Re: UG 527 – CUB Opening Testimony and Workpapers

Dear Filing Center:

The Oregon Citizens' Utility Board ("CUB") hereby submits CUB's Opening Testimony in the aforementioned docket. CUB has submitted its related workpapers and Excel exhibits in their native format via Huddle.

Please let me know if you have any questions or concerns.

Respectfully submitted,

/s/Lizzie Lesch-Abhaya

UG 527

OPENING TESTIMONY OF SARAH WOCHELE AND BOB JENKS
ON BEHALF OF THE OREGON CITIZENS' UTILITY BOARD

CUB 100

March 18, 2026

Residential Customer Impact of Rate Increase
Wrongful Disconnections during Winter Moratorium
Alternative Rate Mechanism

Q. Please state your name, occupation, and business address

A. My name is Sarah Wochele. I am an Equity Analyst & Advocate employed by Oregon Citizens' Utility Board (CUB). My business address is 610 SW Broadway, Ste. 400 Portland, Oregon 97205.

A. My name is Bob Jenks. I am the Executive Director of the Oregon Citizens' Utility Board (CUB). My business address is 610 SW Broadway, Ste. 400 Portland, Oregon 97205.

Q. Please describe your qualifications.

A. Sarah Wochele's witness statement is provided in Exhibit CUB/101. Bob Jenks' witness statement is provided in Exhibit CUB/102.

Q. What is the purpose of this Joint Testimony?

A. The purpose of this testimony is to center the residential customer in this proceeding. This includes discussion of customer impacts stemming from unaffordability of NW Natural ("NWN" or "the Company") monthly bills in the face of back-to-back-to-back rate increases from the Company since 2023. We have been in a major rate proceeding (General Rate Case or multi-issue Alternative Rate Mechanism) with NWN every month except two months since December, 2023. We highlight our concerns about certain vulnerable customers in NWN's territory. Not all of these vulnerable customers are accounted for in the Company's analysis of how this rate increase will impact energy burden for known low-income customers.

Related to this, we raise high-level concerns about not getting to some root cause issues of unaffordability related to energy inefficiency and low-income customers with high gas usage. We raise concerns about the Company's error regarding the disconnection of its known vulnerable customers in the second half of November and all of December

2025, when those customers were supposed to be receiving protection. Lastly, we also discuss our concerns with the Company's use of an Alternate Rate Mechanism (ARM), which includes a discussion on how utility reliance on even more, unchecked multi-issue ARMs is out of alignment with the 2025 FAIR Energy Act (HB 3179) and requires Commission action.

Q. Are you sponsoring any exhibits?

A. Yes. Exhibits 101-132.

I. CUSTOMER IMPACTS: "DEATH BY A THOUSAND CUTS"

Rates are Increasing for Residential Customers

Q. How much is NW Natural proposing to change residential customer rates in this Alternative Rate Mechanism (ARM) filing?

A. NW Natural is requesting a 1.4% rate increase for its residential customers. This would add about $1.40/month to the average household's monthly bill. In December, this increase would be about $2.80/month more for the average household.[1] For the average customer receiving 15% off their monthly bill via the Company's Bill Discount Program (BDP), the annual average increase is $1.18/month and $2.38 in the month of December.[2]

Q. How have NW Natural's residential customer rates changed over time?

A. NWN has had major rate proceedings (GRCs or ARM) in four out of the last five years. See CUB Figure 1.

Figure 1: NW Natural GRCs and ARMs

Docket	*Rate Effective Date*
UG 435	11/1/2022
UG 490	11/1/2024
UG 520	10/31/2025
UG 527	10/31/2026

It is important to recognize that NWN allocates the bulk of the Company's costs to Oregon households. CUB Figure 2 looks at NWN margin rates. This represents the cost

[1] CUB/114 Wochele-Jenks/1.
[2] *Id.*

to customers, not including the gas commodity. This shows the costs that are largely under NWN's control and creates a better comparison with transport customers because they do not purchase the gas commodity from NWN but use NWN's system to deliver third-party gas. It is important to look not just at the increase in rates as a percentage, but the overall level of increase on a cents/therm basis. Because residential rates are substantially higher than other customer classes, a 10% increase in residential rates is a much higher overall increase in cents/therm, than a 10% increase to other customer classes.

Figure 2: Residential Customers Bear the Brunt of Rate Increases[3]

Rate Class	Margin Increase since 10/2022 including UG 427 (cents/therm)	Margin Increase since 10/2022 including UG 427 (% increase)	percent of margin allocated to class
Residential	***31.96***	***43%***	***66.75%***
3C	27.60	50%	24.32%
3I	11.00	26%	0.42%
31CSF	8.90	23%	1.68%
31CTF	9.57	25%	0.18%
31ISF	7.06	27%	0.54%
32CSF	5.60	21%	2.37%
32ISF	1.41	8%	0.65%
32CTF	2.97	19%	0.17%
32ITF	0.28	3%	1.12%
32CSI	3.04	34%	0.42%
32ISI	1.00	11%	0.44%
32CTI	0.43	6%	0.09%
33ITI	0.28	9%	0.86%

CUB Figure 2 shows that since October 2022, residential rates have increased by approximately 32 cents/therm, while some classes of customers have seen an increase of less than 1 cent/therm. In addition, more than two-thirds of the costs of NWN's non-gas

[3] CUB/104 Wochele-Jenks/1.

costs are assigned to residential customers and more than 90% of the costs are assigned to residential and small commercial customers.

What's more, a study by the Freedom of Heat Initiative (FOHI), found that on average "about two-thirds of a typical gas bill goes to delivery charges, not the gas itself."[4] The delivery charges are the same as the margin charges in the chart above. The study was authored by Jamie Van Nostrand, the Policy Director at FOHI. Mr. Van Nostrand is the former Chair of the Massachusetts Department of Public Utilities and previously practiced law in the Pacific Northwest. In the study, Mr. Van Nostrand explains that costs for delivering gas to customers has almost doubled in the past 14 years due to the strong incentive by gas companies to spend more money on infrastructure that they can then charge customers for.[5]

Households in NWN territory are experiencing year-over-year increases from the Company since 2022. With the current ARM, NWN's residential rates excluding gas costs will have gone up by 43% since October 2022.[6] For an individual residential customer using 650 therms per year this is an increase of $207/year – the bulk of which will come from winter bills. As purchased gas prices increase due to CPP compliance costs and market disruptions, these rate increases will strain the ability of residential customers to afford NWN's service. As a result, this will increase the risk posed by stranded assets as customers leave to avoid the high costs and are no longer available to pay off the marginal cost additions. In consequence, there is a risk that these stranded asset costs will then be placed on those without the ability to pay and thereby increasing disconnections.[7]

Q. Does CUB agree with NWN's claim that this filing, as well as this type of filing, is necessary for customers to "smooth rates" as an interim measure during Oregon's transition to multi-year plans?

A. No. CUB is skeptical that that is the purpose. CUB believes that the purpose of the ARM is to get cost recovery and avoid regulatory lag. Because regulatory lag is one of the few incentives that exist to control costs and reduce new investment, CUB is concerned that in the long run, ARMs will lead to higher rates.

NWN states it filed this ARM "to recover the costs of a limited subset of capital additions through a new base rate tariff, Schedule 123."[8] But NWN controls the timing of its rate cases. To put this in perspective, the Commission can look at the outcome of UE 435. There PGE could have filed its rate case so that the rate effective date coincided with Seaside's rate effective date. Instead PGE requested two rate effective dates, one on January 1st and the other later in the year to recover the tracked Seaside costs.[9] Likewise, NWN could have filed UG 520, its 2025 general rate case, to coincide with the rate effective date for the "limited subset of capital additions" or it could wait until its next rate case for this recovery. Either way would entail some regulatory lag. Thus, the Company is avoiding regulatory lag by using these back-to-back proceedings.

The Harm from Rate Hikes Affects Some Customers More Than Others

Q. What is the difference between energy burden and energy insecurity?

[8] NWN Initial Filing, *UG 527; NWN OPUC Advice No. 25-25,* at 1 (Nov. 25, 2025).
[9] *See* Order No. 24-454 3-4, 43-45.

A. Energy insecurity is understood as an inability to adequately meet household energy needs, and this can be acute or chronic.[10] A lack of energy security leads to energy poverty. An example of energy poverty is a household never starting gas service with a utility in the first place and opting to cook with propane instead.[11] There are at least three core dimensions to energy insecurity:

1. Economic: the disproportionate share of household income allocated to utility expenses (i.e. energy burden)
2. Physical: deficient and inefficient housing structures impacting comfort and costs, this includes infrastructure deficits (e.g. no air conditioning and an old, unweatherized house)
3. Coping: energy related behavioral and adaptive strategies to manage physical and economic hardship (for example, energy limiting behaviors such as not turning the heat up in the winter and wearing jackets indoors)

Energy burden in this context is generally understood as the percentage of a household's gross income that is spent on its energy bills—meaning it is a dimension of energy insecurity. To date, conversations about energy insecurity in the regulated energy space have been dominated by energy burden. Where this becomes especially limiting is considerations around energy limiting behaviors and infrastructure deficits due to affordability. For example, in the summer a family's energy burden may calculate to being

[10] Dr. Diana Hernandez from Columbia University has defined and operationalized the concept of energy insecurity. *See* more here: www.publichealth.columbia.edu/research/programs/energy-equity-housing-health/what-energy-insecurity.

[11] CUB has heard from community partners that this is a reality at least in NWN territory, as some people were limited in establishing service due to the Company's prior requirements to start an account. There were primarily concerns around requests for social security numbers.

low or moderate, but it is because they do not have air conditioning as they cannot afford to buy one and run it.

Q. Are there residential customer types who CUB thinks may be particularly vulnerable to back-to-back rate increases?

A. Yes. The energy security of the following residential customers is increasingly precarious in the face of back-to-back rate increases. Generally, CUB is currently concerned about impacts on the following customer groups:

- **Customers living on low fixed incomes**.
- **Customers with low incomes experiencing various symptoms of energy insecurity** who are not yet benefiting from the Bill Discount Program (BDP).
- **Immigrant and refugee households whose energy insecurity is worsening** due to ongoing threats by federal immigration action, especially those who are forced to navigate the chilling effect[12] and those whose households have faced deportations.[13]
- **Households who have incomes at 61-100% State Median Income (SMI)—the "energy assistance gap" or the "energy assistance hole"** where there are little to no possibilities for receiving energy assistance despite households with this income experiencing high energy burden. For example, the experience of those who are Asset Limited, Income Constrained, and Employed. Per the 2024 Energy Burden Assessment (EBA) 13% of NWN households fall into this category.[14]

[12] *See* CUB/112 Wochele-Jenks/3 (The "chilling effect" is where the threat itself of aggressive immigration enforcement imposes fear on immigrant and minority communities. They become scared to leave the house, go to work, or attend school as these everyday activities could end in detention and deportation of themselves or their loved ones).
[13] CUB/111 Wochele-Jenks/4.
[14] CUB/110 Wochele-Jenks/68-70.

- **Households with low-incomes *and* high gas usage.**

Q. How have these recent rate increases impacted customers' energy security generally?

A. Households living with certain vulnerabilities are experiencing more impacts to their energy security from unaffordable bills. This shows up in chronic arrears, cycles of disconnection for non-payment, chronic high usage, high energy burden, and the energy limiting behaviors and difficult choices families are forced into that we cannot also measure quantitatively. Disconnections and chronic arrears (90+ day arrears), however, are two reliable metrics for measuring energy insecurity. In October 2022, NWN started its Bill Discount Program (BDP) in response to HB 2475 (2021). In 2025, the Company disconnected 12,363 households for non-payment.[15] Of these households who were disconnected in 2025, just over one third of them were enrolled in the BDP at the time of being disconnected by the Company.[16] In January 2026, three months after a 5.5% rate increase as well as the middle of winter, one third of NWN's customers with arrears over 90 days old, were known low-income customers, those enrolled in the BDP.[17]

Looking at the number of customers in Time Payment Arrangements (TPAs) also tells us how many customers are struggling to afford their bill payments in full. TPAs are payment plans that break down a customer's past due bills equally across twelve months or twenty-four. As of January 2026, there were 5,485 households enrolled in a TPA—though these enrollment numbers do not tell us if these households were able to "successfully" complete

[15] *See* CUB/115 Wochele-Jenks/at 20, 24, 30, 39 (The reports are made quarterly and each covers three months. CUB determined NWN disconnected 12,363 households for non-payment by the sum of each set of three months).
[16] *Id.*
[17] CUB/116 Wochele-Jenks/8.

their TPA on top of their existing monthly bills before entering the disconnection cue.[18] Instead, these data just highlight customers making attempts to manage their unaffordable bills and help avoid or delay disconnection.

Q. As energy burden is one economic metric of energy insecurity, did NW Natural conduct an analysis of how its customers' energy burden would be impacted by its proposal to raise rates?

A. Yes. We appreciate that NWN took the initiative to provide an energy burden analysis for its known low-income customers—those enrolled in its Bill Discount Program (BDP). The Company is not required to do a full Cumulative Economic Impact Analysis for the residential customer class with this ARM filing as ROE is not under consideration. See CUB Figure 3 for the Company's analysis from its initial filing.

[18] *Id.* at 3.

Figure 3: NW Natural's Energy Burden Analysis in UG 527[19]

Table 5 - NW Natural Bill Discount Effectiveness Targeting 2 Percent Energy Burden

Assuming family of 4	Tier 3 Example	Tier 2 Example	Tier 1 Example	Tier 0 Example
NW Natural bill discount tier	15%	30%	50%	85%
average annual usage	651	651	651	651
annual bill	$1,038.88	$1,038.88	$1,038.88	$1,038.88
Mid point of income for the tier	$64,590	$46,135	$27,681	$9,227
Existing				
NW Natural bill discount	$155.83	$311.66	$519.44	$883.04
annual bill after bill discount	$883.04	$727.21	$519.44	$155.83
Annual Bill as a % of income before discount	1.6%	2.3%	3.8%	11.3%
Annual Bill as a % of income after discount	**1.4%**	**1.6%**	**1.9%**	**1.7%**
ARM increase - illustrative	1.6%			
annual bill	$1,055.50	$1,055.50	$1,055.50	$1,055.50
NW Natural bill discount	$158.32	$316.65	$527.75	$897.17
annual bill after bill discount	$897.17	$738.85	$527.75	$158.32
Annual Bill as a % of income before discount	1.6%	2.3%	3.8%	11.4%
Annual Bill as a % of income after discount	**1.4%**	**1.6%**	**1.9%**	**1.7%**

Q. How does the Company analyze the way its proposed rate increase will impact energy burden for its known low-income customers?

A. As shown above, the Company's analysis looks at each of its Bill Discount Program (BDP) tiers, the corresponding discounts, the midpoint of income based on the income guidelines for each tier based on a household size of four, and average annual residential usage as well as the annual bill resulting from that usage. The Company uses this information to also calculate annual energy burden for enrolled customers, with the annual bill as a percentage of income after the discount is applied. Additionally, it illustrates what a BDP customer's

[19] NWN/100 Kravitz-Walker/20.

annual bill looks like currently, both before and after the discount, as well as what the annual bill for each tier looks like with the proposed ARM increase. The Company uses a 2% annual energy burden threshold to consider what high energy burden is based on the outcomes of its 2024 Energy Burden Assessment (EBA), which specifically addresses 2% as the "high-burden threshold" for NWN's territory.[20]

Q. What does NW Natural's energy burden analysis find?

A. On the whole, NWN concluded that the "overall 1.4% revenue requirement increase associated with the ARM is reasonable and would not compromise energy equity and affordability."[21] From the Company's energy burden analysis for enrolled BDP customers specifically, it found that the BDP is "bringing energy burden rates to an affordable level for eligible customers."[22] Though it is important to clarify that "eligible" is not the same as being enrolled in and benefitting from the program. There are many eligible customers whose energy burdens are still high because they have not yet learned about and enrolled in the BDP. Overall, NWN's energy burden analysis shows that after the proposed ARM increase, when considering the midpoint of income for each tier, and customers with average energy use, these accounted-for-customers' energy burdens (and those with incomes above the midpoint) would stay the same as they currently are without the ARM increase.[23]

Q. What are the limitations of the Company's analysis?

There are at least four limitations:

[20] CUB/110 Wochele-Jenks/20.
[21] NWN/100 Kravitz-Walker/19.
[22] *Id.* at 20.
[23] *Id.*

1. The Company relies on energy burden calculations for a limited group of its customers, along with the mere existence of its Oregon Low-Income Gas Assistance (OLGA) and Arrearage Management Program (AMP) programs, as evidence of customer affordability and energy equity considerations.[24]
2. The Company relies on the midpoint of each income tier to assess the energy burden for customers across the entire income range in each tier.[25]
3. The Company uses the average residential customer usage despite being required to track average usage at the tier level in RO 16 Energy Burden Metric Reporting (EBMR).[26]
4. Customer bills will increase, not by 1.4%, but by this amount plus the changes in the gas commodity and the various single issue rate mechanisms that go into effect with the Purchased Gas Adjustment (PGA). A 1.4% increase, when combined with increases in those costs, will only increase energy burden.

Q. Please describe the limitations of relying solely on an energy burden analysis of known low-income customers to understand the status of energy equity and affordability for residential customers.

A. Generally, while the energy burden metric is useful, it is a limited metric, and it is especially limited when used in isolation to assess the state of energy equity and energy affordability—which is essentially what the Company did. Again, over one third of customers in chronic arrears as of January 2026 were known low-income customers (aka those enrolled in the BDP), so we know that at least these 4,972 families cannot afford

[24] NWN/100 Kravitz-Walker/ 19-21.
[25] *Id.* at 20.
[26] CUB/117 Wochele-Jenks/1.

NWN's proposed increase.[27] And the chronic arrears of the other 9,608 families suggest these families also cannot afford this increase.[28] Further, high energy burden thresholds of 2% for gas utilities, and 6% for electric utilities, result in the assumption that it is equitable for low-income families to have higher energy burdens than higher income households do—as these higher income households are often spending much less of their income on their energy bills.

Q. Please describe the limitations of the Company using the midpoint of income for each tier in its energy burden analysis.

A. The Company's rationale for using the midpoint of each tier's income range was that it was consistent with the most recent design of the BDP and that this "provides better coverage of reduced energy burden throughout each tier."[29]

Q. What do you mean by "consistent with the most recent design of the BDP" and that this "provides better coverage"?

A. The Company most recently altered the discounts in its BDP through its 2024 General Rate Case, UG 490.[30] In that case, the Company utilized this methodology to make its initial proposal for altering the BDP. However, the final outcome for the updated BDP resulted in discounts that were deeper than those the Company proposed in its initial proposal.

In UG 490 the Company explains that in the BDP's original design, the maximum income of a tier was used to estimate energy burden.[31] It stated that using the midpoint instead was an "improvement upon the original design of the bill discount program by providing

[27] CUB/116 Wochele-Jenks/8.
[28] *Id.* at 3.
[29] CUB/117 Wochele-Jenks/1.
[30] Order 24-359 at 60.
[31] CUB/131 Wochele-Jenks/126.

additional coverage for the members of the tier than the prior bill discount program." Thus, it appears the Company is comparing the idea of "better coverage" to support the rationale for its analysis in UG 527 to the methodology which previously provided less coverage (the maximum income of a tier), but not to a third option—for example, the low-point of income in a tier. In UG 490 the Company believed that using the midpoint ensured that discounts were "calibrated to the needs of the 'average' household rather than the highest or lowest incomes, which aligns with our shared goals of delivering resources where they are needed most."[32]

Q. Does CUB agree with NWN's methodology and rationale?

A. No, CUB disagrees with this methodology and rationale. As discussed further below, Staff also disagreed with this methodology when the Company relied on it in UG 490 finding the methodology was unsupported by the evidence.[33]

Relying on the midpoint of an income range rather than the low point to illustrate customer energy burden impacts leaves the realities of customers with the lowest incomes of each tier unaccounted for. In other words, this methodology ignores the lowest income customers and does not paint a full picture of energy burden impacts for each tier. Yet households with the lowest incomes in each tier are arguably more vulnerable based at least on the premise of having less available income to apply to energy bills. Additionally, using the midpoint assumes a normal income distribution in each tier, when it could be the case that each income's distribution skews lower or higher, rendering the analysis not representative. Consequently, the rate increase is most pronounced for the highest burdened

[32] CUB/131 Wochele-Jenks/126-127.
[33] CUB/118 Wochele-Jenks/196-199.

and lowest income households but this segment is overlooked under NWN's mid-point methodology.

Q. Can you provide an example of what this looks like with NWN's BDP tiers?

A. Yes. For example, NWN's Tier 1 analysis, for those four person households with incomes at 16-30% SMI, shows that customers with incomes at the midpoint of this range ($27,681 as identified by NWN, CUB is assuming ~22-23% SMI) have a 1.9% energy burden—just under the high burden threshold of 2%. From this, NWN determines that energy burdens are being kept below 2% for all customers in this tier, both currently and with the ARM increase. But if we look at the lowest income in Tier 1's range, 16% of SMI for a household size of four ($19,684.32),[34] everything else the same, energy burden for these customers is actually 2.6% currently, and would be 2.7% with the ARM. See CUB Figure 4. Its worth nothing in Figure 4 that the current rates in place from UG 520 that went into effect last fall, customers in the lower even of Tiers 1 and 0 are above the 2% energy burden mark.

Figure 4: NW Natural Bill Discount Effectiveness Targeting 2% Energy Burden Using Each Tier's Lowest Income

Assuming Family of 4	Tier 3 (46-60% SMI)	Tier 2 (31-45% SMI)	Tier 1 (16-30% SMI)	Tier 0 (0-15% SMI)
NW Natural BDP Discount	15%	30%	50%	85%
Avg Annual Usage	651	651	651	651

Q. How does CUB's analysis in CUB Figure 4 dispute what the Company found in its own energy burden analysis?

A. Accounting for the lowest income in each tier points out that current NWN customer bills for those on the lower end of income in each tier, for three out of four tiers, are already experiencing energy burdens greater than 2% with current NWN rates. The ARM would slightly worsen that energy burden. See CUB Figure 4. As we do not know the income distribution for each tier currently, another option to paint a fuller picture of energy burden impacts for customers enrolled into the BDP is to use the lowest income in each tier as well as the highest income of each tier. This allows us to craft a range of energy burdens to better understand impacts for BDP enrolled customers in each tier. Calculating at the lowest incomes helps illustrate the oversight in the Company's analysis.

The Company's analysis also shows that those BDP customers in the two lowest income tiers (Tier 0 and Tier 1), who are at the midpoint in each income range, currently have the highest energy burdens of all the Company's BDP tiers, teetering closest to the 2% threshold (1.7% and 1.9% respectively). In CUB's analysis provided in Figure 4 this remained true, but energy burdens were worse than in the Company's analysis. This

highlights the limitations of the BDP's design (and analysis for that matter) targeting the midpoint, as the lower someone's income is in each tier, the worse off they are as compared to those with higher incomes in each tier. Under the Company's own analysis, which has customers in Tier 1 with incomes at 16-30% SMI holding at 1.9% energy burden, what will the Company do when it seeks to raise rates again and its own analysis shows energy burdens are greater than 2%?

Q. What were Staff's critiques of the Company's energy burden analysis methodology in UG 490?

A. Staff raised concerns that the Company's methodology, which NWN was using at the time to determine changes to its BDP, did not adequately consider income distributions and levels of energy burden among participants.[35] Staff describe it as overlooking critical areas of need for households at the lower end of income ranges, particularly those with the lowest incomes and highest burdens.[36] As is illustrated in CUB's Figure 4, Staff point out that this particular design has "rapidly declining benefits for those deeper in need."[37] Thus, the design, and the analysis itself do not prioritize the lowest incomes with the highest burden, as was what Staff recommended at the outset of UM 2211 when interim bill discount programs were created in response to HB 2475 (2021).[38] Staff also highlight concerns related to how this methodology does not account for customers who are on the higher end of usage patterns.[39] When CUB asked the Company about its approach in this regard, especially given we know the Company has more representative usage data for each BDP

[35] CUB/118 Wochele-Jenks/196.
[36] *Id.* at 197.
[37] *Id.* at 198.
[38] *Id.* at 199.
[39] *Id.* at 197.

tier, NWN responded that it used, "a methodology previously used in illustrating bill discount program impacts and was used here for consistency and comparability."

Q. Given what CUB has presented here, and the deficiencies Staff also identified in UG 490, why is NWN still using this methodology to determine energy burden for its Bill Discount Program customers, and thus assess whether the rate increase is affordable?

A. NW Natural appears to generally find that consistency and comparability with its previous analysis matters more than updating its analysis in order to be in alignment with Staff's previous critiques to ensure a more accurate assessment.

Q. Can CUB explain its concerns regarding the Company's low-income, high usage customers?

A. In November 2025, the Company identified 8,627 Bill Discount Program (BDP) households who qualified as a "high-usage customer."[40] This is roughly 18% of NWN's bill discount program customers—nearly 1 in 5 known low-income households. [41] A "high-usage customer" is defined as "a residential customer participating in a utility-administered bill discount program whose energy consumption places them in the 90th percentile or above of all other bill discount program participants within the utility's service area."[42] The average usage amongst these high-usage customers was 73 therms/month, while the average overall residential usage that month was 47.2 therms/month.[43] These customers' average bill in November 2025 was $109.87,[44] this is *after* their monthly bill discount, while the overall average residential customer bill was $77.04.[45] In other words, even

[40] CUB/109 Wochele-Jenks/3.
[41] According to NWN's RO 16 2025 Q4 Energy Burden Metric Report, there were 48,027 households who received a BDP discount in November 2025. *See* CUB/108 Wochele-Jenks/6.
[42] OAR 860-021-0408(m).
[43] CUB/108 Wochele-Jenks/5.
[44] CUB/109 Wochele-Jenks/3.
[45] CUB/108 Wochele-Jenks/5.

though these customers were enrolled in the BDP, their average bill was still 43% higher than the average residential customer.

Of these high-usage customers in November (the month which tracked the largest number of high usage customers in 2025) ~19% of them were in chronic arrears, which means nearly 1 in 5 had arrears that were 90 days and older.[46]

Q. What is the Company's proposal to address chronic arrears for love-income high-usage customers?

A. The Company relies on energy efficiency to address this issue, that is replacing the customers' existing gas appliances with more efficient gas appliances. The Company's 2024 Energy Burden Assessment (EBA) noted that while energy efficiency "potential" was concentrated in a small segment of low-income households, this still amounted to 12,000 households who would potentially be good candidates for energy efficiency measures. Yet the problem remains that these energy efficiency programs serve relatively few households.[47]

Q. Does CUB have concerns with this strategy?

A. Yes. In 2026, continuing to lock low-income families into unhealthy fossil fuel appliances is a poor energy efficiency strategy in the face of worsening climate change. It also directly contradicts Oregon's ongoing imperative to work towards a just energy transition and our understanding of environmental justice.[48]

Q. How does NWN's strategy implicate environmental justice?

[46] CUB/109 Wochele-Jenks/3.
[47] CUB/110 Wochele-Jenks/66.
[48] A "just transition" refers to addressing climate change in a fair, just and inclusive manner. This includes taking an inclusive approach to managing challenges associated with the low-carbon transition.

A. Low-income energy efficiency programs, such as NWN's Oregon Low-Income Energy Efficiency (OLIEE) program, which install new fossil fuel appliances, arguably cause long-term harm to low-income households by keeping them chained to the gas system for even longer. For example, a new high efficiency gas furnace typically has a useful life of 15-20 years. This pushes low-income households 15-20 years out from electrification of the heating in their homes. While a gas furnace may have a low operating cost today, as Renewable Natural Gas (RNG), hydrogen, and other alternative fuels get added to NWN's system, the price to run that furnace will increase significantly over the next 20-25 years.

Relatedly, new gas stoves have useful lives of 13-15 years. Meanwhile, a growing body of research shows that there are serious negative health implications stemming from fossil fuel appliances in one's home, especially around gas stoves and air quality.[49] Gas stoves emit nitrogen dioxide, carbon monoxide, and particulate matter, pollutants many studies show are linked to asthma, respiratory issues, and other long term health problems.[50] Low-income families are already more likely to be living in areas with poor outdoor air quality and have an increased likelihood of having asthma.[51] This is especially true for children in low-income families.[52] Setting low-income families up for this is not environmental justice.

The lack of a fuel switching policy for Oregon Investor-Owned Utilities is misaligned with both Oregon's Climate Protection Program (CPP) and Oregon's Energy Affordability Act. For example, HB 2475 (2021), the Energy Affordability Act, defines Environmental Justice

[49] CUB/119 Wochele-Jenks/1-5.
[50] *Id.*
[51] CUB/120 Wochele-Jenks/14.
[52] *Id.* at 15.

in part as "equal protection from environmental and health hazards."[53] And defines Environmental Justice Communities as those that:

> includes communities of color, **communities experiencing lower incomes**, tribal communities, rural communities, coastal communities, communities with limited infrastructure and other communities traditionally underrepresented in public processes and adversely harmed by environmental and health hazards, including but not limited to seniors, youth and persons with disabilities.[54]

Further, the purpose and scope of the Climate Protection Program (CPP) laid out in OAR 340-273-0010(2) states:

> Climate change caused by anthropogenic greenhouse gas emissions has detrimental effects on the overall public welfare of the State of Oregon. Reducing greenhouse gas emissions and mitigating climate change will improve the overall public welfare of Oregon. In particular, reducing greenhouse gas emissions will improve the welfare of environmental justice communities.[55]

OAR 340-273-0010(2)(c) further addresses health impacts to environmental justice communities, stating:

> Environmental justice communities in Oregon are disproportionately burdened by air contamination, including through disproportionate risk of the impacts of climate change.[56]

While energy efficiency programs have the potential to reduce near-term costs, installing fossil fuel appliances into low-income homes makes it increasingly likely that low-income and energy burdened customers will be stranded on the gas system, left to cover the system's fixed costs as wealthier people leave due to their choice and economic ability to

[53] CUB/106 Wochele-Jenks/1.
[54] *Id.*
[55] OAR 340-273-0010.
[56] *Id.*

electrify. Similar to CUB's concerns around the necessity to eliminate Line Extension Allowances (LEAs), CUB is growing increasingly concerned that the Commission does not have a fuel switching policy in place to support the electrification of low-income customers who are already the least likely to be able to afford electrification—and who are the least responsible for climate change. Additionally, as of 2024, 15-20% of the energy assistance need of NWN customers was among renters, meaning these families also face even more barriers to making necessary electric upgrades to begin with.[57] While it is imperative to get to the root cause of low-income, high-usage households' energy insecurity and affordability struggles, our current approach is out of step with the State's environmental justice goals. Especially when we consider that these low-income energy efficiency programs at a minimum do not give qualifying low-income customers a choice of what fuel type appliance is installed. These customers are already captive customers of a monopoly utility. On top of this, they likely have had little to no control over what appliances are inside of the homes they move into due to their incomes. Instead, our current process amounts to the outdated and inequitable adage of "beggars can't be choosers." Essentially, it limits the autonomy of impacted families who need support by justifying their second-rate treatment.

Ensuring a fuel switching policy for low-income households is both a short term and a long-term affordability strategy for high-usage customers in particular. It is also aligned with Oregon's understanding of climate change and environmental justice. This issue warrants sincere attention and time from all relevant stakeholders in order to problem solve

[57] CUB/110 Wochele-Jenks/19.

the barriers as identified in UG 490 and UG 520, and any other barriers, for low-income and environmental justice communities' right to a just energy transition.[58]

Q. Does CUB have a particular recommendation related to the energy affordability concerns of low-income, high-usage households?

A. CUB is not suggesting we stop funding NWN's OLIEE program. At this time, we uplift these concerns to highlight the limitations of NWN continuing to raise rates without attention to both root cause affordability problems and energy equity and environmental justice principles for this group of customers. It also highlights opportunities for the Company to improve energy equity in a meaningful way. These are policies which are in the control of the utility to champion and enact. Further, focusing on energy burden as the sole metric of energy insecurity is limiting and cannot be relied upon alone, especially in the context of low-income customers with high-usage from energy inefficiencies.

Q. Nonetheless, does the record show that this proposed rate increase is affordable?

A. No. As discussed above, the record does not support NWN's conclusion the "overall 1.4% revenue requirement increase associated with the ARM is reasonable and would not compromise energy equity and affordability."

II. WRONGFUL DISCONNECTIONS IN NOVEMBER & DECEMBER 2025

Q. Please explain the temporary disconnection moratorium policy that was to be in place for at least half of November and all of December 2025.

A. In November 2025, NWN along with the other five Oregon Investor-Owned Utilities agreed to voluntarily implement additional protections for known vulnerable customers.

[58] Order No. 25-420 at 19-23.

NWN specifically agreed to pause all disconnections for its BDP customers and medical certificate customers, respectively. This was in response to Oregon Legislators[59] advocacy in docket UM 2211 on November 7, 2025. CUB has since learned that the Company intended to implement this for its Washington customers as well but failed to do so.[60]

Q. When did the temporary winter disconnection moratorium begin?

A. According to the Company, it was to begin on November 15th, 2025. Though this was not CUB's understanding. The Company told legislators on or before November 12th that it would be implementing this temporary pause. Senator Patterson put out a press release on November 12th stating the commitment that NWN made in this regard.[61] The discrepancy of why the Company planned for November 15th to begin this moratorium despite knowing that the information about the moratorium was publicized on November 12th through that press release and reported in at least one local news outlet, is unclear.[62] It is worth highlighting that November 15th of 2025 was a Saturday, and the Company is not allowed to administer disconnections on Fridays, Saturdays, or Sundays under regular Division 21 rules.[63] While it turns out that NWN did not implement this moratorium at all, it did implement a "holiday moratorium" where it did not disconnect customers the week of December 22 or December 31 through January 2.[64] This means customers still could have been disconnected on Monday, December 29th or Tuesday, December 30th.

[59] CUB/122 Wochele-Jenks/1-3.

[63] OAR 860-021-0320.
[64] CUB/123 Wochele-Jenks/1-4.

Q. Please explain what CUB discovered about the Company's failure to implement a promised voluntary, temporary winter disconnection moratorium for its known low-income and medically vulnerable customers.

A. On February 12th, when CUB was reviewing data from NWN's 2025 Q4 Energy Burden Metric Reporting (EMBR) in docket RO 16, we realized that there were a total of 352 BDP households disconnected in November (139 accounts) and December (213) of 2025.[65] Yet there was supposed to be a temporary winter moratorium in place for these customers for roughly half the month of November, and the entire month of December.[66] CUB immediately sent Data Requests (DRs) to the Company inquiring about this discrepancy, assuming it was a reporting error, and not that the Company had in fact gone through with hundreds of disconnections it was not supposed to.[67]

On Friday, February 19th, NWN's Vice President of Regulatory Affairs and Resource Planning contacted CUB's Executive Director, Bob Jenks, to inform him of the Company's error.[68] In response to CUB DR 31, the Company stated that it "discovered that we did not implement the voluntary temporary winter disconnect moratorium for bill discount programs as intended."[69] It further noted that "processes were in place to do so."[70] The mistake was made due to a "internal miscommunication."[71]

[65] CUB/108 Wochele-Jenks/4.
[66] *Id.*
[67] CUB/128 Wochele-Jenks/1-2.
[68] NWN's Vice President of Regulatory Affairs and Resource Planning also reached out to Oregon Public Utility Commission Chair Letha Tawney on or around the same date. *See* CUB/123 Wochele-Jenks/4.
[69] CUB/128 Wochele-Jenks/2. The moratorium was also supposed to be for medical certificate customers, but the Company did not disconnect any of those customers during this time despite its failure to otherwise implement the policy.
[70] CUB/123 Wochele-Jenks/2.
[71] *Id.*

Q. When exactly did the Company realize its error regarding not implementing the temporary winter disconnection moratorium?

A. The Company states that it was not CUB's DR 31-32 inquiring about the data reporting in RO 16 which uncovered the error, but that it realized the error upon its submission of the report into RO 16 on January 29, 2026.[72] It states it began researching the cause for the error at this time, but that CUB's February 12th, 2026 DRs 31-32 "further heightened the priority of finding the cause."[73]

Q. How were customer impacted?

A. CUB is still working through the impacted customer data provided by the Company at this time. What we can say is that the Company stated that the majority of impacted households were reconnected the same day or next day following their mistaken disconnection in November or December.[74] It is worth noting though that there were at least 20 households who were disconnected for 3-13 days, 12 families who were disconnected for two weeks or more, with a household who remained disconnected for 43 days who had to pay $572.67 to reconnect, another household who remained disconnected for 50 days who was only $54.73 past due and had to pay $50 to reconnect, another disconnected for 61 days who had to pay $714.52 to reconnect, and other disconnected for 78 days.[75] Additionally, there were 35 households who have not yet been reconnected.[76] We know that at least four of those households did not wish to be reconnected when the Company was able to reach them, and two of these four had moved residences.[77] For customers who were disconnected

[72] CUB/123 Wochele-Jenks/2.
[73] *Id.*
[74] CUB/123 Wochele-Jenks/3.
[75] CUB/129 Wochele-Jenks/Excel spreadsheet Tab 1.
[76] *Id.*
[77] CUB/123 Wochele-Jenks/3.

for amounts below $150, they were on pre-existing payment plans which lowers the threshold for disconnection to just $50, instead of $150.[78] Recall that a customer is expected to pay not only their current bill, but a portion of the payment plan on top of that, and once a customer misses two consecutive payments for the payment plan, they are removed from the plan and subject to being shut off by the Company.

There were at least nine households who were disconnected twice in 2025 and once in 2024, and one household who was disconnected three times in 2024 and four times in 2025.[79] There were eight households who were disconnected again since they were wrongfully disconnected in November or December.[80]

Q. How many customers were impacted?

A. There were 198 Oregon households impacted by the Company's error and 16 Washington households.[81]According to the Company's records of those enrolled in the BDP, there were 603 people impacted by this error.[82]

Q. Can CUB explain the discrepancy in numbers from Docket RO 16 and the discovery process in this case?

A. Yes. NWN describes the reason for the discrepancy is due to the fact that the Company counts those customers who were, at the time of their disconnection not on the BDP, but who enrolled in the BDP following their reconnection, as BDP households who

[78] CUB/129 Wochele-Jenks/Excel spreadsheet Tab 1.
[79] *Id.*
[80] *Id.*
[81] CUB/132 Wochele-Jenks/1-2.
[82] When enrolling in the Bill Discount Program a family must also self-attest their household size to determine eligibility. CUB asked the Company to disclose the household sizes of the impacted households. *See* CUB/129 Wochele-Jenks/Tab 1.

experienced disconnection in a single month.[83] Customers who were qualified, but not yet enrolled in the BDP, would not have been protected from disconnection even if the Company had correctly implemented the temporary moratorium. However, their BDP enrollment following their November or December disconnection would have protected them from a future disconnection taking place during the moratorium, if the moratorium had been enacted.

Q. How has the Company handled its mistake to date?

A. The Company took three actions:

1. Refunded all impacted customer accounts the fees associated with the disconnection.[84]
2. Attempted contact or made contact with those customers who still remained disconnected in February following a November or December disconnection.[85]
3. Credited $150 to all impacted customer accounts—those whose accounts were still open.[86]

Q. How did the Company ascertain that a $150 bill credit was a reasonable amount given its error?

A. In a meeting with the Company, Company representatives told CUB that $150 is the amount past due that triggers a disconnection.

Q. How did the Company contact its customers when it realized this error?

A. On February 19th, three weeks after the Company states it first realized its error, and one week after CUB submitted DRs 31-32 regarding the error, it reached out to the 21 Oregon

[83] CUB/132 Wochele-Jenks/1-2; *See* also CUB/ 129 Wochele-Jenks.
[84] CUB/123 Wochele-Jenks/3.
[85] *Id.* at 3.
[86] *Id.* at 4.

households who still remained disconnected from their November or December mistaken disconnect, to inform these customers that they could be reconnected for no charge.[87] NWN was able to reach five of the 21 households.

Of those 5 reachable impacted households:

- 2 impacted households told the Company they had moved;
- 2 impacted households said they wanted their service to remain off and their account closed; and
- 1 impacted household elected to have their gas turned back on that day—suggesting this family had been navigating life without access to gas for at least two months in the middle of winter.

Of the 16 impacted households who the Company could not reach, those who remained otherwise disconnected since a November or December disconnection:

- 6 impacted households had non-working phone numbers; and
- 10 impacted households the Company left a voicemail alerting them to the possibility of reconnection with no charge.

Q. Did NWN reach out to those customers who had already reconnected to explain the error in the disconnection?

A. The record does not show that NWN communicated this. Instead, as discussed below, NWN has applied a bill credit.

[87] CUB/123 Wochele-Jenks/3.

Q. Did the Company offer impacted households any form of compensation for their error and the ensuing hardship these families likely navigated due to the winter disconnection?

A. On February 27, 2026, one month and one day after the Company says it first identified its error, and nearly two months since the moratorium should have ended, NWN applied a $150 bill credit for all impacted customers. The Company states that the bill credit will appear on the customer's next bill as a line item with a bill message that reads, "The $150 credit on this bill corrects a service disconnection error related to a temporary pause in your service last year. This courtesy will help lower your bill."[88] In the instance of impacted customers who have closed accounts, such as the four households who indicated they had either moved or wanted their account to remain closed, they would be issued a "corrected final bill that includes the credit, which will reduce the final balance and may result in a refund check."[89] Note that the households who have moved or any who have been evicted, would need to have mail forwarding set up to receive any refund check, as well as a new stable address to receive mail.

Q. Does CUB believe this message on the bill is sufficient to explain what happened?

A. No, the explanation provided by the Company with the bill credit does not paint a clear picture for impacted customers about how, when, and why they were impacted.

Q. Does the Company expect ratepayers to cover these bill credits?

A. NW Natural told CUB's Executive Director in a phone conversation on February 19th, 2025, that the Company/ its shareholders would cover the cost of the bill credits. To date

[88] CUB/123 Wochele-Jenks/4.
[89] *Id.*

this is not in writing in the discovery process to CUB's knowledge. Nor has CUB seen any deferrals for these bill credits.

Q. What does CUB think of the actions the Company has taken to date to remedy its error?

A. CUB is glad the Company took action to both attempt reconnection for those impacted households who perhaps still remained disconnected after months of being disconnected, and for all impacted households to receive a bill credit, as well as refunds of associated fees. However, CUB expressed to the Company previously that we do not think the bill credit goes far enough for impacted families, especially considering the families who remained disconnected for extended periods of time, as well as those who were perhaps evicted as an outcome of their disconnection. CUB is waiting for additional data coming from the Company to better understand the specific circumstances of the impacted households. Once CUB receives that information and is able to analyze it, we may have additional recommendations. We greatly appreciate the Company's efforts to expedite information to us on this crucial matter.

Q. Is CUB aware of any other instances of Company errors that are impacting its customers?

A. Yes. Advocates in Washington alerted CUB to an ongoing issue with NWN improperly charging fees to customers in Washington. Some customers in Washington are eligible to receive waived fees, but the Company's process for waiving these fees is done manually and is subject to human error.[90] Advocates have noted that there are customers who are still charged these fees when they should not be.[91] This has required the Company to go back

[90] CUB/126 Wochele-Jenks/40.
[91] *Id.*

each month and reimburse impacted customers those fees. Advocates have expressed frustration around this and are consistently making efforts to verify that NWN is indeed reimbursing these fees. This raises concerns for CUB that the new waived fees coming out of the updated Division 21 rules from Oregon Docket AR 671, will also be subject to this manual fee reversal process.[92]

Q. Is CUB seeking any additional action in this docket to address the Company's mistake and its impact on the identified low-income disconnected households?

A. Yes. At the very least, CUB is proposing a management disallowance. NWN committed to a moratorium on disconnecting low-income customers. It promised legislators that it would not disconnect these customers. CUB recommends a management disallowance of $10,000 for each household incorrectly shut off. This means $10,000 x 198 Oregon households, or $1,980,000.

CUB is also concerned that if it were not for the Company needing to comply with disconnection data reporting through Docket RO 16, this error would not have been caught by the Company or anyone else, and customers would not have received any compensation or acknowledgement of the Company's mistake. We are interested in the Company being subject to an audit, investigation, or something similar as it relates to both its customer service department and Customer Information Systems. For example, the Commission has undertaken a similar process in UM 1750 when it received customer complaints on NWN's Weather Adjusted Rate Mechanism (WARM) end of year billing true-ups. In that docket, the Commission opened an investigation pursuant to ORS 756.515 into NWN's WARM

[92] *See* CUB and Energy Justice Advocate comments regarding compliance and accountability for Oregon utilities regarding the Division 21 Disconnection Protections, CUB/127 Wochele-Jenks/1-4.

issues related to the 2014-15 winter season.[93] Likewise, the Commission has instructed utilities to submit a Performance Plan after receiving customer complaints calling into question whether the utility was providing safe and adequate services.[94] CUB is interested in accountability to ensure something like this does not happen again. We reserve the right to make additional recommendations through UG 527 as it relates to this issue, if it becomes the case that we cannot come to agreement with the Company outside of this space.

III. ALTERNATIVE RATE MECHANISMS: AN ARM AND A LEG

Q. How is NWN asking to recover these costs?

A. NWN filed for rate recovery under what it claims is an "Alternative Rate Mechanism" or ARM. NWN states the application for an ARM "is to recover the costs of a limited subset of capital additions through a new base rate tariff, Schedule 123."[95]

Q. What is an Alternative Rate Mechanism (ARM)?

A. Beginning in 2025, PGE filed two ARMs to allow the utility cost recovery for a limited number of issues. As discussed below, PGE filed the ARMs after entering into an MOU that set the ARM's parameters. Subsequently, NWN filed this ARM. To date, the two utilities have used the ARMs to define what is in and what is out for consideration, while avoiding a comprehensive look at a utility's costs, revenues, and investments. Additionally, by filing ARMS they ensure the protection of their authorized ROE which is not reviewed in an ARM. Relatedly, NWN also avoided conducting a corresponding Cumulative

[93] Order No. 15-264.
[94] *See e.g.,* Order No. 35-371.
[95] NWN OPUC Advice No. 25-25, at 1.

Economic Impact Assessment for its residential customer class, which are now required for all rate cases where ROE is under review, per HB 3179 (2025), the FAIR Energy Act.[96]

Indeed, there is no definition of an ARM in Oregon ratemaking. ARMs have been used as an alternative to a General Rate Case, and while they might be considered a form of single-issue ratemaking in principle, these three ARM filings test whether that is true. Relatedly, it is not clear what can be included in an ARM. For example, could a utility file an ARM and include all the new capital investments it has made? Could an electric utility include generation, transmission, and distribution investment? NWN's ARM is a smorgasbord for recovery, which includes Mist, IT investments unrelated to Mist, other discrete investments with a cost above $1 million, and projects it labels "public work" projects.[97] Could a utility include some O&M costs? The ARMs that have been filed by PGE and NWN have not included the rate of return (ROR). Is that what makes a rate case an ARM?

Q. What are CUB's views regarding the recent utility use of Alternative Rate Mechanisms (ARMs)?

A. In addition to our general concerns about lack of clarity on what exactly an ARM is and is not, including the current lack of limits around ARMs, we are concerned at least about the following as it relates to ARMs:

1. Utilities shifting risk to customers;
2. The inability for a comprehensive review of a utility's costs by stakeholders;
3. The utility using ARMs to protect its ROE;
4. The utility alone determining the limits to these cases; and

[96] CUB/121 Wochele-Jenks/1.
[97] *See* NWN/100 Kravitz-Walker/2.

5. Utilities' ability to rely on ARMs with no set limits during the interim Multi-Year Rate Plan (MRP) period.

Oregon utilities already enjoy a plethora of mechanisms to raise rates. Yet, somehow an unusual, broad, open-ended mechanism has been introduced. We generally do not support the use of ARMs, especially when there are not clear, pre-defined guardrails to contain them and to protect customers. This recent mutation of single-issue ratemaking is no better a process for customers than previous single-issue cases, and it is far outside the spirit of the FAIR Energy Act. CUB's negative experience and growing concerns while navigating an increasing number of single-issue cases contributed to the impetus for the creation of the FAIR Energy Act in the first place. Yet, in response to the legislation becoming law, ARMs seem to be one way utilities are responding to it.

Through utilities' use of ARMs, like other single-issue rate cases, other parties to the case lose the ability to look holistically at a utilities' overall costs, resulting in less oversight and more risk for customers. The unchecked use of ARMs will only enable a utility to continue to reduce its own risk, shifting it to its customers, while also protecting, or staving off a lower ROE in response to declining ROEs of peer utilities or the utility's multiple opportunities for cost recovery. Following Order 24-454, utilities are no doubt keenly aware of the recent precedent of lowering ROE to recognize that frequent rate cases reduce risk and reduce regulatory lag.[98] Could a utility use an ARM to lower its risk by having frequent rate cases with limited regulatory lag, but avoid any consideration of adjusting the ROE to account for the lower risk?

[98] Order 24-454 at 12.

Q. Can CUB describe its concerns related to NW Natural defining the limits of this case?

A. Yes. There currently are no agreed upon limits in this case. Instead, NWN has attempted to define the terms of what is being considered. It chose what cost increases to include and what offsets to those cost increases to include. But it is important to recognize that there is no basis for NWN to define the limitation on CUB's or other party's testimony and evidence. And we do not believe that companies in these cases can limit what evidence or issues CUB and other parties put before the Commission.

To illustrate this concern, in this case NWN is adding three new rate base additions to Mist but has not included updating depreciation for all Mist assets as an offset. If the Company is asking the Commission to add Mist replacement costs to rate base, NWN should correspondingly update depreciation to ensure that customers are not paying for an inflated rate base. Thus, CUB is proposing to update the depreciation of all assets associated with Mist. While this is not an offset that NWN has defined as part of this ARM it is appropriate and necessary. See Witnesses Jenks' testimony in CUB 200 for further discussion of the Mist asset replacements.

Q. What are CUB's views on the use of a multi-party Memorandum of Understanding (MOU) in a utility's use of ARMs to set limits at the outset of a case?

A. In the PGE ARM (UE 459), there was a MOU where parties negotiated what would be considered and what would be off-limits.[99] This included binding and non-binding understandings.[100] One of the intentions of the MOU was to limit the scope of costs while

[99] CUB/107 Wochele-Jenks/28-33.
[100] *Id.*

avoiding another General Rate Case (GRC).[101] Following the decision in UE 435, the MOU was quickly executed. It was not perfect, but it was likely better than not having one as it placed guardrails on recovery. As CUB noted in UE 459 and expressed in the MOU itself, CUB's signatory to the MOU did not represent an agreement "on the need or the appropriateness of a [...] Alternative Recovery Mechanism."[102] The MOU in UE 459 was not meant to set any sort of precedent for future reliance on ARMs or other such mechanisms. Despite that, in UG 527, and in the absence of an MOU, NWN has proposed not just an ARM, but a leg. PGE's ARM was limited to distribution investments, NWN's ARM covers investments in storage, IT, public work projects, and other investments it calls discrete investments. Overall, CUB is interested in the ways an MOU can set guardrails to an ARM if there are otherwise none established by the Commission.

Q. What does CUB think about how the use of unchecked ARMs will interfere with stakeholders working toward implementing Multi-Year Rate Plans from the 2025 FAIR Energy Act (HB 3179)?

