must also satisfy two of the following conditions:

(a) The business or proposed business, at the time of application, must not have been operating for more than 24 months.

(b) The business must have annual revenues of less than $100,000 in the 12-month period immediately preceding the date of application.

(c) The business or proposed business is owned in whole or in part by a person certified as being severely disabled by the Vocational Rehabilitation Division of the Department of Human Services or the Commission for the Blind. [1991 c.688 s.8; 1997 c.147 s.5]

285B.749 Additional conditions for loan approval; maximum term and amount of loan; deferral of repayment. (1) The Economic and Community Development Department may approve an entrepreneurial development loan under ORS 285B.740 to 285B.758 if, after investigation, it finds that:

(a) The loan has a reasonable prospect of repayment;

(b) The applicant provides funds for the project in the form of cash, property or business equity in an amount equal to 20 percent of the amount of the loan; and

(c) The applicant can provide such evidence of assurance for repayment as the department considers appropriate to the circumstances of the particular applicant. However, loans need not be secured with real property.

(2) The Economic and Community Development Department may make an entrepreneurial development loan to any single applicant in an amount not exceeding $25,000.

(3) Entrepreneurial development loans shall be made for a period not exceeding five years at a rate of interest that does not exceed 18 percent per annum.

(4) The Economic and Community Development Department may defer repayment of a loan by an applicant for a period not exceeding six months. However, interest shall continue to accrue on the unpaid principal amount of the loan during such period of deferred repayment. [1991 c.688 s.9; 1997 c.147 s.6]

285B.752 Additional loans; maximum aggregate amount. An applicant who receives an entrepreneurial development loan under ORS 285B.740 to 285B.758 may apply for another such loan. Notwithstanding the limit set forth in ORS 285B.749 (2), the maximum aggregate amount that may be loaned to a single applicant under ORS 285B.139, 285B.740 to 285B.758 and 285B.765 is $40,000. [1991 c.688 s.10; 1997 c.147 s.7]

285B.755 Oregon Entrepreneurial Development Loan Fund Advisory Committee. (1) The Economic and Community Development Department shall appoint an Oregon Entrepreneurial Development Loan Fund Advisory Committee of not less than five members to advise the department on the operation of the loan program created by ORS 285B.740 to 285B.758. The individuals appointed to the advisory committee shall be representatives of the private sector financial community, public sector business finance groups, small business support organizations and owners and operators of small businesses. The advisory committee shall include at least one owner or operator of a small business who is a woman or a member of a minority group. The advisory committee shall also include at least one person who is a representative of disabled Oregonians.

(2) The Oregon Entrepreneurial Development Loan Fund Advisory Committee shall review all loan forms, contracts and other administrative materials to assure that the loan program created by ORS 285B.740 to 285B.758 operates with administrative simplicity and efficiency to the greatest extent possible. [1991 c.688 s.11]

285B.758 Oregon Entrepreneurial Development Loan Fund. (1) There is established in the State Treasury, separate and distinct from the General Fund, the Oregon Entrepreneurial Development Loan Fund. All moneys in the fund are continuously appropriated to the Economic and Community Development Department for the following purposes:

(a) Administrative costs of the department incurred in processing loan applications, investigating the eligibility of loan applicants and servicing outstanding loans;

(b) Paying for loan origination and loan servicing by contractors under ORS 285B.740 to 285B.758; and

(c) Payment of loans to applicants under ORS 285B.740 to 285B.758.

(2) The Oregon Entrepreneurial Development Loan Fund shall consist of:

(a) Moneys appropriated to the fund by the Legislative Assembly;

(b) Interest earned on moneys in the fund; and

(c) Moneys received as repayment of principal and interest on loans made from the fund under ORS 285B.740 to 285B.758. [1991 c.688 s.13]

MISCELLANEOUS

285B.765 Oregon Dislocated Worker Fund. (1) There is established in the State Treasury, separate and distinct from the General Fund, the Oregon Dislocated Worker Fund. All moneys in the fund are continuously appropriated to the Economic and Community Development Department for the purpose of carrying out ORS 285B.139, 285B.740 to 285B.758 and 285B.765.

(2) The Economic and Community Development Department, in consultation with the Employment Department and the Job Training Partnership Act section of the Department of Community Colleges and Workforce Development, shall develop rules to allocate moneys from the Oregon Dislocated Worker Fund to provide assistance to dislocated timber workers, including but not limited to, training services, emergency medical assistance, child care, tuition or any activities authorized by the Economic and Community Development Department.

(3) The intent of this section is to provide assistance to dislocated timber workers when federal funding is reduced, is inadequate or is otherwise not available.

(4) For the purposes of this section, “dislocated timber worker” includes persons who the Economic and Community Development Department determines are likely to become dislocated based on employer notification of layoffs or other reliable information available to the department. [1991 c.688 s.6; 1997 c.61 s.12]

Oregon Eyes Lottery Funds to Build Pipeline

By NGI Staff Reports on March 08, 1999 at 12:00 a.m.

In an effort to attract large businesses to their districts, twoOregon state legislators introduced a bill recently that wouldprovide $20 million in lottery funds to help build a 64-milepipeline. No engineering study for the pipeline has been conductedso far. The bill's main supporters, state Sen. Veral Tarno(R-Coquille) and Rep. Ken Messerle (R-Coos County), said some ofthe funds also could be used to build a high-voltage power line.

As the area's timber industry has faltered, the Coos Countyunemployment rate has grown to 10%, nearly double the state'saverage. A Coos County official said 1,700 jobs have been lost and14 companies have passed on building plants in the area because ofthe lack of natural gas access. Overall, 61,000 people in the CoosBay area are without natural gas service.

Nucor Corp., a Charlotte, NC-based steel manufacturer, hasexpressed interest in building a $280 million steel mill in thearea, but only if the power line is built. The Bonneville PowerAdministration (BPA) is conducting an environmental impact study onthe proposed $80 million power line, but Nucor, the BPA andinterested utility companies have not been able to decide whoshould pay for it.

Salem, Oregon 97301-3398

Re: Schedule 160 – Cancellation of Charges for Coos County Customers and Proposal for Coos County Pipeline

Northwest Natural Gas Company, dba NW Natural (NW Natural or Company), files herewith the following revision to its Tariff P.U.C. Or. 25, stated to become effective December 31, 2025.

First Revision of Sheet 160-1	Schedule 160	Revision of Charges for Coos County Customers

NW Natural proposes to cancel Schedule 160 as part of its plan to terminate its existing Transportation Services Agreement (TSA) with Coos County, as described in detail below. Under the TSA, NW Natural purchases transportation service on the county-owned Coos County Pipeline (Pipeline) in order to serve the Company's customers in Coos County. NW Natural also currently operates and maintains the Pipeline for Coos County under the terms of the TSA. Cancelling Schedule 160 and terminating the TSA will facilitate NW Natural's purchase of the Pipeline. By purchasing the Pipeline, NW Natural will be able to make investments in much-needed landslide prevention work that will ensure safe and reliable gas service for NW Natural's customers that depend on the Pipeline.

Purpose

The purpose of this filing is to cancel Schedule 160 as part of NW Natural's overall plan to continue to provide safe and reliable gas service to Coos County. Importantly, Coos County meets the definition of an environmental justice community per ORS 756.010(5). ORS 756.010(5) defines environmental justice communities, in part, as "coastal communities," "rural communities," "communities with limited infrastructure," and "communities experiencing lower incomes." Therefore, Coos County, located in a rural area along the Oregon Coast with limited energy infrastructure that is dependent on the county-owned Pipeline and whose household median income is less than the state and national median,[1] is an environmental justice community.

[1] As discussed below, the median household income for a Coos County household is $60,313, whereas the Oregon median household income is $80,426 and the national median income is $78,538.

To ensure safe and reliable gas service to this environmental justice community, approximately $10 million of landslide prevention work (prior to applying construction overhead) must be completed on the county-owned Pipeline prior to the 2026-2027 winter heating season. Unfortunately, Coos County is not in a financial position to complete this work itself. In addition, the residents and businesses of Coos County that are ultimately served by the Pipeline would struggle to solely bear the cost of this landslide prevention work and continue to shoulder the costs of the natural gas distribution system in Coos County—a portion of which were directly assigned to these communities through Schedule 160.

NW Natural has coordinated closely with Coos County to find a solution that is in the best interests of the County, its residents and businesses, and the Company's customers. Therefore, NW Natural requests the Public Utility Commission of Oregon's (Commission) approval to cancel Schedule 160 by December 31, 2025, with the understanding that NW Natural will seek to recover Pipeline-related costs in a future cost recovery proceeding. To facilitate the recovery of these Pipeline-related costs, NW Natural will acquire the Pipeline from Coos County for $1.00 (one dollar) upon Commission approval of this filing and use deferred accounting to track the operations and maintenance (O&M) costs related to remediation and maintenance work, as explained below. The Company's proposed cancellation of Schedule 160 is attached.

Background

In 1999, the Oregon Legislative Assembly provided $24 million in state funding ($20 million in lottery funds and $4 million in economic development funds) for Coos County to construct a 60-mile Pipeline that would route natural gas from the Williams pipeline near Roseburg to the south coast to increase economic development in the area. Coos County voters authorized general obligation funds of $27 million to cover the balance of the construction costs. The Pipeline entered service in January 2005.

On July 30, 2001, NW Natural and Coos County entered into the TSA under which NW Natural agreed to construct distribution facilities that would connect customers to natural gas when the Pipeline was completed. NW Natural provides gas service to its Coos County customers by transporting gas through the Williams pipeline, purchasing gas transportation services from Coos County on the Pipeline through the TSA, and then delivering gas on NW Natural's distribution system to customers. The Company currently collects $0.01271 per therm of monthly nominations from Coos County transportation customers, of which there are three as of August 2025, for these transportation services per the TSA.[2]

[2] Per the TSA, the "the initial Transportation Rate shall be 10 cents per MMBtu" and "at the end of the tenth year of the initial term … the 10-cent fee will be adjusted in proportion to changes in CPI." Therefore, the Company charged $0.01000 per therm for transportation service for the initial term (equal to 10 cents per MMBtu), and for the second ten-year term adjusted this amount to $0.01271 per the Consumer Price Index for All Urban Consumers (seasonally adjusted) as specified in the TSA.

The Commission adopted the Second Stipulation Relating to the Coos County Distribution System (Stipulation) in docket UG 152 (Order No. 03-236) (Order) in April 2003 that addressed how NW Natural's distribution system investments would be recovered from customers, including a two-cent per therm surcharge on Coos County sales customer bills (referred to as the "Coos County Charge" and collected under the Company's tariff Schedule 160).[3] In January 2005 the distribution system, which NW Natural invested over $11.5 million to construct in Coos Bay, entered service coincident with the Pipeline. There were several terms included in the Stipulation and Order, and those of which that are relevant to this proposal are summarized below:

(1) For ratemaking purposes, NW Natural's investment in the Coos County gas distribution system was capped at $12 million.

(2) The $12 million investment was included in the Oregon rate base. However, the Stipulation provided that Coos County sales customers will repay $1.6 million of the initial gas distribution system investment through the two-cent per therm Coos County Charge. Collection of the Coos County Charge is applied first to pay the O&M expenses for transportation services on the Pipeline as determined by the TSA, and then to repay the $1.6 million Coos County customer share of the initial investment in the gas distribution system.

(3) The rate charged to industrial transportation customers per the TSA will also be applied to pay the O&M expenses for transportation services on the Pipeline. This is meant to increase the amount of the two-cent Coos County Charge available to reduce the $1.6 million Coos County customer share.

(4) After collection of the Coos County Charge, any balance for O&M expenses for transportation services on the Pipeline will be recoverable, statewide, from Oregon sales service customers as part of the Company's annual purchased gas adjustment (PGA).

(5) If the $1.6 million Coos County customer share has not been paid down by the end of the Initial Term ending December 31, 2025, a new schedule to amortize the balance, approved by the Commission, will be established.[4]

Lastly, in January 2005, NW Natural exercised its option under the TSA to assume responsibility for operating and maintaining the transmission pipeline as Coos County's contractor under a separate service agreement. Under the agreement, NW Natural's obligations include supervisory, administrative, technical, and other services as may be required to be performed relative to operating and maintaining the Pipeline. All costs

---

[3] *In the Matter of Northwest Natural Gas Company, dba NW Natural, Application for a General Rate Revision,* Docket No. UG 152, Second Stipulation Relating to the Coos County Distribution System (April 9, 2003).
[4] Note that Schedule 160 currently reflects an incorrect TSA ending date of December 31, 2024. The TSA provides that the initial term of the TSA will end on December 31 of the twentieth year after the year in which the Pipeline becomes operational. The Pipeline construction was completed and gas flowing on NW Natural's distribution system on January 19, 2005. As a result, the initial term expires December 31, 2025.

incurred by NW Natural associated with these services are subject to reimbursement from the County. Extraordinary and emergency services work, as defined in the service agreement, require the Company to notify the County of a workplan and budget and is subject to the County's approval of such work.

Current Status of the Coos County Pipeline

As of August 2025, the Company has 2,307 Coos County customers served by the pipeline, of which 1,793 are residential customers, 502 are commercial customers, and nine are industrial sales service customers. Additionally, as stated above, there are three transportation customers. Coos County relies on the Pipeline as the single source of natural gas delivery to the area. The forest products industry is the largest consumer of natural gas in the region, accounting for about 80.5% of industrial throughput and about 39.5% of all Coos County pipeline throughput for the twelve months ending March 2025.

The Coos County Pipeline has significant safety issues due to landslide risks. In 2021, NW Natural commissioned a study to identify landslide areas near the Pipeline. In that study, nine landslide areas were identified as moderate/low risk where federal code required monitoring practices to sufficiently address the safety risk.[5] Three areas were identified as having a higher risk of a major landslide. The Company is currently monitoring each of these identified landslide risk areas, with more frequent monitoring of the higher risk areas. It is important to note that one of the higher risk areas was identified initially as moderate/low risk - so even with a highly reputable point-in-time study, it is hard to accurately predict landslide safety risks. Severe storms, for instance, can heighten the risk at certain areas or expose new areas to landslide risk.

In March 2025, heavy rains in Southwest Oregon caused widespread damage due to flooding, landslides, mudslides, sinkholes, and rockfalls resulting in a Level 3 regional emergency response activation from the Oregon Department of Emergency Management.[6] In Coos County, heavier than normal rainfall caused the Coos and Coquille River watersheds to flood, resulted in damage at approximately 90 sites on county roads, and required the Coos County Sheriff's Office to deploy search and rescue operations to protect life and safety. Due to the severity of the damages from the storm, the Federal Emergency Management Agency (FEMA) declared a presidential disaster on July 22, 2025, which made available federal disaster assistance.[7] Landslides related to this storm, as discussed in greater detail below, have resulted in higher risk of failure at multiples points along the Pipeline and therefore have made the Company's request in this filing more urgent.

Coos County does not have the ability to back a bond measure to mitigate the landslide risk for the Pipeline. Coos County has been working to find grants and other types of programs to help offset these expenses, including the FEMA Building Resilient Infrastructure in

Communities (BRIC) grant request, and has secured $1.45 million in American Rescue Plan Act funds to offset the cost of this work. In expressing their support for the Coos County application for a FEMA BRIC grant to fund hazard mitigation work on the pipeline, Oregon Senators Jeff Merkley and Ron Wyden noted that "the existing pipeline is currently the only source of natural gas in the county" and "If this pipeline were to fail, as is expected in its current state, it could have an enormous impact on the local economy with businesses and hundreds of households reliant on gas from the pipeline."[8]

Necessary Landslide Risk Prevention Work

There are three major landslide areas along the Pipeline that need to be addressed prior to the 2026-2027 winter heating season. The total cost of the work needed is expected to be approximately $10 million (prior to applying construction overhead costs). The three most critical locations are:

- **Coquille River**
  - Pipe relocation is necessary; a temporary above ground bypass has been installed due to the risk of a riverbank washout.
  - As stated above, Coos County will contribute $1.45 million in American Rescue Plan Act funds for this work.

- **Mile 98**
  - This is an active landslide area with temporary remediation steps in place.
  - The Mile 98 slide area has been identified as the highest risk location on the Pipeline.
  - The Company has requested and has been given approval from Coos County to hire a surveying firm to assess this slide area and present a long-term remediation design solution to the County.
  - There are currently no plans to relocate the Pipeline from this area.

- **Lookingglass**
  - This area became a high risk for landslides in March 2025. It was previously identified as a low-risk area. The March 2025 storm, described in greater detail above, caused a large landslide in this area of the Pipeline. Company crews examined the site and determined that although the landslide decreased the amount of soil cover over the Pipeline, the soil at the site is currently stable. The lack of soil cover and the presence of exposed soil, however, caused the Company to elevate its designation of this area from low risk to high risk.
  - Since the Pipeline is currently situated at and below the landslide area, restoration work is necessary.

[8] Letter in support of Coos County application for FEMA Building Resilient Infrastructure in Communities (BRIC) grant, from Oregon United States Senators Jeffrey A, Merkley and Ron Wyden to FEMA Administrator Deanne Criswell, dated January 21, 2025.

There are six additional landslide areas in the moderate/low risk categories that are also being monitored and their risk for landslides may change over time.

Proposed Ratemaking and Pipeline Purchase

In this filing, NW Natural is seeking to cancel Schedule 160 and terminate the TSA as part of its plan to maintain safe and reliable service to its Coos County customers and in response to the current condition of the Pipeline as discussed below. This plan also includes NW Natural acquiring the Pipeline from Coos County for $1.00 (one dollar). NW Natural already has an agreement in principle with Coos County to acquire the Pipeline. The proposed purchase of the Pipeline and related ratemaking treatment will allow NW Natural to begin work on the three critical landslide risk areas identified above and efficiently plan for future work.

NW Natural plans to separately file a deferral application that will allow it to track the operations and maintenance (O&M) costs related to remediation and maintenance work on the Pipeline. NW Natural would seek to recover these costs in a future ratemaking proceeding. At the time of the next general rate case, the ongoing O&M costs of the Pipeline would be placed in base rates.

By cancelling Schedule 160, terminating the TSA, and assuming ownership of the Pipeline, NW Natural anticipates that it will no longer assess Coos County customers an additional charge for gas service based on their geographic location (i.e., the Coos County Charge). This type of rate treatment will put NW Natural's Coos County customers in the same position as all of the Company's other Oregon customers whose rates are not set based on location. It is also important to note that through base rates, NW Natural's Coos County customers have been paying for projects outside of Coos County for the last twenty years. Moreover, the Pipeline will remain an important component of Oregon's energy infrastructure for the foreseeable future, supporting local industry and heating residents' homes.

NW Natural's proposed rate treatment is also equitable. As stated above, Coos County meets the definition of an environmental justice community, which includes coastal communities, rural communities, communities with limited infrastructure, and communities experiencing lower incomes. The median income for a Coos County household—$60,313—is considerably below both the Oregon and United States median of $80,426 and $78,538 respectively. The percentage of Coos County residents living in poverty also exceeds both the state and national averages.[9]

Given these circumstances, it is equitable to charge Coos County customers the same amount as any other NW Natural customer in Oregon. NW Natural understands that ORS 757.230(1) permits the Commission to consider "environmental justice factors that affect affordability," which presumably includes considering affordability for environmental justice communities. While NW Natural is not seeking special rate consideration for Coos County

[9] US Census Bureau, QuickFacts. *See*: https://www.census.gov/quickfacts/fact/table/OR,cooscountyoregon,coosbaycityoregon/PST045223.

customers due to such factors, it does believe that it is inequitable to continue to charge these customers more for natural gas service compared to every other community in its Oregon service territory. Instead, NW Natural is seeking to ensure the same rate treatment for Coos County customers as for any other Oregon customer.

As part of its proposal to terminate the TSA and purchase the Pipeline, the Company plans to work with existing Coos County transportation customers to cancel capacity releases they currently need to move their gas supplies across the Pipeline to the Company's distribution system. Avista Corporation (Avista), separately, has a TSA with Coos County for a small amount of deliverability on the Pipeline. The Company plans to work with Avista on arrangements necessary for its service on the Pipeline.

Customer Impacts of NW Natural's Proposal

Without the equal and equitable rate treatment proposed in this filing, Coos County customers will experience large rate increases. Although NW Natural is not requesting cost recovery of the Pipeline landslide prevention work in this filing, the Company believes it is nonetheless important to show the impact of allocating these costs to only Coos County customers. Table 1 below illustrates this expected rate impact, with Scenario 1 showing the impact of allocating the cost of the necessary $10 million for landslide risk prevention work described above to only Coos County customers. Scenario 2 shows the impact assuming the costs were allocated to all of NW Natural's Oregon customers (NW Natural's proposal).

Table 1
Estimated Rate Impacts at Existing Rates Associated with Necessary Landslide Risk Prevention Work: Spread Based on Scenario 1 - Coos County Customers Only, Compared to Scenario 2 - All Oregon Customers (NW Natural's Proposal)

Estimated Impacts	Scenario 1 Impacts: Coos County Customers	Scenario 2 Impacts: All Oregon Customers
Pipeline ownership	NW Natural	NW Natural
Pipeline landslide risk prevention work [1]	$10 Million	$10 Million
On-going O&M (Annual)	$400k	$400k
Rate spread methodology	Equal percent of margin	Equal percent of margin
Recovery of initial distribution investment	No	No
Estimated Residential Bill Impacts [2]		
Average Residential bill increase (%)	37.2%	0.2%
Average Residential bill increase ($)	$25.27	$0.14
Estimated Bill Commercial and Industrial Bill Impacts, Selected Schedules [2]		
General Commercial (C03)	34.5% ($106.54)	0.2% ($0.54)
Large Commercial Sales Firm (32CSF)	22.0% ($962.58)	0.1% ($6.16)
Industrial Transportation Firm (32ITF)	55.6% ($4,495.17)	0.3% ($21.49)
Industrial Transportation Interruptible (32ITI)	55.9% ($1,619.29)	0.3% ($31.21)

1: Pipeline landslide risk prevention cost estimate is prior to applying construction overhead costs.
2: Bill impacts based on average usage by customers in each group (Coos County, or all of Oregon).

Table 1 shows that Coos County residential customers would face a 37.2% rate increase if the Pipeline landslide prevention costs were solely allocated to them, whereas Oregon residential customers would see their bills increase by only 0.2% if these costs were allocated to all customers. Given the importance of the Pipeline, how it supports local industry, and how it would further equity, NW Natural considers its proposal to allocate these costs on a statewide basis to be in the best interest of the entire state of Oregon.

Current Regulatory and Contractual Framework of the Coos County Pipeline

The alternative to the Pipeline purchase proposal described above is to follow the regulatory and contractual framework of the TSA. In that case, NW Natural would update the fee for pipeline transportation service, adjusted based on O&M costs, for the Second Term of the TSA expiring on December 31, 2045. Importantly, this updated fee which would apply to transportation customers, would not include landslide prevention work that is necessary for safe and reliable service. Instead, under this alternative, Coos County would retain ownership of the Pipeline and, as explained above, it cannot afford to perform this work on its own.

Secondly, the Company would revise the Schedule 160 Coos County Charge for sales customers, where it would collect the full unrecovered portion of the original $1.6 million investment in Coos County's distribution system that was directly assigned to Coos County. Due to the current two-cent per therm Schedule 160 Coos County Charge first being applied towards transportation service under the TSA, and lower than forecasted customer growth, the unrecovered portion of the initial distribution system investment remains approximately $1.6 million. To recover this amount, the Schedule 160 Coos County Charge for Coos County sales customers would have to increase from $0.02 per therm to approximately $0.10 per therm based on existing Coos County customer counts and load. This would result in an approximately 4.9% increase for the average Coos County residential customer, or $3.67 per bill, which is *in addition* to the necessary landslide prevention work on the Pipeline as shown in Table 1 above.

NW Natural recognizes the order approving its initial investment in the Coos County distribution system (Order No. 03-236) assumes that the existing regulatory framework would be maintained after the initial term of the TSA expires on December 31, 2025, including Coos County's ownership of the Pipeline and NW Natural continuing to assess Coos County customers a Schedule 160 Coos County Charge, as described above. However, maintaining this status quo would not address the landslide risks the Pipeline faces today and it poses significant safety risks to the area surrounding the Pipeline. In addition, any failures on the Pipeline would impact the reliability of service to Coos County customers. Unplanned service interruptions would be costly for NW Natural's industrial and commercial customers and could also put residential customers at risk. Finally, the cost of landslide risk mitigation and remediation work would be borne solely by Coos County, an environmental justice community.

Before making this filing, NW Natural had conversations with all parties originally involved in the UG 152 Coos County distribution system docket (Commission Staff, Oregon Citizens' Utility Board, and the Alliance of Western Energy Consumers). No party objected to NW Natural making a different proposal than what was envisioned more than twenty years ago in Order No. 03-236, although all parties retain their right to continue to evaluate the Company's proposal.

Conclusion

As described above, cost recovery for the proposal described in this filing will be requested in a future ratemaking filing. Thus, there is no rate increase due to terminating the TSA and assuming ownership of the Pipeline. Rather, terminating the TSA will result in a rate reduction as the Company will no longer collect $0.01271 per therm of monthly nominations for transportation services from Coos County transportation customers, of which there are three as of August 2025.

In compliance with OAR 860-022-0025, NW Natural states that the proposal to cancel Schedule 160 will also reduce the rates of Coos County sales service customers by the amount of the two-cent per therm Coos County Charge. The change impacts 2,304 Coos County sales service customers (of which 1,793 are residential customers, 502 are commercial customers, and nine are industrial customers) as of August 2025. Because Schedule 160 collections are first applied towards transportation service under the TSA, cancelling Schedule 160 has no impact on the Company's annual revenue.

NW Natural respectfully requests approval to cancel Schedule 160, terminate the TSA, and assume ownership of the Pipeline with the understanding that NW Natural will seek to recover Pipeline-related costs in its next general rate case.

In accordance with ORS 757.205, copies of this letter and the filing made herewith are available in the Company's main office in Portland, Oregon and on its website at www.nwnatural.com.

SCHEDULE 160

--CANCELLED-- (C)

(D)

78th OREGON LEGISLATIVE ASSEMBLY--2015 Regular Session

Enrolled
Senate Bill 32

Printed pursuant to Senate Interim Rule 213.28 by order of the President of the Senate in conformance with presession filing rules, indicating neither advocacy nor opposition on the part of the President (at the request of Senate Interim Committee on Rural Communities and Economic Development)

CHAPTER .....

AN ACT

Relating to natural gas; and declaring an emergency.

Be It Enacted by the People of the State of Oregon:

SECTION 1. The Legislative Assembly finds and declares that having access to natural gas is in the public interest and that the extension of natural gas pipelines and other infrastructure necessary for providing natural gas to areas that do not have access to natural gas is necessary for the communities of this state to preserve local economies, enlarge tax bases and generate additional economic opportunities.

SECTION 2. (1) The Public Utility Commission shall form a work group for the purpose of conducting a study on methods by which a public utility that furnishes natural gas may expand the public utility's service to areas that do not have access to natural gas. As part of the study, the work group shall review the commission's authority to authorize, and the commission's policies on, the expansion of natural gas services. At a minimum, the work group shall study:

(a) The commission's policies regarding the extension of natural gas mains;

(b) Mechanisms for funding the expansion of natural gas services, including the use of tariffs, the imposition of charges and fees, the use of unclaimed refunds and the establishment of accounts dedicated to the expansion of natural gas services;

(c) The submission of recommendations by public utilities that furnish natural gas;

(d) Possible processes for including in a public utility's rates the cost of projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas;

(e) Possible selection criteria for projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas; and

(f) The potential rate cap for projects involving the extension of natural gas pipelines and other infrastructure necessary for providing natural gas.

(2) The commission shall include in the work group:

(a) Representatives of public utilities that furnish natural gas, other energy suppliers, local governments and elected officials;

(b) Stakeholders who have an interest in the outcome of the study;

(c) Individuals who have knowledge about the subject matter of the study;

(d) One member from the House of Representatives who represents an area that does not have access to natural gas; and

(e) One member from the Senate who represents an area that does not have access to natural gas.

(3) The commission shall compile a report, including any recommendations for legislation, of the work group's findings and conclusions. The commission shall submit the report in the manner provided in ORS 192.245 to an interim committee of the Legislative Assembly related to energy no later than September 15, 2016.

SECTION 3. Sections 1 and 2 of this 2015 Act are repealed on January 2, 2017.

SECTION 4. This 2015 Act being necessary for the immediate preservation of the public peace, health and safety, an emergency is declared to exist, and this 2015 Act takes effect on its passage.

Passed by Senate March 4, 2015

Repassed by Senate June 30, 2015

Chair Decker and Commissioners Tawney and Thompson

Enclosed is Staff's Final Report to conclude the agency's Natural Gas Fact Finding investigation. The Final Report is the summation of a two-year assessment that the Public Utility Commission (PUC) held with regulated gas utilities and stakeholders. Staff explored the potential ratepayer and system impacts of limiting gas utility greenhouse gas (GHG) emissions and the regulatory tools needed achieve compliance with state GHG policies.

As you are aware, this report is just one element of an extensive and ongoing conversation on utilities' role in decarbonizing the Oregon economy. This conversation was well underway before the PUC undertook this investigation and it has shaped PUC decision-making and activities over the last two years. Through our work across various dockets, Staff envisions this conversation will continue to proceed, evolve, and grow in importance as utilities work towards compliance with state decarbonization goals. The Fact Finding process has been integral to surfacing key issues for consideration and debate and will inform the PUC's approach to utility regulation, as it already has in 2022.

In this Final Report, Staff sought to address and incorporate the valuable feedback provided by numerous parties to the Draft Report. Staff also sought to reflect the PUC's decarbonization planning work and activities that continued throughout 2022, including Northwest Natural's 2022 General Rate Case and Cascade Natural Gas' Update to its 2020 Integrated Resource Plan.

Decarbonization of the natural gas sector is still in its earliest stages. There is much to be learned from the initial steps taken by Oregon utilities and stakeholders as well as the actions being taken regionally, nationally, and globally. As recognized in the Final Report, an effective and successful decarbonization of Oregon's natural gas sector will require continued and thoughtful analysis, communication, and review by all parties so that lessons can be learned and plans can be adapted as quickly and efficiently as possible to reach decarbonization goals. To aid in this work, Staff is seeking to bolster its own knowledge development by bringing in outside expertise to address targeted questions raised by the Fact Finding process—including studying how the PUC can begin taking steps towards a holistic, system-wide approach to decarbonization planning and evaluating the accuracy, appropriateness, and adequacy of existing utility integrated resource planning.

Staff thanks all the participants to the Fact Finding process and hopes that readers find the Final Report as useful as Staff found the entire development process.

Sincerely,

JP Batmale
Energy Resources and Planning Division Administrator, Public Utility Commission

1 NATURAL GAS FACT FINDING EXECUTIVE SUMMARY

Oregon has taken explicit steps to reshape the state's energy market by introducing Greenhouse Gas (GHG) emission reduction targets reflecting national trends to actively address climate change through state policy. Policies like the Oregon Department of Environmental Quality's (DEQ) Climate Protection Program (CPP) and House Bill (HB) 2021 set ambitious GHG emission reduction targets that will have a permanent impact on regulated utility investments and operations. In addition, trends related to climate change and climate adaptation are driving consideration of deep decarbonization pathways. These trends include the evolution of regional and national policies that cap or price GHG emissions and the rapid development and deployment of solutions designed to reduce energy related GHG emissions.

For the natural gas utilities overseen by the Oregon Public Utility Commission (PUC), the Environmental Quality Commission's 2021 adoption of CPP rules for DEQ represented a significant step in reorienting these utilities' near-term planning and future operations. By complying with the CPP, Oregon's fossil fuel suppliers – including the regulated gas utilities – must collectively achieve emission reductions of 50 percent by 2035 and 90 percent by 2050.

To assess the impact of the CPP on gas utilities, their customers, and other potential decarbonization activities, PUC Staff engaged in a dynamic, six-month public process of fact finding (UM 2178). The purpose of this Natural Gas Fact Finding (Fact Finding or NGFF) was twofold. The first was to conduct an initial analysis of the potential ratepayer bill impacts from the limiting of natural gas utilities' GHG emissions under the DEQ's CPP. The second was to identify appropriate regulatory tools to mitigate potential customer impacts and accommodate utility action.

To achieve these purposes, Staff collaborated with stakeholders, utilities, and expert consultants to identify CPP compliance pathways in a Draft Report, posted April 2022. The PUC then collected extensive public comment over the summer of 2022 on this draft. Concurrently with these efforts, the PUC conducted various public proceedings affecting natural gas utilities, including the completion of a major gas rate case, launched and/or completed two gas Integrated Resource Plan (IRP) dockets, and finalized the 2023 budget and action plan for Energy Trust.

Staff submits this Final Report to conclude this investigation. Our experiences and interactions with the Commissioners, utilities, and broad collection of stakeholders of these experiences and interactions have shaped this Final Report on the docket findings and suggested next steps for the PUC.

Broadly, our findings are that:

- Stakeholders bring **increasingly divergent approaches** to emission reductions, namely either limiting gas expansion or developing gas supply decarbonization innovations.
- CPP compliance **costs and risks** to gas customers from gas utilities' compliance actions range from manageable to rather substantial by 2029.
- CPP **compliance and decarbonization issues** that PUC activities will need to address are much better understood.
- A host of **regulatory tools** – identified and organized below under the categories of Planning, Programs, and Rate Making – are available to shape and manage the policy risks of various compliance pathways for gas utility decarbonization.

- A number of potential regulatory tools identified require an optimization across the energy system, rather than a focus on a single fuel (i.e., natural gas or electricity). Implementing such tools requires work across a variety of dockets and utilities and an unprecedented degree of **coordination and additional resources**.

Accordingly, Staff developed a set of regulatory tool recommendations that begin to address the identified issues given various constraints. The table below functions as a high-level summary of the near-term regulatory tools Staff recommends.

Table 2: Roadmap of Staff Regulatory Tools for Oregon (See Section 5.7 for more details)

Section 5 Analysis	Recommendation	Regulatory Tool		
		Planning	Programs	Ratemaking
Protecting Customers	Estimated Ratepayer Bill impact	X		
	Direct ETO to target programs to LI and EJ		X	
	Target IRA Incentives		X	
	EE programs to include transport		X	
	Assess CPP compliance risk in distribution system investments	X		X
	Explore rate impacts of accelerated depreciation in rate cases			X
	Transport customer cost of compliance in rate cases			X
Access and Info	Quarterly stakeholder Communications in UM 2178	X		
	RFA docket engagement through PUC AHD			X
Full Cost	Compliance costs into EE AC			X
	Develop marginal abatement cost curve	X		
	Utilities articulate electrification assumption in IRPs	X		
	Electrification info and data from DSP	X		
Decarbonization Planning & Cost-Recovery	Gas system maps with infrastructure age and depreciation information	X		
	IRPs include growth-related DSP investment details from Appendix F and provide analysis of demand-side options and non-pipe alternatives	X		
	Independent 3rd party analysis of key tech and market assumptions used by utilities	X		
	CPP as an acknowledgeable item in IRPs	X		
	Exploring IRP guidance from UM 2178	X		
	Follow Order No. 22-388 guidance regarding customer growth and compliance costs	X		X
Monitoring, Tracking, and Reporting	Utilities host annual presentation to PUC on CPP compliance filings	X		
	Purchased Gas Adjustment includes full CPP compliance costs			X
	Explore linking CPP amortization to CPP performance			X
Incentivize GHG Reductions	Explore use of SB 844 for emerging technologies	X		
	Pilot or Joint pilots with electric utilities proposals by 2025			X

The Final Report attempts to reflect participants' feedback and positions. Where applicable, Staff uses footnotes to indicate changes to actions or regulatory tools based on feedback or new learnings. The Final Report also includes a summary of Stakeholder Comments as Appendix E and has "Stakeholder

Insights" subsections and sidebars throughout the report to call attention to the perspectives of stakeholders on specific topics.

PUC Next Steps
This investigation and subsequent report created a foundation to shape the PUC's role relative to GHG emission reduction needs and policies in Oregon. The purpose was to better prepare Commissioners, stakeholders, and Staff for issues and positions that will arise across multiple dockets. Over the last six months of 2022, the PUC has already begun actively weaving early learnings from this Fact Finding and natural gas utility compliance with the CPP into existing dockets and activities.

The continued incorporation of the Fact Finding's regulatory tools serves as enhancements to the PUC's pursuit of the same goals that it has always had namely, to:

1. Determine whether the utilities have a least-cost, least-risk strategy, including for CPP compliance;
2. Ensure utilities are passing on to ratepayers only prudent and reasonable costs;
3. Set rates that represent reasonable balance of future risks and incentives between the company and ratepayers; and
4. Ensure that different customer classes are each allocated a reasonable proportion of the costs and benefits of utility service.

Going forward, as Staff learns more by incorporating NGFF recommendations and associated experiences into familiar regulatory proceedings, Staff may eventually recommend proactive new rulemakings or proceedings.

2 BACKGROUND

2.1 PUC'S NATURAL GAS FACT FINDING

The Oregon PUC requires utilities to plan and prepare for all risks, including new regulatory requirements, and to take action to mitigate customer risks in advance. In the natural gas sector, utility IRP planning has been considering for several years various decarbonization policy futures and how to develop a least-cost, least-risk strategy to comply with future policies. But, as state and national pressure for the gas sector to address climate began to build, the PUC took additional action and, in 2021, directed its Staff to conduct a "fact-finding" to lay a foundation for understanding the customer implications of decarbonization policy in the natural gas sector. Specifically for gas customers, the work plan proposed a study of the impact of the proposed DEQ CPP rulemaking to "understand the customer dimensions and impacts of different decarbonization scenarios and thus help in form future decision making."[1]

In June 2021, Staff officially opened this Fact Finding under Docket No. UM 2178. The purpose of this Fact Finding was to analyze the potential natural gas utility ratepayer bill impacts that may result from

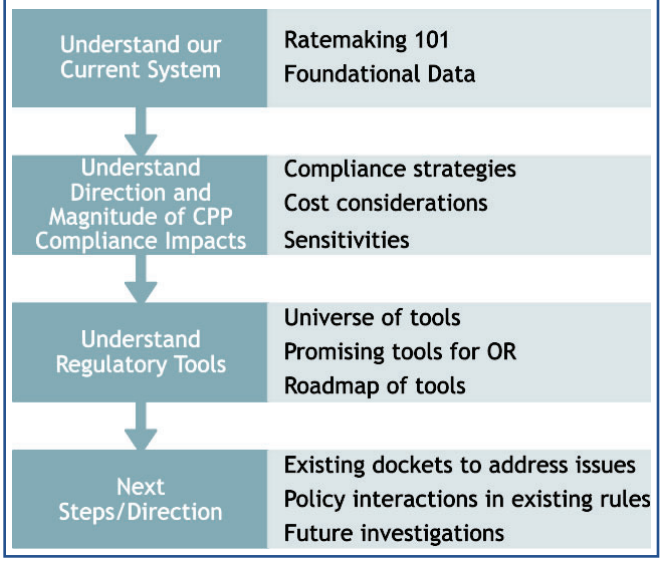
[1] To some extent Natural Gas Fact Finding work built on Staff's existing work plan to implement Governor Brown's Executive Order 20-04. See Oregon Public Utility Commission EO 20-04 Work Plans. Page 10. https://www.oregon.gov/puc/utilities/Documents/EO-20-04-Work_plans-Final.pdf.

limiting GHG emissions of regulated natural gas utilities under the CPP and to identify appropriate regulatory tools to mitigate potential customer impacts. It was crafted to produce two primary outcomes: 1) An understanding of potential natural gas ratepayer bill impacts associated with the CPP GHG emission target compliance; and 2) the identification of strategies and regulatory tools that equitably mitigate potential harm to natural gas customers while accommodating action that supports compliance.[2] The ultimate goal of the Fact Finding was to inform future policy decisions and other key analyses to be considered in 2022, once the CPP is in place.

The work plan (as outlined in Figure 1) was designed to:

- Help Staff and stakeholders understand current natural gas and cost recovery systems;
- Understand the potential impacts of CPP compliance;
- Explore applicable regulatory tools; and
- Identify actions the Commission could take to protect customers.

Figure 1: Natural Gas Fact Finding Process



Staff utilized a process that mixed facilitated workshops, public comments, and external analysis to develop an extensive set of documents.

Staff held six workshops, each of which was generally attended by over 90 people. In addition, the PUC offered multiple opportunities for public comment and access to utility compliance modeling workbooks. Staff also engaged the Regulatory Assistance Project (RAP) to assist staff and explore regulatory tools.

Staff's Draft Report was filed on April 15, 2022. By June 3, 22 groups provided feedback on the Draft Report and Staff received an additional 290 public comment emails outside of the UM 2178 docket. On July 12, the PUC hosted a Commissioner workshop and a subsequent Public Hearing to hear from stakeholders and to discuss issued raised in the fact finding and the Draft Report.

2.2 Natural Gas Use in Oregon

Oregon is served by three natural gas Investor-Owned Utilities. All operate as standalone gas companies in Oregon, with no retail electricity sales in the state. Annual sales revenues for Oregon's three natural gas utilities were over $810 million in 2019.[3] In 2019, Oregon's natural gas customers consumed about 1.6 billion therms, or about 4.4 million therms per day.[4] NW Natural is the largest of Oregon's three gas

[2] *See* UM 2178, Staff's Initial Application, June 8, 2021. Page 16 of pdf. https://edocs.puc.state.or.us/efdocs/HAA/um2178haa11959.pdf.

[3] 2019 Oregon PUC Statistics Book. Page 42. https://www.oregon.gov/puc/forms/Forms%20and%20Reports/2019-Oregon-Utility-Statistics-Book.pdf.

[4] Descriptive Statistics Excel Workbook, May 27, 2021. Available on Oregon PUC's Natural Gas Fact Finding webpage - https://www.oregon.gov/puc/utilities/Pages/EO-20-04-UP-FactFinding.aspx.

utilities, providing about 80 percent of total natural gas retail sales, with Avista Corporation (Avista) representing 12 percent of retail sales and Cascade Natural Gas (CNG) representing 8 percent.

Oregon's customers are divided into four categories: Residential, Firm Commercial & Industrial (Firm C&I), Interruptible C&I, and Transport. Firm C&I customers are generally small businesses, while Interruptible C&I customers are generally larger businesses. Transport customers are large, non-residential utility customers that have purchased their gas from another natural gas supplier (e.g., gas marketer) but who continue to use the regulated utility's distribution system to deliver their gas.

As can be seen in Figures 2 and 3,[5] while most natural gas utilities' revenues come from residential customers, much of gas delivered annually by these utilities is for transport customers. The revenues from transport customers to the regulated utilities is relatively small because these customers purchase their gas from gas marketers, not the utilities, and only use the utility's distribution system to deliver the gas to their location.

Figure 2: OR Natural Gas Utilities' 2019 Sales Revenue

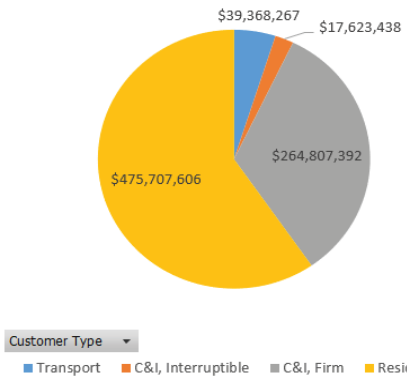


Figure 2: OR Natural Gas 2019 Delivery (Therms)

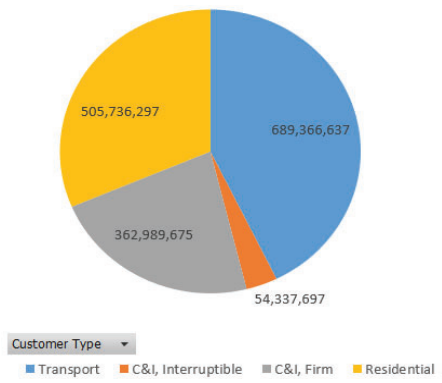


2.3 The Climate Protection Program

The CPP, effective in January 2022 (OAR Chapter 340 Division 271), is designed to substantially reduce GHG emissions in Oregon over the next thirty years. The CPP establishes a declining limit, or cap, on GHG emissions from fossil fuels used throughout Oregon, including diesel, gasoline, natural gas, and propane. This includes emissions from fossil fuels used in transportation, residential, commercial, and industrial settings. It also uses a best available emissions reductions approach for other site-specific emissions at facilities, such as emissions from industrial processes.

Companies regulated under the declining cap, known as covered fuel suppliers, include the three natural gas utilities and other suppliers of liquid and gaseous fossil fuels. The aggregate emissions covered under the CPP represent about half of the state's GHG emissions, with natural gas utilities making up 26 percent of total CPP covered emissions (NW Natural with 21 percent, and Avista and Cascade with

[5] *See* Descriptive Statistics Excel Workbook, May 27, 2021. Available on Oregon PUC's Natural Gas Fact Finding webpage - https://www.oregon.gov/puc/utilities/Pages/EO-20-04-UP-FactFinding.aspx.