CUB is concerned about the use of ARMs becoming a new normal, especially as we work towards implementing Multi-Year Rate Plans (MRPs) in Oregon. Thus, not only is the use of unchecked ARMs a real concern, but CUB is concerned about the capacity of stakeholders to take on the labor required to be successful in the creation of MRPs for Oregon if we must also navigate multiple unchecked ARMs. The Pacific Northwest National Laboratory (PNNL) noted in its recent analysis of "Oregon's Existing Utility Rates and Related Mechanisms"[103] the following:

[101] *Id.*
[102] CUB/105 Wochele-Jenks/24.
[103] CUB/113 Wochele-Jenks/21.

> Rate cases, power/gas costs and true-up proceedings, other revenue adjustment requests, and other schedules, adders, and automatic adjustment clauses collectively represent a meaningful administrative workload for OPUC staff and others.[104]

To date there are no guardrails in place for ARMs for the interim period, though stakeholders are working through that process in Docket AR 677.[105] Importantly, it remains to be seen if the Commission will be approving interim guidelines in rules or if utility stakeholders will be expected to abide by some sort of an honor system through Docket AR 677. Indeed, as this ARM is being considered, NWN may well be preparing to file a new ARM next December.

Q. Has NWN indicated the statutory authority under which it can seek this rate increase?

A. No. Normally when a utility files for a rate increase, the utility indicates the statute that permits such a filing. NWN, however, has not indicated what statute, rule, or regulation permits this ARM filing. Nor has NWN entered into a Memorandum of Understanding (MOU) with the parties agreeing to its filing of this ARM. In other words, it's not clear there is any authority that would allow NWN to change rates through this ARM.

Q. NWN says it is filing this ARM because of FAIR's prohibition on residential rate increases during winter months (November 1 to March 31) and extension of the rate suspension period to 11 months in total.[106] Do these new restrictions justify this ARM?

A. No. To begin, the moratorium on winter rate increases does not then require an ARM filing. HB 3179 Section 3(7) only states "[a]ny increase in residential rates may not take effect

[104] *Id.* at 47.
[105] CUB/103 Wochele-Jenks/1-5.
[106] NWN/100 Kravitz-Walker/7.

from November 1 to March 31." This winter moratorium on rate increases was a direct response to dramatic and back-to-back rate increases in the middle of winter. Such practice was harmful to residential ratepayers particularly during winter storms. Both of these events – the rate hike and the extreme cold weather – significantly increased customer heating bills. As a result, the legislature placed a restriction on winter rate increases, but this was not an invitation for the utility to turn around and file for cost recovery in every other month of the year. Likewise, extending rate cases from 10 to 11 months gives the Commission and parties one additional month to review the cases. It recognized the capacity constraints of the Commission, particularly when multiple utilities file rate cases with nearly identical schedules. It is absurd to think that this month-addition would be to encourage a flood of rate recovery filings outside of a GRC.

Q. NWN then says that the reason for the ARM is because it did not file for a multi-year rate plan in 2025, and given the passage of HB 3179 (2025) it, then forwent filing a "traditional rate case", and instead filed an ARM.[107] Does this reason justify the ARM?

A. Again no. To the best of CUB's knowledge, there have not been multi-year rate cases since the use of the Alternative Form of Regulation (AFOR) statute in the 1990s and yet that did not lead to annual rate case or ARMs. In UG 490, the Company requested the Commission direct it to file a multi-year rate plan in lieu of its next general rate case.[108] Staff, CUB, and AWEC all opposed NWN's request.[109] The Commission declined NW Natural's request pointing to an insufficient record as the basis with the reminder that a GRC is not an

[107] NWN/100 Kravitz-Walker/7.
[108] Order No. 24-359 at 47.
[109] *Id.* at 48

appropriate place to seek an advisory opinion.[110] If the Company was going to file a multi-year plan, it would need to "engage in a robust stakeholder process ahead of the filing to gather feedback on the design and all elements of the framework, as well as any stakeholder concerns."[111] The Commission further expected that any such proposal would include "detailed discussion regarding meaningful performance metrics, how the plan results in just and reasonable rates, and any customer protections or benefits." [112] To CUB's knowledge, while NWN participated in the back-and-forth of the FAIR Energy Act negotiations prior to enactment, NWN did not separately engage stakeholders on the framework of a multi-year plan ahead of its UG 520 filing. If it had filed UG 520 as a multi-year plan for recovery, it's likely the Commission would have again declined to adopt the plan based on the direction in the UG 490 Order. What this means is that there was no multi-year rate plan option for NWN in 2025 to choose over the traditional rate case. Accordingly, the Commission should find this justification for the ARM is not persuasive.

Q. NWN also says it considered filing a GRC with a rate effective date of April 1, 2027 "combined with a deferral to address the delay in cost recovery" but instead opted for this ARM. [113] Does this reason justify the ARM?

A. Still no. Recall that NWN filed this ARM less than a month after its rate effective date in UG 520. This ARM is not limited to a few discrete issues; rather, it covers a variety of cost recovery and allocation changes similar to a GRC. But if NWN had filed this as a GRC, presumably with the opportunity to adjust its ROE, then there was the real risk the Commission could have lowered the ROE as it did in UE 435. In this way NWN has used

[110] *Id.*
[111] *Id.* at 50.
[112] *Id.*
[113] NWN/100 Kravitz-Walker/8.

the ARM as insurance to avoid a lowered ROE while still requesting to recover costs to avoid regulatory lag. In short, NWN's filing is a wolf in sheep's clothing. The scope of NWN's ARM is in effect a GRC but offers a cost of capital protection a GRC would not. The benefit here is to NWN.

On the second point, HB 3179 (2025) amended ORS 757.210 to add two new subsections 6 and 7. Although not yet codified in ORS 757.210(7), the Commission recognized that ORS 757.210(7) will state "[a]ny increase in residential rates may not take effect from November 1 to March 31."[114] Section 7 does not explicitly provide for a deferral of costs. That said, the Commission recently commented how the winter rate increase moratorium will be implemented in Order No. 25-505 on PacifiCorp's RAC filing. In considering the mechanics of the FAIR Energy Act and its winter rate increase moratorium, the Commission explained:

> We generally do not believe residential rate payers shouldering additional interest is consistent with the FAIR Act's intent, especially in a mechanism designed to reduce the utility's regulatory lag in capital cost recovery. However, how to accomplish this in light of the statute related to the RAC remains to be settled. Similarly, outside of legislatively mandated single-issue recovery processes, utilities control most, if not all, aspects of their capital planning and decisions to seek single-issue capital cost recovery filings. In those cases, we encourage the company to consider changes to the timing of its future filings given the residential winter rate increase mortarium.[115]

[114] *In the Matter of THE PUBLIC UTILITY COMMISSION OF OREGON Investigation into the Purchased Gas Adjustment (PGA) Mechanism Used by Oregon's Three Local Distribution Companies,* Docket No, UM 1286, Ruling establishing deadlines (Aug. 11, 2025).
[115] Order No. 25-505 at 15.

Thus, the Commission has signaled that deferrals for capital cost recovery during the winter months, as NWN's states it contemplated as an alternative to this ARM, are inconsistent with the FAIR Energy Act's intent and inappropriate when utilities control capital planning.

It is important to recognize that while NWN may desire an opportunity to eliminate any delay in cost recovery, it is that delay, regulatory lag, which provides an incentive for a utility to control costs. NWN's frequent rate cases have eliminated most regulatory lag, but the consequences may be related to the explosion of cost increases in non-gas (margin) costs that we discussed above with CUB Figure 2.

This contrasts with a power cost filing or a purchased gas adjustment. Recall that, for a capital project that the utility will earn a return on for decades, so it can take on regulatory lag. In contrast, a power cost case is an annual filing and the company is not earning a return. In PGE's 2026 AUT, the Commission commented on the timing of the residential rate increase in the first year after the FAIR Energy Act became effective. "Given the nature of the interaction between the FAIR Energy Act and annual cost reviews such as this AUT, we anticipate longer-term changes in the future through additional processes."[116] In this instance the deferral was a stipulated measure to address power costs while FAIR was being implemented at the PUC.

[116] Order No. 25-439 at 4.

As noted above, Section 7 does not explicitly provide for a deferral of costs during the winter. Nor has NWN indicated which portion of the FAIR Energy Act they are otherwise looking to for this deferral. Where it is not required by law, whether or not to grant a deferral is up to the Commission's discretion. HB 3179 (2025), the FAIR Energy Act, specifically mentions two instances when the PUC must review and *consider* deferred accounting, Section 3 and Section 4. The first is in Section 3, when the Commission determines it is necessary to mitigate "an increase in residential customer rates if the increase is of such magnitude that, if applied at the higher rate or all at one time, the increase would affect the ability of residential customers to maintain adequate utility service," In other words, a GRC, and specifically for the amounts at issue.[117] In the second instance, Section 4 (HB 3179(4)) only requires the Commission to *consider* a deferral filing in cases where the ROE is subject to review or modification, and whether to grant that review is still up to the Commission. Section 4 of FAIR is a temporary section intended to apply as utilities transition from historical general rate case schedules to multi-year rate schedules.[118] In sum, nothing in the FAIR Energy Act guarantees a deferral will be granted.

Q. Does CUB believe the Commission can reject the consideration of an ARM?

A. Yes. While neither of us are attorneys, CUB hopes that the Commission can do so. The Commission ruled in UE 435 that it could not reject a GRC.[119] But the Commission has found that deferrals and SCRMs are discretionary and also declined to adopt the Seaside tracker in UE 435.[120] Because a utility is not claiming that it needs the recovery associated

[117] HB 3179, Sec. 3(6).
[118] *See* HB 3179(5) that repeals section 4 when the Commission establishes permanent rules for Section 7, or Jan. 2, 2027, whichever comes first.
[119] Order No. 24-110 at 3-4.
[120] Order No. 24-454 at 38.

with an ARM to ensure shareholders are compensated, it seems like an ARM is closer to a deferral and the Commission would have discretion. But as it stands, it appears there is nothing yet stopping NWN from coming back with another ARM within a month of the final order in UG 527. There is a real need for the Commission to identify what ARMs are meant to accomplish and to place limitations on ARMs.

While the regulatory process is often described as a balancing act between the interests of shareholders and customers, it is worth recognizing that Oregon law centers the customer. The first two sentences of the PUC's General Powers make clear who is supposed to be central to utility regulation in Oregon:

> In addition to the powers and duties now or hereafter transferred to or vested in the Public Utility Commission, the commission shall represent the customers of any public utility or telecommunications utility and the public generally in all controversies respecting rates, valuations, service and all matters of which the commission has jurisdiction. In respect thereof the commission shall make use of the jurisdiction and powers of the office to protect such customers, and the public generally, from unjust and unreasonable exactions and practices and to obtain for them adequate service at fair and reasonable rates.[121]

Centering the customer means rather than focusing on the utility's desire for cost recovery without regulatory lag, we should be addressing the problems customers are experiencing – things like high rates of disconnections, rate levels that are increasingly unaffordable, incentives to control capital spending, the growing risks and inequities from stranded gas assets, and outstanding arrearages. This ARM does not address these problems.

[121] ORS 756.040.

Q. Does NWN have alternative means for recovery of these costs outside of the ARM?

A. Yes. The issue here is not whether the Company can get cost recovery; the question is whether the Company should allow for regulatory lag by controlling its costs. NWN filed UG 221 in 2011 and did not file another rate case until UG 344 in 2017.[122] The Company had capital investments it made during this time but accepted regulatory lag and worked to reduce costs. This was not unusual. The PUC's website has a page called key cases which list the General Rate Cases for each utility. It is a recent phenomenon that NWN has ceased controlling costs and now needs annual rate adjustments and the elimination of nearly all regulatory lag.

Q. Should the Commission apply an earnings test to ARMs?

A. Yes. First, we note that the Commission recently imposed an earnings test in both PGE's Seaside ARM and to PGE's Distribution System Plan (DSP) ARM (UE 455 and UE 459) in order to ensure fair and reasonable rates.[123] In doing so the Commission has affirmed its "application of an earnings test and accompanying deferral is squarely within the Commission's broad legal powers in accordance with ORS 756.040."[124] When PGE challenged the imposition of an earnings test in UE 455, the Commission upheld its decision explaining:

> Because this docket is a single-issue proceeding with limited review of PGE's rate base, costs, and earnings, we find that the unconstrained cost recovery for the Seaside Project may result in unjust and unreasonable rates. For that reason, we allow PGE to place its Seaside Project in rates but include an earnings test on the associated revenue collected to constrain recovery reflective of the company's overall earnings to help ensure just and

[122] *See* Order No. 12-437 at 1, Order No. 18-419 at 2.
[123] *See* Order No. 25-417 at 13-14 (finding "an earnings test will serve as an important check to ensure that this rate adjustment mechanism does not result in additional cost recovery when the company is otherwise able to achieve its authorized [rate of return]."); *see also* Order No. 26-025 (supplementing and upholding Order No. 25-417); Order No. 26-074 at 6-7.
[124] Order No. 26-025 at 2.

> reasonable rates for customers. This serves to avoid unfair overearning through pursuit of single-issue ratemaking.[125]

Thus, CUB believes that the Commission should apply an earnings test to this case and that earnings test should reflect the frequency of NWN rate cases by being established at 40 basis points below its authorized ROE. The Company should only be allowed to adjust rates out of this case up to 40 basis points below its authorized ROE.

Q. In PGE's recent ARMS, UE 455 and UE 459, the Commission set the earnings test at the authorized ROE, why is CUB recommending an earnings test of 40 basis points below the AROE for NWN's ARM?

A. PGE was starting from a point of having a reduced ROE from UE 435. Its ROE was reduced from 9.5 to 9.34 to reflect the Company's reduced risk due to the frequency of its ratecases. NWN is using an ARM to avoid its third straight ROE challenge, which could have led the PUC to cut the ROE because frequent rate cases reduce the utility's risk. Between the ROE reduction in UE 435 and the earning tests PGE is facing a 41 basis point reduction from their ROE before it was adjusted to account for frequent rate cases. Accordingly, an earnings test set at 40 basis points below is consistent with these Commission orders.

Q. What has the Commission said previously about the limits of single-issue ratemaking or ARMs that support CUB's request for an earnings test?

A. Most recently, in Order 26-025, which the Commission reiterated in Order 26-074, the Commission stated:

> The Commission prefers to set rates in a general rate proceeding, where all of the utilities' costs, investments, and earnings can be evaluated to ensure

[125] Order No. 26-025 at 3.

> that rates are just and reasonable. Single-issue ratemaking proceedings are allowed but are limited. As we noted in our prior order, a single-issue rate case precludes a full examination of the utility's overall costs and profits, and could result in a rate adjustment that allows a utility additional cost recovery when the company is otherwise earning its authorized rate of return.[126]

Further, in the Commission recent Order 26-074 on PGE's DSP ARM in UE 459, the Commission required an earnings test in order to:

> balance risk between customers and PGE and to ensure that rates remain just and reasonable […] we find the limited review afforded to PGE's rate base, costs and earnings could result in unjust and unreasonable rates.[127]

In UE 458, PGE's 2024 Winter Storm Deferral, the Commission also ordered an earnings test stating:

> Deferrals, such as the one at issue here, are intended to provide for a range of outcomes and are not intended to guarantee recovery at the company's authorized ROE. An earnings test will allow us to ensure that resulting rates are fair, just, and reasonable.[128]

Q. Are there additional levers the Commission could consider pulling as it relates to ARMs?

A. Yes. Beyond an earnings test, the Commission should consider the following:

- Rejecting additional ARMs while stakeholders are designing a new Multi-Year Rate Plan (MRP) process. With multi-year ratemaking, ARMs should not be necessary, but to design a good process for multi-year ratemaking, stakeholders

[126] Order No. 26-074 at 6.
[127] *Id.*
[128] Order No. 26-077 at 10.

cannot afford to spend large amounts of effort evaluating utility requests for ARMs.

- Rejecting the use of serial ARMs where the utility files a new ARM soon after one is completed.
- Identify the circumstances where a utility's ROE should be adjusted to account for the lower risk associated with too many rate adjustments.
- Permitting ARMs only where there is an identifiable and definitive risk to customers not merely when the utility is seeking recovery.

The Commission placing limits on ARMs will be increasingly important once stakeholders come to alignment in AR 677 about the interim MRP exceptions process. If a utility is out of step with the agreed upon exceptions process guidelines and determination process, the Commission will need to act to protect customers and ensure utility accountability. Otherwise, the labor expended by Staff and other stakeholders like CUB in AR 677 and beyond, is for naught.

IV. CONCLUSION

Q. Please summarize your recommendations.

A. Note that this is a summary of our recommendation. The summary should not be read in isolation but with our testimony as a whole.

- Require a management disallowance of $10,000 for each of the 198 impacted Oregon households who were wrongly disconnected in November and December 2025 due to the Company's oversight.
- Require an earnings test at 40 basis points below the ROE for any rate change associated with this filing.

- Establish limitations on utility filing ARMs in the future.

Q. Does this conclude your testimony?

A. Yes.

WITNESS QUALIFICATIONS STATEMENT

AR 677 Rulemaking General Rate Revisions HB 3179

Staff Transition Period Concept

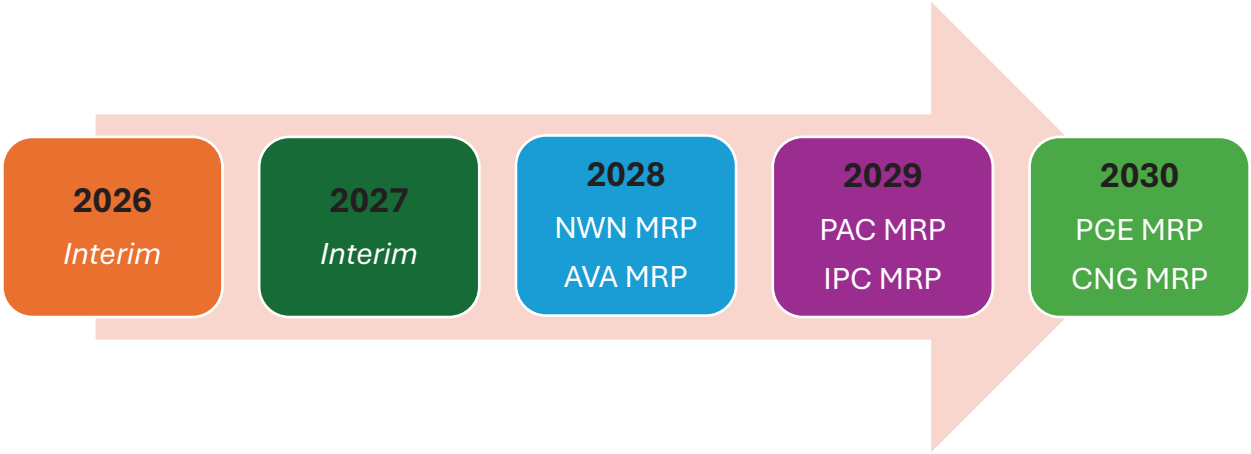
In the Matter of Rulemaking to Establish General Rate Revisions Filing Schedule and Exemption Process (HB 3179 Implementation).

Purpose

This straw proposal provides draft concepts for the transition period between now and each utility's first Multi-Year Rate Plan (MRP) under HB 3179. The objective is to clarify how existing ratemaking tools will be evaluated during the transition period and ensure that actions taken before 2029 do not undermine implementation of the MRP framework. This document is intended to inform stakeholder discussion and further refinement.

MRP Filing Schedule

Staff's proposed MRP filing schedule for inaugural utility MRPs is intended to create the certainty the utilities and stakeholders need to adequately plan. It provides a starting point for discussion and subject to change. At this stage, Staff's proposal sought to consider utilities' last GRC effective date, cumulative rate increases, utility size and service territory, and the proposed transition cost recovery process.



Transition Concepts

Staff's vision for cost recovery during the transition periods focuses on a limited number of narrowly scoped general rate cases (GRC) and discourages the use of new limited scope cost recovery mechanisms, such as alternative rate mechanisms (ARMs) and deferred accounting. Staff also responds to the concept of indexing approaches during the transition period.

Principles

Staff's concept is intended to preserve as much bandwidth as possible for the development of the MRP framework and to facilitate a transition that is transparent, predictable, and cost-contained. This phase is distinct from the term *between* utility MRPs once the framework has been established.

During the transition period, utilities will continue to make investments in energy resources and infrastructure, face inflationary pressures, incur non-discretionary costs (e.g., public works projects), and may make capital investments with short depreciable lives (e.g., software). Staff also recognizes that utilities with later MRP filing dates may have additional considerations and that there is a necessary balance between regulatory lag and rate shock. Staff's transition period concepts attempts to reflect these realities, the affordability and energy burden experience of customers, and the need to focus as much bandwidth as possible on MRP framework development. Therefore, Staff's proposal is guided by the following principles:

1. Balance affordability, financial stability, and administrative capacity.
2. Focus on targeted, high priority, and disciplined costs.
3. Provide clear expectations that enhance predictability and help utilities plan to avoid under recovery.

Transition Period Capital (ARMs)

With the two exceptions noted below, Staff does not contemplate the use of new ARMs during the transition period. Capital trackers or formula-like recovery mechanisms can reduce cost containment incentives, shift risk to customers, and unnecessarily complicate the transition to MRPs without the structural safeguards contemplated under HB 3179.

Staff's concept contemplates implementation of an ARM if the utility demonstrates:

- A single cost or cost category is included,
- The Company will not file a GRC during the transition period,
- The scope and timing of the filing is made such that it is responsive to Staff and stakeholder bandwidth, and
- Delayed cost recovery would materially impair access to capital, or
- The Company achieved a Return on Equity greater than 250 basis points lower than their most recently approved Authorized Return on Equity.

Any utility that determines it necessary to file for recovery via an ARM or tracker-like mechanism is expected to demonstrate that recovery during the transition period is necessary, time sensitive, and cannot reasonably be pursued in a GRC or the utility's first MRP filing in order to balance potential burden from cumulative impact of the proposed increase on customers.

Staff's concept does not include cost overruns for recovery during the transition period; and no investment will be subject to recovery unless in use prior to the rate effective date. Based on learnings from recent ARMs, Staff's concept also contemplates that depreciation for the same class of asset is included and there is an earnings test where excess earnings would be refunded and there would be no automatic upward adjustment for earnings shortfalls.

Staff notes that utility bears the burden of demonstrating both necessity and time sensitivity. General statements of policy alignment, system benefit, or future need are not sufficient. Where the required showing is not made, the request will be denied without prejudice to later review.

Approval of cost recovery in an ARM does not limit the Commission's authority to review scope, cost management, or overruns in the first MRP.

Deferrals

Staff intends to utilize the transition period to focus on minimizing use of new deferrals for cost recovery outside of general rate cases. Staff recognizes that deferrals are used to facilitate various existing cost-recovery mechanisms and statutorily required programs and recovery of costs associated with extraordinary and unforeseen costs, but notes in several instances, deferrals are used to facilitate year-over-year and dollar-for-dollar, recovery of costs that could be forecasted and recovered through general rate cases.

Staff will closely scrutinize new deferral requests during the transition period and look for opportunities to streamline reauthorizations that are not associated with existing cost recovery mechanisms, statutorily required programs, or high cost extraordinary and unforeseen costs. Further, based on Staff's analysis of the utilities' success at obtaining authorization to amortize deferred costs, Staff concludes recovery risk may not be commensurate with the utilities authorized RoR. Instead, the likelihood that utilities will be allowed to amortize deferred costs, based on a review of past Commission decisions, may warrant a lower interest rate.

Staff's concept does not include the creation of new deferrals without approaches that balance utility and ratepayer impacts through application of the Modified Blended Treasury Rate or another industry-based rate to deferred amounts rather than the utility's rate of return where evidence exists that recovery of costs is more likely than the utilities standard business risk.

General Rate Cases

Staff's transition concept seeks to facilitate one or fewer GRCs filed consistent with HB 3179 and other existing statutes. In line with Staff's principles, the transition concept focuses on moderating cumulative rate impacts and limited the number of concurrently filed GRCs in the transition period. To this end, Staff recommends any utility GRC filing during the transition period demonstrate consideration of the following Staff objectives:

- Minimize transition period proceedings
    - Utilities limit GRC filings to one within two years of utility's first MRP.
    - Limited number of concurrent rate cases to two.
- GRC's demonstrate narrow focus and O&M discipline
    - Target total rate increase requests to track at or below inflation.
    - Prioritize the use of GRCs where O&M reductions are possible.
    - Focus on bringing new capital projects into rates that are focused on cost-effective reliability, safety, and long-term affordability.
    - Focus on urgent or non-discretionary costs, including investments with short depreciable lives.
    - Focus on projects that can be supported with a thorough non-wires, non-pipes, or other alternatives analysis informed by stakeholder input.
- Mindfulness of potential rate shock
    - Phased increase for rate increases above 5 percent.

Indexed O&M

Staff notes that discussion of indexing approaches such as a fixed percent annual rate increase during the transition period has been discussed at workshops. Staff's concept reserves consideration of indexing for the MRP framework development process and does not include any indexing mechanisms or inflation-based automatic adjustments during the transition period. Indexing can reduce regulatory burden but also weakens the link between costs and review. Introducing indexing prior to MRPs risks embedding cost assumptions that may not receive full scrutiny before becoming the baseline for MRPs.

Next Steps

- **Tuesday, March 10, 2026, 9:30-11:30 Pacific:** AR 677 Workshop
  - Presentation of Staff proposal for clarification and initial discussion.
- **Tuesday, March 17, 2026.** AR 677 Comment deadline (optional)
  - Comments on Staff proposal and workshop discussion.

- *HB 3179 implementation office hours, every Monday, 12:30-1:30 Pacific.*

Staff looks forward to stakeholder input on this proposal and appreciates all of the thoughtful engagement on these efforts to date.

If you have any questions regarding this document or process, please contact:

Michelle Scala | Regulatory Strategy Manager | 503-689-2608 | Michelle.m.scala@puc.oregon.gov

To receive meeting notices and agendas for this docket, send an email to puc.hearings@puc.oregon.gov, and ask to be added to the service list for Docket No. AR 677. You will then receive emails with workshop details, when new documents have been added to the docket, or there is a change to the schedule.

CHAPTER .....

AN ACT

Relating to public utilities; creating new provisions; and amending ORS 756.010, 757.072 and 757.230.

Be It Enacted by the People of the State of Oregon:

SECTION 1. ORS 756.010 is amended to read:

756.010. As used in ORS chapters 756, 757, 758 and 759, except as otherwise specifically provided or unless the context requires otherwise:

(1) "Commission" means the Public Utility Commission of Oregon.

(2) "Commissioner" means a member of the Public Utility Commission of Oregon.

(3) "Customer" includes the patrons, passengers, shippers, subscribers, users of the service and consumers of the product of a public utility or telecommunications utility.

(4) "Environmental justice" means equal protection from environmental and health hazards and meaningful public participation in decisions that affect the environment in which people live, work, learn, practice spirituality and play.

(5) "Environmental justice communities" includes communities of color, communities experiencing lower incomes, tribal communities, rural communities, coastal communities, communities with limited infrastructure and other communities traditionally underrepresented in public processes and adversely harmed by environmental and health hazards, including but not limited to seniors, youth and persons with disabilities.

[*(4)*] **(6)** "Municipality" means any city, municipal corporation or quasi-municipal corporation.

[*(5)*] **(7)** "Person" includes individuals, joint ventures, partnerships, corporations and associations or their officers, employees, agents, lessees, assignees, trustees or receivers.

[*(6)*] **(8)** "Public utility" has the meaning given that term in ORS 757.005.

[*(7)*] **(9)** "Rate" means any fare, charge, joint rate, schedule or groups of rates or other remuneration or compensation for service.

[*(8)*] **(10)** "Service" is used in its broadest and most inclusive sense and includes equipment and facilities related to providing the service or the product served.

[*(9)*] **(11)** "Telecommunications utility" has the meaning given that term in ORS 759.005.

SECTION 2. ORS 757.230 is amended to read:

757.230. (1) The Public Utility Commission shall provide for a comprehensive classification of service for each public utility, and such classification may take into account the quantity used, the time when used, the purpose for which used, the existence of price competition or a service alternative, the services being provided, the conditions of service**, differential energy burdens on low-income customers and other economic, social equity or environmental justice factors**

that affect affordability for certain classes of utility customers, and any other reasonable consideration. Based on such considerations the commission may authorize classifications or schedules of rates applicable to individual customers or groups of customers. The service classifications and schedule forms shall be designed consistently with the requirements of ORS 469.010. Each public utility is required to conform its schedules of rates to such classification. If the commission determines that a tariff filing under ORS 757.205 results in a rate classification primarily related to price competition or a service alternative, the commission, at a minimum, shall consider the following:

(a) Whether the rate generates revenues at least sufficient to cover relevant short and long run costs of the utility during the term of the rates;

(b) Whether the rate generates revenues sufficient to insure that just and reasonable rates are established for remaining customers of the utility;

(c) For electric and natural gas utilities:

(A) Whether it is appropriate to incorporate interruption of service in the utility's rate agreement with the customer; and

(B) Whether the rate agreement requires the utility to acquire new resources to serve the load; and

(d) For electric utilities, for service to load not previously served, the effect of the rate on the utility's average system cost through the residential exchange provision of the Pacific Northwest Electric Power Planning and Conservation Act of 1980, Public Law 96-501, as amended.

(2) The commission may prescribe such changes in the form in which the schedules are issued by any public utility as may be found to be expedient. The commission shall adopt rules which allow any person who requests notice of tariff filings described under subsection (1) of this section to receive such notice.

SECTION 3. ORS 757.072 is amended to read:

757.072. (1) A public utility providing electricity or natural gas may enter into a written agreement with an organization that represents broad customer interests in regulatory proceedings conducted by the Public Utility Commission relating to public utilities that provide electricity or natural gas. The agreement shall govern the manner in which financial assistance may be provided to the organization. The agreement may provide for financial assistance to other organizations found by the commission to be qualified under subsection (2) of this section. More than one public utility or organization may join in a single agreement. Any agreement entered into under this section must be approved by the commission before any financial assistance is provided under the agreement.

(2)**(a)** Financial assistance under an agreement entered into under this section may be provided only to organizations that represent [*broad customer*] interests in regulatory proceedings before the commission relating to public utilities that provide electricity or natural gas **that are:**

(A) The broad interests of customers;

(B) The interests of low-income residential customers; or

(C) The interests of residential customers that are members of environmental justice communities.

(b) The commission by rule shall establish such qualifications as the commission deems appropriate for determining which organizations are eligible for financial assistance under an agreement entered into under this section.

(c) The total aggregate financial assistance available to all organizations that represent the interests described in paragraph (a)(B) and (C) of this subsection from all public utilities providing electricity or natural gas may not exceed $500,000 annually.

(d) The commission shall establish a process for evaluating and approving an agreement described in this section that includes the provision of financial assistance to organizations that represent the interests described in paragraph (a)(B) or (C) of this subsection. The commission must evaluate and approve an agreement described in this paragraph before financial assistance may be provided under the agreement. The agreement described in this paragraph shall govern the manner in which financial assistance may be provided to an organization found by the commission to be qualified under paragraph (a)(B) or (C) of this

subsection. More than one public utility or organization may join in a single agreement described in this paragraph.

(3) In administering an agreement entered into under this section, the commission by rule or order may determine:

(a) The amount of financial assistance that may be provided to any organization;

(b) The manner in which the financial assistance will be distributed;

(c) The manner in which the financial assistance will be recovered in the rates of the public utility under subsection (4) of this section; and

(d) Other matters necessary to administer the agreement.

(4) The commission shall allow a public utility that provides financial assistance under this section to recover the amounts so provided in rates. The commission shall allow a public utility to defer inclusion of those amounts in rates as provided in ORS 757.259 if the public utility so elects. An agreement under this section may not provide for payment of any amounts to the commission.

SECTION 4. The Public Utility Commission shall, no later than September 15, 2025, provide a report to the interim committees of the Legislative Assembly related to energy that discusses, for the period beginning on the effective date of this 2021 Act and ending December 31, 2024, the implementation and impacts of the amendments to ORS 757.072 by section 3 of this 2021 Act. The report shall include, but need not be limited to:

(1) A description of the process established under ORS 757.072 (2)(d) and any other rules, orders, processes or polices adopted or established by the commission as necessary to implement the amendments to ORS 757.072 by section 3 of this 2021 Act; and

(2) A detailed description of the organizations described in ORS 757.072 (2)(a)(B) and (C) that received funding during the period subject to reporting that includes, for each organization, a description of:

(a) The proceedings for which the organization received financial assistance;

(b) The amount of financial assistance received by the organization for each proceeding;

(c) The issues raised by the organization in each proceeding for which the organization received financial assistance; and

(d) The outcome within each proceeding with regard to the issues described in paragraph (c) of this subsection.

SECTION 5. Section 4 of this 2021 Act is repealed on January 2, 2026.

SECTION 6. Section 7 of this 2021 Act is added to and made a part of ORS chapter 757.

SECTION 7. (1) In addition to comprehensive classifications, tariff schedules, rates and bill credits, the Public Utility Commission may address the mitigation of energy burdens through bill reduction measures or programs that may include, but need not be limited to, demand response or weatherization.

(2) The costs of tariff schedules, rates, bill credits or program discounts allowed pursuant to subsection (1) of this section must be collected in the rates of an electric company through charges paid by all retail electricity consumers, such that retail electricity consumers that purchase electricity from electricity service suppliers pay the same amount to address the mitigation of energy burdens as retail electricity consumers that are not served by electricity service suppliers.

RE: Advice No. 25-22, UE 459 Schedule 121, Distribution System Plan Alternative Recovery Mechanism

Portland General Electric Company (PGE) submits this filing pursuant to Oregon Revised Statute (ORS) sections 757.205 and 757.210 and Oregon Administrative Rules (OARs) 860-022-0025 and 860-022-0030, for filing proposed tariff sheets associated with Tariff P.U.C. No. 19, with a requested effective date of **April 1, 2026**:

Fourth Revision of Sheet No. 1-2
Original Sheet No. 121-1
Original Sheet No. 121-2

Enclosed for filing is the following Testimony and Exhibits assigned as Docket No. UE 459:

- Jay Tinker, Jason Salmi Klotz (UE 459 PGE / 100-103)
- Joey Baranski, Kevin Putnam, Jack Podlesnik (UE 459 PGE / 200-201(C))
- Greg Batzler, Stephanie Meeks (UE 459 PGE / 300-302)
- Chris Pleasant (UE 459 PGE / 400-401)

PGE is submitting this filing to request recovery of the revenue requirement associated with new Schedule 121, Distribution System Plan Alternative Recovery Mechanism (DSP ARM). The DSP ARM includes specific capital projects in PGE's 2024 Distribution System Plan that are in-service by March 31, 2026. The mechanism only includes capital costs and related revenue calculations consistent with Docket UE 435 standards for all calculations. The overview and summary of the DSP ARM is provided in PGE's Testimony and supporting Exhibits.

To satisfy the requirements of OAR 860-022-0025(2) and OAR 860-022-0030(1), PGE responds as follows:

PGE estimates that approximately 953,000 Cost of Service (COS) customers will be impacted by this overall $72.2 million or 2.2% increase in COS revenues from the proposed Schedule 121 prices. A typical Schedule 7 customer consuming 784 kWh monthly will see a bill increase of $4.49 or 2.8%.

Work papers detailing the updated revenue requirements, price development and percentage impacts on customers is attached.

Please direct any questions regarding this filing to Greg Batzler at greg.batzler@pgn.com or Chris Pleasant at christopher.pleasant@pgn.com Please direct all formal correspondence and requests to pge.opuc.filings@pgn.com

Sincerely,

\s\ *Jay Tinker*

SCHEDULE 121
DISTRIBUTION SYSTEM PLAN ALTERNATIVE RECOVERY MECHANISM

PURPOSE

This Schedule recovers the revenue requirement associated with PGE's Distribution System Plan.

AVAILABLE

In all territory served by the Company.

APPLICABLE

To all bills for Electricity Service except Schedules 76R, and 576R.

ADJUSTMENT RATE

The Adjustment Rate, applicable for service on and after the effective date of this schedule are:

Schedule	Adjustment Rate	
7	0.564	¢ per kWh
15/515	0.597	¢ per kWh
32/532	0.524	¢ per kWh
38/538	0.691	¢ per kWh
47	0.910	¢ per kWh
49/549	0.876	¢ per kWh
75/575		
Secondary	0.062	¢ per kWh
Primary	0.062	¢ per kWh
Subtransmission	0.044	¢ per kWh
83/583	0.330	¢ per kWh
85/485/585		
Secondary	0.145	¢ per kWh
Primary	0.110	¢ per kWh

SCHEDULE 121 (Concluded)

ADJUSTMENT RATE (Continued)

Schedule	Adjustment Rate	
89/489/589/689		
Secondary	0.062	¢ per kWh
Primary	0.062	¢ per kWh
Subtransmission	0.044	¢ per kWh
90/490/590		
Primary 30-250 MWa	0.064	¢ per kWh
Primary >250 MWa	0.057	¢ per kWh
Subtransmission	0.064	¢ per kWh
91/491/591	0.600	¢ per kWh
92/492/592	0.167	¢ per kWh
95/495/595	0.600	¢ per kWh

SPECIAL CONDITIONS

1. Costs recovered through this schedule will be allocated to each schedule using the applicable schedule's forecasted energy on the basis of an equal percent of distribution revenue applied on a cents per kWh basis to each applicable rate schedule.

2. The costs for projects included under this schedule will be updated annually as provided above and will continue to be recovered under Schedule 121 until such time as the costs are included in base rates.

3. Once the Distribution System Plan is included in base rates or is no longer in service, this Schedule will be withdrawn, and no other assets will be placed within this Schedule.

VI. Qualifications 18

List of Exhibits 19

I. Introduction

Q. Please state your names and positions with Portland General Electric Company (PGE).

A. My name is Jay Tinker. I am employed by PGE as the Senior Manager of Rates and Regulatory Operations.

My name is Jason Salmi Klotz. I am employed by PGE as the Senior Manager Regulatory Strategy and Planning. Our qualifications appear at the end of this testimony.

Q. What is the purpose of your testimony?

A. The purpose of this testimony is to summarize PGE's request for Commission approval for rate recovery of specific distribution system investments through a Distribution System Plan Alternative Recovery Mechanism (DSP ARM). We will provide an overview of the DSP ARM and its relationship to the Distribution System Plan (DSP).[1] In recognition of the current challenging economic environment for our customers, PGE proposes a carefully and intentionally crafted approach to capital cost recovery that balances necessary investments to serve customers with consideration for customer affordability. This underscores PGE's dedication to addressing cost concerns while continuing the needed modernization of the grid. This approach was developed following constructive discussions between PGE and the Oregon Public Utility Commission Staff (Staff), the Citizens Utility Board (CUB) and the Alliance of Western Energy Consumers (AWEC). As a result, the DSP ARM was formulated as a pathway to narrow the scope of a rate review request to focus on the recovery of capital investments for distribution system planning and the Seaside Energy Battery Storage System (Seaside).[2]

[1] *PGE's 2024 Distribution System Plan*, Dkt. UM 2362, Initial Filing, (Dec. 18, 2024).
[2] *Request for Seaside Battery Storage Alternative Recovery Mechanism*, Dkt. UM 455.

Q. Describe the testimony and witnesses in this filing.

A. The testimony in this filing are as follows:

- Exhibit 200, DSP capital projects included in the DSP ARM will be addressed by witnesses Joey Baranski, Senior Director Project Management Office, Battery Energy Storage System Operations, and VPP Operations, Kevin Putnam, Senior Director Engineering Services, and Jack Podlesnik, Senior Director Grid Strategy, Transmission and Planning.
- Exhibit 300, DSM ARM revenue requirements by witnesses Greg Batzler, Manager of Revenue Requirement within Rates and Regulatory Affairs, and Stephanie Meeks, Regulatory Consultant, within Rates and Regulatory Affairs summarize the $72.3 million test year revenue requirement as of April 1, 2026.
- Exhibit 400, DSP ARM pricing and rate impacts by witness Christopher Pleasant, Regulatory Consultant, of Rates & Regulatory Affairs.

II. Overview and Summary

Q. Please provide an overview of PGE's request.

A. PGE is requesting recovery of a $72.3 million of revenue requirement for capital investments in the distribution system that either already are in service, or are expected to be in service, by the end of March 2026. The capital investments included in the revenue requirement calculation are limited to those specified in the DSP filed last December and are consistent with the provisions in the Memorandum of Understanding (MOU). The amounts requested, along with support for the adherence of calculations to the relevant MOU provisions, are discussed in more detail in PGE Exhibit 300. PGE is seeking to recover costs through a new DSP ARM tariff (Schedule 121) that will discontinue once all values become a part of base rates.

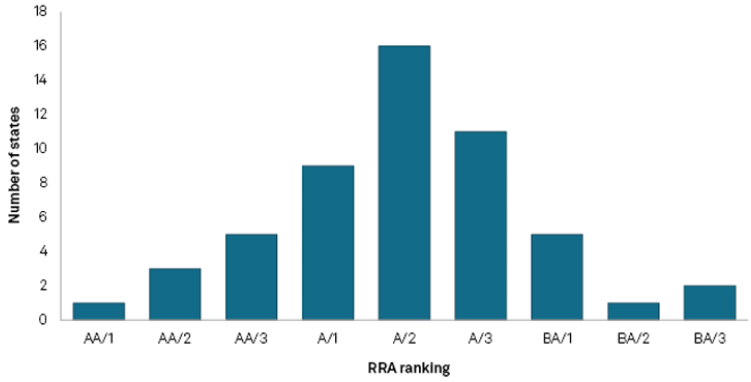
The DSP ARM offers a streamlined and focused regulatory tool that benefits both customers and the utility, particularly when compared to a general rate review. PGE makes this request to recover costs for targeted, in-service investments that directly enhance system reliability, safety, and affordability—investments that are foundational to meeting customer needs now and into the future. Unlike a general rate review, the DSP ARM limits the scope of recovery to discrete categories—[gross plant, depreciation, property taxes, and related items for DSP-specific capital investments]—using the current Commission-authorized cost of capital. This narrow and transparent approach balances cost recovery with sensitivity to customer affordability by avoiding the upward rate pressure of more expansive general rate reviews. Moreover, timely cost recovery through the DSP ARM signals to investors that Oregon's regulatory framework supports prudent infrastructure investment, thereby strengthening investor confidence. This confidence translates into continued access to low-

cost capital for PGE, ultimately lowering the long-term cost of critical infrastructure for customers.

Q. Is there a need to improve investor confidence in the regulatory environment for PGE?

A. Yes. While rating agencies, such as Moody's have always considered several aspects when evaluating utilities, the regulatory environment is a critical factor because it directly impacts utilities' financial stability and operational predictability. Rating agencies generally view favorably regulatory environments that provide utilities with timely cost recovery, reasonable returns, and mechanisms that reduce regulatory lag. State commissions that demonstrate consistent, predictable behavior tend to receive more positive assessments as they create a more stable operating environment for utilities like PGE. Regulatory Research Associates' (RRA) state regulatory evaluation is intended to assess the comparative level of risk for investors of owning the securities issued by utilities within each state regulatory jurisdiction. The RRA metric can range on a scale with the highest ranking being Above Average-1 through the lowest ranking of Below Average-3.

Figure 1
State regulatory rankings distribution: Energy



Data compiled June 20, 2025.
AA = Above Average; A = Average; BA = Below Average; RRA = Regulatory Research Associates.
Source: Regulatory Research Associates, a group within S&P Global Commodity Insights.
© 2025 S&P Global.

On June 20, 2025, RRA adjusted their ranking of the regulatory climate for Oregon by downgrading it from an Average/2 to an Average/3.

PGE also received an A3 negative credit rating by Moody's on June 30, 2025, with Moody's noting for factors that could lead to an upgrade, "if PGE's regulatory framework strengthens to include credit-supportive mechanism (e.g., riders or trackers) that enable timely recovery of cash flows related to carbon transition investments."[3]

Q. How is the scope of PGE's request for recovery for this DSP ARM different from a general rate review request?

A. The scope for the DSP ARM is limited to DSP capital costs, for gross plant, accumulated reserve, accumulated deferred income taxes, depreciation expense, property taxes, and income tax expense for in scope capital investments that become operational and in-service during the timeframe of January 1, 2025 to March 31, 2026 but uses the current Commission-authorized cost of capital. In comparison, a general rate review is much broader in scope and includes several additional cost recovery request components, such as capital investments beyond the DSP, other regulatory assets and liabilities, return on equity, operation and maintenance expenses, the associated depreciation and amortization, taxes for the other investments, and other expenses or miscellaneous credits. The parameters of what can be addressed in the DSP ARM docket are outlined in the MOU which is discussed further in Section IV below.

[3] Moody's report filed as Exhibit 103C.

III. Distribution System Plan and Status

Q. What is the purpose of the Distribution System Plan?

A. The DSP serves as a comprehensive roadmap for building a modern, bi-directional, clean energy grid that is cost-effective and contributes to the goals of customer affordability, electrification and decarbonization. This strategic plan helps PGE make informed investment decisions to address grid modernization, virtual power plant (VPP) platform development, distributed energy resource (DER) integration, and traditional infrastructure needs. Taken together, these informed investment decisions are intended to meet evolving system and customer needs while creating transparency with stakeholders and fulfilling regulatory requirements established by the Commission.

Q. Why does PGE file a DSP with the Commission?

A. On March 13, 2019, Staff opened an investigation into Distribution System Planning. At the conclusion of that investigation in December 2020 the Commission issued Order No. 20-485 establishing the original approved DSP guidelines, which were most recently updated in Order No. 24-421. PGE filed part one of its first DSP on October 15, 2021,[4] which focused on baseline data and system assessments, estimated costs and timelines, a community engagement plan, and a long-term plan. Part two of PGE's DSP was filed on August 15, 2022, and focused on load growth forecasts, identification of areas where the distribution system will need improvements, options to address improvement opportunities, and project or investments selected for distribution system improvements. Both DSP submissions were accepted and approved by the Commission.[5] PGE provided its most recent DSP on

[4] *PGE's Distribution System Plan*, Dkt. UM 2197, Initial Filing (Oct. 15, 2021).
[5] UM 2197, Orders 22-083 and 23-069 for Parts1 and 2, respectively.

December 18, 2024, in accordance with the revised and updated guidance from the Commission.[6]

Q. Describe the DSP guidelines as applicable today and how PGE complied with those guidelines.

A. The DSP guidelines were updated most recently by the Commission in Order No. 24-421, which was issued on November 4, 2024. The guidelines are extensive and cover nine key areas:

- Process and Timing
- Commission Action
- Community Engagement
- Current System Data and Assessment
- Forecasting of Load Growth, DER Adoption, and EV Adoption
- Grid Needs
- Solution Identification
- Near-term Action Plan
- Long-term Plan

Throughout the development of the newly adopted DSP guidelines PGE worked closely with Staff to understand the scope, intentions, and expectations set by these new guidelines. As a result, we were able to file shortly after the Commission Order No. 24-421 adopting the new DSP guidelines.

[6] *Investigation Into Distribution System Planning*, Docket UM 2005, Order 24-421 (Nov. 15, 2024).

Q. Did PGE consider stakeholder input when developing the DSP?

A. Yes. For the 2024 DSP, PGE conducted community outreach through multiple channels to gather diverse stakeholder input. This included: 1) hosting five multi-hour distribution workshops throughout 2024; 2) providing informational material and discussing components of demand response, programs and concepts with representatives from environmental justice communities at Community Benefits and Impacts Advisory Group (CBIAG) meetings; 3) incorporating accessible educational materials for meaningful participation from traditionally underrepresented communities in the planning process; 4) Making copies of presentations and recordings available on PGE's website for transparency; and 5) holding two office hour sessions to allow for more candid discussions.

Q. Provide an overview and status on PGE's 2024 DSP.

A. Portland General Electric's 2024 Distribution System Plan (DSP)[7] documents a comprehensive strategy and compilation of information in compliance with Commission approved DSP guidelines,[8] which were developed from Staff working with the utilities and stakeholders for building a modern, clean energy grid that is cost-effective and contributes to the goals of customer affordability, electrification and decarbonizing. The plan also provides investment decision making process insights with reporting and planning information for DSP investments and operation of the grid.

The 2024 DSP revised schedule is displayed in Table 1 below which was revised on April 24, 2025. At the time of this filing, PGE has submitted its reply comments in docket UM 2362 and is awaiting the second round of comments from Staff and stakeholders.

IV. Memorandum of Understanding (MOU)

Q. Describe the Memorandum of Understanding (MOU).

A. The MOU, dated June 4, 2025, is an agreement between PGE, Staff, AWEC, and CUB (jointly, "the Signatories").[9] The MOU establishes an Alternative Recovery Mechanism (ARM) framework to limit the scope of cost recovery for the Seaside Battery Storage Project (Seaside) and the Distribution System Plan (DSP) investments. The Seaside and DSP ARMs are alternatives to PGE pursuing a full general rate review in 2025. While the Signatories disagree on the necessity of these ARMs, they've agreed to these limitations given current regulatory circumstances and recent legislation that has directed the Commission to consider multi-year rate plans and alternative ratemaking. In this filing we address the areas of the MOU pertaining to PGE's DSP that was filed in December 2024. The MOU establishes that all costs in either ARM will be subject to Commission prudence review.

Q. What is the importance of the MOU?

A. The MOU is an agreement between the Signatories limiting the scope of cost recovery to be requested in both the Seaside and the DSP ARMs while allowing customers to benefit from the investments made that are beyond the scope of these ARMs and for which PGE may not seek rate recovery until a future point in time. The MOU resulted from several months of discussions and thoughtful engagement between the Signatories. From PGE's perspective, we agreed to the MOU and limited scope of cost recovery in light of the affordability challenges facing customers and part of our commitment to keep customer prices as low as possible while still working to provide a safe and reliable system. By pursuing Seaside and DSP recovery through a limited one-time mechanism, PGE is able to significantly lessen the cost impacts to

[9] PGE Exhibit 101, MOU (June 4, 2025).

customers compared to a full general rate review. The MOU also recognizes the benefits customers gain from improvements and investments made to the system.

Q. Describe how customers benefit from the key conditions of the MOU.

A. Customers benefit in three key ways:

The first is that the MOU limits the scope of cost recovery to projects identified in the DSP filed in December 2024. As discussed in more detail in PGE's Exhibit 200, these are projects that went through a rigorous and very thorough internal stage-gating process where the planning for some of these projects began months if not years before the DSP was submitted to the Commission in December 2024. Further, PGE's 2024 DSP, inclusive of these projects, has seen robust engagement and stakeholder input. These capital investments and improvements directly benefit customers through essential infrastructure upgrades like pole replacements, safety enhancements, and improvements to system reliability, resiliency, and security.

Secondly, the rate effective date is timed for April 1, 2026, which avoids a rate change in the winter season. PGE is targeting a Commission order in this docket to allow for rates of a new tariff to go into effect on April 1, 2026,[10] which is after the 2025-2026 winter season. PGE avoids the impacts of rate increases for customers during the winter months.

Third, assuming PGE's requests for recovery for Seaside and the DSP capital projects are decided by the Commission on the merits, "PGE agrees to not file a request for a general rate review with a rate effective date before May 1, 2027."[11] By recovering the limited amounts identified in the MOU, customers will not only benefit from lower rate increases compared to

[10] *See* PGE Exhibit 101, MOU, Binding Agreements – 8.d. "A DSP ARM would have a rate effective date of April 1, 2026."
[11] *Id*., Binding Agreements –13.

a general rate review filed in 2025, but will also benefit from investments PGE is making in the system that are outside the scope of the DSP and for which the earliest a general rate review increase will occur is May 1, 2027. Throughout this period, customers will continue to benefit from PGE's ongoing capital improvements that are separate from the Seaside and DSP ARM programs. These additional investments are specifically designed to enhance customer service and infrastructure but are not part of the current cost recovery request.

The MOU can be found in Exhibit 101 and includes both a Non-Binding Understandings section and a section of Binding Agreements.

Q. Are there revenue requirement drivers PGE will not be seeking to recover through the DSP ARM?

A. Yes, as mentioned, increases in O&M expenses experienced by the company are not part of PGE's recovery request, nor are any amounts for additional capital improvements or investments in generation (and other non-2024 DSP specific) plant placed in-service throughout 2025 and 2026. While PGE continues to experience costs and uncertainty from supply chain disruptions and inflationary pressures in 2025, which are anticipated to increase in 2026, under the terms of the MOU, PGE will absorb regulatory lag on those capital and O&M costs until PGE's next general rate review which, pursuant to the MOU will have a rate effective date no earlier than May 1, 2027. Also, with an authorized ROE of 9.34%—one of the lowest authorized ROE for a regulated vertically integrated electric utility in the nation—and despite the fact that year over year, PGE's share price has dropped more than 13 percent, PGE will not be seeking to increase its authorized ROE in the DSP ARM.

Q. Why is recovery of DSP costs through the method detailed in the MOU reasonable from a regulatory perspective?

A. The MOU limits what PGE is seeking to recover to capital projects identified to a narrow set of capital investments that are placed in service for customer use by the rate effective date. In Order No. 24-454, while the Commission rejected PGE's request for a tracker to include Seaside in rates once it is placed in service it was open to consider alternative tools by stating that "we acknowledge that today's system investment needs may involve more frequent capital additions and thus, absent a change in our framework, frequent general rate review filings. We are open to alternatives to this outcome that fairly balance the interests of customers and investors."[12]

The Commission then invited PGE to make a new filing for a tracker to bring Seaside into rates that the Commission would consider approving on an expedited basis. In recognizing "that our decision makes frequent general rate review filings likely to continue" the Commission indicated an openness to considering an alternative means of cost recovery for PGE but pointed out that such an alternative rate mechanism "must balance the need for PGE to bring new investments into rates with the opportunity to capture for customers other costs that have decreased." The Commission also referenced recent changes to distribution system planning guidelines as uncovering ways to discipline overall pace and allocation of costs in capital investments in a way that "is carefully tuned to safety, reliability, and affordability."[13]

The DSP ARM as outlined in the MOU makes clear that PGE will forecast depreciation reserve and accumulated deferred tax offsets to DSP rate base through March 31, 2026, which

[12] UE 435, Order 24-454, 45 (Dec. 20, 2024).
[13] *Id*. 2.

provides the most up to date treatment before rates go into effect. Paragraph 8g of the MOU details the treatment.

From a regulatory perspective, the ARMs are consistent with the guidance provided by the Commission in Order No. 24-454. The ARMs also allow for administrative efficiency since although there are two separate ARM filings, they are still less burdensome for the Commission and parties when compared to a general rate review. Moreover, the ARMs allow for the protection of a full prudence review of the costs as well as the submission of attestations to ensure all capital projects identified in the DSP tracker are actually in-service before rates would go into effect on April 1, 2026.[14] Furthermore, with its use in 38 other states, capital cost trackers are "the most widely used [alternative] tool in American retail ratemaking. For electric companies, trackers for generation capacity, smart grid investments, and replacement of aging assets have been especially common in recent years."[15]

Q. Is the MOU binding on the Signatories?

A. While PGE and the other Signatories are not seeking a Commission order approving the MOU because it is not considered the same as a settlement agreement filed for Commission approval after the start of a contested case, the Signatories did have several discussions about what to include or not include in the MOU and as Paragraph 17 states, "[t]he Signatories reached the terms of this MOU as an integrated document with all non-binding understanding and binding agreements considered critical elements in reaching consensus for supporting this MOU. Should a Signatory not act consistently with the MOU, the terms of the MOU shall not be considered binding on any other Signatory."

[14] *See* PGE Exhibit 101, MOU, Binding Agreements – Paragraph 8i.
[15] Mark Newton Lowry, Matt Makos, Gretchen Waschbusch, and Benjamin Cohen, "Innovative Regulatory Tools for Addressing an Increasingly Complex Energy Landscape: 2023 Update," Edison Electric Institute, (Feb. 2024).

Q. Would approval for recovery of capital investments through the ARMs as outlined in the MOU establish precedent for utilities seeking similar single-issue ratemaking in the future?

A. No. In fact, the MOU specifically addresses this concern in Paragraph 3 of the Non-Binding Understandings where it makes clear that the Signatories did not intend for the MOU to be construed as establishing precedent in future proceedings beyond those specifically contemplated in the Seaside and DSP ARMS proceedings. PGE does not see the use of the DSP ARM or the agreement reached in the MOU as a presage of future requests but rather a tool in the Commission's existing tool kit that can be used until alternatives—such as multi-year rate plans—can reasonably be implemented. That is why PGE proposes the use of new separate tariff schedules for recovery of the Seaside and DSP ARMs that will terminate once all values become a part of base rates. As Paragraph 9 of the Binding Agreements section of the MOU states, "[t]he schedules are not intended for repeat use and will be withdrawn once no longer in use."

Q. Does this filing provide the information related to the DSP ARM as outlined in the Binding Agreements section from the MOU?

A. Yes. PGE Exhibit 102 provides an index for the MOU binding agreements, which identified information to be provided in this filing. Exhibit 102 provides the description of the information in the binding agreements to be addressed and both the location in the MOU and where the information is provided in this filing.

V. Benefits of DSP Acknowledgement and DSP ARM Approval

Q. What are the benefits of the acknowledgement of the DSP?

A. There is a benefit of having an acknowledged DSP from the Commission in providing the understanding to all stakeholders on the direction that PGE's DSP is heading. It assists in rate review filings, such as this filing, by providing the planning context for the investments PGE is seeking recovery. PGE filed the DSP on December 18, 2024, in Docket UM 2362. The DSP describes PGE's strategy of planned capital investments over the next two to four years for grid modernization and infrastructure upgrades. A summary of annual projected distribution system investments for 2024 through 2028 were identified in Chapter 8, Table 25 and Table 26 of the DSP.

Q. Why should PGE be allowed recovery of all projects in the DSP as outlined in the MOU through an ARM?

A. As PGE looks towards the future of energy in the West, PGE's DSP represents critical infrastructure investments that deserve appropriate cost recovery. The DSP is not simply a utility program, but rather a roadmap for creating a more reliable, resilient and equitable grid that serves our communities. These investments support our transition to clean energy while maintaining the reliable service our customers expect.

These investments directly benefit customers through modernized infrastructure, the replacement of aging equipment, meeting regulatory requirements, and help the grid to support increased electrification and renewable integration. These investments represent prudent planning for the future. By upgrading the distribution system now, PGE is working to mitigate the need for more costly emergency replacements later while meeting growing

demand on the system. The cost of these investments and improvements should be recovered because they represent necessary investments that benefit all customers.

Furthermore, recovery of these prudent investments allows PGE to continue being a financially stable utility, which assists in maintaining lower financing costs for on-going investments. Being a financially stable utility will help PGE gain access to capital markets at more favorable rates. Lower financing costs means PGE can fund future essential infrastructure projects at a lower overall cost. This translates directly to savings benefits for customers because for every percentage point reduction in our borrowing costs, millions of dollars can be saved on large-scale projects. Financial stability also means PGE can weather unexpected challenges without compromising service. Whether facing natural disasters, economic downturns, or unforeseen system demands, a strong financial footing allows PGE to respond effectively. Beyond immediate cost benefits, a financially healthy PGE enables strategic long-term planning for future investments rather than needing to focus solely on short-term patches. This approach creates a more resilient grid and helps smooth rates for customers over time. Customers also benefit from a smoothing of rate increases over time with the Commission's approval of the DSP ARM since rate increases for capital improvements are not only limited but also staggered with Seaside rates targeted to go into effect in October 2025 and the DSP ARM in April 2026.

The Commission should approve recovery of the projects in PGE's DSP through a DSP ARM because it strikes a meaningful balance: it addresses the need for modern, grid investments while supporting customer affordability through regulatory efficiency and financial discipline.

VI. Qualifications

Q. Jay Tinker, please state your educational background and experience.

A. I received a Bachelor of Science in Finance and Economics from Portland State University and a Master of Science in Economics from Portland State University. I began working for the Company in June 1996 in Rates and Regulatory Affairs and entered my current position as Senior Manager of Regulatory Operations in March 2025.

Q. Jason Salmi Klotz, please state your educational background and experience.

A. I hold a Masters in Environmental Law and a Juris Doctor from Vermont Law School and am member of the Oregon State Bar. Prior to working for Portland General Electric, I have worked for FERC, the Vermont Public Service Board, the California Public Utilities Commission and the Oregon Public Utilities Commission. At PGE I have held several positions: Senior Manager in PGE's Customer Programs department, Senior Manager in PGE's Planning department overseeing the development of the 2024 Distribution System Plan, as well as PGE's Transportation Electrification Plan and our Flex Load Multi-Year Plan. I currently hold the position of Senior Manager of Regulatory Affairs Strategy and Planning.

Q. Does this conclude your testimony?

A. Yes.

List of Exhibits

PGE Exhibit	Description
101	June 4, 2025, Memorandum of Understanding
102	Memorandum of Understanding Index
103C	Moody's Credit Opinion Dated June 30, 2025

Memorandum of Understanding

This **MEMORANDUM OF UNDERSTANDING** (**"MOU"**) is made as of June 4, 2025 (the "Effective Date") by and among Portland General Electric Company ("PGE"); the Staff of the Public Utility Commission of Oregon ("Staff"); the Alliance of Western Energy Consumers ("AWEC"); and the Oregon Citizens' Utility Board ("CUB") (individually referred to as a "Signatory" and collectively referred to as the "Signatories").

Background:

Based on the Public Utility Commission of Oregon's ("Commission's") order in UE 435, the current regulatory framework in Oregon, the lack of regulatory limits on when and how often PGE can file a rate case, and given current unique circumstances in which the legislature is considering implementing multi-year rate plans or other alternative ratemaking mechanisms, the Signatories, established an MOU that lays out the scope of an Alternative Recovery Mechanism ("ARM") to limit the scope of costs that may be recovered through the Seaside and Distribution System Plan ("DSP") ARM in comparison to costs sought in a general rate review.

While the Signatories do not agree on the need or appropriateness of a Seaside or DSP ARM, the Signatories are entering into this MOU to limit the scope of these rate proceedings as an alternative to PGE deciding to pursue a general rate review in 2025.

This MOU sets forth certain non-binding understandings and binding agreements among the Signatories. Except as expressly set forth in the section of this MOU titled "Binding Agreements" nothing in this MOU constitutes a binding agreement of the Signatories. Furthermore, the existence of this MOU shall not be construed as establishing precedent or the ability of the Signatories to rely on this MOU for any future regulatory action beyond those contemplated in this MOU.

Non-Binding Understandings

The following paragraphs in this Non-Binding Understandings section do not constitute legally binding agreements of any Signatory.

1. Seaside has a contractual online date of August 21, 2025. In Docket UE 435, PGE identified a fully-loaded capital cost of $396 million for Seaside in PGE Exhibit 1700 at page 15 and a total rate base amount of 268.1 million, net of ITC benefits, in PGE Exhibit 2401.
2. PGE filed its DSP on December 18, 2024, in Docket UM-2362. The DSP describes PGE's strategy of planned capital investments over the next two to four years for grid modernization and infrastructure upgrades. A summary of annual projected distribution system investments for 2024 through 2028 were identified in Chapter 8, Table 25 and Table 26 of the DSP, with Appendix E of the DSP providing detailed project summaries for planned investments estimated to cost more than $2 million.
3. A Signatory's agreement to this MOU shall not be construed as a policy position of that Signatory on ARMs, single issue ratemaking, or general rate cases in any future proceeding beyond the ARM proceedings specifically contemplated in this MOU.

Binding Agreements

The following paragraphs in this Binding Agreements section are the only binding agreements of the Signatories in this MOU.

1. For purposes of this MOU, "Capital Costs" means gross plant, accumulated reserve, accumulated deferred income taxes, depreciation expense, investment tax credits, property taxes, and current deferred taxes.
2. For purposes of this MOU a "general rate review" is considered a filing by PGE pursuant to OAR 860-022-0019 that affects all or most of PGE's rate schedules and includes a determination by the Commission of the authorized return on equity. For the avoidance of doubt, "general rate review" shall not include any advice or rate filing for service for new large loads or data centers.
3. For purposes of this MOU, "Alternative Rate Mechanism" or "ARM" means tariff filings to recover the costs of the Seaside Battery Storage Project and specified distribution system investments as further described in this MOU.
4. All costs included in either ARM will be subject to review by the Commission for prudence based on the record developed by PGE, Staff, and intervenors in the docket.
5. For purposes of this MOU, "Loadings and Overheads" means allocable administrative and overhead costs, a portion of which are assigned to capital projects.
6. For purposes of this MOU, "Revenue Sensitive Rates" are Cost of Debt, Return on Equity, Cap Structure, State Tax Rate, Federal Tax Rate, Uncollectibles Rate, Franchise Fee Rate, Working Cash Factor, and OPUC Fee Rate.

Seaside

7. The Signatories agree that for a Seaside ARM the following conditions shall apply:
   a. The Capital Costs PGE will seek to recover in a Seaside Tracker shall not exceed the Capital Costs provided for Seaside in UE 435 PGE Exhibit 2401, as modified to use the Commission-approved ROE of 9.34%.
   b. A Seaside ARM will have a target final order date by October 26, 2025.
   c. All revenue sensitive rates and calculations must be consistent with the final outcome of UE 435.
   d. Rate base will be calculated as of October 31, 2025, and include depreciation expense, accumulated depreciation and deferred taxes consistent with the method used for setting prices in UE 435.
   e. PGE must forecast depreciation reserve and accumulated deferred tax offsets to Seaside rate base through October 31, 2025. Reserve offsets will be aligned with UE 435 final approved depreciation expense for battery assets.
   f. PGE's initial filing in the Seaside ARM will include a demonstration that PGE is absorbing regulatory lag on investments outside of the ARMs expected to be placed in service relative to changes in depreciation and deferred tax offsets over the same period.
   g. In addition to e) above, PGE will provide a rate base credit for forecast battery storage (i.e., Constable, Coffee Creek, and all other battery storage forecast to FERC 363 in UE 435), depreciation relative to UE 435 results through October 31, 2025.

DSP ARM

8. The Signatories agree that for a DSP ARM the following conditions shall apply:
   a. The scope of the revenue requirement under the DSP ARM is the revenue requirement of the capital projects identified in Appendix E for projects over $2 million plus the revenue requirement of the capital projects under $2 million as stated in the DSP in Appendix I for projects that will be in service as of the rate effective date. Additionally, PGE will provide information demonstrating that all projects included in the DSP ARM are also included within Tables 25 and 26 of the DSP. Signatories are not prohibited from bringing the costs and benefits associated with the distribution investment as described in the DSP into the scope of the DSP ARM. Signatories are not prohibited from raising issues related to the practice of recovery of distribution system costs through customer rates. The reference DSP was filed with the Commission in Docket UM 2362 in December 2024.
   b. Only capital amounts, Capital Costs, and revenue sensitive calculations can be included in the revenue requirement request included in a DSP ARM.
   c. All Revenue Sensitive Rates and calculations (i.e., method of applying the rates within PGE's revenue requirement) must be consistent with the final outcome of UE 435.
   d. A DSP ARM would have a rate effective date of April 1, 2026.
   e. Capital projects can be included in revenue requirement only if in-service on or before March 31, 2026, and will reflect application of Loadings and Overheads and Allowance for Funds Used During Construction (AFUDC) consistent with standard accounting practices and procedures.
   f. PGE's Loadings and Overheads and AFUDC policies must be supported in PGE testimony and subject to Party evaluation for reasonableness as part of a DSP ARM. PGE will file workpapers in a DSP ARM that provide detailed information regarding forecast loadings and AFUDC used to develop rate base amounts. PGE will demonstrate that loading rates are consistent with the loading rates as applied in UE 435.
   g. PGE must forecast depreciation reserve and accumulated deferred tax offsets to DSP rate base through March 31, 2026. Reserve offsets will be aligned with UE 435 final approved unbundled depreciation expense for distribution and transmission functionalized assets.
   h. Notwithstanding 8.g., depreciation expense, accumulated depreciations, and deferred taxes will be calculated consistent with the method used for setting prices in UE 435.
   i. PGE must submit an attestation for all capital projects identified in a DSP Tracker that are in-service by March 31, 2026. Should the net total exceed the proposed capital recovery within the filing, the total allowed in customer prices can be no greater than the filed amount.

Both

9. PGE must bill Seaside and DSP ARMs to customers through new separate tariff schedules, which will terminate once all values become a part of base rates in the next rate review proceeding. The schedules are not intended for repeat use and will be withdrawn once no longer in use. Should the separate schedules be in effect at the one-

year anniversary of their respective effective dates, PGE will update the Capital Costs for each schedule.

10. Seaside and DSP ARMs are limited in scope to address the recovery in customer rates of the specific items described in Paragraphs 7 and 8 of the Binding Agreements section of this MOU. The Signatories agree to act in good faith and use best efforts to either remain neutral or defend the scope of the proceeding as outlined in this MOU. In the event non-MOU parties raise additional issues beyond the scope of this MOU, this MOU does not preclude the Signatories from also presenting evidence into the record responsive to other issues or cost recovery items that may be raised by parties to the Seaside and DSP ARMs who are not parties to this MOU. If the Signatories disagree whether an issue or cost recovery item raised by a party is within the scope of the MOU they will convene to determine next steps.
11. Notwithstanding Section 10, above, Staff, CUB, and AWEC are not prohibited from proposing an earnings test and PGE is not prohibited from opposing such a proposal.
12. For purposes of Seaside and DSP ARMs, rate base must be calculated in the same manner as the Commission authorized PGE to use for capital projects in Docket UE 435.
13. If the Commission decides both of PGE's filings to establish Seaside and DSP ARMs on the merits, PGE agrees to not file a request for a general rate review with a rate effective date before May 1, 2027 (inclusive of the statutory nine-month suspension period). Accordingly, PGE could submit a request for a general rate review as early as July 1, 2026.
14. PGE will offer the MOU as an Exhibit to its opening testimony for both ARMs along with PGE-specific rationale for support of the MOU. Other Signatories will offer their rationale for supporting the MOU in subsequent filings related to each ARM at their discretion.
15. The Signatories will submit to the Commission the following Joint Proposed Procedural Schedules or not oppose PGE submitting the following proposed procedural schedules with the Commission:
    a. Proposed Schedule for a Seaside ARM is as follows:
        1) PGE files direct testimony and a proposed tariff change May 30, 2025.
        2) Parties file responsive testimony July 25, 2025.
        3) PGE files reply testimony August 18, 2025.
        4) Hearing tentative August 28.
        5) Simultaneous opening briefs September 16, 2025.
        6) Simultaneous closing briefs early October (2 weeks from opening brief).
        7) Target Commission Order October 26, prices effective by October 31, 2025.
    b. Proposed Schedule for a DSP ARM is as follows:
        1) PGE files direct testimony and a proposed tariff change July 25, 2025.
        2) Parties file responsive testimony October 24, 2025.
        3) PGE files reply testimony November 21, 2025.
        4) All-Party Pre-Hearing Brief mid-December.
        5) Hearing tentative early January.
        5) All-Party Post-Hearing briefs mid-February 2026.
        6) PGE reply brief late February 2026.
        7) Commission Order March 20, 2026, compliance filing by March 27, prices effective April 1, 2026.
16. This MOU does not limit or in any manner impair PGE's ability to seek recovery in its next rate case for any amounts related to Seaside, projects in the DSP, or other

amounts associated with capital projects incurred in 2026 following the stay out provision that are not otherwise recovered in customer rates.

17. The Signatories reached the terms of this MOU as an integrated document with all non-binding understandings and binding agreements considered critical elements to reaching consensus for supporting this MOU. Should a Signatory not act consistently with the MOU, the terms of the MOU shall not be considered binding on any other Signatory.
18. Except as provided in this MOU, no Signatory shall be deemed to have agreed that any provision of this MOU is appropriate for resolving issues in any proceeding other than the Seaside ARM or the DSP ARM.
19. By entering into this MOU, no Signatory shall be deemed to have approved, admitted or consented to the facts, principles, methods or theories employed by another Signatory beyond what is agreed to in this MOU. Nothing in this MOU shall be construed as creating a partnership or association between or among the Signatories. No Signatory shall have any power or authority to enter into commitment on behalf of or otherwise bind any other Signatory on other matters.
20. This MOU may be signed in any number of counterparts, each of which will be an original for all purposes, but all of which taken together will constitute one and the same agreement. This Binding Agreements section is the entire agreement of the Signatories related to the subject matter herein. This MOU may be amended only by a written agreement signed by all Signatories.
21. Signatories agree that the Commission shall have exclusive jurisdiction to resolve any dispute between the Signatories concerning this MOU.

I. Introduction and Summary 1

II. Distribution System Plan (DSP) ARM Projects 2

III. Qualifications 11

List of Exhibits 13

I. Introduction and Summary

Q. Please state your names and positions with Portland General Electric Company (PGE).

A. My name is Joey Baranski. I am employed by PGE as the Senior Director of the Project Management Office, Battery Energy Storage System Operations, and VPP Operations.

My name is Kevin Putnam. I am employed by PGE as the Senior Director of Engineering and Design.

My name is Jack Podlesnik. I am employed by PGE as the Senior Director of Grid Strategy, Transmission and Planning. Our qualifications appear at the end of this testimony.

Q. What is the purpose of your testimony?

A. The purpose of our testimony is to discuss the Distribution System Plan (DSP) projects that are included in this filing for cost recovery. We discuss PGE's capital planning process for identifying system needs and selecting the projects and the benefits of the projects for both the system and customers. Ultimately, the timely recovery of costs associated with these projects, which directly benefit customers is critical for PGE to continue to maintain a reliable, safe and affordable system at the lowest cost to customers well into the future.

Q. Please provide an overview of the testimony.

A. This testimony discusses the DSP projects, which are in this request for recovery review. We discuss the project categories and the importance of each category of investments to maintain and improve the grid. Our testimony provides details on the capital investment projects including documenting the requirements from Section 8 of Order No. 24-421 in Docket UM 2005 (i.e., revisions to distribution system planning guidelines) for the projects being reviewed for recovery in Exhibit 201.

II. Distribution System Plan (DSP) ARM Projects

Q. What are the types of projects in the DSP, and those requested in this DSP ARM?

A. DSP[1] projects are broadly categorized into six categories, shown in Table 1 below, all of which advance PGE's distribution system strategy to maintain a safe and reliable system and enabled grid for customers. In this DSP ARM filing, we request recovery for 72 projects, representing $655 million of capital in-service by March 31, 2026.

Table 1
DSP ARM Projects
($ in Millions)

Project Category	Number of Projects	Capital In-Service ($)
Capacity/Flexibility	3	$51
Compliance	10	$155
Customer/Partner	22	$264
Grid Modernization	18	$74
Operations	2	$2
Reliability	17	$103
Reserve*		$6
Total	**72**	**$655**

*Reserve for DSP projects anticipated to close by March 31, 2026.

Q. Please describe the project categories and the function they serve.

A. Included projects are classified into the following categories, based on primary justification for the project group:

A. Capacity/Flexibility – increase capacity and/or flexibility to address load growth or increase demand; may include capacity-driven compliance and reliability projects.

B. Compliance – address a non-capacity related compliance requirement from FERC, NERC, OPUC, EPA, DEQ,[2] or other regulatory body.

[1] *PGE's 2024 Distribution System Plan*, Dkt. UM 2362, Initial Filing at 304 (Dec. 18, 2024).
[2] Federal Energy Regulatory Commission, North American Reliability Corporation, Oregon Public Utility Commission, Environmental Protection Agency, Oregon Department of Environmental Quality.

C. Customer/Partner – investments involving a commitment to a customer, municipality, or co-owner; includes critical service restoration and our obligation to serve; applicable to both sustaining and growth sub-portfolios.

D. Reliability – enhance reliability, resiliency, and security; includes proactive repair/replace in kind projects as well as broader improvements initiatives.

E. Operations – address tools, safety, restoration of non-critical services, and efficiency improvements.

F. Grid Mod – involve new technologies such as energy storage, distribution automation, communications and software, such as advanced distribution management system (ADMS) platforms, which increase visibility, reliability, resilience, and control of the distribution system and Distributed Energy Resources (DERs) within the distribution system. Grid Mod would also include projects that are components of Virtual Power Plan (VPP).

Q. What is included in reserves?

A. Reserve funds are used to address unforeseen grid needs, emergency repairs, or emergent infrastructure requirements that weren't specifically budgeted. These funds provide financial flexibility to respond to urgent situations like equipment failures, severe weather damage, or emerging reliability issues without disrupting planned projects. Reserve funds help PGE maintain system reliability while managing financial risk in the face of uncertainties in grid operations and development.

Q. How are capital projects identified for the distribution system?

A. PGE's capital planning and project prioritization process is designed to ensure that customer and system needs are met through a rigorous, transparent, and forward-looking approach.

Once potential solutions are identified through the Distribution Planning process—based on system needs, technical requirements, and cost-benefit analysis—projects are submitted to the Transmission & Distribution (T&D) Portfolio Team for integration into a comprehensive five-year capital roadmap. The T&D Portfolio Team leads a structured prioritization process that accounts for resource and material availability, risk mitigation, compliance obligations, funding constraints, and customer commitments. Importantly, this process is not conducted in isolation. It incorporates input from key functional partners across the enterprise, including Transmission Planning, Substation Engineering, Property Services, and Distribution Operations Engineering. These groups provide critical expertise to ensure that proposed projects are viable, coordinated across system layers, and aligned with operational realities and long-term strategic goals. The result is a robust and disciplined process that ensures investments are targeted, timely, and deliver maximum value to customers and the grid.

Q. What factors are considered to ensure investments are targeted, timely, and deliver maximum value to customers and the grid?

A PGE's solution identification process for grid needs begins with evaluating existing infrastructure to maximize capacity utilization before considering new investments. The process involves analyzing low-cost solutions utilizing distribution load flow software. The company assesses various solutions options, including upgrading existing infrastructure, site expansions, new substation construction, or non-wire solutions. This process relies on collaboration among several PGE teams, including Transmission and Distribution Planning, Substation Engineering, Property Services, and Distribution Operations Engineering to determine the proposed solutions to meet the grid needs. The Asset Management Planning group conducts economic and cost-benefit analyses, considering multiple data sources such

as historical loading, load forecasts, and known block loads. The distribution planning manager reviews the resulting system study, which provides a recommended solution option, rationale, and cost estimate. This thorough process aims to develop cost-effective, long-lasting solutions with a minimum 10-year lifespan to address capacity issues and system deficiencies, ultimately serving as the foundation for project design and construction scope.

Once the proposed solutions are identified by the Asset Management Planning group as described above, the projects are submitted for funding and consideration to the Capital Review Group (CRG) process, specifically the T&D Business Sponsor Group (BSG)[3] Portfolio Team for funding consideration and development of a five-year capital planning roadmap. Beyond the system technical requirements and cost-benefit analysis performed in the solution identification process, portfolio prioritization will further prioritize and advance projects based on resource availability, material availability, risk, funding availability, compliance and customer commitments.

Q. Describe the benefits these projects bring to the distribution system.

A. Each of the projects in these categories provides a solution to an identified need on the system, which is evolving as the grid requires more consideration for solutions. These solutions must meet faster response times, seamless integration of distribution energy resources, and provide the new digital capabilities that can optimize distributed energy resources (DERs). As needs are identified in one of these categories, projects are analyzed and evaluated to determine the best solution to meet the needs of the system. A robust grid infrastructure unlocks the full

[3] UM 2362, 2024 DSP, Appx. J describes the Capital Review Group (CRG) process for setting the overall capital budget and capital project governance.

potential and value of increased DER adoption while protecting the host customer and the grid.[4]

Q. Briefly describe PGE's grid modernization initiative.

A. PGE is undertaking a multi-year grid modernization effort. This involves integrating new technologies such as enhanced sensors, advanced grid control equipment, telecommunications infrastructure and computing solutions to support the bidirectional flow of energy. Modernizing the grid offers several key advantages, including improved operator awareness, clean energy resource integration and optimization and greater control over transmission and distribution equipment, including both utility and customer-owned distributed energy resources (DER) and flexible loads. This means customers will benefit from a more reliable, resilient, and secure bidirectional grid.[5]

Q. How would approval of PGE's DSM ARM request benefit customers?

A. Improvements in T&D and grid modernization will benefit customers by modernizing and securing the grid and its operations for enhanced reliability, especially by leveraging distributed energy resources. Customers will benefit from projects that support additional capacity and flexibility on the system to meet new and growing customer load, specifically through the implementation of customer solutions that enable electrification of transportation and buildings. Approval of PGE's request helps accelerate decarbonization while maintaining a reliable and resilient integrated grid. It increases safety of the system that serves customers through work performed to meet National Electric Safety Code (NESC), North American Electric Reliability Corporation (NERC) and Western Electricity Coordinating Council (WECC) requirements, and all other applicable standards.

[4] UM 2362, 2024 PGE Distribution System Plan, at 25 (Dec. 18, 2024).
[5] *See* https://portlandgeneral.com/about/who-we-are/resource-planning/distribution-system-planning.

Q. Can you give examples of some of the major projects in PGE's request?

A. Yes. Included in this request are forecast plant in service amounts totaling $129.1 million for ongoing overhead distribution replacement work, such as pole and cross-arm replacements on distribution assets, as identified through our overhead Facilities Inspection and Treatment to the National Electric Safety Code (FITNES) program; $37.6 million primarily to replace or upgrade underground cable, driven primarily by the age of the cable, to enhance reliability and mitigate the probability of failures that could cause injury or damage. To address customer needs and growth, $66.8 million for distribution line construction and distribution system maintenance and restoration; $38.8 million for transformers and purchasing and installing customer meters; and $15.2 million for street lighting installations.

Q. Where can more detailed information about projects included in this rate review be found?

A. A complete list of the projects in this filing is provided in PGE Exhibit 201. Consistent with MOU item 8a. of the binding agreements, PGE's work papers included with this filing provide detail by project number demonstrating the exact projects used to create PGE's 2024 DSP Tables 25 and 26, which can be used to match projects provided in PGE Exhibit 201.

Q. For the projects in this rate review, has PGE provided the information required in the Commission's DSP investigatory docket?

A. Yes, PGE Exhibit 201 contains the information for each of the projects in this recovery review, including the information in Docket UM 2005, Order No. 24-421, Section 8. The information included addresses:

1. Project narrative, benefits and needs, asset classes involved and counts, foundational assumptions, risks and mitigations, reason or need for initiation of the project.

2. Project timeline initiation date, estimated completion date, and the type of project: Programs such as pole replacement. Blankets capital to support any development and redevelopment such as enlarging roads; or Projects have a beginning and end date such as distribution, transmission and wildfire projects.
3. Estimation of expenditures and on-going maintenance costs.
4. Description of the analysis of any benefits or risk reduction expected from project in a quantified manner and the value framework-based value determined for the project.
5. Descriptions of alternative solutions considered, proposed asset classes, unit counts, and estimated project costs/expenditure amount for each alternative.
6. Description on if the project interacts with IRP/CEP, WMP, TEP, and/or MYP.
7. Projects impact beyond the distribution system, how will it interact with non-distribution asset strategies, and whether there were any alternatives to distribution investments considered and what were its impact on other network assets.
8. Table including the projected annual costs to implement the action plan.

Q. Please explain why PGE included Order No. 24-421 Section 8 information in this request and not in the DSP itself?

A. PGE's DSP, filed in December 2024, is a forward-looking *plan* of expenditures and not a cost recovery proceeding of projects in service. Projects in the filed DSP were all at different stages in the capital planning and stage-gating process—meaning projects at early planning stages would have updates or changes are the projects move toward execution.[6] These changes are normal in the course of business in managing around timing for availability in materials, delays due to permitting, weather, or other business impacts.

[6] The 2024 DSP filing was based on a project planning forecast from July 2024.

Conversely, this DSP ARM request is for projects, which were in the DSP and have advanced to implementation and are, or will be, fully or partially placed into service by March 31, 2026. As such, they are included in this cost recovery docket, where the prudency of PGE's decisions is determined, prior to a change in customer prices. At this stage, the Section 8 information, should not only be able to be addressed on a project-by-project basis but is foundational in providing the necessary details to assist Staff and stakeholders with their review of these recovery of costs.

Q. Why is the distinction of the DSP as a forward-looking planning process versus the current cost recovery proceeding important?

A. While all projects in this DSP ARM filing originate from the DSP projects (as shown in Tables 25 and 26), and are consistent with MOU binding agreement 8a, the DSP ARM focuses on a smaller subset. Specifically, it only includes projects anticipated to be in service from January 1, 2025, through March 31, 2026. Furthermore, the costs for DSP projects represent only direct, incurred charges, based on when the funds are expected to be spent (cash flow). Conversely, the amounts requested for recovery in this docket are calculated based on project in-service dates and incorporate standard accounting elements such as capital loadings, overheads, and Allowance for Funds Used During Construction (AFUDC). For more detailed information on the application of these loadings, overheads, and AFUDC, please refer to PGE Exhibit 300.

Q. Does PGE plan to update the capital investment amounts during this proceeding?

A. Yes. As is done in other rate review filings, PGE will provide an update to the capital investments in PGE's reply testimony on November 21, 2025.[7] Furthermore, as agreed to in

[7] See PGE Exhibit 101, MOU, Paragraph 15b of the MOU for the Joint Proposed Procedural Schedule.

the MOU, PGE will submit an attestation for all the capital projects identified in this DSP ARM that are in service by March 31, 2026, and will seek the lesser of actual amounts or the original amount in this filing.

III. Qualifications

Q. Joey Baranski, please state your educational background and experience.

A. I received a Bachelor of Science Degree in Electrical Engineering from Portland State University. My employment with PGE started in April 2006 and I have worked as a SCADA Engineer, Substation Technical Services Manager, Manager of Operational Technology Services, Senior Manager of Integrated Engineering Services, Director of Asset Management, and Director of Strategic Grid Planning before moving into my current role as Senior Director of the Project Management Office, BESS Operations, and VPP Operations. Prior to Portland General Electric, I worked as a contractor for PNGC Power.

Q. Kevin Putnam, please state your educational background and experience.

A. I received a Bachelor of Science Degree in Electrical Engineering from the University of Idaho. My employment with PGE started in January 2019 as Manager, Planning, Scheduling and Line Dispatch. I then held the roles of Director, Utility Operations for the Programs, Design and Crew Coordination group and Senior Director, Compliance and Utility Operations, before moving into my current role as Senior Director, Engineering and Design. Prior to joining PGE, I served as Director, Field Engineering at PacifiCorp. I have held other engineering, leadership and field operations management positions at PacifiCorp.

Q. Jack Podlesnik, please state your educational background and experience.

A. I received a Bachelor of Science degree in Electrical Engineering from the University of Wyoming in 2002 and a Masters in Business Administration with an Innovation and Technology Option from Portland State University – School of Business in 2008. I am a registered professional engineer in the state of Oregon since 2011. I joined the Company in 2019 as the Director, Transmission and Distribution Programs, Design and Construction and

have held a variety of management roles overseeing Project Management, Operations Support, Construction Management, Integration Program Management, and Transmission Delivery. My current title is Senior Director, Grid Strategy, Transmission and Planning. In my current role I am responsible for transmission and distribution system planning, regional transmission initiatives, capital budgeting and oversight of transmission projects, distributed device strategy, and economic business development. Prior to joining the Company, I worked at PacifiCorp for nearly sixteen years, last serving as Vice President, System Operations. I serve on the Board of Directors for the Western Energy Institute and am a transmission section council member for the Electric Power Research Institute.

Q. Does this conclude your testimony?

A. Yes.

IV. Qualifications 10

List of Exhibits 11

I. Introduction and Overview

Q. Please state your names and positions with Portland General Electric Company (PGE).

A. My name is Greg Batzler. I am employed by PGE as the Manager of Revenue Requirement within Rates and Regulatory Affairs.

My name is Stephanie Meeks. I am employed by PGE as a Regulatory Consultant. Our qualifications appear at the end of this testimony.

Q. What is the purpose of your testimony?

A. The purpose of our testimony is to request the recovery of the revenue requirement of $72.3 million associated with Distribution System Plan (DSP) capital projects forecast to be placed into service from January 1, 2025, through March 31, 2026.

Q. Please provide an overview of the testimony.

A. This testimony describes the components included in PGE's DSP ARM revenue requirement, as provided in PGE Exhibit 301. PGE requests the recovery of the DSP specified capital and the associated costs. This testimony will describe each of the amounts included in the calculation of capital projects, such as capital clearings, loadings and allocations, and allowance for funds used during construction (AFUDC). The included DSP capital and associated costs are a subset of projects from PGE's 2024 DSP filed in December 2024. In addition, the testimony will address any Memorandum of Understanding (MOU) conditions that impact the revenue requirement calculation and how those are included within PGE's request.

Q. Please summarize PGE's request in this testimony.

A. PGE seeks approval for the inclusion of costs for distribution system capital projects in customer rates effective April 1, 2026. The specific capital projects are identified within PGE

Exhibit 201 and discussed in more detail in PGE Exhibits 200 and 201. The revenue requirement for the projects in the DSP ARM includes 2024 DSP capital investments and all the associated costs for those investments, which includes depreciation expense, accumulated depreciation reserve, accumulated deferred income taxes (ADIT), return on the investments, property taxes, and other applicable standard fees and taxes. As a direct offset to these requested amounts and as a condition of the MOU, PGE has also included a significant credit to rate base aligned with the unbundled transmission and distribution (T&D) depreciation expense and deferred tax from PGE's last general rate review, Docket UE 435 (UE 435). This credit acknowledges the reduced net plant value of existing plant amounts included in current customer prices.

II. DSP Capital Amounts and Revenue Requirement Calculation

Q. Please describe the DSP capital amounts included in the revenue requirement.

A. The projects included in this filing are those specified in PGE's 2024 DSP[1] and are discussed further in PGE Exhibit 200. The Gross Plant in the revenue requirement calculation is comprised of the DSP projects that are expected to be placed into service between January 1, 2025, through March 31, 2026. This timeframe is used because the gross plant in the last general rate review included capital additions through December 31, 2024, and the recovery for those amounts are already included in current customer prices. The gross plant in this filing extends through March 31, 2026, as it is one day prior to PGE's requested price effective date of April 1, 2026, and is consistent with the terms specified within the MOU, which specifies in Paragraph 8e that "[c]apital projects can be included in revenue requirement only if in-service on or before March 31, 2026, and will reflect application of Loadings and Overheads and Allowance for Funds Used During Construction (AFUDC) consistent with standard accounting practices and procedures."[2]

Q. Describe the other costs included in the capital investments clearing amounts.

A. When capital investments are placed into service, PGE applies labor loadings, administrative overhead allocations, and AFUDC to capture the full costs of the projects.

Q. What are labor loadings, and how are they applied to capital amounts?

A. Labor loadings, which include items such as paid time off, employee benefits, and injuries and damages, are generally classified and recorded as Administrative & General (A&G) costs per Federal Energy Regulatory Commission (FERC) and Generally Accepted Accounting

[1] *PGE's 2024 Distribution System Plan*, Dkt. No. UM 2362.
[2] *See* MOU, PGE Exhibit 101, Binding Agreements – Paragraph 8e

Principles (GAAP) accounting rules. However, for labor that is charged to capital accounts (and other specified accounts including non-utility), associated labor loadings are applied. The allocation methodology generally distributes these costs proportionately to actual direct labor charges in specified Cost Elements, Accounts, Accounting Work Orders, and Operating Units. Most loadings apply only to straight-time labor charges, with exceptions for Payroll Taxes and Injuries & Damages, which apply to premium time and overtime, in addition to straight-time labor.

Q. What are administrative overheads and how are they applied to capital amounts?

A. Administrative overheads reflect the planning, design, engineering, supervision, and administrative activities that benefit construction projects but are not otherwise charged directly. These administrative and overhead amounts are allocated and loaded to capital projects using underlying "driver" accounts, departments, and cost elements. Per FERC requirements, projects bear an equitable share of these overhead costs.

Q. How is AFUDC calculated and applied to capital projects?

A. AFUDC is added to the final plant values for each project and is calculated in accordance with FERC guidance in 18 C.F.R. pt. 101 Electric Plant Instruction. PGE calculates AFUDC rates on a monthly basis utilizing balances and applicable cost levels, as of the end of the preceding month, for all components of capital, and utilizing estimates of construction work in progress balances and short-term debt balances and cost rates in the month that the AFUDC rate is to be used.

Q. Paragraph 8f of the MOU states that PGE will demonstrate that loading rates are consistent with the loading rates as applied in UE 435. Has PGE complied with this provision of the MOU?

A. Yes. PGE has performed an analysis of the loadings and overheads applied as a percentage of forecast T&D capital spend over the period January 1, 2024 through December 31, 2024 using the UE 435 capital forecast version and compared to the percentage of loadings and overheads applied to forecast T&D capital spend from January 1, 2025 through March 31, 2026 using the DSP ARM capital forecast version. The results of this analysis show that the ratio of labor loadings and other overheads as a percentage of total capital spend is consistent between the two forecast versions. This analysis, which is summarized below in Table 1, is included as part of our work papers.

Table 1
Overheads and Loadings as a Percent of Forecast T&D Capital Spend

	2025 Capital Forecast[1] 01/01/2025-03/31/2026	UE 435 Capital Forecast 01/01/2024-12/31/2024	2025 vs 2024
Labor Loading Percent[2]	61%	60%	1%
Other Overheads Percent[3]	37%	35%	2%
Total Overheads Percent[4]	39%	37%	2%

1. capital budget utilized for DSP ARM request
2. sum of labor loadings / Total incurred labor
3. sum of other overheads / sum of total incurred non-labor
4. sum of all loadings and overheads / sum of total incurred capital

Q. Why are you comparing capital spend amounts versus looking at capital closings?

A. Loadings and overheads are applied on a monthly basis to amounts incurred. Thus, for an apples-to-apples comparison of loadings and overheads between years it is critical to fix the period you are reviewing. This is not possible to do when looking at capital closings, as projects placed into service can include capital spend spanning multiple years. By reviewing spend between these two forecast versions and focusing on the applicable periods, you can accurately compare loading rates between years.

Q. Why are you focusing on comparing T&D projects between years?

A. We focus on T&D projects for two reasons. First, the majority of DSP ARM projects fit into the T&D spending category. Second, focusing on T&D between the two forecast versions and time periods creates an apples-to-apples comparison. If comparing projects included in the DSP ARM to T&D included within UE 435 you will have two different bases, which creates a skewed result.

Q. Paragraph 8f also states that "PGE's Loadings and Overheads and AFUDC policies must be supported in PGE testimony." Has PGE complied with this binding agreement?

A. Yes. We discuss the basis of labor loadings, administrative overheads, and AFUDC above and PGE Exhibit 302 provides the 2024 Cost Allocation Manual describing the method for applying loadings and overheads to end-use accounts, and which was most recently provided as part of Docket RE 64, PGE's Annual Affiliated Interest Report. Additionally, we provide as PGE Exhibit 303 a copy of PGE's Capital Accounting Policy, along with an opinion letter from PGE's auditor (Deloitte and Touche), which indicates that PGE's financial statements "present fairly, in all material respects" and that the results of PGE's operations are "in conformity with accounting principles generally accepted in the United States of America" and that in their opinion, PGE "maintained in all material respects, effective internal control over financial reporting as of December 31, 2024, based on criteria established in Internal Control — Integrated Framework (2013) issued by COSO."

Q. Has PGE made any adjustments to rate base amounts in this filing in order to "balance the need for PGE to bring new investments into rates with the opportunity to capture for customers other costs that have decreased,"[3] as recommended by the Commission in UE 435?

A. Yes. Paragraph 8g of the MOU specifies that "PGE must forecast depreciation reserve and ADIT offsets to DSP rate base through March 31, 2026." And that [r]eserve offsets will be aligned with UE 435 final approved unbundled depreciation expense for distribution and transmission functionalized assets." By doing this PGE effectively credits back to customers the accumulated depreciation and ADIT benefits that PGE is receiving from these assets currently included in customer prices in between general rate reviews. The total rate base credit amount associated with UE 435 depreciation included in our filed revenue requirement is approximately $270.3 million, while the UE 435 ADIT benefit credited back to customers totals approximately $34.0 million. These credit amounts represent a significant reduction to the total rate base value associated with DSP projects, amounting to a revenue requirement reduction of approximately $28.2 million.

Q. What are the forecast costs associated with DSP ARM Capital?

A. PGE's forecast for DSP ARM capital consists of the following major categories:

- Rate base totals approximately $316.5 million, which includes gross plant of approximately $655.0 million, accumulated depreciation and accumulated deferred income tax through March 31, 2026, of approximately ($34.0 million) and ($0.9 million) respectively. Additionally, the depreciation and deferred tax roll off amounts from

[3] *PGE's Request for a General Rate Revision*, UE 435, OPUC Order No. 24-454, at 45.

UE 435, which are credited to accumulated depreciation and ADIT total approximately ($270.3 million) and ($34.0 million) respectively.

- Annualized depreciation expenses total approximately $33.6 million and are consistent with the parameters and depreciation values included in PGE's 2021 depreciation study (Docket UM 2152), approved by Commission Order No. 21-463.
- The annualized property tax forecast for the DSP ARM capital totals approximately $9.3 million.
- The other additional costs, such as franchise and OPUC fees and income taxes of approximately $7.2 million, brings the total revenue requirement to approximately $72.2 million.
- There is no associated Operations & Maintenance nor Administrative & General costs included in this filing for recovery.

III. Comparison of the DSP ARM to a GRR

Q. Describe how this filing compares to a general rate review.

A. The calculations in this filing follow the same methods to calculate the revenue requirement as it would in a general rate review. The difference in this filing is the limitation on the elements that are being requested for recovery, which specifically are certain additional capital investments and the associated costs with those investments. Additionally, subject to the terms of the MOU, PGE has provided a significant rate base credit associated with T&D projects included within existing current prices. This narrow and transparent approach balances cost recovery with sensitivity to customer affordability by avoiding the upward rate pressure of more expansive general rate reviews. The DSP ARM thus strikes a meaningful balance: it addresses the need for modern, resilient grid investments while supporting customer affordability through regulatory efficiency and financial discipline.

IV. Qualifications

Q. Greg Batzler, please state your educational background and experience.

A. I received a Bachelor of Arts degree in Radio and Television from San Francisco State University in 1997 and a Master of Business Administration degree from Marylhurst University in 2011. I have been employed at PGE since 2006, working in various departments including Meter Reading and Human Resources. I have worked in the Rates and Regulatory Affairs department since 2012. I became the Manager of Revenue Requirement within Rates and Regulatory Affairs in April 2025.

Q. Q. Stephanie Meeks, please state your educational background and experience.

A. I received a Bachelor of Science degree in Accounting from National American University in 2002. I joined PGE in April 2024, working as a Regulatory Consultant in the Rates and Regulatory Affairs. I have worked at a combination of electric and gas utilities since 2006 in various positions including Revenue Requirements Senior Analyst, Utility Gross Margin Manager, and Regulatory Manager.

Q. Does this conclude your testimony?

A. Yes.

PORTLAND GENERAL ELECTRIC
COST ALLOCATION MANUAL
FOR THE YEAR 2024

Introduction

This document contains PGE's 2024 Cost Allocation Manual along with a reference of actual allocation activity pertinent to the nature of this Affiliated Interest Report for the year 2024. Actual loadings, costs, allocations, and other factors have been summarized separately for inclusion of the final, complete 2024 Cost Allocation Manual these numbers relate to.

***There has been no change in the nature of the actual values provided within from prior years' filings.**

Following is a discussion of PGE's loadings, allocations and the respective methodologies that are used to redistribute costs to non-regulated activities and affiliates. For some services, typically those that benefit various functional areas, it is not practicable to charge the cost directly. Costs that cannot be reasonably directly charged are captured either on the balance sheet through deferred accounts or in specific income statement accounts. These costs are then redistributed to their ultimate destination.

PGE uses a series of automated reclassifications and loadings to distribute administrative and overhead costs to end use accounts. There are four groups of these: 1) Labor Loadings, 2) Service Provider Allocations, 3) Administrative Overheads, and 4) Other Allocations.

Within the above allocations, numerous costs are distributed to and from Administrative and General (A&G) ledgers, generally FERC accounts 920 and 921. Most A&G costs are not fully allocated. Some A&G accounts are not allocated at all, while others are only allocated in part. With the exception of Paid Time Off (PTO), A&G allocations apply largely to capital and deferred (balance sheet) accounts, and to operations and maintenance (O&M - income statement) accounts in limited circumstances. Consequently, the amounts remaining in A&G represent the unallocated costs related to O&M. The reason for this approach is to comply with FERC reporting requirements (see the Interpretations of Uniform System of Accounts for Electric, Gas and Water Utilities, as revised February 27, 1981). Costs that are applicable to construction work should be directly assigned or allocated to capital. Those that are not related to capital work remain in A&G according to their FERC designation. Note, see the discussion below regarding the exception for Service Provider allocations.

In accordance with FERC, "wherever allocations are necessary in order to arrive at the amount to be included in any accounts, the method and basis of allocation shall be reflected by underlying records" (CFR, Title 18, Pt. 101).

PORTLAND GENERAL ELECTRIC
COST ALLOCATION MANUAL
FOR THE YEAR 2024

PGE's Non-Regulated Activities

Non-Regulated Activities:

- Large Nonresidential Tradable Renewable Credit Rider (Schedule 54)
- Meter Information Services (Schedule 320)
- Electrical Equipment Services (Schedule 715)

PGE Affiliates and Subsidiaries

Affiliates:

- Portland General Electric Foundation – Corporate foundation of PGE.

Subsidiaries:

- 121 SW Salmon Street Corporation – 121SWS owns the World Trade Center buildings, where PGE has its headquarters. 121SWS charges PGE rent based on PGE's percentage of occupancy of the rentable space in WTC multiplied by WTC operating expenses. PGE charges 121SWS labor costs based on man-hours utilized at fully allocated labor rates. Non-labor items are billed at cost. All profits/losses from 121SWS are retained at 121SWS.

- World Trade Center Northwest Corporation – Inactive except for holding the World Trade Center franchise.

- Salmon Springs Hospitality Group, Inc. – SSHG provides catering within the WTC complex. SSHG charges PGE market rate for catering but discounts the charge for room rental. PGE charges SSHG labor costs based on man-hours utilized at fully allocated labor rates. Non-labor items are billed at cost, with the exception of office space, which is billed at market value. All profits from SSHG flow back to PGE (regulated). SSHG ceased operation in 2022.