3 percent each).[6] The 2022 cap is based on average emissions from 2017 to 2019 for the covered fuel suppliers. The CPP requires GHG reductions of 50 percent by 2035 and 90 percent by 2050.[7]

Covered fuel suppliers must demonstrate compliance every three years along a steady trajectory towards those two milestones in 2035 and 2050. The first compliance period is 2022-2024, with covered fuel suppliers first demonstrating compliance in November 2025. Companies demonstrate compliance by submitting one compliance instrument or community climate investment (CCI) credit (discussed in more detail below) for each ton of covered emissions reported in their annual GHG emissions reports to DEQ during the compliance period. Under the CPP, each natural gas utility receives a free annual distribution of compliance instruments based on their share of the overall declining emissions cap.

While DEQ prescribes exactly the number of compliance instruments that will be supplied to each natural gas utility in years 2022-2050, there are additional flexibility mechanisms. Covered fossil fuel suppliers can trade unused compliance instruments or bank them for future use. These companies can also optionally contribute funds to DEQ-approved third parties in order to receive CCIs that work similarly to the compliance instruments DEQ distributes (e.g., each CCI credit allowing supply of fossil fuels that when combusted emit 1 metric ton CO2 equivalent).

Covered fuel suppliers can earn CCI credits by contributing funds to third-party entities to implement projects that reduce GHG emissions in Oregon. The contribution amount for a CCI credit is established by DEQ. The contribution amount starts at $107 ($2021) per CCI credit and increases over time.[8] CCIs are designed to reduce emissions by at least one MT CO2e on average, prioritize benefits in or near environmental justice communities and reduce co-pollutants. CCI credits can be banked for two compliance periods and cannot be traded. Covered fuel suppliers can only use a limited number of CCIs to meet compliance obligations. The limit begins at 10 percent of total compliance obligations for the first compliance period and eventually grows to 20 percent by the third compliance period.[9]

In short, DEQ's CPP lays out a regulatory framework that reduces GHG emissions associated with natural gas by the three utilities. These amounts decline by 50 percent from the outset in 2022 by 2035, and by 90 percent by 2050. While there are some flexibilities such as trading and CCIs, these requirements represent a significant, rapid, and mandatory requirement in the reduction of the utilities' natural gas related emissions.

2.4 Stakeholder Feedback

Staff received feedback on its Draft Report in June 2022. Much of it indicated that stakeholders did not adequately see their positions and feedback represented. The Final Report attempts to better reflect participants' feedback and positions, and where applicable, language has been changed in response to this feedback. The Final Report also includes a summary of Stakeholder Comments as Appendix E and has "Stakeholder Insights" subsections and sidebars throughout the report to call attention to the perspectives of stakeholders on specific topics.

---

[6] *See* Supplemental Cap Information Excel Workbook. Available on Oregon DEQ's Climate Protection Program website = https://www.oregon.gov/deq/ghgp/pages/climate-protection.aspx.
[7] *See* OAR 340-271-9000, Table 4.
[8] *See* OAR 340-271-9000, Table 7.
[9] *See* OAR 340-271-9000, Table 6.

Additional feedback on the Draft Report generally addressed the scope of the fact finding, utility modeling, the regulatory tools presented, action and regulatory tool prioritization, next steps, and the role of the PUC.

Staff attempted to strike a balance in scope that permitted for discrete analysis without omitting critical information. This was especially challenging in the case of how to consider electrification as an emission reduction strategy for gas utilities. Staff appreciates both the direction from stakeholders on this analysis, as well as the gas utilities' efforts to model electrification scenarios and impacts. That said, all parties appear to agree that the outcomes were inadequate. Staff has included more detail about the importance and challenges of modeling electrification with Oregon utilities.

Staff notes where it modified recommendations about regulatory tools based on stakeholder feedback. The Final Report also includes a new section on Stakeholder Insights on Prioritization and Next Steps. Staff appreciates stakeholder perspectives on the role of the PUC and captures this feedback in Appendix E but has not made further modifications to the Final Report based on this feedback. The most voluminous feedback came from environmental, climate, and environmental justice advocacy groups and associated grassroots organizations.

Table 3: Environmental, Climate, & Environmental Justice Advocacy Groups Feedback

Feedback	Staff Response
More direct action by the PUC to phase out gas and use electricity for space and water heating	As was clear throughout this proceeding, determining the role of electrification of space and water heating is paramount. Staff believes that its analysis, and utility planning, must expand to be able to provide guidance about when electrification is determined to be a least-cost, least-risk solution. Staff agrees that rigorous scrutiny and analysis of utility modeling and fuel decarbonization are critical elements of utility regulation. Staff recommends deploying an increased analytical focus on these topics, accompanied by expanded analytical capabilities to better evaluate and provide guidance on this topic in IRPs, procurement activities, and ultimately general rate cases.
Rigorous scrutiny and analysis of utility modeling and fuel decarbonization efforts	
Regulatory tools that focus on protecting customers, not gas companies	Staff included stakeholder guidance on prioritization to better reflect a focus on protecting customers. Staff also updated several near-term actions to reflect this prioritization.

We also heard from consumer groups such as the Alliance of Western Energy Consumers and the Oregon Citizens' Utility Board (CUB).

Table 4: Consumer Groups Feedback

Feedback	Staff Response/modification
Offered modifications and additions to the list of regulatory tools to be considered	Staff has attempted to capture this feedback in the applicable Staff Analysis sections, and notes where suggestions resulted in modifications.

Offered approaches for considering cost and risk allocation	
Presented different perspectives on the value or liability of existing and potential future infrastructure	Staff expands and updates section 5.4.3 on CPP Investments where there is further discussion of Line Extension Allowances and infrastructure investments to reflect both stakeholder feedback and recent PUC activities in rate cases and IRPs.
Presented perspectives on the role of renewable natural gas and hydrogen.	Staff incorporated additional stakeholder feedback on fuel decarbonization in Section 5.4.3 on CPP Investments where there is further discussion on decarbonizing supply. As noted above, Staff recommends heightened scrutiny and analysis of the role of decarbonized fuels in least-cost, least-risk planning, and expect that analysis will be informed by the best available science and information.

Last, we received feedback from Oregon's gas utilities and the gas industry.

Table 5: Gas Utility and Industry Feedback

Feedback	Staff Response
Reliability and cost concerns associated with electrification of heating loads	Staff has incorporated this feedback in the applicable sections of this report
The value of leveraging existing infrastructure in decarbonization efforts through decarbonizing fuels	
The near-term need to provide guidance on CPP cost recovery and develop EE programs for transport customers.	

Additionally, Staff found the guidance regarding prioritization of actions and next steps a valuable addition to this effort and include these insights below.

Prioritization

Stakeholders offered direction regarding how the Final Report and the PUC should prioritize its efforts. Staff notes that all commenters who spoke to this issue noted the need to prioritize near term GHG emission reductions and the need to provide clear direction on ways to protect customers. In addition, stakeholder providing the following feedback on prioritization:

Environmental, Climate, & Environmental Justice Advocacy Groups Feedback

- *Prioritization 1: Prioritize low-risk solutions that result in near term emission reductions via regulatory tools that support the deployment of existing, proven, established, and cost-effective tools, citing energy efficiency, weatherization, and electric heat pumps targeted to LMI customers. - TNC, NRDC, Multnomah County, JC - CS et al., and BE*

- *Prioritization 2: Prioritize Staff time by not developing pilots that focus on hydrogen or other nascent technologies. - JC - CS et al.*

- *Prioritization 3: Energy Efficiency and non-pipe alternative programs should prioritize GHG emission reductions by being fuel neutral and accommodating consideration of beneficial electrification. - TNC*

- *Prioritization 4: Solutions should be realistically available to achieve GHG reductions in the short term, and geared toward their best use. - JC - CS et al.*

- *Prioritization 5: Prioritize tools that can be implemented in the near term to protect customers. – NWEC*

- *Prioritization 6: Focus on protecting customers rather than preserving utility gas customers and allowing for system growth. - NWEC, TNC, and JC - EC et al.*

- *Prioritization 7: LMI-targeted electric heat pump deployment programs that bring resiliency co-benefit of cooling. - Multnomah County and JC - Mayoral*

Utility, Gas Industry, and Large Energy Customers

- *Prioritization 8: Regulatory tools should prioritize near term natural gas decarbonization efforts to meet CPP targets. - NWN*

- *Prioritization 9: Exercise caution and avoid hurried decisions in this time of heightened uncertainty and transition - JC - NWGA et al.*

- *Prioritization 10: Programs to help customers should be flexible, be allocated funds, and focus on low income and energy burdened customers. - CNG*

- *Prioritization 11: Protect customers, in part by protecting the viability of gas utilities to accomplish other GHG emission reduction goals. - NWN*

Stakeholder Recommended Next Steps

Staff heard stakeholders express a desire to see some explicit next steps and provided input about what those next steps could be.

NWN recommends and CNG stresses the PUC open a docket to address CPP compliance and cost allocation. CNG states the investigation should carefully consider the role of sending appropriate price signals. AWEC adds that the principles of cost causation should be maintained in rate spread approaches.

Avista, AWEC, NWN and JC - CS et al. describe the need to conduct an Oregon specific electrification study and provided details about what the study should include. This has also been referenced by other commenters as a beneficial electrification study.

CUB identified topics it had expected this investigation to investigate, which Staff believes can inform next steps. These include "no pipes solutions; line extension reform; useful lives and depreciation curves; discouraging incentives to switch from electricity to gas; reallocating investment risk; and fuel switching."

Staff is not opining on Stakeholder Recommended Next Steps but includes them here as part of the feedback received from Stakeholders and sees this as valuable information for the PUC to consider.

3 KEY FINDINGS, ISSUES, AND STAFF ANALYSIS

The compliance modeling, stakeholder dialogue, and discussion around regulatory tools in the Fact Finding led to several findings:

- Stakeholders bring **increasingly divergent approaches** to emission reductions, namely either limiting gas expansion or developing gas supply decarbonization innovations.
- CPP compliance **costs and risks** to gas customers from gas utilities' compliance actions range from manageable to rather substantial by 2029, depending on the customer and their existing level of energy burden.
- CPP **compliance and decarbonization issues** that PUC activities will need to address are much better understood.
- A host of **regulatory tools** are available to shape and manage the policy risks of various compliance pathways for gas utility decarbonization and the PUC most likely has sufficient authority to implement them.
- A number of potential regulatory tools identified in this Fact Finding would require an optimization across the energy system, rather than a focus on a single fuel (i.e. natural gas or electricity). Implementing such tools would require work across a variety of dockets and utilities over the next decade. For these reasons, these tools would require an unprecedented degree of internal and external **coordination and additional resources**.

3.1 DIVERGENT APPROACHES

Broadly speaking, two camps have emerged regarding the preferred approach to gas utility decarbonization. One group generally highlights the risks of gas system expansion and advocates to reduce or switch energy use away from the Oregon gas system. An opposing view generally proposes solutions that leverage the existing gas system through the accelerated deployment of gas decarbonization innovations such as methanated hydrogen and gas-powered heat pumps. This Fact Finding directly experienced this tension across the analysis and comments.

These divergent pathways for the gas industry are often described as being in opposition to each other. Although the Fact Finding confirmed this to largely be true, Staff finds that some combination of choices – between encouraging low-to-zero carbon gas technologic advances *in conjunction* with regulatory

actions that moderate future gas customer and infrastructure growth – may best balance among the various technology, cost, and regulatory risks associated with meeting the state's near-term GHG emission targets.

3.2 Modeling Costs & Risk

The structure of the NGFF allowed utilities and stakeholders to explore a wide range of possible compliance scenarios. As a result, participants were able to glean an initial understanding of the possible impact of various pathways, explore sensitivities, and begin the process of stress testing the reasonableness of underlying assumptions put forth by both utilities and various stakeholders.

As a foundation for all other analytic inquiries, Staff asked the gas utilities to model how they would comply with DEQ's CPP. Each utility modeled three overall CPP compliance scenarios (base case, high innovation, and accelerated electrification) with multiple sensitivities. The purpose of the modeling was to understand more about the cost and timing of the strategies the companies were contemplating to meet CPP GHG emission targets. By broadly understanding how utilities might comply and the associated costs and timelines for different strategies, the PUC, Staff and stakeholders might better understand where, when, and which regulatory tools might be used to mitigate costs and risks.

There were two general points of agreement:

1. Gas utilities will need to take significant near-term action to decarbonize: "Business As Usual" growth and operations of the system result in emissions exceeding the 2035 compliance targets.
2. Any compliance pathway will very likely increase the costs of energy service for all categories of customers over the next decade.[10]

3.2.1 Scenarios as Compliance Pathways

The gas companies were asked first to model how they might envision complying with the CPP, and then to consider a set of sensitivities, which were intended to stress test the company's proposed pathway. These sensitivities tested decarbonized gas availability, decreases in the number of customers, a more aggressive policy environment, and a reduction in availability of alternative compliance mechanisms. The gas companies were further asked to model scenarios with high electrification and high levels of support for innovation as different scenarios. A summary of the sensitivities and scenarios are in Table 6. Full descriptions can be found in Appendix A.

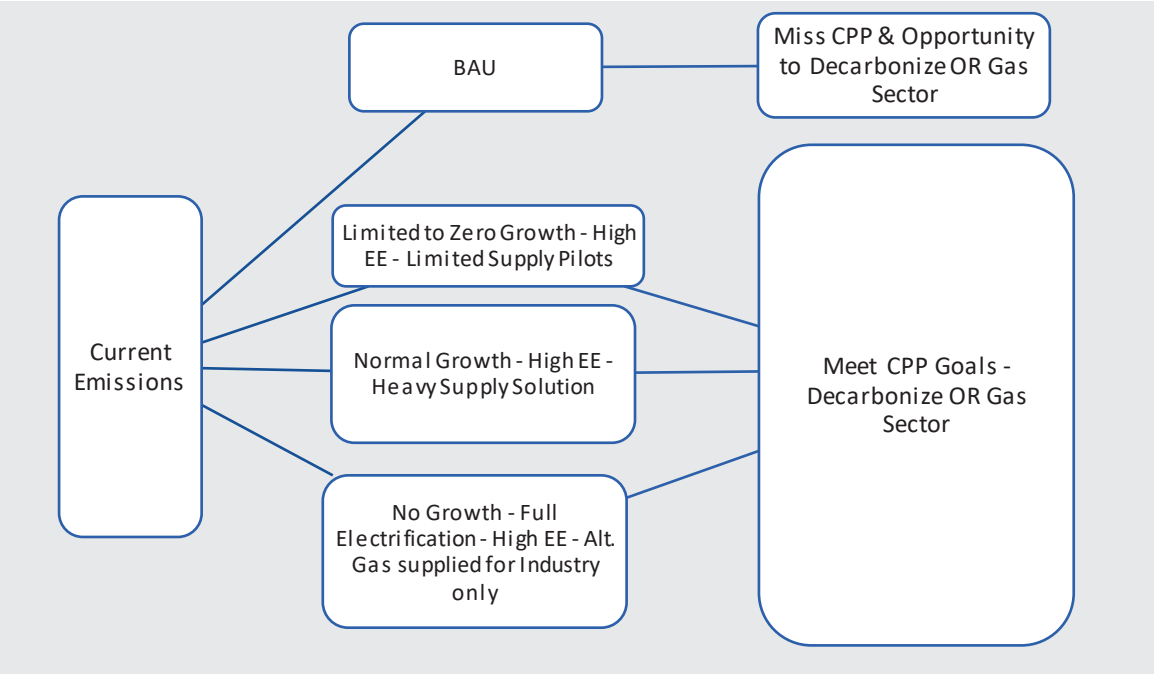
[10] As the only outlier, NW Natural's base case modeling actually projected slightly lower residential customer bills in 2050.

Table 6: Scenarios and Sensitivities

Scenarios	Base Case Scenario	Utilities model what they see as most optimal compliance pathways
	Alt. Scenario 1 – Innovation / Electrification / SCC	Modeled a Production Tax Credit for green hydrogen and syngas before 2026, use of higher Social Cost of Carbon, and high electrification of buildings
	Alt. Scenario 2 – Delayed innovation / Accelerated Electrification	Lower energy efficiency (EE) technology adoption curves, limited availability of RNG, and very rapid electrification of existing customers
Sensitivities	Declining Customer Counts	Modeled sensitivities that consider zero and negative customer growth
	Aggressive Timeline	CPP targets are advanced to align more closely with HB 2021: CPP targets 45% below baseline by 2030, 80% below baseline by 2040
	No CCIs	Modeled impacts of removing CCI compliance options
	Restricted RNG	Applied constraints on assumptions about the availability of RNG to meet emission reduction goals

The scenarios represent factors that are outside utility control, such as market and policy assumption variations. Scenarios combined with sensitivities test how well compliance pathways respond when market and policy factors differ from what was thought to be most likely as represented in the base case. The various scenarios modeled produced different compliance pathways. The uncertainty in costs, performance risks, and availability of resource options for each pathway to decarbonize has raised many more questions to be addressed to ensure the planning and decision-making process supports the identification of the least-cost and least-risk approaches to future GHG emission compliance. While the gas companies, stakeholders, policy makers, and regulators must chart a pathway to meet the CPP requirements, technology costs and performance remain highly speculative. The analysis from the NGFF, while informative, made it clear that more robust modeling and rigorous vetting of resource assumptions within IRPs would be required to make informed assessments about least-cost, least-risk paths for compliance.

Figure 3: Compliance Pathways



3.2.2 Lessons on Costs and Risks from Scenarios

While the modeling showed a general trend of increased ratepayer bills attributable to CPP compliance, it also often provided a wide range of results from which trends were difficult to detect. All parties agreed that the rigor and analysis that comes with a full IRP would be needed for more definitive modeling conclusions.[11] However, there were still many important learnings gleaned from the Fact Finding that we continue to find playing out in various dockets.

Perhaps more than anything, this exercise afforded stakeholders an opportunity to highlight concerns and challenge assumptions that will inform future IRPs.[12] Most notably, future IRPs must include rigorously vetted assumptions, and alignment with Staff and Stakeholders on the following topics to help assess least-cost/least-risk compliance strategies.

- Cost, feasibility, and ratepayer impacts of CPP specific compliance strategies;
- A need to understand the interdependency of the gas and electric systems in terms of costs and emissions that result from policies that shift load away from gas;
- The necessity to include transport customers in CPP compliance activities;.
- Costs of non-compliance, while not modeled, drives understanding of risk in future planning;
- Assumptions about the availability and cost of RNG;
- Cost, availability, timeline, and highest value use of hydrogen;
- Consistent modeling approaches for energy efficiency and associated avoided costs;

[11] The IRP presents a utility's current plan to meet the future energy and capacity needs of its customers through a "least-cost, least-risk" combination of energy generation and demand reduction. The plan includes estimates of those future energy needs, analysis of the resources available to meet those needs, and the activities required to secure those resources. *See* https://www.oregon.gov/puc/utilities/Pages/Energy-Planning.aspx.

[12] *See* Appendix B on Suggested changes to IRPs.

- Commercial readiness of proposed approaches (e.g. gas heat pumps);
- Data informing cost, benefits, and modeling guidance for beneficial electrification; and
- Load forecasts

Base Case

The Fact Finding's base case scenario was presented by each utility in September 2021 and represented a starting point for analysis.[13] Each base case reflected the gas utilities' preferred compliance strategies for residential, commercial, and industrial customers, given their most recent planning and what was understood about the CPP rules prior to adoption.

In the base case scenarios, annual ratepayer bills increased in the near term and showed a range of outcomes.[14] The estimated ratepayer bill increases varied across companies, customer types, and the assumptions made about future technology advances. Additionally, the rate and direction of ratepayer bill increase changed in later years of the model. CPP compliance costs to gas customers range from single digit percentages to rather substantial by 2025, depending on the customer and choices in the utility modeling. Figure 5 and Table 7 illustrate the estimated ratepayer bill impacts over time.[15]

Figure 4: Annual Ratepayer Bill Impacts in Base Case

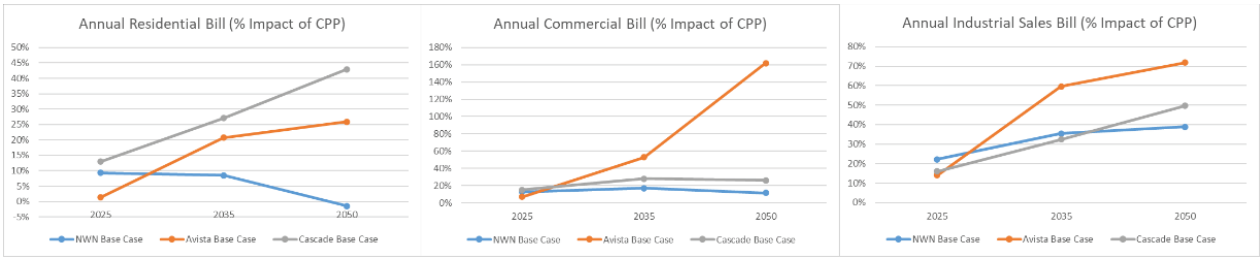


Table 7: Trends in Estimated Ratepayer Bill Impacts over Time

	2025			2035			2050*		
Util.	Res.	Com.	Ind.	Res.	Com.	Ind.	Res.	Com.	Ind.
AVA	1%	7%	14%	21%	53%	60%	26%	162%	72%
CNG	13%	15%	16%	27%	28%	32%	43%	26%	50%
NWN	9%	17%	22%	9%	17%	35%	-2%	12%	39%

*AVA and CNG only go to 2040 so those values were used in place of 2050

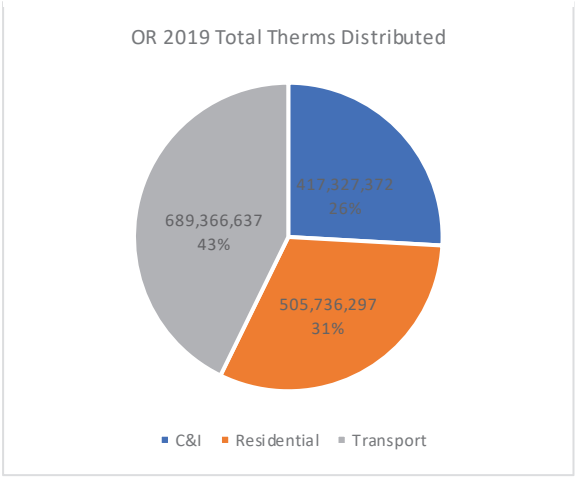
Transport Customers

Transport customers are customers that pay Oregon's gas utilities to transport gas to their location, but that pay a gas marketer, not the gas utility, for the actual gas commodity. However, it is the gas utility that is a regulated entity under CPP and is the entity through which transport gas emissions are regulated.

[13] *See* NGFF Workshop 3 presentations and link to modeling materials available on Oregon PUC's Natural Gas Fact Finding website – https://www.oregon.gov/puc/utilities/Pages/EO-20-04-UP-FactFinding.aspx.
[14] Avista notes that its compliance cost had been added to the price per dekatherm of natural gas available as supply into the Company's system and may not be indicative of actual rate spread.
[15] *Ibid.*

As can be seen in Figure 6, which simplifies customers into three categories, Transport customers accounted for over 40 percent of total therms distributed in 2019. With the adoption of CPP rules, the gas utility is now accountable for this large portion of emissions. This creates a situation in which the regulated gas utilities will need to consider developing more programs and activities aimed directly at reducing transport customers' GHG emissions and ways for those customers to pay for those programs.

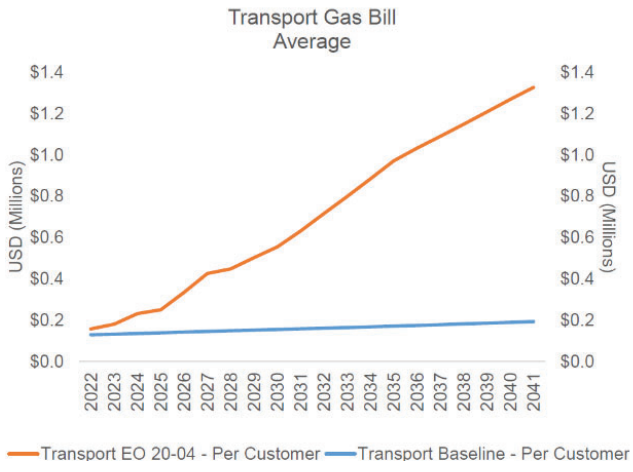
Figure 6: 2019 Total Therms Distributed



The regulated charges that transport customers pay to a gas utility represent a small portion of their total gas costs.[16] The additional cost to transport customers from their regulated utility for CPP compliance, on a $/therm basis, appears large on a relative basis as it is only compared to what transport customers pay now to the regulated gas utilities, which is the cost of moving their gas. It is important to note that rate spread determinations have not yet been established and how compliance costs would be spread across all customers has not been determined.

However, as an imperfect way to try to understand CPP compliance for transport customers, Staff pulled from the utility modeling how an evenly spread $/therm could manifest. As an example, Avista modeled price impacts to transport customers in its base case as seen in Figure 7. Transport customers see an increase in the average ratepayer bills they receive from the gas company, which reflects the increased cost of compliance per therm over the time horizon. Understanding how compliance costs could be spread is an open and unresolved issue that will need to be further explored in future cost recovery dockets. Additionally, transport load, as well as associated emissions and compliance costs,

Figure 7: Avista Base Case Transport Ratepayer Bill Increases due to CPP



[16] When representing the CPP compliance ratepayer bill impacts to these customers as a percent of the ratepayer bill impact, one only captures the increase to what transport customers pay to regulated gas utilities. It would not accurately represent the percent increase because it would not include the cost of the gas itself and the percent increase would appear very high, as compared to the total ratepayer bill paid to the regulated gas utilities.

have not previously been addressed in IRPs and will need to be captured in future gas IRPs.

Renewable Natural Gas

Assumptions about RNG (biogenic, hydrogen, and synthetic methane) costs and availability was also a topic of interest. Utilities modeled RNG use for compliance in all scenarios. Given the nascent market for RNG of various types, the use of RNG as a compliance strategy creates uncertainty and will require additional analysis of RNG costs and availability in future IRPs.[17] By 2025, the utility models projected RNG costs ranging from about $6/dekatherm to $12/dekatherm and these costs are assumed to decrease at different rates after 2025. For comparison purposes, natural gas is currently trading in a range of $3 to $5 per dekatherm.

Each of the three utilities came up with different assumptions about how much RNG they would be able to secure over time. These varying assumptions made it difficult to generalize about the costs and availability of RNG, as well as the impacts on future ratepayer bills. However, the use of neutral third-party market information about the RNG market and other nascent compliance solutions and technologies should provide a way to reduce uncertainty around compliance costs and risks in future IRP analyses.

Declining Customer Counts

Finally, modeling scenarios with declining customer counts provided limited insights. This may be due to inconsistencies in how each company modeled assumptions about how to handle the relatively fixed costs of existing infrastructure given a shrinking customer base. For example, Cascade's modeling showed the ratepayer bill impact from declining customer counts to be virtually unchanged when compared with its base case. Avista's model showed customer costs decreasing significantly in its declining customer count scenario when compared with its base case. Meanwhile, NWN's model showed a substantial increase in customer costs under its declining customer scenario. This reinforces the need to refine and standardize how such scenarios of declining customer counts should be modeled in future IRPs. The Table 8, summarizes the modeling results by scenario and sensitivity. More information on modeling results can be found in Appendix A.

Modeling Electrification

There was substantial disagreement about the consideration of electrification in the modeling. Staff provided initial electrification modeling direction in the Alternative Scenarios, and utilities followed with feedback on the challenges of this modeling. At stake were issues regarding what costs to include, how to assess ratepayer bill impacts, and concerns about reliability. Staff notes there is significant room for improvement

STAKEHOLDER INSIGHTS

MODELING ELECTRIFICATION

The costs of electrifications were not included in utility modeling, are unknown, and need further study - NWN *and JC – NWGA et al.*

Utilities modeled their ability to comply with CPP without relying on electrification - *NWN*

Load shifts from gas to electric could bring reliability risks in peak times - *Avista*

Reliability concerns are not supported and switching resistance heating to electric heat pumps would largely address load concerns – *JC – CS et al. and JC - MCAT*

Electrification might take longer than stakeholders who support it realize – *Avista*

Even swift moves toward electrification [of the gas system] take time to implement and [electricity] reliability concerns can be addressed in long-term planning – *JC – CS et al. and JC – MCAT*

[17] *See* RNG modeling recommendations for IRP in Appendix B.

in electrification modeling and that the electrification modeling for this fact finding is missing important cost and reliability elements.

Table 8: Scenario Modeling Summary

Scenario	Results – high level summary
Base Case	Generally, compliance with GHG emission regulations resulted in a range of both increased and decreased ratepayer bill impacts. The source of those ratepayer bill changes varied by company and compliance strategy. There is a lot of variation in the models, which reinforces the need to look at these issues more closely in the context of a planning document such as an IRP.
Restricted RNG	Restricting RNG had mixed results – NWN modeled increased RNG prices with the restriction, resulting in higher compliance costs compared to base case. Avista and Cascade reduced how much RNG was used for compliance, which reduced their overall cost of compliance compared to their base case scenarios.
Declining Customer Counts	NWN modeling showed customer declines result in increased compliance costs above those of its base case as the years progressed. Avista compliance costs decreased with declining customers and Cascade saw costs remain almost identical to its base case.[18]
Aggressive Timeline	NWN costs increased in the middle years of the model run but the difference between this scenario and the base case shrank as they approached 2050. Avista and Cascade's aggressive timeline model runs showed compliance costs consistently higher than in their base cases for all customer types.
No CCIs	All companies showed that the inability to use CCI's would result in higher compliance cost than in their base cases in the early years. But by 2050 the three utilities' modeling runs arrived at different conclusions with NWN's annual compliance costs continuing to outpace compliance costs in its base case, while Avista's cost differential was shrinking, and Cascade's annual compliance costs were the same as in its base case.
Alt. Scenario 1 - Innovation	Cascade's model resulted in ratepayer bill impacts that were lower than in their base case. Avista's modeling summary showed zero change in ratepayer bill impacts, but the workbooks showed negative ratepayer bill impacts for all customers except transport, and then compliance cost increases similar to those found in their base case. NWN's ratepayer bill impacts for the scenario increased significantly due to high electrification-related customer declines, which resulted in costs not tied to energy use being spread over many fewer customers (a 318% increase in non-energy charges in 2050). There was no increase in hydrogen usage on NWN's or Avista's system because the high electrification rates reduced or eliminated the need for fuel 'innovation.' Hydrogen usage was significantly decreased as a solution for Cascade when compared to its base case. For Avista, this scenario saw its transport customers pay an increasing share of the utility's compliance costs as the utility's retail customer count declined.

[18] Avista noted in their Comments to the Draft Report that their costs in scenarios with declining customer counts erroneously omitted ratepayer bill increase customers would face as fixed costs are distributed over fewer customers. This omission affected all high electrification and customer decrease scenarios. *See* Avista June 3, 2022, Comments in UM 2178.

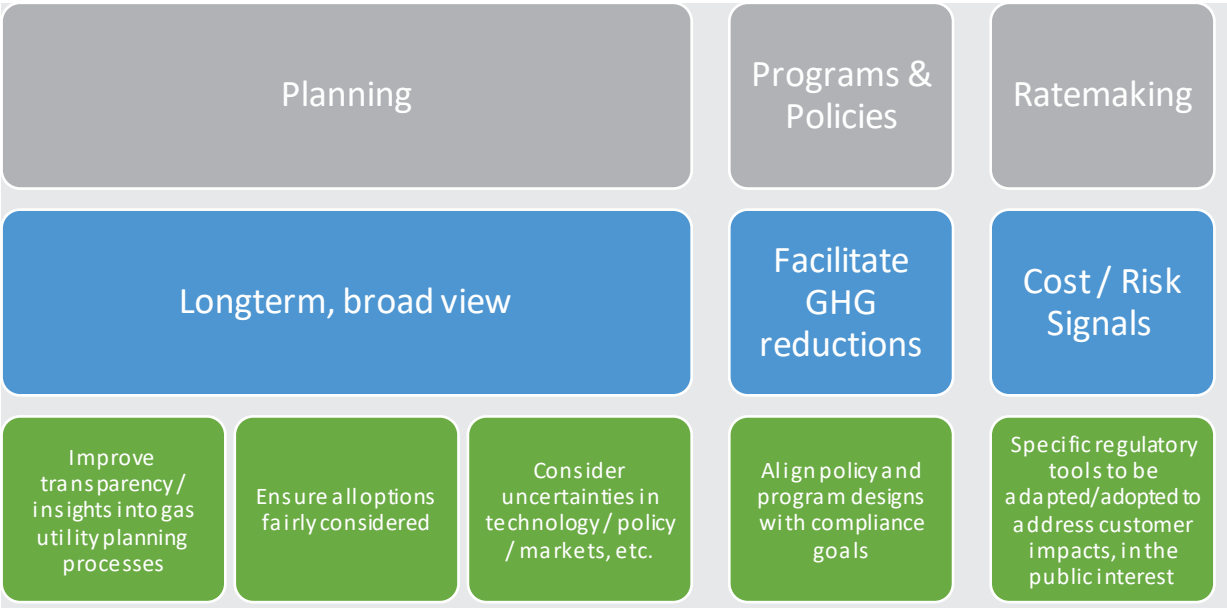
Alt. Scenario 2 – Accelerated Electrification	Like Scenario 1, Cascade modeled ratepayer bill impacts that were lower than their base case. Avista's summary showed zero ratepayer bill impacts, but the workbooks showed negative impacts in 2025 and then similar increases to the base case by 2035. NWN modeled the most aggressive electrification assumptions, resulting in a scenario that showed a significant drop in customers on the system and a 405% increase in residential bills by 2050. NWN also showed a moderate amount of industrial EE around 2035 and the use of banked allowance credits collected before 2042 for CPP compliance in the 2040s.

3.3 Regulatory Tools

In this proceeding, Staff, stakeholders, and utilities, led by the Regulatory Assistance Project (RAP), explored regulatory tools that could be used to address the customer impacts while meeting CPP targets.

Staff relied on a framework provided by RAP (summarized in Figure 8) to organize categories of tools and explore the benefits and tradeoffs associated with the different tools. These categories include three types of tools: planning, programs, and ratemaking. Additional information about these tools can be found in workshop 4a materials.[19]

Figure 8: Categories and Goals of Regulatory Tools



Staff believes current PUC authority is sufficient to apply all of the regulatory tools discussed in this report in the categories of planning, programs, and ratemaking as they are already being or have been implemented in some shape or form. These tools can support any number of CPP compliance pathways. However, some of the tools require new resources (e.g., reports, staffing, etc.), enhanced understanding

[19] See Docket No. UM 2178 September 24, 2021 Workshop 4a at:https://edocs.puc.state.or.us/efdocs/HAH/um2178hah101818.pdf

of costs and risks, and a coordinated, strategic focus to optimize decisions across Oregon's entire energy system, not just a single fuel type.

4 STAFF ANALYSIS AND RECOMMENDATIONS

The compliance modeling, workshops, and stakeholder input gave Staff an excellent set of raw materials from which to analyze costs, risks, and implementation options. The analysis and considerations below are meant to serve as an initial guide into the application of the identified regulatory tools.

Staff believes compliance with the CPP will very likely increase costs to all customers in the near-term and the modeling suggests it may have differing impacts. The extent of rate impacts depends upon the type of customer, compliance strategies deployed, and gas company characteristics.

While utility modeling showed a range of customer impacts from CPP compliance, in the absence of some form of intervention, the greatest burden from any increased ratepayer bills will likely fall to those already experiencing high energy burdens. All stakeholders involved in the workshops expressed concern about the potential impacts that will result from further burdening low-income and other at-risk customers. Further, the risk is not limited to gas customers. Initial analysis and research point to electrification costs, for either new or existing gas customers, spilling over into ratepayer impacts on electricity customers as well.[20]

The rate pressure risk grows beyond just the increasing cost of compliance for the existing system. Customer migration to the electric system, due to any number factors, spreads the cost of gas infrastructure over a smaller customer base. The potential for a feedback loop emerges, where a shrinking customer count potentially accelerates cost pressures, which further motivates those customers that can leave to do so. This problem also calls into question annual expansion of the gas system, as each new customer not only brings increased CPP compliance obligations, but also more gas infrastructure for future ratepayers to cover.

To understand this possible feedback loop better, Staff conducted its own investigation of residential customers' propensity to connect or disconnect from the natural gas grid.[21] Our research into the elasticity of residential demand confirmed two things: 1) Decisions to depart the system happen only after sustained price increases and generally lag those increases by two to three years, and 2) Cost increases will be felt more acutely by energy burdened customers because their options to respond to price signals are limited. Communications about the permanency of CPP compliance costs and Oregon's commitment to decarbonization may have an impact on the lag in gas consumer decisions.

Utility modeling confirmed that there could be significant cost impacts to commercial, industrial, and transport customers, not just residential customers. In short, CPP compliance has the potential to create rate pressure risks that could exacerbate energy burden issues for many types of customers. In light of this, Staff recommends regulatory tools that mitigate near-term price increases, limit long-term risks, and fairly manage any transition to new technologies. Potential solutions are discussed below, organized around various themes.

[20] Gridworks Central California Pilot of CPUC. https://gridworks.org/2021/09/lessons-learned-so-far-in-targeted-building-electrification/.

[21] See Appendix D – Elasticity.

4.1 Protecting Customers with Limited Options

Stakeholders identified two types of customers especially at risk from higher costs because they lacked the ability to easily substitute away from the natural gas system. Those two groups were low-income residential customers and businesses reliant upon gas for specific end-use processes. For low-income customers, higher costs create and increase an unavoidable energy burden. Some Oregon businesses have limited-to-no-economic substitutes to gas use for processes like emissions control technologies, outdoor heating for nurseries, and process heat to meet food safety standards. Tools that provide targeted mitigation of certain ratepayer bill increases, without hindering progress toward compliance, would be of high value to the process of gas system decarbonization. One such tool that has emerged since the Draft Report was published in April 2022, is the U.S. Inflation Reduction Act (IRA). Most notably for this section, the IRA has a generous set of rebates, via the High-Efficiency Electric Home (HEEH) Program, for low- to moderate-income households (i.e., ≤ 150 percent of Area Median Income), including up to $8,000 for electric heat pumps. Working with the administrator of these funds in Oregon to prioritize the use of IRA rebates for the gas companies' most vulnerable residential customers would go a long way toward protecting customers with limited options as the gas system seeks to decarbonize.

STAKEHOLDER INSIGHTS

PROTECTING CUSTOMERS

LMI-targeted deployment of electric heat pump deployment brings resiliency co-benefits of cooling - *Multnomah County and JC - Mayoral*

Focus on customer protections, not utility incentives - *NWEC, TNC, and JC - EC et al.*

Exercise caution and avoid hurried decisions in this time of heighten uncertainty and transition - *JC - NWGA et al.*

Protect customers, in part by protecting the viability of gas utilities to accomplish other GHG emission reduction goals. – *NWN*

Prioritize near term implementation of tools that protect customers – *NWEC*

Identify options for accelerating amortization schedules - *JC - EC et al.*

Deny rate recovery for investments in unproven technologies - *JC - EC et al.*

Implement rate class policies (e.g. HB 2475) - *JC - EC et al.*

HB 2475 is good, but insufficient protection - *Multnomah County*

4.1.1 Actions

To address a primary goal of this Fact Finding, Staff identified the following near-term actions that could help protect ratepayers from bill increases. Many of the comments from Stakeholders regarding protecting customers are also reflected in the priorities identified in Section 2.4, as well as throughout the NGFF report.

<u>Planning</u>

- Include estimated ratepayer bill impact analysis in IRPs to ensure transparency of trends and implications of compliance pathways as represented in portfolios.

<u>Programs</u>[22]

[22] The Draft Report previously included the recommendation: "Prioritization of incremental energy efficiency for CPP compliance that lowers natural gas usage but allows for customer count growth to continue at some level so as to avoid near-term outcomes that place upward rate pressures on those customers unable to exit the gas system and would therefore be forced to cover an increasing proportion of fixed costs." Staff decided to remove this action. The analysis in Cascade Natural Gas' IRP Update and the Commission decision on Line Extension

- Direct Energy Trust of Oregon (ETO or Energy Trust) and Community Action agencies to work with utilities to expand and target energy efficiency programs to low income and environmental justice communities to reduce energy burden and minimize anticipated ratepayer bill impacts.
- Assist in targeting IRA incentives and rebates, including but not limited to the installation of heat pumps as either a replacement for inefficient furnaces or in dual fuel configuration, for qualified low- to moderate- income households. Targeting includes securely providing data on customers to Oregon's IRA administrator(s) so they can prioritize rebates and incentives to these gas customers at risk from potentially elevated costs from ongoing CPP compliance activities and decarbonization investments.
- Ensure the gas utilities enroll transport gas customer into efficiency programs and that these customers pay their fair share relative to what other ratepayers pay for energy efficiency programs.

Rates[23]

- Include assessments of CPP compliance risks, like load growth from new customers, in prudency review of investments in the distribution system, in order to limit uncertainty around accumulation of long-term capital assets.
- Explore accelerated depreciation of unamortized investments in the gas utilities' next depreciation studies and provide a sensitivity analysis to better to understand rate impacts.
- Explore transport customer rate spread and rate design issues related CPP Compliance in general rate cases.[24]

4.2 Accessing Information and Proceedings

Stakeholders continually raised concerns about the complexity and resource commitment necessary to acquire key regulatory information and meaningfully engage in planning processes and other gas dockets. Much like the outcome of the PUC's 2018 Senate Bill 978 report,[25] community-based and business organizations interested in impacting PUC and utility CPP decisions noted the difficulty in achieving procedural inclusion across the spectrum of gas dockets.

Allowances in UG 435 underscored the several risks associated with continued system growth due to increased customer counts and that any associated benefits were more indeterminate and uncertain than previously thought in April of 2022.

[23] The Draft Report included the recommendation regarding the implementation of HB 2475 bill discount regime that will mitigate rate increases for energy burdened customers, in conjunction with aggressive energy efficiency." Staff removed this recommendation because it is currently being implemented.

[24] AWEC notes in its June 3 Comments that the principles of cost causation should be maintained in rate spread approaches.

[25] Oregon PUC. SB 978 – Actively Adapting to the Changing Electricity Sector. September 2018.

4.2.1 Actions

The following activities would improve stakeholder's access and awareness of gas utility's information and proceedings.

Planning[26]

- Facilitate stakeholder awareness of gas planning and CPP compliance related dockets through outreach coordinated by Energy Resources and Planning Division Staff, including, to the extent possible, how and when stakeholders could get involved.

STAKEHOLDER INSIGHTS

COMMUNICATIONS & ACCESS

Apply communication strategies to both gas and electric IRPs – *NWN*

Staff should produce manuals on effective participation – *JC – CS et al.*

Ratemaking

- Encourage parties interested engaging in rate cases to work with PUC's Administrative Hearings Division's efforts to expand eligibility for intervenor funding to fund participation in PUC proceedings.

4.3 Full Cost of Aggressive Demand Reduction – Load Shift Impacts of Electrification

Many stakeholders put forth ideas to rapidly reduce customer demand to meet CPP targets. These range from energy efficiency to Beneficial Electrification (BE).

Energy Efficiency Avoided Costs

The calculation and application of energy efficiency avoided costs is a key input in planning as it dictates what energy efficiency measures are deemed cost effective. Many stakeholders pointed to the important role of Energy Efficiency Avoided Costs (EE AC) in facilitating cost-effective GHG emission reductions. This included comments on the inclusion of CPP compliance costs, consideration of avoided gas infrastructure, consideration of climate impacts, and capturing non-energy benefits.

STAKEHOLDER INSIGHTS

EE AVOIDED COSTS (AC)

CPP compliance costs should be reflected in EE AC – *CNG and NWN*

AC in NWN's current IRP and AC filings will reflect CPP costs – *NWN*

EE AC should reflect avoided gas infrastructure costs – *TNC*

Include AC of climate impacts and non-energy benefits – *Multnomah County*

Beneficial Electrification

BE emerged as a key concept in UM 2178. The Regulatory Assistance Project (RAP) offers this description of beneficial electrification:

> For electrification to be considered beneficial, it must meet one or more of the following conditions without adversely affecting the other two: 1) Saves consumers money over the long run; 2) Enables better grid management; or 3) Reduces negative environmental impacts.[27]

[27] Farnsworth, D., Shipley, J., Lazar, J., and Seidman, N. (2018, June). Beneficial electrification: Ensuring electrification in the public interest. Montpelier, VT: Regulatory Assistance Project.