Overview

PGE uses a series of automated reclassifications and loadings to distribute certain administrative and overhead costs to end use accounts. These can be categorized into four groups:

1. Labor Loadings
2. Service Providers
3. Administrative Overheads
4. Other Overheads

Please note, costs that are applicable to construction work should be directly assigned or allocated to capital. Those that are not related to capital work remain in O&M according to their FERC designation. See the discussion below regarding the exception for Service Provider allocations.

In accordance with FERC, "wherever allocations are necessary in order to arrive at the amount to be included in any accounts, the method and basis of allocation shall be reflected by underlying records" (CFR, Title 18, Pt. 101).

In January 2024, PGE switched the operating system from PowerPlan to Oracle EPCM for running allocations. Some allocations changed from year to year. This manual reflects allocation rules in place for the 2024 Fiscal Year. Please refer to prior versions of this file for earlier years.

Labor Loadings

Labor-related costs that cannot be directly assigned to "productive" or "end-use" accounts are "loaded" to productive/end-use accounts via a series of labor loading allocations based on direct labor costs. The labor-related costs incurred to date are allocated proportionately to the actual direct labor costs in specified accounts and other accounting string elements.

There are 10 categories of labor loadings:

1. Paid Time Off
2. Corporate Incentives
3. Payroll Taxes
4. Other Post-Employment Benefits (OPEB) – Service Cost
5. Other Post-Employment Benefits (OPEB) – Non-Service Cost
6. Pension Service Cost
7. Pension Non-Service Cost
8. Employee Benefits
9. Injuries & Damages

Please note: these labor-related A&G costs are allocated to direct labor charges to all accounts; however, per FERC and GAAP accounting rules, all non-PTO costs are pulled back to A&G from all accounts, except for the following:

- Construction Work in Progress
- Retirements
- Materials and Supplies (i.e., inventory)
- Other Noncurrent assets (i.e., suspense)
- Asset Retirement Obligations (i.e., trojan decommissioning)

- Non-Utility O&M
- Transmission Study costs (for billing purposes)
- Any O&M account that received certain service provider allocations.
- Reg assets/liabilities (not for Injuries & Damages or Corporate Governance)

Service Providers

It is not practical or cost-effective to maintain corporate service expertise in each area of the company. Accordingly, service groups are formed to provide these services to all organizations within the company. PGE has several departments that provide services for the benefit of the other functional areas of the company. These services include the following:

- World Trade Center (WTC) facilities management
- Air and fleet vehicle transportation services
- Information processing, telecommunications, and computer hardware and software support

Except for WTC, FERC account 184 serves as the allocation "base" that accumulates costs. Departments whose functions fall within the services listed above charge their time and expenses to this account. The total costs are then reclassified (or allocated) to those functional areas of the company receiving the services.

Currently, the Service Provider cost allocations include:

1. WTC Floorspace
2. Helicopter
3. Enterprise IT Service Provider
4. Utility Operations IT Service Provider
5. Fleet Services (TRANSPORTATION)

Service Provider allocations and the loadings thereon are distributed to various income statement accounts outside of the general rule associated with capital and non-utility accounts and all co-owner accounts. These costs are distributed to reflect the fully allocated cost of the services provided in a manner similar to the results of services provided by a third party. This approach recognizes the full value of the service groups to the user groups and reflects the costs of these services in the income statement line items where the services are used.

Administrative Overheads

PGE utilizes a series of system allocations to reclassify various pools of administrative services that support functional areas of the company in both capital and O&M work activities. Thus, these administrative expenses are allocated out as an overhead cost to capital, utility, non-utility and the co-owned generation plants. These allocations use data from underlying "driver" account(s) for the purpose of calculating the relative proportion to apply to the summary of "balance" (source) costs. The balance costs are in turn multiplied by the calculated rates to determine the dollar values to reclassify.

The various pools of administrative overhead allocations include:

1. Corporate A&G (Corporate Governance)
2. Generation Engineering Support
3. Transmission & Distribution Plan, Analyze, and Design (PAD)
4. Distribution Admin Overhead (DOSE)

5. Transmission Admin Overhead (TOSE)

In addition, there are some other administrative overheads related to materials and inventory:

1. Line Expendables
2. Substation Expendables
3. Materials Overhead

Other Allocations

There're miscellaneous allocations related to the co-owner of generation plants as well as dividend:

1. PGE Share: the co-owner credit entry
2. Plant: the co-owner credit entry for specific capital jobs
3. Dividend Close: reclass from retained earnings to undistributed earnings.

Key Allocation Terms

Source

The allocation source, also known as the “Allocation Balance,” is an account or set of accounts that provides the total amount to be allocated for an allocation.

Driver

The allocation driver provides the criteria for how and how much of the allocation source is distributed.

Destination

The allocation destination provides the criteria for where the allocation balance is distributed.

Offset

The allocation offset can be either a clearing account or an allocation credit account.

A clearing account is the account in which we collect costs, then fully allocate them to other accounting strings each period. The offsetting credit goes to the same account as the expenses. Clearing accounts are all FERC 184 accounts. An allocation credit account records the amount that was allocated from the balance. Both balance and credit accounts roll up within the same FERC designation.

Allocation Run Sequence

1 Labor Loadings
   a. Paid Time Off
   b. Corporate Incentives
   c. Payroll Taxes
   d. OPEB – Non-Service Cost
   e. OPEB – Service Cost
   f. Pension Service Cost
   g. Pension Non-Service Cost
   h. Employee Benefits
   i. Injuries & Damages

2 Service Providers
   a. WTC Floorspace
   b. Helicopter
   c. Enterprise IT Service Provider
   d. Utility IT Service Provider
   e. Fleet Transportation

3 Administrative Overheads
   a. Corporate A&G
   b. Generation Engineering
   c. PAD
   d. DOSE
   e. TOSE

4 Other Administrative Overheads
   a. Line Expendables
   b. Substation Expendables
   c. Material Overhead

5 Other Allocations
   a. PGE Share
   b. Plant
   c. Dividend Close

Labor Loadings

Allocation Methodology:
Labor loadings are mostly allocated to straight-time labor charges, using a fixed percentage rate determined during the annual budget process. The fixed rate is based on the budgeted labor loading cost as a percentage of budgeted labor.

Each month, any variance between the fixed rate and the actual rate is applied to department 806, HR's transfer department. This removes the variability of the labor loadings at the department level that are outside of the manager's control.

Paid Time Off (PTO)

Cost Element: 5104

Definition: Paid Time Off (PTO) consists of employee pay for vacation, holiday, sick leave, and funeral leave. Costs for vacation pay include amount taken as well as an accrual of earned vacation, while costs for holiday, sick and funeral leave are expensed as taken. PTO is the only A&G expense that is fully allocated to balance sheet and income statement accounts.

Loadings Criteria:

	Source	Driver	Destination	Offset
Entity	PGE01	*	Same as driver	PGE01
Unit	18100	*	Same as driver	18100
Account	1840017	<>1840017	Same as driver	1840017
Department	*	*	Same as driver	Same as Source
Cost Element	<> 5104	1101,1102,1103	5104	5104
AWO	*	*	Same as driver	2000013300

Corporate Incentives

Cost Element: 5103

Definition: The Corporate Incentive loadings represent the cost of PGE's general incentive pay program that is incurred in the Performance Incentive Compensation accounts. Please note, the Corporate Incentive program does not include the following generating facilities, because they have their own incentive programs:

- Coyote Springs (Unit 16100, 86100, 95500 and 95599)
- Port Westward I (Unit 16400 and 16600)
- Carty (Unit 16800)
- Biglow (Unit 17200)

- Tucannon (Unit 17400)
- Wheatridge (Unit 17500)
- Trojan (Unit 91100)
- Boardman (Unit 92100)
- Pelton Round Butte (Unit 96100 and 99100)

Loadings Criteria:

	Source	Driver	Destination	Offset
Entity	PGE01	*	Same as driver	PGE01
Unit	18100	<> Units listed above	Same as driver	18100
Account	9200004, 9200005, 9210004, 9210005	<> Source Accounts	Same as driver	9220003
Department	*	*	Same as driver	Same as Source
Cost Element	*	1101,1103	5103	5103
AWO	*	*	Same as driver	2000013301

Payroll Taxes

Cost Element: 5106

Definition: The Payroll Tax loading consists of employer-paid, labor-related taxes such as FICA (Social Security & Medicare), federal unemployment, state unemployment, and SIAC (workers' compensation premiums). For accounting purposes, incurred payroll taxes are classified as Taxes Other Than Income Taxes. However, it is appropriate to capitalize a portion of these costs as they relate to direct labor costs that have been capitalized.

Loadings Criteria:

	Source	Driver	Destination	Offset
Entity	PGE01	*	Same as driver	PGE01
Unit	18100	*	Same as driver	18100
Account	4081004, 4081005, 4081006, 4081007, 4081008	<> Source Accounts	Same as driver	4081009
Department	*	*	Same as driver	Same as Source
Cost Element	*	11*, 12*, 14*, 1501, 1601	5106	5106
AWO	*	*	Same as driver	2000013302

Other Post-Employment Benefits (OPEB)

Cost Element: 5112 OPEB Service; 5117 OPEB Non-Service

Definition: OPEB allocation includes the actuarial cost component of Other Post Employment (retirement) Benefit (OPEB) loading. For SEC/GAAP purposes, only the service cost can be capitalized, therefore the labor loadings for OPEB is split into a non-service cost loading and a service cost loading.

Loadings Criteria:

- **OPEB Non-Service Cost:**

	Source	Driver	Destination	Offset
Entity	PGE01	*	Same as driver	PGE01
Unit	18100	*	Same as driver	18100
Account	9260032	<> 9260032	Same as driver	9260037
Department	*	*	Same as driver	Same as Source
Cost Element	*	1101,1102,1103	5117	5117
AWO	*	*	Same as driver	2000013303

- **OPEB Service Cost:**

	Source	Driver	Destination	Offset
Entity	PGE01	*	Same as driver	PGE01
Unit	18100	*	Same as driver	18100
Account	9260031	<> 9260031	Same as driver	9260036
Department	*	*	Same as driver	Same as Source
Cost Element	*	1101,1102,1103	5112	5112
AWO	*	*	Same as driver	2000013304

Pension Service Cost

Cost Element: 5101 Pension Service; 5118 Pension Non-Service

Definition: Pension service cost allocation includes service cost component and non-service cost component. For SEC/GAAP purposes, only the service cost component of the actuarial costs can be capitalized, therefore the labor loadings for pension have been split into a service cost loading and a non-service cost loading.

Loadings Criteria:

- **Pension Non-Service Cost**

	Source	Driver	Destination	Offset
Entity	PGE01	*	Same as driver	PGE01
Unit	18100	*	Same as driver	18100
Account	9260002	<> 9260002	Same as driver	9260027
Department	*	*	Same as driver	Same as Source
Cost Element	*	1101, 1102, 1103	5118	5118
AWO	*	*	Same as driver	2000013309

- **Pension Service Cost**

	Source	Driver	Destination	Offset
Entity	PGE01	*	Same as driver	PGE01
Unit	18100	*	Same as driver	18100
Account	9260001	<> 9260001	Same as driver	9260024
Department	*	*	Same as driver	Same as Source
Cost Element	*	1101, 1102, 1103	5101	5101
AWO	*	*	Same as driver	2000013305

Employee Benefits

Cost Element: 5105

Definition: The Employee Benefits loading includes the costs for retirement savings, health, dental, disability, life insurance, and education & recreation programs. For accounting purposes, these costs are classified as A&G costs. However, it is appropriate to capitalize a portion of these costs as they relate to direct labor costs that have been capitalized.

Loadings Criteria:

	Source	Driver	Destination	Offset
Entity	PGE01	*	Same as driver	PGE01
Unit	18100	*	Same as driver	18100
Account	9260003, 9260004, 9260005, 9260008,9260009, 9260011, 9260013, 9260014, 9260016, 9260017, 9260018, 9260019, 9260020, 9260021, 9260022	<> Source Accounts	Same as driver	9260015
Department	*	*	Same as driver	Same as Source
Cost Element	*	1101, 1102, 1103	5105	5105
AWO	*	*	Same as driver	2000013312

Injuries & Damages

Cost Element: 5107

Definition: The Injuries & Damages loading includes the cost of administering PGE's health and safety programs plus claims from general liability damages, workers' compensation injuries, and auto accidents.

Please note, since most injuries and damages occur in fieldwork, the labor basis is reduced by office groups and A&G workers. Consequently, the allocation is weighted to field operation and construction work by excluding the following accounts from the driver basis:

- All Service Provider source accounts (i.e., IT Service Provider)
- Non-Utility O&M
- Customer Expense
- A&G Expense

Loadings Criteria:

	Source	Driver	Destination	Offset
Entity	PGE01	*	Same as driver	PGE01
Unit	18100	*	Same as driver	18100
Account	9250001, 9250003	<> Source Accounts, <> Service Providers, <> Non-Utility O&M, <> Customer Expense, <> A&G Expense	Same as driver	9250004
Department	*	*	Same as driver	Same as Source
Cost Element	*	11*, 12*, 14*, 1501, 1601	5107	5107
AWO	*	*	Same as driver	2000013313

Service Providers

WTC Floorspace

Cost Element: 5206

Definition: PGE leases its corporate headquarters office at the World Trade Center (WTC) from 121 SW Salmon Street Corporation (121SWS), a PGE subsidiary. Portions of the WTC are leased to third parties (non-PGE tenants). The purpose of this allocation is to allocate PGE's base rent and share of the operating and maintenance costs of WTC between PGE functional areas which utilize the WTC complex.

Operating costs include security, general maintenance, cleaning, administration, licenses and fees, utilities, property taxes, insurance, and depreciation.

Allocation Methodology: A monthly recurring entry, SWSREV, records PGE's base rent and its share of operating expenses, based on PGE's percentage of occupancy of the rentable space in the WTC buildings. The amount recorded to PGE is then split between utility portion and non-utility portion according to the annual space study done by WTC property management. The utility portion is allocated into the Corporate A&G (Corporate Governance) allocation pool. The remaining portion is allocated to non-utility expense.

Allocation Criteria:

	Source	Driver	Destination	Offset
Entity	PGE01	PGE01	PGE01	PGE01
Unit	18100	18100	18100	18100
Account	4180900	4171008 (Non-utility % of rent) 9200001 (Utility % of rent)	same as Driver	4180007
Department	*	*	Same as Source	Same as Source
Cost Element	*	*	5206	5206
AWO	*	*	2000013314	2000013314

* See Appendix A for fixed allocation percentage that is applied to accounts noted in the driver.

Helicopter

Cost Element: 5203

Definition: The costs associated with the corporate helicopter allocation include the operations and maintenance of the helicopter (i.e., pilot, fuel, required training, travel expenses, etc.) as well as the depreciation of the aircraft asset.

Allocation Methodology: An annual survey is performed to decide the fixed percentage allocated to Transmission, Distribution and Wildlife based on pilot's mission flight hours of prior year. To appropriately allocate the operational and maintenance costs of the corporate helicopter to the various areas of the company that utilize its services.

Allocation Criteria:

	Source	Driver	Destination	Offset
Entity	PGE	PGE01	Same as Driver	PGE01
Unit	18100	18100, 15200, 99100	Same as Driver	18100
Account	1840002	5710001, 5710002, 5710004, 5930001, 5370002	Same as Driver	1840002
Department	*	*	Same as Source	Same as Source
Cost Element	<> 5203	*	5203	5203
AWO	*	*	2000013315	2000013315

* See Appendix A for fixed allocation percentage that is applied to accounts noted in the driver.

Enterprise IT

Cost Element: 5201

Definition: Enterprise IT includes the operational and maintenance costs of providing the following services:

- Operational and developmental support to end-user application systems (software),
- Develops, operates, and maintains mainframe and LAN computer systems and telecommunication equipment,
- Manages the overall direction for information system and technology issues.

Allocation Methodology: Enterprise IT is allocated dynamically based on all PGE incurred O&M labor across the company. It does not directly allocate to capital. However, it flows to capital indirectly through administrative overhead allocations (i.e., DOSE, PAD, Corporate Governance, etc.).

Allocation Criteria:

	Source	Driver	Destination	Offset
Entity	PGE	*	Same as Driver	PGE01
Unit	18100	*	Same as Driver	18100
Account	1840004	All Net Income Accounts, Trojan ARO, Generation Engineering Support Source Account, PAD Source Account, DOSE and TOSE Source Accounts	Same as Driver	1840004
Department	*	*	Same as Source	Same as Source
Cost Element	<> 5201	1101, 1102, 1103, 1501, 1502	5201	5201
AWO	*	<> Wildfire Mitigation, <> Labor Loading Ony Projects	Same as Driver	2000013316

Utility Operations IT

Cost Element: 5221

Definition: Utility Operations IT is specifically related to the operation of Generation, Transmission and Distribution. It includes the operational and maintenance costs of providing the following services:

- Operational and developmental support to end-user application systems (software),
- Develops, operates, and maintains mainframe and LAN computer systems and telecommunication equipment,
- Manages the overall direction for information system and technology issues.

Allocation Methodology: Utility Operations IT is allocated dynamically based on all PGE incurred labor in transmission, distribution, and generation. It does not directly allocate to capital. However, it flows to capital indirectly through administrative overhead allocations (i.e., DOSE, PAD, Corporate Governance, etc.).

Allocation Criteria:

	Source	Driver	Destination	Offset
Entity	PGE	*	Same as Driver	PGE01
Unit	18100	*	Same as Driver	18100
Account	1840033	Transmission, Distribution and Generation Expenses, DOSE and TOSE source accounts	Same as Driver	1840033
Department	*	*	Same as Source	Same as Source
Cost Element	<> 5221	1101, 1102, 1103, 1501, 1502	5221	5221
AWO	*	Transmission Projects, Distribution Projects or Generation projects; <> Wildfire Mitigation, <> Labor Loading Ony Projects	Same as Driver	2000013316

Fleet Transportation

Cost Element: 5301

Definition: Fleet Transportation is the labor and expenses of the Fleet and Garage Operations organization that maintains the company's vehicle fleet as well as the depreciation expense associated with the vehicle assets.

Allocation Methodology: Prior to allocation runs, a recurring JE (JAL32A) is recorded each month to allocate out fixed fee of non-T&D assigned vehicles. The remaining balance in transportation source pool is then allocated dynamically based on straight time labor of T&D line and substation crews and eagles.

Allocation Criteria:

	Source	Driver	Destination	Offset
Entity	PGE	*	Same as Driver	PGE01
Unit	18100	*	Same as Driver	18100
Account	1840001	<> Service Provider accounts, <> Suspense Accounts, <> Customer Expense, <> A&G Expense	Same as Driver	1840001

AWO	*	Transmission Projects, Distribution Projects; <> Wildfire Mitigation, <> Labor Loading Ony Projects	Same as Driver	2000013322

Administrative Overheads

Corporate A&G Labor

Cost Element: 5204

Definition: Incurred labor costs for activities such as Human Resources, Accounting, and other corporate functions that support all of PGE's activities are distributed to PGE's capital, non-utility and the co-owned entities. Activities charged to the corporate governance allocation accounts have been identified as supporting all of PGE, including the generating plant co-owners.

Allocation Methodology: Corporate A&G labor is allocated out dynamically based on incurred labor across company. In addition, the capital allocated from Corporate A&G labor is trued up based on the capital rate resulted from a PWC time study. The true-up pool is the allocable A&G labor plus non-allocable A&G labor (9200001, 9200002, 9200009).

Allocation Criteria:

	Source	Driver	Destination	Offset
Entity	PGE	*	Same as Driver	PGE01
Unit	18100	*	Same as Driver	18100
Account	9200001, 9200009	<> Source accounts, <> Service Provider accounts, <> Labor Loading source accounts	Same as Driver	9220001
Department	*	*	Same as Source	Same as Source
Cost Element	<> Service Provider CEs	1101, 1102, 1103, 1501	5204	5204
AWO	*	<> Wildfire Mitigation, <> Labor Loading Only Projects	Same as Driver	2000013318

Corporate A&G Non-labor

Cost Element: 5214

Definition: Incurred non-labor costs for activities such as Human Resources, Accounting, and other corporate functions that support all of PGE's activities are distributed to PGE's capital, non-utility and the co-owned entities. Activities charged to the corporate governance allocation accounts have been identified as supporting all of PGE, including the generating plant co-owners.

Allocation Methodology: Corporate A&G non-labor is allocated out dynamically based on incurred labor across company.

Allocation Criteria:

	Source	Driver	Destination	Offset
Entity	PGE	*	Same as Driver	PGE01
Unit	18100	*	Same as Driver	18100
Account	9210001, 9210009, 9230002	<> Source accounts, <> Service Provider accounts, <> Labor Loading source accounts	Same as Driver	9220001

AWO	*	<> Wildfire Mitigation, <> Labor Loading Only Projects	Same as Driver	2000013318

Generation Engineering Support

Cost Element: 5210

Definition: The incurred charges within the Generation Engineering Overhead allocation represent engineering supervision, planning, design and engineering support function expenses.

Allocation Methodology: Generation Engineering Support is allocated according to the Straight time labor of Generation Engineers (Department 551) specifically working on generation projects.

Allocation Criteria:

	Source	Driver	Destination	Offset
Entity	PGE	*	Same as Driver	PGE01
Unit	18100	*	Same as Driver	18100
Account	1840015	Capital, Trojan ARO, Generation Expense	Same as Driver	1840015
Department	*	551	Same as Source	Same as Source
Cost Element	<> 5210	1101	5210	5210
AWO	*	Generation Projects; <> Wildfire Mitigation, <> Labor Loading Only Projects	Same as Driver	2000013319

Plan, Analyze, and Design (PAD)

Cost Element: 5208

Definition: The cost of labor and expenses incurred in the design and engineering of distribution capital assets.

Allocation Methodology: “PAD” activities are exclusively in support of capital projects. The PAD allocation allocates all of the PAD costs across the T&D capital projects.

Allocation Criteria:

	Source	Driver	Destination	Offset
Entity	PGE	PGE01	Same as Driver	PGE01
Unit	18100	*	Same as Driver	18100
Account	1840016	1070001	Same as Driver	1840016
Department	*	*	Same as Source	Same as Source
Cost Element	<> 5208	11*, 12*, 14*, 15*, 16*, 22*	5208	5208
AWO	*	Transmission Capital, Distribution Capital, <> Wildfire Mitigation, <> Labor Loading Only Projects	Same as Driver	2000013321

Distribution Admin Overhead (DOSE)

Cost Element: 5205

Definition: The allocation includes the costs of the departments that directly support the daily activities of the line crews working on the distribution network. For transparency, the allocation has been broken into six functions:

- **Distribution System**
- General Supervision & Support
- Engineering & Design
- Load Dispatch
- Operations Technology

- **Distribution Line**
- Line Crew Supervision, Support & Misc. Operations

- **Distribution Substation**
- Substation Crew Supervision, Support, Misc. Operations, etc.

Allocation Methodology: The costs incurred within the DOSE allocation pool(s) are allocated out based on where PGE's line crews and contract crews charged their straight time to distribution capital and O&M projects.

Allocation Criteria:

Distribution System - General Supervision & Support

	Source	Driver	Destination	Offset

Transmission Admin Overhead (TOSE)

Cost Element: 5215

Definition: The allocation includes the costs of the departments that directly support the daily activities of the line crews working on the Transmission network. For transparency, the allocation has been broken into six functions:

- **Transmission System**
  - General Supervision & Support
  - Engineering & Design
  - Load Dispatch
  - Operations Technology
- **Transmission Line**
  - Line Crew Supervision, Support & Misc. Operations
- **Transmission Substation**
  - Substation Crew Supervision, Support, Misc. Operations, etc.

Allocation Methodology: The costs incurred within the TOSE allocation pool(s) are allocated out based on where PGE's line crews and contract crews charged their straight time to transmission capital and O&M projects.

Allocation Criteria:

Transmission System - General Supervision & Support

	Source	Driver	Destination	Offset
Entity	PGE	PGE01	Same as Driver	PGE01
Unit	18100	18100	Same as Driver	18100
Account	1840026	1070001, Transmission Operations (56%), Transmission Maintenance (57%)	1070001, 5600013 (Operations), 5680013 (Maintenance)	1840026

Other Administrative Overheads

Expendables

Cost Element: 5304 Line Expendables; 5305 Substation Expendables

Definition: The evaluation for designating items as Expendables/Tools includes the consideration of the following material characteristics: low unit cost, high usage, issuance unit is not equal to actual unit usage (rolls, tape, nails), high frequency of returns, sustained high rate of turns, consumable commonly reusable and predictable pattern of usage.

Allocation Methodology: The costs incurred within the Expendable allocation pools are allocated out based on where PGE's line/substation crews charged their time to T&D capital and O&M projects.

Allocation Criteria:

Line Expendables

	Source	Driver	Destination	Offset
Entity	PGE	PGE01	Same as Driver	PGE01
Unit	18100	*	Same as Driver	18100
Account	1840012	<> Expendable Source accounts, <> DOSE, <> TOSE, <> Service Providers, <> Suspense accounts, <> Customer Expense, <> A&G Expense	Same as Driver	1840012

Materials Overhead

Cost Element: 5302

Definition: The cost of labor and expenses incurred in operating Transmission and Distribution materials inventory storerooms.

Allocation Methodology: The allocation loads a fixed rate calculated during the budget cycle to all accounting strings which contain cost element 2101 - Storeroom Material Issue/Returns and 5304/5305 - Expendables. Throughout the year, material overhead balance is reviewed to make sure the balance is as expected and manual true-up will be made at year end if necessary. The true-up portion will be allocated dynamically under the same criteria of Material Overhead.

Allocation Criteria:

	Source	Driver	Destination	Offset
Entity	N/A	PGE01	Same as Driver	PGE01
Unit	N/A	18100	Same as Driver	18100
Account	N/A	<> Expendable Source accounts, <> DOSE, <> TOSE, <> Service Providers, <> Suspense accounts, <> Customer Expense, <> A&G Expense	Same as Driver	1630001
Department	N/A	*	617	617
Cost Element	N/A	2101, 5304 ,5305	5302	5302
AWO	N/A	Distribution Projects, Transmission Projects, <> Labor Loading Only Projects	Same as Driver	2000013327

* See Appendix A for fixed allocation percentage that is applied to accounts noted in the driver.

Other Allocations

PGE Share

Cost Element: 7001

GL Journal Category: PGE_SHARE

Definition: To allocate PGE's share of capital and operational costs of co-owned plants according to co-ownership agreement. The co-owned plants include KB Pipeline, Coyote Springs, Trojan, Boardman, Pelton Project, and Round Butte.

Allocation Criteria:

OU	Plant Name	PGE's Share	Co-owner's Share
82100	KB Pipeline	79.50%	20.50%
86100	Coyote Springs	50.00%	50%
91100	Trojan	67.50%	32.50%
92100	Boardman	90.00%	10%
96100	Pelton Project	50.01%	49.99%
99100	Round Butte Project	50.01%	49.99%
99600	Round Butte Switchyard	64.01%	36%

Plant

Cost Element: 7002

GL Journal Category: PLANT

Definition: To charge the monthly plant activities booked in JPL63 to Co-owners. The co-owned plants include KB Pipeline, Coyote Springs, Trojan, Boardman, Pelton Project and Round Butte.

Dividend Close

Cost Element: 5498

GL Journal Category: DIVIDEND_CLOSE

Definition: To reclass the monthly retained earning balance in 4380001 and 4390001 to 2161003- undistributed earnings.

Introduction

Purpose

This policy provides company guidelines for classifying expenditures as capital for Portland General Electric (PGE). Accounting for capitalization expenditures must use a consistent methodology following generally accepted accounting principles (GAAP), federal requirements, and regulatory reporting.

The Federal Energy Regulatory Commission (FERC) Electric Plant Instructions in CFR 18 Part 101, Uniform System of Accounts is the primary guideline used by PGE for identifying capital expenditures and major units and minor items of property.

Revisions

The capitalization policy of the Company is established by the Chief Financial Officer (CFO) and Controller. A formal review will occur at least annually, and significant updates will be published as soon as practicable. The Controller will implement and administer the corporate capitalization policy in accordance with GAAP and FERC.

Acronyms

The following table defines some key acronyms used throughout this document:

Acronym	Definition
AFUDC	Allowance for funds used during construction
ASC	Accounting Standards Codification
AWO	Accounting work order
CFR	Code of Federal Regulations
CWIP	Construction work-in-progress
FERC	Federal Energy Regulatory Commission
GAAP	Accounting principles generally accepted in the United States of America
OPUC	Public Utility Commission of Oregon
ORS	Oregon Revised Statute
PP&E	Property, Plant and Equipment
RWIP	Retirement Work in Progress
SEC	United States Securities and Exchange Commission
T&D	Transmission & Distribution

Capitalization Policy

General Guidance

PGE follows GAAP and FERC guidelines to determine when expenditures should be classified as capital and considered additions or retirements of Property, Plant, and Equipment (PP&E). Authoritative guidance includes:

- GAAP Guidance – Accounting Standards Codification (ASC) 360 – Property, Plant and Equipment
- FERC Guidance – Code of Federal Regulations (CFR) Title 18, Chapter 1, Electric Plant Instructions

Capitalization Criteria

In general, expenditures will be capitalized and depreciated if they meet the following criteria:

- Have an economic useful life more than one year
- Can be reasonably and cost effectively identified and accounted for
- Results in the creation of a new fixed asset (Retirement Unit)
- Replaces an existing fixed asset (Retirement Unit)
- Capitalizing is consistent with engineering construction techniques and field practices
- Capitalizing is consistent with FERC and GAAP
- Results in the betterment or modification of an existing fixed asset which satisfies either of the following:
    - Significantly extends the useful life of the asset beyond the originally anticipated life period
    - Significantly alters the use of the asset

Electric Utility Plant – Capitalization Policy

Electric utility plant is capitalized at original cost, which includes direct labor, materials and supplies, and contractor costs, as well as indirect costs such as engineering, supervision, employee benefits, and an allowance for funds used during construction (AFUDC). Plant replacements are capitalized, with minor items charged to expense as incurred. Costs to purchase or develop software applications for internal use only are capitalized and amortized over the estimated useful life of the software. Costs of obtaining FERC licenses for the Company's hydroelectric projects are capitalized and amortized over the related license period.

During the period of construction, costs expected to be included in the final value of the constructed asset and depreciated once the asset is complete and placed in service, are classified as Construction work-in-progress (CWIP) in Electric utility plant on the consolidated balance sheets. If the project becomes probable of being abandoned, such costs are expensed in the period such determination is made. If any costs are expensed, PGE may seek recovery of such costs in customer prices, although there can be no guarantee such recovery would be granted. Costs disallowed for recovery in customer prices, if any, are charged to expense at the time such disallowance becomes probable.

PGE records AFUDC, which is intended to represent the Company's cost of funds used for construction purposes, based on the rate granted in the latest general rate case for equity funds and the cost of actual borrowing for debt funds. AFUDC is capitalized as part of the cost of plant and credited to the consolidated statements of income.

Capital Accounting Policy Interpretations

The Capital Accounting Policy Interpretations document contains specific capital policy interpretations and guidance. The document will be updated on a frequent basis as new guidance and interpretations arise.

Retirement Units (Units of Property)

A retirement unit is the smallest item of property which when replaced or removed from service must be retired from the electric plant accounts. It is always capitalized when originally installed and its replacement is always capitalized. Retirement units are generally costly and long lived. A retirement unit may also be referred to as a property unit or units of property. A property unit is either and individual retirement unit or a combination of retirement units.

Retirement units are a representation of PGE's capitalization policy. When retirement units no longer reflect current capitalization policy, a revision to the units should be made. Changes in technology or construction field practices are the primary reasons which support a retirement unit revision.

Asset Accounting is responsible for maintaining the Retirement Unit Catalog. A high-level internal review should be performed annually to support company compliance for capitalization. By performing reviews annually, the retirement unit lists will stay current, support the understanding of the company capitalization policies, improve and maintain an understanding of the purpose of retirement units, and reduce the impact that longer periods between reviews create to the overall capital policy in place.

Minor Item of Property

Minor items of property are all items that are part of a related retirement unit and are generally inexpensive. The cost to add or remove an existing minor item of property shall be expensed to the appropriate maintenance account.

Betterment

Betterment represents an improvement or enlargement of existing depreciable electric plant property by the replacement of minor items of property independent of the retirement units of which they are part. It should only be considered as a reason for capitalization when there is no retirement unit being installed by the project.

Betterment permits capitalization of the difference between the current material costs of the betterment part over the current material costs of the replaced parts. No labor or other costs can be capitalized using these criteria.

Betterment should only be used as a reason for capitalization when there is an improvement or enlargement of existing depreciable electric plant where the improvement has the effect of significantly extending the original life or increasing the capacity or lowering the operating cost of the retirement unit affected. Betterment will only be considered when a substantial addition of $100,000 or greater results.

FERC Chart of Accounts

The FERC has prescribed a Uniform System of Accounts for utilities to use. The following table provides an overview of the account structure:

	Account Group	Range	Type of Account
1	Assets and Other Debits	101-120 121-129 130-176 181-190	Utility Plant Other Property and Investments Current and Accrued Assets Deferred Debits
2	Liabilities and Other Credits	201-219 221-226 227-230 231-245 251-283	Proprietary Capital Long-Term Debt Other Noncurrent Liabilities Current and Accrued Liabilities Deferred Credits
3	Electric Plant		
	Intangible Plant	301-303	Intangible Plant
	Production Plant	310-317 320-326 330-337 340-348	Steam Production Nuclear Production Hydraulic Production Other Production
	Transmission Plant	350-359.1	Transmission Plant
	Distribution Plant	360-374	Distribution Plant
	Regional Transmission & Market Operation	380-387	Regional Transmission & Market Operation Plant
	General Plant	389-399.1	General Plant
4	Income *Includes Non-Utility Income & Expenses	400-414 415-421.1 421.2-426.5 408.2-420 427-432 434-435	Utility Operating Income Other Income Other Income Deductions Taxes Applicable to Other Income and Deductions Interest Charges Extraordinary Items
5,9	Operation and Maintenance Expense		
	Power Production Expense	500-509 510-515	Steam Power Generation – Operation Expense Steam Power Generation – Maintenance Expense
	Nuclear Power Generation Expense	517-525 528-532	Nuclear Power Generation – Operation Expense Nuclear Power Generation – Maintenance Expense
	Hydraulic Power Generation Expense	535-540.1 541-545.1	Hydro Power Generation – Operation Expense Hydro Power Generation – Maintenance Expense
	Other Power Generation Expense	546-550.1 551-554.1	Other Power Generation – Operation Expense Other Power Generation – Maintenance Expense
	Other Power Supply Expense	555-557	Other Power Supply Expenses

	Regional Market Expense	575.1-575.8 576.1-576.5	Regional Market – Operation Expense Regional Market – Maintenance Expense
	Distribution Expense	580-589 590-598	Distribution – Operation Expense Distribution – Maintenance Expense
	Customer Accounts Expense	901-905	Customer Accounts – Operation Expense
	Customer Service & Informational Expense	906-910	Customer Service – Operation Expense
	Sales Expense	911-917	Sales – Operation Expense
	Administrative & General Expense	920-933 935	Administrative & General – Operation Expense Administrative & General – Maintenance Expense

Construction Activity

Forecasting of In-Service Dates

Projects managers are responsible for updating the forecasted in-service dates of their projects within PowerPlan. It is important that these dates are regularly updated to ensure that AFUDC is only accrued on projects still under construction and projects are placed in service in a timely manner.

Cost of Removal (COR) and Salvage

Cost of Removal (COR) is the cost of demolishing, dismantling, tearing down or otherwise removing electric plant, including the cost of transportation and handling. Any COR expenditures and proceeds from salvage are to be recorded to account 1080001.

Contributions in Aid of Construction (CIAC)

PGE may receive funding from a customer for a portion of the costs of construction, which offsets the overall capital cost. The amount of CIAC to be received is reflected as a reduction to capital costs. CIAC rates are calculated based on a specific tariff rate approved by the OPUC for the share that a customer agrees to pay.

CIAC received should be recorded to account 1070001 using cost element 6001.

Construction Overheads

Construction overheads are support costs for construction that are not directly assigned to specific construction projects. Support activities relate to the planning, designing, engineering, supervision, administration and constructing and completing of construction projects. Overheads are incurred for activities that charge to construction but are not practical or cost-effective to charge directly to the projects. As a result, the projects bear an equitable share of overheads as prescribed by FERC.

The following are the primary construction overheads:

Plan Analyze and Design (PAD)

The directly incurred engineering and all associated expenses for T&D capital construction projects. These costs – whether incurred by PGE engineers or by contracted engineers are directly and specifically applicable to constructed assets.

Distribution Operations, Supervision & Engineering (DOSE)

Includes costs associated with system planning, engineering, design, system mapping, scheduling, coordinate new customer connects, dispatch crews, system control to ensure continued service during construction, safety inspections, system testing, system reliability, substation engineering, process work orders, dispatch for repair, damage claims, inspection of customers facilities for construction, and permitting. Although this is not an all-inclusive list of every work activity, it demonstrates the high volume of different types of work activities and the difficulties that would arise in trying to capture these costs by direct charging to individual work orders.

A capitalization percentage/rate is developed each month based on the amount of actual capital/O&M work that has been performed on a year-to-date basis. This capitalization rate is applied to the overall DOSE charges at month end, with those charges reclassified to capital.

PSES Administrative Overhead Allocation

Similar concept to DOSE, except for Generation projects. The charges accumulate within a generation cost pool. Throughout the month direct labor charging occurs to both capital and O&M projects which derives an allocation percentage.

Allowance for Funds Used During Construction (AFUDC)

Definition

AFUDC includes the net cost for the period of construction of borrowed funds used for construction purposes (debt) and a reasonable rate of return on other funds when used (equity). The cost of debt and equity funds used during construction is a component of the cost to construct facilities for the production, transmission, distribution, and delivery of electric service, and is capitalized monthly in CWIP to account 1070001.

Exceptions – AWOs Not Eligible for AFUDC

The following AWOs are not eligible to receive AFUDC:

- Jobs that purchase equipment only (vehicles, tools, computers, furniture, etc.)
- Work orders that close monthly, such as customer blanket jobs
- Removal work orders
- Customer funded projects where the customer pays 100% of the construction
- Non-utility work orders
- Operations and Maintenance (O&M) work orders

Work orders that have had no capital activity for three consecutive months will be evaluated to determine if AFUDC should still be accrued.

Rate and Methodology

The AFUDC rate is calculated using the FERC-prescribed formula, with the exceptions PGE requested and FERC approved in 1982. The exceptions are:

- Utilizing monthly balances and applicable cost levels as of the end of the preceding month for all components of capital
- Utilizing CWIP balances and short-term debt cost rates and balances in the month that the AFUDC rate is to be used
- Example: In determining the monthly AFUDC rate, the September 2020 calculation would use:
- August 2020 balances and rates for equity and long-term debt
- September 2020 balances and rates for CWIP and short-term debt

The AFDUC rate applied to CWIP is a gross rate as deferred income taxes for AFUDC are recorded separately.

Computation

For each AWO, AFUDC is computed by applying the calculated rate to the beginning monthly balance and on one-half of the current month's capital charges. For purposes of the AFUDC computation, accruals are not included. In the month a project closes, the rate is applied to one-half of both the beginning monthly balance and to the current month's capital charges. The only exception is for major projects greater than $100 million in gross plant that are placed into service and customer prices either immediately or the revenue requirement is deferred for future collection. For these projects, in the month the project closes the calculated AFUDC rate is applied to the beginning monthly balance for the number of days the project remained in CWIP for the current month plus one-half of the current month charges. AFUDC is compounded no more than semiannually (currently in January and July).

Tax Construction Period Interest (CPI)

Internal Revenue Code (IRC) §263A(f) requires the capitalization of interest costs which are paid during the production period of four types of property:

1. Real property; or

2. Tangible personal property that has a tax class life of 20 years or more under IRC §168,

3. Tangible personal property with an **estimated** production period exceeding two years, or

4. Tangible personal property with an **estimated** production period exceeding one year and an **estimated** cost exceeding $1 million.

Preliminary Survey

The FERC prescribes through the CFR that utilities may use balance sheet account 183 for such costs that are incurred while performing preliminary survey work, planning activities, investigations, etc., for the purpose of determining the feasibility of a utility project under consideration. This account classification does not allow for recovery of costs from PGE customers until such costs are reclassified to capital and the construction project is used and useful. It also does not accrue AFUDC while classified to this account.

There are two definitions in use for engineering and related work activity – detailed engineering and preliminary engineering for this purpose.

- Detailed Engineering – represents design activities (design engineering) that are incurred prior to the contracting, scheduling and ultimate construction of a Capital project defined with a specific scope and outcome written into an approved Funding Project. It is not necessary for a project to have initially incurred work through Preliminary Survey to move to Detailed Engineering. These activities are generally incurred as capitalized accounting.

- Preliminary Survey (Engineering) – represents analysis activities, creating or obtaining survey data, plans and investigation work, which are incurred to determine the feasibility or differing options of a project under contemplation. From this work, engineering should be able to begin proposing plans as required under corporate policy for evaluation and approval/non-approval as determined for a capital project.

Consideration of recording expenditures as preliminary survey should be given when:

- The engineering and other development activities occur over an extended period before approval for moving forward to contracting and construction occurs.

- The Company is in the process of determining feasibility and path of construction that may result in capitalized construction project.

During the period the costs are recorded in this account, a quarterly assessment is made to address the probability that such amounts will ultimately support a capital project.

If the project is approved, preliminary survey costs associated with the resulting defined project scope are reclassified to capital. Costs not associated with the resulting defined project scope and any work that is abandoned are to be expensed to account 426.5 - Other Deductions.

Charges that are eligible include costs that meet capitalization criteria including:

- Direct PGE labor costs where employees are providing significant time and services to directly support these projects

- External costs incurred to directly support these projects such as contract labor, external consultants, business expenses, fees, and legal costs

Software

Effective May 2022, the accounting policy for software has been moved to a separate policy document. Refer to the Internal Use Software Accounting Policy.

Plant-in-Service

The following section describes the definition and process for placing assets in service.

Used and Useful

PGE classifies capitalized construction costs as Closed to Plant when the project and associated capitalized costs can be determined to be used and useful for utility services. Used and useful means the completion of the installation, modification, or construction of the elements essential to the project and that they are ready for their intended use or assigned function. Once an asset becomes used and useful, the useful life and depreciation group of the asset are also identified.

Basic Criteria for Determination of Asset in Service

- Asset is ready for a specific use in an income-producing activity even if the asset is not being used.
- Useful life and timing of when the depreciation begins and ends are clearly identified.

Some factors to consider when deciding on whether a project is complete, and the asset is used and useful:

- Transmission/Distribution - can the asset/equipment be energized?
- Generation facility
  - Major, critical construction work is completed
  - Critical pre-operational testing has been completed
  - The unit can operate at or near its designated capacity for sustained periods and is available for regular operations
  - Energy has synchronized to the grid
- Software/Application/Website
  - Can the product perform the function that was agreed upon during the requirement analysis phase?
- Computers, Furniture, Vehicles, Tools, Lab Equipment, Spare Equipment
  - These asset costs are closed in the same month of their purchase. It is expected that these products are useful to the company at the time of purchase, and not for inventory.
- Line Transformers, Customer Meters
  - These asset costs are closed in the same month of purchase.
  - The Code of Federal Regulations # 18 (CFR) states that capital FERC accounts 368 (transformer) and 370 (meter) will include the cost of these items, whether they are in service or held in reserve.

Placing Assets in Service

When a project is "Substantially Complete", the project will be identified as in-service. Substantial completion means the completion of the installation, modification, or construction of the elements essential to the project and that they are ready for their intended use or assigned function. The Project Manager is responsible for entering the in-service date in the PowerPlan system. This identification allows for accounting to reclassify the capitalized costs from CWIP to Plant-In-Service.

Trailing Charges

When a project is placed in service, it is expected that there may be appropriate capital trailing costs necessary to complete a project. The trailing period is currently set to a maximum of eight months after the project is placed in service. Software projects should only have trailing charges for a period of 1-2 months after go-live. Any charges after the trailing charge period should be expensed or discussed with Asset Accounting.

It may be necessary to create a new AWO for these trailing costs. Asset Accounting will apply company capitalization policy to determine whether trailing costs are capital or expense.

Depreciation and Amortization

Definition

The original cost of a capital asset, including a provision for estimated net salvage, is depreciated on a straight-line basis over its estimated economic useful life.

Group Depreciation

Group depreciation theory is the assumption that the appropriate life for a group of assets is an average of all the individual lives within the group. The dispersion of retirements on that average service life is defined for most utilities by an Iowa-type survivor curve.

For all plant, the straight-line, remaining life, unit-summation depreciation method is used. Under this method, depreciation is determined by applying a depreciation rate (1.0 divided by the average remaining life) to the group's net book value. Any reserve excesses/deficiencies are automatically depreciated over the remaining average lives of the asset groups.

The objective of the unit-summation procedure is to fully recover the cost of each asset during its useful life. Iowa-type survivor curves are used to estimate annual retirements. Each group, in effect, is depreciated separately.

Amortization

Certain general plant accounts are amortized rather than depreciated for administrative ease. Records for these assets are condensed into single retirement units within each asset group. The entire vintage is retired upon reaching an authorized depreciation life. The amortization rate (1.0/average remaining book life) is applied to the original book cost, plus or minus estimated salvage, less accumulated depreciation.

Items that are amortized include software and intangible hydro relicensing assets. Hydro relicensing assets are amortized over the life of the hydro license period, and generation related intangibles (other than software) are amortized over the life of the related generating plant.

Non-Depreciable Assets

Land is not a depreciable asset.

Depreciation Study Requirements

A depreciation study is required to be filed every five years with the OPUC. Studies may be filed more frequently at PGE's discretion. Changes to depreciation parameters (e.g. retirement dispersion patterns, methods, procedures, average service lives and net salvage rates) require OPUC approval and are implemented with changes in approved rates.

Plant Dispositions

Asset Retirement Obligations (ARO)

Definition

An Asset Retirement Obligation (ARO) is a legal obligation resulting from the acquisition, construction, or development and (or) the normal operation of a long-lived asset that compels a company to remove the long-lived asset and (or) to perform an asset retirement activity in which the timing and (or) method of settlement are conditional on a future event that may or may not be within the control of the entity. A legal obligation can arise from Federal, state, or local government laws, ordinances, licenses, permits, site certificates or zoning variances, public statements of a company official, or written or oral promises to a third-party (promissory estoppel).

Policy

The fair value of a liability for an ARO is recognized in the period in which it is incurred if a reasonable estimate of fair value can be made. If a reasonable estimate of fair value cannot be made in the period the asset retirement obligation is incurred, the liability is recognized when a reasonable estimate of fair value can be made. If the fair value of an ARO cannot be reasonably estimated, that fact and the reasons are disclosed.

Regulation

Costs of removal related to the retirement of PGE's regulated long-lived assets have historically been included in depreciation expense allowed in PGE's rates charged to customers. PGE expects any changes in estimated AROs to be incorporated in future rates. Substantially all significant AROs are included in rate regulation. Timing differences between cost of removal recognized for book purposes versus regulation purposes are recorded as regulatory assets and/or regulatory liabilities.

Initial Recognition

Upon initial recognition of ARO's that are measurable, the probability weighted future cash flows for the associated retirement costs, discounted at a credit-adjusted risk-free rate, is recognized as both an ARO liability and as an increase in the capitalized carrying amount of the related long-lived assets (ARC asset). In addition, total-to-date accrued accretion expense is reclassified from Accumulated Depreciation to the ARO liability.

The initial measurement of an ARO is fair value. Because of the long lead time involved until future decommissioning activities occur, quoted market prices and a market-risk premium are not available so PGE estimates cash flows that reflect the cost and timing of internally performing the required retirement activities plus a contingency factor, approximating the amount a third party would demand to take on the risks of the future removal costs.

Ongoing Procedures

PGE's ARO analyses of its long-lived assets are reviewed to ensure all applicable ARO's have been identified and are listed and (or) quantified in the financial statements. Major differences in the expected timing of removal cost activity or the estimated scope of decommissioning

activities are taken into consideration by adding new layers of ARO's. Revisions in the timing or the amount of estimated cash flows are to be recognized as changes in the carrying amount of the liability and the related capital asset and are to be measured using the current credit-adjusted risk-free rate for upward revisions, or using the credit-adjusted risk-free rate applied in the initial measurement for downward revisions.

Capitalized asset retirement costs are depreciated over the life of the related asset. Accretion of the ARO liability is classified as an operating expense. The ARO liability is relieved as removal costs are expended.

Property Sales

Policy

Oregon Revised Statute (ORS) 757.480 requires OPUC approval prior to selling, leasing, donating or otherwise disposing of assets with a value greater than $1,000,000. For sales of utility property with values between $25,000 and $1,000,000, the Company is required to notify the OPUC annually of those sales.

The Company has an obligation to ensure that all asset sales serve the public interest, which means that the assets are not necessary for the Company to provide service to the public. Utility equipment will be priced at market value. If a market value cannot be established, the asset should be priced at current replacement cost less depreciation.

Billing Customers for Plant or Equipment

If PGE intends to bill a customer for plant or equipment (such as poles, full span of conductor, pole to pole, vault to vault, switches, etc.) removed from service, a Depreciation worksheet is used to determine the cost that the customer is responsible for. The Depreciation worksheet is used to determine the remaining value and removal costs for these assets. Relocation, transfer, and modification costs are billed at current costs.

Basis for Installation

When removing (retiring) PGE facilities, the first step is to determine the basis for the installation. The basis for the installation is the dollar amount on PGE's books for the facilities. Typically, this is the fully loaded installation costs minus any customer contributions. A review of the original job installation of the facilities is performed to determine the original cost. If the original job is not available, the assumption is that the customer made no contributions.

If only a portion of the original project is being removed, the current cost of the or equipment needs to be estimated. The current cost is then trended back to the original vintage year of installation to determine the current net book value, which represents the replacement cost of the asset. The replacement costs are added to labor costs to remove to determine the amounts to bill the customer.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the shareholders and the Board of Directors of Portland General Electric Company

Opinions on the Financial Statements and Internal Control over Financial Reporting

We have audited the accompanying consolidated balance sheets of Portland General Electric Company and subsidiaries (the "Company") as of December 31, 2024 and 2023, the related consolidated statements of income, comprehensive income, shareholders' equity, and cash flows, for each of the three years in the period ended December 31, 2024, and the related notes (collectively referred to as the "financial statements"). We also have audited the Company's internal control over financial reporting as of December 31, 2024, based on criteria established in *Internal Control — Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2024 and 2023, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2024, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2024, based on criteria established in *Internal Control — Integrated Framework (2013)* issued by COSO.

Basis for Opinions

The Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Annual Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on these financial statements and an opinion on the Company's internal control over financial reporting based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud, and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the financial statements included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures to respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

Definition and Limitations of Internal Control over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail,

accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Critical Audit Matters

The critical audit matters communicated below are matters arising from the current-period audit of the financial statements that were communicated or required to be communicated to the audit committee and that (1) relate to accounts or disclosures that are material to the financial statements and (2) involved our especially challenging, subjective, or complex judgments. The communication of critical audit matters does not alter in any way our opinion on the financial statements, taken as a whole, and we are not, by communicating the critical audit matters below, providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate.

Regulatory Accounting — Refer to Notes 2 and 7 to the consolidated financial statements

Critical Audit Matter Description

The Company is subject to rate regulation by the Public Utility Commission of Oregon (the "OPUC"), which has jurisdiction with respect to the rates for retail electricity in the state of Oregon, and to wholesale rate regulation by the Federal Energy Regulatory Commission (the "FERC"). Management has determined it meets the requirements under accounting principles generally accepted in the United States of America to prepare its financial statements applying the specialized rules to account for the effects of cost-based rate regulation. Accounting for the economics of rate regulation impacts certain financial statement line items and disclosures.

The Company's rates are subject to regulatory rate-setting processes and annual earnings oversight. Because the OPUC and the FERC set the rates the Company is allowed to charge customers based on allowable costs, including a reasonable return on equity, the Company applies accounting standards that require the financial statements to reflect the effects of rate regulation. The Company's rates for retail customers are determined and approved in regulatory proceedings based on an analysis of the Company's cost of providing service to retail customers. The OPUC has the authority to disallow the recovery of any costs that it considers imprudently incurred. Although the OPUC is required to establish customer prices that are fair, just and reasonable, it has significant discretion in the interpretation of this standard. The Company assesses whether the regulatory assets and regulatory liabilities continue to meet the criteria for probable future recovery or settlement at each balance sheet date and when regulatory events occur. This assessment includes consideration of recent rate orders, historical regulatory treatment for similar costs, and factors such as changes in applicable regulatory and political environments. While the Company has indicated it expects to recover costs from customers through regulated rates, there is a risk that the OPUC and the FERC will not approve: (1) full recovery of the costs of providing utility service, or (2) full recovery of amounts invested in the utility business and a reasonable return on that investment.

We identified the impact of rate regulation as a critical audit matter due to its pervasive impact on the Company's financial statements and the significant judgments made by management to support its assertions about certain account balances and disclosures. Given that management's accounting judgments are based on assumptions about the outcome of future decisions by the OPUC or FERC, including decisions regarding the prudency of costs which have been deferred as regulatory assets, auditing these judgments required specialized knowledge of accounting for

Application for Distribution System Plan Alternative Rate Mechanism

PORTLAND GENERAL ELECTRIC

Direct Testimony
Pricing

Chris Pleasant, PGE

July 25, 2025

Table of Contents

I. Introduction..... 1

II. Qualifications 3

List of Exhibits 4

I. Introduction

Q. Please state your name and position with Portland General Electric Company (PGE).

A. My name is Chris Pleasant. I am a Regulatory Consultant in the Pricing and Tariff Department. My qualifications are included at the end of this testimony.

Q. What is the purpose of your testimony?

A. My testimony describes the following:

- PGE's proposed new tariff Schedule 121.
- The estimated rate impacts from this filing anticipated to be effective on April 1, 2026.
- The calculation and allocation of Schedule 121 prices.

Q. How does PGE propose collecting the costs associated with the Distribution System Plan Alternative Recovery Mechanism (DSP ARM)?

A. PGE is proposing a new limited-single use supplemental tariff, Schedule 121 Distribution System Plan Alternative Recovery Mechanism (DSP ARM), shown in PGE Exhibit 401. This tariff will allow PGE to collect the revenue requirement associated with PGE's DSP ARM, until these costs and benefits can be included in base rates in a future general rate review. Once these costs are included in base rates, PGE will retire the limited-single use DSP ARM tariff.

Q. Why is PGE proposing a new supplemental tariff rather than including the costs associated with the DSP ARM in an existing supplemental tariff?

A. Given that PGE does not currently have an existing supplemental schedule that meets the needs of including the DSP ARM into customer prices between rate proceedings, PGE proposes to use Schedule 121 exclusively for the DSP ARM costs and benefits until they are

included in base rates. When the costs and benefits are included in base rates, PGE will retire the Schedule 121 tariff.

Q. What are the rate impacts of the proposed $72.2 million increase in Schedule 121 prices?

A. Table 1, below, summarizes the estimated April 1, 2026, Cost of Service (COS) rate impacts for selected rate schedules.

Table 1
Estimated Rate Impacts

Schedule	Rate Impact
Sch 7 Residential	2.8 %
Sch 32 Small Non-residential 30 kW or less	2.7 %
Sch 83 Non-residential 31-200 kW	2.2 %
Sch 85 Secondary 201-4,000 kW	1.3 %
Sch 85 Primary 201-4,000 kW	1.3 %
Sch 89 Primary Over 4,000 kW	1.2 %
Sch 89 Subtransmission Over 4,000 kW	1.7%
Schedule 90	0.8%
COS Overall	2.2 %

Q. Please describe how you allocate the Schedule 121 amount to each rate schedule and how you calculate the Schedule 121 price.

A. PGE allocates Schedule 121 to COS and Direct Access customers, using the applicable schedule's forecasted energy on the basis of an equal percent of distribution revenue applied on a cents per kWh basis to each applicable rate schedule.

II. Qualifications

Q. Mr. Pleasant, please state your educational background and qualifications.

A. I received a Bachelor of Arts degree in Art History from the University of Oregon. I have been employed at PGE since 2001, working in various departments including Customer Billing, Automated Metering Infrastructure, Information Technology and Transmission Settlements. I have worked in the Rates and Regulatory Affairs department since January 2020.

Q. Does this conclude your testimony?

A. Yes.

List of Exhibits

PGE Exhibit	Description
401	Schedule 121 Distribution System Plan Alternative Recovery Mechanism

Portland General Electric Company
P.U.C. Oregon No. E-19 **Original Sheet No. 121-1**

SCHEDULE 121
DISTRIBUTION SYSTEM PLAN ALTERNATIVE RECOVERY MECHANISM

PURPOSE

This Schedule recovers the revenue requirement associated with PGE's Distribution System Plan.

AVAILABLE

In all territory served by the Company.

APPLICABLE

To all bills for Electricity Service except Schedules 76R, and 576R.

ADJUSTMENT RATE

The Adjustment Rate, applicable for service on and after the effective date of this schedule are:

Schedule	Adjustment Rate	
7	0.564	¢ per kWh
15/515	0.597	¢ per kWh
32/532	0.524	¢ per kWh
38/538	0.691	¢ per kWh
47	0.910	¢ per kWh
49/549	0.876	¢ per kWh
75/575		
Secondary	0.062	¢ per kWh
Primary	0.062	¢ per kWh
Subtransmission	0.044	¢ per kWh
83/583	0.330	¢ per kWh
85/485/585		
Secondary	0.145	¢ per kWh
Primary	0.110	¢ per kWh

Portland General Electric Company
P.U.C. Oregon No. E-19 **Original Sheet No. 121-2**

SCHEDULE 121 (Concluded)

ADJUSTMENT RATE (Continued)

Schedule	Adjustment Rate	
89/489/589/689		
Secondary	0.062	¢ per kWh
Primary	0.062	¢ per kWh
Subtransmission	0.044	¢ per kWh
90/490/590		
Primary 30-250 MWa	0.064	¢ per kWh
Primary >250 MWa	0.057	¢ per kWh
Subtransmission	0.064	¢ per kWh
91/491/591	0.600	¢ per kWh
92/492/592	0.167	¢ per kWh
95/495/595	0.600	¢ per kWh

SPECIAL CONDITIONS

1. Costs recovered through this schedule will be allocated to each schedule using the applicable schedule's forecasted energy on the basis of an equal percent of distribution revenue applied on a cents per kWh basis to each applicable rate schedule.

2. The costs for projects included under this schedule will be updated annually as provided above and will continue to be recovered under Schedule 121 until such time as the costs are included in base rates.

3. Once the Distribution System Plan is included in base rates or is no longer in service, this Schedule will be withdrawn, and no other assets will be placed within this Schedule.

Definitions per OAR 860-021-0408(1):

(e) "Average bill of high-usage customer" means the average monthly dollar amount the utility billed all high-usage customers.

(h) "Average usage of high-usage customers" means the average monthly energy consumption of all customers classified as high usage.

(m) "High-usage customer" means a residential customer participating in a utility-administered bill discount program whose energy consumption places them in the 90th percentile or above of all other bill discount program participants within the utility's service area.

(t) "Total arrears balance of high-usage customers" means the cumulative dollar amount of overdue balances of all high-usage customers in arrears during the reporting period.

Re: UM 2211 – NW Natural's Energy Burden Assessment

Northwest Natural Gas Company, dba NW Natural (NW Natural or Company), respectfully submits the results of its Energy Burden Assessment (EBA) in the timeframe identified by Public Utility Commission of Oregon (Commission) Staff's Phase 2 updates in docket UM 2211.

NW Natural contracted with Empower Dataworks to conduct an EBA in May of 2024. Empower Dataworks is a regional consulting firm specializing in energy equity analytics and has conducted similar assessments for numerous utilities throughout the Pacific Northwest.

The Company submits the complete EBA report, along with findings and recommendations as prepared by Empower Dataworks. The findings were presented to Commission Staff, UM 2211 stakeholders, and other stakeholders, including members of the Company's Washington GREAT Advisory Group on September 11, 2024. NW Natural welcomes stakeholder feedback as we begin to carefully evaluate the recommendations made by Empower Dataworks.

NW Natural knows how important it is to identify customers facing energy insecurity to design programs to mitigate these risks and target outreach efforts. Having the results of the EBA will enable NW Natural to develop new programs and/or enhance existing programs that our customers want and programs that help us best serve our energy-burdened customers. NW Natural completed its first EBA in 2022, and the Company is excited to bring this expanded 2024 EBA to the Commission and other interested parties.

NW Natural appreciates the opportunity to submit its EBA documents and remains fully committed to the UM 2211 process. Please contact me, with a copy to the following, with any questions on this filing.

1. METHODOLOGY

1.1 GENERAL APPROACH

This energy burden assessment relies on collecting customer-level data, modeling missing attributes, then aggregating key metrics by geographic, demographic or building variables for analysis. Prior to this project, Empower Dataworks performed energy burden assessments in over 15 utility service areas (both gas and electric) using this approach. The methodology is also updated occasionally to align with energy assistance best practices. The energy burden assessment results are typically used to guide program design, evaluate the performance of energy assistance programs and develop targeted marketing and outreach strategies.

The customer data (including estimated household income) comes from various sources as described in the rest of Section 1. Some demographic attributes were modeled or inferred using statistical techniques due to lack of primary data in the Customer Information System (CIS) or other sources. American Community Survey data was mainly used to sanity check aggregate statistics of customer-level data at the census tract level.

Three types of metrics were calculated:

- Metrics related to energy burden based on demographic and geographic characteristics
- Participation and funding in Energy Assistance Programs
- Customer energy use characteristics

The final dataset and results were provided to NWN staff.

1.2 DATA SOURCES

The data sources leveraged for the analysis are described in this section.

DATA PROVIDED BY NWN

NWN provided various customer-level datasets to Empower Dataworks to enable this analysis. Data sharing was governed by a confidentiality agreement between Empower Dataworks and NWN. Empower Dataworks was also subject to various cybersecurity requirements to safeguard customer data.

Customer Information System (CIS): This data included monthly gas bills for 27 months between January 2022 and March 2024, account numbers and service addresses. A separate data extract included the dates and customer accounts that received late payment and disconnection notices, allowing us to calculate the on-time payment rate for different customer segments.

Direct Assistance Program Data: We received a list of participating accounts in the Bill Discount Program (BDP), other NWN low-income programs (OLGA, GREAT, GAP, LIEE), and LIHEAP between January 2022 and March 2024, along with discount amounts and dates. This allowed us to calculate the total assistance funding at the household level.

Demographic Data: Demographic data was procured from a third-party data compiler that aggregates data from a variety of sources. This data was mapped to the CIS dataset using customer addresses and included estimated household income, and homeownership status for most residential households. Demographic attributes for some customers were modeled due to lack of primary data in CIS or other sources. The modeling approaches are described in the next section.

DATA OBTAINED FROM OTHER SOURCES

Geocoding: We mapped the latitude/longitude of customer premises to census tracts, block groups and blocks in order to pull additional aggregate statistics.

County Assessor Data: We obtained publicly available assessor data from all counties in NWN's service area. The data from most assessors included appraised values for homes, square footage, building year built, land use codes (residential, mobile homes, commercial and industrial), and other minor data points that were useful for performing general QA.

The addresses in this dataset were standardized to US Postal Service format, then matched with addresses in the CIS data. Some addresses existed in the CIS data but not in the assessor data (typically happens when multiple buildings occupy the same land parcel).

American Community Survey (ACS): ACS data (2018-22 5 year averages) was primarily used for QA to ensure that aggregate counts for various demographic attributes match the expected distributions from ACS.

1.3 FINAL ATTRIBUTES AND METRICS

The calculation methods for the metrics and attributes used in this report are described in this section. For all attributes, we also captured metadata related to the source of data and the confidence in the value (for example, data from primary sources has a high confidence, while modeled data has lower confidence). All of the data is robust for aggregate analysis, while high confidence data is better suited to customer-level marketing and program targeting.

Household Income: Estimated household incomes were obtained using three methods: (i) self-attested incomes for program participants, (ii) third-party purchased and calibrated demographic data, and (iii) modeled income for households with missing data. Self-attested household income was available for about 45,000 households that had participated in the BDP and declared their household income. Third-party estimated income data is sourced from public or commercially available data sources. Since household income from data vendors can become outdated quickly, we adjusted the unverified household incomes by a constant percent, so that the median household income in each county matched the median household income from the DOE LEAD tool and the Federal Reserve's FRED tool. For households with missing income data, an estimated income was calculated as the average of the incomes of the five geographically closest households.

Poverty Status: The number of people living in a household cannot be easily obtained from any public data sources. This makes it difficult to identify a household's poverty status compared to the State Median Income, which is defined by household size. According to the Census Bureau, the median household size in the NWN counties varies from 2.2 to 2.8. In general, we used the income limits for two person households in this analysis as they produced the best estimates of state median income tiers compared to the DOE LEAD tool.

Validation: According to the DOE LEAD tool, between 10-18% of gas-heat households in the four largest Oregon counties served by NWN would fall under 60% of the State Median Income. In this assessment, the county poverty rates range from 9-17% (with an approximately

10% margin of error), which is within the census range. The LEAD tool estimates that 24% of gas-heat customers in Clark County, WA fall under 80% of the Area Median Income, compared to 23% estimated through this assessment.

Building type: Meters were classified into one of five building types: single family, mobile homes, multifamily apartments, commercial or master metered and unoccupied. Commercial meters were those tagged with a specific commercial use by the county assessor or that were on a commercial rate class. Additionally, we filtered out meters using in excess of 3,600 Therms per year as those are likely associated with commercial uses or are master metered. Meters that showed energy consumption less than 60 Therms/year were flagged as potentially unoccupied or vacation homes.

Overall, the number of residential meters was 706,000. When excluding high-use and low-use outliers (suspected seasonal, unoccupied or master-metered), the final number of occupied households for the analysis was approximately 645,000 (567k in OR, 78k in WA). NWN provided internal data to identify single family and multifamily building types – this was used in conjunction with county assessor land use codes to categorize building types.

Validation: The aggregate housing type counts (85-89% single family) are very similar to data from the DOE LEAD tool for the five largest counties in NWN's service area.

Homeownership Status: Some homeownership data (rent vs. own) was available from NWN and the third party demographic dataset. For the remainder, households in multifamily apartments were tagged as "Likely Renters", and households without any account changes during the two year analysis period were tagged as "Likely Homeowners".

Validation: The owner-occupied housing rate from the DOE LEAD tool for the five largest counties in NWN's service area (80-85%) is slightly lower than the homeownership rate from this analysis (85-90%).

Energy Burden and Energy Efficiency Potential thresholds: These thresholds were set as follows:

- High-burden threshold: Greater than 2% in marine climate counties and greater than 3% in cold climate counties – using climate zones defined by DOE. Cold climate counties (1% of households): Hood River, Wasco (OR), Klickitat, Skamania (WA).
- High efficiency potential threshold: Greater than 0.6 therms/sq.ft.

Gas Burden: Gas energy burden for a household is calculated simply by dividing annual gas expenses by gross household income.

$$Gas\ Burden\ [\%] = \frac{Annual\ Gas\ Expenses\ [\$]}{Annual\ Household\ Income\ [\$]}$$

Excess Burden: Excess burden is the portion of a household's gas burden in excess of the high burden threshold.

$$\begin{aligned} Excess\ Burden\ [\$] \\ &= \max(0, Energy\ Burden\ [\%] \\ &\quad - High\ Burden\ Threshold[\%]) \\ &\quad \times Annual\ Household\ Income[\$] \end{aligned}$$

On-Time Payment Rate: This is the proportion of all energy bills that did not require a late payment or disconnect notice to be sent out.

Energy Assistance Funding: The dollar amount of funding flowing through energy assistance programs (including discount, donation and weatherization programs) through discounts or rebates.

Customer Bill Reductions (**Avoided Burden**)**:** The total bill impact (in dollars) from energy assistance programs.

Avoided Need: The total bill impact (in dollars) from energy assistance programs, specifically for program participants flagged as "high-burden". Bill impact is equal to the amount of assistance grants or discounts for direct assistance programs and is equal to measure savings (therms/year) multiplied by the residential therms rate ($/therms) for energy efficiency programs.

Census Tract Statistics: Since each customer has been mapped to a census tract and block group, we are also able to match customers to census tract average statistics (e.g. highly impacted communities, presence of children, non-English speakers, education level, environmental pollution etc.).

Energy Assistance Need: This is the sum of excess burden across all customers.

2024 Projections: Since NWN customers experienced a rate change in November 2023, some figures in this assessment related to need and energy burden are projections for 2024 including the impact of the rate change. The 2024 energy bills were projected by using the 2023 energy usage for customers and applying the 2024 rate structure. 2024 household incomes were estimated by adding a 7% multiplier to the estimated 2023 household incomes (LIHEAP applied a 7% income adjustment to their 2024 income guidelines compared to 2023). This will be noted where relevant.

1.4 SOURCES OF UNCERTAINTY

- **Household income** is a dynamic piece of data as residents move in and out of homes and income data can become outdated within a year or two.

- **Poverty status.** Since household size cannot be reliably captured through any available data source, household poverty status is subject to uncertainty. The State Median Income uses household size as a scaling factor. In this analysis, we have used income thresholds for 2-person households for consistency and clarity, but they may under-estimate or over-estimate the actual income eligibility depending on the actual sizes of low-income households in this service area.

- **Individual vs. aggregate data usage.** The underlying dataset has customer-level flags for data quality – data from primary sources is considered high quality while modeled data is considered medium or low quality, depending on the availability of supporting sources of information (example, home values and location). Higher quality data can be used for individual program targeting, lower quality data can be used for program design and aggregate reporting.

- **Building types.** There is some uncertainty in the classification of building types as described in Section 1.3. This could results in misclassifying non-residential meters as occupied households or single family/mobile homes as multifamily.

- **Achievable reductions in energy assistance need.** This analysis presents a *technical* energy assistance need based on energy burden. However, in our experience with energy assistance programs in general, many customers may not participate in programs, regardless of program design or available benefits due to a variety of barriers like access to information, application process difficulties, stigma and lack of trust. Understanding the *economically achievable* reduction in energy assistance need through utility programs would require a qualitative research of non-participants in a utility's service area.

2. NWN'S ENERGY BURDEN BASELINE - OREGON

2.1 NWN RESIDENTIAL SECTOR PROFILE - OR

NWN's service territory in Oregon was composed of approximately **567,000 occupied households** in 2023 (exceeding a minimal level of 60 therms/year of energy use and not exceeding 3,600 therms/year).

Ethnicity: According to the U.S. Census Bureau, approximately 62-78% of residents in NWN's largest counties are non-Hispanic white.

Household Income: The median household income for residents in NWN's service area was approximately $114,000 in 2024, significantly higher than the state median. Approximately **12.5%** of residents would fall under 60% of the State Median Income (see table on following page for SMI values). An additional 13% of households earn between 60-100% of the state median income. These "borderline" customers would be ineligible for almost all energy assistance programs, but may still bear a relatively high level of energy burden. Designs for programs that are ratepayer-funded should take into account the degree of additional burden that would be imposed on these customers.

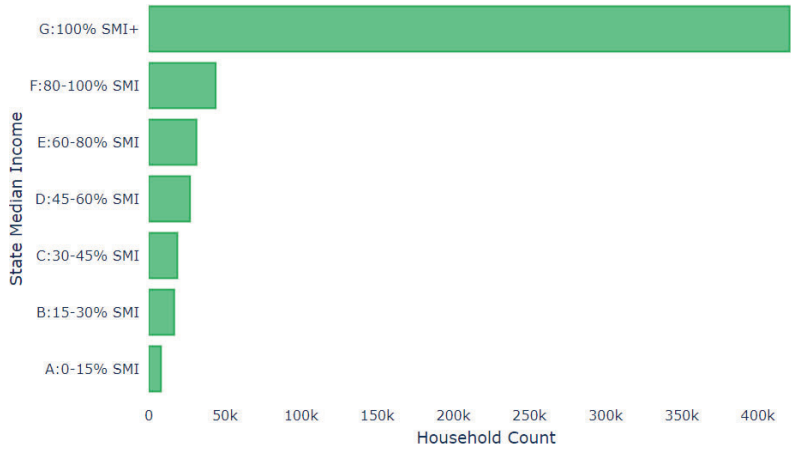

Figure 1. Distribution of households by household income as a percent of state median income for NWN residential customers

	60% of Annual State Median Income (SMI)	
Household Size	2023	2024
1	$31,266	$33,427
2	$40,886	$43,712
3	$50,506	$53,997
4	$60,126	$64,282
5	$69,747	$74,567
6	$79,367	$84,852
Each additional member	$1,803	$1,929

Energy Bills: NWN's residential volumetric gas rates in 2024 were about average for the region, and the basic charge is relatively low. Annual gas bills average **approximately $1,100/year (2024 projection) with an average annual consumption of 720 therms**. Figure 2 shows the distribution of annual gas bills.

Home Vintage: Of the homes with a known age, approximately 48% were built after 1980, 36% were built between 1940 and 1980, with the remainder built prior to 1940. Older homes have more opportunities for weatherization, while newer homes could benefit more from lighting, controls and efficient appliances.

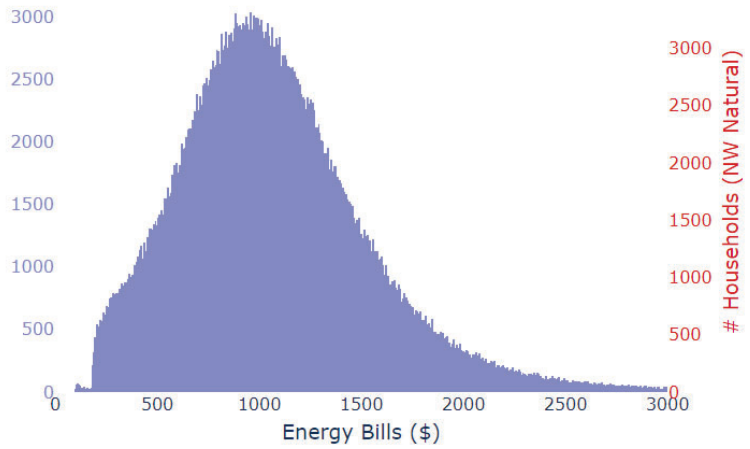

Figure 2. 2024 Household gas bill distribution for NWN residential customers in Oregon

2.2 ENERGY BURDEN

NWN customers in Oregon have an **average and median gas energy burden of 1.4% and 0.9%**, respectively. Figure 3 compares NWN's median total energy burden (including an estimate of electricity burden) to values published in other jurisdictions. The median burden is between other rural and metropolitan regions in the Pacific Northwest.

The average household will pay $1,100/year in gas bills in 2024. Of 567,000 identified households, **75,000 were deemed to have a high energy burden**, of which an estimated 50,000 would fall under 60% State Median income - meaning that annual gas bills exceeded 2/3% of their income, depending on their climate zone. Low-income high-burden customers paid an average of $1,100 in annual gas bills as well; indicating that the high burden is driven by low incomes rather than high gas usage. The **total energy assistance need for NWN customers in Oregon is approximately $38M across all incomes and $29M in households that earn under 60% SMI**—this is the total reduction that would bring all customer gas bills below the high burden threshold.

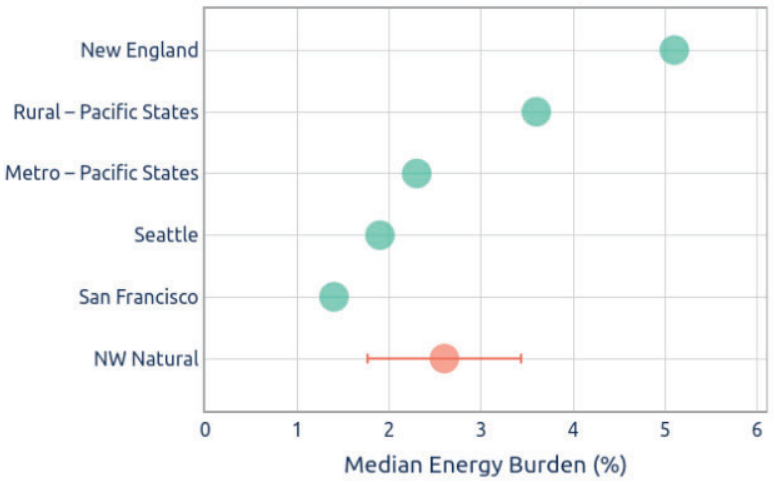

Figure 3. Energy burden benchmarking vs. other regions. Data for other regions is the median across each region, not specific to any utility.

NWN's energy charge in its 2024 residential retail rate is approximately $1.3/therm, which is similar to other gas utilities in the region and slightly lower than the national average of $1.45/therm. Low incomes appear to be the most significant drivers of high energy burden in the area for a minority of customers.

Although averages and medians give a general indication of energy burden across a service territory, the reality is that **energy burden is a customer-level metric** and its distribution is a better indicator of the burden that

customers experience. The distribution of energy burden among NWN customers is shown in Figure 4.

The goal of an effective energy assistance portfolio should be to prioritize the customers who most need the assistance, i.e. the customers exceeding the high burden thresholds.

Approximately 84% of the energy assistance need is borne by single family households. Only 15-20% of the energy assistance need for NWN customers in Oregon is among renters – high-burden single-family homeowners represent a promising opportunity for eliminating gas burden through energy efficiency or weatherization. Other customer segments can be investigated in more detail in the data dashboard.

Number of Occupied Households

~567,000

Low Income Households Under 60% SMI:

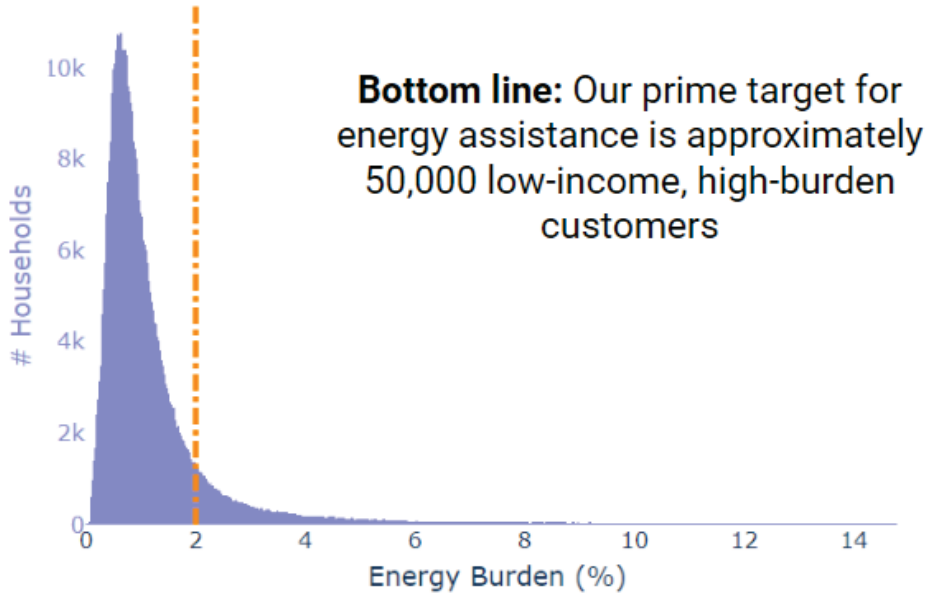
~71k ± 10%

High Burden Households*

~75,000 (all)

~50,000 (LI)

Median Gas Burden
~0.9% (all)
~3% (LI)



Bottom line: Our prime target for energy assistance is approximately 50,000 low-income, high-burden customers

*Energy bills and burden are calculated without factoring in any forms of energy assistance

Figure 4. Distribution of energy burden among NWN customers in Oregon.
Figure shows all homes but dashed line indicating 2% high energy burden threshold applies to marine climate counties (99% of all households).

2.3 ENERGY EFFICIENCY VS DIRECT ASSISTANCE

Figure 5 shows the distribution of energy burden and energy efficiency potential (defined through Energy Use Intensity thresholds) across all low-income residential customers. In a perfect world, the energy assistance portfolio would match these customer segments. For example:

- Energy efficiency and weatherization programs should primarily serve **high burden, high potential** households
- Direct assistance programs should primarily serve **high burden, low potential** households
- Crisis/emergency programs should primarily serve **low burden, low potential** households
- Traditional energy efficiency programs with financing should serve **low burden, high potential** households

Aligning targeted customers with program strengths results are the most cost-effective pathway to energy burden reduction.

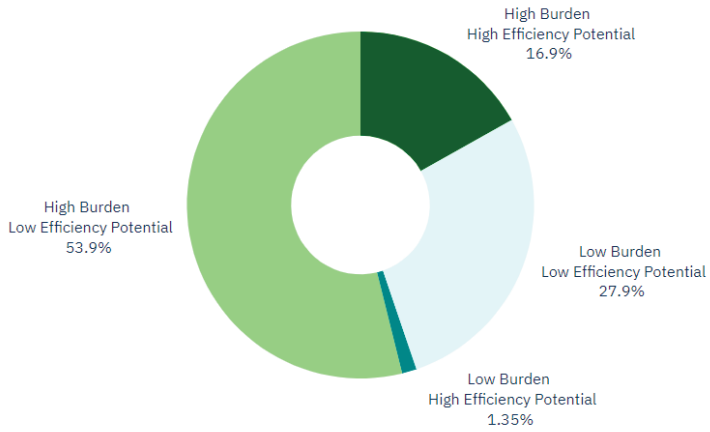


Figure 5. NWN low-income customer segments by energy burden and energy efficiency potential.

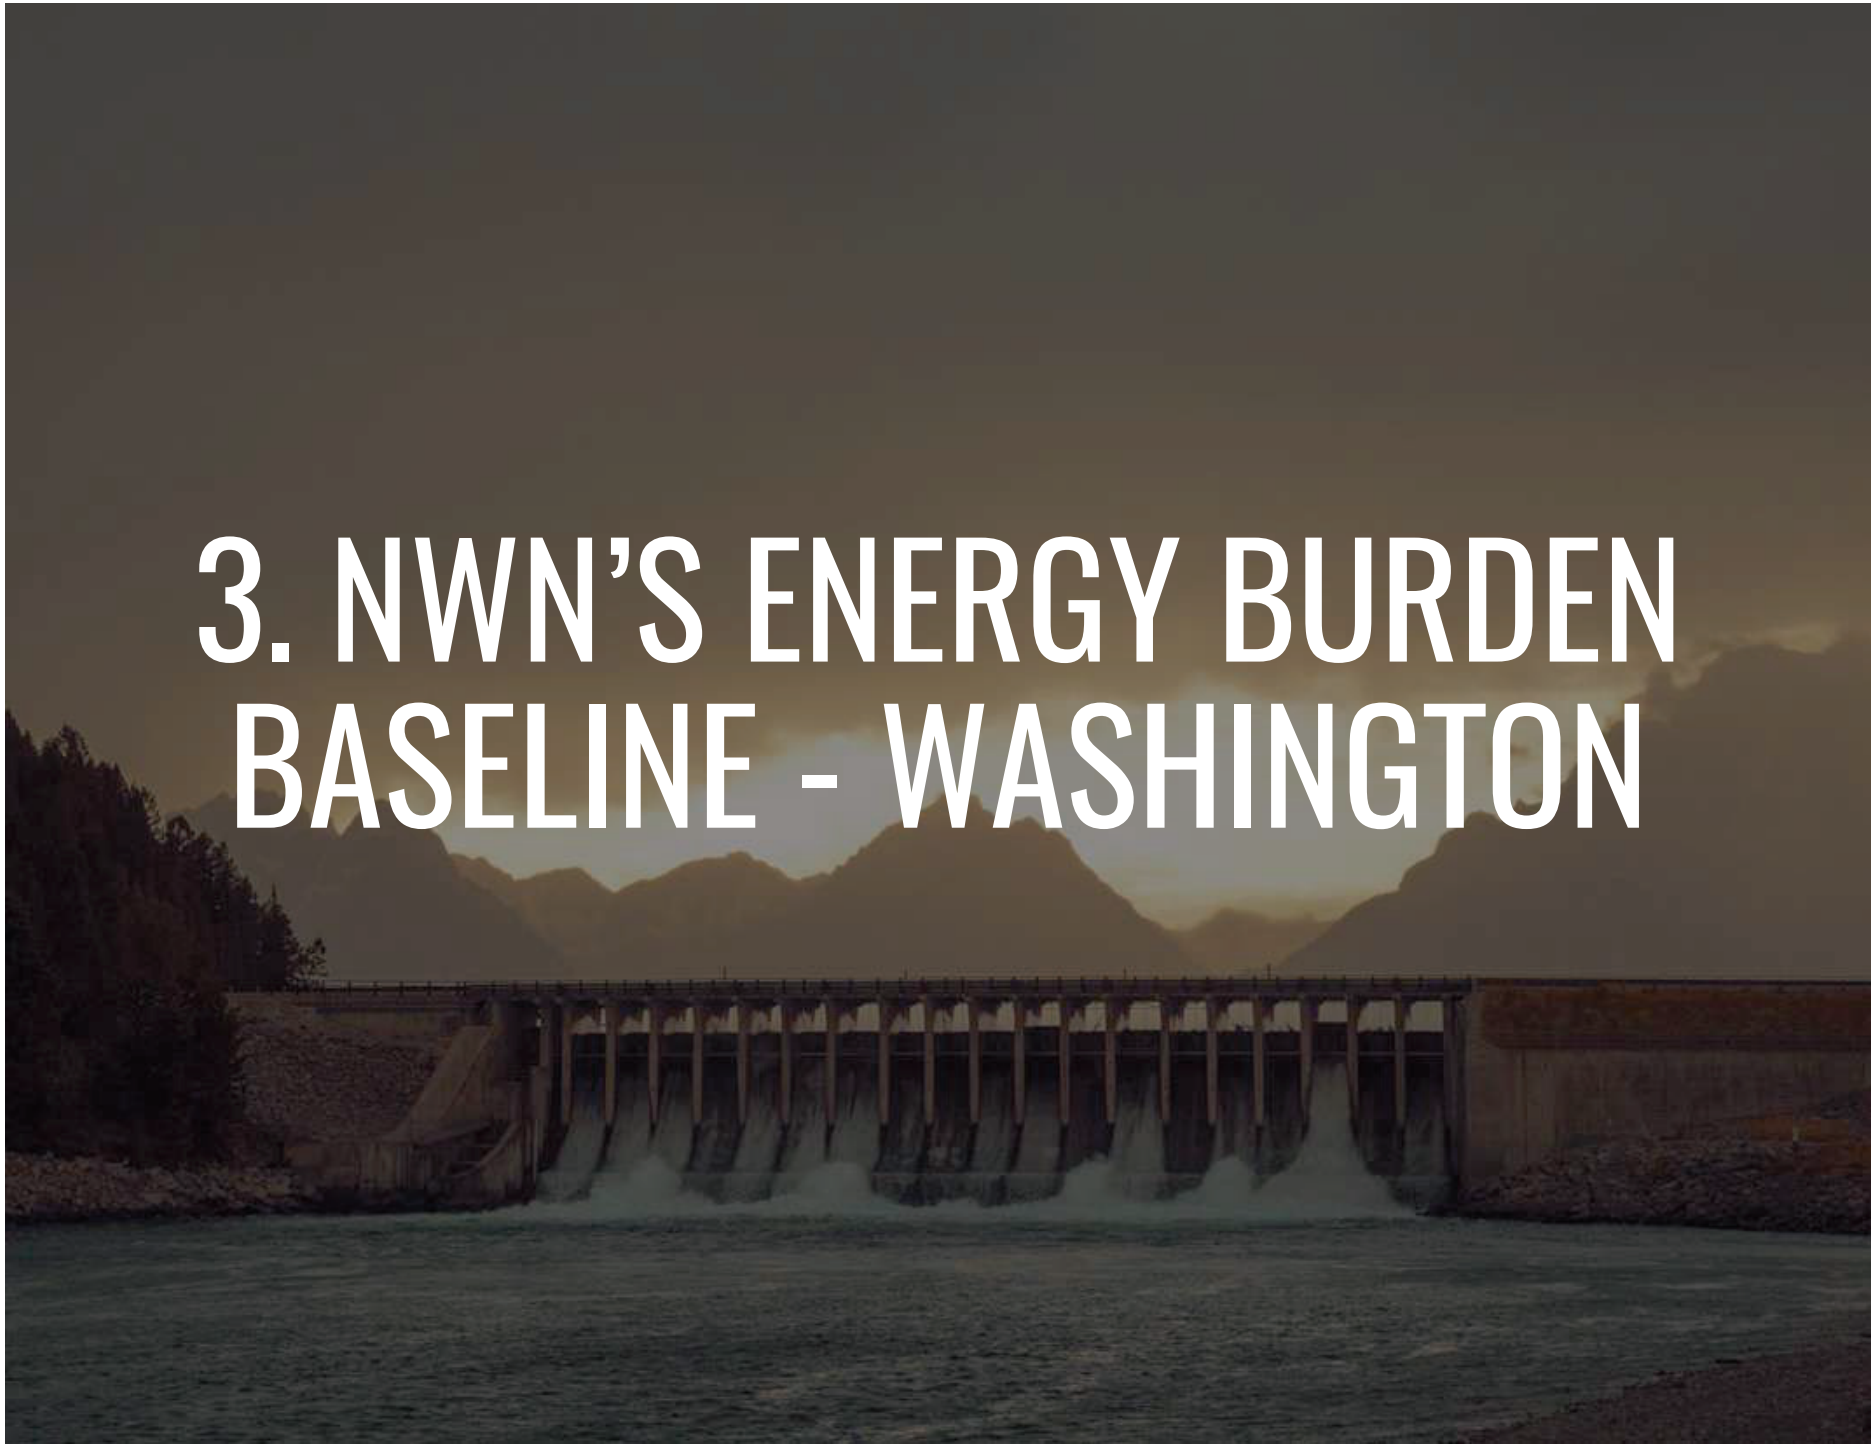
Approximately 28% of NWN's low-income customers are low-burden and low-efficiency potential. These customers' energy bills may not be a huge expense relative to housing, medical and education expenses, and they should not be prioritized in the more intensive programs, such as weatherization.

Almost 24% of high burden customers also have a high efficiency potential indicating that the energy assistance program mix should prioritize immediate relief through bill discounts. While energy efficiency is a more sustained form of energy burden reduction, we should recognize that scaling up low-income weatherization faces a host of barriers. Energy efficiency and direct assistance are not mutually exclusive and there is still a large group of households who would benefit most from energy efficiency to alleviate their high gas burden.



3. NWN'S ENERGY BURDEN BASELINE - WASHINGTON

3.1 NWN RESIDENTIAL SECTOR PROFILE - WA

NWN's service territory in Washington was composed of approximately **78,000 occupied households** in 2023 (exceeding a minimal level of 60 therms/year of energy use and not exceeding 3,600 therms/year).

Ethnicity: According to the U.S. Census Bureau, approximately 73% of residents in Clark County are non-Hispanic white.

Household Income: The median household income for residents in NWN's service area was approximately $123,000 in 2024, significantly higher than the state median. Approximately **23%** of residents would fall under 80% of the Area Median Income (see table on following page for AMI values). An additional 11% of households earn between 80-100% of the area median income. These "borderline" customers would be ineligible for almost all energy assistance programs, but may still bear a relatively high level of energy burden. Designs for programs that are ratepayer-funded should take into account the degree of additional burden that would be imposed on these customers.

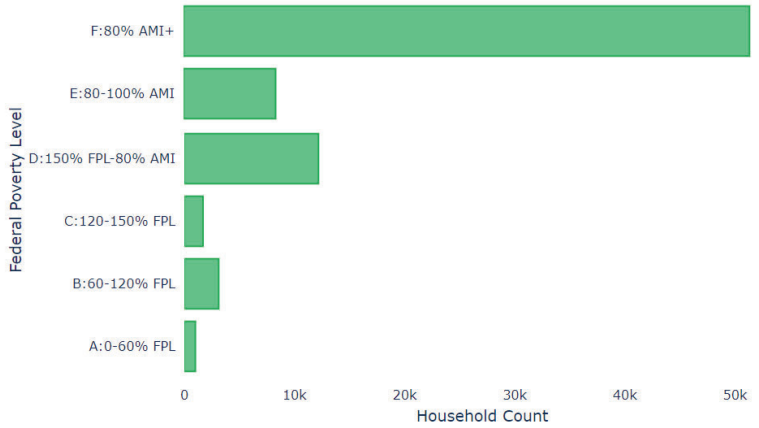


Figure 6. Distribution of households by household income as a percent of federal poverty level and area median income for NWN residential customers

	80% of Annual Area Median Income (AMI) – Clark County, WA	
Household Size	2023	2024
1	$63,150	$66,100
2	$72,200	$75,550
3	$81,200	$85,000
4	$90,200	$94,400
5	$97,450	$102,000
6	$104,650	$109,550
Each additional member	$7,200	$7,550

Energy Bills: NWN's residential volumetric gas rates in 2024 were about average for the region, and the basic charge is relatively low. But the inclusion of the $0.5/therm CCA charge drives up the cost of gas significantly for customers who haven't been certified as low-income. Annual gas bills average **approximately $1,340/year (2024 projection – not including potential CCA credits which are hard to predict) with an average annual consumption of 740 therms**. Figure 7 shows the distribution of annual gas bills.

Home Vintage: Of the homes with a known age, approximately 86% were built after 1980, 11% were built between 1940 and 1980, with the remainder built prior to 1940. Older homes have more opportunities for weatherization, while newer homes could benefit more from lighting, controls and efficient appliances.

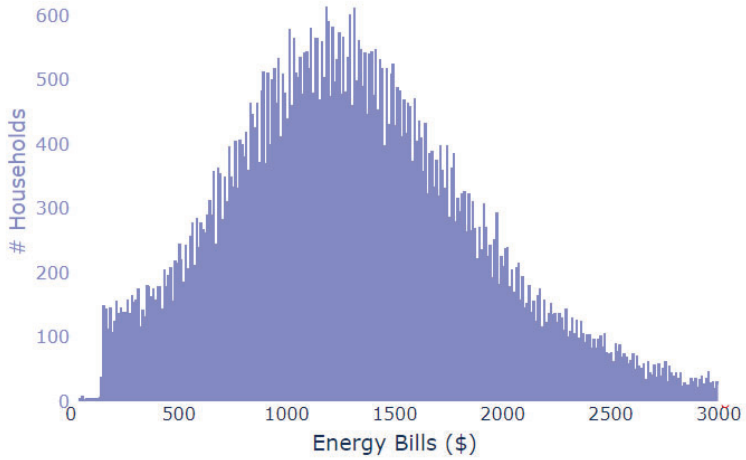

Figure 7. 2024 Household gas bill distribution for NWN residential customers in Oregon

3.2 ENERGY BURDEN

NWN customers in Washington have an **average and median gas energy burden of 1.5% and 1.0%**, respectively. Figure 8 compares NWN's median total energy burden (including an estimate of electricity burden) to values published in other jurisdictions. The median burden is between other rural and metropolitan regions in the Pacific Northwest.

The average household will pay $1,340/year in gas bills in 2024. Of 78,000 identified households, **13,000 were deemed to have a high energy burden**, of which an estimated 10,000 would fall under 80% Area Median income - meaning that annual gas bills exceeded 2/3% of their income, depending on their climate zone. Low-income high-burden customers paid an average of $1,380 in annual gas bills, despite most being exempt from the CCA charges; indicating a higher likelihood of living in less efficient homes. The **total energy assistance need for NWN customers in Washington is approximately $7.3M across all incomes and $5.9M in households that earn under 80% AMI**—this is the total reduction that would bring all customer gas bills below the high burden threshold.

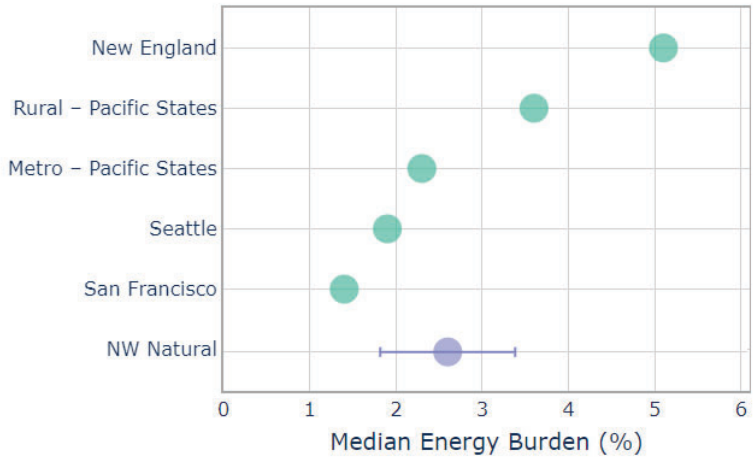

Figure 8. Energy burden benchmarking vs. other regions. Data for other regions is the median across each region, not specific to any utility.

NWN's energy charge in its 2024 residential retail rate is approximately $1.7/therm (inclusing Washington CCA charges), which is higher than other gas utilities in the region and the national average of $1.45/therm. Higher gas use coupled with the CCA charges appear to be a big driver of high energy burden in the region.

Although averages and medians give a general indication of energy burden across a service territory, the reality is

that **energy burden is a customer-level metric** and its distribution is a better indicator of the burden that customers experience. The distribution of energy burden among NWN customers is shown in Figure 9.

The goal of an effective energy assistance portfolio should be to prioritize the customers who most need the assistance, i.e. the customers exceeding the high burden thresholds.

Approximately 88% of the energy assistance need is borne by single family households. Only 9-10% of the energy assistance need for NWN customers in Washington is among renters – high-burden single-family homeowners represent a promising opportunity for eliminating gas burden through energy efficiency or weatherization. Other customer segments can be investigated in more detail in the data dashboard.

Number of Occupied Households

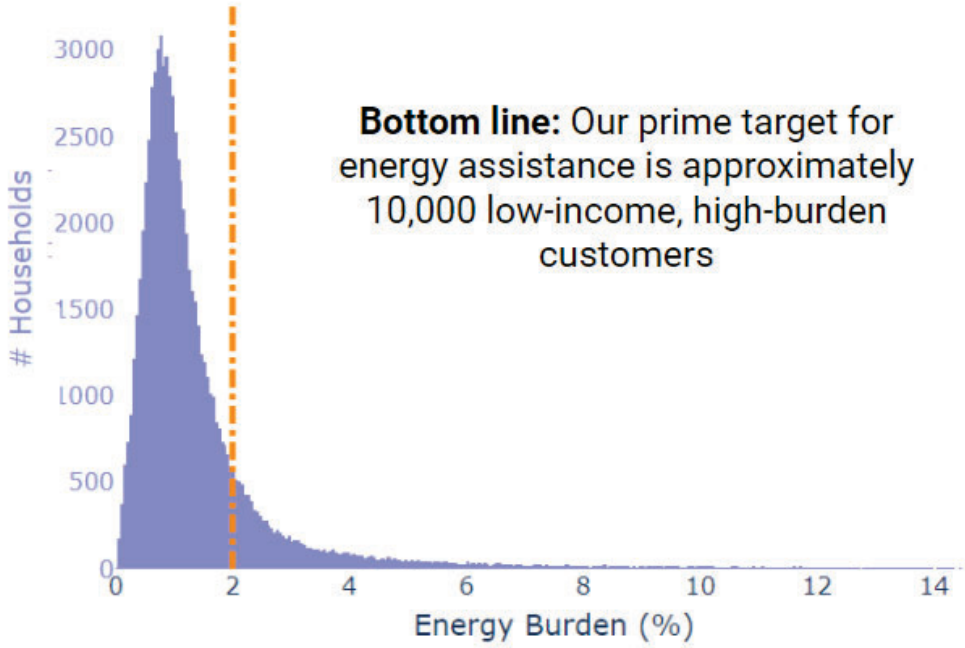
~13,000 (all)

~10,000 (LI)

Median Gas Burden

~1% (all)
~2.2% (LI)



Bottom line: Our prime target for energy assistance is approximately 10,000 low-income, high-burden customers

*Energy bills and burden are calculated without factoring in any forms of energy assistance

Figure 9. Distribution of energy burden among NWN customers in Washington.
Figure shows all homes but dashed line indicating 2% high energy burden threshold applies to marine climate counties (99% of all households).

3.3 ENERGY EFFICIENCY VS DIRECT ASSISTANCE

Figure 10 shows the distribution of energy burden and energy efficiency potential (defined through Energy Use Intensity thresholds) across all low-income residential customers. In a perfect world, the energy assistance portfolio would match these customer segments. For example:

- Energy efficiency and weatherization programs should primarily serve **high burden, high potential** households
- Direct assistance programs should primarily serve **high burden, low potential** households
- Crisis/emergency programs should primarily serve **low burden, low potential** households
- Traditional energy efficiency programs with financing should serve **low burden, high potential** households

Aligning targeted customers with program strengths results are the most cost-effective pathway to energy burden reduction.

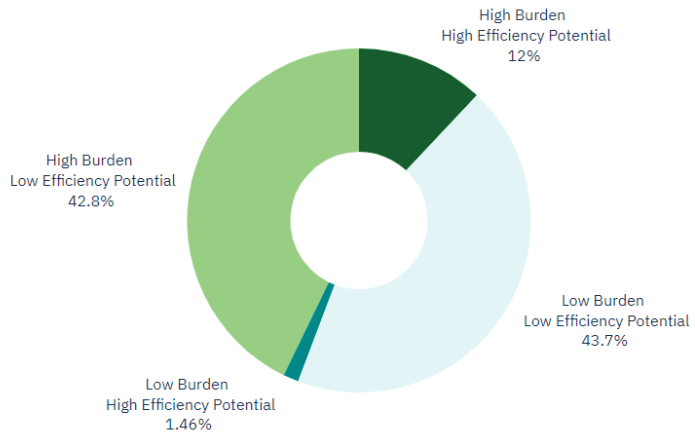


Figure 10. NWN WA low-income customer segments by energy burden and energy efficiency potential.

Approximately 44% of NWN's low-income customers in Washington are low-burden and low-efficiency potential. These customers' energy bills may not be a huge expense relative to housing, medical and education expenses, and they should not be prioritized in the more intensive programs, such as weatherization.