Multiple stakeholders pointed to the role electrification can play in near term emission reductions, the need to consider the likelihood of future electrification policies and actions, as well as equitable transitions via building electrification and associated co-benefits in the planning process. However, there was substantial stakeholder conversation about whether and how electrification should be considered as a strategy for reducing emission or a regulatory tool. For residential customers, this may include replacing gas fired furnaces, stoves, and water-heaters with those powered by electric heat pump and induction technology. For commercial customers, this may include swapping an existing gas-fired boiler for an electric boiler. Much is unknown about how to deploy BE in Oregon and what the resulting emissions and cost impacts might be to the electric system. Without careful analysis, planning, and execution, electrification has the potential to shift greater energy demand, peak risk, distribution costs, and reliability concerns to electric ratepayers. Most stakeholders acknowledged that more must be learned to understand the costs and risks from electrification so that with good planning, electrification could create system benefits.

To this end, Staff has engaged two consultants to begin exploring some of these topics. First, in LC 79, Synapse will be exploring ways to add electrification costs to gas IRP. The intent of the study will be to provide information for a conversation about the costs of electrification scenarios as compared to other decarbonization pathways. Second, through a generous grant from the US Climate Alliance, the Cadmus Group and Moment Energy Insights will conduct a technical study to inform **future** gas and electric IRPs with guidance on information requirements to facilitate joint utility decision making for least-cost, least-risk GHG emission reduction strategies.

STAKEHOLDER INSIGHTS

BENEFICIAL ELECTRIFICATION

Electrification policies as a compliance pathway eliminate customer choice - *JC - NWGA et al. and NWN*

Electrification can play a role in near term emission reductions, there is a high likelihood of future electrification policies and actions, and building electrification can be part of an equitable transitions due to associated indoor air quality co-benefits with direct impacts to Black, Indigenous, and other Environmental Justice communities - *SC, NWEC, Multnomah County, JC - CS et al., and CUB*

The biggest risk of potential customer decreases and associated rate pressure increase are not from gas company compliance costs, but rather from policies that would drive customer defection - *NWN*

While electrification is a preferred strategy for building decarbonization, the Commission should be prepared to protect LMI gas customers from anticipated negative cost impacts - *SC, NWEC, Multnomah County, JC - CS et al., and CUB*.

Conduct electrification study - *Avista, AWEC, NWN, and JC - CS et al.*

Create a timeline for building electrification, ensure targeting incentives for phased electrification and decommissioning of gas - *JC – MCAT*

The Commission should develop and provide direction about how gas companies should consider electrification in IRPs and analysis of stranded asset risk - *JC - CS et al*.

Electrification should not be considered as a 'regulatory tool' - *AWEC, NWN, Avista*

Sources cited to support electrification were too generalized or based on states with very different attributes and should not be relied upon for assessing electrification impacts and costs and, that because the case for electrification is unsupported, that inclusion as an option sends 'calamitous' market signals – *NWN*

4.3.1 Actions

Staff believes the following tools could be used to facilitate coordination between gas and electric utilities to enable analysis of customer costs, grid management, and emission impacts of load reduction associated with aggressive gas demand reduction.

Planning

- Develop marginal abatement cost curves for IRPs that identify all resources potentially used by utilities in CPP compliance, including currently non-cost effective energy efficiency.
- Request gas and electric utilities to develop and articulate individual electrification assumptions in future gas and electric IRPs that others can reference, based on feedback from Staff's two sets of consultants exploring different aspects of this issue.
- Work with electric utilities in future DSP filings to identify the cost elements, costing methodology, and estimated average distribution cost to electrify existing gas customers.

Programs

- Adopt a compliance cost of carbon and an enhanced risk reduction value into gas energy efficiency avoided costs that reflects CPP-related risks in order to accurately value and support energy efficiency opportunities and investments so as to encourage more aggressive demand reduction.

4.4 Decarbonization Policies as Key Determinants to Planning and Cost-Recovery

The GHG emission reduction targets with the passage of HB 2021 and the adoption of the CPP rules reshaped Oregon's energy policy landscape. Resource planning will increasingly require systems thinking across all utility types.[28] Utilities, stakeholders, and the PUC will need to consider the energy system on a whole and ratepayers as households. Key policy decisions can easily have consequential, systemwide feedback loops that span beyond an individual gas or electric utility's IRP or operations. Yet, understanding impacts across utilities proves challenging in Oregon's resource planning environment as interplaying impacts are not readily apparent or captured by the current planning processes.

Energy System Planning

Attempts to model interactions between gas and electric utilities as part of this investigation proved to be beyond the limitations of the NGFF modeling. It also showed how difficult it would be to analyze the costs and benefits of strategies that contemplate shifting heating loads from gas to electric in Oregon as part of a single fuel utility's IRP. To meet the state's GHG reduction targets and avoid unnecessary costs and reliability risks, the planning of both gas and electric utilities will require the sharing of key data in the near-term and the explicit recognition of planning interdependencies. Conducting least-cost, least-risk analysis to determine the best solutions to reduce GHG emissions requires the ability to

STAKEHOLDER INSIGHTS

ENERGY SYSTEM ANALYSIS

Energy system analysis should be a formal coordination planning process, beyond just shared assumptions and data - *TNC*

Develop combined IRP to identify how loads can be met most cost effectively, rather than how companies can best meet loads for their customers - *NRDC*

Gas utilities should collaborate with electric Distribution System Planning on joint planning efforts - *NWN and CNG*

Commission should task a third party to oversee a new joint planning process - *JC – CS et al.*

Joint utility planning scope should closely engage with electric utility to understand cost and reliability information to holistically understand costs of gas decarbonization - *NWN*

[28] Systems thinking is defined as a way of making sense of the complexity of a situation by looking at it in terms of wholes and relationships rather than by splitting it down into its parts.

understand trade-offs across different types of energy utilities (gas or electric) that share the same customer.

Stakeholders provided guidance about what energy system planning ought to include, some of which is referenced in the section on Full Cost of Aggressive Demand Reduction. However, there was general agreement that there is a need for a more holistic understanding of the interactions between gas and electric utility planning.

4.4.1 IRPs - Guidelines & Improvements, Assumptions, and Acknowledgement

Oversight of Oregon's gas utilities meeting DEQ's CPP requirements in a least-cost, least-risk manner is part of the PUC's broad mandate. Much of this oversight begins with the IRP development and review. The PUC IRP process requires utilities to produce plans that adhere to the PUC's IRP Guidelines, which were established in 2007.[29]

Stakeholders called out that there may be a need to revisit the IRP guidelines and providing input on how such a process could take place. They highlighted an interest in further discussion about the IRP elements proposed in Appendix B and where methodologies should be clarified and how assumptions should be supported. The issue of assumption validation and support was raised as part of the conversation around IRPs generally, as well as specifically with regard to decarbonizing supply. Comments regarding decarbonized supply are addressed in the following section regarding CPP investments and section 5.5 regarding Risk and Uncertainty.

STAKEHOLDER INSIGHTS

IRP GUIDANCE AND GUIDELINES

Update Guidelines to better capture emerging risk and uncertainty and require analysis of fuel switching – *Joint Climate Solutions Pre-June 3 Comments*

Open a separate proceeding to address changes proposed in Appendix B regarding IRPs, consideration of marginal abatement cost curves, and modeling assumptions - *NWN, CNG and AWEC*

Commission should work with Companies and stakeholders to develop a uniform methodology for converting IRP investments into estimated ratepayer bill impacts - *CNG*

CPP compliance should be acknowledgeable in IRPs. *CNG and NWN.*

CPP compliance should be mandatory, not just acknowledgeable. *JC - CS et al.*

Group method accounting means utilities do not track all assets or depreciable life and is not consistent with publicly available data from depreciation studies – *Avista*

Mapping may be a security issue – *NWN and Avista*

4.4.2 CPP Investments

Infrastructure and Line Extension Allowances

Infrastructure investments may be related to "safety or generally system reliability" or "customer growth or reliability related to growth." As noted above, system growth brings both additional GHG compliance obligation and infrastructure costs with long depreciation timeframes at risk from uncertainty around the number of customers. Many stakeholders commented on the need for heightened scrutiny of investments in gas infrastructure. Comments ranged from the value of using existing infrastructure for innovative fuel decarbonization options, to concerns about the risk of stranded costs associated with long term investments, as well as an interest in strategic system contractions with electrification.

[29] See Order Nos. 07-002 and 07-047.

During the course of this investigation, the topic of how to consider infrastructure investments was raised in Cascade Natural Cas's IRP Update, LC 76. In that docket, Staff noted that:

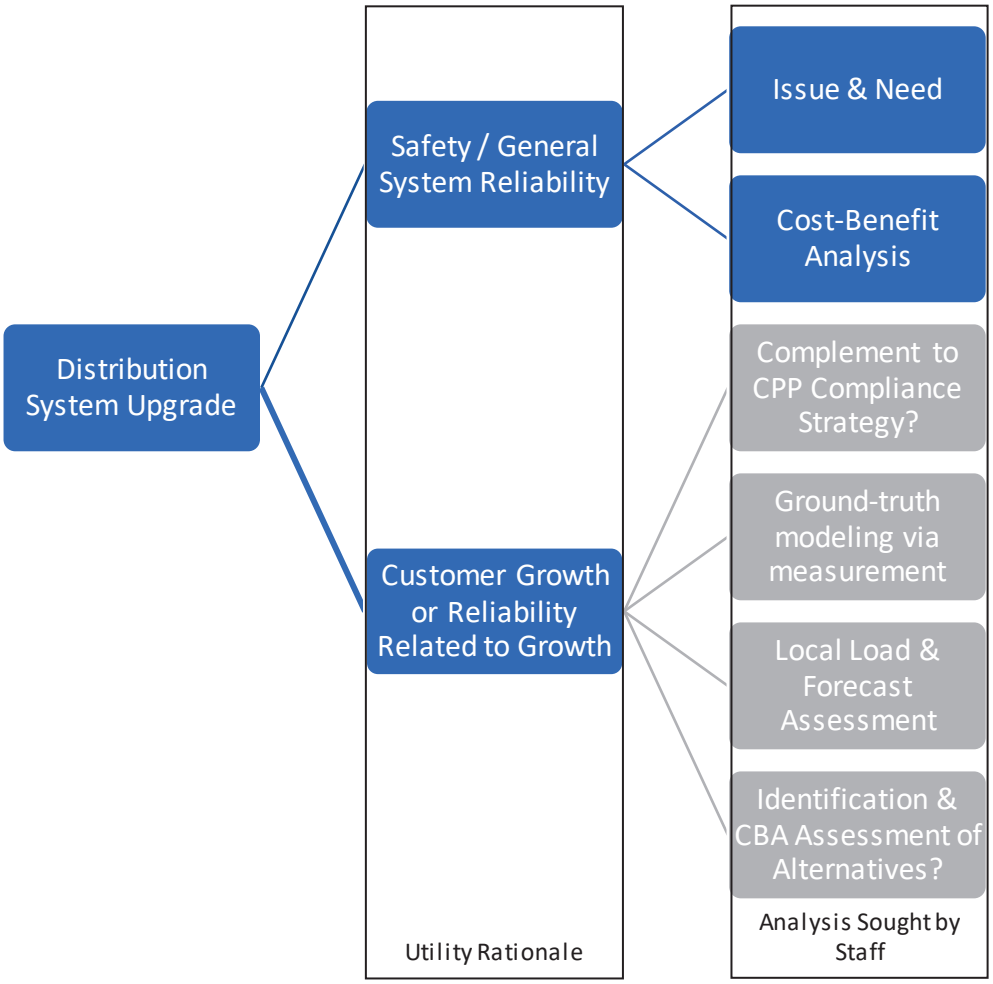
> [g]rowth in natural gas demand requires compensatory investments or actions to stay in line with the CPP's steadily declining trajectory of annual emissions. Determining the acknowledgability – and potentially even the prudency – of distribution upgrades now requires an understanding of the absolute need for any proposed upgrade *and* of how that upgrade fits within the company's system-wide CPP compliance plan, both in the near- and long- term.[30]

In that proceeding, CUB also called for CNG to begin piloting "alternative approaches to distribution system upgrades, like targeted energy efficiency and demand response, to more fully consider non-pipe alternatives in future resource planning."[31]

Staff's comments above presented a high-level framework for how Staff plans to assess gas LDC's proposed distribution system upgrades going forward with new criteria found in grey in **Error! Reference source not found.**9.[32]

[30] See LC 76 Cascade IRP Update, Staff Final Report, October 7, 2022, page 5.
[31] See LC 76 Cascade IRP Update, CUB Comments, July 22, 2022, page 4.
[32] See LC 76, Staff Comments, July 22, 2022, page 11.

Figure 9: *Staff's Proposed Approach in Cascade's IRP Update (LC 76) to Distribution System Project Analysis Post-CPP Adoption*



The grey boxes represent new criteria Staff proposed to use when assessing distribution system projects driven by future customer growth. Appendix F details specific information Staff would request on any growth-driven distribution system project in the future. As Staff learns more and engages with IRPs and stakeholders, we envision this framework evolving.

In addition to the infrastructure issues raised in LC 76, the issue of line extension allowances (LEA) was raised in NW Natural's rate case, docket UG 435. In UG 435, CUB raised CPP compliance obligation costs associated with LEAs for new customers and successfully argued for modifications to the PUC's LEA for NW Natural. In summarizing CUB's argument, the PUC noted that:

> CUB maintains that as the system grows, the costs to reduce emissions to comply with the CPP will also increase. * * * CUB asserts that * * * under a traditional paradigm adding new customers mitigates cost impacts, it is not true when new customers bring additional emission reduction costs to all customers. * * * [U]nder the CPP, NW Natural must reduce its greenhouse gas emissions by 50 percent from a historic baseline, but that as the system grows, NW Natural will have to reduce baseline emissions by 69 percent to accommodate the load growth and still meet the emissions reduction requirements. CUB argues that this increases the costs to existing customers. * * * CUB maintains that NW Natural is seeking to significantly increase its energy efficiency spending to reduce therms while also spending millions on capital investments through the LEA to increase therms. CUB asserts that therms from existing customers are different than those from new customers, because it takes decades to pay back LEA spending and it is more cost effective to not subsidize growth through the LEA than to pay incentives to customers to reduce usage. CUB contends that NW Natural is asking customers both to pay to grow the system and pay for energy efficiency incentives.[33]

STAKEHOLDER INSIGHTS

INFRASTRUCTURE

Immediately halt gas system expansion – *CUB, JC-EC et al., MCAT Joint, and OSPR*

Addition of new gas customers creates a stranded cost risk – *CUB*

NWN Disputes the claim that investments in gas infrastructure will lead to stranded assets - *NWN*

Support decarbonization polices that embrace innovation and make use of existing energy delivery infrastructure - *JC - NWGA et al.*

Investigate opportunities to "branch pruning" sections and replace with electrification - *JC-EC et al.*

LINE EXTENSION ALLOWANCES

Eliminate or phase out Line Extension Allowances for gas and revisit those that consider behind the meter upgrades supporting electrification- *JC-EC et al. JC-CS et al., TNC*

Growth of gas customers is unsustainable and incentives should align to protect customers associated with gas customer declines - *TNC*

LEAs should be based in sound economic and rate making principles (equity among rate

The PUC agreed with CUB on this issue and stated:

> The primary reason that NW Natural's current LEA is problematic is that it fails to take into account any of the costs that are brought to NW Natural's system from new customers associated with greenhouse gas emission abatement obligations placed on the company under the CPP. As shown in this case, those costs could be significant. In fact, the record demonstrates that those costs, when accurately accounted for, could result in no or negligible economic benefit being brought to the existing system from the addition of new customers.[34]

---

[33] *In the Matter of NW Natural Gas Company, dba NW Natural, Request for a General Rate Revision*, Order No. 22-388 at 34 (October 24, 2022)(fo*otnotes omitted*).
[34] *Id*., at 48 (footnotes omitted).

This PUC's decision signals awareness of increased risks of new customers and that this is an area worthy of heightened scrutiny in both planning and cost recovery dockets.

The PUC also provided guidance relevant to CPP compliance costs and customer growth in its decision Order No. 22-388. Guidance from this rate case will be valuable to analysis in the integrated planning process. Specifically:

- Conducting analysis of how each new customer addition changes the costs of CPP compliance for other customers; and
- Reviewing analysis supporting the company's assumptions about the expected time frame over which new customers will remain on the system, and how changing policy dynamics are factored in.[35]

Decarbonizing Supply

RNG, green hydrogen, and synthetic methane represent relatively new supply side additions to natural gas planning in Oregon. Being conservative in projecting costs and availability (both volumes and timing) of emerging solutions/technologies can help manage uncertainty related to the relative unpredictability of these variables, especially for nascent technologies like hydrogen and synthetic methane.

Stakeholders expressed concern about the assumptions of availability and cost of RNG as modeled by the gas utilities. Stakeholders noted discrepancies between the availability cited by the gas companies and that provided in a recent ODOE report, and further questioned the availability assumptions used by the gas companies. They indicate that biomass sources will be difficult to access and costly. These stakeholders urged Staff to provide heightened scrutiny to utility RNG modeling and assumptions.

If RNG and H2 are to be used, stakeholders suggested additional backstops and guardrails to help protect customers, including information about current and future development sites, confirmation that Renewable Thermal Credits can be used for CPP compliance, and close tracking of RNG market potential. It was also suggested that the PUC should not allow expansion of the gas system unless utilities can demonstrate their ability to acquire RNG and Green H2 in a cost competitive manner, and that they can demonstrate the safe use of H2 before approval of any rate-based incentives.

Alternatively, NWN argued that utility activity is a driver of markets, so we should be careful in assuming that general market reports reflect what is possible in the region. Further, both NWN and CNG support use of SB 844 to incentivize H2 deployment.

STAKEHOLDER INSIGHTS

DECARBONIZING SUPPLY

Only Green H2 should be modeled, conservative assumptions should be used regarding availability and cost, and RNG and H2 should be reserved for hard to electrify end uses. - *JC-MCAT et al., JC-CS et al.*

RNG commits customers to gas home heating equipment and eliminates opportunity to electrify - *NRDC*

Market adoption of RNG may be different across locations and demographics - *CNG*

RNG development activity and markets should be tracked closely, and all RNG must be CPP compliant - *JC - CS et al.*

Do not expand the gas system until utilities can demonstrate that RNG can be acquired in a way that is cost competitive and safe – *Multnomah County*

National or general assumptions about RNG do not reflect large utility influence on the market – *NWN*

SB 844 could be a tool for developing H2 – *NWN and CNG*

[35] See UG 435, Order No. 22-388, page 52.

Cost Recovery

The issue of cost recovery associated with CPP compliance was raised by several stakeholders.

NWN, CNG and AWEC expressed concern about limiting cost recovery options for CPP compliance and stated that ensuring adequate cost recovery was critical to maintain safety and reliability, and the ability to bring lower carbon fuels on to the system, like H2. They also expressed concern about connecting cost recovery with CPP compliance.

JC – MCAT *et al.* recommended the PUC deny cost recovery for high-cost and high-risk investments in unproven technologies.

STAKEHOLDER INSIGHTS

COST RECOVERY

Ensuring adequate cost recovery is critical for maintaining safety and reliability and cost recovery should not be limited to CPP compliance – *NWN, CNG, and AWEC*

Deny cost recovery for high cost, high risk investments in unproven technologies – *JC-MCAT et al.*

4.4.3 Actions

To meet the state's GHG reduction targets and avoid unnecessary costs and reliability risks, the IRP for both gas and electric utilities will require the sharing of key data and the explicit recognition of planning interdependencies, the inclusion and review of new information reflecting various supply and demand side compliance approaches, an expansion of data regarding distribution system investments associated with growth, and compliance costs and risks. To address these issues Staff identified the following applicable near-term actions:

<u>Planning</u>

- Make publicly available maps of the gas system overlaying depreciation and age data and include lists of infrastructure and associated depreciation schedules.
- In IRPs, gas utilities should support proposed growth-related distribution system planning investments with analysis and details proposed in Appendix F and ensure that modeling said investments allows them to compete comparably with other demand-side options and non-pipe alternatives.
- To inform utility planning, the PUC should contract with an independent third party (*e.g.*, consulting firm or regional non-profit like NEEA) on a regular basis to evaluate market trends around alternative fuel and low-carbon technology cost and availability and to analyze Pacific Northwest market adoption of decarbonization technologies that are central to any utilities' CPP compliance pathway.
- Staff to treat CPP compliance as an acknowledgeable element of any future gas IRP or IRP update.
- Staff recommends exploring in the future the use of the IRP guidance found in Appendix B. Staff will seek a waiver to adopt this new guidance where it conflicts with existing IRP guidance in Order Nos. 07-002 and 07-047 or existing GHG planning guidance in Order No. 08-339.
- In IRPs gas utilities should include or conduct similar analysis to that directed in Order No. 22-388 regarding two items. First, new customer addition costs and risks to existing customers for CPP compliance. Second, supply analysis regarding new and existing customer retention and how changing policy dynamics are factored in.

4.5 Robust Compliance Monitoring, Tracking, and Reporting

Each utilities' base case CPP compliance modeling relied on decarbonizing the fuel they provide through large amounts of RNG, green hydrogen, and/or synthetic gas. These supply-side alternatives to natural gas currently represent a significant part of each companies' compliance strategy. Notably, large-scale hydrogen availability at a reasonable price is necessary in less than 15 years.

Table 9: Alternative Supply Projections

Utility	RNG Supply Penetration by 2025[36]		RNG Supply Penetration by 2035	
	Volume (Dth/year)	% Of Deliveries	Volume (Dth/year)	% Of Deliveries
Avista	317,875	2%	2,932,134	40%[37]
Cascade Natural Gas	1,544,229	10%	6,673,003	26%
NW Natural	4,842,842	4%	8,399,503 (bio) 13,551,224 (H2)	23%

Many stakeholders believed the quantities and the timeline of availability put forth by the companies were not realistic. Further, they made the case that relying on these natural gas alternatives placed a tremendous amount of compliance and financial risk on the companies, and thus ratepayers. It allows for the continued expansion of the gas system with the promise of future low-to-zero GHG fuel supplies. To inform risk assessments robust monitoring, tracking, and reporting of trends from Oregon activities and the broader market will be necessary to inform compliance risk in planning dockets and rate cases.

Strategies reliant on solutions with high levels of uncertainty (*i.e.*, abundant, carbon-neutral, and low-cost synthetic methane) function amidst a backdrop of uncertainty: the risk of non-compliance with the CPP. The compliance regime for the CPP has already begun. In just over three years, the DEQ will close the first compliance demonstration window and assess fuel supplier performance, including the gas utilities.

CPP rules grant the DEQ broad discretion to impose penalties for enforcement.[38] While the DEQ has not yet announced how it will apply penalties, Staff's operating assumption is that the floor of any non-compliance penalty should be at least the cost of a CCI on a per metric ton basis. For the current three-year compliance period, the average cost of a CCI as an alternative compliance mechanism will be approximately $108/metric ton, unadjusted for inflation. However, stakeholders argued the cost of non-compliance should be double or triple the price of a CCI.

Regardless, imposing a penalty at the CCI price on a per metric ton basis poses a potentially sizeable, near-term, financial risk to the gas utilities. The table below attempts to characterize this financial impact should the utilities exceed their three-year emissions allowance by just 1.5 percent.

---

[36] RNG Supply Penetration refers to all renewable supply options, including biofuel, hydrogen, and synthetic gas.
[37] Avista noted in comments that it believes this value should 19.5 percent of deliveries. However, Staff notes that the value provided by Avista appears to be its 2030 value, not 2035, which is what the above table is intended to capture.
[38] OAR 340-271-0010.

Table 10: Potential Impact of Missed Compliance

Utility	3-Year, CPP Emissions Allowance[39] (Metric Tons)	1.5% CPP Exceedance (Metric Tons)	1.5% Exceedance in Gas Sales (Therms)	Potential 2025 Fine @ Avg. CCI $/Metric Ton		Comparator: *2020 Operating Expenses*
AVA	2,028,960	30,434	5,636,000	$3,286,915		$96,658,000
CNG	2,145,309	32,180	5,959,192	$3,475,401		$48,930,000
NWN	16,615,303	249,230	46,153,619	$26,916,791		$402,484,000

With this in mind it is worth noting that persuasive arguments could be made that avoidable fines should not be paid by ratepayers.

The resulting uncertainty and possible financial risk highlight the need for robust monitoring, tracking, and reporting of both the efficacy of compliance strategies and market developments informing the selected compliance strategy. For reference purposes, each gas utility put forth their preferred strategy to achieve compliance by 2025 in this docket. The table below summarizes each utility's preferred 2022 through 2024 compliance strategy by element.

Table 11: Total Aggregate Reduction for 2022 through 2024 Period by Strategy

Utility	Aggregate 3-Year, CPP Emissions Reduction Goal *(Tons Reduced From Baseline)*		Additional EE/DR			RNG			CCI		Other			Total
			%	Dth	Tons	%	Dth	Tons	%	Tons*	%	Dth	Tons	Tons*1
AVA	188,282		7%	251,710	13,985	12%	-	23,095	81%	153,521	2%	75,148	3,973	190,601
CNG	249,567		14%	164,500	34,801	9%	403,350	21,402	77%	193,364				249,567
NWN	759,354		14%	2,007,951	106,542	51%	3,657,331	386,279	35%	264,718				757,539
	Totals			2,424,160			4,060,681			611,603		75,148		

** - ton equivalent for CCIs*

**1 - Modeled totals may not equal the Aggregate 3-Year CPP Emission Reduction Goal.*

The emissions levels set for the first compliance window (2022 through 2024) require that the gas utilities accomplish what appear to be achievable emission reductions with all three companies making use of allowed CCIs to aid overall company compliance. Perhaps the two biggest near-term challenges will be their reliance on RNG and building the compliance-related infrastructure for the 2025-2027 time period. To this end, NWN is actively pursuing RNG projects, and both Cascade and Avista have indicated in their most recent IRPs that RNG is a resource they have begun pursuing and that the PUC should expect to see it in their forthcoming IRPs.

By comparison, the GHG emission reducing resources required by the end of the second compliance window (2025 through 2027) are substantially larger than the first compliance window.

As shown in Table 12, collectively Oregon's gas utilities will need by 2027:

[39] Calculated using the numbers in OAR 340-271-9000. Table 4.

- 61.6 million Dekatherms of additional avoided demand with energy efficiency and demand reduction,
- 30 million Dekatherms of biogenic RNG,
- 1.7 million CCI credits,
- 920,000 Dekatherms of hydrogen, and
- 300,000 Dekatherms of avoided demand with other programs.

Table 12: Total Aggregate Reduction for 2022 through 2027 by Strategy

Utility	Aggregate 6-Year, CPP Emissions Reduction Goal	Additional EE/DR			RNG			Hydrogen			CCI		Other			Total
	(Tons Reduced From Baseline)	%	Dth	Tons	%	Dth	Tons	%	Dth	Tons	%	Tons*	%	Dth	Tons	Tons
AVA	630,153	7%	835,252	44,156	19%	2,780,979	119,785	8%	919,771	48,624	64%	410,229	3%	377,496	19,956	642,751
CNG	812,939	12%	1,816,124	96,364	43%	6,600,449	350,220	0%	-	-	45%	366,356	0%			812,939
NWN	3,537,123	20%	79,987,893	701,017	38%	25,264,527	1,340,536	0%	-	-	42%	1,483,624	0%			3,525,177
	Totals		82,639,268			34,645,955			919,771			2,260,210		302,348		
	Additional from first compliance window		61,639,346			30,148,407			919,771			1,648,606				

With less than six years before the first GHG reduction requirements in the CPP must be met, the gas utilities and markets will need to move at an unprecedented scale and speed. To manage and mitigate ratepayer risk, the PUC will need to regularly assess and validate performance of the utilities' preferred compliance strategies so course corrections can be made quickly, if necessary.

While each utility is unique and must be afforded the space to choose how they meet CPP compliance, they all function within the same set of market and regulatory constraints. Staff found the divergent forecasts of technology progress and the market availability of alternatives in the utilities' compliance strategies somewhat perplexing and unhelpful overall given the market they share. This highlights the uncertainty that remains around utility compliance across three different companies with a rapidly evolving set of markets and technology. Given the time constraints of the CPP goals, Staff believes the IRP process of each utility individually assessing technology progress and forecasting alternative fuel availability may be inefficient and lead to counterproductive outcomes in planning to meet compliance needs.

4.5.1 Actions

To inform risk assessments, Staff believes the following tools would help the PUC and stakeholders monitor, track, and incorporate market trends and forecasts for alternative gas availability and costs.

Planning

- Host an annual presentation to Commissioners on CPP compliance, comparing forecasted versus actual emission reductions and CPP costs.

Rates

- Submit through the Purchased Gas Adjustment process, or other annual docket, an annual report on full CPP compliance costs.
- Explore linking the amortization of CPP compliance costs from deferrals to actual CPP performance. Should gas companies selected CPP compliance activities fall short of meeting a DEQ, 3-year CPP compliance demonstration window, PUC Staff should investigate the extent to which deferred CPP costs should be amortized in subsequent years.

4.6 Actively Incentivize or Facilitate GHG Emission Reduction Pathways

Gas utilities need to develop and deploy strategies to meet CPP compliance obligations. During the Fact Finding, stakeholders explored how the PUC processes could facilitate the deployment of nascent technologies to decarbonize fuels and improve energy efficiency, as well as exercising new policy direction to promote fuel switching to reduce natural gas use.

The PUC has existing tools at its disposal, like SB 844, which allows gas companies to receive financial incentives for GHG emission reductions activity costs that are outside their normal course of business. Other tools may need to be revisited to explore the boundaries of what is possible within them (*e.g.*, ETO energy efficiency programs).

Incentives and Pilots

The base case long-term compliance strategies of the utilities all rely on growing amounts of RNG, green hydrogen, synthetic biofuels, and new energy efficient gas equipment technologies. By doing so, these strategies mitigate the need for electrification and placing any limits on new customer hook-ups. However, the potential variance around the future cost, availability, and market adoption of new technology makes the efficacy of these compliance strategies uncertain.

Further, while every pathway – from renewable hydrogen to aggressive electrification – most likely requires piloting to achieve broad implementation, Staff cautions that any gas companies' pilots should avoid excessive financial risks to customers. Pilot projects – like Energy Trust's proposed Dual Fuel[40] pilot – require significant coordination across organizations but stand to benefit ratepayers from understanding the extent to which this strategy achieves cost-effective emission reductions.

[40] *See* Energy Trust 2023 Budget and 2023-2024 Action Plan, Dec. 16, 2022, mentioned in each utility action plan.

STAKEHOLDER INSIGHTS

PILOTS

H2 / CCSU pilots may be beneficial, but program costs should be fairly allocated between shareholders and rate payers – traditional ratemaking might not work – *AWEC*

Ratepayers should not pay for alternative gas pilots at the expense of leveraging proven technologies and innovation should be funded by investors, not ratepayers – *JC-CS et al.*

Pilots should not be used for gas heat pumps as doing so interferes with Energy Trust's analysis on potential, and NEEA is already doing work in this space – *CUB*

Gas utilities should fund ETO to conduct conservation potential study on how CPP emission reductions and costs of RNG affect cost effectiveness of energy efficiency; this would help inform whether NG heat pump pilots are appropriate at this time – *CUB*

Supports ETO training on gas and electric heat pumps – *NWN and CNG*

Public funds should not be used to promote gas heat pumps because of their relatively low commercial and technology readiness as compared to electric heat pumps - *CUB, JC - EC et al., JC - CS et al., JC - MCAT, NRDC, TNC*

STAKEHOLDER INSIGHTS

ROLE OF INCENTIVES

Eliminate subsidies or incentives that promote or support gas system expansion, gas heat pumps, or RNG - *JC - EC et al., JC - CS et al., Multnomah County, Zero Coalition and JC – Mayoral*

The role of PUC is to ensure compliance and protect customers, not provide incentives for utilities to comply with the law – *NWEC*

PUC should encourage gas companies to innovate to reduce emissions - *NWN, CNG, AWEC, and JC - NWGA et al.*

Support for innovation should only be for hard to decarbonize end uses *JC - CS et al.*

PUC has long history of not supporting customer-funded R&D, there is sufficient federal and private support for Green H2, and PUC should focus on directing utilities to do things they would not otherwise do, like electrification and limiting new hook ups – *NWEC*

Utilities drive market trends and the Commission should strongly encourage near-term investments in promising new decarbonization strategies - NWN

4.6.1 Actions

Staff finds the PUC's existing tools provide the flexibility to explore a range of CPP compliance strategies. Feedback from these projects – and from DEQ annual compliance reporting – will help inform planning and prudency determinations in the future.

The PUC remains open to new investments and pilots under SB 98 and SB 844. They provide space for experimentation and evaluation and, when paired with market research and regular evaluation, support the PUC's heighten awareness of and responsiveness to CPP compliance investments.

Planning

- Continue the use of SB 844 to as a tool for exploring emerging technologies that could be important to reaching 2050 targets, but that currently do not demonstrate cost-effectiveness because of their early-stage commercial or technological readiness.

Programs[41]

- Request the gas and electric utilities explore studying – between themselves and with organizations such as Energy Trust – the development of joint pilots where the coordination between the two utilities might result in better outcomes for customers (*e.g.*, for such things as Green Hydrogen production and Demand Side Management options such as dual-fuel heat pump deployment) and present their findings to the PUC before January 2025.

[41] The Draft Report previously included the following recommendation, "Direct Energy Trust to expand training vendors on heat pump technology through education and pilots and increase the marketing of heat pump technology on its website." Based on stakeholder comments and further research, this recommendation was deemed unnecessary.

4.7 Roadmap Summarizing Staff's Near-Term Recommendations

The regulatory actions identified through our Fact Finding effort may not reflect all the potential actions raised by stakeholders and available to the PUC. Stakeholders responded to Staff's list of near-term actions in the Draft Report and provided guidance about additional tools that are available to the PUC and regulatory tools they had hoped to have discussed as part of this docket.[42]

These included: a more explicit conversation about phasing out gas LEAs; more attention to Energy Trust policies to identify and remove barriers to gas and bulk fuel customers choosing to transition to more-efficient electric options; expanding low-income weatherization programs to allow for funds to be used for low-income electrification options and/or create a pilot program to encourage equitable electrification for LMI households; continuing and expanding current efforts to ensure robust low-income ratepayer protections; and exploring the value of pruning to strategically resize the gas system where it is aging, inefficient, or requiring significant and expensive upgrades.

CUB, in particular stated the docket should have included investigation of: "no pipes solutions; line extension reform; useful lives and depreciation curves; discouraging incentives to switch from electricity to gas; reallocating investment risk; and fuel switching."

These additional regulatory tools and issues are reflected above to help inform future investigations and to inform the PUC's work in relevant dockets. In particular, in

- IRPs, where Staff asks whether the company's resource strategy least-cost, least-risk in light of the obligations of the CPP;
- General Rate Cases, where Staff asks whether rates reflect prudent and reasonable costs, balance of risks and incentives, proportional allocation of costs and benefits of CPP compliance; and
- PUC oversight of Energy Trust of Oregon to ensure energy efficiency is fully leveraged as a significant part of every utility's emission reduction pathway.

STAKEHOLDER INSIGHTS

NEAR TERM ACTIONS

Phase out gas Line Extension Allowances - *JC - CS et al.*

Update Energy Trust policies to facilitate access to electric options – *JC-CS et al.*

Expand low-income weatherization programs to include electrification options - *JC - CS et al.*

Explore gas system pruning to strategically resize the gas system where it is aging, inefficient, or requiring significant and expensive upgrades - *JC - CS et al.*

Differentiate ratepayer bill impacts by LMI – *JC – CS et al.*

[42] Please see Section 2.4 and Appendix E for more details

Given this and the PUC's decisions and activities undertaken during the last half of 2022 (*e.g.,* UG 435 Order No. 22-388, LC 76 acknowledgement, and the Energy Trust 2023 budget) Staff's list of NGFF recommendations has evolved since the Draft Report was published in April 2022. The revised list is as follows.

Table 13: Roadmap of Near-Term Actions

Section 5 Analysis	**Recommendation**	**Regulatory Tool**		
		Planning	Programs	Ratemaking
Protecting Customers	Estimated Ratepayer Bill impact	X		
	Direct ETO to target programs to LI and EJ		X	
	Target IRA Incentives		X	
	EE programs to include transport		X	
	Assess CPP compliance risk in distribution system investments	X		X
	Explore rate impacts of accelerated depreciation in rate cases			X
	Transport customer cost of compliance in rate cases			X
Access and Info	Quarterly stakeholder Communications in UM 2178	X		
	RFA docket engagement through PUC AHD			X
Full Cost	Compliance costs into EE AC			X
	Develop marginal abatement cost curve	X		
	Utilities articulate electrification assumption in IRPs	X		
	Electrification info and data from DSP	X		
Decarbonization Planning & Cost-Recovery	Gas system maps with infrastructure age and depreciation information	X		
	IRPs include growth-related DSP investments details from Appendix F and provide analysis of demand-side options and non-pipe alternatives	X		
	Independent 3rd party analysis of key tech and market assumptions used utilities	X		
	CPP as an acknowledgeable item in IRPs	X		
	Exploring IRP guidance from UM 2178	X		
	Follow Order No. 22-388 guidance regarding customer growth and compliance costs	X		X
Monitoring, Tracking, and Reporting	Utilities host annual presentation to PUC on CPP compliance filings	X		
	Purchased Gas Adjustment includes full CPP compliance costs			X
	Explore linking CPP amortization to CPP performance			X
Incentivize GHG Reductions	Explore use of SB 844 for emerging technologies	X		
	Pilot or Joint pilots with electric utilities proposals by 2025			X

5 CONCLUSION

This investigation sought to establish an initial understanding of the impact of the CPP on the gas utilities and their customers and explore the regulatory tools available to achieve compliance while mitigating certain cost impacts. The timely modeling completed by each gas utility and the constructive engagement by dozens of stakeholders resulted in an initial analytic foundation from which to guide PUC activities, analysis, and decision making in both the near- and long- term.

Meeting the emissions targets in the CPP is the energy policy of the state. Collectively, Oregon's three gas utilities must find and secure approximately 1.2 million metric tons of GHG emission reductions by 2025. Further, the pressure for near-term emissions reductions increases greatly after 2025. By 2028, in less than six years, an additional 3.8 million metric tons of new GHG emission reductions must be secured. Solutions – be they supply oriented or demand reducing – must scale quickly in the near-term.

Modeling done by the gas utilities in this docket provided our first insights into the nature of the impacts of compliance with the CPP and existing barriers to assessing and mitigating energy decarbonization risk in planning more broadly. It is highly likely that most if not all CPP compliance strategies will come with increased costs and risks that must be monitored and tracked, and when appropriate, mitigated. If thoughtfully done, the transition to a decarbonized gas sector can create benefits and long-term cost savings for customers and the Oregon economy.

The issues identified by stakeholders and Staff and the suggested next steps are driven by the urgent need for action. Despite uncertainty around the efficacy and long-term cost trends of compliance tools, the pace of necessary emission reductions will likely require utilities and customers to assume increased levels of risk over the next ten years.

Feedback from both the utilities and other stakeholders throughout the process made it clear that this urgency is understood. Stakeholders agreed that regulatory tools should facilitate strategies that result in real reductions in GHG emissions and that they should do so in ways that seek to minimize costs and risks to protect customers. All stakeholders supported compliance strategies and associated regulatory tools that reduced gas use per customer. Staff believes that customers, especially low-income customers, are best protected with compliance strategies and regulatory tools that reduce compliance uncertainty at relatively low-cost in the near-term and maintain compliance flexibility.

Further strategy-specific regulatory tools that attempt to address uncertainty, costs, and risks associated with compliance also bring their own risks. As the utilities, stakeholders, and the PUC gain experience from implementation of tools and strategies for compliance in individual utility dockets over the next few years, it will also be important for Staff and/or the PUC to identify a future docket where a comprehensive dialogue can occur among all stakeholders around the collective efficacy of CPP compliance. A notable juncture to bring all stakeholders and utilities together for a group conversation on joint planning would be after 2023, when the first round of IRPs since the CPP adoption and HB 2021's passage are complete.

This report captures some of the regulatory tools that hold gas utilities accountable as they plan and pursue least-cost, least-risk options to reduce their GHG emissions by: increasing transparency, maintaining optionality, and enhancing engagement. Staff intends to apply these principles as it considers which tools to bring forward as it develops recommendations in IRPs and rate cases.

Appendices

6 APPENDIX A: SCENARIO DESCRIPTIONS

6.1 MODELING DIRECTION: DELIVERABLES, SENSITIVITIES, AND ALTERNATIVE SCENARIOS

A key component of the PUC's Natural Gas Fact Finding (NGFF, Fact Finding, or UM 2178) was the development of Compliance Models to establish a range of potential costs associated with achieving the goals of DEQ's Climate Protection Program (CPP). The development of this data served as the foundation for identifying and assessing which regulatory tools may be needed in the future by the utilities and the PUC to support the CPP and natural gas utility decarbonization.

The launch and completion of the utility Fact Finding modeling occurred before two key events: each utility's Integrated Resource Plan (IRP) and the finalization of DEQ's CPP in rules. Because of this, the utilities lacked the latest IRP information, the time and resources to run full IRP models, and complete certainty of important operational details. Thus, Staff informed all Fact Finding participants that while the accuracy of any modeling cost estimates would be limited, the information would be valuable going into 2022. In that year, CPP compliance would begin, and each utility would begin development – and for NW Natural, completion – of their next IRPs. The information from the Fact Finding would serve to foreshadow utility compliance strategy and the direction and magnitude of compliance potential costs, in addition to starting an important dialogue among all stakeholders about the application and efficacy of regulatory tools needed to achieve the state's GHG reduction goals.

Prior to any utility modeling, Staff created a summary of key utility data that could help stakeholders with their analysis of utility compliance modeling. Titled "Foundational Data," these documents comprise two Excel workbooks using data from multiple public sources and can be found online at this link.

The utilities were asked to deliver two large sets of deliverables in a very short time. The first was a presentation and underlying data to their initial NGFF model runs with selected sensitivities. The second was a presentation using alternative scenarios, which were shaped by participant input in the form of written and verbal comments. The table below captures the major milestones in the NGFF compliance modeling activities, with links to key documents.

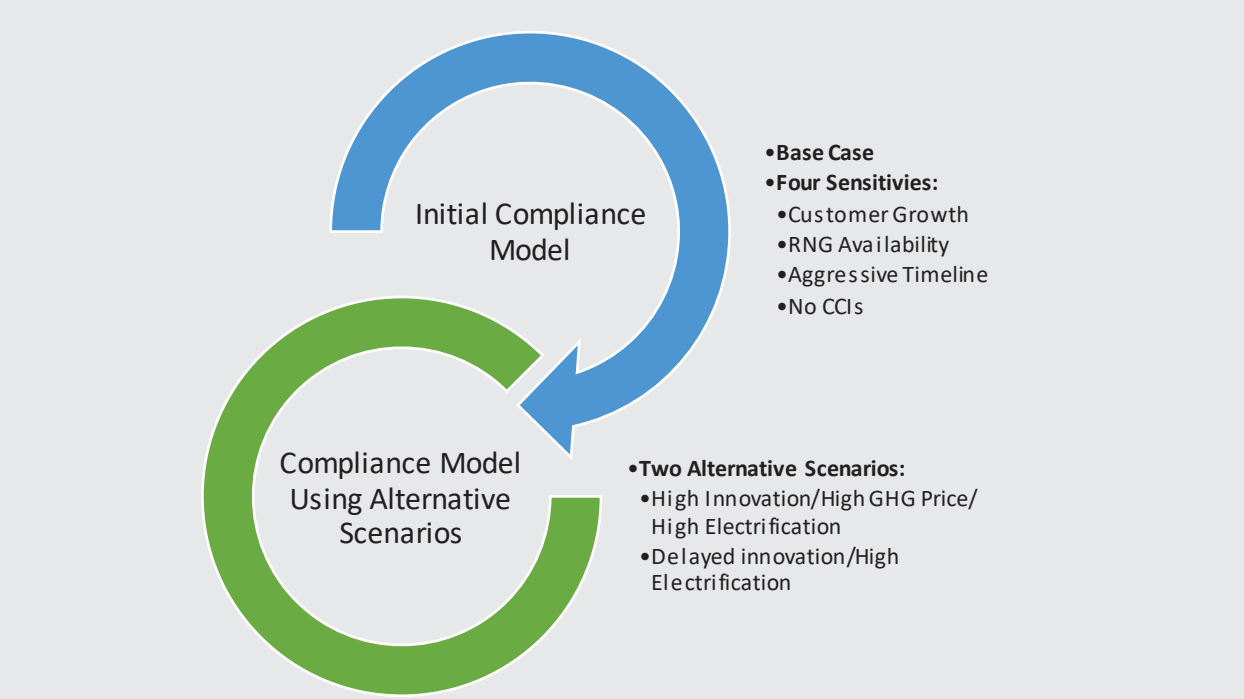
Table A1: Major Milestones in NGFF Modeling Activities

Date	Deliverable/Item	Additional information
July 8, 2021	Staff's initial compliance modeling proposal	Initial expectations for data to be used (inputs) by utilities in their analysis, the key deliverables to be shared (outputs). Modeling sensitivity selection occurs after input from stakeholders.
July 26 -30, 2021	Stakeholder comments on modeling proposal and suggestions for potential sensitivities	*See docket for more information.*
Aug. 4, 2021	Modeling sensitivities to inform initial model	Four sensitives selected by Staff after stakeholder input.