Almost 22% of high burden customers also have a high efficiency potential indicating that the energy assistance program mix should prioritize immediate relief through bill discounts. While energy efficiency is a more sustained form of energy burden reduction, we should

recognize that scaling up low-income weatherization faces a host of barriers. Energy efficiency and direct assistance are not mutually exclusive and there is still a large group of households who would benefit most from energy efficiency to alleviate their high gas burden.

4. KEY CUSTOMER SEGMENTS

4.1 OVERVIEW

This section presents statistics and profiles related to some key customer segments in NWN's service area. These customer segments were selected for a combination of reasons:

1. Flagged in this assessment as having high overall burden or high prevalence of energy burden

2. Identified as having low access to existing programs

3. Identified as vulnerable through the Department of Energy's environmental justice screen

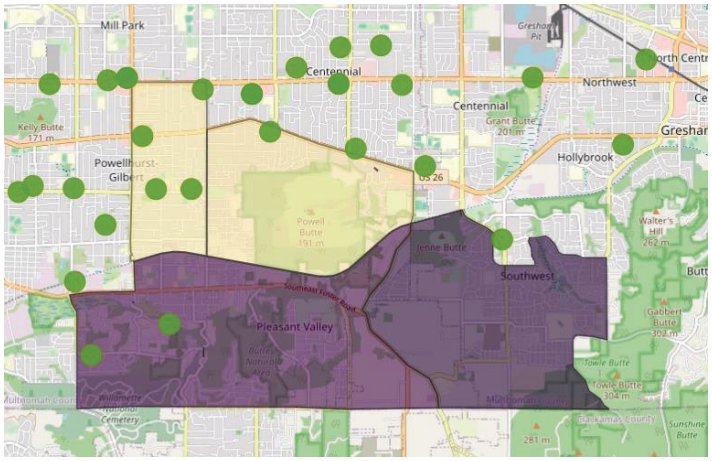
This analysis is primarily geographic, focusing on specific neighborhoods. The maps in the following sections display the level of energy assistance need in these areas as well as locations of social services for potential outreach (green dots).

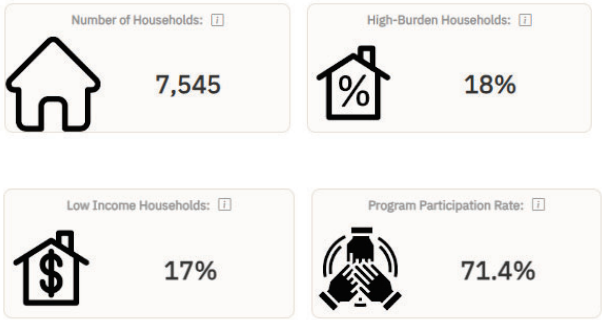
These customer segments represent only a portion of the high energy burden among NWN's customers, but they are intended to serve as an example of the targeting analysis that NWN can perform for their programs or outreach initiatives in the future.

4.2 PLEASANT VALLEY

Census tracts: **41051008901, 41051009000, 41051009102, 41051009903**

Total Assistance Need: **$745k (1.6% of total need)**
Total Assistance Funding: **$414k (2.5% of total funding)**
People of Color: 38%
Linguistic Isolation: 8%





PROFILE: The Pleasant Valley neighborhood in Eastern Multnomah county is a very diverse community with over 38% people of color and over 8% of the population living in linguistic isolation (mix of Spanish, Asian and East European). Members of this community tend to be single family homeowners. On the other hand, it appears to be well served by existing assistance programs.

RECOMMENDATIONS: Households in this area already have very high participation rates, yet the energy assistance funding only covers 56% of the need. It is evident that higher benefits or connecting participants to additional programs may be needed to fully alleviate gas burden.

4.3 COASTAL AREAS

Total Assistance Need: **$2.1M (4.6% of total need)**

Total Assistance Funding: **$0.4M (2.4% of total funding)**

PROFILE: Clatsop and Lincoln counties are characterized by smaller towns and rural areas. Households in these areas experience moderate energy burden – 21% of households are considered high burden. The region was flagged for having relatively low participation rates. Most of these residents are single family homeowners.

RECOMMENDATIONS: Consult with local community-based organizations on the best approach to reaching potentially eligible households. Locally targeted marketing campaigns might be effective at reaching customers as well as collaborating with schools and local.

www.empowerdataworks.com

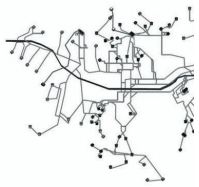
NW Natural

2024 Energy Burden Assessment

Findings (Oregon)

empower dataworks

What is an Energy Burden Assessment?



Data analysis (not a survey) that uses utility and third-party customer data.

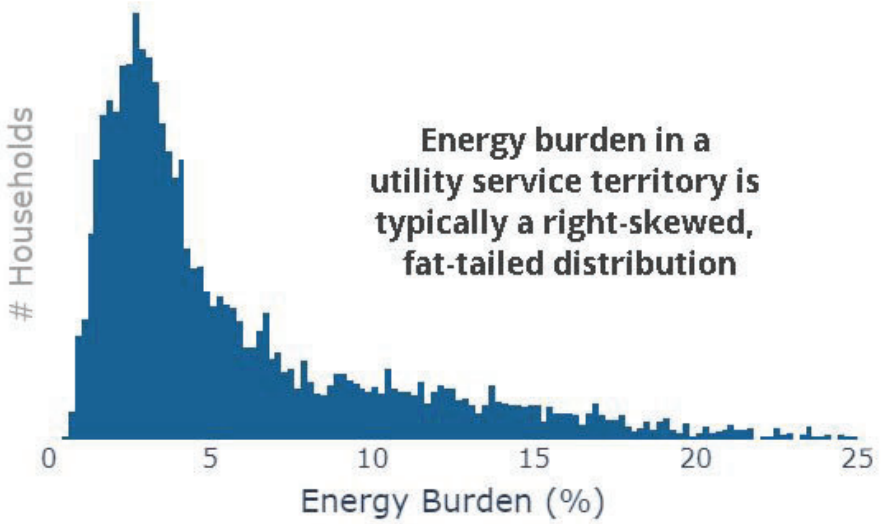
Primary purpose is to estimate the energy assistance need based on customer-level geographic, demographic and building data.

Comparing the need to actual program performance gives us an **actionable** path to improving our energy assistance programs

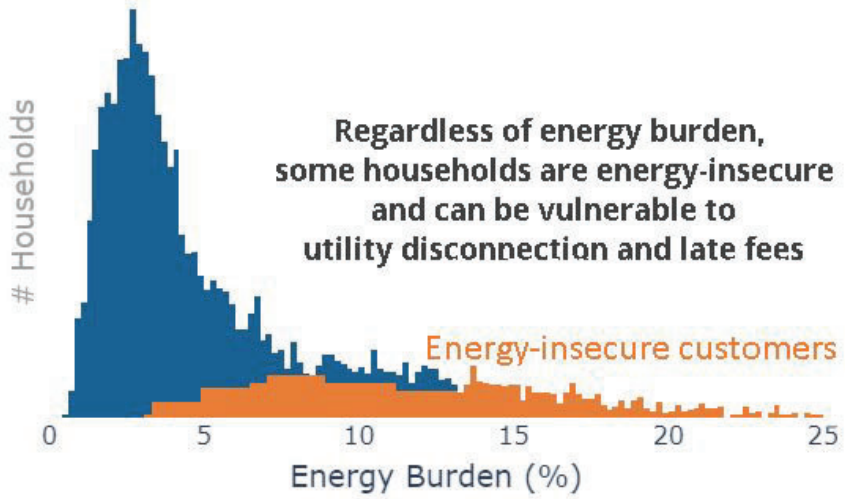
Energy Burden

The primary metric of success is reduction in energy insecurity

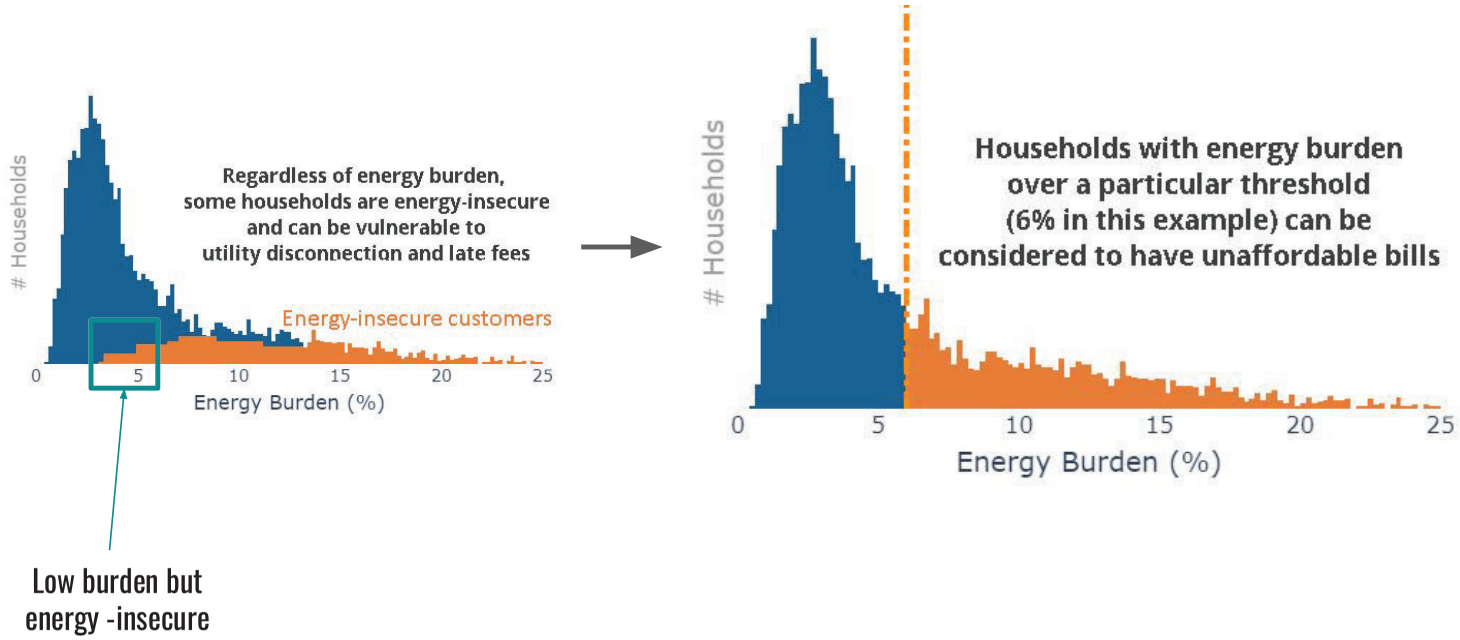
Energy Burden is a Distribution



Energy Insecurity is Harder to Measure



Energy Burden is a Proxy for Energy Insecurity



Definitions

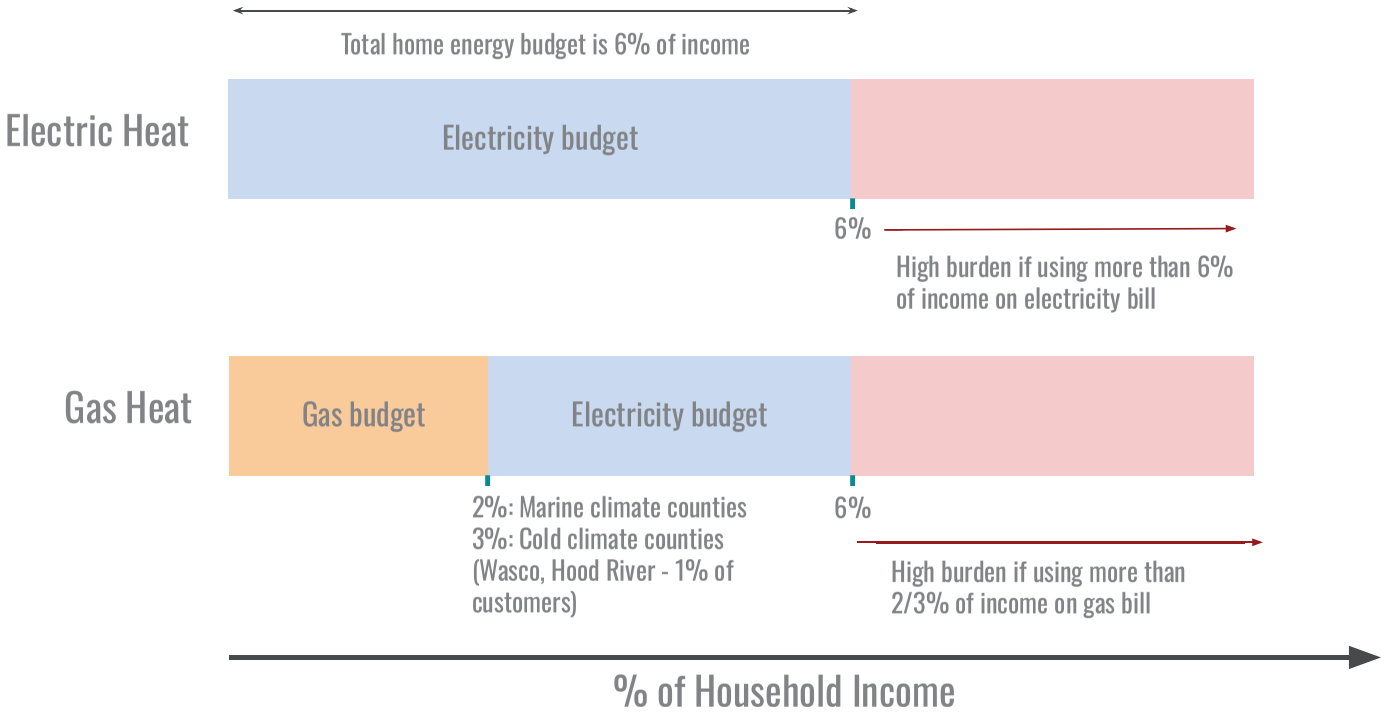
Low-income (Oregon):

Households earning under 60% of the state median income (SMI)

Household Unit Size	Annual Gross Income
1	$33,427
2	$43,712
3	$53,997
4	$64,282
5	$74,567
6	$84,852

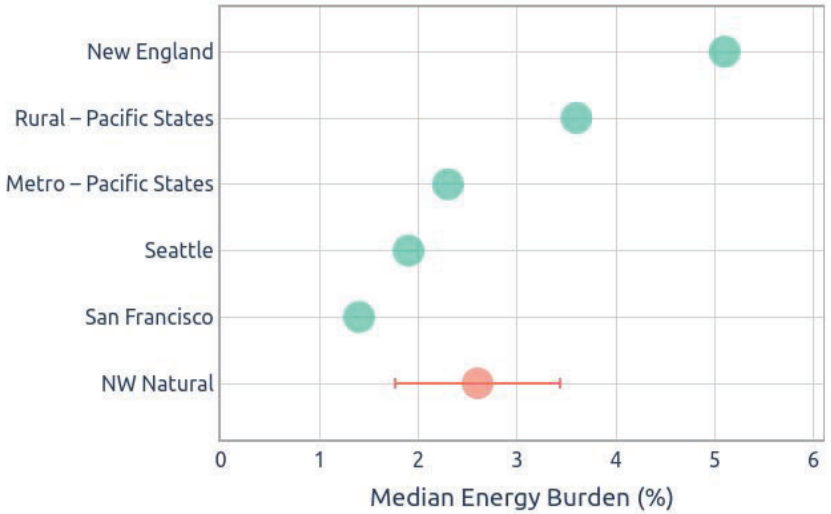
**Most data is reported for the 2023 calendar year. Bills and energy burden are projected for 2024 using 2024 rates and 2023 energy usage. 2024 household incomes are estimated to be 7% over 2023 incomes on average (equal to state median income increase)*

High burden thresholds for multiple fuels



Insights: **Energy Burden**

- ➔ Median total energy burden (~2.6%) is comparable to other metropolitan areas in the Pacific Northwest.
- ➔ Rates are average for the region and NW Natural customers have relatively higher incomes than the general population and experience mostly mild winters.



Insights: **Energy Burden (Oregon)**

Number of Occupied Households

~567,000

Low Income Households Under 60% SMI:

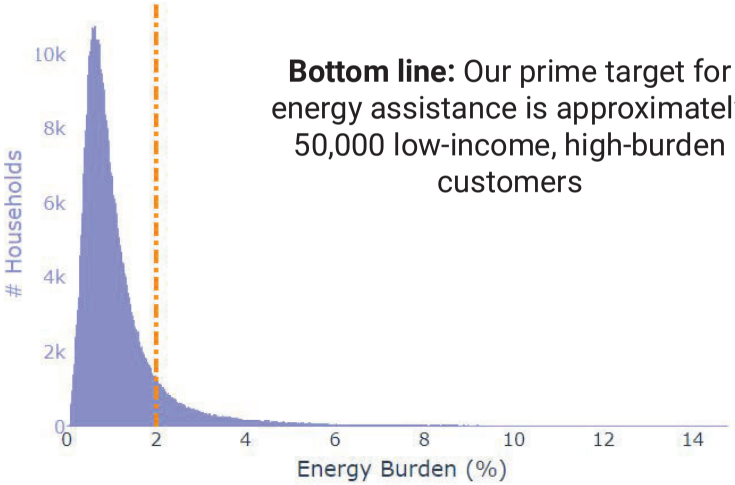
~71k ± 10%

High Burden Households*

~75,000 (all)

~50,000 (LI)

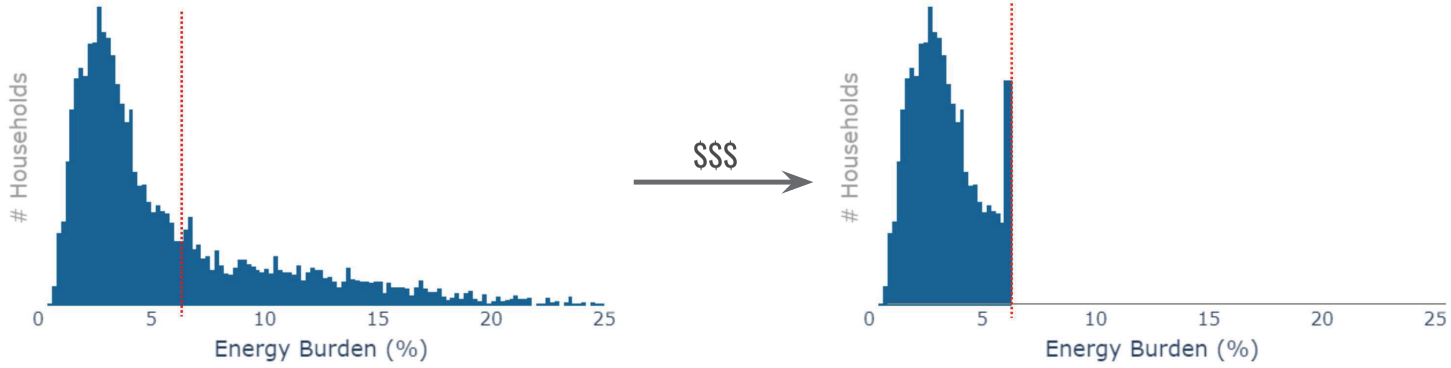
Median Gas Burden
~0.9% (all)
~3% (LI)



Bottom line: Our prime target for energy assistance is approximately 50,000 low-income, high-burden customers

*Energy bills and burden are calculated without factoring in any forms of energy assistance

Energy Assistance Need



Insights: **High-level Assistance Gap (Oregon)**

Low-Income, High Burden Households

~50,000

Income-eligible only

2024 Projection not including additional program participation.
Bill Discount Program (BDP): ~$8.3M

2025: $12M BDP, $18M total - 62% of need

➔ At program maturity (year 5+), best practice is to target at least 60-70% of the need available as program funding - with proposed 2025 rates, BDP would need additional participation. Once this target is reached, participation usually slows down and focus shifts to program optimization and targeted outreach.

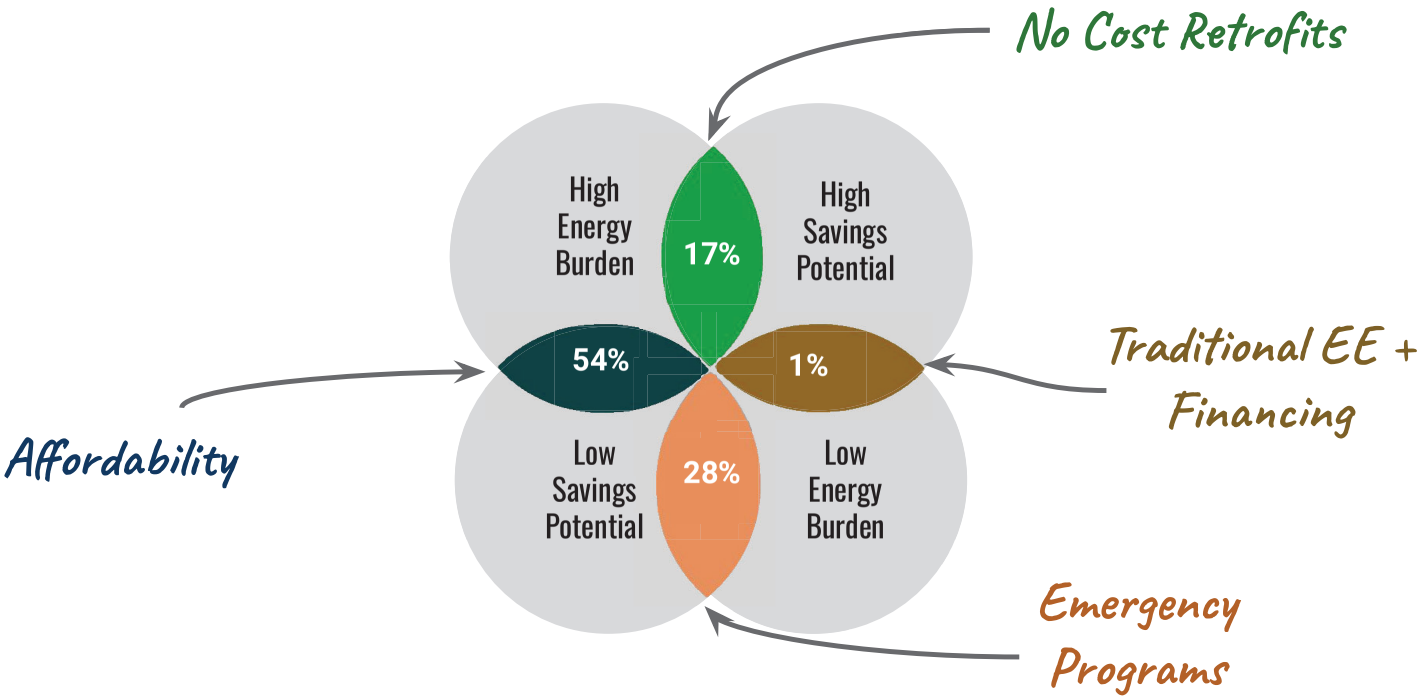
Recommendation: To capture the impact and reach of the program, track total energy assistance funding as a percent of energy assistance need as a program metric (as opposed to solely relying on participation counts)

Insights: **Rate Increase Impact (Oregon)**

2024:	Low-Income, High Burden Households **~50,000**		Existing discounts cover 49% of need Proposed discounts cover 62% of need
2025:	~54,000 (+8%)	$38.3M (+33%)	Proposed discounts cover 47% of need

*Assumes 18% average residential rate increase and 3% average household income increase in 2025

Program Potential (Oregon)

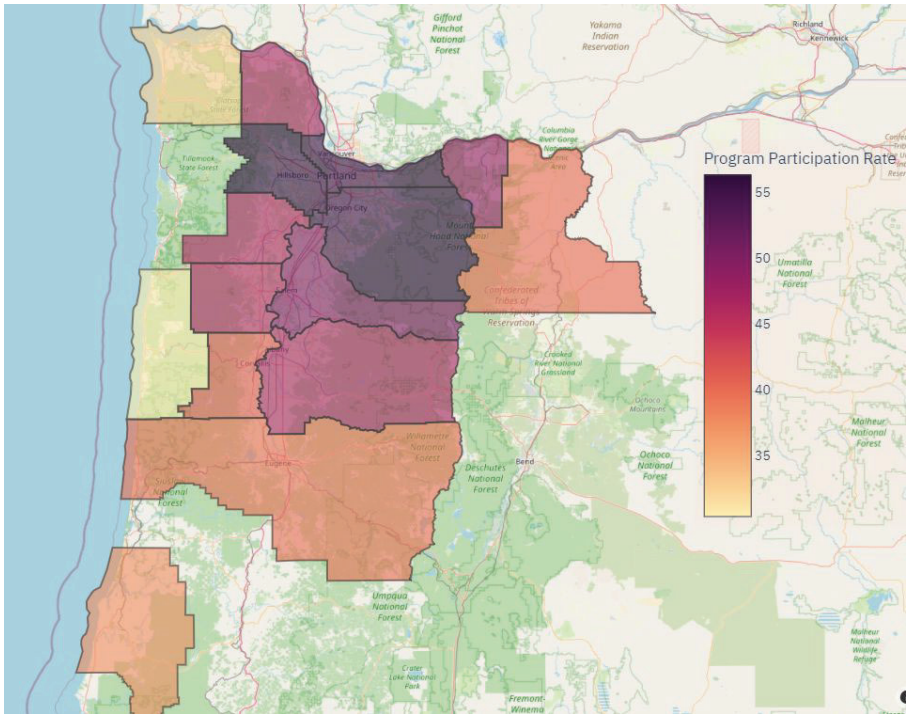


UG 527/CUB/110
Wochele-Jenks/51

Bill Discount Program

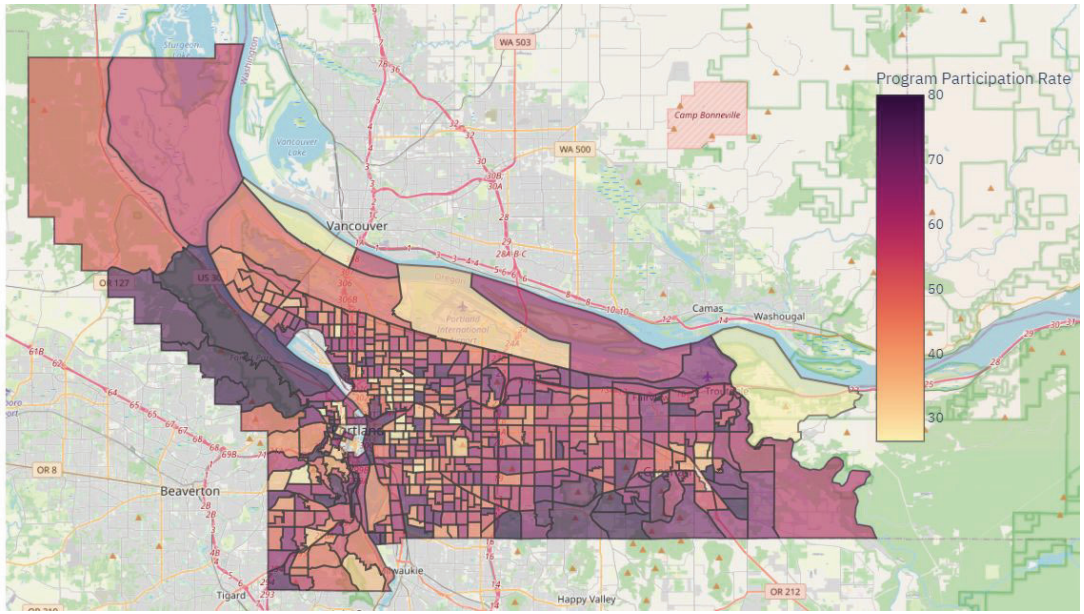
Program Participation Rate (Oregon)

Recommendation: Improve outreach in coastal and outlying areas.



Program Participation Rate (Multnomah County)

Recommendation:
Impressive participation rates in Portland area. Focus outreach on underserved neighborhoods in urban areas.



Program Saturation Rates (Oregon)

Income tier	Estimated number of households	% High-burden	Participation rate
0-15% SMI	8,000	94%	73%
15-30% SMI	17,000	89%	52%
30-45% SMI	19,000	74%	52%
45-60% SMI	27,000	50%	43%

Maintain focused outreach efforts on these groups. Target 80% participation by 2027.

Discount Tier Analysis (Oregon)

Recommendation: Assess the feasibility and benefit vs. cost of enhanced discounts for lower income tiers. This excludes interaction with other utility programs (see next slide).

Income tier	Discount Level	Discount Level (2025)	Average assistance need as a percent of bill (2024)	Average assistance need as a percent of bill (2025)
Tier 0: 0-15% SMI	40%	85%	78%	81%
Tier 1: 15-30% SMI	25%	50%	59%	63%
Tier 2: 30-45% SMI	20%	30%	40%	46%
Tier 3: 45-60% SMI	15%	15%	22%	29%

Example: Increase Tier 1 discount to 60%. Estimated budget impact at current enrollment (Q2 24): ~$1.8M (+15%)

Example: Increase Tier 2 discount to 40%. Estimated budget impact at current enrollment (Q2 24): ~$2M (+17%)

Program Interaction (Oregon)

Discount tier analyses quantify the bill reductions needed to reduce gross customer energy bills to a reasonable percentage of their income. They do not take into account other sources of energy assistance available to low-income households. This is appropriate when a utility uses the discount program as the only type of energy assistance. NW Natural also funds the Oregon Low-Income Gas Assistance (OLGA) program which provide energy assistance grants to eligible customers who apply through a community action agency.

Recommendation:

- *Option 1:* Redesign OLGA.
- *Option 2:* Sunset OLGA and shift funding to BDP.

Program Interaction (Oregon)

Recommendation:

Option 1: Redesign OLGA.

Slightly reduce 2025 proposed discount rates (50%/30%/20%/10%). Move from LIHEAP benefit matrix (fixed grant based on income tier) to bill-based credit that is an **extension of BDP** (e.g. grant for 20% of prior 12 month bills) and is intended to cover difference between BDP discount and assistance need.

Pros:

- Targets funds to customers experiencing hardship even after receiving a discount. Customers are referred to agency to apply if they are still burdened even after receiving the BDP.
- Maintains agencies as a point of application for gas assistance
- Limits over-serving customers who don't need high discounts (the higher income households within each income tier).
- Aligns OLGA with goal of energy burden reduction by tying the grant to energy usage rather than solely income

Cons:

- Complexity - maintains current structure of dual programs, cost recovery etc.
- Difficult for agencies as the redesigned program will not mirror LIHEAP anymore

Making OLGA work with BDP

Current customer journey

Enrolled in OLGA through CAPs and receive a fixed grant

↓

Autoenrolled in BDP

↓

Income tier	BDP Discount	OLGA grant
Tier 0: 0-15% SMI	85%	~$400-600
Tier 1: 15-30% SMI	50%	~$350-500
Tier 2: 30-45% SMI	30%	~$300-400
Tier 3: 45-60% SMI	15%	~$200-300

Likely overserved

Redesigned customer journey

Enrolled in **BDP first** through CAPs/NWN

↓

Customers with additional need (low income/high usage/hardship) referred to OLGA

↓

Complete OLGA application and receive additional discount as a bulk one-time bill credit

↓

Income tier	BDP Discount	OLGA grant
Tier 0: 0-15% SMI	50%	30%
Tier 1: 15-30% SMI	30%	30%
Tier 2: 30-45% SMI	20%	20%
Tier 3: 45-60% SMI	10%	20%

Program Interaction (Oregon)

Recommendation:

Option 2: Sunset OLGA.

Adopt new discount rates for 2025 (e.g. 85%/50%/30%/15%). Unify Schedules 310 and 330 (shift ~$4M to BDP).

Pros:

- Lower administrative costs ($800k per year potentially redirected to customers)
- Much smaller rate impact even with higher discounts
- Simplifies NW Natural energy assistance under one banner

Cons:

- Loses an important pathway for customer participation through the agencies.
- Worse at targeting funds to need - all customers in a tier receive the same discount for at least two years, regardless of their level of need.

Outreach Challenges

Challenge:
NW Natural's service territory has a myriad of cultures and ethnicities, a variety of economic backgrounds, urban and rural households and more. NW Natural cannot feasibly become an expert in outreach to every community within its service area.

Recommendation:

Program Navigator Fund: Incentivize local community-based organizations (CBOs) to refer and support customers in applying for the program. These CBOs would serve as the "Program Navigators" would be CBOs that register with NW Natural and would be compensated per successful customer application. Program Navigators would be trained to refer customers to other programs (e.g. LIHEAP, Energy Trust, etc.) in addition to BDP and assist with the application and post-enrolment verification process.

Pilot estimates: $200k fund, $75 per successful application. Program/pilot may be coordinated jointly with PGE/Pacific Power.

Arrearages and BDP

- NW Natural generally has a low service disconnection rate when considering unique premises (many households may get disconnected multiple times a year)
- 32% of disconnected households are reconnected on the same day and 26% reconnected within one week.
- Very few disconnected households (~100) in past year were likely eligible for energy assistance but didn't participate. **Communication about BDP to customers at risk of disconnection is working well.**

Arrearage Relief

Challenge:
About 10-15% of BDP participants enroll in the program with pre-existing arrears.

Recommendations:
While some BDP participants may need help with arrears, we are not recommending an Arrearage Management Program (AMP). In our experience, AMPs (which typically require consistent payments from customers in exchange for arrearage matching from a utility) are very onerous to implement, hard to explain to customers and typically have low success rates for customers completing the term of the program (customers do not receive the full arrearage matching because they fall behind on their bills). Most NW Natural customers have relatively small arrears. Instead, we are recommending that NW Natural provide arrearage relief using an immediate, much simpler, and no strings attached approach.

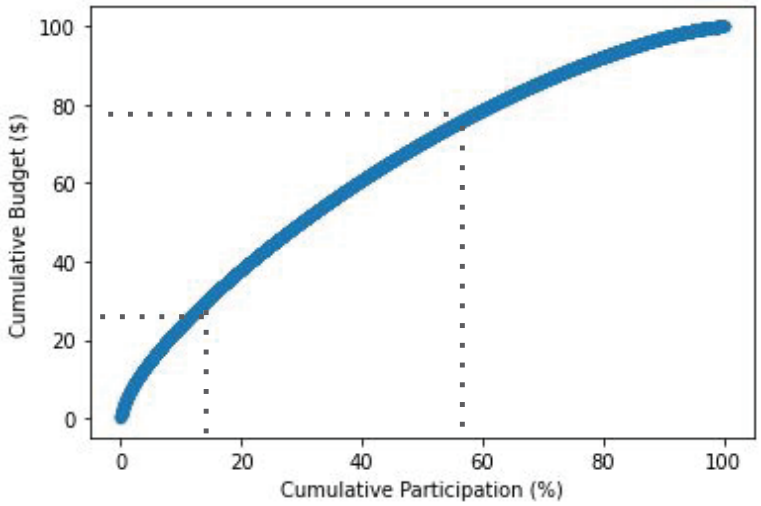
Arrearage relief for program participants: Assess the feasibility and benefit vs. cost of a capped budget arrearage relief program. For simplicity, the program should be made available to BDP participants as a retroactive credit. In other words, the customer's bill discount percent gets applied retroactively for arrears up to a limit (e.g. X% discount on first $1,000 of arrears).

Pilot estimate: $500k arrearage relief fund is likely sufficient to serve the 3,000-4,000 BDP customers who enroll with pre-existing arrears.

UG 527/CUB/110
Wochele-Jenks/63

Energy Efficiency

Bill Discount Program utilization



Within each income/discount tier:

Top 10% of participants by energy use utilize 21-24% of budget. Their average energy use is 80% higher than the overall average energy use.

Top 50% of participants by energy use utilize 69-72% of budget. Their average energy use is 30% more than the overall average energy use.

Top 10 energy users will receive $3,000+ in 2025

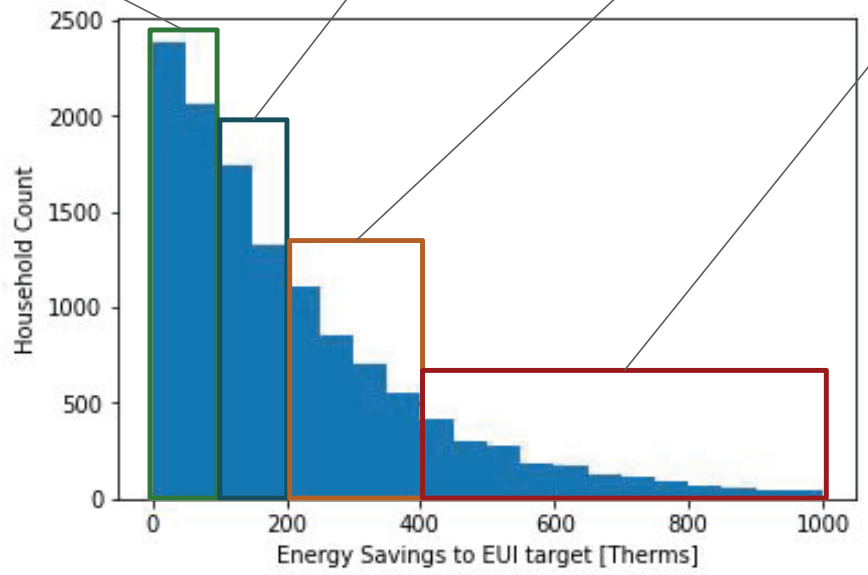
Energy Efficiency Potential (Oregon) (12,500 low-income households)

35% Smart thermostats, pipe insulation, furnace tuneups

24% HE water heater/furnace

25% Weatherization

16% Custom / Energy Audits



EUI target = 0.6 Therms/sq.ft

Energy Efficiency Potential

Challenge:
Overall, energy efficiency potential appears to be concentrated in a small segment of low-income customers. High energy users overutilize program funds while the root cause of their high energy burden remains unaddressed. There are 12,000 low-income customers (7,400 BDP participants) who would potentially be good candidates for energy efficiency measures, but existing low-income EE programs serve relatively few households.

Recommendations:

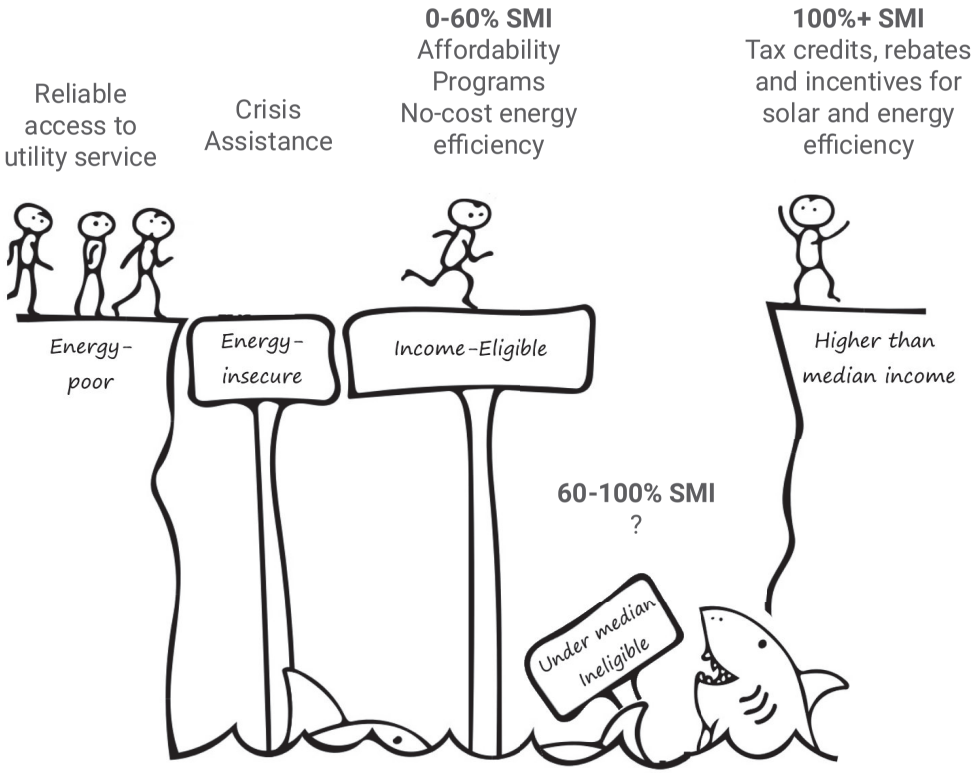
First step towards integrating energy efficiency with BDP is to identify and understand the high use participants.

Energy audit program: Establish a energy audit pilot program (through RFP) that focuses on the top 2,000 or so users in BDP ($1.5M approx. budget). Program should include walkthrough energy audit, ETO and EE credit referrals. List of high priority homes should be provided to program implementer. This program can be designed to be cost-effective through realized savings in BDP discounts.

Unbundled energy efficiency: 35-40% of households could have their energy use reduced to a reasonable level through low-cost measures, without requiring extensive weatherization. Evaluate the feasibility of funding or offering low-cost measures (smart thermostats, pipe insulation, furnace tuneups) and energy education at no-cost to low-income households. This would be most effectively accomplished in collaboration with the Energy Trust of Oregon

The Energy Assistance Hole

The Energy Assistance Hole



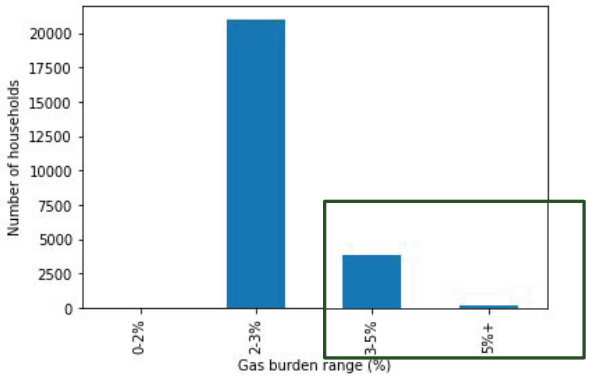
The Energy Assistance Hole (Oregon)

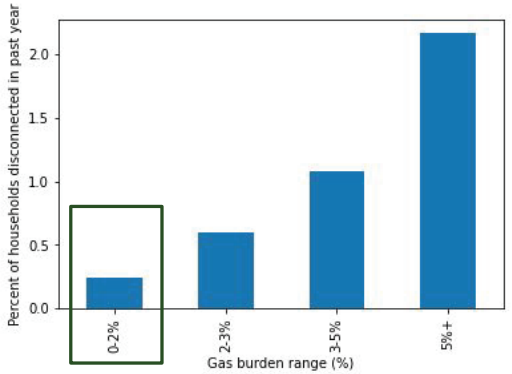
~4k non-low-income households with a high energy burden >3%

~21k borderline (2-3% burden)

Moderate income, high gas use (1,200 Therms/yr on average)

~1k non-low-income households at risk of disconnection despite having a low energy burden





Addressing high-burden, program-ineligible households

Challenge:
There are households that are not eligible for existing programs but may need help improving their bill affordability.

This includes households that:

- Are under the state median income, have a high energy burden, but are ineligible for assistance
- Constrain their energy use due to lack of affordability and lack of program access
- Are **A**sset **L**imited, **I**ncome **C**onstrained, **E**mployed
- Earn above the program income thresholds but under the Self Sufficiency Standard Income

Recommendations:

Customers in this category are high gas users, so discounts and grants do not solve the root causes of their high burden.

Offer no-cost energy weatherization: Expand eligibility for OLIEE to 80% SMI in 2025 and potentially up to 100% SMI in future years

Coordination with energy efficiency providers: Work with ETO and CAP agencies to target EE funds at low-income, high burden households. Consider targeted co-marketing campaigns based on data from this assessment.

41041950304
41041950400
41041950601

Other Recommendations

Post-enrolment verification

Challenge:
BDP was designed with self-declared income and the intent was to establish a post-enrolment verification process for 3% of participants in a random draw.

Recommendations:

Targeted verifications: Consider a more targeted verification protocol. Consult with BDP advisory group to determine criteria for initiating a verification (e.g. high property value, own multiple properties, high estimated income).

Potentially use remunerated program navigators to assist customers with responding to the verification request.

Rough estimates of PEV counts

Risk-based: 2,500 (7%) High value homes - 1,100 (3%) of which are in high discount tiers

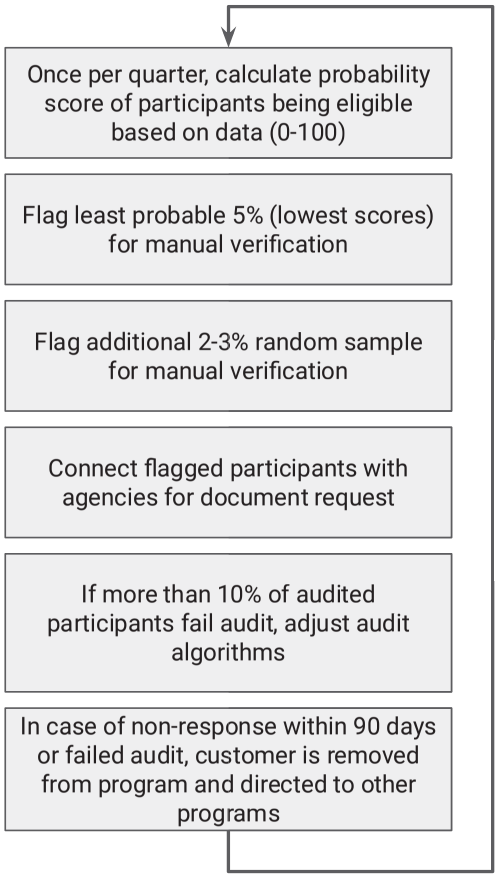
Benefit value-based: 1,700 (5%) receiving over $1,000 from BDP

Audit Protocol for Self-Verification and Auto-Enrollment

The audit process and scoring algorithms are developed and operated within the utility - customer audit lists are shared with agencies.

Data requirements:

- Home values
- Housing type
- Renter/homeowner
- Disconnect/past due notices
- Home location and average neighborhood energy burden
- Participation in other means-tested benefits (optional)
- Estimated customer income range (optional)



Continuous monitoring of audit metrics (esp. equity of audits and failure rates) and iterative improvement of scoring algorithms

Other Issues

Reduce need for reapplication: Allow fixed income customers to reapply every 4-5 years instead of every two.

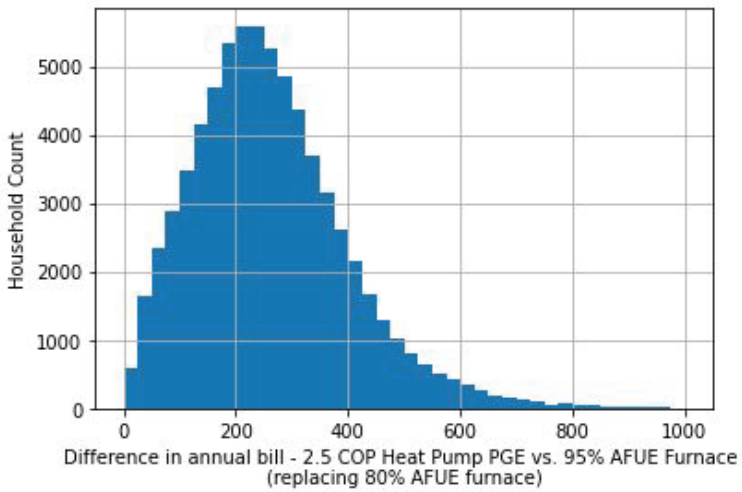
Communication timing: Biggest marketing pushes should be in September/October **before** high bill season. Include communication about projected winter bills including rate increases and energy efficiency tips to encourage customers to apply early.

Rate design: Evaluate raising the fixed charge with a corresponding decrease in the therm charge. The fixed charge also does not reflect NW Natural's true fixed costs (average of $34 for the residential class). This encourages conservation and solar but low-income customers cannot afford these improvements. Higher volumetric rates are a major trigger for falling behind on bills when a customer receives an unplanned bill during the cold season.

Enrolment target: Use energy assistance need in addition to enrolment as a program metric. Participation rates alone do not reflect whether the program is alleviating energy burden. Set program targets in relation to energy assistance need (similar to Washington state) as opposed to enrolment % targets - this incentivizes targeting the highest need customers vs. just a higher number of participants.

Master-metered buildings

Electrification burden through OLIEE



Assumptions:

- 80% of gas usage is for heating
- 80% AFUE gas furnace as baseline
- Cost comparison for a 3 ton central heat pump (2.5 average COP) vs 95% AFUE gas furnace
- Chart is for LI households in Oregon, assuming PGE electric rates
- Not including additional cooling costs

Main Takeaways - Energy Burden Assessment

- NW Natural's customers are relatively higher income and live in a moderate climate. This is reflected in a generally moderate gas burden. Approximately **9% of NW Natural's customers suffer from a high gas burden** (exceeding 2/3% depending on the climate zone)
- The Bill Discount Program (BDP) has been ramping up successfully and along with other assistance programs, is expected to meet **49% of the energy assistance need** for NW Natural's customers in 2024 and 47% of the need in 2025 (including rate increases and proposed discount tiers).
- Recommendations in this assessment are auxiliary components that can be added to NW Natural's energy assistance portfolio to better improve bill affordability:
    - **BDP:** How to deal with the interaction between BDP and OLGA/GREAT to eliminate participants' high energy burden
    - **Arrearages:** How to best serve customers with pre-existing arrears
    - **Energy Efficiency:** How can we leverage energy efficiency for sustained energy burden reduction
    - **Energy assistance hole:** How to best serve customers who have unaffordable bills but are ineligible for assistance programs
    - **Other:** How do we design more equitable rates and target assistance at customers who need it the most

NW Natural

2024 Energy Burden Assessment

Summary of Recommendations

empower dataworks

Main Takeaways - Energy Burden Assessment

- NW Natural's customers are relatively higher income and live in a moderate climate. This is reflected in a generally moderate gas burden. Approximately **9% of NW Natural's customers suffer from a high gas burden** (exceeding 2/3% depending on the climate zone)
- The Bill Discount Program (BDP) has been ramping up successfully and along with other assistance programs, is expected to meet **49% of the energy assistance need** for NW Natural's customers in 2024 and 47% of the need in 2025 (including rate increases and proposed discount tiers).
- Recommendations in this assessment are auxiliary components that can be added to NW Natural's energy assistance portfolio to better improve bill affordability:
    - **BDP:** How to deal with the interaction between BDP and OLGA/GREAT to eliminate participants' high energy burden
    - **Arrearages:** How to best serve customers with pre-existing arrears
    - **Energy Efficiency:** How can we leverage energy efficiency for sustained energy burden reduction
    - **Energy assistance hole:** How to best serve customers who have unaffordable bills but are ineligible for assistance programs
    - **Other:** How do we design more equitable rates and target assistance at customers who need it the most

Summary of Recommendations

	Recommendation	Cost/Complexity	Impact/Priority	Timeline
BDP	Track energy assistance funding percent as a BDP evaluation metric	Low	Low	2025
	Focus immediate BDP outreach efforts on 0-30% SMI households	Medium	Medium	Q4 2024
	Re-examine OLGA/GREAT in context of the BDP and consider redesigning or sunsetting those programs	High	High	Q4 2024
	Assess impact of enhanced discounts for lower income tiers, as well as hybrid discount/grant model	High	High	Q4 2024
	Allow fixed income customers to reapply every 4-5 years instead of every two	Low	Low	2025
	Implement a targeted post-enrolment verification protocol	Low	Medium	2025
Program Portfolio	Assess impact of retroactive application of bill discount for customers in arrears (arrearage forgiveness)	Low	Medium	2025
	Biggest marketing pushes should be before high bill season	Low	Low	2025-27
	Initiate a Program Navigator fund for partner nonprofits to help customers access programs	Medium	Medium	2025
	Expand eligibility for OLIEE to 80% SMI and potentially up to 100% SMI in future years	Low	Low	2025
	Consider an energy audit program for high users in energy assistance programs	Medium	High	2025
	Allocate energy efficiency funding for unbundled measures through ETO for low-income, high-burden customers	High	High	2026+
Other	Consult with advisory groups on potential solutions to help households under state median income but above energy assistance income thresholds	Medium	Low	2025
	Adjust timing of rate increases	Low	Medium	2025
	Consider revisiting fixed charge component of residential rate schedule	Medium	Medium	Next GRC

Insights: **High-level Assistance Gap (Oregon)**

Low-Income, High Burden Households

~50,000

Income-eligible only

2024 Projection not including additional program participation.
Bill Discount Program (BDP): ~$8.3M

2025: $12M BDP, $18M total - 62% of need

➔ At program maturity (year 5+), best practice is to target at least 60-70% of the need available as program funding - with proposed 2025 rates, BDP would need additional participation. Once this target is reached, participation usually slows down and focus shifts to program optimization and targeted outreach.

Recommendation: To capture the impact and reach of the program, track total energy assistance funding as a percent of energy assistance need as a program metric (as opposed to solely relying on participation counts)

Program Saturation Rates (Oregon)

Income tier	Estimated number of households	% High-burden	Participation rate
0-15% SMI	8,000	94%	73%
15-30% SMI	17,000	89%	52%
30-45% SMI	19,000	74%	52%
45-60% SMI	27,000	50%	43%

Maintain focused outreach efforts on these groups. Target 80% participation by 2027.

Discount Tier Analysis (Oregon)

Recommendation: Assess the feasibility and benefit vs. cost of enhanced discounts for lower income tiers. This excludes interaction with other utility programs (see next slide).

Income tier	Discount Level	Discount Level (2025)	Average assistance need as a percent of bill (2024)	Average assistance need as a percent of bill (2025)
Tier 0: 0-15% SMI	40%	85%	78%	81%
Tier 1: 15-30% SMI	25%	50%	59%	63%
Tier 2: 30-45% SMI	20%	30%	40%	46%
Tier 3: 45-60% SMI	15%	15%	22%	29%

Example: Increase Tier 1 discount to 60%. Estimated budget impact at current enrollment (Q2 24): ~$1.8M (+15%)

Example: Increase Tier 2 discount to 40%. Estimated budget impact at current enrollment (Q2 24): ~$2M (+17%)

Program Interaction (Oregon)

Discount tier analyses quantify the bill reductions needed to reduce gross customer energy bills to a reasonable percentage of their income. They do not take into account other sources of energy assistance available to low-income households. This is appropriate when a utility uses the discount program as the only type of energy assistance. NW Natural also funds the Oregon Low-Income Gas Assistance (OLGA) program which provide energy assistance grants to eligible customers who apply through a community action agency.

Recommendation:

- *Option 1:* Redesign OLGA.
- *Option 2:* Sunset OLGA and shift funding to BDP.

Program Interaction (Oregon)

Recommendation:

Option 1: Redesign OLGA.

Slightly reduce 2025 proposed discount rates (50%/30%/20%/10%). Move from LIHEAP benefit matrix (fixed grant based on income tier) to bill-based credit that is an **extension of BDP** (e.g. grant for 20% of prior 12 month bills) and is intended to cover difference between BDP discount and assistance need.

Pros:

- Targets funds to customers experiencing hardship even after receiving a discount. Customers are referred to agency to apply if they are still burdened even after receiving the BDP.
- Maintains agencies as a point of application for gas assistance
- Limits over-serving customers who don't need high discounts (the higher income households within each income tier).
- Aligns OLGA with goal of energy burden reduction by tying the grant to energy usage rather than solely income

Cons:

- Complexity - maintains current structure of dual programs, cost recovery etc.
- Difficult for agencies as the redesigned program will not mirror LIHEAP anymore

Making OLGA work with BDP

Current customer journey

Enrolled in OLGA through CAPs and receive a fixed grant

↓

Autoenrolled in BDP

↓

Income tier	BDP Discount	OLGA grant
Tier 0: 0-15% SMI	80%	~$400-600
Tier 1: 15-30% SMI	40%	~$350-500
Tier 2: 30-45% SMI	20%	~$300-400
Tier 3: 45-60% SMI	15%	~$200-300

Likely overserved

Redesigned customer journey

Enrolled in **BDP first** through CAPs/NWN

↓

Customers with additional need (low income/high usage/hardship) referred to OLGA

↓

Complete OLGA application and receive additional discount as a bulk one-time bill credit

↓

Income tier	BDP Discount	OLGA grant
Tier 0: 0-15% SMI	50%	30%
Tier 1: 15-30% SMI	30%	30%
Tier 2: 30-45% SMI	20%	20%
Tier 3: 45-60% SMI	10%	20%

Program Interaction (Oregon)

Recommendation:

Option 2: Sunset OLGA.

Adopt new discount rates for 2025 (85%/50%/30%/25%). Unify Schedules 310 and 330 (shift ~$4M to BDP).

Pros:

- Lower administrative costs ($800k per year potentially redirected to customers)
- Much smaller rate impact even with higher discounts
- Simplifies NW Natural energy assistance under one banner

Cons:

- Loses an important pathway for customer participation through the agencies.
- Worse at targeting funds to need - all customers in a tier receive the same discount for at least two years, regardless of their level of need.

Outreach Challenges

Challenge:
NW Natural's service territory has a myriad of cultures and ethnicities, a variety of economic backgrounds, urban and rural households and more. NW Natural cannot feasibly become an expert in outreach to every community within its service area.

Recommendation:

Program Navigator Fund: Incentivize local community-based organizations (CBOs) to refer and support customers in applying for the program. These CBOs would serve as the "Program Navigators" would be CBOs that register with NW Natural and would be compensated per successful customer application. Program Navigators would be trained to refer customers to other programs (e.g. LIHEAP, Energy Trust, etc.) in addition to BDP and assist with the application and post-enrolment verification process.

Pilot estimates: $200k fund, $75 per successful application. Program/pilot may be coordinated jointly with other utilities.

Arrearage Relief

Challenge:
About 10-15% of BDP participants enroll in the program with pre-existing arrears.

Recommendations:
While some BDP participants may need help with arrears, we are not recommending an Arrearage Management Program (AMP). In our experience, AMPs (which typically require consistent payments from customers in exchange for arrearage matching from a utility) are very onerous to implement, hard to explain to customers and typically have low success rates for customers completing the term of the program (customers do not receive the full arrearage matching because they fall behind on their bills). Most NW Natural customers have relatively small arrears. Instead, we are recommending that NW Natural provide arrearage relief using an immediate, much simpler, and no strings attached approach.

Arrearage relief for program participants: Assess the feasibility and benefit vs. cost of a capped budget arrearage relief program. For simplicity, the program should be made available to BDP participants as a retroactive credit. In other words, the customer's bill discount percent gets applied retroactively for arrears up to a limit (e.g. X% discount on first $1,000 of arrears).

Pilot estimate: $500k arrearage relief fund is likely sufficient to serve the 3,000-4,000 BDP customers who enroll with pre-existing arrears.

Energy Efficiency Potential

Challenge:
Overall, energy efficiency potential appears to be concentrated in a small segment of low-income customers. High energy users overutilize program funds while the root cause of their high energy burden remains unaddressed. There are 12,000 low-income customers (7,400 BDP participants) who would potentially be good candidates for energy efficiency measures, but existing low-income EE programs serve relatively few households.

Recommendations:

First step towards integrating energy efficiency with BDP is to identify and understand the high use participants.

Energy audit program: Establish a energy audit pilot program (through RFP) that focuses on the top 2,000 or so users in BDP ($1.5M approx. budget). Program should include walkthrough energy audit, ETO and EE credit referrals. List of high priority homes should be provided to program implementer. This program can be designed to be cost-effective through realized savings in BDP discounts.

Unbundled energy efficiency: 35-40% of households could have their energy use reduced to a reasonable level through low-cost measures, without requiring extensive weatherization. Evaluate the feasibility of funding or offering low-cost measures (smart thermostats, pipe insulation, furnace tuneups) and energy education at no-cost to low-income households. This would be most effectively accomplished in collaboration with the Energy Trust of Oregon

Addressing high-burden, program-ineligible households

Challenge:
There are households that are not eligible for existing programs but may need help improving their bill affordability.

This includes households that:

- Are under the state median income, have a high energy burden, but are ineligible for assistance
- Constrain their energy use due to lack of affordability and lack of program access
- Are **A**sset **L**imited, **I**ncome **C**onstrained, **E**mployed
- Earn above the program income thresholds but under the Self Sufficiency Standard Income

Recommendations:

Customers in this category are high gas users, so discounts and grants do not solve the root causes of their high burden.

Offer no-cost energy weatherization: Expand eligibility for OLIEE to 80% SMI in 2025 and potentially up to 100% SMI in future years

Coordination with energy efficiency providers: Work with ETO and CAP agencies to target EE funds at high burden households. Consider targeted co-marketing campaigns based on data from this assessment.

Post-enrolment verification

Challenge:
BDP was designed with self-declared income and the intent was to establish a post-enrolment verification process for 3% of participants in a random draw.

Recommendations:

Targeted verifications: Consider a more targeted verification protocol. Consult with BDP advisory group to determine criteria for initiating a verification (e.g. high property value, own multiple properties, high estimated income).

Potentially use remunerated program navigators to assist customers with responding to the verification request.

Rough estimates of PEV counts

Risk-based: 2,500 (7%) High value homes - 1,100 (3%) of which are in high discount tiers

Benefit value-based: 1,700 (5%) receiving over $1,000 from BDP

Other Issues

Reduce need for reapplication: Allow fixed income customers to reapply every 4-5 years instead of every two.

Communication timing: Biggest marketing pushes should be in September/October **before** high bill season. Include communication about projected winter bills including rate increases and energy efficiency tips to encourage customers to apply early.

Rate design: Evaluate raising the fixed charge with a corresponding decrease in the therm charge. The fixed charge also does not reflect NW Natural's true fixed costs (average of $34 for the residential class). This encourages conservation and solar but low-income customers cannot afford these improvements. Higher volumetric rates are a major trigger for falling behind on bills when a customer receives an unplanned bill during the cold season.

Enrolment target: Use energy assistance need in addition to enrolment as a program metric. Participation rates alone do not reflect whether the program is alleviating energy burden. Set program targets in relation to energy assistance need (similar to Washington state) as opposed to enrolment % targets - this incentivizes targeting the highest need customers vs. just a higher number of participants.

The American Immigration Council is a non-profit, non-partisan organization. ***Sign up to receive our latest analysis as soon as it's published.***

As we near the one-month mark of the new Trump administration, it is clear that the president's thinly veiled threats of imposing mass deportation on "criminal immigrants" are in fact a promise to target all immigrants—and sometimes even U.S. citizens.

In the first weeks, we have already seen **wrongful immigration arrests of people with U.S. passports**, including a **veteran in New Jersey**, **Native Americans** in the Navajo nation, and others from Puerto Rico. We have reports of the sweeping-in of immigrants with lawful status who pose absolutely no public safety threat, including **Venezuelan people with no criminal record**, shipped off to Guantanamo Bay. A **mi middle-school teacher with DACA** faced arrest and possible deportation.

Sign Up Donate Now →

American Immigration Council

The consequence of a mass deportation agenda that targets anyone and everyone is a chilling effect. The threat itself of aggressive immigration enforcement imposes fear on immigrant and minority communities. They become scared to leave the house, go to work, or attend school as these everyday activities could end in detention and deportation of themselves or their loved ones. School districts like one in Texas, are **forced to send letters** to their students and parents, warning them that ICE may show up on the morning school bus. And when ICE uses intimidation stunts like posting ominous photos of alleged "criminal immigrants," publicizes its raids, or uses military planes to deport people, the fear mongering becomes theater but also hurts local communities and their economies.

Citrus farmers in California were afraid to show up to work, just like farmers in Florida, New York and Iowa. When ICE threatened enforcement in Chicago, some people **hid in their attics.** In states like Texas, where undocumented people represent approximately 50% of the construction industry's labor force–this chilling effect will have reverberations for local housing costs and economies. This is unsurprising considering that the 11 million undocumented people who live in the U.S. fill critical sectors of the labor market–like agriculture, construction, and health care–in addition to loving U.S. citizen children and partners and having deep ties to our communities.

It doesn't matter whether ICE hits its arrest "quotas" or "targets," the damage is already at play. President Trump has set a goal of approximately 1,000 arrests per day for immigration enforcement agencies–a goal his administration was unable to meet this past week. But using immigration enforcement to score political points and adopting a terrorizing PR strategy means people still won't show up for our country and economy–and that hurts all of us.

American Immigration Council

additional $3,745.

To meet these costs, President Trump has redirected law enforcement resources away from critical priorities like combating drug trafficking, terrorism, and child sex crimes to instead focus on arresting and deporting people who pose no threat at all. For example, **Trump ordered** ICE's Homeland Security Investigations (HSI), which typically investigates online child sex abuse material and fights transnational criminal organizations, to make it their "primary mission" instead to investigate immigration law offenses. We have seen this redirection of critical public safety resources before. During Trump's Zero Tolerance policy in 2018—which led to family separations at the border—prosecutors had to drop other cases to focus on charging migrants with misdemeanors. As a result, **prosecutions for drug trafficking** at the border plummeted.

Now, as President Trump signals that he sees ICE's arrests as **too low** in number and frequency, he is working with Congress to seek $175 to $200 billion additional dollars to fuel this mass deportation agenda. This request is six times more than the already historically-high funding levels of around $30 billion for ICE and CBP. We can be assured that if Congress approves these unprecedented dollars, indiscriminate arrests of U.S. citizens and people who pose no public safety threat will continue at the expense of safety and security.

Agenda

1:30	Welcome and Introductions
1:40	**Staff Presentation:** Overview of Written Comments and Current Regulatory Landscape
2:05	**Presentation from Pacific Northwest National Laboratory (PNNL):** Oregon's Existing Utility Rates and Related Mechanisms
2:45	**BREAK**
3:00	**Breakout Discussions**: Evaluating Oregon's Current Ratemaking Framework
3:45	Breakout Room Takeaways and Whole-Group Discussion
3:55	Next Steps and Wrap-Up
4:00	Adjourn

GREAT PLAINS INSTITUTE

Meeting Ground Rules

1. Respect differences of perspective and the time we have together.
2. Be open to continued learning and growth informed by new information; it is ok for perspectives to shift or change throughout the process.

GREAT PLAINS INSTITUTE

Meeting Objectives

1. Develop a shared understanding of Oregon's current ratemaking framework.
2. Discuss aspects of the current framework that are working well and high impact opportunities to enhance our approach.

GREAT PLAINS INSTITUTE

AR 676 Phase 1 Workshop Schedule

Date	Workshop	
December 17, 2025	**Kickoff Meeting**	• Review objectives and process • Presentation of MYP report • Presentation of survey results
January 27, 2026	**PBR Foundations**	• Stakeholder input on goals/outcomes approach • Review common PBR mechanisms • Facilitated discussion
February 27, 2026	**Existing Regulatory Structures**	• Review current regulatory structures in Oregon to clarify leverage points for incentive alignment • Facilitated discussion
Early April 2026	**Exploration of MYP and PBR Design for Oregon**	• Participants provide input on MYP design elements and preferred PBR mechanisms • Facilitated discussion
May 2026	• Staff to file report outlining foundational concepts, goals, and outcomes (Phase 1 items) for MYPs in Oregon • Staff to present report findings at Public Meeting	

GREAT PLAINS INSTITUTE

Presentation Whiteboard Activity

During the presentations, participants are encouraged to add their thoughts and responses to the following two questions via the shared whiteboard:

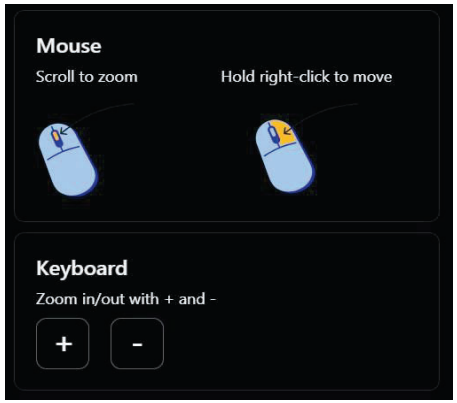
1. What aspects of Oregon's existing ratemaking framework do you think are working well?
2. What aspects of Oregon's existing ratemaking framework do you think could be adjusted or evolved as part of this process?

GREAT PLAINS INSTITUTE

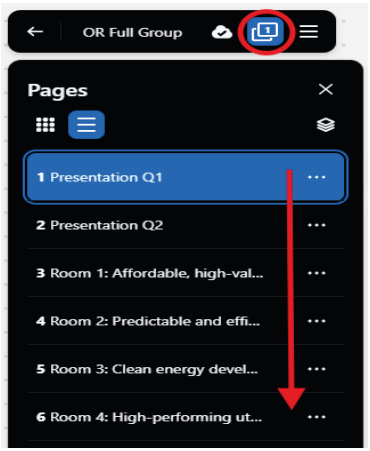
Whiteboard "How To"

- In the bottom right corner, select the hand to move around the whiteboard.

- To place a sticky note, hover over a sticky note stack and click. Move your cursor to where you would like to place the sticky note and click again.



- You may also use your mouse (right click) and keyboard to navigate the whiteboard.



- Whiteboards can have multiple pages. In the upper left corner, select the page icon to open the page navigation bar.

Oregon Public Utility Commission

February 27, 2026

Relevant statutes – Ratemaking

ORS 756.040

- Rates must provide adequate revenue to cover a utility's operating expenses and capital costs
- Rates must allow the utility to earn a return that is commensurate with the return on investments in other enterprises having corresponding risks
- Rates must be sufficient to ensure confidence in the financial integrity of the utility, allowing the utility to maintain its credit and attract capital

ORS 757.355

- Prohibits recovery in rates for facilities not currently used for providing service ("used and useful")

ORS 757.259

- Authorizes retroactive ratemaking in only limited circumstances

Relevant statutes – Ratemaking

ORS 757.612

- Requires electric companies to surcharge customers a statutorily required amount for the purpose of establishing a public purpose fund

ORS 757.269

- Specific requirements related to recovery of tax expense and deferred tax credits

ORS 757.205, et seq.,

- Establish several procedural requirements related to rate-setting
- Do not authorize any party other than a utility to file a tariff

Relevant statutes – Performance Based Rates

ORS 757.210

- Electric and gas utilities can request an alternative form of regulation (AFOR)
- Defines an AFOR as a plan adopted by the commission *upon petition by a public utility*
- Defines AFOR as a plan that sets rates and revenues and a method for changes in rates and revenues using alternatives to cost-of-service rate regulation

ORS 757.603

- Electric company shall provide all retail electricity consumers that are connected to the electric company's distribution system with a regulated, cost-of-service rate option

Relevant statutes – Performance Based Rates

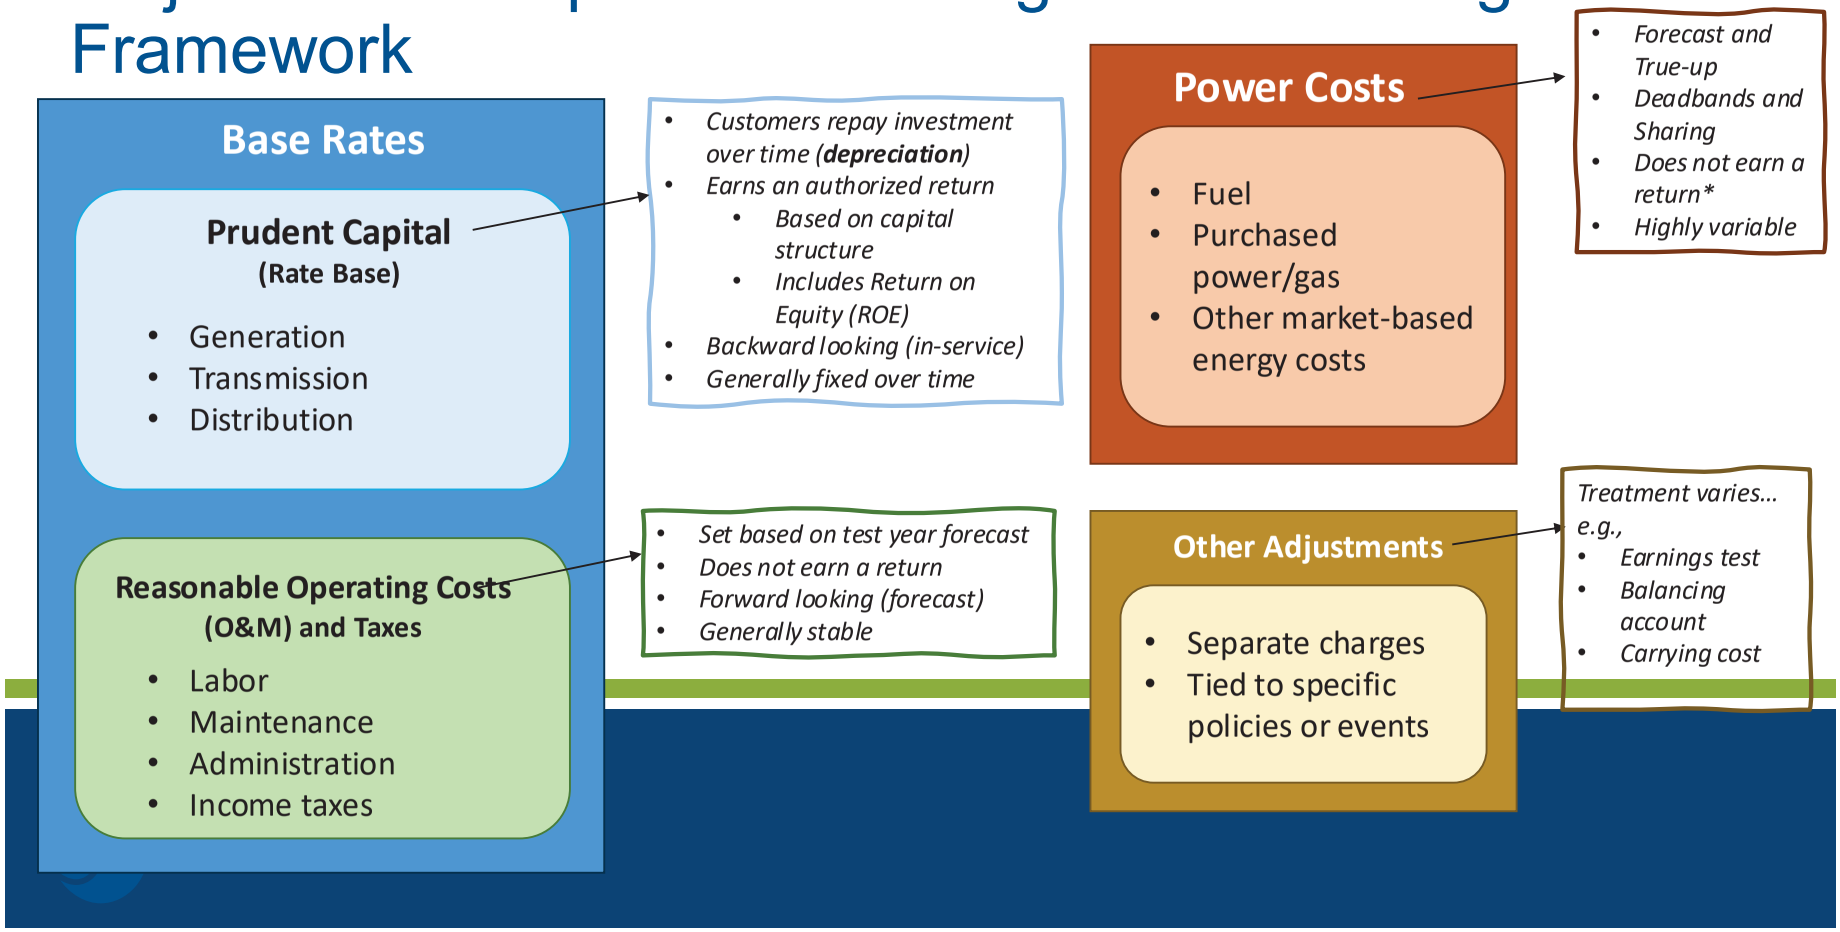
ORS 757.217

- Requires the Commission to adopt rules requiring natural gas and electric utilities to establish multi-year rate plans
- Gives the Commission discretion to *provide incentives* for efficient utility operations

ORS 757.046

- Authorizes the Commission to impose performance-based rates, with incentives and penalties, on *electric utilities* to achieve regulatory objectives listed in the statute

Major Cost Components in Oregon Ratemaking Framework



Stakeholder Comments Overview:
Identified strengths of Oregon's current structure

perspectives vary

- Power and gas cost adjustment mechanisms already mitigate a significant share of cost volatility.
- Earnings tests ensure that customers are sharing in cost savings.
- Commission oversight remains active and iterative through frequent proceedings.
- Adjustment clauses and capital trackers have reduced regulatory lag for large cost categories.

Stakeholder Comments Overview:
Areas to discuss further

- Clarifying which revenue risks remain with utilities versus automatic revenue adjustments
- Determining whether the MRP would consolidate existing trackers and deferrals or layer on top of them.
- Calibrating earnings sharing and performance incentives so they are financially meaningful but bounded.
- Defining guardrails if earnings drift outside an authorized range.
- Establishing clearer criteria for reopeners during stay-out periods.
- Clarifying how affordability would be operationalized before tying it to incentives.
- Considering whether design elements differ between gas and electric utilities.

Stakeholder Comments Overview:
Recurring structural design decision points

- The scope of costs included inside the MRP (particularly capital and O&M categories).
- The length and structure of the stay-out period and its reopener triggers.
- The degree of automatic revenue adjustment versus Commission review.
- The strength and symmetry of earnings sharing mechanisms.
- Whether performance incentives begin with financial exposure or a test phase.
- Whether capital recovery structures remain unchanged or are modified.

Ratemaking Framework Scope: Phases 1-2

Foundational Design Elements	• Plan duration (3-7 years) • Type of MRP (index-based, forecasted, hybrid) • Scope of an MRP (limited or comprehensive) • Goals-outcomes hierarchy
Revenue Mechanisms and Adjustments*	• ROE • Going-in (year 1) rates • Annual adjustments: inflation, productivity, exogenous event treatment, consumer dividend • Treatment of capital expenses
Additional Elements	• Performance measures (PIMs) and metrics • Shared savings mechanisms and earnings sharing mechanism • Off-ramps and re-openers
Transition to the next MRP	• Rebasing process • Efficiency carryover mechanism

* Phase 2 may determine which mechanisms are used while values would be determined in a rate case or other docket

Current Alternative Ratemaking Mechanisms

Cost Control	Service Quality	Risk Allocation	Capital Trackers
• Sharing Mechanisms • Earnings Test	• Vegetation PBR	• Decoupling • PCAM • PGA	• RAC • ARM

Pacific Northwest
NATIONAL LABORATORY

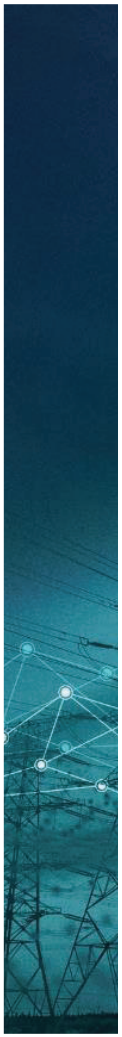
Scope of this Presentation

- Trends in the frequency of rate cases and other rate schedule filings
- Primary cost components of Oregon gas and electric revenue requirements and bills
- Basic overview of how rates are set
- Forecasted or proposed costs
- Existing cost-sharing mechanisms

- For reference, a slide map and key terms are provided in the appendix. Throughout the presentation, key terms are highlighted in blue.



Pacific Northwest NATIONAL LABORATORY

Summary

- Rate case frequency is variable across utilities and over the last decade, but there are time periods when rate case filings are nearly annual.
- Between rate cases, power/gas costs and true-ups occur annually, plus updates to a multitude of other schedules, adders, and automatic adjustment clauses.
- "Single issue" requests for revenue requirement adjustments are a more recent occurrence.
- Structure of authorized revenue for PGE and PacifiCorp is similar:
  - Adders / supplemental schedules: 5-8%
  - Base rates: ~60%
  - Power costs: ~33%
- For Avista and Northwest Natural, the percentage ranges are a bit larger:
  - Adders / supplemental schedules: 8-12%
  - Base rates: 58-66%
  - Gas costs: 22-34%
- IRPs and electric utility representations indicate a new cycle of very large generation and transmission capital investments over the next 3 to 6 years.
- IRPs for natural gas utilities are exploring flat or reduced load over 20 to 30 years in part due to state policies.

Rate Case Timeline: Filing Date to Order Date

Purchased Gas Adjustment and Spring Earnings Review

- The PGA is designed to recover costs for gas purchases, passing through costs to customers
  - Two components:
    - ✓ Prospective reset of base gas costs (Commodity and Pipeline Capacity components)
    - ✓ Retroactive true-up for differences between actual and base costs

NWN and Avista currently have 90/10 sharing of Weighted Average Cost of Gas (WACOG) variance (90% customers, 10% utility)

- Gas utilities with a PGA are also subject to a Spring Earnings Review:

Pacific Northwest NATIONAL LABORATORY

Summary

- Rate cases, power/gas costs and true-up proceedings, other revenue adjustment requests, and other schedules, adders, and automatic adjustment clauses collectively represent a meaningful administrative workload for OPUC staff and others.
- Electric utilities' rates are generally comprised of:
  - Adders / supplemental schedules: 5-8%
  - Base rates: ~60%
  - ✓ Power costs: ~33%
- Gas utilities' rates are generally comprised of:
  - ✓ Adders / supplemental schedules: 8-12%
  - Base rates: 58-66%
  - ✓ Gas costs: 22-34%
- Going forward:
  - Electric utilities expect significant capital investments over the next 3 to 6 years.
  - Gas utilities are exploring flat or reduced load over 20 to 30 years in part due to state policies.

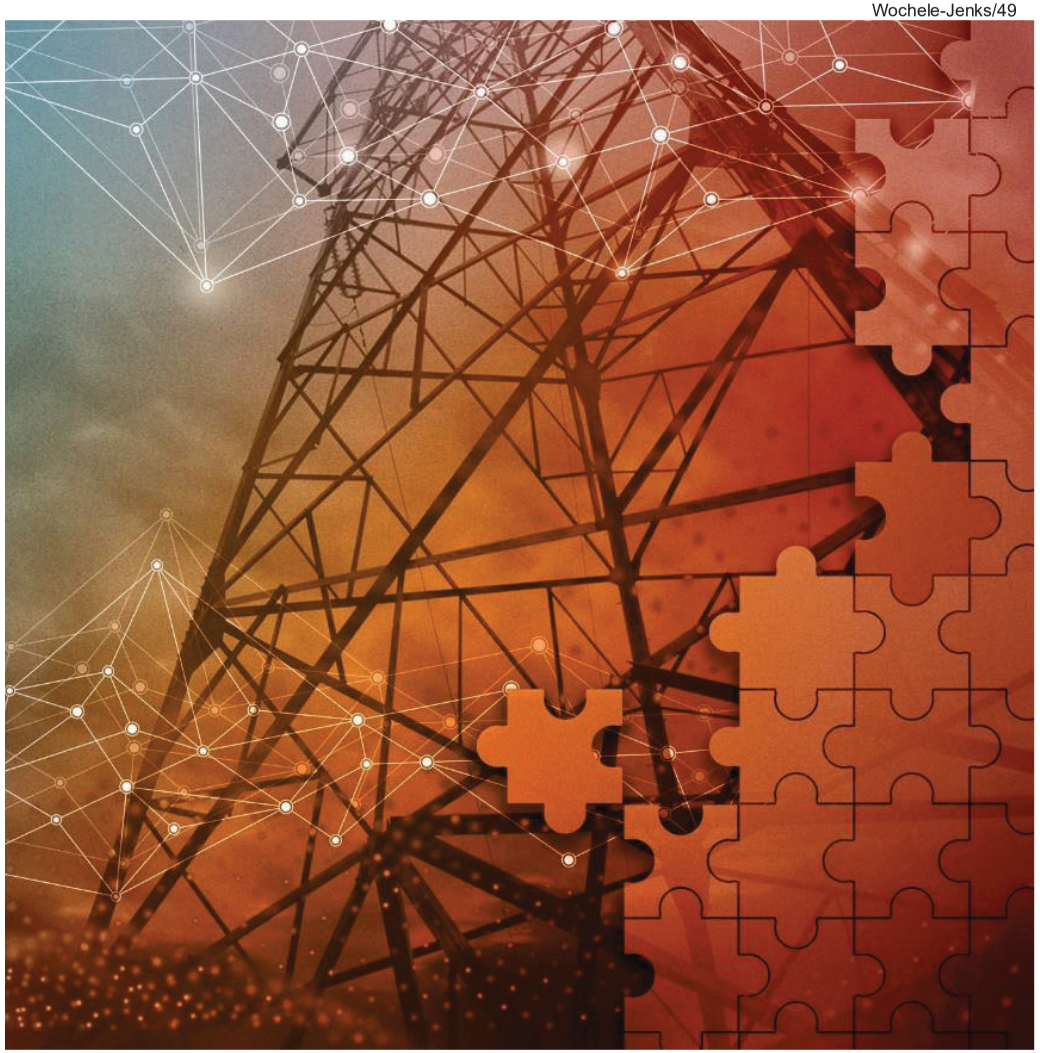
Appendix



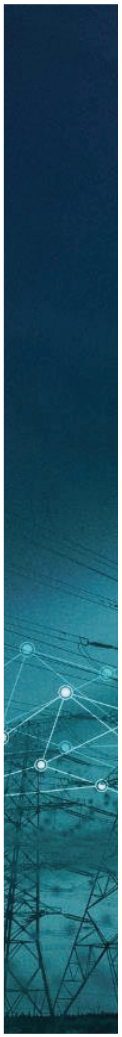
U.S. DEPARTMENT of ENERGY BATTELLE

PNNL is operated by Battelle for the U.S. Department of Energy

Nomenclature – 1/3

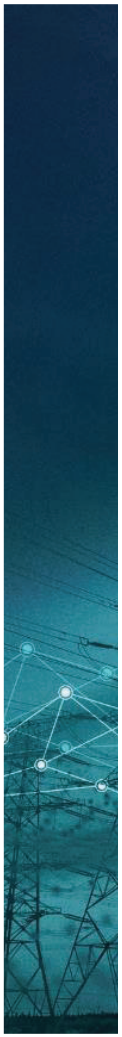
Note: Definitions included here are not necessarily the same definitions as may be used in Oregon statute or rule for the same or a similar term. These definitions have been compiled by PNNL from multiple sources, some of which are cited below.

- **Adders:** a fee, surcharge, or adjustment to energy prices that recovers a specific cost that is not otherwise recovered through base rates.
- **Alternative Rate Mechanism (ARM):** a mechanism to adjust rates that diverges from the traditional, retroactive rate-setting that occurs through rate cases. One use of ARMs is to reduce the time between a utility's investment and cost recovery.
- **Amortization:** the recovery over time of an investment in intangible plant. For example, a payment to a city for entering into a franchise agreement, or the investment in an abandoned power plant that no longer provides service, but for which the regulator has determined cost recovery is appropriate.*
- **Authorized Revenue:** the total amount of money approved by regulators that a utility is authorized to collect from customers. In this analysis, it is being used to mean the total of revenue requirement set in rate cases, plus the net power/gas costs and any supplemental schedules or adders.
- **Automatic Adjustment Clause:** a mechanism that allows for cost recovery outside of a general rate case process. These are typically governed by formulas and rules that are separately evaluated. Historically, these dealt with specific factors that have effects on costs and the company's bottom line and are beyond the control of the utility.
- **Base Rates:** represents the costs that are core to providing service to customers, as determined through a general rate case. Typically consists of the non-power/fuel expenses, such as labor, the return on capital investment, depreciation expense, taxes, and other fees.
- **Cost allocation**: one of the major steps in the regulatory process for setting utility rates where regulators determine how to equitably divide the revenue requirement among several broadly defined classes of ratepayers.
- **Cost effectiveness tests**: Cost-benefit tests are used to determine the cost efficacy of different energy resources to ensure utility customer investments benefit customers, utility systems, and society.
- **Cost of service regulation**: an approach for determining a fair price for electric service that uses aggregate costs for providing each class of service (e.g. residential, commercial, industrial). Prices are set to recover those costs, plus a reasonable return on the invested capital portion of those costs.



Nomenclature – 2/3

- **Decoupling and Decoupling Adjustment:** a regulatory mechanism that separates a utility's collected revenue from its energy sold, ensuring that the authorized revenue requirement is recovered regardless of whether customers consume more or less energy.
- **Depreciation expense:** the recovery over time of a capital investment in a tangible plant that provides service. The return *of* capital (different from the return *on* capital) to the utility's investors over time, as the capital asset is used.*
- **Distributed Energy Resources, or DERs**: Energy resources located on the distribution system, including solar, wind, battery storage, energy efficiency and demand response.
- **Earnings Test**: a mechanism for assessing a utility's overall earnings as compared to an expected level of earnings and using that information to determine whether cost recovery or refunds to customers are appropriate.
- **Gold Plating:** A regulated utility investing more in capital infrastructure than is strictly necessary for the grid's performance or improving customer outcomes.
- **Hosting capacity**: The amount of distributed generation (or demand) that can be added to the distribution system before control changes or system upgrades are required to keep the system safe and reliable and to add more resources
- **Integrated resource plans**: Electricity system planning documents that include a roadmap to meet forecasted energy demand using both supply and demand side resources in the least cost and risk manner.
- **Investor-owned utility**: a utility owned by shareholders or other for-profit owners. A majority of US electricity customers are served by IOUs.
- **Net gas costs:** the net cost of gas supply, including the forecasted costs for the following year and the true-up that results from the PGA calculation described below.
- **Net Variable Power Cost:** the projected cost of the power needed to serve customers for the year ahead, including the cost for utilities to generate its own energy and predicted cost to buy supplemental energy from the wholesale power market.
- **Power Cost Adjustment:** a mechanism to recognize in rates part of the difference for a given year between the actual net variable power costs and the forecasted net variable power costs. The mechanism consists of a deadband, within which no adjustment to rates is made, and a power cost variance amount which dictates the sharing of costs between customers and the utility. The recovery from or refund to customers through the PCA is subject to an earnings review.
- **Prudence:** a regulatory determination by commissions to assess whether a utility project has been completed or implemented as proposed, according to sound management practices, and at a reasonable cost and with reasonable care.
- **Purchased Gas Adjustment:** annual rate mechanism that allows natural gas utilities to pass through the actual costs of buying and transporting natural gas to customers without markup. It accounts for the difference between forecast costs and actual costs and may result in a credit in cases where costs were lower than forecast.



Nomenclature – 3/3

- **Rate base**: the net investment of a utility in property that is used to serve the public. Typically, consists of the original cost net of depreciation, adjusted by working capital, deferred taxes, and various regulatory assets.
- **Rate case**: a formal proceeding, usually before a regulatory commission, involving expert testimony, discovery and briefing, and taking anywhere from 6 to 13 months, principally involving the rates and revenues of a public utility.
- **Rate design:** structure of prices for each component of rates for each class of customers, which are calculated to produce the revenue requirement.
- **Rate of return**: the level of return (profit) that a utility can collect from ratepayers for each source of capital funding the utility receives. Different sources of capital funding have different rates of return. The overall rate of return is calculated by using the weighted average of the cost of debt and common equity within the utility's capital structure.
- **Restructured or deregulated:** Replacement of the traditional vertically integrated utility with some form of competitive market. In some cases, transmission and generation components are purchased by the customer-serving distribution utility in a wholesale competitive market. In others, retail customers are allowed to choose their generation suppliers in a competitive market.
- **Revenue requirement**: the annual revenues that the utility needs to collect to cover its costs, including a return of and on its investment, given an expected level of demand for energy. It is the sum of operation and maintenance expenses, depreciation, taxes, and a return on rate base and often modified by adjustments.
- **Supplemental Schedules:** in this context, this generally means the same thing as an "adder."
- **Used and Useful:** In general, used means that the facility is actually providing service, and useful means that without the facility, either costs would be higher or the quality of service would be lower. However, each state has its own regulatory history that determines what is meant by this term.
- **Vertically integrated:** A utility that owns its own generating plants, transmission system, and distribution lines, providing all aspects of electric service.

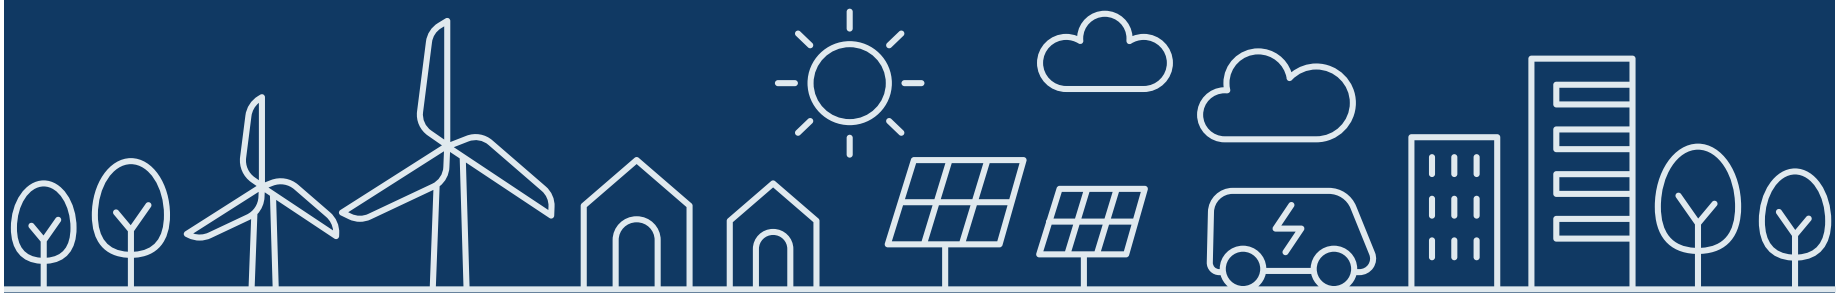
GREAT PLAINS INSTITUTE

Clarifying Questions



GREAT PLAINS INSTITUTE

BREAK

Return at 3:10 pm PT

Breakout Sessions:
Evaluating Oregon's Current Ratemaking Framework

Room 1

Affordable, high-value service

- Affordability *
- **Reduced disconnections ***
- Customer service
- Customer trust
- **Reduced energy burden**
- **Support for vulnerable and low-income customers ***
- Plain language, translated, and regular communications
- **Cost containment**

Room 2

Predictable and efficient regulatory system

- Procedural equity
- **Reduced administrative burden**
- **Stagger rate increases**
- **Reduced rate case frequency**
- **Rate transparency**
- **Narrow and clear tracking mechanisms**
- Standardization in the rate setting and rate case process
- **Smooth and predictable rates and bills**
- **Consolidated rate-setting process**
- **Reduced single-issue ratemaking**
- **Alignment between forecasts and expenses**

Clean energy development

- GHG emission reductions *
- DER expansion *
- **Energy efficiency ***
- Electrification
- Low-carbon fuels
- Community solar expansion *
- Microgrid expansion *
- Demand response expansion *

Room 3

High-performing utility business

- Strategic and efficient capital investment
- **Efficient utility operations ***
- Asset utilization
- **Increased productivity**
- **Safety**
- **Reliability ***
- **Resilience ***
- Financial health
- **Fair earning opportunity**
- Planning
- Interconnection
- **Investments in policy goals**

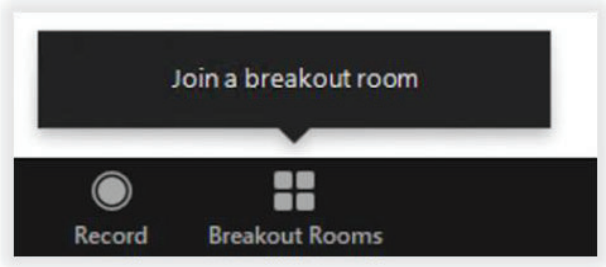
Asterisk (*): Outcomes identified in SB 688

Bold: Outcomes listed by three or more stakeholders in scoping survey

Room 4

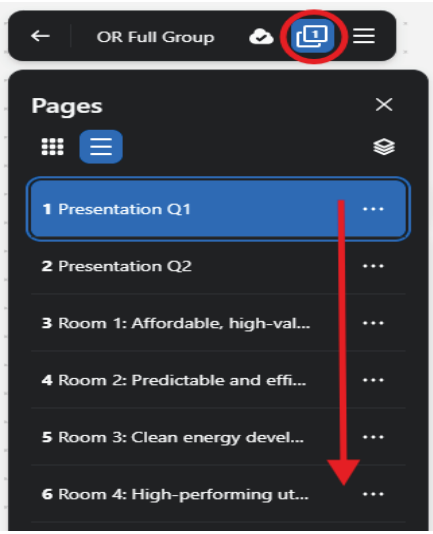
GREAT PLAINS INSTITUTE

Breakout Sessions: Evaluating Oregon's Current Ratemaking Framework



Select one breakout room based on the following goals:

- **Room 1:** Affordable, high-value service
- **Room 2:** Predictable and efficient regulatory system
- **Room 3:** Clean energy development
- **Room 4:** High-performing utility business



Consider the following for a given goal:

1. Which aspects of Oregon's existing regulatory framework help incentivize alignment with this goal?
2. What aspects of Oregon's existing ratemaking framework could be adjusted/evolved to improve alignment with this goal?

Participants will have the option to switch to a second room after 20 minutes.

GREAT PLAINS INSTITUTE

Breakout Sessions: Evaluating Oregon's Current Ratemaking Framework

- Key takeaways from each room
  - **Room 1:** Affordable, high-value service
  - **Room 2:** Predictable and efficient regulatory system
  - **Room 3:** Clean energy development
  - **Room 4:** High-performing utility business

Enclosures

OREGON PUBLIC UTILITY COMMISSION
ENERGY BURDEN METRICS REPORT QUARTERLY REPORT
DOCKET NO. RO 16
OAR 860-021-0408

Instructions for Filing

General Information

I. Purpose

The Energy Burden Metrics Report is a quarterly reporting requirement for all investor-owned utilities that operate within Oregon. These reports are designed to collect energy burden related metrics and program specific information from utilities. These reports are considered to be non-confidential.

II. Who Must Submit

All investor-owned utilities that operate within Oregon are required to submit this report.

III. When to Submit

Each energy utility must submit a quarterly report within 45 days of the end of each reporting period. For quarterly reporting purposes, the following four reporting periods apply: January 1 to March 31, April 1 to June 30, July 1 to September 30, October 1 to December 31

General Instructions

a. Enter the month and year for each date cell using the following format – "Month Year".
b. For any cell(s) that is not applicable to the respondent enter "NA" or "Not Applicable".
c. For any resubmissions, please explain the reason for the resubmission in a footnote or data field.
d. For average usage metrics, figures should be reported in either kWh or Therms. For total usage metrics, figures should be reported in either MWh or Therms.
e. For average bill metrics, figures should include cents rounded to the second decimal place.
f. For all residential arrearage figures, each residential customer should only be counted only in one group, based on their oldest arrearage balance.
g. If errors or omissions are discovered after a report has been submitted, utilities must submit a revised report within 30 days of identifying the discrepancy.
h. In addition to this form, utilities must submit zip-code level data in an accompanying excel file.

Table 1: Utility Information

Line No.	Field	Description
1	Utility Name	NW Natural
2	Reporting Period	1Q24
3	Date of Submission	8/14/2025

Table 2: Arrearage Information

Line No.	Metric	Month 1	Month 2	Month 3
		Jan-24	Feb-24	Mar-24
1	Total Number of Residential Customers in Arrears	45,351	50,964	49,647
2	31 – 60 days in arrears	21,899	32,226	24,227
3	61 – 90 days in arrears	9,790	7,710	15,634
4	91 or more days in arrears	13,662	11,028	9,786
5	Total Residential Arrears Balance	$6,471,438.56	$7,682,321.98	$7,318,111.83

4	Tier 4	0% - 15% SMI	40%
5	Tier 5		

Appendix Table 2: Terms & Definitions		
Line No.	**Term**	**Definition**
1	Administrative costs	All incremental expenses related to the management and operation of the bill discount program. This includes, but is not limited to, incremental costs for program design, staff salaries, data processing, customer outreach, eligibility verification, compliance, reporting, and any other overhead or indirect costs necessary to administer the program
2	Applied credits	The aggregate dollar value of discounts applied to the utility bills of residential customers that participate in the utility's bill discount program.
3	Arrearage balance	Any amount of money that a customer owes to the utility company for services provided which remain unpaid past the bill issuance date.
4	Average bill discount program participant usage	The average monthly usage of residential customers enrolled in a utility- administered bill discount program.
5	Average residential bill	The average monthly bill for residential utility services within a utility's Oregon service territory
6	Average residential usage	The average monthly amount of energy billed per residential meter within a utility's Oregon service territory.
7	Disenrollments	Residential customers who were enrolled in a utility's bill discount program as of the previous reporting period but are no longer participating as of the current reporting period. This includes customers who were removed from the program due to ineligibility or non-compliance.
8	Energy assistance recipient	A residential customer who has received bill payment assistance with an energy bill from any federal, state, customer-funded, bill payment assistance fund or program at least once within the past 12 months.
9	New enrollments	Residential customers enrolled in a utility's bill discount program for the first time within the current calendar year.
10	Pre-discount average bill discount program participant bill	The average monthly utility bill amount for bill discount program participants before the application of any bill discounts.
11	Post-discount average bill discount program participant bill	The average monthly utility bill amount for bill discount program participants after the application of their respective bill discount.
12	Residential customer	Any individual or household that receives utility services for personal, non- commercial use. This includes all customers being served on a utility's residential service tariff.
13	Service disconnection for non-payment	Any instances where utility service to a residential account was terminated due to the customer's failure to pay their utility bill.
14	Disconnection notice	Any written or electronic notification issued by a utility to a customer in accordance with OAR 860-021-0405 (3).
15	Total arrears balance of bill discount program participants	The total dollar amount of outstanding balances owed by residential customers enrolled in a utility-administered bill discount program on their utility bills.
16	Total dollars provided to bill discount program participants	The aggregate dollar value of discounts applied to the utility bills of residential customers who participate in the utility's bill discount program.
17	Total bill discount program costs	The total expenditure incurred by a utility in administering its bill discount program for low-income residential customers.
18	Total residential arrearage balances	The total dollar amount of outstanding balances owed by residential customers on their utility bills.
19	31-60 days in arrears	A customer who has an arrearage balance that has been unpaid for a period of between 31 and 60 days from the original bill issuance date.
20	61-90 days in arrears	A customer who has an arrearage balance that has been unpaid for a period of between 61 and 90 days from the original bill issuance date.
21	91+ days in arrears	A customer who has an arrearage balance that has been unpaid for a period greater than 90 days from the original bill issuance date.