Date	Deliverable/Item	Additional information
Sept. 7-24, 2021	Utilities' initial modeling results	Initial modeling results provided on Sept. 7 with some supplemental and revised filings through Sept. 24. *See docket for more information.*
Sept. 24-27, 2021	Stakeholder comments on utility modeling results	Alliance of Western Energy Consumers Sierra Club Joint Parties, including Climate Solutions Citizens' Utility Board NW Natural Wendy Woods RNG Coalition Metro Climate Action #1 & #2
Oct. 1, 2021	Staff's alternative modeling scenarios	Alternative scenarios differ from sensitivities in that the scenarios alter the underlying assumptions, and in some cases, the data used by the initial model. Two alternate scenarios were selected based on participant feedback in NGFF workshops and from comments.
Nov. 17, 2021	Utilities' alternative modeling scenario runs	Avista's presentation of results CNG's presentation of results NW Natural's presentation of results

Given the timing and short turnaround time for the initial model runs, the natural gas companies were asked to use past IRP data, the most current version of CPP rules, and to model a base case of CPP compliance strategies they envisioned worked best for their company. They were also asked to consider a set of sensitivities, which were intended to stress test the company's proposed pathway. The selected alternative modeling scenarios attempted to show the impact of CPP compliance in two possible futures, combining multiple sensitivities within the initial model: one in which there was aggressive electrification of gas loads, and one in which efforts were directed to accelerate innovation in decarbonizing gas. Figure A1 provides a graphic representation of the scenarios and sensitivities the utilities modeled.

Figure A1: Scenarios and Sensitivities for NGFF Utility Modeling



6.1.1 Key Deliverables from initial modeling

Each utility delivered a presentation and underlying data as part of the model runs. Specified outputs to be shared included the following:

1. Forecast of emissions (weather adjusted):
    a. Graphic of million metric tons CO2e per year
        i. Stacked Area chart
        ii. Estimates of avoided emissions by compliance strategy and technology
    b. Supporting table capturing underlying data used in graphic by year
    c. Annual emissions reduction by compliance strategy, technology, and portfolio of technologies
    d. Annual emissions reduction in metric tons by technology by year
    e. Annual emissions above or below annual DEQ CPP threshold

2. Data supporting the development of emissions forecasts, including but not limited to:
    a. Load forecast and growth assumptions
    b. Use per customer estimates
    c. Compliance strategy assumptions
        i. Demand, supply, and capture assumptions
        ii. Sector/customer class reduction assumptions
        iii. Technology assumptions
            1. Cost trajectory curves over time for each technology
            2. Tons of emissions avoided per therm for each technology
            3. Variable costs per therm for each technology
    d. Any major distribution or transmission system upgrades or changes

e. In addition to the above data, all model inputs, outputs, and workpapers provided in electronic format with all references and formulae intact.

3. Description of approach and/or assumptions, including but not limited to:
   a. Values and terms selected for DEQ key assumptions
   b. Model methodology
   c. Description of weather pattern forecasts impacting load forecast
   d. Avoided costs assumptions, such as peak day usage and savings ratios

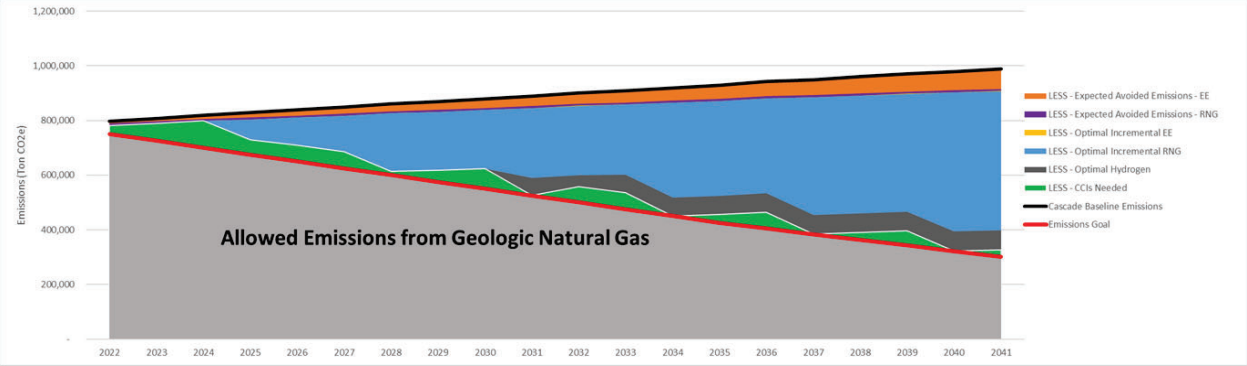
4. Estimated Net Present Revenue Requirement of Compliance Model and Comparison Across Selected Sensitivities:
   a. Twenty year time horizon minimum
   b. Annual and total Revenue Requirement difference between Compliance Model and most recent IRP's preferred portfolio
   c. Annual and total Revenue Requirement difference between Compliance Model and selected sensitivities.

6.1.2 Results of Base Case Compliance Strategies

The base case strategies for CPP compliance varied across utilities. Figures A2-A4 below summarize the compliance strategies each utility presented in UM 2178 workshops.

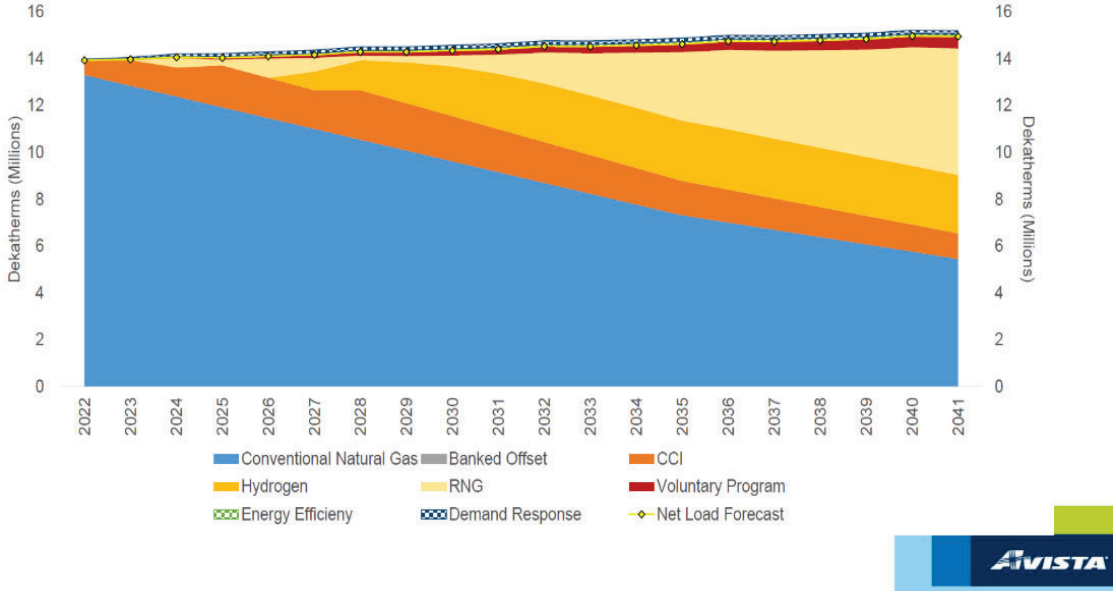
Cascade relied on CCIs in the near term and then heavily on incremental RNG (blue sliver in Figure A2) beyond what it planned for with SB 98 RNG (purple sliver in Figure A2).

Figure A2: Cascade CPP Base Case Compliance Strategies



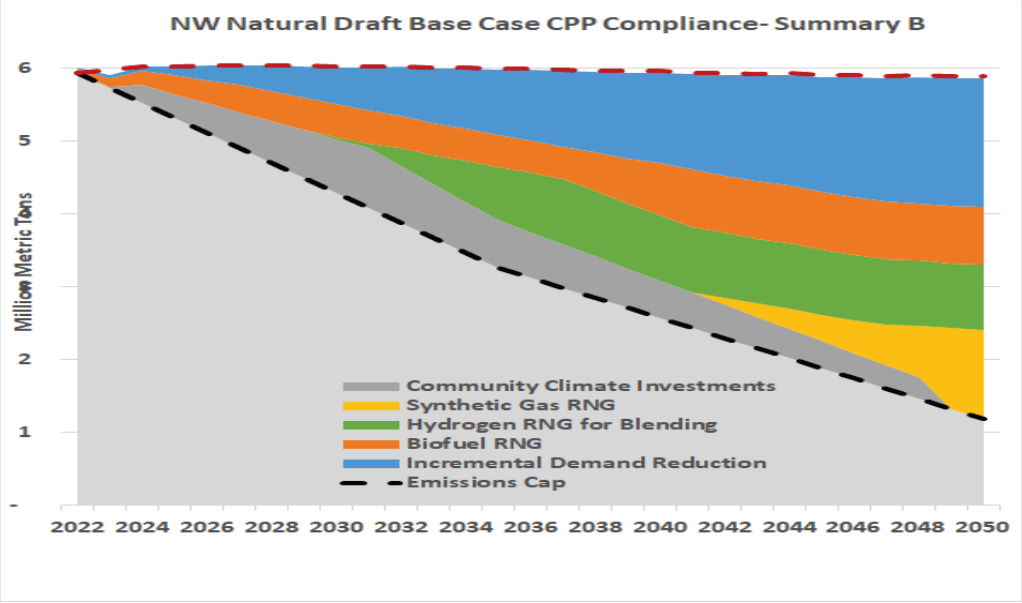
Avista also relied on CCIs in the near term and biofuel RNG throughout, but brings in hydrogen in 2026.

Figure A3: Avista Base Case CPP Compliance Strategies



NW Natural increasingly relies on demand reduction/EE over the course of the compliance timeframe. Its use of biofuel RNG and CCIs start in the near term and play a moderate role throughout, with CCI's decreasing and RNG increasing. By 2031 it introduces hydrogen and by about 2040, begins to envision the inclusion of synthetic gas RNG.

Figure A4: NW Natural Base Case CPP Compliance Strategies



6.1.3 Sensitivities

Below is a description of each of the four sensitivities to accompany the initial model run's base case. Each sensitivity was run in isolation from the other. A comparison of the results for each sensitivity are included in Figures A5-A8.

6.1.3.1 Customer Decline

Issue: How might policies limiting customer growth and associated GHG emissions inform regulatory tools to consider?

Approach: Model sensitivities that consider zero and negative customer growth.

Sensitivity: Current IRP forecasted load growth through 2025; no new customers beginning from 2025 through 2030; -0.75 percent customer growth beginning in 2031 through the end of model's time horizon.

Results: NWN modeling showed customer declines result in increased compliance costs above those of its base case as the years progressed. Avista compliance costs decreased with declining customers and Cascade saw costs remain almost identical to its base case.[43]

Figure A5: Customer Decline Sensitivity Comparison

	2025	2035	2050
NWN Base Case	9%	9%	-2%
NWN Customer Decline	8%	15%	18%
Avista Base Case	1%	21%	26%
Avista Customer Decline	2%	6%	3%
Cascade Base Case	13%	27%	43%
Cascade Customer Decline	12%	28%	42%

6.1.3.2 RNG Availability

Issue: Uncertainty about availability of RNG.

[43] Avista noted that its modeling did not accurately reflect the increase in cost per customer that would result from customer declines because of the need to spread fixed costs over fewer customers. This omission, it says, makes all its electrification and ratepayer decline scenario bill impacts lower than they should be.

Approach: Apply constraints on assumptions about the availability of RNG to meet emission reduction goals.

Sensitivity: Limit RNG availability to the annual percentages set by SB 98 and found in ORS 757.396(1).

(a) In each of the calendar years 2020 through 2024, five percent may be renewable natural gas;
(b) In each of the calendar years 2025 through 2029, 10 percent may be renewable natural gas;
(c) In each of the calendar years 2030 through 2034, 15 percent may be renewable natural gas;
(d) In each of the calendar years 2035 through 2039, 20 percent may be renewable natural gas;
(e) In each of the calendar years 2040 through 2044, 25 percent may be renewable natural gas; and
(f) In each of the calendar years 2045 through 2050, 30 percent may be renewable natural gas.

Results: Restricting RNG had mixed results – NWN modeled increased RNG prices with the restriction, resulting in higher costs compared to base case. Avista and Cascade reduced how much RNG was used for compliance, which reduced the overall cost of compliance compared to their base case scenarios. This generally increased cost of compliance for NWN, but Cascade and Avista saw decreased compliance costs in the later years of the model run when compared to their base cases.

Figure A6: Restricted RNG Sensitivity Comparison

	2025	2035	2050
NWN Base Case	9%	9%	-2%
NWN Restricted RNG	13%	19%	9%
Avista Base Case	1%	21%	26%
Avista Restricted RNG	2%	21%	18%
Cascade Base Case	13%	27%	43%
Cascade Restricted RNG	13%	24%	31%

6.1.3.3 More Aggressive Timeline on Climate Policy

Issue: The Governor's Executive Order set state emission reduction targets of at least 45 percent below 1990 levels by 2035 and at least 80 percent below 1990 levels by 2050. The DEQ Climate Protection Program is poised to make progress towards these state emission reduction targets. However, there is the potential for future policy to have more aggressive targets.

Approach: Using the same target reduction emissions currently contemplated by DEQ for 2035 and 2050, advance the dates to align with the date bookends (2030 and 2040) of the recently passed Oregon legislation for electric utilities (HB 2021).

Sensitivity: CPP targets of 45 percent below baseline by 2030, 80 percent below baseline by 2040.

Results: NWN costs increased in the middle years of the model run but the difference between this sensitivity and the base case shrank as they approached 2050. Avista and Cascade's aggressive timeline model runs showed compliance costs consistently higher than in their base cases for all customer types.

Figure A7: Aggressive Timeline Sensitivity Comparison

	2025	2035	2050
NWN Base Case	9%	9%	-2%
NWN Aggressive Timeline	10%	23%	2%
Avista Base Case	1%	21%	26%
Avista Aggressive Timeline	8%	34%	32%
Cascade Base Case	13%	27%	43%
Cascade Aggressive Timeline	20%	36%	49%

6.1.3.4 No CCI

Issue: Community Climate Investments (CCI) are a CPP compliance instrument. However, it is not currently clear to the PUC how the emissions associated with these projects will be quantified and verified. PUC Staff would like to understand the role CCIs play in accomplishing compliance with emission reductions and what emission reduction options become more viable if they are not part of a solution set.

Approach: Remove the availability of CCIs.

Results: All companies showed that the inability to use CCI's would result in higher compliance cost than in their base cases in the early years. But by 2050 the three utilities' modeling runs arrived at different conclusions with NWN's annual compliance costs continuing to outpace compliance costs in its base case, while Avista's cost differential was shrinking and Cascade's annual compliance costs were the same as in its base case.

Figure A8: No CCI Sensitivity Comparison

	2025	2035	2050
NWN Base Case	9%	9%	-2%
NWN No CCIs	11%	13%	3%
Avista Base Case	1%	21%	26%
Avista No CCIs	8%	25%	29%
Cascade Base Case	13%	27%	43%
Cascade No CCIs	16%	28%	43%

6.1.4 Alternative Scenarios

The alternative scenarios were run after the initial compliance models were completed and shared. They were greatly shaped by participant feedback. They combined multiple sensitivities from the previous model run, in some cases with new data. These two scenarios were designed to characterize possible futures that explored potential impacts, suggesting different policy and planning approaches.

6.1.4.1 Alt. Scenario 1: Accelerated Innovation / Electrification / High Social Cost of Greenhouse Gas

Approach:

- **Accelerated Innovation:** Assume a 30 percent six-year production tax credit for the production of green hydrogen and syngas for which construction begins before 2026.[44] It is anticipated that projects may be outside the ordinary course of business and would result in near-term and aggressive emission reductions.
- **Higher Cost of GHG**: Assume updates to the social cost of carbon. Beginning in 2026, adjust the CCI price to align with the Social Cost of Carbon's 95th percentile with a three percent discount.[45] For example, starting in 2026 use the starting value of $173.

[44] *See* page 49 of the Department of the Treasury, General Explanations of the Administration's Fiscal Year 2022 Revenue Proposals https://home.treasury.gov/system/files/131/General-Explanations-FY2022.pdf.
[45] *See* Social Cost of Carbon table A-1 in Appendix – Annual SC-CO2, SC-CH4, and SC-N2O Values, in 2020-2050. Technical Support Document: Social Cost of Carbon, Methane, and Nitrous Oxide – Interim Estimates under Executive Order 13990. Interagency Working Group on Social Cost of Greenhouse Gases, United States Government. https://www.whitehouse.gov/wp-content/uploads/2021/02/TechnicalSupportDocument_SocialCostofCarbonMethaneNitrousOxide.pdf.

- **Electrification:**
  - Fraction of new buildings (residential and commercial) using gas goes from its present share to zero in 2030 and stays zero thereafter.
  - Existing buildings converting to electricity goes from its present share to 90 percent in 2050.
  - Light industry converts to 90 percent electricity by 2050.

Results: Cascade's model resulted in ratepayer bill impacts that were lower than in their base case.[46] Avista's modeling summary showed zero change in ratepayer bill impacts, but the workbooks showed negative ratepayer bill impacts for all customers except transport, and then compliance cost increases similar to those found in their base case. NWN's ratepayer bill impacts for the scenario increased significantly due to high electrification-related customer declines, which resulted in costs not tied to energy use being spread over many fewer customers (a 318 percent increase in non-energy charges in 2050). There was no increase in hydrogen usage on NWN's or Avista's system because the high electrification rates reduced or eliminated the need for fuel 'innovation.' Hydrogen usage was significantly decreased as a solution for Cascade when compared to its base case. For Avista, this scenario saw its transport customers pay an increasing share of the utility's compliance costs as the utility's retail customer count declined.

Figure A9: High Innovation + Electrification + High SCC Scenario Comparison

	2025	2035	2050
NWN Base Case	9%	9%	-2%
NWN Alt. Scenario 1 - Innovation	6%	45%	318%
Avista Base Case	1%	21%	26%
Avista Alt. Scenario 1 - Innovation	0%	0%	0%
Cascade Base Case	13%	27%	43%
Cascade Alt. Scenario 1 - Innovation	11%	17%	9%

[46] CNG noted that differences in electrification modeling may have been due to differing interpretations of the guidance from Staff.

6.1.4.2 Alt. Scenario 2: Delayed Innovation / Accelerated Electrification

Approach:

- **Delayed Innovation:** Use a slower energy efficiency technology adoption curve. Gas heat pump water heaters come to market, but there are no gas heat pumps until after 2030 and they assume a traditional s-curve adoption pattern.[47]
- **Supply Competition:** RNG availability is limited to the percentage of the national RNG resource equal to the company's throughput share of total gas use in the U.S., including power sector use. National RNG resource is ICF's Low Resource Potential for RNG in 2040, namely 1,660 trillion Btu (tBtu) of RNG produced annually for pipeline injection by 2040.[48]
- **Very Rapid Electrification:**
  - The fraction of new buildings (residential and commercial) using gas goes from its present share to zero in 2025 and stays zero thereafter.
  - Fraction of existing buildings converting to electricity goes from its present share to 90 percent by 2040.

Results: Like the Accelerated Innovation and Electrification w/High SCC Scenario, Cascade modeled ratepayer bill impacts that were lower than their base case. Avista's summary showed zero ratepayer bill impacts, but the workbooks showed negative impacts in 2025 and then similar increases to the base case by 2035. NWN modeled the most aggressive electrification assumptions, resulting in a scenario that showed a significant drop in customers on the system and a 405% increase in residential bills by 2050. NWN also showed a moderate amount of industrial EE around 2035 and the use of banked allowance credits collected before 2042 for CPP compliance in the 2040s.

Figure A10: Delayed Innovation/High Electrification Scenario Comparison

	2025	2035	2050
NWN Base Case	9%	9%	-2%
NWN Alt. Scenario 2 - Electrification	15%	136%	407%
Avista Base Case	1%	21%	26%
Avista Alt. Scenario 2 - Electrification	0%	0%	0%
Cascade Base Case	13%	27%	43%
Cascade Alt. Scenario 2 - Electrification	13%	8%	3%

6.1.4.3 Modeling Parameters for Alternative Scenarios

Companies were instructed to use existing models and data to create the alterative scenarios with the following deliverables:

- Updated graphics and tables comparable in format to those submitted for the base case and associated sensitivities.
- To the extent possible and applicable, Staff asked that Avista and Cascade replicate the Scenario Comparison table created and shared by NW Natural, and that all companies use this format to include the alternative scenarios described above.
- **Data for Electrification:**
    - Where a load currently served by gas is not eliminated, but rather served by another resource, total annual MMBtu transferred to the alternative source must be identified for each year.
    - Staff will calculate estimated costs of the transferred load and associated emissions, taking into consideration the electrification cost elements proposed by stakeholders in comments.
- **Low and Moderate Income Customers**: Indicate the assumed or known percentage of low and moderate income residential customers.
- **Ratepayer Bill Impacts**: Report ratepayer bill impacts in terms of $/therm.

Table A2. Summary of Compliance Base Case, Sensitivities, and Scenarios Impacts

	Sensitivities/ Scenarios	Renewable Supply Penetration (% of Deliveries)			Biofuel RNG Penetration (% of Current Deliveries)			Renewable Supply Portfolio Cost (2020$/Dth)			Total Incremental Cost of CPP Program (Million 2020$/Year)[49]			Community Climate Investments (% of Emissions)			Annual Residential Bill Impact (% Impact of CPP)			Annual Industrial Sales Bill Impact (% Impact of CPP)

[49] Red figures indicate that the cost of compliance to NW Natural is offset by assumed electrification, where the cost of this e lectrification needs to be assessed on the electric rather than gas grid

7 APPENDIX B: IRP GUIDANCE

Throughout the Fact Finding workshops and comments, Staff heard feedback from stakeholders about ways to leverage and improve upon the existing gas utility integrated resource planning process. Staff, with support from the Regulatory Assistance Project, attempted to capture and categorize this feedback in Table B1 to help inform future IRPs. This table serves as a reference and compendium for ideas received as part of UM 2178 and to be considered potentially in the future when the Commission embarks on revising IRP guidance.

TABLE B1: IRP-RELATED FEEDBACK

Category	Addition to IRP
Expand Public Access & Equity	Expand communications about IRP - basics, process and outcomes/implications, start to expand customer understanding of impacts of new policies (CPP)
	Utilities should record and post workshops on website
	Capture additional customer information, create a baseline of customer statistics (energy burden, participation in programs - e.g. EE and LI) by location (e.g. zip code)
Load Forecast – Improvements	Consider and reflect potential impacts of local policies to limit gas in new construction.
	Provide data on customer trend gas and electric usage assumed for space and water heating, (gas furnaces/electric heat pumps/gas domestic hot water heaters/heat pump water heaters) across service territory population, by county or zip code, # of customers and share of electric utility overlap (*recent history and current state*)
	Provide transparent assumptions and data about customer technology adoption and behavior, including end use fuel splits between electric and gas over time and justification for technology adoption assumptions (e.g. relying on technology adoption modeling? Does modeling approach assess/compare all customer options?) (*forward looking*)
	Identify transportation load - industry types/end uses and explore H2 potential for these customers. Characterize how this load is currently served to understand new liability for compliance – include seasonality and daily nature of emissions
	Conduct sensitivities to load forecast around customer adoption of emerging EE technologies
RNG	Quantify the near- and long-term geographic availability of RNG potential, updated regularly. Provide detailed discussion/description with supporting workpapers for assumptions used to model RNG resources and market. Develop Base/Low/High cases of resource costs. Base/accelerated/delayed cases for availability and base/low/high volumes. Essentially creating a resource potential assessment for RNG. Be explicit about total RNG resource potential and justify assumptions about what will be available to Oregon gas utilities.
	Provide Bundled vs unbundled RNG assumptions
	Discussion of RNG affiliate plans

H2	Provide detailed discussion/description with supporting workpapers for assumptions used to model H2 resources. Develop Base/Low/High cases of resource costs. Base/accelerated/delayed cases for availability and base/low/high volumes. Essentially creating a resource potential assessment for H2 designed around end uses that can feasibly use H2. Be explicit about total H2 resource potential and justify assumptions about what will be available to Oregon gas utilities. Assumptions should include whether sited with energy user or if transport from production to end user required and costs/risks of new pipeline delivery infrastructure or storage needed.
EE and Beneficial Electrification	Review cost effective EE potential
	Develop Beneficial Electrification assumptions in coordination with electric utility
System Mapping / Infrastructure	Include planned infrastructure costs identified as new customer vs. maintenance of existing system. Identify high priority projects and 5 year planned investments with non-pipeline alternatives considered.
	Identify areas of new development / system expansion - with as much granularity as possible
	Scenarios of load decline should include assessment of stranded asset risk
	Include current rate base depreciation assumptions, list of assets and amortization schedules
Scenarios	H2 and RNG delayed growth vs. base case assumptions
	CPP compliance requirements more stringent than current (as modeled in UM 2178 scenario)
	Decline in load starting in 2030, after 2025-2030 no growth (as modeled in UM 2178)
Transparency and Clarity	Provide input data and results in a clear and transparent manner. Including such things as units, methodologies, assumptions, sources, and application.
Emissions	All portfolios should be designed to meet CPP, include discussion around risk of noncompliance costs
Cost and Risks	Account for biogenic CO_2 from RNG

8 APPENDIX C: RMI BUILDING ELECTRIFICATION POLICY PRESSURES

This table is an excerpt from materials provided by the Rocky Mountain Institute to PUC Staff via email on November 2, 2022.

- It is an informal landscape scan of the future of gas proceedings across the country.
- - While RMI intends to keep it updated, it is a work in progress and not intended to be comprehensive or up-to-the-minute. Some states may have more details than others.
- - For the most accurate information, refer to the state PUC dockets, many of which are linked in the "proceedings" tab
- - If you have questions, corrections, or additions, please contact Sherri Billimoria (sbillimoria@rmi.org) or Abby Alter (aalter@rmi.org)

State	Docket #	Title/link	Key filings to date	State-wide energy strategies, plans, or studies	Any state commitments / indications around electrification?
California	R1807006	Order Instituting Rulemaking to Establish a Framework and Processes for Assessing the Affordability of Utility Service	Fourth Amended Scoping Memo and Ruling from 9.15.21		SB 1477 (2018) funded and required CPUC to develop BUILD and TECH programs to reduce GHG from buildings AB 3232 (2018) required CEC to release an assessment of "the feasibility of reducing [GHG] emissions of California's buildings 40 percent below 1990 levels by 2030" link
	R1901011	Order Instituting Rulemaking Regarding Building Decarbonization			
	R2001007	Order Instituting Rulemaking to Establish Policies, Processes, and Rules to Ensure Safe and Reliable Gas Systems in California and Perform Long-Term Gas System Planning	10/14/21 Amended scoping memo outlines tracks 2a, 2b, and 2c scope and timeline. https://docs.cpuc.ca.gov/PublishedDocs/Efile/G000/M415/K275/415275138.PDF

9 APPENDIX D: ELASTICITY

The Fact Finding modeling suggests that under most scenarios all customers (residential, commercial, and industrial) will see cost increases in the near term. NWN modeling suggests that by 2040, under some scenarios, some customers would see a cost *decline*. However, given how far out in the future those cost declines are projected and the disagreement between NWN and the other gas utilities' models, Staff believes it is appropriate to plan for cost increases to customers under all scenarios proposed by utilities.

Part of what initiated the Fact Finding was the concern that as the energy system decarbonizes, low income customers would not only experience increases in fuel costs, but also be saddled with increasing costs associated infrastructure costs being spread over a smaller customer base. This, it was assumed, could be the result of decarbonization efforts that motivated more affluent customers to leave the gas system entirely and to switch to all electric homes. Staff conducted its own analysis of ratepayer bill impacts of natural gas decarbonization to better understand the extent to which this might warrant the use of policy intervention. That analysis follows.

10.1 STAFF's ELASTICITY ANALYSIS

Staff notes that if a natural gas utility raises its rates, natural gas customers are likely to change their behavior accordingly. These behavior changes can come in two possible forms:

- Changes in natural gas consumption
- Deciding whether to remain on the natural gas grid or seek alternative energy sources

The elasticity of natural gas consumption has been well studied in academic literature, particularly in the last few years. Using data from over 300 million household natural gas ratepayer bills in California and rigorous econometrics, Auffhammer and Rubin 2018 estimate that the residential natural gas consumption elasticity is between -0.17 and -0.23. Staff created its own econometric model using data aggregated to the state-year level and found an elasticity that is also near this range.

Aufhammer and Rubin break down the elasticity by season and by income and notes that low income households exhibit higher elasticity than high income households, and households in the winter exhibit higher elasticity than in the summer. These elasticity estimates vary from -.05 for high-income households in summer to -.52 for low-income households in the winter. This implies that should natural gas prices rise in response to decarbonization, low-income households in the winter are most likely to change their consumption patterns.

Staff conducted preliminary empirical modeling to investigate residential customers' propensity to connect or disconnect from the natural gas grid. Staff created an econometric model using annual data on state-level natural gas connections, residential natural prices, population and economic activity and various sets of controls. The econometric model assumes that residential consumers would not immediately change their equipment in response to a change in natural gas price, but instead do so after observing sustained price changes for multiple years. While Staff's results are preliminary and not corroborated by any known literature, they are suggestive of the following things:

- At an aggregate level, residential customers' natural gas connection decisions only react to a price change after at least 2-3 years. Absent outside pressures to connect or disconnect, it is unclear whether this reaction comes through existing customers switching natural gas connections to electric connections or new residential structures selecting non-gas heat sources.

- Regardless of the time lag, residential natural gas connection or disconnection appears to be highly price inelastic. Staff's preliminary model suggests that the price elasticity is approximately -.10. However, Staff reiterates that this value is preliminary and does not account for endogeneity of variables that likely biases the estimate in an indeterminant manner.

Due to data limitations, Staff's estimates do not account for any changes in technology or financial incentives that may reduce the costs to switch from natural gas to electricity. However, Staff's estimated negative elasticity implies that there will be some, albeit small, natural attrition from the natural gas system or slowdown in new connections if the push to decarbonize results in higher prices even without added incentives.

There is unfortunately also a gap in the academic literature regarding the elasticity of natural gas connections and disconnections, which makes it difficult to precisely determine the rate at which customers defect from the natural gas system. However, there has been recent research investigating the effects of the switch away from natural gas. Lucas and Hausman 2021 investigates who bears the cost of a declining utility and notes that a ten percent decrease in residential utility customers leads to only a five percent decrease in revenues, implying that the remaining utility residential customers bear a higher burden in costs. This is to say that should there be a large defection from natural gas utilities due to decarbonization, the remaining infrastructure costs will not scale down and will be paid by those remaining on the system.

What this suggests is that any cost increase is felt more acutely by customers that are already facing energy burden. Energy burdened customers' ability to respond to price signals appears to be limited to reduction in use, which in the case of gas used for heating, may result in a decrease in home comfort felt more by these customers than those who can maintain home heating expectations by either absorbing the cost increase, or ultimately changing heating sources.

10 APPENDIX E: SUMMARY OF STAKEHOLDER COMMENTS

UM 2178 Comment Summary for October 26, 2021, December 3, 2021, and June 3, 2022, Comment Periods

The following material attempts to summarize comments received in UM 2178 regarding the Report Draft, docket scope, and general policy positions. It generally does not capture the feedback received regarding the modeling and associated scenarios.

Table 14: Abbreviations – Organizations that submitted comments and that were referenced in the Comment Summary

Abbreviation	Organization
A Sherrett	Arlene Sherrett, Oregon Native and Climate Advocate
Avista	Avista Corporation
AWEC	Alliance of Western Energy Consumers
BE	Better Energy LLC
C Reed	Carly Reed
Climate Reality	Climate Reality Project, Portland Chapter
CNG	Cascade Natural Gas Company
CUB	Oregon Citizens' Utility Board
EDF	Environmental Defense Fund
JC - Mayoral	Joint Mayor City Official Letter
JC - CS et al.	Joint Comments - Climate Solutions et al. (29 Organizations)
JC - EC et al.	Joint Comments - Electrify Coalition et al. (41 Organizations)
JC - NWGA et al.	Joint Comments - NWGA et al. (17 Organizations)
LWVO	League of Women Voters of Oregon
JC - MCAT	Joint Comments - Metro Climate Action Team et al. (3 Organizations)
Multnomah County	Multnomah County Office of Sustainability
NRDC	Natural Resources Defense Council
NWEC	NW Energy Coalition
NWN	Northwest Natural
OPSR	Oregon Physicians for Social Responsibility
RNW	Renewable Northwest

SC	Sierra Club
TNC	The Nature Conservancy
Zero Coalition	Zero Coalition

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
1	Decarbonization	Decarbonize Planning	Study	NWN, RNW, and EDF discuss the importance of relying on economy wide decarbonization studies. RNW and EDF cite that an existing decarbonization study conducted by Evolved Energy support the role electrification plays in decarbonization in the Northwest. NWN states that such a study is still needed, and should be sponsored by the Commission, because the existing studies reference to date are not specific to the Northwest or are lacking in sufficient detail to fully understand the impacts of load shifting from electrification and goes on to describe what the study should include.
2	Decarbonization	EITE - Leakage		AWEC and JC - NWGA et al. expressed concerns about Emission Intensive Trade Exposed (EITE) leakage and impacts to the economy.
3	Decarbonization	Fuel-Neutrality	No fuel switch	NWN, JC - NWGA et al., and CNG all indicate that the PUC should remain fuel neutral. AWEC says decarbonization should be fuel neutral, based on facts and studies and consistent with state law; and NWN further states that the Executive Order (EO) 20-04 further establishes fuel neutral GHG reduction goals and calls out Renewable Natural Gas (RNG) as beneficial for Oregonians.
4	Decarbonization	Fugitive Emissions		BE and Climate Reality PDX state that the PUC should include life cycle emissions and capture fugitive emissions in its decision making. NWN states that is has one of the most modern pipeline systems in the US, that leaks are not an issue, and that its system is well prepared for hydrogen (H_2).
5	Decarbonization	Reliability		AWEC, NWN, and JC - NWGA et al. state that natural gas provides reliable, affordable, safe energy services for customers, including during peak loads and extreme weather. NWN cites the E3 decarbonization report stating that it concludes that natural gas companies serving existing and new customers while decarbonizing "is a cost-effective strategy to meet the region's climate goals while also reliably serving winter peak demands."

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
6	Direction/PUC Role	Commission Authorities / Responsibilities	Broader decarb authority	Environmental and climate advocates also assert that it is the responsibility of the PUC to protect customers, but that doing so necessarily means protecting customers from expensive or high-risk strategies taken by gas companies to meet climate policy obligations. They state that it is the responsibility of the PUC to ensure gas companies consider and deploy existing, proven technologies and strategies for reducing emissions, including supporting strategies such as fuel switching from gas to electric and ceasing socialization of gas line extension costs. They further state that the PUC has an obligation to protect customers, not maintain particular utility business models or protect gas company market share. (TNC, NWEC, CUB, JC - MCAT)
7	Direction/PUC Role	Commission Authorities / Responsibilities	Decision making/direction	Stakeholders opined on both the topics on which the commission should provide direction and the issues that should be considered in decision-making. Commenters generally agree that decisions should be based on the best available science, should be fact based, lawful, and within existing authority, although as mentioned above, there were differing opinions about how broad that authority is. Some stakeholders indicated that it was important that the PUC include public health and climate impacts in decision making. (See Comment Regulatory Tools – Beneficial Electrification 4). Commenters expressed frustration that the report did not provide more explicit direction to influence current IRPs and other PUC proceedings or future investigations. They argued that the PUC should be "decisive and proactive in implementing decarbonization policy and provide unambiguous direction based in climate science, available technology, and economic data (TNC). JC - CS et al. expressed concern that by allowing gas companies to continue to expand and allowing for consideration of alternative fuels to be used where electrification alternatives exist, the report puts a premium on flexibility that "abdicates the commission's responsibility to regulate." (See Direction/PUC Role Optionality 339).

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
8	Direction/PUC Role	Commission Authorities / Responsibilities	Limited decarb authority	Many commenters opined on the authority and responsibilities of the PUC, including regarding its general statutory obligations, its role with regard to policy implementation and leadership, its obligations to customers and utilities and associated least-cost, least-risk planning, PUC actions in relation to state climate policies, fuel neutrality, and obligations to public processes. NWN and Avista state that the PUC's authority is to ensure safe, reliable and affordable natural gas service and to remain fuel neutral. They explain that attempts to establish decarbonization mandates in the form of either reducing access to natural gas or effectuating declines in gas customers via electrification as means to achieving climate action goals is an overreach. They indicate that this falls into policy direction and that that is the purview of the legislature, not the PUC. Similarly, the JC - NWGA et al. further state that forced electrification and policies that phase out natural gas violate the regulatory compact and increase costs of energy for individuals and businesses.
9	Direction/PUC Role	CPP		LWVO suggests the PUC request that DEQ modify CPP for transport gas so that regulation lives with the party that can control the emissions
10	Direction/PUC Role	Customer count	Do not prohibit growth	NWN states that proposals that seek to reduce emissions by decreasing customers counts by prohibiting new hook ups go against the commission mandate to ensure safe, reliable utility services and that the Commission should focus on emission reductions specifically rather than on customer count limitations. It further states that the modeling demonstrated that there are cost effective compliance strategies that do not rely on prohibiting new customer hook ups.
11	Direction/PUC Role	Customer count	No growth	Multiple commenters expressed concerns about Staff seeking regulatory tools that allow for continued customer growth. They indicate that it was reasonable to assume that customer counts would decrease because the "market response to economic, climate and associated policy pressures" make for reasonable assumptions about consumer decisions to move away from gas" (CUB), that studies show electrification of space and water heating is a cost-effective emission reduction solution that is available today, that allowing for growth

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
				increases risk to gas customers both because it makes it more difficult and expensive to meet emission reduction targets, and increases infrastructure costs that they argue will inevitably be borne by fewer customers, who also will likely be Low-Moderate Income (LMI) customers less able to transition to electric options (JC - CS et al., CUB, NWEC, JC - EC et al., TNC,). Rather, they argue that at a minimum the Commission should not get in the way of customers that may want to fuel switch by limiting incentives to that could allow a switch, and that regulatory tools should be focused on how to manage declining customer counts.
12	Direction/PUC Role	Decarbonize Supply - general		NWN suggests that EO 20-04, 2019's Senate Bill (SB) 98 and 2013's SB 844 all demonstrate support for efforts to decarbonize supply.
13	Direction/PUC Role	Joint Planning		Many stakeholders commented on the need to perform some kind of joint utility planning or system-wide analysis and evaluation of GHG emission reduction approaches and the collaborative assessment of the impacts of electrification (Multnomah County, NWN, Avista, CNG, TNC, NWEC, NRDC, LWVO, JC - MCAT, Climate Solutions Joint Commenters pre-June 6, and BE).
14	Direction/PUC Role	Joint Planning		Some stakeholders provided additional guidance about what joint planning ought to include. JC - MCAT state it should include a timeline for building electrification, targeting of incentives for phased electrification, and phase decommissioning of gas. TNC notes that there should be a more formal coordinated planning process, beyond just shared assumptions and data. NRDC notes the process should develop "a combined "IRP" that begins with how loads can be met most effectively and cost-efficiently rather than how existing companies can best meet them for their customers." NWN and CNG both note support for collaborating with current electric Distribution System Planning filings on joint planning efforts. JC - CS et al. notes the Commission should task a third party to oversee a new joint planning process. NWN further notes that the scope of joint utility planning should closely engage with electric utilities to understand cost and reliability information to holistically understand costs of gas decarbonization efforts.

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
15	Direction/PUC Role	Optionality		NWN stresses the importance of optionality and not taking "premature" actions that could limit the development of nascent technologies, especially with regard to building electrification, noting that the E3 study demonstrates that "any rush to judgement on the future of gas is misguided and that rapid, wholesale electrification of building load is neither economical nor necessary for meeting Oregon's decarbonization targets." JC - CS et al. express concern that the Report's "premium on flexibility" abdicates the Commission's responsibility to regulate.
16	Direction/PUC Role	Prioritization	Focus on EE and Electrification	Stakeholders offered direction regarding how the Final Report and the Commission should prioritize its efforts. All commenters who spoke to this issue note the need to prioritize near term GHG emission reductions and the need to provide clear direction on ways to protect customers. TNC, NRDC, Multnomah County, JC - CS et al., and BE say the Final Report should focus on supporting low-risk solutions that result in near term emission reductions via regulatory tools that support the deployment of existing, proven, established, and cost-effective tools, citing energy efficiency, weatherization, and electric heat pumps targeted to LMI customers. JC - CS et al. additionally note that given limited Staff resources that the Commission should not use Staff time developing pilots that focus on hydrogen or other nascent technologies. TNC notes that EE and non-pipe alternative programs should prioritize GHG emission reductions by being fuel neutral and accommodating consideration of beneficial electrification. NWN states that regulatory tools should prioritize near term natural gas decarbonization efforts to meet CPP targets.
17	Direction/PUC Role	Prioritization		JC - CS et al. notes that all solutions should be CPP compliant, realistically available to achieve GHG reductions in the short term, and geared toward their best use
18	Direction/PUC Role	Protecting Customers	Flexibility & $	JC - NWGA et al. note heighten uncertainty during this time of transition and that this is "not the time for hurried decisions that could cost Oregonians for decades." CNG notes that programs to help customers should be flexible, be allocated funds, and focus on low income and energy burdened customers. And while NWN

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
				supports programs to protect customers, including implementation of HB 2475, it notes that its modeling showed it could comply with CPP without significant cost impacts to customers.
19	Direction/PUC Role	Protecting Customers	Implement tools to help customers	NWEC notes that UM 2178 should continue with an updated purpose on how to use tools identified to manage customer risk.
20	Direction/PUC Role	Protecting Customers	Protect customers, not gas utilities	NWEC, TNC, and JC - EC et al. state that the regulatory tools that the Commission considers should focus on protecting customers rather than what they perceive as protecting utilities by preserving gas customers and allowing for system growth. JC - EC et al. express concern that the report closely aligns with gas industry positions, and in doing so fails to protect customer interests. NWEC notes that the report devoted too much time to how to help gas companies reduce GHG emissions and not enough time considering the interests of customers. TNC notes that all commenters need to acknowledge that continued growth of gas customers is unsustainable and align incentives accordingly to protect customers associated with a gas customer declines. Further, Multnomah County and JC - Mayoral comments recommends considering the targeted resiliency co-benefit of cooling associated with programs that support the deployment of electric heat pump technologies to LMI customers. NWN's comments do not counter the need to protect customers, but they do point to the importance of protecting the viability of gas utilities to accomplish other GHG emission reduction goals. They state, "HB 2021 relies on the financial health of gas companies: Commission action that minimizes the number of customers who help pay for the state's gas infrastructure could inadvertently impact the financial health of gas utilities, irreversibly damaging the statewide benefits provide by OR gas system."
21	Direction/PUC Role	Regulatory tools		NWEC supports tools that can be implemented in the near term to protect customers.

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
22	Direction/PUC Role	Report Changes - Direction		Some stakeholders said that the Final Report needs to result in tangible direction from the Commission to the utilities, in many instances citing specific regulatory tools. NWEC notes that a key path to avoid customer risk is by providing guidance as soon as possible and note that the lack of guidance leaves customers at risk to either gas companies' failure to meet CPP targets or paying much more than necessary for energy services. JC - CS et al. note that where possible the Commission should not delay providing direction in the name of planning, but in doing so should be careful of stranded assets. NWN states that the modeling results were limited, which reinforces the need to stay with the existing regulatory process of "modeling, reporting, and follow-through."
23	Direction/PUC Role	Scope	Too broad	Throughout the docket, stakeholder discussed and challenged the proposed scope of the NGFF. Stakeholders continued to comment on the scope in response to the Draft Report. JC - NWGA et al., AWEC, and Avista state that electrification was beyond the scope of this docket and should not have been considered. Avista states the report takes an "anti-natural gas perspective" by including tools geared toward winding down natural gas business on the path to electrification. CUB, notes that the original objective as stated in the PUC's EO 20-04 workplan was not accomplished. They state the "EO 20-04 workplan includes ..."determine whether utility portfolios and customer programs reduce risks and costs by making rapid progress toward reducing GHG emissions" and prioritized proceedings and activities that advance decarbonization in utility sector to reduce GHG emissions." They further note the initial request from CUB for the NGFF was that it "provide guidance to IRPs about how to consider options for emissions reductions and the need to investigate how to minimize customer risk, including with stranded costs associated with impacts of policies that require GHG emissions reductions and further state the NGFF has not accomplished this. Rather, they state the NGFF has focused on gas company's ability to comply with CPP, where it should have included "...analysis of the future of natural gas within the PUC's proposed pathways to compliance with the EO directives, including

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
				utility planning framework (IRPs)." NWEC comments that it believed the Draft Report generally meets the state outcomes of the NGFF, but that exploring the optimal pathway for natural gas decarbonization is important, but secondary to protecting customers as we decrease GHG emissions.
24	Direction/PUC Role	UM 2178 Process	Next Step	TNC recommends opening an investigation for additional revenue decoupling and Performance Based Regulation (PBR) options to "reduce tension between policy goals and growth-oriented utility business models."
25	Direction/PUC Role	UM 2178 Process		CUB and NWN suggest the UM 2178 process needed additional opportunities for stakeholder engagement. CUB wants Staff to host the final workshop before the July 12 SPM so Staff can consider feedback from that workshop in the Final Report. NWN suggested that Staff add another comment period after the July 12 SPM.
26	Direction/PUC Role	UM 2178 Process		CUB comments that the final workshop, as noted in previous docket schedules, should be expedited and be held prior to the July 12, 2022, SPM.
27	Direction/PUC Role	UM 2178 Process		NWEC states that the next phase of UM 2178 should include "more robust independent analysis, active effort to overcome business as usual, and be laser focused on protecting customers in GHG constrained world."
28	Modeling	CCI Penalty		JC - CS et al. state that Staff's assumptions about cost of non-compliance should be increased. The CPP provides limited access to the use of CCI for compliance, so if the cost of non-compliance was just the cost of the CCI, that effectively permits unlimited purchases of CCIs. They argue the cost of non-compliance should be doubled or tripled.
29	Modeling	Decarbonize Supply - general		AWEC, NWN, and JC - NWGA et al. state that the modeling shows that gas companies can meet CPP targets by decarbonizing their fuel supply without electrification and that they should be given an opportunity to demonstrate compliance with this strategy. However, many stakeholders expressed concern that the utility assumptions were not adequately scrutinized by Staff and that analysis on RNG, and gas heat pump should come from a party other than the utilities. (See Regulatory Tools: Decarbonize Supply – RNG line #40)

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
30	Modeling	Electrification - Costs		Avista and CNG note that they did not report electrification bill impacts associated with reduced numbers of customers. Avista replied in comments that it should have included these impacts.
31	Modeling	Modeling	Unsupported claims / assumptions	Stakeholders identified issues regarding the modeling used for the Draft Report, including concerns about utility assumptions, concerns about inconsistencies in modeling and application of direction provided by Staff, and various weaknesses of the modeling itself. Many commenters stated that Staff did an inadequate job challenging the claims and assumptions associated with utility modeling and indicated that utilities played an outsized role in the process, and the utilities need to better support their claims (JC - CS et al., SC, CUB). Gas utilities noted that the process was rushed and that results should not be relied upon for decision-making, but NWN noted that of the modeling, the base case scenarios were most heavily scrutinized and should be relied upon over the alternatives. In particular, the electrification modeling was considered to be missing important information about load shift impacts, costs, and resulting impacts on the number of customers. Avista and NWN provide additional information about how to model electrification in future IRPs and stressed the importance of using more sophisticated modeling techniques (Plexos), and the need for data and information consistency. CNG notes that differences in electrification modeling may have been due to differing interpretations of the guidance from Staff and recommends Staff capture more detail about how electrification was modeled by the utilities. JC - CS et al. recommends moving more of the modeling findings from the Appendix to the body of the text.
32	Next Steps	CPP Compliance & Cost Allocation	Next Steps	NWN recommends and CNG stress the Commission open a docket to address CPP compliance and cost allocation. CNG states the investigation should carefully consider the role of sending appropriate price signals. AWEC adds that the principles of cost causation should be maintained in rate spread approaches.

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
33	Next Steps	Electrification Study		Avista, AWEC, NWN and JC - CS et al. describe the need to conduct an Oregon specific electrification study and provided details about what the study should include. This has also been referenced by other commenters as a beneficial electrification study.
34	Other	Business model		JC - CS et al. suggest that the regulatory tools presented in the report protected the gas utility business model and stated that the PUC should prioritize the public over protecting the existing, "unsustainable" gas utility business model. Others suggested the gas utilities should pursue other business models (e.g., carbon-free energy for industrial customers or green hydrogen for seasonal storage), but did not provide additional feedback on the role of the PUC in consideration or development of alternative business models (JC - MCAT, and A. Sherret).
35	Regulatory Tools	Beneficial Electrification		Many stakeholders stated that beneficial electrification was inadequately addressed in the report. Supporters of beneficial electrification would like the Final Report to address this topic in more detail and earlier in the document, and state that it should include a discussion about the direct and co-benefits of electrification as a decarbonization pathway, including public health benefits (JC - CS et al.). Whereas NWN indicates that beneficial electrification was presented as a viable solution without the inclusion of the full cost and implications to customers and stated that the report should "unambiguously" indicate that the full cost burden borne by energy customers was not considered.
36	Regulatory Tools	Decarb Planning & Cost Recovery		JC – MCAT et al. recommend the commission deny cost recovery for high-cost and high-risk investments in unproven technologies.
37	Regulatory Tools	Decarb Planning & Cost Recovery		The issue of cost recovery associated with CPP compliance was raised by a number of stakeholders. NWN, CNG and AWEC expressed concern about limiting cost recovery options for CPP compliance and stated that ensuring adequate cost recovery was critical to maintain safety and reliability, and the ability to bring lower carbon fuels on to the system, like H_2. They also expressed concern about connecting cost recovery with CPP compliance.
38	Regulatory Tools	Decarb Planning & Cost Recovery - Accelerated Depreciation		AWEC states that depreciation of assets should reflect the useful life of the asset and that inappropriately increasing or decreasing the time period over which costs are recovered is not in the best interest of customers. It says this assumes electrification as a future path without studying whether this is an appropriate

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
				assumption. CNG raise additional concerns, citing that changing asset depreciation timelines with anticipated use over a decarbonization timeline may be problematic for accounting purposes and may violate the matching principle. But it alternatively indicated support for "regulatory approval to accelerate depreciation expense since the assumption implies these assets will face obsolesce in the near future and the company would be faced with recovering fixed costs with smaller customer base."
39	Regulatory Tools	Decarbonize Supply - H_2		JC – MCAT et al., JC - CS et al., Multnomah County, NRDC, and NWEC expressed concerns about the role of H_2 in meeting CPP targets. They note that only Green H_2 should be modeled as a resource option, that the report erroneously assumes cost-effective availability of this resources for use in building heating applications, and does not adequately take into consideration a variety of risks, such as competition, redesign and replacement of pipelines and appliances, and stranded asset risks. Further, many stakeholders indicate that RNG and H_2 should be reserved for hard-to-electrify end uses. NRDC further notes that leveraging RNG and H_2 for home heating brings opportunity costs, because in an emergency, if a system fails, it is most likely replaced with the same, thus eliminating an opportunity to switch to electrification.
40	Regulatory Tools	Decarbonize Supply - RNG		There were disagreements about the assumptions of availability and cost of RNG as modeled by the gas utilities. CNG states the underlying market assumptions were consistent across all gas utilities, but that Staff should seek to understand differences in market adoption across different locations and demographics. However, other Stakeholders note discrepancies between the availability cited by the gas companies and that provided in a recent ODOE report, and further question the availability assumptions used by the gas companies. They indicate that biomass sources will be difficult to access and costly. Many of these stakeholders indicate that Staff needs to provide more scrutiny to the modeling done by utilities.

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
41	Regulatory Tools	Decarbonize Supply - RNG		If RNG and H_2 are to be used, stakeholders provided additional backstops and guardrails to help protect customers, including information about current and future development sites, confirmation that Renewable Thermal Credits can be used for CPP compliance, and close tracking of RNG market potential. Further Multnomah County states that the PUC should not allow expansion of the gas system unless utilities can demonstrate their ability to acquire RNG and Green H_2 in a cost competitive manner, and that they can demonstrate the safe use of H_2 before approval of any rate-based incentives. Additionally, in an effort to value RNG produced in OR, assessments should capture local benefits in Cost-Effectiveness calculations.
42	Regulatory Tools	Decarbonize Supply - RNG		NWN argues that utility activity is a driver of markets, so we should be careful to assume that general market reports reflect what is possible in the region. Further, both NWN and CNG support use of SB 844 to incentivize H_2 deployment. Avista notes that if SB 844 is to be used that the requirements need to be reevaluated to make it easier for gas companies to leverage.
43	Regulatory Tools	Decoupling / PBR		AWEC does not support PBR if what Staff means is crafting revenue stability for NG utilities that increases cost to ratepayers to encourage electrification.
44	Regulatory Tools	EE Avoided Cost (AC)		CNG and NWN support that CPP compliance costs should be reflected in energy efficiency avoided cost and align with CPP cost alternatives. NWN further states that the AC it will use in the current IRP and AC filings will be based upon CPP GHG costs. TNC adds that avoided gas infrastructure renewal costs should also be captured in EE AC. Multnomah County indicates that cost effectiveness "calculations should include AC of climate impacts and reducing emissions, and EE and non-energy benefits."
45	Regulatory Tools	Electrification - Choice		JC - NWGA et al. and NWN state that electrification policies eliminate customer choice and do not agree with Staff that electrification should be considered a compliance pathway.
46	Regulatory Tools	Electrification - Costs		There was substantial disagreement about the consideration of electrification costs in the modeling. NWN, JC - NWGA et al. state the high cost of electrification was not included and is currently unknown. NWN further indicates the need for further study and provides examples of what assumptions need to be considered, and states that its modeling shows compliance without electrification.

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
47	Regulatory Tools	Electrification - Costs		JC - EC et al. cites a Rocky Mountain Institute (RMI) report that studied electrification in Seattle that shows lower upfront costs for all electric homes but slightly higher annual utility ratepayer bills.
48	Regulatory Tools	Electrification - Fuel Switching		JC - CS et al., Multnomah County, and SC state the Commission needs to revisit fuel switching policies to allow Energy Trust and Community Action Agencies (CAAs) to engage in fuel switching, especially for Low Income (LI) and rural communities, and that fuel switching needs to be revisited in IRP Guideline Order (07-002).
49	Regulatory Tools	Electrification - General	Against	AWEC, NWN, and Avista were generally unsupportive of including electrification as a regulatory tool to be considered in the Final Report. NWN argues that the sources cited to support electrification were too generalized or based on states with very different attributes and should not be relied upon for assessing electrification impacts and costs. NWN further argues that because the case for electrification is unsupported, that inclusion as an option sends 'calamitous' market signals. They argue that the biggest risk of potential customer decreases and associated rate pressure increase are not from gas company compliance costs, but rather from policies that would drive customer defection.
50	Regulatory Tools	Electrification - General	For	Multiple stakeholders stated that the Draft Report does not adequately capture the role electrification can play in near term emission reductions, the likelihood of future electrification policies and actions, or the stakeholder comments addressing equitable transitions via building electrification and associated indoor air quality co-benefits with direct impacts to Black, Indigenous, and other Environmental Justice (EJ) communities. Further, some argue that while electrification is a preferred strategy for building decarbonization, the Commission should be prepared to protect LMI gas customers from anticipated negative cost impacts. (SC, NWEC, Multnomah County, JC - CS et al., and CUB).
51	Regulatory Tools	Electrification - Reliability		Avista is concerned about risks associated with load shifts from gas to electric but said both that electrification might take longer than stakeholders who support it realize, and that load shifts could make the electric system unreliable in peak times. Alternatively, JC - CS et al. and JC - MCAT believe arguments against electrification

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
				based on "reliability" are unsupported. They argue that switching resistance heating to electric heat pumps will largely address load concerns, and that even swift moves toward electrification will take time to implement, and reliability concerns can be addressed in long-term planning.
52	Regulatory Tools	Energy Trust Heat Pump		CUB states that funds coming from gas companies to Energy Trust should be used to conduct a conservation potential study focusing on how CPP emission requirements and costs of RNG affect cost effectiveness of energy efficiency. They indicate that it would include potential of NG heat pumps and would inform whether NG heat pump pilots are appropriate at this time.
53	Regulatory Tools	Energy Trust Heat Pump		NWN states the Commission will need to do more than direct Energy Trust. "The Commission and utilities will first need to address ETO budget development, as well as funding and delivery mechanisms for program expansion" e.g., expanded expertise may be needed.
54	Regulatory Tools	Energy Trust Heat Pump		NWN and CNG support Energy Trust training for both gas and electric heat pump technology. Joint commenters oppose the use of public funds for gas heat pump technologies, and many other commenters objected to public funds for gas heat pump technology promotion because of its relatively low commercial and technology readiness as compared to electric heat pumps. (See Regulatory Tools Technology Readiness line #83).
55	Regulatory Tools	Gas Infrastructure	Against	CUB, JC - EC et al., MCAT joint, and OPSR recommend an immediate halt of gas system expansion. Some specify that this just be the case for residential and commercial buildings. JC - EC et al. add that gas Line Extension Allowances (LEAs) should be eliminated immediately, and that the PUC should investigate the opportunity to "branch prune" sections of the existing gas system and replace those portions with electric heating. CUB states that the Report's suggestions that gas system expansion is necessary to protect customers should not be treated as fact. CUB further provides a cost comparison showing that reducing customer count reduces utility revenue by about $70-100/year, but that it is offset by reducing capital investment of about $2500. It would take more than 20 years for the additional customer charge to pay for the cost of the capital investment, creating a stranded cost risk if that customer later converts to an electric heat pump.

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
56	Regulatory Tools	Gas Infrastructure	For	NWN disputes the claim that investments in gas infrastructure will lead to stranded assets, and JC - NWGA et al. support decarbonization polices that embrace innovation and make use of existing energy delivery infrastructure.
57	Regulatory Tools	GHG Emission Reductions		NWN argues that a rush to electrification could increase emissions in the short run because of the current mix of electric generation and inhibit large-scale emission reductions in the long run. They cite an E3 Study - Pacific Northwest Pathways to 2050 the company commissioned in 2018. The company also notes that electrifying all natural gas high efficiency heat pumps would reduce OR emissions by less than 1 percent while increasing customer heating bills.
58	Regulatory Tools	Incentives - eliminate gas incentives		JC - EC et al., JC - CS et al., Multnomah County, Zero Coalition and JC - Mayoral comments indicate that the report should include the elimination of subsidies or incentives associated with the development or promotion of gas system expansion, gas heat pumps, or renewable natural gas. NWEC further states that the PUC does not need to incentivize anything because CPP is law and that the role of the PUC is to ensure compliance and make sure customers pay fair, just, and reasonable rates.
59	Regulatory Tools	Increase access to information		Comments regarding increased access to information were all generally supportive, the primary exception was with regard to mapping (see Regulatory Tools – Mapping lines #66 and #70). NWN notes that notices and quarterly update requirements should apply equally to gas and electric companies. JC - CS et al. notes that the Commission should direct utilities to host public workshops for lay audiences including explanations of the planning process, how the models work, and how to understand utility investments. They further note that staff should produce manuals on how to effectively participate in various proceedings, particularly IRPs.
60	Regulatory Tools	Innovation	For	NWN, CNG, AWEC, and JC - NWGA et al. believe the PUC should encourage gas companies to innovate to reduce emissions. AWEC notes pilot programs could be beneficial for hydrogen and CCSU but cautions that pilot programs costs should be fairly allocated between shareholders and rate payers, noting that traditional ratemaking paradigms might not work. JC - CS et al. indicate support for innovation only for hard to decarbonize end uses, not on residential or commercial heat. NWN notes that the Commission would need to provide

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
				additional clarity on goals of the pilot to ensure benefits to both gas and electric are explored.
61	Regulatory Tools	Innovation - Green H_2	Against	CUB, JC - CS et al., and NWEC were generally not supportive of incentivizing Green H_2 pilots and cautions against other pilots. JC - CS et al. indicate that ratepayers should not pay for alternative gas pilots at the expense of leveraging proven technologies, that new technologies take time to commercialize and scale to be effective, and that innovation should be funded by investors, not ratepayers. CUB argues that pilots should not be used for gas heat pumps and that doing so interferes with Energy Trust's analysis on potential, that NEEA is already conducting analysis in this space, but has not yet run a pilot, and that because there are no commercially available natural gas heat pumps for the residential market, that it does not make sense to run pilots with them. NWEC notes that the Commission has a long history of not supporting customer funded R&D, and this should continue as there is sufficient federal and private support for Green H_2 research. Further, the Commission should focus on directing the utilities to do things they would not otherwise do, such as implementing electrification and placing limits on new customer hook ups.
62	Regulatory Tools	IRP	Appendix B	NWN and Avista recommend against implementing IRP recommendations included in Appendix B in current IRPs via a waiver. NWN states that the IRP process has been vetted and that adding elements via a waiver risks adding unclear and unvetted requirements into an established process, which may produce flawed results. Additionally, NWN notes that allowing waivers might undermine the validity of the IRP guidelines and circumvent the public process. JC - CS et al. suggests that Appendix B should feature more prominently in the report, highlighting the need for tangible near term direction from the Commission regarding IRP analysis.

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
63	Regulatory Tools	IRP	Appendix B	Some commenters note concerns about the fact that all three gas utilities are in the process of developing their IRPs and recommend elements of Appendix B and any other applicable IRP related recommendation be implemented in the current IRPs (NWEC, LWVO, SC, CUB). NWN and Avista note that some of the changes proposed for IRPs in Appendix B are likely non-controversial, but they should not be applied to the current IRPs because there has not been a public process to discuss these changes and, in NWN's case, the IRP is too far along to make some of the changes requested. NWN also states that it is premature to take any action from UM 2178 that might undermine NWN's IRP action plan.
64	Regulatory Tools	IRP	CPP Acknowledgement	Regarding CPP compliance being acknowledgeable in IRPs, CNG and NWN agree that it should be acknowledgeable. JC - CS et al. however say CPP compliance should be mandatory, not just acknowledgeable.
65	Regulatory Tools	IRP	Elements	Many stakeholders convey differing positions regarding particular elements being included in the next round of IRPs. CNG notes that CPP compliance bill impacts should be included but should include uncertainly levels and a focus on near term action items and to the extent possible, CPP compliance costs should carry over into electric IRPs. Avista notes that demographic information should not be part of the IRP but should be with EE and energy assistance discussions and reporting. Avista also notes that gas companies would not know information about space and water heating across its territory, but that a consultant could be hired to find this information. It also notes that it would not know new technology adoption rates. NWN states that Marginal Abatement Cost curves should not be required in IRPs because they are not "sufficiently detailed to make accurate determinations about relative cost effectiveness of specific investments or actions."
66	Regulatory Tools	IRP	Proceeding	NWN, CNG and AWEC state that to consider changes proposed in Appendix B regarding IRPs that the Commission should open a proceeding on IRP guideline changes, pertaining to both gas and electrics. NWN notes that companies need to work with the Commission and stakeholders to develop a uniform methodology for converting IRP investments into ratepayer bill estimated impacts. NWN notes that the consideration of marginal abatement cost curves should be discussed in

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
				this broader IRP proceeding. CNG notes that modeling assumptions should be a topic when considering modifications to the current IRP process. Joint Climate Solutions comments prior to June 3 note that the IRP guidelines need to be updated to better capture emerging risk and uncertainty and that IRPs should require an analysis of fuel switching.
67	Regulatory Tools	IRP - Electrification	Electrification	JC - CS et al. state that that the Commission should develop and provide more direction about how gas companies should consider electrification in IRPs, including requiring that IRPs have realistic electrification scenarios and the ability to analyze stranded asset risk. They state the Commission should at least direct gas companies to conduct low, medium, and high electrification scenarios and identify cost impacts.
68	Regulatory Tools	Line extension allowances	Change/Eliminate	JC - CS et al. and NWN note that the Line Extension Allowance recommendation provided in the Draft Report needs clarification. JC - CS et al., TNC, and JC - EC et al. state that LEAs for gas companies need to be phased out immediately and that those for electric utilities should be revisited to consider behind the meter upgrades that support electrification. CNG and AWEC note that LEAs should be based in sound economic, and rate making principles (equity among rate payers and cost causation) and not be used to effectuate electrification without further conversation about decarbonization strategies. Regarding the process proposed by Staff in the recommendation, NWN says the Commission should refrain from making 'interim' changes, and TNC notes that discussions about LEA changes should allow stakeholder input.
69	Regulatory Tools	Mapping		NWN and Avista do not support providing infrastructure maps, stating that it is a security issue, the information Staff is seeking is not available, and that utilities use “group method” accounting and depreciation, so they do not track every asset or depreciable life. Avista also notes that the mapping information about depreciation would not be consistent with publicly available data from the Company's depreciation studies, which are provided every 5 years. NWN further notes that if maps are required that Staff should explain the goals of the mapping

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
				to enable constructive discussion and that requirements should apply equally to gas and electric utilities. CNG states that it does not believe additional mapping proposed by Staff provides value, given the effort required and notes that Staff should clarify the value of the mapping proposed.
70	Regulatory Tools	Mapping		JC - CS et al. states that maps of the gas system should help inform opportunities to prune the system with electrification.
71	Regulatory Tools	Monitoring, Tracking and Reporting	CPP Reports	Regarding monitoring, tracking and reporting, stakeholders commented on the urgent need for rulemaking to determine the cadence, form, and data required for CPP reporting and alternative fuel related reporting (RNG/ H_2). CNG indicates a preference for leveraging existing platforms such as IRPs and Purchased Gas Adjustments. NWN further comments on the need for "well-designed measures to monitor utility compliance" that should be accompanied by cost recovery that enables compliance. It states that lacking clear standards for cost recovery for investments makes compliance more challenging because it sends negative signals to "much-needed investors in Oregon's energy future...". NWN also stresses the urgency of initiating CPP reporting rulemaking. JC - CS et al. supports monitoring, tracking, and reporting, but cautions against prioritizing this such that it delays action.
72	Regulatory Tools	Programs		Climate Solutions Joint comments submitted prior to the Draft Report recommend a series of program related tools. They include: promote shell and weatherization improvements; eliminate incentives for methane gas measures; prioritize LMI, EJ - rural opportunities, rental units; heat pumps for LMI; include public health and climate impacts program/measure design; align funding for EE with least-cost decarb pathways; and remove barriers to Energy Trust conducting beneficial electrification.
73	Regulatory Tools	Programs		NWN, Avista, and CNG support the expansion of EE programs to assist in least-cost, least-risk CPP compliance. Avista notes that this will require a review of EE cost effectiveness assumptions for avoided cost calculations.

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
74	Regulatory Tools	Programs		JC - CS et al. comment that 2/3 of the program recommendations encourage gas system growth, namely EE measures that allow for customer hook-ups and EE programs for transport customers.
75	Regulatory Tools	Protecting Customers	Recommended tools	JC - EC et al. suggest specific actions and tools to be considered to protect customers, including accelerating amortization schedules, denying rate recovery for investments in unproven technologies, and implementing rate class policies (HB 2475). However, Multnomah County notes that HB 2475 has limitations and is not sufficient protection for vulnerable customers from upward rate pressure.
76	Regulatory Tools	Protecting Customers - participation	Outreach	Zero Coalition recommends expanded outreach and reduced administrative burden for BIPOC, tenants, and LMI populations to facilitate participation in incentive programs.
77	Regulatory Tools	Rate Spread/design		CNG and NWN note the need to consider rate design and rate spread in a near term proceeding on CPP compliance and that it should include consideration of how to handle transport customers. CNG notes it is supportive of alternative rate design mechanisms if they promote positive outcomes and maintain safe and reliable service while protecting customers. CNG notes it prefers voluntary conservation based on price signals and enrollment in conservation programs provided by the company.
78	Regulatory Tools	Rates		NWEC and JC - CS et al. indicate support for the rate tools being considered. Climate Solutions joint comments prior to the Draft Report suggest the Commission should consider Multi-year Rate Plans, Performance Incentive Mechanisms, securitization, as well as heightened scrutiny of the impact of new infrastructure investments. However, JC - CS et al. note that the Commission should not let ratepayer risk "slow energy transition progress."
79	Regulatory Tools	Reduce Demand - EE	Expand EE Offerings	Expanded EE offerings was consistently supported by stakeholders who commented on the topic and expanded support for Energy Trust was regularly cited as a path by which this should be accomplished. Avista notes that Energy Trust does not provide LI weatherization, that CAAs do, but that they have been limited in their ability to meet demand for weatherization. They note that expanded outreach will not address this, rather that new solutions are needed to serve LI customers with weatherization. JC - CS et al. note that EE program spending should only be for insulation, shell improvements, and electrification.

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
80	Regulatory Tools	Reduce Demand - Electrification	More focus on electrification	Multiple stakeholders note that the Final Report should more thoughtfully address electrification as a core decarbonization strategy (Zero Coalition, TNC, JC - NWGA et al., Multnomah County, MCAT Joint, and BE). However, JC - NWGA et al. state that electrification does not equate to decarbonization. Several stakeholders cited multiple sources and studies that show that electrification of water and space heating is the most cost-effective way to decarbonize buildings (MCAT joint, Zero Coalition, and BE). SC notes that utility planning related to electrification is within the sphere of influence of the PUC, whereas guaranteeing an affordable and available supply of RNG is not.
81	Regulatory Tools	Regulatory tools		JC - CS et al. provide a list of tools that should be captured in the Final Report, including: phase out gas LEAs; update Energy Trust policy to remove artificial barriers so gas and bulk fuel customers can choose to transition to more-efficient electric options; Expand low-income weatherization programs to allow for funds to be used for low-income electrification options and/or create a pilot program to encourage equitable electrification for LMI households; Continue and expand current efforts to ensure robust low-income ratepayer protections; and explore the value of pruning to strategically resize the gas system where it is aging, inefficient, or requiring significant and expensive upgrades. They further note that ratepayer bill impacts should be differentiated by LMI.
82	Regulatory Tools	Report Changes - Direction		CUB states the docket should have included investigation of: "no pipes solutions; line extension reform; useful lives and depreciation curves; discouraging incentives to switch from electricity to gas; reallocating investment risk; and fuel switching."
83	Regulatory Tools	Technology Readiness		Many stakeholders commented that the Final Report recommendations should rely on proven technologies that exist in the market today, which are more readily available to reduce GHG emissions, are less costly, and less risky. Staff should also consider ways to further incentivize use of existing GHG emission reduction technologies, namely energy efficiency, weatherization, electrification. (CUB, JC - EC et al., JC - CS et al., JC - MCAT, NRDC, TNC). Alternatively, NWN notes that

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
				utilities like NWN drive market trends and that the Commission should strongly encourage near-term investments in promising new decarbonization strategies.
84	Regulatory Tools	Third Party Support		AWEC, CNG, and NWN provided comments regarding the use of third-party consultants to inform technical and market assumptions. AWEC notes that said party should be unbiased and fuel neutral. CNG notes said party should be selected via a transparent process with stakeholder participation, and that results should be informational, not prescriptive. NWN seeks clarification from Staff on how the findings would be used and expressed concerns about generic reports not being representative of what is possible via utility driven investments and that such an analysis could hinder encouragement of reasonable investments in nascent technologies.
85	Regulatory Tools	Transport - EE		AWEC, Avista, CNG, and NWN commented on the need for EE programs for transport customers and highlighted some of the challenges that will need to be considered. NWN notes that the challenges and regulatory considerations warrant opening an "industry-wide" proceeding on EE programs for transport customers and the PUC's regulatory authority over this customer class. The issues include how to fund, implement, and administer such a program and how to address associated compliance costs and rate spread. AWEC further provides suggestions for a "Large Customer Carbon Reduction" program (AWEC pg. 3-5)
86	Report	Analysis and Conclusion		CUB states the report lacked analysis and scrutiny of utility modeling or assumptions; it did not include any findings on the modeling or provide ratepayer bill impacts; it did not include consideration of feedback and data from stakeholders; nor did it provide conclusions regarding appropriate tools to mitigate potential customer impacts.
87	Report	Climate and health risks	Public health	JC - CS et al., OPSR, and TNC want the Final Report to include more information about the public health harms of methane gas use.
88	Report	Climate and health risks	Urgency	JC - CS et al. and JC - Mayoral comments indicated that the Final Report should better reflect climate urgency and the science supporting the need to rapidly, substantially, and continually reduce methane emissions. They indicate that the Final Report should better reflect climate urgency in its justification and prioritization of regulatory tools.

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
89	Report	Costs		Regarding CPP costs, AWEC indicates that decarbonization goals should consider the cost of compliance for consumers in Oregon. However, NWEC and JC - CS et al. express concern that this investigation's focus on compliance costs, and less on the benefits of CPP compliance, might be used as an attempt to challenge the CPP rules. They caution the PUC about making statements about cost without knowing overall energy costs, energy burden, and tradeoffs. Additionally, many commenters indicate that it was important that the Final Report couch CPP compliance cost in the context of the benefits provided by the CPP.
90	Report	Elasticity		CNG and JC – CS et al. wants Staff to share its econometric model on elasticity or move the elasticity report to the body of the text.
91	Report	GHG Emission Reductions		BE, Climate Reality PDX, and Multnomah County state that the climate crisis requires that the Commission focus decision making on emission reductions. CUB states that gas companies have yet to demonstrate their ability to reduce emissions with existing customers "let alone accommodate growth and increase load." And JC - MCAT state that the Draft Report's "all of the above" approach is contrary to OR statewide energy policy, citing CPP rules and further notes that Staff's recommendations fail to facilitate GHG emission reductions. JC - EC et al. note that actions proven to reduce emission from gas utilities and protect ratepayers are: 1. Eliminate further expansion of the gas system; 2. Reduce the quantities of gas that are consumed by existing gas customers; and 3. Replace methane combustion with less polluting, high efficiency electric heating wherever possible.
92	Report	Reduce Demand - Electrification: Trends		Multnomah County and JC - EC et al. note that policy and customer choice will increasing lead to electrification of end uses. JC - EC et al. cites cities, counties, and states enacting building codes supporting a move to electrification.
93	Report	Report Changes	Clarify	NWN, Avista, and CNG request clarification on select recommendations and other aspects of the report and indicate that Staff should allow commenters to respond to clarifications before any PM addressing the Draft Report. Recommendations that need clarification include: - Rates 5.1.1(6): Align near-term investment levels with annual progress in CPP compliance in order to limit uncertainty around accumulation of long-term capital assets.

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
				- Rates 5.4(3): Explore linking the amortization of CPP compliance costs from deferrals to actual CPP performance. TNC indicates that Staff's recommendation regarding cost recovery associated with CPP compliance and CPP amortization links to CPP performance was unclear.
94	Report	Report Changes	Clarify	CNG notes section 3.2.2 regarding transport customers should explicitly exclude electric generation customers and be indicated as such.
95	Report	Report Changes	Clarify	CNG notes the Final Report should clarify whether the elasticity relationship is evaluated relative to gas prices, ratepayer bills or utility rates.
96	Report	Report Changes	Clarify	For section 4.3, fifth bullet – Avista notes it is unclear what is meant by "business model motivation" and aligning utility behavior with transition targets. Additional detail should be provided to articulate what this bullet is attempting to portray.
97	Report	Report Changes	Correction	Avista notes that in Table 5 - alternative Supply Projections the RNG Supply Penetration by 2035 - the Avista column incorrectly states 40 percent of overall deliveries – it should state 19.5 percent.
98	Report	Report Changes	Correction	Avista notes that Avista's general rate revision proposal does not include a differential rate proposal. Avista is proposing to implement a ratepayer bill discount program pursuant to HB 2475, but it is outside of its general rate case.
99	Report	Report Changes	Correction	Avista notes that it is not necessarily true that compliance with the CPP will likely increase costs to all customers in the near-term.
100	Report	Report Changes	Correction	Avista notes that its compliance cost had been added to the price per dekatherm of natural gas available as supply into the Company's system and may not be indicative of actual rate spread.
101	Report	Report Changes	Fact Check	Avista notes that the Draft Report incorrectly states the CPP lays out framework that "prohibits supply of natural gas."
102	Report	Report Changes		JC - CS et al. state that the background section should include how other states (MA and CA) are addressing future of gas.
103	Report	Report changes - momentum		Avista and JC - CS et al. noted they both disagreed with the language characterizing natural gas 'momentum'.

Ln	Feedback Issue	*Topic*	*Subtopic*	Summary
104	Report	Report Changes - Stakeholder Feedback		Many stakeholders commented that the Draft Report disregards stakeholder feedback and data and does not provide justification for Staff positions with regard to stakeholder feedback and data. This includes, but it not limited to modeling, electrification, RNG/ H_2 assumptions, and natural gas heat pumps. (CUB, JC – EC et al., JC – CS et al., TNC, Avista)
105	Report	Report Changes - Unsupported claims		Multiple stakeholders note that the Draft Report contained unsupported or unsubstantiated claims and challenged whether the report accomplished its goal of fact finding. JC - CS et al. notes that the Report fails to "meaningfully parse through the discord between gas utilities' analysis and recommendations, and those of third-party experts and community stakeholder to come up with actual facts." NWN comments that its decarbonization pathways are credible and supported by facts. CUB notes that the Final Report should detail and weigh in on compliance scenarios informed by utilities, but also market and industry data, science-based information, stakeholder input, and PUC experience. CUB further notes that the Final Report should clearly indicate where issues were in dispute and/or explain the basis for Staff conclusions where issues were in dispute.
106	Report	Risk		Multnomah County, JC - CS et al., JC - EC et al., and Avista commented that the Report inadequately addressed various risks. JC - CS et al. notes the report should better capture uncertainty regarding various CPP compliance strategies and that the Report inaccurately reflects the risks of electrification as being on par with the risks of decarbonizing gas; Multnomah County says the Report should better reflect environmental and financial risk of failing to decarbonize the gas sector; and JC - EC et al. state the PUC should address emerging risks of CPP non-compliance by adopting least-cost, least-risk strategies proposed by stakeholders and RAP. Avista notes that the risks associated with electrification as a CPP compliance strategy has not be adequately addressed in the Report.

11 APPENDIX F: DISTRIBUTION SYSTEM PROJECT INFORMATION IN FUTURE GAS IRPS

Staff seeks the analysis and information on proposed distribution system upgrades to determine rationale and thus inform acknowledgability under the CPP. Specifically, Staff seeks:

- An understanding of the model parameters used to identify and justify an upgrade.
- Information to assess model performance against observed conditions at the proposed upgrade location, including scenarios and probability of those scenarios, e.g., Number of Heating Degree Day in targeted years at the investment location
- Minimum standards for operation around the proposed upgrades
- Alternative activities or investments analyzed or already enacted, particularly focused on minimizing growth of overall throughput of the network
- If a distribution system project was selected over an alternative investment, the rationale supporting the selection

Staff has developed a set of questions, akin to standard data requests, divided into four categories, with the goal of helping to guide the information submitted about distribution system projects and clarify expectations. To the extent that any gas company's IRP omits this analysis and information, Staff may ask for it in Information Requests.

Distribution System Upgrade, Model Basics

Goal: To help Staff and stakeholders understand fundamental modeling assumptions used by the Company to assess distribution system upgrades and the logic used to model a system, identify upgrades, and assess alternatives to upgrades.

1. For any proposed distribution system project provide the following in Excel format with formulas intact:
    a. Model parameters,
    b. Customer-temperature correlation and confidence, particularly focusing on those customers for whom correlation is not high (e.g., non-temperature dependent use types),
    c. HDD scenarios considered and the influence of more extreme use cases,
    d. Minimum delivery pressures, and
    e. Correlation and confidence of location-specific temperature cases.

Distribution System Upgrade, Ground Truthing

Goal: To help Staff and stakeholders understand how well a model reflects actual conditions observed at the location of a proposed distribution upgrade. This helps to establish confidence in the need for a project.

2. Describe **how** the Company assessed model accuracy for pressure recordings and weather data against actual observations.

3. Provide data demonstrating how modeled conditions appeared in observations. This should include:
    a. A description of when they happened;
    b. Locally measured temperatures and other relevant weather parameters;
    c. How often they happened;
    d. How long they were observed for; and
    e. Clarification about whether during the observations any contingency actions were deployed, including but not limited to curtailing interruptible customers, effecting cold weather actions (i.e. bypassing regulator stations), local injection of gas, or the use of any energy efficiency or demand side management approaches.

4. Provide data supporting where in the system the largest line losses occurred to determine the best mitigation for the reduced delivery pressure cases.

Distribution System Upgrade, Minimum Standards

Goal: To help Staff and stakeholders gain insights into the engineering and operational standards under which a utility seeks to operate its distribution system. These standards provide a better understanding of the extent to which the current system falls outside of those standards and how the proposed upgrades address those issues.

5. Provide the following information for each category of a utility's system
    a. High pressure distribution system:
        i. Maximum allowable operating pressure (MAOP)
            1. Limiting component(s)
        ii. Specified minimum yield strength (SMYS)
        iii. Normal operating pressure
        iv. Minimum operating pressure
        v. Standard pipe sizes, materials, and grades
        vi. Minimum cover depth
        vii. Main pipeline leaks by grade
        viii. How many leaks are carried over from prior calendar year by grade
    b. Intermediate pressure distribution system:
        i. Maximum allowable operating pressure
            1. Limiting components
        ii. Normal operating pressure
        iii. Minimum operating pressure
        iv. Standard pipe sizes, materials, and grades
        v. Minimum cover depth

vi. Main pipeline leaks by grade
vii. How many leaks are carried over from prior calendar year by grade

c. Industrial services:
i. Maximum allowable operating pressure
ii. Normal operating pressure
iii. Minimum operating pressure
iv. Standard pipe sizes, materials, and grades
v. Minimum cover by grade
vi. Service line leaks by grade
vii. How many leaks are carried over from prior calendar year by grade

d. Residential and commercial services:
i. Maximum allowable operating pressure
ii. Normal operating pressure
iii. Minimum operating pressure
iv. Standard pipe sizes, materials, and grades
v. Minimum cover depth by grade
vi. Service line leaks by grade
vii. How many leaks are carried over from prior calendar year by grade

6. For each project identified outline:
a. Existing maximum allowable operating pressure.
b. Proposed maximum allowable operating pressure.
c. Normal operating pressure.
d. Design day (hour) minimum pressure and related HDD.
e. All data supporting the validation of the local network model, including pressure recording charts.
f. The model under the variety of cases with various thematics, including delivery pressures and line losses.
g. Cathodic protection records demonstrating the effectiveness of the program for this corridor.
h. Leak history for transmission, distribution mains and service lines by grade.
i. If cover or other safety or reliability concern is relevant to the project's completion, please identify the data supporting that concern. For instance, in the case of insufficient cover, provide evidence of how pervasive the cover limitations are, e.g., pothole history or other supporting material. If any metal coupons of the pipeline have been tested, please provide such information.

Distribution System Upgrade, Cost Effective Alternatives

Distribution system upgrades that can increase emissions put financial pressure on ratepayers and the Company to reduce emissions elsewhere on the system. Thus, resource planning in Oregon must now explore the extent to which upgrade alternatives that forestall or even avoid expanding distribution system capacity were explored. The questions below seek to establish the alternatives explored, how they were identified, and, if applicable, why distribution system upgrades were selected over the explored alternatives.

1. Describe the alternatives to distribution system investments that were explored as part of the Company's research.

2. Identify the frequency with which the Company has performed contingency actions to ensure proper system delivery, such as bypassing regulator stations, injecting CNG or other measures. For each time such actions were taken, provide all supporting records about the actions taken.

3. List the number of interruptible customers and their hourly maximum demand, as well as any curtailments conducted during peak events. Additionally, describe how much each interruptible customer is estimated to use at peak and how the model used for distribution system upgrades incorporates the interaction with interruptible customers when assessing the size and timing of a distribution system upgrade, especially a gate upgrade.

4. Identify the extent to which the Company analyzed the potential for large loads in the area of the upgrades to either shift or be shed during peak events to avoid upgrades.

5. Identify the extent to which the Company analyzed the use of energy efficiency and/or demand response (e.g., thermostat pre-heating or reducing peak demand) programs to forestall or avoid the proposed upgrades. If such analysis was conducted, please summarize the impact on the size and timing of any of the proposed upgrades and why such energy efficiency and/or demand response was not pursued.

SUBJ: Public Comment Regarding UG 527, UG 528, and UM 2419 - Coos County Pipeline

Chair Tawney and Commissioners Perkins and Powers,

Thank you for the opportunity to comment on UM 2419 in regards to the gas pipeline sale to NW Natural in Coos County. Rogue Climate serves and works alongside Southern Oregon and South Coast communities most impacted by climate change, including low-income, rural, youth, and communities of color, by organizing for clean energy, sustainable jobs, and a healthy environment. We do so through leadership development, political education, and campaigns for policies that benefit our communities.

For the past 7 years Rogue Climate's South Coast team has been organizing with Coos County community members to build a vision of a thriving and resilient future for the South Coast. Through listening sessions, gatherings and surveys, we heard that community members envision a future in which people, the economy and the ecosystems that sustain them are cared for. They envision affordable and abundant housing, clean air and water, and resilience in the face of rising sea levels, temperatures, fires and floods. Community members want reliable, affordable and renewable energy.

The Coos County Pipeline sale is an opportunity to gradually decommission this faulty infrastructure while investing in solutions that would increase energy efficiency and cost savings for coastal Oregonians. The history of this pipeline proves it is a poor investment that has lacked community support from the beginning. The pipeline poses a substantial safety and economic risk, threatening leaks that could cause substantial damage to the community and fragile coastal ecosystems – especially in a region that is expected to be severely impacted by natural disasters such as a Cascadian subduction zone earthquake event and/or tsunami. Already, Coos County taxpayers have been investing in this failing infrastructure without much benefit. The cost of further upgrades to the pipeline would pose an additional burden on NW Natural's customers across the state who have already seen exorbitant rate increases in past years. Coos County deserves investment in energy resilience through robust transmission upgrades and energy efficient electrification, rather than locking in fossil fuel infrastructure that pollutes the air and takes Oregon further away from our climate goals.

Rogue Climate
www.rogueclimate.org || PO BOX 1980, Phoenix OR, 97535
South Coast Office: 153 N. Broadway, Coos Bay, 97420 ||
541-816-0758
Rogue Valley Office: 205 N. Phoenix Rd, Suite G || 541-301-9204

The average household income in Coos Bay is $55,292, highlighting the need for affordable sources of energy that can keep homes safe during any weather. 30-39% of households in Coos county are facing severe energy burdens while also earning less than $15,060 per year.
As extreme weather events become more common, from heat waves to ice storms, families on the South Coast are increasingly burdened by high energy costs and power outages, highlighting the urgent need for affordable, climate-resilient solutions. As more and more customers across the state move off gas and choose more affordable and efficient energy sources, rural communities locked in to natural gas reliance will be forced to pick up the cost, resulting in skyrocketing bills.

Now is the time to invest in energy resiliency for the South Coast. In alignment with the Oregon Energy Strategy and Governor Kotek's recent Executive Order 25-29, communities across the state are shifting away from fossil fuels towards renewable, reliable, and affordable electricity. Expanding access to heat pumps, solar generation and storage, and home generation are essential steps to ease the transition. Investing in microgrids would help to prepare Coos County for disasters and workforce development programs would support projects that bring sustainable, high-paying jobs to the region. The Oregon Energy Strategy underscores that the cost of the energy transition will only increase with further delay.

Rogue Climate has seen firsthand how ductless heating and cooling pumps reduce energy use, lower utility bills, and support our communities to be safe and healthy. Heat pumps can provide pollution-free cooling during more frequent extreme heat on the coast, transition households away from reliance on bulk fuels, create jobs for local HVAC installers, and reduce rural energy burden. Rogue Climate's Energize programs in Coos, Douglas, Jackson, Josephine, and Klamath counties over the past 10 years demonstrated the high demand for efficient heat pumps and the great benefit to community members when this technology is accessible to low-income and rural households. Over the course of the Energize South Coast program, we trained more than 300 South Coast residents and installed affordable DHP's in 75 households in Coos County. The program was so popular, we had to hire a second contracted installer to meet the demand. The average participant experienced reductions of 50-75% in their utility bills. Plus, dozens of family-wage jobs were created with local installers.

The maintenance and repair costs of this pipeline would fall unfairly on residential rate-payers. The Coos County Pipeline currently serves around 1,700 residential customers, however, the

Rogue Climate
www.rogueclimate.org || PO BOX 1980, Phoenix OR, 97535
South Coast Office: 153 N. Broadway, Coos Bay, 97420 ||

Rogue Valley Office: 205 N. Phoenix Rd, Suite G || 541-301-9204

largest users are commercial: the essential but underfunded Bay Area Hospital and Rosburg Forest Products, a failing timber business that ceased operations in Weed, CA and Dillard, OR in 2025. Industrial customers using gas will be subject to Oregon's climate policies like the Climate Protection Program, which calls for a reduction of "90% of carbon emissions from diesel, gasoline and natural gas companies by 2050." This is a prime opportunity to support commercial customers to transition away from gas.

As the Commission considers NW Natural's proposed purchase of the pipeline, we urge you to thoughtfully decommission the pipeline and prioritize energy efficient electric alternatives. This is a critical opportunity to invest in energy resilience and cost savings for South Coast communities, while mitigating the dangers of a failing gas pipeline. Coos County deserves forward-looking solutions, rather than locking our rural communities into further fossil fuel reliance.

Sincerely,

Ashley Audycki, South Coast Coordinator, Rogue Climate

Oregon Public Utility Commission
201 High Street SE, Suite 100
Salem, Oregon 97301-3398

RE: Coos County Pipeline - UG 527, 528, and UM 2417

Dear Chair Tawney, and Commissioners Perkins and Power:

I am writing to voice the Sierra Club's concerns about NW Natural's proposal to purchase the Coos County Pipeline, and to use millions of ratepayer dollars to repair this aging gas infrastructure. The Commission should reject this proposal, and instead use this opportunity to explore non-pipe alternatives that will reduce emissions and build community resilience.

The Coos County Pipeline has been controversial since it was first proposed in the late 1990s, with opponents, including the Sierra Club filing multiple lawsuits citing the impacts of the project to the environment, private property and public safety. Now, as the state is working to meet its climate goals, and is increasingly pursuing building and industrial electrification, we must consider alternatives to maintaining and replacing fossil fuel infrastructure, and pursue opportunities for zonal electrification.

Governor Kotek has directed the PUC to "adopt and implement greenhouse gas reduction strategies and align their decisions, activities, and investments as appropriate to advance the five least-cost pathways identified in the Oregon Energy Strategy."[1] That includes taking "appropriate actions necessary within their existing authorities to align programs, decisions, and investments to advance the state's interest in increasing cost-effective, strategic electrification of . . . buildings, and water heating systems while also supporting affordable and reliable energy for Oregon ratepayers."[2] We encourage the Commission, pursuant to EO 25-29, to take this opportunity to eliminate the significant greenhouse gas emissions from this natural gas pipeline.

As the Coos County Pipeline only serves a little over 2,000 customers, and as there are viable alternatives to the gas use, decommissioning the pipeline offers an excellent chance to electrify one of the largest communities on the coast in Oregon, reducing harmful air pollution and greenhouse gas emissions. As NW Natural notes in its application, Coos County qualifies as an environmental justice community per ORS 756.010(5), which includes "coastal communities," "rural communities," "communities with limited infrastructure," and "communities experiencing

[1] Exec. Order 25-29, page 2, I.1.
[2] *Id.* at I.1.c.

lower incomes" in its definition of environmental justice communities. As such, it is critical that we are making investments in the Coos County community to reduce climate and air pollution, outcomes which decommissioning this pipeline would achieve.

The reports from various commenters about the extent of repairs needed,[3] combined with the past history of pipeline failures,[4] suggests careful scrutiny of the workplan is necessary to determine whether any of NW Natural's ratepayers should be responsible for this poor investment. Gas utilities in a variety of dockets have repeatedly reported facing rising construction costs. Additionally, as the Energy Strategy points out, "[s]cenarios that delayed action on energy efficiency and building electrification . . . led to higher overall costs to the economy."[5] Of course, the cost of inaction cannot be overstated.

It is important for the Commission to question whether a smaller and smaller pool of customers will use gas from this pipeline over time, as furnaces and boilers are replaced with electric versions, further driving up costs. And finally, we must question whether the larger commercial and industrial customers will remain gas customers, with the volatile gas market and impacts from the Climate Protection Program, not to mention the challenges at least one timber products company faces for reasons unrelated to energy prices. Specifically, Roseburg Forest Products has not been a stable economic partner for rural communities. In the last year alone, they have ceased operations in Weed, CA[6] and Dillard, OR,[7] decisions which have significantly impacted the stability for environmental justice communities. The instability of industrial partners does not make the economic feasibility case to invest into a pipeline that would be on the shoulders of ratepayers to cover the costs.

Coos County rate-payers and residents deserve solutions and investments that make the region more economic, climate, and energy resilient. Investments can be made into microgrid planning especially for preparing for natural disasters, expanding programs to make heat pumps, solar panels, and home weatherization materials more accessible, and workforce development programs to support projects that bring sustainable, high-paying jobs to the region.

RE: Coos County Pipeline - UG 527, 528, and UM 2417

Dear Chair Tawney, and Commissioners Perkins and Power:

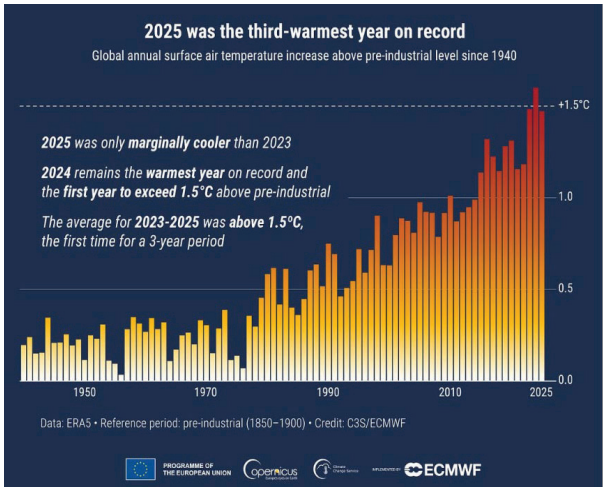
This is an unusual time in Oregon's climate policy history; we are close to standing up an entity to issue community climate investments, we are implementing rules for large buildings to decrease energy use, we are approaching a time when we will adopt rules requiring energy intensive trade exposed entities to reduce carbon emissions, and we have a brand new Energy Strategy setting out five pathways to meet our climate and energy goals. The timing for considering an alternative future for the communities served by the publicly owned Coos County pipeline is either terrible or ideal. Either way, it offers a great opportunity to assess where we are now and how we can best achieve Oregon's climate and energy goals.

NW Natural's request to cancel Schedule 160, facilitating its purchase of the county-owned pipeline for $1.00, and use deferred accounting to track the *at least* $10 million to undertake landslide prevention work, doubling down on a future locked into fossil fuel use, comes at a time of reckoning for climate action.



Credit: C3S/ECMWF The period of 2015 through 2025 has been the hottest ever recorded, with each of those eleven years being among the 11 warmest years yet.

Are we serious about implementing an energy transition? If so, this seems like a good time to invest in an under-invested community, apply solutions that we've wanted to implement, and stop throwing good money after bad.

In considering NW Natural's vision for the future, set out in this request, we should account for the Governor's Executive Orders, the Energy Strategy, the opportunity cost of accepting the status quo, and the real opportunity presented to improve residents' lives.

I. Energy Strategy and Executive Order 25-29

Governor Kotek has directed the PUC to "adopt and implement greenhouse gas reduction strategies and align their decisions, activities, and investments as appropriate to advance the five least-cost pathways identified in the Oregon Energy Strategy."[1] That includes taking "appropriate actions necessary within their existing authorities to align programs, decisions, and investments to advance the state's interest in increasing cost-effective, strategic electrification of . . . buildings, and water heating systems while also supporting affordable and reliable energy for Oregon ratepayers."[2]

If the Commission considers this an inappropriate time or context, pursuant to EO 25-29, to eliminate GHG emissions from a natural gas pipeline delivering natural gas to 2,000 customers, it should explain why.

II. Estimated cost of the pipeline repairs versus actual cost of pipeline repairs

The reports from various commenters about the extent of repairs needed,[3] combined with the past history of pipeline failures,[4] suggests careful scrutiny of the workplan is necessary to determine whether any of NW Natural's ratepayers should be responsible for this poor

investment. Gas utilities in a variety of dockets have repeatedly reported facing rising construction costs. Additionally, as the Energy Strategy points out, "[s]cenarios that delayed action on energy efficiency and building electrification . . . led to higher overall costs to the economy."[5] Of course, the cost of inaction cannot be overstated. It is important for the Commission to question whether a smaller and smaller pool of customers will use gas from this pipeline over time, as furnaces and boilers are replaced with electric versions, further driving up costs. And finally, we must question whether the larger commercial and industrial customers will remain gas customers, with the volatile gas market and impacts from the Climate Protection Program, not to mention the challenges at least one timber products company faces for reasons unrelated to energy prices. Specifically, Roseburg Forest Products has not been a stable economic partner for rural communities. In the last year alone, they have ceased operations in Weed, CA[6] and Dillard, OR,[7] decisions which have significantly impacted the stability for environmental justice communities. The instability of industrial partners does not make the economic feasibility case to invest in a pipeline that would be on the shoulders of ratepayers to cover the costs.

III. Forward-thinking solutions could improve lives and pocket books

Entities that have submitted comments in the docket are right to be concerned about what happens in the near term. Their businesses and homes rely on natural gas right now. But opportunities to bring resilience, cooling, and lower costs warrant consideration of electrification in order to future-proof the community.

For example, PacifiCorp has an obligation to provide at least 10 percent of its aggregate electrical capacity using electricity generated by small-scale renewable energy projects by 2030. At least two companies operating in the County are producing wood pellets for overseas markets.[8] Local use of this resource, in partnership with PacifiCorp, could keep limited dollars in the hands of local companies and residents while bringing resilience to the community.

Organic West Creamery relies on a boiler to operate its facility, but could consider electrification and thermal energy storage to reduce its energy needs.[9] We understand from conversations with green building sustainability managers that it is possible to electrify wood products/lumber operations, and that it is an especially good opportunity for smaller and more rural operations.

Switchbox has just developed a new nonpipeline alternatives tool[10] that, in the hands of Staff with access to the relevant information, might offer more information about the costs and benefits of decommissioning this pipeline.

Thank you for the opportunity to offer thoughts on this proposal.

Sincerely,

Carra Sahler

75th OREGON LEGISLATIVE ASSEMBLY--2009 Regular Session

B-Engrossed
Senate Bill 76

Ordered by the House June 3
Including Senate Amendments dated February 13 and House Amendments dated June 3

Printed pursuant to Senate Interim Rule 213.28 by order of the President of the Senate in conformance with pre-session filing rules, indicating neither advocacy nor opposition on the part of the President (at the request of Governor Theodore R. Kulongoski)

SUMMARY

The following summary is not prepared by the sponsors of the measure and is not a part of the body thereof subject to consideration by the Legislative Assembly. It is an editor's brief statement of the essential features of the measure.

Directs Public Utility Commission to determine depreciation schedules for Klamath River dams based on assumption that dams will be removed in 2020. Directs commission to allow affected public utility to recover undepreciated amounts by imposing rates and tariffs.

Directs Public Utility Commission to require affected public utility to collect surcharges from customers for purpose of recovering costs incurred by public utility for removal of Klamath River dams. Imposes limit on amounts collected as surcharges. Requires commission to hold public hearing on imposed surcharges. Provides for direct review by Supreme Court if person challenges order issued pursuant to public hearing. Provides that if commission determines that Klamath River dams will not be removed, commission may terminate collection of all or part of surcharges and direct refund of amounts collected or use of amounts collected for benefit of customers.

Directs Public Utility Commission to allow affected public utility to include in rates and tariffs costs that are prudently incurred by utility by reason of changes in operation of Klamath River dams before removal of dams, or for replacement power after dams are removed.

Declares emergency, effective on passage.

A BILL FOR AN ACT

Relating to Klamath River dams; and declaring an emergency.

Whereas the Klamath Agreement in Principle was signed November 13, 2008, by the states of Oregon and California, by the United States Department of the Interior and by PacifiCorp, and it is anticipated that a final agreement will be entered into by these and other parties; and

Whereas the Klamath Agreement in Principle states that it is the preliminary view of this state and the United States Department of the Interior that the potential benefits of the removal of dams on the Klamath River for fisheries, water and other resources outweigh the potential costs of that removal; and

Whereas it is anticipated that, subject to final analysis and confirmation by the Secretary of the Interior and review by the states of Oregon and California, the Klamath Agreement in Principle and the final agreement will together set forth a framework for action based on the preliminary view that removal of dams on the Klamath River is in the public interest; and

Whereas to facilitate the removal of the Klamath River dams, the Public Utility Commission must set rates that allow PacifiCorp to recover Oregon's fair share of PacifiCorp's undepreciated investment in the dams, to recover the funds necessary to pay additional costs that PacifiCorp may incur from changes in operation of the dams prior to removal and to pay for replacement resources following removal; and

Whereas to facilitate removal of the dams, the Public Utility Commission must establish a sur-

NOTE: Matter in **boldfaced** type in an amended section is new; matter [*italic and bracketed*] is existing law to be omitted. New sections are in **boldfaced** type.

charge to provide funds necessary to cover costs associated with removal of the dams; and

Whereas the public interest requires that the Public Utility Commission hold a hearing to determine whether the imposition of surcharges under the terms of the final agreement results in rates that are fair, just and reasonable; now, therefore,

Be It Enacted by the People of the State of Oregon:

SECTION 1. Sections 2 to 8 of this 2009 Act are added to and made a part of ORS chapter 757.

SECTION 2. Definitions. As used in sections 2 to 8 of this 2009 Act:

(1) "Agreement in principle" means the agreement signed November 13, 2008, by the states of Oregon and California, by the United States Department of the Interior and by PacifiCorp.

(2) "Allocated share" means the portion of PacifiCorp's costs assigned to this state under the interjurisdictional cost allocation methodology used by the Public Utility Commission for the purpose of establishing rates for PacifiCorp.

(3) "Customers" means the Oregon retail electricity customers of PacifiCorp.

(4) "Final agreement" means a successor agreement to the agreement in principle.

(5) "Klamath River dam" means the J.C. Boyle Dam located in Oregon, the Copco 1 Dam located in California, the Copco 2 Dam located in California or the Iron Gate Dam located in California.

SECTION 3. Recovery of investment in Klamath River dams. (1) Not more than six months after the execution of a final agreement, the Public Utility Commission shall determine a depreciation schedule under ORS 757.140 for each Klamath River dam based on the assumption that the dam will be removed in 2020. The commission may change a depreciation schedule determined under this section at any time if removal of a dam will occur during a year other than 2020.

(2) The commission shall use the depreciation schedules prepared under this section to establish rates and tariffs for the recovery of Oregon's allocated share of undepreciated amounts prudently invested by PacifiCorp in a Klamath River dam. Amounts recoverable under this section include, but are not limited to:

(a) Return of investment and return on investment;

(b) Capital improvements required by the United States or any state for continued operation of the dam until dam removal;

(c) Amounts spent by PacifiCorp in seeking relicensing of the dam before the effective date of this 2009 Act;

(d) Amounts spent by PacifiCorp for settlement of the issues of relicensing or removal of the dam; and

(e) Amounts spent by PacifiCorp for the decommissioning of the dam in anticipation of the dam's removal.

(3) If any amount specified under subsection (2) of this section has not been recovered by PacifiCorp before a dam is removed, the Public Utility Commission shall allow recovery of that amount by PacifiCorp in PacifiCorp's rates and tariffs. The commission shall allow the recovery without an amortization schedule if the impact of the recovery does not exceed one-half of one percent of PacifiCorp's annual revenue requirement. If the impact exceeds one-half of one percent of PacifiCorp's annual revenue requirement, the commission may establish an amortization schedule that limits the annual impact to one-half of one percent

of PacifiCorp's annual revenue requirement.

SECTION 4. Surcharges for funding costs of removing Klamath River dams. (1) Not more than 30 days after the execution of a final agreement, PacifiCorp must file a copy of the final agreement with the Public Utility Commission along with full and complete copies of all analyses or studies that relate to the rate-related costs, benefits and risks for customers of removing or relicensing Klamath River dams and that were reviewed by PacifiCorp during the decision-making process that led to PacifiCorp's entering into the final agreement.

(2) PacifiCorp must include with the filing made under subsection (1) of this section tariffs for the collection of two nonbypassable surcharges from its customers for the purpose of paying the costs of removing Klamath River dams as described in subsection (11) of this section. Notwithstanding the commission's findings and conclusions under subsection (4) of this section, the commission shall require PacifiCorp to begin collecting the surcharges on the date that the filing is made under subsection (1) of this section, or on January 1, 2010, whichever is later, and PacifiCorp shall continue to collect the surcharges pending a final decision on the commission's order under subsection (4) of this section. The surcharges imposed under this section shall be:

(a) A surcharge for the costs of removing the J.C. Boyle Dam; and

(b) A surcharge for the costs of removing the Copco 1 Dam, the Copco 2 Dam and the Iron Gate Dam.

(3) The surcharges imposed under this section may not exceed the amounts necessary to fund Oregon's share of the customer contribution of $200 million identified in the agreement in principle. In addition, the total amount collected in a calendar year under both surcharges may not exceed more than two percent of PacifiCorp's annual revenue requirement as determined in PacifiCorp's last case under ORS 757.210 decided by the commission before January 1, 2010.

(4) Not more than six months after a filing is made under subsection (1) of this section, the commission shall conduct a hearing under ORS 757.210 on the surcharges imposed under this section, and shall enter an order setting forth findings and conclusions as to whether the imposition of surcharges under the terms of the final agreement results in rates that are fair, just and reasonable.

(5) Notwithstanding ORS 183.482 (1), jurisdiction for judicial review of any appeal of an order entered under subsection (4) of this section is conferred on the Supreme Court, and a person seeking judicial review of the order must file a petition for review with the Supreme Court in the manner provided by ORS 183.482. ORS 183.482 (3) does not apply to an order entered under subsection (4) of this section. If a petition for review is filed, the surcharges imposed under the terms of the final agreement shall remain in effect pending a final decision on the petition, but shall be refunded if the rates resulting from the surcharges are finally determined not to be fair, just and reasonable. A petition filed under this subsection must indicate on its face that the petition is filed pursuant to this subsection.

(6) The commission may not use any commercially sensitive information provided to the commission in a filing made under subsection (1) of this section for any purpose other than determining whether the imposition of surcharges under the terms of the final agreement results in rates that are fair, just and reasonable. Notwithstanding ORS 192.410 to 192.505, the commission may not release commercially sensitive information provided to the commission under this section, and shall require any person participating in a proceeding relat-

ing to the surcharge to sign a protective order prepared by the commission before allowing the participant to obtain and use the information.

(7) The surcharges imposed under this section must be of a specified amount per kilowatt hour billed to retail customers, as determined by the commission. The amount of each surcharge shall be calculated based on a collection schedule that will fund, by December 31, 2019, Oregon's share of the customer contribution of $200 million identified in the agreement in principle. To the extent practicable, the commission shall set the surcharges so that total annual collections of the surcharges remain approximately the same during the collection period. The commission may change the collection schedule if a Klamath River dam will be removed during a year other than 2020.

(8) Except as provided in section 5 (2) of this 2009 Act, all amounts collected under the surcharges imposed under this section shall be paid into the appropriate trust account established under section 5 of this 2009 Act.

(9) If the commission determines at any time that amounts have been collected under this section in excess of those needed, or in excess of those allowed, the commission must:

(a) Direct the trustee of the appropriate trust account under section 5 of this 2009 Act to refund these excess amounts to customers or to otherwise use these amounts for the benefit of customers; or

(b) Adjust future surcharge amounts as necessary to offset the excess amounts.

(10) If one or more Klamath River dams will not be removed, the commission shall direct PacifiCorp to terminate collection of all or part of the surcharges imposed under this section. In addition, the commission shall direct the trustee of the appropriate trust account under section 5 of this 2009 Act to apply any excess balances in the accounts to Oregon's allocated share of prudently incurred costs to implement Federal Energy Regulatory Commission relicensing requirements. If any excess amounts remain in the trust accounts after that application, the Public Utility Commission shall order that the excess amounts be refunded to customers or otherwise be used for the benefit of customers in accordance with Public Utility Commission rules and policies.

(11) For the purposes of subsection (2) of this section, "the costs of removing Klamath River dams" includes costs of:

(a) Physical removal of the dams;

(b) Site remediation and restoration;

(c) Avoiding downstream impacts of dam removal;

(d) Downstream impacts of dam removal;

(e) Permits that are required for the removal;

(f) Removal and disposal of sediment, debris and other materials, if necessary; and

(g) Compliance with environmental laws.

SECTION 5. Surcharge trust accounts. (1) The Public Utility Commission shall establish a separate trust account for amounts generated by each of the two surcharges imposed under section 4 of this 2009 Act. The commission shall establish the trust accounts as interest-bearing accounts with an agency of the United States identified in the final agreement, or in a depository that is qualified under ORS 295.001 to 295.108 to receive public funds. The commission may authorize transfer of funds from one trust account to another as necessary to fund removal of the Klamath River dams.

(2) If an agreement is entered into under section 7 (2) of this 2009 Act, the parties to the

agreement may agree that a portion of the amounts collected under one surcharge may be deposited in the trust account established for amounts collected under the other surcharge.

(3) Upon request of an agency of the United States, or upon request of the designee of an agency of the United States, the commission shall require the trustee of the appropriate trust account established under this section to transfer to the agency or designee the amounts that are necessary to pay the costs of removing the Klamath River dams as described in section 4 (11) of this 2009 Act.

(4) If any amounts remain in a trust account established under this section after the trustee makes all payments necessary for the costs of removing the Klamath River dams as described in section 4 (11) of this 2009 Act, the commission shall direct the trustee of the account to refund those amounts to customers or to otherwise use the excess amounts for the benefit of customers.

SECTION 6. Recovery of other costs incurred by PacifiCorp. Pursuant to ORS 757.210, the Public Utility Commission shall allow PacifiCorp to include in its rates and tariffs this state's allocated share of any costs that are prudently incurred by PacifiCorp from changes in operation of Klamath River dams before removal of the dams, or that are prudently incurred for replacement power after the dams are removed, that are not otherwise recovered under sections 3 and 4 of this 2009 Act.

SECTION 7. Agreement to apportion costs and to establish and administer trust fund. (1) The State of Oregon may enter into an agreement with representatives of the State of California, either as part of a final agreement or by separate agreement, that establishes each state's share of the customer contribution of $200 million identified in the agreement in principle.

(2) The Public Utility Commission may enter into an agreement with representatives of the State of California to establish and administer the trust accounts authorized under section 5 of this 2009 Act and to ensure that trust account moneys are disbursed for dam removal costs that are necessary and appropriate.

SECTION 8. Disclaimers. (1) Sections 2 to 8 of this 2009 Act do not authorize the expenditure of any public moneys for removal of Klamath River dams.

(2) Sections 2 to 8 of this 2009 Act do not create a cause of action against the State of Oregon or against any of the officers, employees or agents of the state and may not be used as the basis for an assertion of liability on the part of the State of Oregon or of any officers, employees or agents of the state.

SECTION 9. The section captions used in this 2009 Act are provided only for the convenience of the reader and do not become part of the statutory law of this state or express any legislative intent in the enactment of this 2009 Act.

SECTION 10. This 2009 Act being necessary for the immediate preservation of the public peace, health and safety, an emergency is declared to exist, and this 2009 Act takes effect on its passage.

4. Estimated Timelines—KHSA as Amended

The KLAMATH HYDROELECTRIC SETTLEMENT AGREEMENT was made and entered into by and among the following entities:

Ady District Improvement Company;
American Rivers;
Bradley S. Luscombe;
California Department of Fish and Game ("CDFG");
California Natural Resources Agency ("CNRA");
California Trout;
Collins Products, LLC;
Don Johnston & Son;
Enterprise Irrigation District;
Humboldt County, California;
Institute for Fisheries Resources;
Inter-County Properties Co., which acquired title as Inter-County Title Co.;
Karuk Tribe;
Klamath Basin Improvement District;
Klamath County, Oregon;
Klamath Drainage District;
Klamath Irrigation District;
Klamath Tribes;
Klamath Water and Power Agency ("KWAPA");
Klamath Water Users Association ("KWUA");
Malin Irrigation District;
Midland District Improvement Company;
Northern California Council, Federation of Fly Fishers;
Oregon Department of Environmental Quality ("ODEQ");
Oregon Department of Fish and Wildlife ("ODFW");
Oregon Water Resources Department ("OWRD");
Pacific Coast Federation of Fishermen's Associations;
PacifiCorp;
Pioneer District Improvement Company;
Plevna District Improvement Company;
Randolph Walthall and Jane Walthall as trustees under declaration of trust dated November 28, 1995 (the "Randolph and Jane Walthall 1995 trust");
Reames Golf and Country Club;
Salmon River Restoration Council;
Shasta View Irrigation District;
Sunnyside Irrigation District;
Trout Unlimited;
Tulelake Irrigation District;
United States Department of Commerce's National Marine Fisheries Service ("NMFS");
United States Department of the Interior ("Interior");
Upper Klamath Water Users Association ("UKWUA");
Van Brimmer Ditch Company;
Westside Improvement District #4;

Winema Hunting Lodge, Inc.; and
Yurok Tribe;

This Klamath Hydroelectric Settlement Agreement, as amended, is entered into by and among the entities who sign the Settlement.

1. Introduction

1.1 Recitals

WHEREAS, the States, the United States and PacifiCorp entered into the 2008 Agreement in Principle that addressed issues pertaining to the resolution of certain litigation and other controversies in the Klamath Basin, including a path forward for possible Facilities Removal; and

WHEREAS, the 2008 AIP provided that the parties to the 2008 AIP would continue good-faith negotiations to reach a final settlement agreement in order to minimize adverse impacts of dam removal on affected communities, local property values and businesses and to specify substantive rights, obligations, procedures, timetables, agency and legislative actions, and other steps for Facilities Removal; and

WHEREAS, the other Parties to this Settlement desired to participate in the negotiations of a final settlement agreement in order to ensure that the interests of Indian tribes, environmental organizations, fishermen, water users, and local communities were addressed; and

WHEREAS, the Parties view this Settlement as an important part of the resolution of long-standing, complex, and intractable conflicts over resources in the Klamath Basin; and

WHEREAS, the 2008 AIP established a "commitment to negotiate" a settlement "based on existing information and the preliminary view of the governmental Parties (the United States, Oregon, and California) that the potential benefits for fisheries, water and other resources of removing the Facilities outweigh the potential costs, risks, liabilities or other adverse consequences of such removal"; and

WHEREAS, certain Parties believe that decommissioning and removal of the Facilities will help restore Basin natural resources, including anadromous fish, fisheries and water quality; and

WHEREAS, the Parties understand that the Project dams are currently the property of PacifiCorp, and that they are currently operated subject to applicable state and federal law and regulations. The other Parties understand that the decision before PacifiCorp is whether the decommissioning and removal of certain Facilities is appropriate and in the best interests of PacifiCorp and its customers. PacifiCorp asserts that prudent and reasonable long-term utility rates and protection from any liability for damages caused by Facilities Removal are central to its willingness to voluntarily transfer the dams and the low-carbon renewable energy they produce and to concur in the removal of the dams by the DRE; and

WHEREAS, the United States has devoted considerable funds and resources toresource enhancements, management actions, and compensation in the Klamath Basin, and various Parties believe that a broader and integrated approach is appropriate to realize Basin-wide objectives; and

WHEREAS, this Settlement contemplates a substantial non-federal contribution in support of said approach; and

WHEREAS, the Tribes and the Federal Parties agree that this Settlement advances the trust obligation of the United States to protect Basin Tribes' federally reserved fishing and water rights in the Klamath and Trinity River Basins; and

WHEREAS, in 2016, PacifiCorp, the United States, and the States signed the 2016 Agreement in Principle to signify their intent to negotiate an amended KHSA that would facilitate Facilities Removal through the existing authority of FERC under the Federal Power Act; and

WHEREAS, all of the Parties agree that this Settlement is in the public interest.

NOW, THEREFORE, the Parties agree as follows:

1.2 Purpose of Settlement

The Parties have entered into this Settlement for the purpose of resolving among them the pending FERC relicensing proceeding by establishing a process for potential Facilities Removal and operation of the Project until that time.

1.3 Parties Bound by Settlement

The Parties shall be bound by this Settlement for the term stated in Section 8.1 herein, unless terminated pursuant to Section 8.11.

1.4 Definitions

"2008 Agreement in Principle" or **"2008 AIP"** refers to the Agreement in Principle executed on November 13, 2008, by the states of Oregon and California, Interior, and PacifiCorp setting forth a framework for potential Facilities Removal.

"2016 Agreement in Principle" or **"2016 AIP"** refers to the Agreement in Principle executed on February 2, 2016, by the states of Oregon and California, Interior, the U.S. Department of Commerce, and PacifiCorp signifying their intent to negotiate an amended KHSA that would achieve Facilities Removal through the existing authority of FERC under the Federal Power Act.

"Amendment Effective Date" is defined in Section 8.2.

"Applicable Law" means general law that (1) exists outside of this Settlement, including, but not limited to a Constitution, statute, regulation, court decision, or common law, and (2) applies to obligations or activities of Parties contemplated by this Settlement. The use of this term is not intended to create a contractual obligation to comply with any law that would not otherwise apply.

"Authorizing Legislation" refers to the statutes enacted by the Oregon and California Legislatures, respectively, to authorize and implement certain aspects of this Settlement, if necessary.

"**CEQA**" refers to the California Environmental Quality Act, Cal. Pub. Res. Code § 21000 *et seq*.

"**CWA**" refers to the Clean Water Act, 33 U.S.C. § 1251 *et seq.*

"Coordination Process" for the Studies Supporting the Secretarial Determination means the process contained in Appendix A by which the United States will obtain input and assistance from the Parties to this Settlement, as governed by Applicable Law, regarding the studies and environmental compliance actions needed to inform and support the Secretarial Determination.

"**Counties**" refers to the counties that sign this Settlement.

"**Dam Removal Entity**" or "**DRE**" is the Klamath River Renewal Corporation, which will be the entity responsible for Facilities Removal under this Settlement.

"**Decommissioning**" means PacifiCorp's physical removal from a facility of any equipment and personal property that PacifiCorp determines has salvage value, and physical disconnection of the facility from PacifiCorp's transmission grid.

"**Definite Plan**" means a plan and timetable for Facilities Removal submitted by the DRE or any of its contractors or assigns under Section 7.2.1.

"**Detailed Plan**" means the plan dated July 2012 that includes elements described in Section 7.2.2.

"Dispute Resolution Procedures" means the procedures established by Section 8.6.

"Due Diligence" means a Party's taking all reasonable steps to implement its obligations under this Settlement.

"**Effective Date**" is defined in Section 8.2.

"**EPAct**" refers to the Energy Policy Act of 2005, Section 241, codified at 16 U.S.C. § 823d and amendments to 16 U.S.C. §§ 797(e) and 811.

"ESA" refers to the federal Endangered Species Act, 16 U.S.C. §§ 1531 *et seq*.

"**Facilities**" or "**Facility**" means the following specific hydropower facilities within the jurisdictional boundary of FERC Project No. 2082: Iron Gate Dam, Copco No. 1 Dam, Copco No. 2 Dam, J.C. Boyle Dam, and appurtenant works currently licensed to PacifiCorp.

"**Facilities Removal**" means physical removal of all or part of each of the Facilities to achieve at a minimum a free-flowing condition and volitional fish passage, site remediation and restoration, including previously inundated lands, measures to avoid or minimize adverse downstream impacts, and all associated permitting for such actions.

"**Federal Parties**" refers to Interior, including the component agencies and bureaus of Interior, and the NMFS.

"**FERC**" refers to the Federal Energy Regulatory Commission.

"**Interim Conservation Plan**" or "**ICP**" refers to the plan developed by PacifiCorp through technical discussions with NMFS and the U.S. Fish and Wildlife Service ("USFWS") regarding voluntary interim measures for the enhancement of coho salmon and suckers listed under the ESA, filed with FERC on November 25, 2008, or such plan as subsequently modified.

"**Interim Measures**" refers to those measures described in Appendices C and D to this Settlement.

"**Interim Period**" refers to the period between the Effective Date and Decommissioning.

"**Keno facility**" means Keno Dam, lands underlying Keno Dam, appurtenant works and PacifiCorp-owned property described as Klamath County Map Tax Lot R-3907-03600-00200-000 located in Klamath County, Oregon.

"Klamath Hydroelectric Settlement Agreement" or **"KHSA"** means the Klamath Hydroelectric Settlement Agreement executed February 18, 2010.

"**Meet and Confer**" procedures mean the procedures established by Section 8.7 of this Settlement.

"**NEPA**" refers to the National Environmental Policy Act, 42 U.S.C. §§ 4321 *et seq.*

"**Nominal dollars**" means dollars that are not adjusted for inflation at the time they are collected.

"**Non-bypassable surcharge**" means a monetary surcharge authorized by the appropriate state utility commission through a tariff schedule that applies to all retail customers who rely on PacifiCorp's transmission and distribution system for the delivery of electricity.

"Notice" means written notice pursuant to the requirements and procedures of Section 8.5.

"**Oregon Surcharge Act**" is defined in Section 2.2.

"**PacifiCorp's Economic Analysis**" means the primary economic analysis prepared by PacifiCorp and relied upon by PacifiCorp to compare the present value revenue requirement impact of the KHSA against the present value revenue requirement of relicensing of the Facilities under defined prescriptions generally based on the FERC Final Environmental Impact Statement dated November 2007, which analysis PacifiCorp filed with the Public Utility Commission of Oregon ("Oregon PUC") pursuant to Section 4(1) of the Oregon Surcharge Act and with the California Public Utilities Commission ("California PUC") in accordance with Section 4 of the KHSA. This analysis was used to compare the relative cost of relicensing with the relative cost of the KHSA.

"**Parties**" or "**Party**" means the signatories to this Amended KHSA collectively or a signatory individually.

"**Project**" refers to the Klamath Hydroelectric Project as licensed by FERC under Project No. 2082.

"Public Agency Party" means each Tribe, the Federal Parties, the agencies of each of the States, the Counties, and each other Party that is a public agency established under Applicable Law.

"Regulatory Approval" means each permit or other approval under a statute or regulation necessary or appropriate to implement any of the obligations or activities of Parties contemplated under this Settlement.

"Regulatory Obligation" means each of those obligations or activities of Parties contemplated by this Settlement that are subject to Regulatory Approval and, upon such approval, are enforceable under regulatory authority.

"**Secretarial Determination**" means the determination contemplated in Section 3.3 of the KHSA.

"**Secretary**" refers to the Secretary of the Interior.

"**Services**" means the National Marine Fisheries Service and the U.S. Fish and Wildlife Service.

"**Settlement**" means the entirety of the KHSA and Appendices A through L, as amended and applicable. "Settlement" does not include Exhibits 1 through 4, which are related documents attached for informational purposes.

"**States**" refers to the State of Oregon by and through the Oregon Department of Fish and Wildlife, Oregon Department of Environmental Quality, and Oregon Water Resources

Department, and the State of California by and through the California Department of Fish and Wildlife ("CDFW") and the California Natural Resources Agency.

"**State Cost Cap**" means the collective maximum monetary contribution from the states of California and Oregon as described in Section 4.1.3 of this Settlement.

"Timely" or **"Timeliness"** means performance of an obligation by the deadline established in the applicable provision of this Settlement or otherwise in a manner reasonably calculated to achieve the bargained-for benefits of this Settlement.

"**Tribes**" means the Yurok Tribe, the Karuk Tribe, the Hoopa Valley Tribe, and the Klamath Tribes, so long as such tribe is a signatory to the Settlement.

"**Value to Customers**" means potential cost reductions described in Section 7.3.8. These cost reductions would (1) decrease the Customer Contribution defined in Section 4.1.1.C, (2) decrease the costs of ongoing operations, or (3) decrease the costs of replacement power, as compared against the assumptions contained in PacifiCorp's Economic Analysis.

1.5 Compliance with Legal Responsibilities

In the implementation of this Settlement, Public Agency Parties shall comply with Applicable Law, including but not limited to the Authorizing Legislation, NEPA, ESA, CWA, the Wild and Scenic Rivers Act, and CEQA.

1.6 Reservations

1.6.1 Generally

Nothing in this Settlement is intended or shall be construed to affect or limit the authority or obligation of any Party to fulfill its constitutional, statutory, and regulatory responsibilities or comply with any judicial decision. Nothing in this Settlement shall be interpreted to require the Federal Parties, the States, or any other Party to implement any action which is not authorized by Applicable Law or where sufficient funds have not been appropriated for that purpose by Congress or the States. The Parties expressly reserve all rights not granted, recognized, or relinquished in this Settlement.

1.6.2 Reservations Regarding Federal Appropriations

All actions required of the Federal Parties in implementing this Settlement are subject to appropriations for that purpose by Congress. Nothing in this Settlement shall be interpreted as or constitute a commitment or requirement that any Federal agency obligate or pay funds in violation of the Anti-Deficiency Act, 31 U.S.C. § 1341, or other Applicable Law. Nothing in this Settlement is intended or shall be construed to commit a federal official to expend federal funds not appropriated

for that purpose by Congress. Nothing in this Settlement is intended to or shall be construed to require any official of the executive branch to seek or request appropriations from Congress to implement any provision of this Settlement.

1.6.3 Availability of Public Funds

Funding by any Public Agency Party under this Settlement is subject to the requirements of Applicable Law. Nothing in this Settlement is intended or shall be construed to require the obligation, appropriation, or expenditure of any funds by the States or a Public Agency Party except as otherwise permitted by Applicable Law.

1.6.4 Reservations Regarding Legislative Proposals

Nothing in this Settlement shall be deemed to limit the authority of the executive branch of the United States government to make recommendations to Congress on any particular proposed legislation.

1.6.5 Reservations Regarding Regulations

Nothing in this Settlement is intended or shall be construed to deprive any public official of the authority to revise, amend, or promulgate regulations.

1.6.6 No Pre-Decisional Commitment

Nothing in this Settlement is intended or shall be construed to be a pre-decisional commitment of funds or resources by a Public Agency Party. Nothing in this Settlement is intended or shall be construed to predetermine the outcome of any Regulatory Approval or other action by a Public Agency Party necessary under Applicable Law in order to implement this Settlement.

1.6.7 No Waiver of Sovereign Immunity

Nothing in this Settlement is intended or shall be construed as a waiver of sovereign immunity by the United States, the State of Oregon, the State of California, any other Public Agency Party, or the Tribes. This Settlement does not obligate the United States or any Federal Party to affirmatively support this Settlement regarding any state or local legislative, administrative, or judicial action before a state administrative agency or court.

1.6.8 No Argument, Admission, or Precedent

This Settlement shall not be offered for or against a Party as argument, admission, or precedent regarding any issue of fact or law in any mediation, arbitration, litigation, or other administrative or legal proceeding, except that this Settlement may be used in any future proceeding to interpret or enforce the terms of this

Settlement, consistent with Applicable Law. This Settlement may also be used by any Party in litigation by or against non-Parties to implement or defend this Settlement. This section shall survive any termination of this Settlement.

1.6.9 Protection of Interests

Each Party may, in a manner consistent with this Settlement, protect, defend, and discharge its interests and duties in any administrative, regulatory, legislative or judicial proceeding, including but not limited to the Secretarial Determination, FERC relicensing process, CWA 401 proceedings, or other proceedings related to potential Project relicensing, surrender, or Facilities Removal.

1.7 Trinity River

The Parties intend that this Settlement shall not adversely affect the Trinity River Restoration Program.

To reach that conclusion, the Tribes reaffirm and rely upon their view of the existing fishery restoration goals and principles for the Trinity River Fishery Restoration Program, as follows:

A. Restoration of the Trinity River fish populations to pre-Trinity Dam construction levels;

B. Fishery restoration shall be measured not only by returning anadromous fish spawners but also by the ability of dependent tribal and non-tribal fishers to participate fully in the benefits of restoration through meaningful subsistence and commercial harvest opportunities;

C. An appropriate balance between stocks of natural and hatchery origins shall be maintained to minimize negative interactions upon naturally produced fish by hatchery mitigation releases;

D. A collaborative working relationship between federal agencies and the above mentioned Tribes;

E. Portions of federal activities that are associated with fishery restoration programs are Indian Programs for the purposes of the Indian Self-Determination Act; and

F. The Tribes support full funding implementation of the Trinity River Record of Decision from funding sources outside of this Settlement.

Nothing in this section binds any Party to any particular interpretation of the law or requires any Party to take particular actions, including performance of Interim Measures, or excuses any action otherwise required by Applicable Law or this Settlement.

1.8 Tribal Water Rights

This Settlement does not waive or in any way limit any treaty right, federally reserved right, or other right of the Tribes, or any federally recognized tribe, including any water or fishing right.

1.9 Klamath Basin Agreement

The States, the Federal Parties, and other entities are concurrently entering into the 2016 Klamath Power and Facilities Agreement. Each Party, other than PacifiCorp, shall support and defend the 2016 Klamath Power and Facilities Agreement, in its current form as of April 6, 2016, and its objectives in each applicable venue or forum in which it participates, including any administrative or judicial action. For purposes of this Section 1.9 only, the terms "support and defend" mean that the Party will advocate for the 2016 Klamath Power and Facilities Agreement or refrain from taking any action or making any statement in opposition to the 2016 Klamath Power and Facilities Agreement. More broadly, the Parties are committed to engage in good faith efforts to develop and enter into a subsequent agreement or agreements pertaining to other water, fisheries, land, agriculture, refuge and economic sustainability issues in the Klamath Basin with the goal to complete such agreement or agreements within the next year.

2. Implementation of Settlement

2.1 General Duty to Support Implementation

The Parties shall fully support this Settlement and its implementation. The form, manner, and timing of each Party's support are reserved to the discretion of each Party. Each Party agrees to refrain from any action that does not support or further cooperative efforts in support of the goals of this Settlement and its effective implementation.

2.1.1 Legislation

A. The Parties understand and agree that federal legislation is not necessary to carry out this Settlement.

B. Within 60 days of the Amendment Effective Date, the CDFW will provide draft California legislation to the Parties regarding a limited authorization for incidental take of Lost River Suckers, Shortnose Sucker, Golden Eagles, southern Bald Eagles, Greater Sandhill Cranes, or American Peregrine Falcon contingent upon the fulfillment of certain conditions, if such authorization is necessary for implementation of this Settlement. After reasonable opportunity for Parties to provide comments on the draft legislation, the State of California shall Timely recommend the legislation.

2.1.2 Regulatory Approvals

Subject to Sections 1.6.1, 2.1, and 7.1.5, each Party shall support the application for and granting of Regulatory Approvals consistent with this Settlement. The preceding sentence shall not apply to the Public Agency Party exercising the regulatory approval or to a Public Agency Party not participating in the proceeding.

2.1.3 Defense of Settlement

If an administrative or judicial action is brought against any Party to challenge the validity of this Settlement or its implementation consistent with the Settlement, each other Party shall endeavor to intervene or otherwise participate in such action, subject to its discretion, necessary funding, and Section 1.6. Any such participating Party will defend the Settlement. The form of such defense, including what litigation positions to support or recommend in such action, shall be left to the discretion of each participating Party in the action.

Each Party may comment on the consistency of any plan, other document, or data arising during the implementation of this Settlement and not otherwise set forth in an Appendix or Exhibit to this Settlement. The Parties acknowledge that their comments may conflict due to differing good-faith interpretations of the applicable obligations under this Settlement.

2.1.4 Obligation to Implement

A. General

Each Party shall implement each of its obligations under this Settlement in good faith and with Due Diligence. Any obligation identified as an obligation of all of the Parties does not obligate any individual Party to take any action itself or itself make any specific commitment other than to participate in the applicable procedures.

B. Cooperation Among the Parties

Each Party shall cooperate in the implementation of this Settlement. A Party shall not act in a manner that results in an action or requirement that is inconsistent with the Settlement unless necessary to comply with statutory, regulatory, or other legal responsibility.

C. Covenant Not to Sue with Respect to Permitting and Performance of Definite Plan

(1) No Party shall directly or indirectly through other entities oppose the DRE's securing all permits and entering all contracts necessary

for Facilities Removal consistent with the Definite Plan or any Regulatory Approval, provided this clause does not apply to a Public Agency Party exercising a Regulatory Approval;

(2) After transfer of the Facilities to the DRE, each Party covenants not to sue any other Party for monetary or non-monetary relief for harm arising from removal of any of the Facilities, provided this covenant does not apply to claims against the DRE arising from the negligence, recklessness, or willful misconduct of the DRE or any of its contractors, subcontractors, or assigns, or from the actions or omissions of the DRE or any of its contractors, subcontractors, or assigns inconsistent with the Definite Plan or in violation of a Regulatory Approval. This provision does not apply to rights under the indemnifications established in Section 7.1.3 or the States' agreements with the DRE required in Section 4.12.

2.1.5 Timeliness

Exhibit 4 describes the sequence of performance of specific obligations necessary to achieve the bargained-for benefits of this Settlement. Exhibit 4 is subject to change and modification as needed and is provided for guidance only. The Parties shall undertake to implement this Settlement in a manner consistent with this sequence. If any Party requires more time than permitted by this Settlement to perform an obligation, that Party shall provide Notice to other Parties 30 days before the applicable deadline, unless the applicable provision in this Settlement establishes a different period. The Notice shall explain: (1) the obligation that the Party is attempting to perform; (2) the reason that performance is or may be delayed; and (3) the steps the Party has taken or proposes to take to Timely complete performance.

2.1.6 Force Majeure

A. Definition of Force Majeure

The term "Force Majeure" means any event reasonably beyond a Party's control that prevents or materially interferes with the performance of an obligation of that Party, that could not be avoided with the exercise of due care, and that occurs without the fault or negligence of that Party. Force Majeure events may be unforeseen, foreseen, foreseeable, or unforeseeable, including without limitation: natural events; labor or civil disruption; breakdown or failure of Project works not caused by failure to properly design, construct, operate, or maintain; or new regulations or laws that are applicable to the Project (other than the Authorizing Legislation). Force Majeure is presumed not to include normal inclement weather, which presumption can be overcome by a preponderance of the evidence provided by the non-performing Party.

B. Suspension of Obligation

During a Force Majeure event, and except as otherwise provided in this Settlement, a Party shall be relieved of any specific obligation directly precluded by the event, as well as those other obligations performance of which is materially impaired, but only for the duration of such event. The non-performing Party bears the burden of proving by a preponderance of the evidence the existence of Force Majeure, including the absence of negligence and fault.

C. Remedies

If a Force Majeure event occurs, and except as otherwise provided in this Settlement:

(1) A Party that believes it is excused from performance pursuant to Section 2.1.6.B shall provide Notice within 10 days of the onset of the event. Such Notice shall describe the occurrence, nature, and expected duration of such event and describe the steps the Party has taken or proposes to be taken to prevent or minimize the interference with the performance of any affected obligation under this Settlement;

(2) A Party shall thereafter provide periodic Notice to the other Parties of the efforts to address and resolve a Force Majeure event; and

(3) If any other Party disputes the Party's claim of a Force Majeure event, or the adequacy of the efforts to address and resolve such event, such Party shall initiate the Dispute Resolution Procedures stated in Section 8.6.

2.2 Ratemaking Legislation and Proceedings

Each Party shall support implementation of the Oregon Surcharge Act enacted as Senate Bill 76, 2009 Or. Session Laws Chapter 690 in 2009 and authorizing the collection of a customer surcharge for the costs of Facilities Removal, which was codified as ORS 757.732 through 757.744. The Oregon Surcharge Act as codified is attached to this Settlement as Appendix F.

The Parties understand and agree that the costs of Facilities Removal shall be funded as specified in Section 4 of this Settlement. The Parties further understand and agree that funds allocated for Facilities Removal shall be managed and disbursed as specified in Section 4 of this Settlement. In the event that (1) the California Legislature does not adopt legislation by the time of the Secretarial Determination to place a ballot measure before California voters that contains a provision to fund up to $250,000,000 (in nominal dollars) of the costs of Facilities Removal, or (2) the California voters do not adopt such

ballot measure by the time of the Secretarial Determination, or (3) the California PUC does not adopt a California Klamath Surcharge, as defined herein and specified in Section 4, or (4) the Oregon PUC does not adopt an Oregon Klamath Surcharge, as defined in the Oregon Surcharge Act and specified herein, the Parties shall Meet and Confer to attempt, in good faith, to identify substitute funding and/or other alternatives to cover the costs of Facilities Removal.

2.3 Project Water Rights; Klamath Basin Adjudication

2.3.1 Project Water Rights

PacifiCorp's Oregon water rights will be processed and adjusted in accordance with the principles of Oregon law and the *Water Rights Agreement between PacifiCorp and the State of Oregon* attached to this Settlement as Exhibit 1.

2.3.2 Klamath Basin Adjudication

The Parties support the efforts by PacifiCorp, the Klamath Tribes, Bureau of Indian Affairs, and OWRD to develop a Klamath Basin Adjudication ("KBA") Settlement Agreement of cases 282 and 286 in the KBA.

2.4 Lease of State-Owned Beds and Banks

Within 60 days of the Effective Date, PacifiCorp shall apply to the Oregon Department of State Lands in accordance with state law for leases authorizing occupancy of submerged and submersible lands by the J.C. Boyle Dam, J.C. Boyle Powerhouse, and Keno Dam. No Party shall be deemed to have admitted, adjudicated, or otherwise agreed to the State of Oregon's claim to ownership of submerged and submersible lands by virtue of this Settlement.

3. Secretarial Designation and Statement of Support

3.1 Statement of Support

In cooperation with the Secretary of Commerce and other federal agencies as appropriate, the Secretary may make an affirmative statement of support for Facilities Removal if, in the Secretary's judgment, Facilities Removal (1) will advance restoration of the salmonid fisheries of the Klamath Basin, and (2) is in the public interest, which includes but is not limited to consideration of potential impacts on affected local communities and Tribes.

3.2 Secretarial Designation

The Secretary, through execution of Amendment No. 1, agrees that the DRE will act as the entity with authority under ORS 757.738(3) to request transfer of funds held in the appropriate trust account established under ORS 757.738. The DRE, its assigns, or successors, shall expend funds in the amounts necessary and as consistent with the Settlement to pay "the costs of removing the Klamath River dams" as that phrase is used in ORS 757.736(11).

successor, in accordance with a funding agreement as specified in Section 4.12.2, in the amounts necessary to pay "the costs of removing the Klamath River dams" as that phrase is used in ORS 757.736(11).

4. Costs

4.1 Funds for the Purpose of Facilities Removal

The Parties agree to pursue arrangements for the creation of the funding sources described below for the purpose of Facilities Removal.

4.1.1 The Customer Contribution

A. Within 30 days of the Effective Date, PacifiCorp shall request that the Oregon PUC, pursuant to the Oregon Surcharge Act, establish two non-bypassable customer surcharges, the Oregon J.C. Boyle Dam Surcharge and the Oregon Copco I and II/Iron Gate Dams Surcharge (together, the "Oregon Klamath Surcharges"), for PacifiCorp's Oregon customers to generate funds for the purpose of Facilities Removal. PacifiCorp shall request that the Oregon PUC set the Oregon Klamath Surcharges so that to the extent practicable the total annual collections of the surcharges remain approximately the same during the collection period.

B. Within 30 days of the Effective Date, PacifiCorp shall request that the California PUC establish a non-bypassable customer surcharge (the "California Klamath Surcharge") for PacifiCorp's California customers to generate funds for the purpose of Facilities Removal. PacifiCorp shall request that the California PUC establish the California Klamath Surcharge so that it will collect an approximately equal amount each year that it is to be collected. PacifiCorp shall request that such surcharge assigns responsibility among the customer classes in an equitable manner. PacifiCorp shall also request that the California PUC set the California Klamath Surcharge so that it at no time exceeds two percent of the revenue requirements set by the California PUC for PacifiCorp as of January 1, 2010.

C. The Parties agree that the total amount of funds to be collected pursuant to the Oregon Klamath Surcharges and the California Klamath Surcharge shall not exceed $200,000,000 (in nominal dollars); these funds shall be referred to as the "Customer Contribution."

D. PacifiCorp shall request that the Oregon PUC establish a surcharge so that the amount collected under the Oregon Klamath Surcharges is 92% (a maximum of approximately $184,000,000) of the total

Customer Contribution, and with 75% of the total Oregon Klamath Surcharges amount collected through the Oregon Copco I and II/Iron Gate Dams Surcharge and 25% collected through the Oregon J.C. Boyle Dam Surcharge.

E. PacifiCorp shall request that the California PUC establish a surcharge so that the amount collected under the California Klamath Surcharge is 8% (a maximum of approximately $16,000,000) of the Total Customer Contribution. The trustee of the California Klamath Surcharge shall apply 75% of the total California Klamath Surcharge amount collected to the California Copco I and II/Iron Gate Dams Trust Account and 25% of the total California Klamath Surcharge amount collected to the California J.C. Boyle Dam Trust Account.

F. PacifiCorp shall collect and remit the surcharges collected pursuant to this section to the trustee(s) described in Section 4.2, below, to be deposited into the appropriate California Klamath Trust Accounts and Oregon Klamath Trust Accounts.

G. Consistent with Section 2.1 of this Settlement, each non-Federal Party shall support the California Klamath Surcharge and the Oregon Klamath Surcharges in the proceedings conducted by the California PUC and the Oregon PUC, respectively, to the extent the proposed Surcharges are consistent with this Settlement.

4.1.2 The California Bond Funding

A. The California Legislature has approved a general obligation bond ("Bond Measure") containing a provision authorizing the issuance of bonds for the amount necessary to fund the difference between the Customer Contribution and the actual cost to complete Facilities Removal, which bond funding in any event shall not exceed $250,000,000 (in nominal dollars). The bond language is set forth in Appendix G-1. At its sole discretion, the State of California may also consider other appropriate financing mechanisms to assist in funding the difference between the Customer Contribution and the actual cost of complete Facilities Removal, not to exceed $250,000,000 (in nominal dollars).

B. Consistent with Applicable Law and Section 2.1, each non-federal Party shall support the Klamath bond language in Appendix G-1; provided that nothing in this Settlement is intended or shall be construed to require a Party to support a Bond Measure that includes authorizations unrelated to the implementation of this Settlement.

4.1.3 State Cost Cap

The Customer Contribution and the California Bond Funding shall be the total state contribution and shall be referred to together as the "State Cost Cap."

4.2 Establishment and Management of Trust Accounts and California Bond Funding

4.2.1 The Oregon Klamath Trust Accounts

A. In accordance with the Oregon Surcharge Act, the Oregon PUC will establish two interest-bearing accounts where funds collected by PacifiCorp pursuant to the Oregon Klamath Surcharges shall be deposited until needed for Facilities Removal purposes. The Oregon J.C. Boyle Dam Account shall be established to hold funds collected pursuant to the Oregon J.C. Boyle Dam Surcharge. The Oregon Copco I and II/Iron Gate Dams Account shall be established to hold funds collected pursuant to the Oregon Copco I and II/Iron Gate Dams Surcharge. The Oregon J.C. Boyle Dam Account and the Oregon Copco I and II/Iron Gate Dams Account may be referred to together as the "Oregon Klamath Trust Accounts."

B. In accordance with the Oregon Surcharge Act, the Oregon PUC will select a trustee to manage the Oregon Klamath Trust Accounts. The Parties may recommend a trustee for consideration by the Oregon PUC.

4.2.2 The California Klamath Trust Accounts

A. Upon execution of this Settlement, California shall request, and each non-Federal Party shall support the request, that the California PUC establish two interest-bearing trust accounts where funds collected by PacifiCorp pursuant to the California Klamath Surcharge for the purpose of Facilities Removal shall be deposited until needed for Facilities Removal purposes. The non-Federal Parties shall also request that California and the California PUC establish the trust accounts in a manner that ensures that the surcharge funds will not be taxable revenues to PacifiCorp. The California J.C. Boyle Dam Trust Account shall be established to hold 25% of the funds collected pursuant to the California Klamath Surcharge. The California Copco I and II/Iron Gate Dams Trust Account shall be established to hold 75% of the funds collected pursuant to the California Klamath Surcharge. The California J.C. Boyle Dam Trust Account and the California Copco I and II/Iron Gate Dams Trust Account may be referred to together as the "California Klamath Trust Accounts."

B. California shall request, and each non-Federal Party shall support the request, that the California PUC select a trustee to accept surcharge

funds from PacifiCorp and manage the California Klamath Trust Accounts. The Parties may recommend a trustee for consideration by the California PUC.

4.2.3 The California Bond Funding

In the event that the Bond Measure is placed on the ballot and approved by voters, bond funds available from the Bond Measure shall be managed pursuant to California bond law; however, the State of California agrees that, to the extent permitted by law, the California Bond Funding shall be managed and disbursed in a manner consistent with and complementary to the management and disbursement of the Customer Contribution.

4.2.4 Management of the Trust Accounts

A. Within six months of the Effective Date, the States in consultation with the Federal Parties shall prepare draft trustee instructions for submission to the respective PUCs. The States shall then request that the California PUC or another designated agency of the State of California, and the Oregon PUC work cooperatively to prepare joint instructions to the trustee(s) of the Oregon Klamath Trust Accounts and California Klamath Trust Accounts, consistent with the draft instructions, as to the following:

(1) Whether and when to disburse funds from the Oregon Klamath Trust Accounts and California Klamath Trust Accounts to the DRE;

(2) The methodology to be used by the trustee(s) to determine which account or accounts to draw funds from for the purpose of disbursing funds to the DRE;

(3) A protocol for the trustee(s) to use to ensure that the management of the Customer Contribution is consistent with and complementary to the management of the California Bond Funding;

(4) Disbursement of funds under the circumstances described in Section 4.4 below;

(5) A protocol for reallocating between Trust Accounts monies that have already been deposited into the Trust Accounts, to be used by the trustees, at the request of the States, for removal of specific facilities; and

(6) If the trustee is a federal agency, provisions ensuring that Trust Account monies are not used for any other purpose than Facilities Removal consistent with the trustee instructions and do not become part of any federal agency's or bureau's budget.

B. As necessary, the States, in consultation with PacifiCorp and the DRE, will prepare draft trustee instructions revised as appropriate and request that the California PUC or another designated agency of the state of California, and the Oregon PUC work cooperatively to prepare revised joint instructions to the trustee(s) of the Oregon Klamath Trust Accounts and California Klamath Trust Accounts consistent with the draft revised instructions. The States and PacifiCorp will take such other actions as may be reasonably necessary to facilitate the distribution of the Customer Contribution.

4.3 Adjustment to Surcharges

As appropriate, the States shall consult with each other, PacifiCorp, and the Federal Parties regarding adjustments to the California Klamath Surcharge or Oregon Klamath Surcharges necessitated by or appropriate considering the circumstances. Following such consultation, PacifiCorp will request that the California PUC and Oregon PUC adjust the Klamath Surcharges to be consistent with the recommendations developed through the consultation. Any adjustment shall not alter the maximum level of the Customer Contribution or State Cost Cap.

4.4 Disposition of Unnecessary or Unused Funds from the Oregon and/or California Klamath Trust Accounts

4.4.1 If, as described in Section 4(5) of the Oregon Surcharge Act, the Oregon Klamath Surcharges are finally determined to result in rates that are not fair, just, and reasonable, the surcharges shall be refunded to customers in accordance with the Oregon Surcharge Act and the trustee instructions.

4.4.2 In the event that the Oregon PUC finds that the Oregon Klamath Trust Accounts contain funds in excess of actual costs necessary for Facilities Removal, those excess amounts shall be refunded to customers or otherwise used for the benefit of customers as set forth in Section 4(9) of the Oregon Surcharge Act and the trustee instructions.

4.4.3 In the event that, following Facilities Removal, the trustee of the California Klamath Trust Account determines that the California Klamath Trust Account contains funds in excess of actual costs necessary for Facilities Removal, the non-Federal Parties shall request that the California PUC order those excess amounts to be refunded to customers or otherwise used for the benefit of customers.

4.4.4 If, as a result of the termination of this Settlement, or other cause, one or more Project dams will not be removed:

A. All or part of the Oregon Klamath Surcharges shall be terminated and the Oregon Klamath Trust Accounts disposed as set forth in Section 4(10) of the Oregon Surcharge Act and the trustee instructions; and

B. PacifiCorp shall request that the California PUC direct PacifiCorp to terminate all or part of the surcharge, that the California PUC direct the trustee to apply any excess balances in the California Klamath Trust Account to California's allocated share of prudently incurred costs to implement FERC relicensing requirements, and that, if any excess amount remains in the trust accounts after that application, that the California PUC order that the excess amounts be refunded to customers or otherwise be used for the benefit of customers.

4.5 Recovery of Net Investment in Facilities

4.5.1 Consistent with Section 3 of the Oregon Surcharge Act, PacifiCorp shall request, and each non-Federal Party shall support the request, that the Oregon PUC allow recovery of PacifiCorp's net investment in the Facilities.

4.5.2 PacifiCorp shall request, and each non-Federal Party shall support the request, that the California PUC conduct one or more proceedings to implement the following:

A. That the California PUC determine a depreciation schedule for each Facility based on the assumption that the Facility will be removed in 2020, and change that depreciation schedule at any time if removal of the Facility will occur in a year other than 2020; and

B. That the California PUC use the depreciation schedules adopted consistent with Section 4.5.2.A above to establish rates and tariffs for the recovery of California's allocated share of undepreciated amounts prudently invested by PacifiCorp in the Facilities, with amounts recoverable including but not limited to:

(1) Return on investment and return of investment;

(2) Capital improvements required by the Federal Parties or any agency of the United States or any agency of the States for the continued operation of the Facility until Facility removal;

(3) Amounts spent by PacifiCorp in seeking relicensing of the Project before the Effective Date of this Settlement;

(4) Amounts spent by PacifiCorp for settlement of issues relating to relicensing or removal of the Facilities; and

(5) Amounts spent by PacifiCorp for the Decommissioning of the Facilities in anticipation of Facilities Removal.

C. If any amount has not been recovered by PacifiCorp before a Facility is removed, PacifiCorp shall request, and each non-Federal Party shall support the request, that the California PUC allow recovery of that amount by PacifiCorp in PacifiCorp's rates and tariffs.

4.5.3 Rates and tariffs proposed pursuant to this Section 4.5 shall be separate from, and shall not diminish the funds collected by, the Oregon and California Klamath Surcharges.

4.6 Recovery of Costs of Ongoing Operations and Replacement Power

4.6.1 Consistent with Section 6 of the Oregon Surcharge Act, PacifiCorp shall request, and each non-Federal Party shall support the request, that the Oregon PUC allow recovery of other costs incurred by PacifiCorp.

4.6.2 Subject to Section 2.1.2, each non-Federal Party shall support PacifiCorp's request to the California PUC for PacifiCorp to include in rates and tariffs California's allocated share of any costs that are prudently incurred by PacifiCorp from changes in operation of Facilities, including reductions to generation from the Facilities before removal of the Facilities and for replacement power after the dams are removed.

4.6.3 Rates and tariffs proposed pursuant to this Section 4.6 shall be separate from, and shall not diminish the funds collected by, the Oregon and California Klamath Surcharges.

4.7 Treatment of Costs Related to Future Portfolio Standards and Climate Change Legislation

The Parties agree to Meet and Confer at PacifiCorp's request regarding provisions to address potential customer impacts from renewable portfolio standards and climate change emissions requirements.

4.8 Acknowledgment of Independence of Oregon PUC and California PUC

The Parties acknowledge that the Oregon PUC and California PUC each is a separate state agency that is not bound by this Settlement. Nothing in this Settlement expands,

limits, or otherwise affects any authority of the respective commissions regarding the customer surcharges and trust accounts, recovery of net investment, or recovery of costs of ongoing operations or replacement power. Because the Parties cannot provide assurance that either commission will decide to or be allowed to implement any of the provisions for funding Facilities Removal, failure of a commission to do so is not a breach of this Settlement by any Party.

4.9 Consultation

Before filing the requests to the California PUC and Oregon PUC described in Sections 4.5 and 4.6, above, PacifiCorp shall undertake to consult with the Parties, pursuant to a confidentiality agreement among the Parties or a protective order issued by the relevant PUC, so that the requested rates can be explained and the basis for such rates can be provided. Further, before any request to the California PUC or the Oregon PUC to reduce or increase a surcharge in the event the amount needed for Customer Contribution is determined to be less or more than the level of Customer Contribution specified in Section 7.3.2.A, the States and PacifiCorp shall undertake to consult with all Parties.

4.10 United States Not Responsible for Costs of Facilities Removal

The United States shall not be liable or responsible for costs of Facilities Removal.

4.11 Parties' Costs Related to Facilities Removal

Subject to Section 4.4, the funds accumulated pursuant to Section 4 are solely for use in accomplishing Facilities Removal, including but not limited to development of the Definite Plan, all necessary permitting and environmental compliance actions, and construction/project management for Facilities Removal. Nothing in this section shall be interpreted as a limitation on the State of California's use of California Bond Funding, or funds collected pursuant to the California Klamath Surcharge and deposited into the California Copco 1 and 2 and Iron Gate Dams Trust Account, for environmental review; provided the use of any funds from California Copco 1 and 2 and Iron Gate Dams Trust Account may be offset by California Bond Funds to achieve the target dates set forth in Section 7.3.

4.12 Funding and Grant Agreements

4.12.1 On or around June 15, 2016, CNRA will enter into an agreement with the DRE pertaining to the use of funds from the Customer Contribution and California Bond Funding.

4.12.2 On or around June 15, 2016, and as is necessary at any time thereafter, the DRE will enter into an agreement with the Oregon PUC pertaining to the use of funds from the Customer Contribution in a manner not inconsistent with the Settlement and ORS 757.738(3).

4.12.3 On or around June 15, 2016, CNRA will enter into a funding agreement with the DRE and any other entity as appropriate. The funding agreement will include conditions not inconsistent with the Settlement pertaining to the use of the California Klamath Trust Accounts.

4.12.4 Following appropriation by the California legislature and consistent with the agreement in Section 4.12.1, CNRA will enter into a grant agreement(s) with the DRE. The grant agreement(s) shall include conditions not inconsistent with the Settlement pertaining to the use of the California Bond Funding.

5. Local Community Power

5.1 Power Development

5.1.1 PacifiCorp and the irrigation-related Parties will in good faith cooperate in the investigation or consideration of joint development and ownership of renewable generation resources and the purchase by PacifiCorp of power from renewable energy projects developed by KWAPA or other parties related to the Klamath Reclamation Project or off-project irrigators. PacifiCorp and interested Public Agency Parties will in good faith cooperate in the investigation or consideration of joint development and ownership of potential renewable generation resources and the purchase by PacifiCorp of power from renewable energy projects developed by interested Public Agency Parties. Nothing in this Settlement requires any Party to enter into a specific transaction related to such development, ownership or purchase, but PacifiCorp, interested Public Agency Parties and the irrigation-related Parties desire to take actions in their mutual beneficial interest where opportunities arise.

5.1.2 Pursuant to that certain Memorandum of Understanding dated October 15, 2001 among the Western Governors Association and various federal agencies, the Secretary and the State of California shall seek to designate Siskiyou County as a Western Renewable Energy Zone and the Secretary and the State of Oregon shall seek to designate Klamath County as a Western Renewable Energy Zone. The Federal Parties will work with the Counties and other Parties to explore and identify potential ways to expand transmission capacity for renewable resources within the Counties.

5.2 [Section deleted]

5.3 Transmission and Distribution of Energy

Interior, KWAPA, KWUA and UKWUA agree that federal power can contribute to meeting power cost targets for irrigation in the Upper Klamath Basin. To that end, and consistent with applicable standards of service and the Pacific Northwest Power Planning and Conservation Act, 16 U.S.C. § 839 *et seq*., Interior will acquire power from the Bonneville Power Administration ("Bonneville") to serve all "eligible loads" located within Bonneville's authorized geographic area. Interior and Bonneville will engage in an open and transparent process that will provide for public review and comment on any proposed agreement. For purposes of the acquisition of federal power, Interior defines Klamath eligible loads to include both on and off-project loads. Such acquisitions are subject to Bonneville's then effective marketing policies, contracts, and applicable priority firm power rate.

For an additional, standard transmission charge, Bonneville will deliver power to PacifiCorp at the Captain Jack or Malin substations or other points as may be mutually agreed to by Bonneville and PacifiCorp ("Points of Delivery") and PacifiCorp will deliver the energy to eligible loads under applicable tariffs.

Interior, KWAPA, KWUA, UKWUA and PacifiCorp agree to continue to work in good faith to identify and implement a mutually agreeable approach for delivering acquired federal power to eligible loads. PacifiCorp agrees to receive any federal power at the Points of Delivery and to deliver such power to the eligible loads pursuant and subject to the following terms and conditions:

5.3.1 The terms and conditions related to accessing PacifiCorp's transmission system, to the extent that it is necessary, will be consistent with PacifiCorp's Open Access Transmission Tariff ("OATT").

5.3.2 The terms and conditions related to accessing PacifiCorp's distribution system will remain subject to the jurisdiction of the California Public Utilities Commission for distribution facilities located in California and the Oregon Public Utility Commission for distribution facilities located in Oregon. In California and Oregon, the respective PUCs have approved unbundled delivery service tariffs for PacifiCorp to implement direct access legislation. The Parties agree that these unbundled delivery service tariffs can enable the delivery of federal power. For power acquired by Interior from Bonneville, PacifiCorp will charge an unbundled distribution rate that is based on the Oregon Commission-approved tariff applicable to the delivery of Bonneville power to eligible loads in Oregon.

To the extent that PacifiCorp's existing tariffs require revision in order to allow PacifiCorp to implement the mutually agreeable approach, PacifiCorp shall request such revision by the Commission having jurisdiction.

The Parties understand and agree that PacifiCorp shall recover its costs incurred in providing the delivery services required under the mutually agreeable approach and that such services will not be subsidized by PacifiCorp's other retail customers. PacifiCorp, Interior, KWUA, KWAPA, and UKWUA agree to work cooperatively to identify and analyze, as necessary, PacifiCorp's costs for delivery services as part of identification of any such mutually agreeable approach. The Parties further agree that the costs of providing delivery services will be recovered pursuant to a tariff or tariffs established by the respective PUC based on cost-of-service principles and a finding by the PUC that the rates charged under the tariff[s] are fair, just, reasonable and sufficient.

5.3.3 PacifiCorp agrees to work in good faith to develop mutually agreeable revisions to existing provisions of state or federal law, if necessary to implement the mutually agreeable approach.

5.3.4 PacifiCorp agrees to work in good faith with Bonneville, Interior, KWAPA, KWUA and UKWUA and other Parties as the case may be, to resolve, on a mutually agreeable basis, any technical and administrative issues (such as billing and metering) that may arise with respect to PacifiCorp's delivery of power to the eligible loads.

5.3.5 It is the Parties' intent that this Agreement will not require PacifiCorp to modify its existing transmission or distribution facilities. PacifiCorp may elect to do so at the sole cost and expense of the Party or entity requesting such modification.

5.3.6 At such time as the eligible loads are prepared to and technically able to receive federal power, PacifiCorp, Interior, KWAPA, KWUA and UKWUA agree to work cooperatively with each other to transition the eligible loads from full retail service on a mutually agreeable basis. The Parties acknowledge that for any eligible load that has received federal power pursuant to this section, PacifiCorp will no longer have the obligation to plan for or meet the generation requirements for these loads in the future, provided, however, that PacifiCorp agrees to work cooperatively to provide generation services to eligible loads in a manner that is cost-neutral to other PacifiCorp customers in the event that a contract for federal power is no longer available. Interior, KWAPA, KWUA and UKWUA agree to provide notice to PacifiCorp as soon as practicable after becoming aware that federal power will no longer be available to serve any eligible loads.

5.3.7 Interior, in consultation with KWAPA, KWUA and UKWUA, shall Timely develop a preliminary identification of the eligible loads for purposes of Section 5.3. Interior, in consultation with KWAPA, KWUA and UKWUA, shall provide notification to PacifiCorp identifying the final

eligible loads for purposes of Section 5.3, not later than 120 days before delivery of federal power to any such eligible loads is to begin. The mutually agreeable approach will address the manner by which Interior provides notification to PacifiCorp of any changes to eligible loads.

5.3.8 Interior agrees to work cooperatively to assign or delegate or transition functions of Interior to KWAPA or another appropriate entity subject to the terms of this Section.

5.3.9 If Interior or KWAPA or UKWUA are able to acquire power from any entity other than Bonneville for eligible loads in either Oregon or California, PacifiCorp, KWAPA, UKWUA, Interior, and KWUA, as applicable, will work cooperatively to agree on a method for transmission and delivery.

5.3.10 Upon termination of this Settlement, PacifiCorp agrees to provide service under the terms of its approved delivery tariff until or unless the respective PUC determines that the applicable tariff should no longer be in place. It is the intention of PacifiCorp, Interior, KWUA, KWAPA, and UKWUA that the general principles of cooperation expressed in Section 5 continue beyond the term of this Settlement.

5.4 Irrigator Rates

In consultation with Klamath Basin irrigators, PacifiCorp will continue to explore alternative rate structures and programs, such as time-of-use rates or demand control programs.

6. Interim Operations

6.1 General

Interim Measures under this Settlement consist of: (1) Interim Measures included as part of PacifiCorp's Interim Conservation Plan ("ICP Interim Measures") (Appendix C); and (2) Interim Measures not included in the Interim Conservation Plan ("Non-ICP Measures") (Appendix D). In addition, PacifiCorp's Interim Conservation Plan includes certain measures for protection of listed sucker species not included as part of this Settlement.

6.1.1 PacifiCorp Performance

PacifiCorp shall perform the Interim Measures in accordance with the terms and schedule set forth in Appendices C and D as long as this Settlement is in effect during the Interim Period. However, if this Settlement terminates, PacifiCorp shall continue performance of the Iron Gate Turbine Venting until the time FERC issues an order in the relicensing proceeding. PacifiCorp shall have no obligation

under this Settlement to perform any other of the Interim Measures if this Settlement terminates, but may implement certain ICP and Non-ICP Interim Measures for ESA or CWA purposes or for any other reason. PacifiCorp reserves its right to initiate termination pursuant to Section 8.11.1.C, if the Services fail to provide incidental take authorization in a Timely way.

6.1.2 Duty to Support

Subject to the reservations in Sections 1.6, 6.2, and 6.3.4, each Party shall support the Interim Measures set forth in Appendices C and D, and will not advocate additional or alternative measures for the protection of environmental resources affected by the Project during the Interim Period.

6.1.3 Permitting

A. PacifiCorp or the DRE (as applicable) shall comply with all federal, state, and local laws and obtain all federal, state, and local permits related to Interim Measures, to the extent such laws and permits are applicable.

B. FERC Enforcement and Jurisdiction

(1) The Parties agree that enforcement of the terms of the current license, as extended through annual licenses, shall be exclusively through FERC. If the annual license is amended to incorporate any of the Interim Measures, a Party may seek compliance pursuant to any remedies it may have under Applicable Law.

(2) Subject to the reservations in Section 6.3.4, PacifiCorp will implement Interim Measures and the Klamath River TMDLs, subject to any necessary FERC or other Regulatory Approvals.

6.1.4 Interim Power Operations

Consistent with the operation and maintenance agreement contemplated in Section 7.1.6, PacifiCorp shall continue to operate the Facilities for the benefit of customers and retain all rights to the power from the Facilities until each Facility is transferred and Decommissioned, including all rights to any power generated during the time between transfer of the Facility to the DRE and Decommissioning of the Facility by PacifiCorp.

6.1.5 Adjustment for Inflation

For any funding obligation under a Non-ICP Interim Measure in Appendix D expressly made subject to adjustment for inflation, the following formula shall be applied at the time of payment:

$$AD = D \times (CPI\text{-}U_t) / (CPI\text{-}U_o))$$

WHERE:

AD = Adjusted dollar amount payable.
D = Dollar amount prescribed in the Interim Measure.
$CPI\text{-}U_t$ = the value of the published version of the Consumer Price Index-Urban for the month of September in the year prior to the date a dollar amount is payable. (The CPI-U is published monthly by the Bureau of Labor Statistics of the federal Department of Labor. If that index ceases to be published, any reasonably equivalent index published by the Bureau of Economic Analysis may be substituted by written agreement of the Parties.)
$CPI\text{-}U_o$ = the value of the Consumer Price Index-Urban for the month and year corresponding to the Effective Date of this Settlement.

6.2 Interim Conservation Plan

6.2.1 Application by PacifiCorp

PacifiCorp shall apply to the Services pursuant to ESA Section 10 and applicable implementing regulations to incorporate the Interim Conservation Plan measures, including both Appendix C (ICP Interim Measures) and the Interim Conservation Plan measures for protection of listed sucker species not included in Appendix C, into an incidental take permit. PacifiCorp also may apply in the future to FERC to incorporate some or all of the Interim Conservation Plan measures as an amendment to the current annual license for the Project.

6.2.2 Applicable Actions by the Services under the ESA

The Services shall review PacifiCorp's application to incorporate the Interim Conservation Plan measures into an incidental take permit pursuant to ESA Section 10 and applicable implementing regulations. Subject to Section 2.1.2, each Party shall support PacifiCorp's request for a license amendment or incidental take permit to incorporate the Interim Conservation Plan measures. Provided, however, the Services reserve their right to reassess these interim measures, as applicable, in: (1) developing a biological opinion pursuant to ESA Section 7 or reviewing an application for an incidental take permit pursuant to ESA Section 10 and applicable implementing regulations; (2) reinitiating consultation on any final biological opinion pursuant to applicable implementing regulations; or (3) revoking any final incidental take permit pursuant to the ESA, applicable implementing regulations, or the terms of the permit. Provided further, other Parties reserve any applicable right to oppose any such actions by the Services.

6.2.3 Potential Modifications of Measures

The Services shall provide the Parties Notice upon issuance of any final biological opinion or incidental take permit issued by the Services pursuant to the ESA regarding the ICP Interim Measures (Appendix C). If the terms of any such final biological opinion or incidental take permit include revisions to the ICP Interim Measures, those measures in the Settlement shall be deemed modified to conform to the provisions of the biological opinion or incidental take permit if PacifiCorp agrees to such modifications. If PacifiCorp does not agree to such modifications, PacifiCorp reserves the right to withdraw its application for license amendment or refuse to accept an incidental take permit regarding the ICP Interim Measures.

6.3 TMDLs

6.3.1 PacifiCorp Implementation

Subject to the provisions of this Section 6.3.1, PacifiCorp agrees to implement load allocations and targets assigned the Project under the States' respective Klamath River TMDLs, in accordance with OAR chapter 340, Division 42, and California Water Code Division 7, Chapter 4, Article 3. It is the expectation of the Parties that the implementation of the commitments in this Settlement, coupled with Facilities Removal by the DRE, will meet each State's applicable TMDL requirements. PacifiCorp's commitment to develop and carry out TMDL implementation plans in accordance with this Settlement is not an endorsement by any Party of the TMDLs or load allocations therein.

6.3.2 TMDL Implementation Plans

A. No later than 60 days after ODEQ's and the North Coast Regional Water Quality Control Board's (NCRWQCB's) approval, respectively, of a TMDL for the Klamath River, PacifiCorp shall submit to ODEQ and NCRWQCB, as applicable, proposed TMDL implementation plans for agency approval. The TMDL implementation plans shall be developed in consultation with ODEQ and NCRWQCB.

B. To the extent consistent with this Settlement, PacifiCorp shall prepare the TMDL implementation plans in accordance with OAR 340-042-0080(3) and California Water Code section 13242, respectively. The plans shall include a timeline for implementing management strategies and shall incorporate water quality-related measures in the Non-ICP Interim Measures set forth in Appendix D. Facilities Removal by the DRE shall be the final measure in the timeline. At PacifiCorp's discretion, the proposed plans may further include other planned activities and management strategies developed individually or cooperatively with other sources or designated management agencies. ODEQ and NCRWQCB may authorize PacifiCorp's use of offsite

pollutant reduction measures, subject to an iterative evaluation and approval process; provided, any ODEQ authorization of such offsite measures conducted in Oregon solely to facilitate attainment of load allocations in California waters shall not create an ODEQ obligation to administer or enforce the measures.

6.3.3 Keno Load Allocation

Subject to Section 6.3.4, in addition to other Project facilities and affected waters, PacifiCorp's TMDL implementation plan under Section 6.3.2 shall include water quality-related measures in the Non-ICP Interim Measures set forth in Appendix D that are relevant to the Keno facility and affected waters for which the Project is assigned a load allocation. PacifiCorp shall implement Keno load allocations in accordance with the approved TMDL implementation plan under Section 6.3 up until the time of transfer of title to the Keno facility to Interior. Upon transfer of title to the Keno facility as set forth in Section 7.5 of this Settlement, the load allocations shall no longer be PacifiCorp's responsibility. Funding, if necessary, for post-transfer Keno load allocation implementation requirements will be provided by other non-PacifiCorp sources.

6.3.4 TMDL Reservations

A. PacifiCorp's TMDL implementation obligations under this Settlement are limited to the water quality-related measures in the Interim Measures set forth in Appendices C and D and any additional or different measures agreed to by PacifiCorp and incorporated into an approved TMDL implementation plan. If a TMDL implementation plan for PacifiCorp as finally approved, or a final discharge permit or other regulatory decision intended to implement a TMDL or water quality standard or regulation, requires measures that have not been agreed to by PacifiCorp and that are materially inconsistent with the Interim Measures, PacifiCorp may initiate termination under Section 8.11.1.C.

B. PacifiCorp reserves the right to seek modification of a TMDL implementation plan in the event this Settlement terminates. The States reserve their authorities under the CWA and state law to revise or require submission of new TMDL implementation plans in the event this Settlement terminates or an implementation plan measure or Facilities Removal does not occur in accordance with the timeline in the approved implementation plans. Other Parties reserve whatever rights they may have under existing law to challenge the TMDLs or TMDL implementation plans in the event this Settlement terminates.

C. To the extent it possesses rights outside of this Settlement, no Party waives any right to contest: a Klamath River TMDL; specific TMDL

load allocation; decision on a PacifiCorp TMDL implementation plan; or final discharge permit or other regulatory decision intended to implement a TMDL or water quality standard or regulation, if materially inconsistent with this Settlement.

6.4 Other Project Works

6.4.1 East Side/West Side Facilities

A. PacifiCorp will apply to FERC for an order approving partial surrender of the Project license for the purpose of decommissioning the East Side/West Side generating facilities unless PacifiCorp, in consultation with the state of Oregon, the Federal Parties, and the Tribes, agrees to an alternative disposition of these facilities. PacifiCorp will file the application consistent with applicable FERC regulations, and after consultation with the Parties. Notwithstanding Section 2.1.2, the Parties reserve their rights to submit comments and otherwise participate in the FERC proceeding regarding the conditions under which decommissioning should occur. PacifiCorp reserves the right to withdraw its surrender application for these facilities if any FERC order or other Regulatory Approval in connection with the surrender application would impose unreasonable conditions on that surrender.

B. Upon FERC approval, and in coordination with Reclamation and pursuant to Section 7.5.2, PacifiCorp shall decommission the East Side/West Side facilities in accordance with the FERC order approving the decommissioning, with the costs of such decommissioning to be recovered by PacifiCorp through standard ratemaking proceedings.

C. Upon completion of decommissioning and subject to FERC's and state requirements, PacifiCorp and Interior shall discuss possible transfer of the following lands to Interior: Klamath County Map Tax Lots R-3809-00000-05800-000, R-3809-00000-05900-000, and R-3809-00000-05700-000, or any other mutually-agreeable lands associated with the East Side and West Side Facilities on terms and conditions acceptable to PacifiCorp and Interior.

6.4.2 Fall Creek Hydroelectric Facility

PacifiCorp will continue to operate the Fall Creek hydroelectric facility under FERC's jurisdiction unless and until such time as it transfers the facility to another entity or the facility is otherwise disposed of in compliance with Applicable Law.

6.5 Abeyance of Relicensing Proceeding

6.5.1 Within 30 days of the Amendment Effective Date, PacifiCorp will file the Settlement with FERC and an expedited motion asking FERC to hold PacifiCorp's Project relicensing proceeding in abeyance. Each Party agrees to refrain from any action that does not support PacifiCorp's request to abate the FERC relicensing docket for the Project. The motion will specify that the abeyance should remain in effect while the DRE's surrender application is pending and until after FERC takes action on the DRE's surrender application as provided in Section 7.1.7.A.

6.5.2 Within 15 days after FERC issues an abeyance order for the Project relicensing proceeding, PacifiCorp will withdraw its CWA Section 401 certification applications currently pending before the California State Water Resources Control Board and ODEQ.

6.5.3 If FERC denies PacifiCorp's motion to abate or fails to rule on the motion before July 1, 2016, PacifiCorp will ask the California State Water Resources Control Board and the ODEQ to abate permitting and environmental review for PacifiCorp's FERC Project No. 2082 licensing activities, including but not limited to water quality certifications under Section 401 of the CWA and review under CEQA, during the Interim Period. If FERC does not hold the Project relicensing proceeding in abeyance, PacifiCorp will withdraw and re-file its relicensing applications for Section 401 certifications as necessary to avoid the certifications being deemed waived under the CWA during the Interim Period.

6.5.4 If no abeyance of relicensing proceedings is approved by FERC or, as applicable, the California State Water Resources Control Board or the ODEQ, or an abeyance is ordered then later lifted, then the Parties are excused from their duty to support this Settlement to the extent necessary to maintain their rights and arguments in the Project relicensing proceedings, and any Party may initiate the Meet and Confer procedures described in Section 8.7.

7. DRE, Transfer, Surrender, and Facilities Removal

This section describes the measures, schedule, and regulatory compliance during transfer, surrender, and removal of Facilities under this Settlement.

7.1 DRE

7.1.1 Execution of Settlement

The Parties expect that the DRE will become a Party by executing the Settlement on or around July 1, 2016, as provided in Section 9.4.

7.1.2 Capabilities

A. The Parties agree that the DRE must possess the legal, technical, and financial capacity to:

(1) Accept and expend non-federal funds consistent with Section 4.2.4;

(2) Accept transfer of the FERC license and title for the Facilities from PacifiCorp;

(3) Seek and obtain necessary permits and other authorizations to implement Facilities Removal;

(4) Enter into appropriate contracts and grant agreements for effectuating Facilities Removal;

(5) Perform, directly or by oversight, Facilities Removal;

(6) Prevent, mitigate, and respond to damages the DRE or any of its contractors, subcontractors, or assigns cause during the course of Facilities Removal, and, consistent with Applicable Law, respond to and defend associated liability claims against the DRE or any of its contractors, subcontractors, or assigns, including costs thereof and any judgments or awards resulting therefrom;

(7) Carry the required insurance and bonding set forth in Appendix L to respond to liability and damages claims associated with Facilities Removal against the DRE or any of its contractors, subcontractors, or assigns;

(8) Meet the deadlines set forth in Exhibit 4; and

(9) Perform such other tasks as are reasonable and necessary for Facilities Removal.

B. Before the DRE and PacifiCorp file the joint application to transfer the license for the Facilities, the DRE will Timely demonstrate to the reasonable satisfaction of the States and PacifiCorp that it possesses the legal, technical, and financial capacity to accomplish the tasks in Sections 7.1.2.A(1) through (5), (8), and (9). PacifiCorp and the States will consult if the DRE fails to make the demonstration required in this subsection.

C. Within six months of the DRE's execution of the Settlement, the DRE will include in an informational filing in the FERC license transfer

proceeding proof that it possesses the legal, technical, and financial capacity to accomplish the tasks in Sections 7.1.2.A(6) and (7). This filing will include documentation that the DRE meets the requirements of Parts II, III, and IV of Appendix L and is capable of fulfilling its obligations under Section 7.1.3. The DRE will not provide the filing if either of the States or PacifiCorp objects to the filing after a reasonable opportunity to review before submission to FERC. The six-month deadline may be changed by agreement of the DRE, the States, and PacifiCorp. The Parties will Meet and Confer if the DRE fails to provide the informational filing to FERC.

7.1.3 Liability Protection

A. By executing this Settlement, the DRE agrees, on its behalf and on behalf of the DRE's employees, contractors, subcontractors, and authorized agents or assigns to indemnify, hold harmless, and defend PacifiCorp, the state of California, and the state of Oregon for, from, and against any and all claims, actions, proceedings, damages, liabilities, monetary or non-monetary harms or expense arising from, relating to, or triggered by Facilities Removal, including but not limited to:

(1) Harm, injury, or damage to persons, real property, tangible property, natural resources, biota, or the environment;

(2) Harm, injury, or damage caused by the release, migration, movement, or exacerbation of any material, object, or substance, including without limitation hazardous substances; and

(3) Breaches or violations of any Applicable Law, Regulatory Approval, authorization, agreement, license, permit, or other legal requirement of any kind.

B. If the DRE partially assigns its responsibilities under this Settlement, the DRE and its assign will be jointly and severally obligated under this section.

7.1.4 License Transfer Conditions and Timing

Before the FERC license transfer to the DRE will become effective, the DRE must demonstrate to PacifiCorp's and the States' reasonable satisfaction that the DRE has met the obligations in Appendix L and the following conditions:

A. The DRE has provided Notices required under Section 7.2.1.B;

B. The DRE has met the requirements of Section 7.1.3 and Appendix L;

C. PacifiCorp and the States agree that the DRE has made sufficient and Timely progress in obtaining necessary permits and approvals to effectuate Facilities Removal;

D. The DRE, the States, and PacifiCorp are assured that sufficient funding is available to carry out Facilities Removal;

E. The DRE, the States, and PacifiCorp are each assured that their respective risks associated with Facilities Removal have been sufficiently mitigated consistent with Appendix L;

F. The DRE, the States, and PacifiCorp agree that no order of a court or FERC is in effect that would prevent Facilities Removal;

G. The DRE and PacifiCorp have executed documents conveying the property and rights necessary to carry out Facilities Removal; and

H. The DRE accepts license transfer under the conditions specified by FERC in its order approving transfer.

7.1.5 FERC Application for Transfer

A. On or around July 1, 2016, PacifiCorp and the DRE will jointly file an application to remove the Facilities from the Project license, redesignate the Facilities with a new project number, and transfer the redesignated FERC license for the Facilities to the DRE.

B. The application for transfer may include proposals to decommission the East Side and West Side facilities, subject to Section 6.4.1 of this Settlement; remove the Keno facilities from the Project license under Section 7.5 of this Settlement; and transfer the Fall Creek development to a third party for purposes of relicensing.

C. PacifiCorp and the DRE will file the joint application for transfer at FERC concurrent with the DRE's application for surrender and removal of the Facilities, retaining the 2020 target date for Facilities Removal.

D. The joint application for transfer will request that FERC incorporate the conditions in Section 7.1.4 into the transfer order and require that transfer will not become effective until the DRE, or PacifiCorp and the DRE jointly (as appropriate), file notice with FERC when those conditions have been satisfied.

7.1.6 Operation and Maintenance Agreement

On or around July 1, 2016, the DRE and PacifiCorp will enter into an operation and maintenance agreement allowing PacifiCorp to continue operating the Facilities for the benefit of its customers following transfer of the FERC Facilities license to the DRE. The conditions of operation under this agreement will be consistent with interim operations described in Section 6 and Appendices B, C, and D, and will include requirements that PacifiCorp pay all costs associated with operating the Facilities and indemnify, defend, and hold harmless the DRE with respect to those operations. The DRE and PacifiCorp will obtain the concurrence of the States for any such agreement.

7.1.7 FERC Application for Surrender

A. Concurrently with the joint application for license transfer, the DRE will file an application with FERC to surrender the FERC license for the Facilities for the purpose of Facilities Removal, which will include a copy of this Settlement and the Detailed Plan. The DRE will request that FERC defer acting on the application until the conditions in Section 7.1.4 are satisfied. The DRE will take any action necessary to obtain necessary FERC authorization to carry out Facilities Removal in accordance with this Settlement. PacifiCorp will provide technical support to the DRE and to FERC in processing the surrender application, but will not be a co-applicant or co-licensee on the surrender application unless otherwise mutually agreed upon with the DRE.

B. Concurrently with the joint application for license transfer and the DRE's application to FERC for surrender, the DRE will file applications seeking state water quality 401 certifications for Facilities Removal with the California State Water Resources Control Board and the ODEQ.

7.1.8 Performance of Facilities Removal

The DRE will perform Facilities Removal in accordance with the Definite Plan, as approved and as may be modified by the FERC surrender order and other applicable Regulatory Approvals. The DRE will complete final design and cost estimates before initiating Facilities Removal.

7.1.9 Other Regulatory Approvals for Facilities Removal

The DRE will take any action necessary to obtain other Regulatory Approvals necessary to effectuate Facilities Removal in accordance with this Settlement, except that PacifiCorp will file and support applications to obtain the necessary

state commission approvals for the transfer of assets to the DRE in accordance with this Settlement.

7.1.10 Assignment

The DRE may assign to another entity any of its responsibilities under this Settlement, including the DRE responsibilities described in this section. This assignment is subject to any necessary Regulatory Approvals. The DRE may not assign its responsibilities under this Settlement without the prior written consent of the States and PacifiCorp.

7.2 Definite Plan and Detailed Plan

7.2.1 Development and Use of Definite Plan

The DRE will develop a Definite Plan for Facilities Removal that, once completed, may be included as a part of any applications for permits or other authorizations. The Definite Plan must be consistent with this Settlement.

A. Elements of Definite Plan

The Definite Plan may be based on all elements of the Detailed Plan described in Section 7.2.2 and will be consistent with FERC requirements for surrender. Such elements shall be in the form required for physical performance, such as engineering specifications for a construction activity, and shall also include consideration of prudent cost overrun management tools such as performance bonds. The Definite Plan shall also include:

(1) A detailed estimate of the actual or foreseeable costs associated with: the physical performance of Facilities Removal consistent with the Detailed Plan; each of the tasks associated with the performance of the DRE's obligations as stated in Section 7.1; seeking and securing permits and other authorizations; and insurance, performance bond, or similar measures, as set forth in Appendix L to this Settlement;

(2) The DRE's analysis demonstrating that the total cost of Facilities Removal is likely to be less than the State Cost Cap, which is the total of Customer Contribution and California Bond Funding as specified in Section 4;

(3) Appropriate procedures consistent with state law to provide for cost-effective expenditures within the cost estimates stated in (1);

(4) Accounting procedures that will result in the earliest practicable disclosure of any actual or foreseeable overrun of cost of any task relative to the detailed estimate stated in (1); and

(5) Appropriate mechanisms to modify or suspend performance of any task subject to such overrun. Upon receipt of Notice from the DRE of any actual or foreseeable cost overrun pursuant to (2), the Parties shall use the Meet and Confer procedures to modify the task (to the extent permitted by the FERC surrender order, an applicable permit, or other authorization) or to modify this Settlement as appropriate to permit Facilities Removal to proceed.

B. Notice of Completion

The DRE shall provide Notice to the Parties upon completion of the Definite Plan.

C. Use of Definite Plan

The DRE must incorporate the Definite Plan, once completed, into any FERC application to surrender the Facilities license. After FERC issues an order on the FERC Facilities license surrender application, the Parties will review the consistency of the Definite Plan, FERC's surrender order, and this Settlement. If either of the States or the DRE finds that the FERC surrender order is materially inconsistent (as defined in Section 8.11.2) with the Definite Plan or this Settlement, either the DRE or the States may initiate Meet and Confer proceedings.

7.2.2 Detailed Plan for Facilities Removal

The Secretary developed the Detailed Plan, which may serve as a basis for the Definite Plan described in Section 7.2.1.A. The Detailed Plan includes A through F below; G is addressed in Appendix L and will be fully developed in the Definite Plan; H will be addressed during solicitation and selection of engineering and construction contract(s) for development of a Definite Plan and for Facilities Removal.

A. The physical methods to be undertaken to effect Facilities Removal, including but not limited to a timetable for Facilities Removal, which is removal of all or part of each Facility as necessary to effect a free-flowing condition and volitional fish passage as defined in Section 1.4;

B. As necessary and appropriate, plans for management, removal, and/or disposal of sediment, debris, and other materials;

C. A plan for site remediation and restoration;

D. A plan for measures to avoid or minimize adverse downstream impacts;

E. A plan for compliance with all Applicable Laws, including anticipated permits and permit conditions;

F. A detailed statement of the estimated costs of Facilities Removal;

G. A statement of measures to reduce risks of cost overruns, delays, or other impediments to Facilities Removal; and

H. The qualifications, management, and oversight of a non-federal DRE.

7.2.3 Assessment and Mitigation of Potential Impacts to the City of Yreka

The Parties understand that actions related to this Settlement may affect the City of Yreka. In recognition of this potential, the Parties agree to the following provisions, which shall remain in effect so long as this Settlement remains in effect.

A. The Parties collectively and each Party individually shall agree not to oppose the City of Yreka's continued use of California State Water Right Permit 15379, which provides for the diversion of up to 15 cfs for municipal uses by the City of Yreka.

B. As part of implementation of this Settlement, an engineering assessment to study the potential risks to the City of Yreka's water supply facilities as a result of implementation of Facilities Removal shall be funded and conducted by the Secretary. Actions identified in the engineering assessment necessary to assure continued use of the existing, or equivalent replacement, water supply facilities by the City of Yreka shall be funded from the California Bond Measure and implemented. Actions that may be required as a result of the engineering assessment and in consultation with the City of Yreka include, but are not limited to:

(1) Relocation, replacement, and/or burial of the existing 24-inch diameter water line and transmission facilities from the City of Yreka's Fall Creek diversion;

(2) Assessment, mitigation, and/or funding to address potential damage to the City of Yreka's facilities located along the Klamath River, including mitigation of potential impacts that may occur as a result of a dam breach. Such assessment, mitigation, and/or funding shall include consideration of the cathodic protection field located near the north bank of the Iron Gate crossing and the facilities that house the City's diversion and pump station; and

(3) Assessment, mitigation, and/or funding to address any impacts resulting from implementation of the Settlement, on the ability of the City to divert water consistent with its Water Right Permit 15379.

C. As part of implementation of this Settlement, an assessment of the potential need for fish screens on the City of Yreka's Fall Creek diversion facilities was completed in the Detailed Plan and it identified the need for fish screens on Dam A and Dam B. As a result of implementation of this Settlement, in order to meet regulatory requirements and screening criteria, construction of the required fish screens, including, but not limited to, necessary costs to preserve City facilities with additional species protection, shall be funded through the California Bond Measure pursuant to Section 4.2.3, or through other appropriate sources.

7.3 Schedule for Facilities Removal

7.3.1 The Parties agree that the target date to begin Facilities Removal is January 1, 2020. The Parties agree that preparatory work for Facilities Removal may be undertaken by the DRE before January 1, 2020, consistent with the Definite Plan, applicable permits, and Section 6 of this Settlement; provided such preparatory work shall not have any negative impact on PacifiCorp's generation operations at the Facilities. The Parties further agree to a target date of December 31, 2020 for completion of Facilities Removal at least to a degree sufficient to enable a free-flowing Klamath River allowing volitional fish passage.

7.3.2 The Parties acknowledge and agree that the schedule to accomplish Facilities Removal will be determined by the DRE in accordance with Section 7.3.4. The Parties intend to implement this Settlement based on the following approach to achieve the target dates for Decommissioning and Facilities Removal set forth in Section 7.3.1:

A. Collect $172 million of the total Customer Contribution by December 31, 2019, consistent with Section 4;

B. Earn approximately $28 million in interest on the Klamath Trust Accounts to provide Value to Customers, which results in a total of $200 million in the accounts available for Facilities Removal costs as illustrated in Appendix H to this Settlement;

C. Implement Decommissioning and Facilities Removal in a manner that permits PacifiCorp to generate sufficient electricity at the Facilities to achieve the economic results included in PacifiCorp's Economic Analysis; and

D. Implement the ICP and Non-ICP Interim Measures set forth in Appendices C and D to this Settlement.

7.3.3 The Parties agree that PacifiCorp may continuously operate the Facilities subject to the ICP and Non-ICP Interim Measures identified in Appendices C and D to this Settlement and generate electricity at the Facilities through December 31, 2019. Based upon PacifiCorp's representation of its Economic Analysis, the Parties agree that the following additional Value to Customers, in addition to the $28 million in interest described in Section 7.3.2.B, is necessary to achieve the corresponding date for commencement of Facility Decommissioning:

Date of Facilities Decommissioning	Required Additional Value to Customers
January 1, 2020	$27 million
July 1, 2020	$13 million
December 31, 2020	$0

If Decommissioning begins on December 31, 2020, no additional funding is required. The Parties acknowledge that, in order to complete Facilities Removal to the degree described in the last sentence of Section 7.3.1 by December 31, 2020, Decommissioning will need to begin prior to that date. As described in the table above, Decommissioning may begin on July 1, 2020 if $13 million in additional Value to Customers is identified, or on January 1, 2020, if $27 million in additional Value to Customers is identified.

7.3.4 Within 90 days of the DRE's execution of the Settlement, or at such additional time as may be necessary, the Parties shall Meet and Confer to: (1) review progress in implementing the Settlement based upon the approach described in Section 7.3.2; (2) review the DRE's schedule to procure contractor(s) to prepare a Definite Plan based on the Detailed Plan and to provide required liability protection and risk mitigation in accordance with Appendix L; and (3) identify the Value to Customers necessary to implement the schedule, the mechanisms as described in Section 7.3.8 that will be used, and the estimated cost reduction from each mechanism through December 2019. The Parties will subsequently Meet and Confer if the estimated additional Value to Customers has not been timely secured, a Regulatory Approval is inconsistent with that schedule, or the Definite Plan or final designs are inconsistent with the schedule.

If the Parties determine that the identified Value to Customers is less than the amount required to achieve the schedule, then the Parties at that time will consider additional actions to address the funding deficiency, including but not limited to extending the schedule and securing additional funding to protect PacifiCorp customers. The Parties may thereafter Meet

and Confer if additional Value to Customers is secured in excess of what was previously estimated.

7.3.5 PacifiCorp, in its sole and absolute discretion, may determine that Facilities Removal may begin earlier than January 1, 2020.

7.3.6 If the Parties determine that the schedule for Facilities Removal must extend beyond December 31, 2020, then the Parties shall also consider whether (1) modification of Interim Measures is necessary to appropriately balance costs to customers and protection of natural resources, and (2) continuation of the collection of the customer surcharges up to the maximum Customer Contribution is warranted.

7.3.7 The Parties agree that if Decommissioning and Facilities Removal occurs in a staged manner, J.C. Boyle is intended to be the last Facility decommissioned. If, however, the Definite Plan or FERC's surrender order directs a different sequence for Decommissioning and Facilities Removal, then the Parties shall Meet and Confer to identify adjustments necessary to implement Facilities Removal in a manner that is consistent with PacifiCorp's Economic Analysis.

7.3.8 The Parties have identified the following potential mechanisms for creating Value to Customers:

A. Interest on the Klamath Trust Accounts

The Parties acknowledge above that the surcharges from the Customer Contributions will be placed in interest-bearing accounts and that the interest that accrues in the accounts may be used to reduce the amount collected through the surcharges so that the total Customer Contribution, including accrued interest through December 31, 2019, totals $200,000,000. The Parties further acknowledge that it is not possible to precisely estimate the amount of interest that will accrue in the Klamath Trust Accounts. To the extent the interest in the accounts exceeds $28,000,000, the additional earnings may be used as a Value to Customers unless the funds are required for Facilities Removal. Nothing in this paragraph will limit the Customer Contribution to less than $200,000,000.

B. Third-Party Funding

The Parties agree to work jointly to identify potential partnerships to supplement funds generated pursuant to this Settlement. Such third-party funds may be employed to acquire generation facilities that can be used to replace the output of the Facilities, to fund aspects of Facilities Removal, or for other purposes to achieve the benefits of this Settlement.

C. Other

The Parties acknowledge that other mechanisms for Value to Customers may be identified, provided that they create sufficiently quantifiable benefits for customers.

7.3.9 PacifiCorp's Economic Analysis that will be used to implement this section was filed by PacifiCorp with the Oregon PUC pursuant to Section 4(1) of the Oregon Surcharge Act and with the California PUC in accordance with Section 4 of this Settlement. The Parties may seek to intervene in these state proceedings before the Commissions, and may request to view PacifiCorp's Economic Analysis consistent with the limitations imposed by Section 4(6) of the Oregon Surcharge Act, applicable PUC protective orders, and general PUC discovery practices and legal requirements. PacifiCorp shall not oppose either request. PacifiCorp reserves the right to request that the PUCs restrict Parties' access to commercially sensitive material, other than PacifiCorp's Economic Analysis, consistent with Section 4(6) of the Oregon Surcharge Act, applicable PUC protective orders, and general PUC discovery practices and legal requirements.

7.4 Transfer, Decommissioning, and Facilities Removal

7.4.1 DRE Notice

The DRE will notify the Parties and FERC when the necessary permits and approvals have been obtained for removal of a Facility or Facilities, all contracts necessary for removal have been finalized, and Facility Removal is ready to commence.

7.4.2 Decommissioning and Transfer

PacifiCorp will transfer ownership of each Facility, including the underlying land for each Facility in accordance with Section 7.6.4 (except for the Keno Development, which shall be disposed in accordance with Section 7.5). Once the DRE fulfills all of the conditions and obligations in Section 7.1.4, Appendix L, and the FERC license transfer order, and PacifiCorp concurs, PacifiCorp will transfer ownership of the Facilities to the DRE. PacifiCorp will continue to operate and maintain the Facilities in accordance with Section 7.1.6 until the DRE is ready to begin removal of a Facility and requests that PacifiCorp discontinue operation of that Facility.

7.5 Keno Facility

7.5.1 Study

Resolution of issues surrounding Keno facility are an important part of achieving the overall goals of this Settlement. Accordingly, the Secretary, in consultation with affected Parties, shall study issues specific to the Keno facility, with specific focus on addressing water quality, fish passage, transfer of title to the Keno facility from PacifiCorp to Interior, future operations and maintenance, and landowner agreements. The study of the Keno facility will be designed with the goals of addressing these issues and maintaining the benefits the dam currently provides.

7.5.2 Keno Facility Determination

In 2012, the Bureau of Reclamation and PacifiCorp entered into an agreement in principle for transfer of title to the Keno facility from PacifiCorp to Interior. Within 60 days of the Amendment Effective Date, Interior and PacifiCorp shall commence negotiations on Keno transfer informed by the analyses described in Section 7.5.1. Every six months or as necessary after the Amendment Effective Date, and subject to Section 8.17, Interior and PacifiCorp shall report to the Parties on the status of Keno negotiations, including as appropriate, drafts of a proposed Keno transfer agreement, a summary of negotiations and issues in dispute, and supporting documents. Interior and PacifiCorp shall use their best efforts to complete a final Keno transfer agreement within 180 days of the Amendment Effective Date. The Secretary will accept transfer of title to the Keno facility when the DRE notifies the Parties and FERC pursuant to Section 7.4.1 that J.C. Boyle Facility Removal is ready to commence.

The transfer of title to the Keno facility shall be subject to completion of any necessary improvements to the Keno facility to meet Department of the Interior Directives and Standards criteria for dam safety identified by Interior through its Safety of Dams inspection of the Keno facility. To facilitate this inspection, PacifiCorp agrees to grant access to the federal government and its contractors for study and assessment of the Keno facility. The terms and conditions of the transfer of title to the Keno facility, including coordination of operations between Link River dam, Keno dam, and any remaining facilities operated by PacifiCorp, ingress and egress agreements and easements required for operation and maintenance of the Klamath Reclamation Project, including but not necessarily limited to Lake Ewauna, Link River Dam, and Keno Dam will be negotiated between Interior and PacifiCorp prior to transfer. Costs associated with any improvements necessary to meet Department of Interior's Directives and Standards criteria for dam safety shall be funded by other non-PacifiCorp sources.

7.5.3 PacifiCorp Operations Prior to Transfer

Prior to and until transfer of title to the Keno Facility, PacifiCorp shall operate Keno in compliance with Contract #14-06-200-3579A, subject to any Applicable Law including the CWA and the provisions of Section 6.3 of this Settlement.

7.5.4 Operations After Transfer

Following transfer of title to the Keno facility from PacifiCorp to Interior, Interior shall operate Keno in compliance with Applicable Law and to provide water levels upstream of Keno Dam for diversion and canal maintenance consistent with Contract #14-06-200-3579A executed on January 4, 1968, between Reclamation and PacifiCorp (then COPCO) and historic practice.

7.5.5 Landowner Agreements

Based on the analysis under Section 7.5.1, the Secretary, upon acquisition of the Keno facility, will execute new agreements with landowners who currently have agreements in the Lake Ewauna to Keno reach, as the Secretary determines are necessary to avoid adverse impacts to the landowners resulting from the transfer, consistent with Applicable Law, operational requirements, and hydrologic conditions.

7.6 Dispositions of PacifiCorp Interests in Lands and other Rights

7.6.1 Lands Owned by PacifiCorp

PacifiCorp is the fee owner of approximately 11,000 acres of real property located in Klamath County, Oregon and Siskiyou County, California that are not directly associated with the Klamath Hydroelectric Project, and generally not included within the existing FERC project boundary. This property is more particularly described on Page 3 of the PacifiCorp Land Maps, attached as Exhibit 3, and referenced as Parcel A. This Settlement shall have no effect as to disposition of Parcel A lands, which shall continue to be subject to applicable taxes unless and until disposed of by PacifiCorp subject to applicable PUC approval requirements.

PacifiCorp is the fee owner of approximately 8,000 acres of real property located in Klamath County, Oregon and Siskiyou County, California that is associated with the Klamath Hydroelectric Project and/or included within the FERC project boundary. This property is more particularly described on Page 3 of the PacifiCorp Land Maps, Exhibit 3, and referenced as Parcel B. It is the intent of the Parties that Parcel B property be disposed in accordance with Section 7.6.4, except for the Keno Development which shall be disposed in accordance with Section 7.5. In addition to Exhibit 3, PacifiCorp owns significant electric transmission and distribution facilities which will remain under its ownership and subject to applicable taxes.

7.6.2 Potential Non-Project Land Exchanges

Interior and PacifiCorp have identified in Parcel A the potential for the exchange of certain non-Project PacifiCorp-owned lands in the Klamath Basin. Should an exchange of these lands to a state or Federal entity take place, the terms of the exchange agreement shall be revenue-neutral to County governments.

7.6.3 BLM Easements and Rights of Way

The Parties agree that before Facilities Removal, the FERC license for the Facilities shall control the ingress and egress to the Facilities within the FERC project boundary. Access by PacifiCorp outside of the project boundary to BLM-administered lands may require a separate Right Of Way agreement.

The Parties agree that the DRE's obligations for operation, maintenance, remediation and restoration costs of BLM-administered, transportation-related structures affected by Facilities Removal will be addressed as part of the Definite Plan.

A proposed disposition of PacifiCorp's easements and right-of-ways across BLM-administered lands within the FERC Project boundary will be included as a part of the DRE's Definite Plan for Facility Removal. To the extent necessary, reciprocal Right Of Way agreements may be executed across PacifiCorp-owned lands and BLM-administered lands to provide continued access for public and BLM administration needs. During the implementation of the Definite Plan, the DRE will be required to obtain authorization for any access across PacifiCorp and BLM-administered lands necessary for every phase of action.

7.6.4 PacifiCorp Klamath Hydroelectric Project Lands

A. It is the intent of the Parties that ownership of PacifiCorp lands associated with the Klamath Hydroelectric Project and/or included within the FERC Project boundary, identified as Parcel B in Exhibit 3, shall be transferred to the DRE before Facilities Removal begins. It is the intent of the Parties that, once the DRE has completed Facilities Removal and all surrender conditions have been satisfied, ownership of these lands will be transferred to the respective States, as applicable, or to a designated third-party transferee, upon Notice by the relevant State that it has completed to its satisfaction a final property (land and facilities) inspection in accordance with Applicable Law and in accordance with the indemnification(s) provided in Section 7.1.3 and Appendix L. It is also the intent of the Parties that transferred lands shall thereafter be managed for public interest purposes such as fish and wildlife habitat restoration and enhancement, public education, and public recreational access.

B. Each State shall undertake inspection and preliminary due diligence regarding the nature and condition of Parcel B lands located within its state boundaries, in anticipation of transfer of those lands from the DRE to the relevant State. PacifiCorp and the DRE shall provide each State all cooperation and access to the lands and pertinent records necessary to the inspection and due diligence. The DRE, each State, and PacifiCorp shall identify and provide to the Parties, for each specific property in Parcel B: (1) the proposed transferee for the property; and (2) the proposed terms of transfer for the property. The States, the DRE, and PacifiCorp shall consult with the Parties and other stakeholders before identifying the proposed transfer of a specific Parcel B property. Following such evaluation, the State of Oregon and the State of California may, each in its sole and absolute discretion, elect not to accept the transfer of all or any portion of Parcel B lands; provided, if a State, the DRE, or PacifiCorp believes that the proposed transfer for a property (or lack thereof) will not achieve the intent set forth in Section 7.6.4.A, those Parties shall Meet and Confer in accordance with Section 8.7.

C. Without predetermining the final terms of transfer for a specific property, proposed terms of transfer may include but are not limited to: (1) final property inspection; (2) specification of structures and improvements to remain on the property after Decommissioning and Facilities Removal; (3) liability protection for the State, or designated third party transferee, and the DRE, for any harm arising from post-transfer Decommissioning or power operations at the property; (4) liability protection for the State, or designated third party transferee, for any harm arising from post-transfer Facilities Removal by the DRE at the property; (5) easements or other property interests necessary for access to and continued operation of PacifiCorp transmission and distribution system assets that will remain on the property; and (6) notice or acknowledgement of the State's claim of ownership to beds and banks of the Klamath River. The DRE shall be a party to the transfer document as necessary and appropriate. The consideration required for transfer of a property to a State or third party transferee under this section shall be limited to the liability protections and other benefits conferred upon PacifiCorp and the DRE under this Settlement. Transfer of Parcel B lands shall be subject to applicable regulatory approvals and the reservations set forth in Section 1.6.

D. PacifiCorp shall convey Parcel B lands to the DRE, after the DRE provides Notice to the Parties and FERC that all necessary permits and approvals have been obtained for Facility Removal, and all contracts necessary for Facility Removal have been finalized. PacifiCorp shall convey all right, title, and interest in a subset of the Parcel B lands

designated on Exhibit 3 as lands associated with each Facility to the State or third party transferee subject to the DRE's possessory interest, consistent with the terms of this Settlement, including the Facilities, underlying lands, and appurtenances as further described through surveys and land descriptions. The DRE shall hold the underlying land for each Facility in trust for the benefit of the State or third party transferee. This public trust possessory interest in the DRE shall be controlled by the terms of the Settlement, the Definite Plan, and the transfer document. At the conclusion of Facilities Removal, the DRE will release the underlying land to the State or third party transferee. Upon transfer of ownership of all Facilities, PacifiCorp shall convey to the State or third party transferee all right, title, and interest in all Parcel B lands not already transferred to the DRE in trust, as further described through surveys and land descriptions, without restriction of possessory interest for the DRE. If transfer of a specific property for any reason is not consummated in a manner achieving the intent set forth in Section 7.6.4.A, PacifiCorp, the applicable State, and the DRE shall Meet and Confer in accordance with Section 8.7.

E. Notwithstanding any provision hereof, in the event either State accepts title to any portion of Parcel B lands, the State of Oregon and the State of California retain the right to transfer their ownership to any third party for any purpose.

7.6.5 PacifiCorp Water Rights

A. PacifiCorp shall assign its revised hydroelectric water rights to the OWRD for conversion to an instream water right pursuant to ORS 543A.305, and OWRD shall take actions to effect such conversion, in accordance with the process and conditions set forth in *Water Right Agreement between PacifiCorp and Oregon* (Exhibit 1). Nothing in this Section 7.6.5 or Exhibit 1 is intended in any way to affect, diminish, impair, or determine any federally-reserved or state law-based water right that the United States or any other person or entity may have in the Klamath River.

B. Except as provided in this paragraph, within 90 days of completion of Facilities Removal at the Copco No. 1, Copco No. 2 and Iron Gate Facilities, respectively, PacifiCorp shall submit a Revocation Request to the California State Water Resources Control Board for License No. 9457 (Application No. 17527), and shall notify the State Water Resources Control Board of its intent to abandon its hydroelectric appropriative water rights at the Copco No. 1 and Copco No. 2 Facilities, as applicable, as identified in Statement of Water Diversion and Use Nos. 15374, 15375, and 15376. Should ongoing operations of the Iron Gate Hatchery or other hatchery facilities necessitate

continued use of water under License No. 9457 (Application No. 17527) beyond 90 days after completion of Facilities Removal, PacifiCorp shall consult with the Department of Fish and Wildlife and the State Water Resources Control Board and shall take actions directed by such Department and Board as are necessary to ensure a sufficient water supply to the Iron Gate Hatchery or other hatchery facilities under License No. 9457.

7.6.6 PacifiCorp Hatchery Facilities

The PacifiCorp Hatchery Facilities within the State of California shall be transferred to the State of California at the time of transfer to the DRE of the Iron Gate Hydro Development or such other time agreed by the Parties, and thereafter operated by the California Department of Fish and Wildlife with funding from PacifiCorp as follows:

A. Hatchery Funding

PacifiCorp will fund 100 percent of hatchery operations and maintenance necessary to fulfill annual mitigation objectives developed by the California Department of Fish and Wildlife in consultation with the National Marine Fisheries Service. This includes funding the Iron Gate Hatchery facility as well as funding of other hatcheries necessary to meet ongoing mitigation objectives following Facilities Removal. Hatchery operations include development and implementation of a Hatchery Genetics Management Plan as well as a 25% constant fractional marking program. Funding will be provided for hatchery operations to meet mitigation requirements and will continue for eight years following the Decommissioning of Iron Gate Dam. PacifiCorp's eight-year funding obligation assumes that dam removal will occur within one year of cessation of power generation at Iron Gate Dam. If Facilities Removal occurs after one year of cessation of power generation at Iron Gate Dam, then the Parties will Meet and Confer to determine appropriate hatchery funding beyond the eight years.

B. Hatchery Production Continuity

PacifiCorp will fund a study to evaluate hatchery production options that do not rely on the current Iron Gate Hatchery water supply. The study will assess groundwater and surface water supply options and water reuse technologies that could support hatchery production in the absence of Iron Gate Dam. The study may include examination of local well records and increasing production potential at existing or new facilities in the Klamath Basin as well as development of a test well or groundwater supply well. Based on the study results and with the approval of the California Department of Fish and Wildlife and the National Marine Fisheries

Service, PacifiCorp will provide one-time funding to construct and implement the measures identified as necessary to continue to meet current mitigation production objectives for a period of eight years following the Decommissioning of Iron Gate Dam. PacifiCorp's eight-year funding obligation assumes that Facilities Removal will occur within one year of cessation of power generation at Iron Gate Dam. If dam removal occurs after one year of cessation of power generation at Iron Gate Dam, then the Parties will Meet and Confer to determine appropriate hatchery funding beyond the eight years. Production facilities capable of meeting current hatchery mitigation goals must be in place and operational upon removal of Iron Gate Dam. PacifiCorp shall not be responsible for funding hatchery programs, if any, necessary to reintroduce anadromous fish in the Klamath basin.

8. General Provisions

8.1 Term of Settlement

The term of this Settlement shall commence on the Effective Date and shall continue until Facilities Removal has been fully achieved and all conditions of this Settlement have been satisfied, unless terminated earlier pursuant to Section 8.11.

8.2 Effectiveness

The KHSA was effective upon execution on February 18, 2010 ("Effective Date"). The KHSA as amended will take effect when it is executed by the signatories to the 2016 AIP ("Amendment Effective Date").

8.3 Successors and Assigns

This Settlement shall apply to, be binding on, and inure to the benefit of the Parties and their successors and assigns, unless otherwise specified in this Settlement. Except as provided by Section 7.1.10, no assignment may take effect without the express written approval of the other Parties, which approval will not be unreasonably withheld.

8.4 Amendment

Except as otherwise expressly provided in Section 8.11.3, this Settlement may only be amended in writing by all Parties still in existence, including any successors or assigns. The Public Agency Parties may also obtain public input on any such modifications as required by Applicable Law. A Party may provide Notice of a proposed amendment at any time. The Parties agree to meet in person or by teleconference within 20 days of receipt of Notice to discuss the proposed amendment.

8.5 Notices

Any Notice required by this Settlement shall be written. Notice shall be provided by electronic mail, unless the sending Party determines that first-class mail or an alternative form of delivery is more appropriate in a given circumstance. A Notice shall be effective upon receipt, but if provided by U.S. Mail, seven days after the date on which it is mailed. For the purpose of Notice, the list of authorized representatives of the Parties as of the Effective Date is attached as Appendix K. The Parties shall provide Notice of any change in the authorized representatives designated in Appendix K, and PacifiCorp shall maintain the current distribution list of such representatives. The Parties agree that failure to provide PacifiCorp with current contact information will result in a waiver of that Party's right to Notice under this Settlement. The Party who has waived Notice may prospectively reinstate its right to Notice by providing current contact information to PacifiCorp.

8.6 Dispute Resolution

All disputes between Parties arising under this Settlement shall be subject to the Dispute Resolution Procedures stated herein. The Parties agree that each such dispute shall be brought and resolved in a Timely manner.

8.6.1 Cooperation

Disputing Parties shall devote such resources as are needed and as can be reasonably provided to resolve the dispute expeditiously. Disputing Parties shall cooperate in good faith to promptly schedule, attend, and participate in the dispute resolution.

8.6.2 Costs

Unless otherwise agreed among the Disputing Parties, each Disputing Party shall bear its own costs for its participation in these Dispute Resolution Procedures.

8.6.3 Non-Exclusive Remedy

These Dispute Resolution Procedures do not preclude any Party from Timely filing and pursuing an action to enforce an obligation under this Settlement, or to appeal a Regulatory Approval inconsistent with the Settlement, or to enforce a Regulatory Approval or Applicable Law; provided that such Party shall provide a Dispute Initiation Notice and, to the extent practicable, undertake and conclude these procedures, before such action.

8.6.4 Dispute Resolution Procedures

A. Dispute Initiation Notice

A Party claiming a dispute shall give Notice of the dispute within seven days of becoming aware of the dispute. Such Notice shall describe: (1) the matter(s) in dispute; (2) the identity of any other Party alleged to have not performed an obligation arising under this Settlement or Regulatory Obligation; and (3) the specific relief sought. Collectively, the Party initiating the procedure, the Party complained against, and any other Party which provides Notice of its intent to participate in these procedures, are "Disputing Parties."

B. Informal Meetings

Disputing Parties shall hold at least two informal meetings to resolve the dispute, commencing within 20 days after the Dispute Initiation Notice, and concluding within 45 days of the Dispute Initiation Notice unless extended upon mutual agreement of the Disputing Parties. If the Disputing Parties are unable to resolve the dispute, at least one meeting will be held within the 45 days at the management level to seek resolution.

C. Mediation

If the dispute is not resolved in the informal meetings, the Disputing Parties shall decide whether to use a neutral mediator. The decision whether to pursue mediation, and if affirmative the identity and allocation of costs for the mediator, shall be made within 75 days after the Dispute Initiation Notice. Mediation shall not occur if the Disputing Parties do not unanimously agree on use of a mediator, choice of mediator, and allocation of costs. The mediation process shall be concluded not later than 135 days after the Dispute Initiation Notice. The above time periods may be shortened or lengthened upon mutual agreement of the Disputing Parties.

D. Dispute Resolution Notice

The Disputing Parties shall provide Notice of the results of the Dispute Resolution Procedures. The Notice shall: (1) restate the disputed matter, as initially described in the Dispute Initiation Notice; (2) describe the alternatives which the Disputing Parties considered for resolution; and (3) state whether resolution was achieved, in whole or part, and state the specific relief, including timeline, agreed to as part of the resolution. Each Disputing Party shall promptly implement any agreed resolution of the dispute.

8.7 Meet and Confer

8.7.1 Applicability

The Meet and Confer procedures in this Section 8.7 shall apply upon the occurrence of certain events or failure to occur of certain events as specifically required in this Settlement.

8.7.2 Meet and Confer Procedures

A. Any Party may initiate the Meet and Confer procedures by sending Notice: (1) describing the event that requires the Parties to confer, and (2) scheduling a meeting or conference call.

B. The Parties will meet to discuss the problem and identify alternative solutions. The Parties agree to dedicate a reasonable amount of time sufficient to resolve the problem.

C. The Meet and Confer procedures will result in: (1) amendment pursuant to Section 8.4; (2) termination or other resolution pursuant to the procedures of Section 8.11; or (3) such other resolution as is appropriate under the applicable section.

8.8 Remedies

This Settlement does not create a cause of action in contract for monetary damages for any alleged breach by any Party of this Settlement. Neither does this Settlement create a cause of action in contract for monetary damages or other remedies for failure to perform a Regulatory Obligation. The Parties reserve all other existing remedies for material breach of the Settlement; provided that Section 8.11 shall constitute the exclusive procedures and means by which this Settlement can be terminated.

8.9 Entire Agreement

This Settlement contains the complete and exclusive agreement among all of the Parties with respect to the subject matter thereof, and supersedes all discussions, negotiations, representations, warranties, commitments, offers, agreements in principle, and other writings among the Parties, including the 2008 AIP and 2016 AIP, before the Amendment Effective Date of this Settlement, with respect to its subject matter. Appendices B, C, D, F, H, K, and L are hereby incorporated by reference into this Settlement as if fully restated herein. Exhibits 1 through 4 are attached to this Settlement for informational purposes only and are not incorporated by reference except as otherwise noted herein.

8.10 Severability

This Settlement is made on the understanding that each provision is a necessary part of the entire Settlement. However, if any provision of this Settlement is held by a Regulatory Agency or a court of competent jurisdiction to be invalid, illegal, or unenforceable: (1) the validity, legality, and enforceability of the remaining provisions of this Settlement are not affected or impaired in any way; and (2) the Parties shall negotiate in good faith in an attempt to agree to another provision (instead of the provision held to be invalid, illegal, or unenforceable) that is valid, legal, and enforceable and carries out the Parties' intention to the greatest lawful extent under this Settlement.

8.11 Termination

8.11.1 Potential Termination Events

This Settlement shall be terminable if one of the following events occurs and a cure for that event is not achieved pursuant to Section 8.11.3:

A. A condition precedent to license transfer set forth in Section 7.1.4 is not met;

B. The Oregon PUC or California PUC do not implement the funding provisions set forth in Sections 4.1 through 4.6;

C. Conditions of any Regulatory Approval of Interim Measures, denial of Regulatory Approval of Interim Measures including the failure Timely to approve ESA incidental take authorization, or results of any litigation related to this Settlement are materially inconsistent with the provisions of Section 6.1 through 6.3 and Appendices C and D;

D. Conditions or denial of any Regulatory Approval of Facilities Removal or the results of any litigation about such removal, are materially inconsistent with the Settlement;

E. The DRE notifies the Parties that it cannot proceed with Facilities Removal because it cannot obtain all permits and contracts necessary for Facilities Removal despite its good faith efforts; or

F. California, Oregon, the Federal Parties, or PacifiCorp is materially adversely affected by another Party's breach of this Settlement.

8.11.2 Definitions for Section 8.11

A. For purposes of this section and Section 7.2.1.C, "materially inconsistent" means diverging from the Settlement or part thereof in a manner that: (1) fundamentally changes the economics or

liability protection such that a Party no longer receives the benefit of the bargain provided by this Settlement; or (2) frustrates the fundamental purpose of this Settlement such that Facilities Removal or the underlying purposes of Interim Measures cannot be accomplished. Events occurring independent of this Settlement, other than those identified in Section 8.11.1, shall not be construed to create a material inconsistency or materially adverse effect.

B. For purposes of this section, "materially adversely affected" means that a Party no longer receives the benefit of the bargain due to: (1) fundamental changes in the economics or liability protection; or (2) frustration of the fundamental purpose of this Settlement such that Facilities Removal or the underlying purposes of Interim Measures cannot be accomplished.

C. For purposes of this section, a "result of any litigation" is materially inconsistent with this Settlement or a part thereof if a Party is materially adversely affected by: (1) costs to defend the litigation; or (2) a final order or judgment.

8.11.3 Cure for Potential Termination Event

A. A Party that believes that a potential termination event specified in Section 8.11.1 has occurred shall provide Notice.

(1) The Parties shall use the Meet and Confer Procedures specified in Section 8.7 to consider whether to deem the event to conform to the Settlement, or adopt a mutually agreeable amendment to this Settlement. These procedures shall conclude within 90 days of Notice.

(2) If these procedures do not resolve the potential termination event, the Federal Parties, the States, the DRE if a Party, and PacifiCorp may, within 90 days thereafter, agree to an amendment, or deem the event to conform to the Settlement; otherwise, this Settlement shall terminate. In no event shall any amendment under this subsection provide for Facilities Removal with respect to fewer than four Facilities.

B. If the Federal Parties, the States, the DRE if a Party, and PacifiCorp disagree whether a potential termination event specified in Section 8.11.1 has occurred, these Parties shall follow the Dispute Resolution Procedures in Section 8.6 to attempt to resolve that dispute. If such a Notice of Dispute is filed while the Meet and Confer Procedures referenced in 8.11.3.A are ongoing, those Meet and Confer Procedures are deemed concluded, subject to being recommenced in accordance

with the remainder of this subsection. Upon conclusion of the Dispute Resolution Procedures in Section 8.6, the Federal Parties, the States, the DRE if a Party, and PacifiCorp shall issue a Notice of Dispute Resolution.

(1) If, in the Notice of Dispute Resolution, the Federal Parties, the States, and PacifiCorp agree that a potential termination event has occurred, or agree to consider whether a cure could be achieved, the further procedures stated in Section 8.11.3.A(1) and (2) above shall apply.

(2) If, in the Notice of Dispute Resolution, the Federal Parties, the States, the DRE if a Party, and PacifiCorp disagree whether a potential termination event has occurred, this Settlement shall terminate unless a Party seeks and obtains a remedy preserving the Settlement under Applicable Law.

C. A Party may reasonably suspend performance of its otherwise applicable obligations under this Settlement, upon receipt of Notice and pending a resolution of the potential termination event as provided in Section 8.11.3.A or B.

D. If the Federal Parties, the States, the DRE if a Party, and PacifiCorp, pursuant to the procedures in Section 8.11.3.A, agree to an amendment or other cure to resolve a potential termination event absent agreement by all other Parties pursuant to Section 8.4, any other Party may accept the amendment by Notice. If it objects, such other Party: (1) may seek a remedy regarding the potential termination event that resulted in the disputed amendment, to the extent provided by Section 8.8; (2) may continue to suspend performance of its obligations under this Settlement; and (3) in either event shall not be liable in any manner as a result of its objection or the suspension of its performance of its obligations under this Settlement.

E. The Parties shall undertake to complete the applicable procedures under this section within six months of a potential termination event.

8.11.4 Obligations Surviving Termination

A. Upon termination, all documents and communications related to the development, execution, or submittal of this Settlement to any agency, court, or other entity, shall not be used as evidence, admission, or argument in any forum or proceeding for any purpose to the fullest extent allowed by Applicable Law, including 18 C.F.R. § 385.606. This provision does not apply to the results of studies or other technical information developed for use by a Public Agency Party.

This provision does not apply to any information that was in the public domain prior to the development of this Settlement or that became part of the public domain at some later time through no unauthorized act or omission by any Party. Notwithstanding the termination of this Settlement, all Parties shall continue to maintain the confidentiality of all settlement communications.

This provision does not prohibit the disclosure of: (1) any information held by a federal agency that is not protected from disclosure pursuant to the Freedom of Information Act or other applicable law; (2) any information held by a state or local agency that is not protected from disclosure pursuant to the California Public Records Act, the Oregon Public Records Law, or other applicable state or federal law; or (3) disclosure pursuant to Section 1.6.8.

B. The prohibitions in Section 1.6.8 survive termination of this Settlement.

8.12 No Third-Party Beneficiaries

This Settlement is not intended to and shall not confer any right or interest in the public, or any member thereof, or on any persons or entities that are not Parties hereto, as intended or expected third-party beneficiaries hereof, and shall not authorize any non-Party to maintain a suit at law or equity based on a cause of action deriving from this Settlement. The duties, obligations, and responsibilities of the Parties with respect to third parties shall remain as imposed under Applicable Law.

8.13 Elected Officials Not to Benefit

No Member of or Delegate to Congress, Resident Commissioner, or elected official shall personally benefit from this Settlement or from any benefit that may arise from it.

8.14 No Partnership

Except as otherwise expressly set forth herein, nothing contained in this Settlement is intended or shall be construed to create an association, trust, partnership, or joint venture, or impose any trust or partnership duty, obligation, or liability on any Party, or create an agency relationship between or among the Parties or between any Party and any employee of any other Party.

8.15 Governing Law

8.15.1 Contractual Obligation

A Party's performance of an obligation arising under this Settlement shall be governed by (1) applicable provisions of this Settlement, and (2) Applicable Law for obligations of that type.

8.15.2 Regulatory Obligation

A Party's performance of a Regulatory Obligation, once approved as proposed by this Settlement, shall be governed by Applicable Law for obligations of that type.

8.15.3 Reference to Applicable Law

Any reference in this Settlement to an Applicable Law shall be deemed to be a reference to such law in existence as of the date of the action in question.

8.16 Federal Appropriations

To the extent that the expenditure or advance of any money or the performance of any obligation of the Federal Parties under this Settlement is to be funded by appropriations of funds by Congress, the expenditure, advance, or performance shall be contingent upon the appropriation of funds by Congress that are available for this purpose and the apportionment of such funds by the Office of Management and Budget. No breach of this Settlement shall result and no liability shall accrue to the United States in the event such funds are not appropriated or apportioned.

8.17 Confidentiality

The confidentiality provisions of the *Agreement for Confidentiality of Settlement Communications and Negotiations Protocol Related to the Klamath Hydroelectric Project*, as it may be amended, shall continue as long as this Settlement is in effect.

9. Execution of Settlement

9.1 Signatory Authority

Each signatory to this Settlement certifies that he or she is authorized to execute this Settlement and to legally bind the entity he or she represents, and that such entity shall be fully bound by the terms hereof upon such signature without any further act, approval, or authorization by such entity.

9.2 Signing in Counterparts

This Settlement may be executed in any number of counterparts, and each executed counterpart shall have the same force and effect as if all signatory Parties had signed the same instrument. The signature pages of counterparts of this Settlement may be compiled without impairing the legal effect of any signatures thereon.

9.3 New Parties

Except as provided in Section 9.4 any entity listed on pages 1 through 2 of this Settlement that signs this Settlement on or before December 31, 2016, will become a Party to this Settlement. After December 31, 2016, any entity listed on pages 1 through 2 of this Settlement may become a Party through an amendment of this Settlement in accordance with Section 8.4. After 90 days from the Amendment Effective Date, an entity not listed on pages 1 through 2 of this Settlement may become a Party through an amendment of this Settlement in accordance with Section 8.4.

9.4 DRE and Liability Transfer Corp. as Parties

The Parties expect that the DRE will become a Party by executing this Settlement within 90 days of the Amendment Effective Date. No action by any other Party is necessary for the DRE to become a Party. If the DRE assigns any of its responsibilities to a Liability Transfer Corp. as described in Section 7.1.10 and Appendix L, the Liability Transfer Corp. shall become a Party by executing this Settlement. No action by any other Party is necessary for the Liability Transfer Corp. to become a Party.