OREGON PUBLIC UTILITY COMMISSION
ENERGY BURDEN METRICS REPORT QUARTERLY REPORT
DOCKET NO. RO 16
OAR 860-021-0408

Instructions for Filing

General Information

I. Purpose

The Energy Burden Metrics Report is a quarterly reporting requirement for all investor-owned utilities that operate within Oregon. These reports are designed to collect energy burden related metrics and program specific information from utilities. These reports are considered to be non-confidential.

II. Who Must Submit

All investor-owned utilities that operate within Oregon are required to submit this report.

III. When to Submit

Each energy utility must submit a quarterly report within 45 days of the end of each reporting period. For quarterly reporting purposes, the following four reporting periods apply: January 1 to March 31, April 1 to June 30, July 1 to September 30, October 1 to December 31

General Instructions

a. Enter the month and year for each date cell using the following format – "Month Year".
b. For any cell(s) that is not applicable to the respondent enter "NA" or "Not Applicable".
c. For any resubmissions, please explain the reason for the resubmission in a footnote or data field.
d. For average usage metrics, figures should be reported in either kWh or Therms. For total usage metrics, figures should be reported in either MWh or Therms.
e. For average bill metrics, figures should include cents rounded to the second decimal place.
f. For all residential arrearage figures, each residential customer should only be counted only in one group, based on their oldest arrearage balance.
g. If errors or omissions are discovered after a report has been submitted, utilities must submit a revised report within 30 days of identifying the discrepancy.
h. In addition to this form, utilities must submit zip-code level data in an accompanying excel file.

Appendix Table 2: Terms & Definitions

Line No.	Term	Definition
1	Administrative costs	All incremental expenses related to the management and operation of the bill discount program. This includes, but is not limited to, incremental costs for program design, staff salaries, data processing, customer outreach, eligibility verification, compliance, reporting, and any other overhead or indirect costs necessary to administer the program
2	Applied credits	The aggregate dollar value of discounts applied to the utility bills of residential customers that participate in the utility's bill discount program.
3	Arrearage balance	Any amount of money that a customer owes to the utility company for services provided which remain unpaid past the bill issuance date.
4	Average bill discount program participant usage	The average monthly usage of residential customers enrolled in a utility- administered bill discount program.
5	Average residential bill	The average monthly bill for residential utility services within a utility's Oregon service territory
6	Average residential usage	The average monthly amount of energy billed per residential meter within a utility's Oregon service territory.
7	Disenrollments	Residential customers who were enrolled in a utility's bill discount program as of the previous reporting period but are no longer participating as of the current reporting period. This includes customers who were removed from the program due to ineligibility or non-compliance.
8	Energy assistance recipient	A residential customer who has received bill payment assistance with an energy bill from any federal, state, customer-funded, bill payment assistance fund or program at least once within the past 12 months.
9	New enrollments	Residential customers enrolled in a utility's bill discount program for the first time within the current calendar year.
10	Pre-discount average bill discount program participant bill	The average monthly utility bill amount for bill discount program participants before the application of any bill discounts.
11	Post-discount average bill discount program participant bill	The average monthly utility bill amount for bill discount program participants after the application of their respective bill discount.
12	Residential customer	Any individual or household that receives utility services for personal, non- commercial use. This includes all customers being served on a utility's residential service tariff.
13	Service disconnection for non-payment	Any instances where utility service to a residential account was terminated due to the customer's failure to pay their utility bill.
14	Disconnection notice	Any written or electronic notification issued by a utility to a customer in accordance with OAR 860-021-0405 (3).
15	Total arrears balance of bill discount program participants	The total dollar amount of outstanding balances owed by residential customers enrolled in a utility-administered bill discount program on their utility bills.
16	Total dollars provided to bill discount program participants	The aggregate dollar value of discounts applied to the utility bills of residential customers who participate in the utility's bill discount program.
17	Total bill discount program costs	The total expenditure incurred by a utility in administering its bill discount program for low-income residential customers.
18	Total residential arrearage balances	The total dollar amount of outstanding balances owed by residential customers on their utility bills.
19	31-60 days in arrears	A customer who has an arrearage balance that has been unpaid for a period of between 31 and 60 days from the original bill issuance date.
20	61-90 days in arrears	A customer who has an arrearage balance that has been unpaid for a period of between 61 and 90 days from the original bill issuance date.
21	91+ days in arrears	A customer who has an arrearage balance that has been unpaid for a period greater than 90 days from the original bill issuance date.

OREGON PUBLIC UTILITY COMMISSION
ENERGY BURDEN METRICS REPORT QUARTERLY REPORT
DOCKET NO. RO 16
OAR 860-021-0408

Instructions for Filing

General Information

I. Purpose

The Energy Burden Metrics Report is a quarterly reporting requirement for all investor-owned utilities that operate within Oregon. These reports are designed to collect energy burden related metrics and program specific information from utilities. These reports are considered to be non-confidential.

II. Who Must Submit

All investor-owned utilities that operate within Oregon are required to submit this report.

III. When to Submit

Each energy utility must submit a quarterly report within 45 days of the end of each reporting period. For quarterly reporting purposes, the following four reporting periods apply: January 1 to March 31, April 1 to June 30, July 1 to September 30, October 1 to December 31

General Instructions

a. Enter the month and year for each date cell using the following format – "Month Year".
b. For any cell(s) that is not applicable to the respondent enter "NA" or "Not Applicable".
c. For any resubmissions, please explain the reason for the resubmission in a footnote or data field.
d. For average usage metrics, figures should be reported in either kWh or Therms. For total usage metrics, figures should be reported in either MWh or Therms.
e. For average bill metrics, figures should include cents rounded to the second decimal place.
f. For all residential arrearage figures, each residential customer should only be counted only in one group, based on their oldest arrearage balance.
g. If errors or omissions are discovered after a report has been submitted, utilities must submit a revised report within 30 days of identifying the discrepancy.
h. In addition to this form, utilities must submit zip-code level data in an accompanying excel file.

Appendix Table 2: Terms & Definitions

Line No.	Term	Definition
1	Administrative costs	All incremental expenses related to the management and operation of the bill discount program. This includes, but is not limited to, incremental costs for program design, staff salaries, data processing, customer outreach, eligibility verification, compliance, reporting, and any other overhead or indirect costs necessary to administer the program
2	Applied credits	The aggregate dollar value of discounts applied to the utility bills of residential customers that participate in the utility's bill discount program.
3	Arrearage balance	Any amount of money that a customer owes to the utility company for services provided which remain unpaid past the bill issuance date.
4	Average bill discount program participant usage	The average monthly usage of residential customers enrolled in a utility- administered bill discount program.
5	Average residential bill	The average monthly bill for residential utility services within a utility's Oregon service territory
6	Average residential usage	The average monthly amount of energy billed per residential meter within a utility's Oregon service territory.
7	Disenrollments	Residential customers who were enrolled in a utility's bill discount program as of the previous reporting period but are no longer participating as of the current reporting period. This includes customers who were removed from the program due to ineligibility or non-compliance.
8	Energy assistance recipient	A residential customer who has received bill payment assistance with an energy bill from any federal, state, customer-funded, bill payment assistance fund or program at least once within the past 12 months.
9	New enrollments	Residential customers enrolled in a utility's bill discount program for the first time within the current calendar year.
10	Pre-discount average bill discount program participant bill	The average monthly utility bill amount for bill discount program participants before the application of any bill discounts.
11	Post-discount average bill discount program participant bill	The average monthly utility bill amount for bill discount program participants after the application of their respective bill discount.
12	Residential customer	Any individual or household that receives utility services for personal, non- commercial use. This includes all customers being served on a utility's residential service tariff.
13	Service disconnection for non-payment	Any instances where utility service to a residential account was terminated due to the customer's failure to pay their utility bill.
14	Disconnection notice	Any written or electronic notification issued by a utility to a customer in accordance with OAR 860-021-0405 (3).
15	Total arrears balance of bill discount program participants	The total dollar amount of outstanding balances owed by residential customers enrolled in a utility-administered bill discount program on their utility bills.
16	Total dollars provided to bill discount program participants	The aggregate dollar value of discounts applied to the utility bills of residential customers who participate in the utility's bill discount program.
17	Total bill discount program costs	The total expenditure incurred by a utility in administering its bill discount program for low-income residential customers.
18	Total residential arrearage balances	The total dollar amount of outstanding balances owed by residential customers on their utility bills.
19	31-60 days in arrears	A customer who has an arrearage balance that has been unpaid for a period of between 31 and 60 days from the original bill issuance date.
20	61-90 days in arrears	A customer who has an arrearage balance that has been unpaid for a period of between 61 and 90 days from the original bill issuance date.
21	91+ days in arrears	A customer who has an arrearage balance that has been unpaid for a period greater than 90 days from the original bill issuance date.

OREGON PUBLIC UTILITY COMMISSION
ENERGY BURDEN METRICS REPORT QUARTERLY REPORT
DOCKET NO. RO 16
OAR 860-021-0408

Instructions for Filing

General Information

I. Purpose

The Energy Burden Metrics Report is a quarterly reporting requirement for all investor-owned utilities that operate within Oregon. These reports are designed to collect energy burden related metrics and program specific information from utilities. These reports are considered to be non-confidential.

II. Who Must Submit

All investor-owned utilities that operate within Oregon are required to submit this report.

III. When to Submit

Each energy utility must submit a quarterly report within 45 days of the end of each reporting period. For quarterly reporting purposes, the following four reporting periods apply: January 1 to March 31, April 1 to June 30, July 1 to September 30, October 1 to December 31

General Instructions

a. Enter the month and year for each date cell using the following format – "Month Year".
b. For any cell(s) that is not applicable to the respondent enter "NA" or "Not Applicable".
c. For any resubmissions, please explain the reason for the resubmission in a footnote or data field.
d. For average usage metrics, figures should be reported in either kWh or Therms. For total usage metrics, figures should be reported in either MWh or Therms.
e. For average bill metrics, figures should include cents rounded to the second decimal place.
f. For all residential arrearage figures, each residential customer should only be counted only in one group, based on their oldest arrearage balance.
g. If errors or omissions are discovered after a report has been submitted, utilities must submit a revised report within 30 days of identifying the discrepancy.
h. In addition to this form, utilities must submit zip-code level data in an accompanying excel file.

43	91 or more days in arrears	$306,240.97	$294,365.82	$297,330.73

Appendix

Appendix Table 1: Utility Bill Discount Program Information

Line No.	Utility Bill Discount Tier *Note: NW Natural's Tiers are numbered 0-4.	SMI Range (%)	Discount (%)
1	Tier 1	46% - 60% SMI	15%
2	Tier 2	31% - 45% SMI	30%
3	Tier 3	16% - 30% SMI	50%
4	Tier 4	0% - 15% SMI	85%
5	Tier 5		

Appendix Table 2: Terms & Definitions

Line No.	Term	Definition
1	Administrative costs	All incremental expenses related to the management and operation of the bill discount program. This includes, but is not limited to, incremental costs for program design, staff salaries, data processing, customer outreach, eligibility verification, compliance, reporting, and any other overhead or indirect costs necessary to administer the program
2	Applied credits	The aggregate dollar value of discounts applied to the utility bills of residential customers that participate in the utility's bill discount program.
3	Arrearage balance	Any amount of money that a customer owes to the utility company for services provided which remain unpaid past the bill issuance date.
4	Average bill discount program participant usage	The average monthly usage of residential customers enrolled in a utility- administered bill discount program.
5	Average residential bill	The average monthly bill for residential utility services within a utility's Oregon service territory
6	Average residential usage	The average monthly amount of energy billed per residential meter within a utility's Oregon service territory.
7	Disenrollments	Residential customers who were enrolled in a utility's bill discount program as of the previous reporting period but are no longer participating as of the current reporting period. This includes customers who were removed from the program due to ineligibility or non-compliance.
8	Energy assistance recipient	A residential customer who has received bill payment assistance with an energy bill from any federal, state, customer-funded, bill payment assistance fund or program at least once within the past 12 months.
9	New enrollments	Residential customers enrolled in a utility's bill discount program for the first time within the current calendar year.
10	Pre-discount average bill discount program participant bill	The average monthly utility bill amount for bill discount program participants before the application of any bill discounts.
11	Post-discount average bill discount program participant bill	The average monthly utility bill amount for bill discount program participants after the application of their respective bill discount.
12	Residential customer	Any individual or household that receives utility services for personal, non- commercial use. This includes all customers being served on a utility's residential service tariff.
13	Service disconnection for non-payment	Any instances where utility service to a residential account was terminated due to the customer's failure to pay their utility bill.
14	Disconnection notice	Any written or electronic notification issued by a utility to a customer in accordance with OAR 860-021-0405 (3).
15	Total arrears balance of bill discount program participants	The total dollar amount of outstanding balances owed by residential customers enrolled in a utility-administered bill discount program on their utility bills.
16	Total dollars provided to bill discount program participants	The aggregate dollar value of discounts applied to the utility bills of residential customers who participate in the utility's bill discount program.
17	Total bill discount program costs	The total expenditure incurred by a utility in administering its bill discount program for low-income residential customers.
18	Total residential arrearage balances	The total dollar amount of outstanding balances owed by residential customers on their utility bills.
19	31-60 days in arrears	A customer who has an arrearage balance that has been unpaid for a period of between 31 and 60 days from the original bill issuance date.
20	61-90 days in arrears	A customer who has an arrearage balance that has been unpaid for a period of between 61 and 90 days from the original bill issuance date.
21	91+ days in arrears	A customer who has an arrearage balance that has been unpaid for a period greater than 90 days from the original bill issuance date.

OREGON PUBLIC UTILITY COMMISSION
ENERGY BURDEN METRICS REPORT QUARTERLY REPORT
DOCKET NO. RO 16
OAR 860-021-0408

Instructions for Filing

General Information

I. Purpose

The Energy Burden Metrics Report is a quarterly reporting requirement for all investor-owned utilities that operate within Oregon. These reports are designed to collect energy burden related metrics and program specific information from utilities. These reports are considered to be non-confidential.

II. Who Must Submit

All investor-owned utilities that operate within Oregon are required to submit this report.

III. When to Submit

Each energy utility must submit a quarterly report within 45 days of the end of each reporting period. For quarterly reporting purposes, the following four reporting periods apply: January 1 to March 31, April 1 to June 30, July 1 to September 30, October 1 to December 31

General Instructions

a. Enter the month and year for each date cell using the following format – "Month Year".
b. For any cell(s) that is not applicable to the respondent enter "NA" or "Not Applicable".
c. For any resubmissions, please explain the reason for the resubmission in a footnote or data field.
d. For average usage metrics, figures should be reported in either kWh or Therms. For total usage metrics, figures should be reported in either MWh or Therms.
e. For average bill metrics, figures should include cents rounded to the second decimal place.
f. For all residential arrearage figures, each residential customer should only be counted only in one group, based on their oldest arrearage balance.
g. If errors or omissions are discovered after a report has been submitted, utilities must submit a revised report within 30 days of identifying the discrepancy.
h. In addition to this form, utilities must submit zip-code level data in an accompanying excel file.

UG 527

NW Natural Alternative Rate Mechanism

Data Request Response

Request No.: UG 527 CUB DR 7

In the analysis represented by Table 5, "NW Natural Bill Discount Effectiveness Targeting 2 Percent Energy Burden" at NW Natural/100 Kravitz-Walker/Page 20:

a. Why did the Company use the mid-point of income for each tier and not the low-point as a baseline? Did the Company do analysis using the low-point, why or why not?

b. Did the Company consider average winter usage as well as average annual usage in its analysis? Why or why not?

c. Why did the Company use average residential usage in its analysis instead of the average residential usage by tier–which the Company has to now report on in RO 16?

Response:

a. The Company used the mid-point of the income for each tier for consistency and comparability with the actual design of the bill discount program. The Company last proposed changes to the discount percentage in the 2024 rate case in UG 490 (see UG 490 NW Natural/200, Tanka/Pages 22-24). Although the ultimate changes in the discount percentages were resolved through settlement, the underlying analysis included the use of mid-point income levels to provide better coverage of reduced energy burden throughout each tier. The original design of the bill discount program (docket ADV 1390) used the max of the income range. For these reasons, the Company did not analyze using the low-point.

b. No. The analysis provided in Table 5 is consistent with previous illustrations of the impacts of the bill discount program under existing and proposed rates using the same methodology from the program's design, thus providing consistency and comparability of the effectiveness of the program. This analysis used annual usage and annual income. Bill discounts are applied as a percentage of the bill, so larger winter bills will have a commensurately larger bill discount. The bill discount program is intended to reduce energy burden for customers but does not mitigate the seasonality of gas usage. Customers who wish to level out seasonality can participate in the equal pay program.

c. Please refer to responses above – Table 5 uses a methodology previously used in illustrating bill discount program impacts and was used here for consistency and comparability.

CASE: UG 490
WITNESS: Matt Muldoon

PUBLIC UTILITY COMMISSION
OF
OREGON

STAFF EXHIBIT 100

REDACTED
OPENING TESTIMONY
Overview and Return on Equity
Subject to Protective Order No. 23-480

April 18, 2024

Docket No: UG 490 Staff/100
Muldoon/1

Q. Please state your name, occupation, and business address.

A. My name is Matt Muldoon. I am a manager employed in the Accounting and Finance Section of the Rates, Safety and Utility Performance Program (RSUP) of the Public Utility Commission of Oregon (OPUC). My business address is 201 High Street SE, Suite 100, Salem, Oregon 97301.

Q. Please describe your educational background and work experience.

A. My witness qualifications statement is found in Exhibit Stipulating Parties/101.

Q. What is the purpose of your testimony?

A. I introduce Staff-sponsored adjustments and issues regarding the Northwest Natural Gas Company (NW Natural, NWN, or Company) request for a general rate revision, docketed as Docket No. UG 490 and articulate some of Staff's overarching concerns regarding the frequency and aggregate magnitude of the Company's proposed increases in this rate case and in recent years. I also address NW Naturals Pensions and Post Retirement Medical Expenses, Cost of Capital components and overall Rate of Return (ROR), going into greater detail regarding Return on Common Equity (ROE).

Further detail on Capital Structure is found in Rose Pileggi's testimony in Exhibit Staff/1200. NW Natural's cost of Long-Term Debt is addressed in a Stipulation executed by Staff and other parties.[1]

Q. Are other Staff witnesses submitting testimony?

A. Yes. Each Staff assigned to Docket No. UG 490 is submitting separate testimony. My testimony introduces the Staff witnesses and their respective

[1] See Stipulating Parties/100, Kravitz, Muldoon, Jenks, Mullins/1-6.

assignments and estimates the revenue requirement impact of Staff recommended adjustments to the Company's initial filing. Additional detail about revenue, expense, and rate base components of Staff's proposed adjustments is found in Luz Mondragon's testimony in Exhibit Staff/200. The issues identified in Staff testimony are those identified to date. Staff's recommendations and issues may change when informed by new data and after reviewing testimony and analysis by other parties.

Q. How is your testimony organized?

A. My testimony is organized as follows:

1. Revenue Requirement Impact by Staff Topic 3
2. Introduction to Other Staff's Opening Testimony 5
3. Concern – Frequency and aggregate Amount of Increases 8
4. Overall Rate of Return (ROR) 14
6. Pensions and Post Retirment Medical Expense 46
7. Physical and Cyber Security 47
8. Conclusion 50

Q. Did you prepare exhibits for this docket?

A. Yes. In addition to my witness qualifications statement, I prepared the following exhibits:

Other Supporting Exhibits

Exhibit Staff/101 .. ROE – Peer Screen, Dividends, EPS, Hamada Adjustments
Exhibit Staff/102 ..... ROE - Three Stage DCF Modeling
Exhibit Staff/103 ..... ROE - Three Stage DCF Modeling Results

2. INTRODUCTION TO OTHER STAFF'S OPENING TESTIMONY

Q. Please describe the opening testimony submitted by Staff in this rate case.

A. The Staff exhibit number, respective Staff witness, and topics published on this date are presented below.

Topics addressed in Opening Testimony published April 18, 2024:

In **Exhibit 200, Luz Mondragon**, Senior Financial Analyst, reviews revenue requirements, customer service sales expense, operations and maintenance (O&M) non-labor (NL), excess deferred income taxes, interest synchronization, and budget to actuals.

In **Exhibit 300, Michell Scala**, Energy Justice Program Manager, provides an Energy Justice overview for this general rate case and discusses energy justice foci.

In **Exhibit 400, Melissa Nottingham** summarizes public comments received by the Commission as of March 12, 2024. She also provides an overview of how falling natural gas commodity costs may help control costs in another rate proceeding outside this general rate case: the Company's annual Purchase Gas Adjustment (PGA); and in aggregate reduce total rate increases for changes effective November 1, 2024.

In **Exhibit 500, David Abraham**, Senior Economist, discusses the Company's gas storage operating expense, gas storage in rate base, and new major storage gas projects.

Docket No: UG 490

Staff/100
Muldoon/6

In **Exhibit 600, Laurel Anderson**, Senior Financial Analyst, discusses utility plant in service, gains on sale of utility property, test year rate base discrete vs, non-discrete investments, new plant major distribution projects, new plant resource centers, attestations, and Staff-proposed project adjustments.

In **Exhibit 700 Russ Beitzel**, Program Manager of the Rates and Telecommunications Section reviews non-medical insurance and risk, and Directors and Officers (D&O) insurance.

In **Exhibit 800, Itayi Chipanera**, Senior Financial Analyst, discusses escalations, cash working capital, regulatory fees, income taxes, leasehold improvements, and related topics.

In **Exhibit 900, Dr. Curtis Dlouhy**, Senior Economic and Policy Analyst, reviews NW Natural's proposals regarding the Climate Protection Program (CPP), Renewable Natural Gas Automatic (RNG) Adjustment Clause (AAC), Residential Line Extension Allowance (LEA), and Meter Modernization Program (MMP).

In **Exhibit 1000, Julie Dyck**, Senior Economist and Utility Analyst, reviews NW Natural's information technology and security (IT&S) projects, cloud-based software, and A&G (NL) expense.

In **Exhibit 1100, Anna Kim**, Energy Costs Section Manager, reviews the Company's Long-Term Hedging, and Schedule H.

In **Exhibit 1200, Charles Lockwood**, Utility Analyst, analyzes uncollectible accounts, and the Company's bill discount program.

In **Exhibit 1300, Mitch Moore**, Senior Utility Analyst, analyzes distribution O&M expense, materials and supplies, customer accounts, affiliated interests, and the Company's atmospheric testing.

In **Exhibit 1400, Ming Peng**, Senior Economist, analyzes depreciation expense, amortization expense, depreciation reserve, amortization reserve, and Allowance for Funds Used During Construction (AFUDC).

In **Exhibit 1500, Nicola Peterson**, Senior Telecom Analyst, analyzes current medical and health insurance, and Current Pension Costs.

In **Exhibit 1600, Rose Pileggi**, Senior Utility Analyst, analyzes NW Natural's capital structure.

In **Exhibit 1700, Paul Rossow**, Utility Analyst, reviews NW Natural's expense related to political activities, advertising, memberships, dues, donations, meals, entertainments, and travel.

In **Exhibit 1800, Eric Shierman**, Senior Utility Analyst, analyzes NW Natural's marginal cost, rate spread, and rate design.

In **Exhibit 1900, Dr. Bret Stevens, Ph.D.**, Senior Economist, analyzes the Company's load forecasting, decoupling, and rate base calculations.

In **Exhibit 2000, Steph Yamada**, Senior Utility Analyst examines NW Natural's wages and salaries, incentives, full time equivalents (FTE), and other related issues.

In **Exhibit 2100, Kervin Hennessy**, Senior Utility Analyst examines NW Natural's safety and inspection programs.

3. CONCERN – FREQUENCY AND AGGREGATE AMOUNT OF INCREASES

Q. Are there any issues that appear in the case that you would like to highlight?

A. Yes. Staff is concerned that the aggregate rate impacts of this general rate case, deferrals, and power costs may constitute an unreasonably energy burden for NW Natural's Oregon utility customers outpacing Oregon wages. According to the Wall Street Journal (WSJ), necessities like food have become much more expensive in recent years.[2] Further, the U.S. Federal Reserve (Fed) is tightening monetary policy to control high inflation.[3] This increases the cost of borrowing for utility rate payers as well as the cost of debt for utilities.

Q. Can you give a general idea of the mindset you would prefer NW Natural executives avoid when considering cost controls and capital project best management practices?

A. Yes. In the news articles cited above, some food company executives have said that "shoppers will adjust over time to higher prices, as they have in the past". This mind set presumes that consumers of goods and services who have finite resources will either consume less or otherwise shift their spending to deal with higher prices on necessities.

While energy efficiency is generally praiseworthy, Staff expects utility leadership to control costs to the extent practicable throttle the frequency and

[2] See Exhibit Staff/109 Muldoon/21 for "It's Been 30 Years Since Food Ate Up This Much of Your Income" by Jesse Newman and Heather Haddon of the WSJ – Feb 26, 2024. Also see Exhibit Staff/109 Muldoon/22 for "How Far $100 Goes at the Grocery Store After Five Years of Food Inflation" by Stephanie Stamm and Jesse Newman of the WSJ – April 4, 2024.

[3] See Exhibit Staff/109 Muldoon/26 for Fed activity on interest rates.

amount of rate increase, and to avoid the presumption that if energy prices rise faster than wages, they utility customers will just need to "adjust" to that new reality.

Q. Please show the approximate impact on residential customer rates were the Company's rate increase implemented as requested.

A. Staff cautions that it is still early in this proceeding and the following depiction reflects a point estimate prior to Staff's filing its Opening Testimony:

Table 2

Current Residential	Avg. Useage/Mo.	Residential Avg. Basic Charge $/Mo.	Residential Avg. Bill $/Mo.
Single Family	55	$ 8.00	$ 79.43
Multi-Family	55	$ 8.00	$ 79.43

	Nov. 1, 2024 Increase	Scenario if increase were $154.9 M*			
NWN Proposed [1]		New Residential Basic Charge $/Mo.	New Residential Avg. Bill $/Mo.	Increase $/Mo	% Increase
Single Family	$154.9 Million*	$ 10.00	$ 93.81	$ 14.38	18.10%
NP Single Family		$ 26.25	$ 66.54	n/a	n/a
Multi-Family		$ 8.00	$ 91.82	$ 12.39	15.60%
NP Multi-Family		$ 24.25	$ 63.92	n/a	n/a

* Oregon jurisdictional revenues overall increase of 16.62 percent

[1] Margin revenues for existing and new premise (NP) were designed to generate an equal amount. Monthly bill is driven by usage differences.

This information does not yet reflect recommendations offered by Staff and intervenors for Commission consideration, which if adopted, would reduce the impact of NW Natural's proposed rate increase.

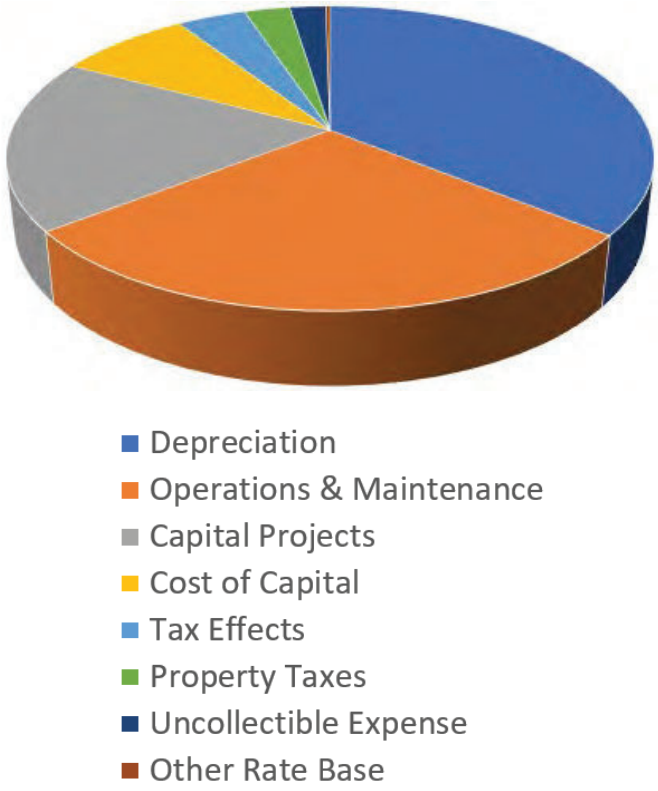
Q. What does the Company identify as key cost drivers when describing this rate case to investors and analysts?

Docket No: UG 490

Staff/100
Muldoon/10

A. With the caution that this is at a very general level, and importantly without showing NW Natural's offsetting revenues and cost controls, the largest drivers of costs in this general rate increase are shown below.

Table 3



Cost Drivers	%
Depreciation	35.92%
Operations & Maintenance	28.57%
Capital Projects	18.36%
Cost of Capital	7.90%
Tax Effects	4.12%
Property Taxes	2.72%
Uncollectible Expense	2.14%
Other Rate Base	0.26%
	100.00%

Staff's testimony will provide more detail on the above costs. Note that the information above does not capture all the Company's tax offsets and offsetting operating revenues as well as cost controls that reduce the impact to customers rates.

Q. What could the Commission do to address general rate increases of the magnitude proposed by NW Natural in this general rate case?

A. One solution proposed by Bob Jenks of the Oregon Citizens' Utility Board (CUB) on that organization's website is for the Commission to set the utility's profit margin at the lowest reasonable point.[4]

Q. Does Staff agree with CUB that this is the Commission's best option?

A. Staff analyzing Cost of Capital (CoC) in this general rate case would not use terms like "allowable profit margins" interchangeably with allowed Return on Equity (ROE). Staff also think holistically about Cost of Capital considering credit ratings and the financial health of Commission jurisdictional energy utilities and their relative strength in financial markets in comparison to their peer or similarly situated like utilities.

However, in advance of reading any testimony by CUB in this general rate case, Staff agrees that the Commission could consider any ROE in Staff's range of reasonable ROE's for Commission Authorized ROE in its final order in this general rate case.

Q. Are there other ways that the Commission could look at using ROE to mitigate the magnitude and frequency of general rate cases?

A. Yes. The Commission could consider using ROE as a throttle to control the frequency of general rate cases. For example, were a utility to file three

[4] Posted January 25, 2024, on https://oregoncub.org/ this proposal within "Is Oregon Utility Regulation Part of the Problem?" by Bob Jenks is reproduced with some small editing changes to fit a written rather than on-screen format at Exhibit Staff/109 Muldoon/13 to capture the context in which the suggestion was made. Also see Exhibit Staff/109 Muldoon/14-16.

general rate cases in a five-year period, the Commission might consider that activity sufficient to reduce regulatory lag and reduce financial risk in terms of metrics like ratio of cash flow from operations before changes in working capital (CFO pre-WC) to debt, in a form meaningful to credit rating agencies.

Q. Would that last approach be immediately applicable in this general rate case?

A. That is uncertain. Persons concerned about the frequency and aggregate magnitude of energy utility rate increases in Oregon are sharing ideas on possible solutions. Consideration of recommendations raised in this general rate case could give the Commission tools to mitigate the impact of frequent rate cases on jurisdictional utility customers. Staff will continue to monitor suggestions on intervenors in this case and closely review the analysis and justifications provided to support such recommendations to the Commission.

The Commission's evaluation of such proposals is consistent with public comments and posting by intervenors asking that the Commission consider impacts on utility customers in its determination of most appropriate just and reasonable outcomes in this case.

Q. Are utility customers helped by falling natural gas prices?

A. Yes. Please see Exhibit Staff/400 Nottingham's discussion of how natural gas prices falling in the first quarter of this year could help control Purchase Gas Adjustment (PGA) and rate case aggregate rate changes on November 1.[5]

[5] NYMEX Natural Gas Prices fell 29.87 percent in the first quarter of 2024. See Exhibit Staff/109, Muldoon/44, "Track the Markets: Quarterly Winners and Losers" published in the Wall Street Journal on April 1, 2024.

Docket No: UG 490

Staff/100
Muldoon/14

4. OVERALL RATE OF RETURN (ROR)

Q. What did NW Natural include in its initial filing for its overall Rate of Return?

A. The Company. proposes a rate of return of 7.807 percent, with a capital structure comprised of 51 percent equity and 49 percent debt, a 5.104 percent cost of debt, and a 10.40 percent return on equity.

Q. Did you prepare tables showing NW Natural's current Commission-authorized, Company-filed, and Staff-calculated RORs?

A. Yes. The following three tables provide that information.

TABLE 4

NWN Current OPUC Authorized (UG 435 Order No. 22-388, 22-437)			NWN
Component	**Percent of Total**	**Stipulated or Implied Cost**	**Weighted Average**

CAPITAL STRUCTURE

Q. Has the Commission recently considered a preferred target capital structure?

A. Yes. In PacifiCorp's 2020 GRC, the Commission adopted a notional 50 percent equity capital structure. The Commission noted that "[w]e consider all components to the company's cost of capital that will result in a fair and reasonable rate of return, 'to strike a balance between the interests of ratepayers and the interests of investors [,]" and that 50/50 capital structure was an optimal structure for ratemaking.[7]

Q. Does NW Natural continue to target a 50 percent Common Equity / 50 percent LT Debt capital structure?

A. Yes.[8] See Staff/1600 Pileggi for further discussion on capital structure.

COST OF LONG-TERM DEBT

Q. Did parties address Cost of Long-Term Debt in a partial settlement?

---

7 *In the Matter of PacifiCorp, dba Pacific Power, Request for a General Rate Revision*, UE 374, Order No. 20-473, p. 24 (December 18, 2020).

8 See NW Natural/300, Wilson/3.

Docket No: UG 490

Staff/100
Muldoon/16

A. Yes. As earlier mentioned in this testimony NW Natural, Staff, the Alliance of Western Energy Consumers, and CUB recommend the Commission adopt a 4.712 percent Cost of Long-Term Debt.

Docket No: UG 490

Staff/100
Muldoon/17

5. RETURN ON EQUITY (ROE)

Q. What range of reasonable ROEs does Staff recommend, and within that range, what point ROE?

A. Staff observes a range of reasonable ROEs of 8.9 percent to 9.3 percent, with a mean ROE of 9.1, derived from Staff's two separate Three-Stage Discounted-Cash-Flow (DCF) models. Staff does not have a recommended point ROE estimate in this case, which is a departure from its typical practice.

Q. Did you perform a check on the results of Staff's Three-Stage DCF models?

A. Yes. Staff employed two simpler models to check the reasonableness of its findings:

1. A Single-Stage DCF or Gordon Growth Model; and,
2. A Capital Asset Pricing Model (CAPM).

Q. What results did these models generate?

A. The Gordon Growth Model generated a mean ROE of 7.5 percent using Staff's peer electric utilities and 7.7 percent with the Company's peer electric utilities. This model points to the lower end of Staff's three-stage discounted cash flow results.

The CAPM using Staff's usual inputs and methodology generated a mean ROE of 9.2 percent using Staff's peer electric utilities and 9.3 percent with the Company's peer electric utilities. This model supports an ROE at the middle to high end of Staff's three-stage discounted cash flow results.

Based on these checks, Staff utilizes the midpoint estimate of 9.1 percent

for ROE in Table 6 above. However, any point within Staff's range of reasonable ROEs from 8.9 percent to 9.3 percent (rounded up) would be support of a just and reasonable ROE.

Q. Does your recommended ROE meet appropriate standards?

A. Yes. The range or reasonable ROEs Staff recommends is appropriate for overall rates that are reflective of forward looking conditions in conjunction with Staff's adjustments and meets the *Hope* and *Bluefield* standards, as well as the requirements of Oregon Revised Statute (ORS) 756.040.[9] Staff recommendations are consistent with establishing "fair and reasonable rates" that are both, "commensurate with the return on investments in other enterprises having corresponding risks" and "sufficient to ensure confidence in the financial integrity of the utility, allowing the utility to maintain its credit and attract capital."[10] However, a higher point within Staff's range would be more supportive of current NW Natural credit ratings and financial market expectations.

PEER SCREEN

Q. How did you select comparable companies (peers) to estimate NW Natural's ROE?

A. Staff used companies that met the following criteria as peer utilities to the regulated electric utility activities of NW Natural:

---

[9] *See Federal Power Commission v. Hope Natural Electric Co*., 320 U.S. 591 (1944) and *Bluefield* Water *Works & Improvement Co. v. Public Service Commission of West Virginia*, 262 U.S. 679 (1923).

[10] *See* ORS 756.040(1)(a) and (b).

1. Covered by Value Line (VL) as an electric utility;
2. Forecasted by VL to have positive dividend growth;
3. LT Issuer Credit Rating greater than or equal to Baa3 from Moody's and greater than or equal to BBB- from S&P;[11]
4. No decline in annual dividend in last five years based on VL;
5. Has heavily regulated electric utility revenue;
6. Has LT Debt from 40 percent to 60 percent inclusive in VL Capital Structure; and[12]
7. Has no recent merger and acquisition activity representing a large portion of the utilities capitalization.[13]

Q. What peer groups of electric utilities did Staff and Company ROE modeling primarily depend on, and were there similarities?

A. The Company and Staff recommended regulated natural gas utility peer groups both drew from pertinent electric utilities covered by VL and with one exception, chose the same peer group. Staff did not select New Jersey Resources Corporation based on how much of its operational cash flows are regulated and that the credit rating coverage for the Company was withdrawn by Moody's and Standard & Poor's. Otherwise Table 7 shows the overlap between NW Natural's and Staff's peer groups.

Q. Did the Company apply some different criteria?

---

[11] See Exhibit Staff/101 Muldoon/1 for a table showing how Moody's and S&P ratings compare with each other.

[12] Staff also performs sensitivity analysis looking at a peer screen of 40 percent to 60 percent long-term debt in capital structure. Sensitivity analysis does not impact Staff's modeling results but does answer questions looking at alternative inputs and scenarios.

[13] See Staff/109, Muldoon/36-39 for examples of financial news on mergers monitored by Staff.

A. Yes. However, there was much overlap between NW Natural's and Staff's screening criteria. For example neither Staff nor NW Natural chose UGI Corporation as it primarily sells propane rather than natural gas.

TABLE 7[14]

UG 490 Company	UG 490 Staff
Yes	Yes
No	No
Yes	No
Yes	Yes
Yes	Yes
Yes	Yes
No	No
Yes	Yes
Yes	Yes
No	No

A comparison of the peer groups used by Staff and NW Natural are set forth in Table 9 above. Staff excluded some of the companies used by NW Natural based on the Staff screening criteria described above. Six companies were relied upon by both Staff and NW Natural.

Q. Is the set of Natural Gas utilities followed by Value Line relatively small.

A. Yes. Staff is also doing sensitivity modeling so that the Commission can consider over time whether publicly traded water utilities should be considered in the future as a second combined water and natural gas utilities peer group for a second set of recommendations regarding ROE. In this publication Staff

[14] See Exhibit Staff 102, Muldoon/2 for the full peer screening table.

just upgraded its natural gas utility information to bring its recommendations current with financial markets. Unfortunately Value Line has not yet made its forward-looking updates for water utilities so readers will have to wait for Staff's Rebuttal Testimony to see that modeling. However, because water utility information and modeling are provided only as a sensitivity and will not impact or change Staff's recommendations.

Q. Does NW Natural also offer a larger second peer group for the Commission's consideration?

A. Yes. NW Natural offers select electric utilities as a potential way to expand its natural gas peer group.[15] While Staff does not think this approach is informative for the Commission, the Company is considering ideas on how to address the relatively small group of publicly traded natural gas companies that are like NW Natural.

Bringing such ideas to the Commission may be helpful over the long run. The Commission may not have a best approach in mind now, but then again might not know exactly what it would like to see until it sees it.

MODEL RESULTS

Q. What are the results of your multistage DCF models?

A. See Table 8 below for the results from Staff's Three-Stage DCF modeling.

[15] See NW Natural/400 Coyne-Nelson/22 Figure 6.

Docket No: UG 490

Staff/100
Muldoon/22

TABLE 8 – RESULTS OF STAFF'S 3-STAGE DCF MODELING[16]

8.9%	to	9.3%
Midpoint	9.1%	ROE

Supporting Exhibit Staff/403, Muldoon/1 shows step-by-step how Staff's Hamada adjusted[17] Three-Stage DCF modeling, using Staff peers and growth rates, generates a higher recommended ROE than using NW Natural's peer electric utility group. Note that Staff rounds upward to generate a top of range value of 9.3 percent.

Q. Does Staff agree with the NW Natural's assertion that the Company's requested ROE of 10.1 percent is reasonable?

A. No. NW Natural comes up with a range of 10.0 percent to 10.6 percent with a recommended point estimate of 10.10 percent.[18] This is a very interesting range as most of the Company's similarly situated and sized (in terms of capitalization) utilities have ROE's authorized within the last two years that are below even the lowest point of this range. According to Regulatory Research Associates (RRA), an affiliate of S&P, the average ROE authorized for electric utilities rose to 9.54 percent for rate cases decided in 2022 from the 9.38 percent average for cases decided in 2021.[19]

16 See Exhibit Staff/103, Muldoon/1 for the results of Staff three-stage DCF modeling.
17 As Staff explains in more detail below, Staff applies the Hamada equation to better compare companies with different capital structures.
18 See NW Natural/403, Coyne-Nelson/1.
19 See Exhibit Staff/109, Muldoon/1 for Average Authorized ROEs in 2023 by Lisa Fontanella, RRA.

Docket No: UG 490

Staff/100
Muldoon/23

Staff invites the Company to explain further in its Reply Testimony why its results exceed recent state commission authorized ROE's for its modeling peers.

Q. Based on the information you have reviewed can you explain why NW Natural's results appear unreasonably high?

A. Yes. NW Natural inputs unreasonably high assumptions regarding future markets into its financial models. These unreasonably high assumptions, coupled with the relatively simple nature of the models relied on most heavily by NW Natural, leads inexorably to high estimates of what return is necessary to attract investors in today's market.

Q. Please provide an example of an extreme input used in the Company's modeling.

A. Example 1 below shows how important inputs are to ROE modeling. Looking at the difference between NW Natural and Staff inputs, one can see how use of an inflated market return can skew results upward.

Example 1 – NOT a Staff Recommendation:

NWN	4.42%	Rf Rate as shown in Exhibit NWN/400 Coyne-Nelson/13 @31
Opening Testimony	13.31%	NWN Mkt Return
	8.89%	NWN Mkt Risk Premium (MRP) as shown in Exhibit NWN/400 Coyne-Nelson/13 @30
Staff	4.555%	R_f as April 5, 2024 30 Yr UST Yields WSJ Bonds & Rates (wsj.com)
★	9.90%	S&P 500 Market Return 1993 thru 2023
	5.35%	Staff Mkt Risk Premium MRP)

Q. Please show a Capital Asset Pricing Model with Staff's and other more inflated inputs that may be preferred by the Company.

A. In Table 9 below, one can see how applying inputs from the table above to all the peer utilities changes ROE results of CAPM modeling.

Docket No: UG 490

CAPM points toward middle to upper end of Staff's 3 Stage DCF Modeling results.

Staff usually relies on a U.S. Treasury (UST) thirty-year bond as reported by the Wall Street Journal (WSJ) and 30-year monthly geometric returns for the Standard and Poor's (S&P) 500 index as a proxy for market returns. If one instead uses **an extreme arithmetic market return,** one can inflate the results of a CAPM model with few inputs.[20] One can also boost results by using a starting point for data collection in the Great Depression and then including World War II era boom times unlikely to be repeated in the U.S. economy.

Q. Is calculation of a market risk premium calculated from 1926-2003 a good predictor of future U.S. stock returns?

A. No. Since returns over the last thirty years are lower than those experienced earlier in the Country's history, which includes post-World-War II economic

[20] See Staff/104, Muldoon/1 for this CAPM modeling example.

expansion in the U.S, expectations should mirror the recent 30-year returns. According to Ibbotson, reliance on a date range like NW Natural's would overstate likely future market returns.[21]

Q. Is Staff suggesting that CAPM is not a good model to check results of other modeling Staff performs, as advised by the Commission?

A. No. Rather, Staff shows why the Commission accepts CAPM only as a check on ROE modeling and demonstrates how one can abuse the model. If one eliminates unreasonable modeling inputs, selects only peer electric utilities most like NW Natural using Staff's standard screening methods, and eliminates unreasonable inputs, you arrive at a result equal to Staff's ROE recommendations.[22]

STAFF MODELS

Q. Describe the two three-stage DCF models on which you primarily rely.

A. Staff's first model is a conventional three-stage discounted dividend model, which Staff denotes as a "30-year Three-stage Discounted Dividend Model with Terminal Valuation based on Growing Perpetuity" (referred to as "Model X"). This model captures the thinking of a money manager at a pension fund or insurance company, or other institutional investor, who expects to keep the Company's stock indefinitely and use the dividend cash flow to meet future obligations.

---

[21] See "The Equity Risk Premium" by William N. Goetzmann and Roger G. Ibbotson available on Amazon.com.

[22] Exhibits Staff/101-105 show how Staff's recommendations are generated.

Staff's second model is the "30-year Three-stage Discounted Dividend Model with Terminal Valuation Based on P/E Ratio" (referred to as "Model Y"). This model best fits the investor who has a goal they are working toward. In addition to the income stream from dividends, this investor intends to sell the stock as the goal is reached.

Both models require, for each proxy company analyzed by Staff, a "current" market price per share of common stock, estimates of dividends per share to be received over the next five years calculated from information provided by Value Line, and a long-term growth rate applicable to dividends 10- to 30-years out. On this last point, Staff always recommends the Commission be particularly vigilant for any substitution of a short-term growth rate for a long-term 20- to 30-year growth rate. Some growth rates labeled "long" may be supported by information looking at the next ten years or less into the future.

For a smooth transition, Staff steps the rate of dividend growth between the near-term (the next five years) and that of long-run expectations.

Q. How does Model X calculate the terminal value of dividends as a perpetual cash flow into the future?

A. Model X includes a terminal value calculation, in which Staff assumes dividends per share grow indefinitely at the rate of growth in Stage 3 ("growing perpetuity"). In contrast, Model Y terminates in a sale of stock where the price is determined by our escalated price/earnings (P/E) ratio.

Q. Why is thirty years the primary horizon for financial decision-making?

A. Investors focus on the 30-year U.S. Treasury (UST) Bond against alternate investment opportunities. Thirty years is a generally accepted period for economists to ascribe to one generation. It is a common length of time for mortgages of plants, equipment, and homes. Many institutional holders of utility securities match the cash flows from utility dividends to future obligations, such as the payout of life insurance, preparing to meet future pension and post-retirement obligations, and interest service for borrowing. Individuals plan for the education of their children, ownership of their home, and provision for their retirement on this same multi-decade timeframe.

Staff uses five years for Stage One, as that is the timeframe for which Value Line estimates of future dividends are available. This is as far as Value Line projects near-future trends. Staff also uses five years for Stage Two as a reasonable length of time for individual company's dividend growth rates that are materially different from the growth rate used in Stage Three (and common to all companies) to converge to a LT dividend growth rate more representative of all electric utilities.

Q. How do you address dividend timing?[23]

A. Each model uses two sets of calculations that differ in the assumed timing of dividend receipt. One set of calculations is based on the standard assumption that the investor receives dividends at the end of each period.

The second set of calculations assumes the investor receives dividends

[23] See Exhibit Staff/108 for Value Line (VL) information relied on in this testimony regarding publicly traded natural gas and water utilities.

at the beginning of each period. Each model averages the unadjusted ROE values to generate an Internal Rate of Return (IRR) produced with each set of calculations for each peer utility. This approach accounts for the time value of money, closely replicating actual quarterly receipt of dividends by investors.

Q. What price do you use for each peer utility's stock?

A. Staff used the average of closing prices for each utility from the first trading day in February 2024, March 2024, and April 2024, to represent a reasonable snapshot of utility stock prices.

GROWTH RATES USED IN THIRD STAGE OF DCF MODELS[24,25]

Q. What long-term growth rates did you use in Staff's two three-stage DCF models?[26,27]

A. Staff used three different long-term growth rates, with different methods employed in developing each.

The first method uses the U.S. Congressional Budget Office's (CBO) 4.46 percent nominal 20-year GDP growth rate estimate.

Staff's second Composite Growth Rate applies a 20 percent weight to each of the following referent entities long-term growth rates: EIA, Organization for Economic Co-operation and Development (OECD), the U.S. Social Security

[24] See Exhibit Staff/106, Muldoon1 for BEA historical GDP growth rates.

[25] See Exhibit Staff/107 Muldoon1 for TIPS implied long-run inflation rates.

[26] Methods used here related to GDP-based growth rates are similar, if not identical to methods Staff has used in past proceedings. *See*, as an example, Staff's discussion of these methods and, to a limited extent, their conceptual underpinnings in Docket No. UE 233, Exhibit Staff/800, Storm/46 – 52. Growth rates relied upon by Staff are also shown in Exhibit Staff/104, Muldoon/1.

[27] See three-stage DCF models X and Y in Exhibit Staff/103.

Administration (SSA), the Congressional Budget Office's (CBO), with the remaining 20 percent as the average annual historical real GDP growth rate, established using regression analysis of U.S. Bureau of Economic Analysis (BEA) Nominal Historical,1980 Q1 – 2022 Q4, for the period 1980 through 2021, to which we apply a TIPS implied inflation forecast. These growth rates are shown below in Table 10.

Staff's third Composite Growth Rate is BEA Nominal Historical,1980 Q1–2023 Q4. These growth rates are shown below in Table 10.

TABLE 10
GROWTH RATES STAFF RELIED UPON

Stage 3 – Long-Term Annual Dividend and EPS Growth Rates						
Component	Real Rate	TIPS Inflation Forecast	20-Yr Nominal Rate	Weight	Weighted Rate	
Energy Information Administration (EIA)	2.24%	2.39%	4.69%	20.0%	0.94%	
Organization for Economic Co-operation and Development (OECD)ggridlines	1.81%	2.39%	4.24%	20.0%	0.85%	
Social Security Administration (SSA)	1.95%	2.39%	4.39%	20.0%	0.88%	
Congressional Budget Office (CBO)	2.02%	2.39%	4.46%	20.0%	0.89%

Congressional Budget Office Long-Term 20-Year Budget Outlook			3.80%	100.0%	4.46%	CBO
BEA Nominal Historical,1980 Q1–2023 Q4	2.65%	2.39%	5.10%	100.0%	5.10%	Historical

Q. Did your analysis reflect a synthetic forward curve?

A. Yes. Staff utilized synthetic forward curve using UST Treasury Inflation Protected Securities (TIPS) break-even points. This reflects implied market-based inflationary expectations. Staff's recommendations are consistent with market activity indicating investor expectations of future inflation.

Staff assumes for purposes of its three-stage DCF modeling that LDC utility growth is bounded by the growth of the U.S. economy, and more

specifically impacted by challenges regarding U.S. population, workforce participation, and productivity in the long-run (20-year) modeling period.

Q. How do your methods employed in this case differ from those utilized by Staff in recent general rate cases?

A. Staff's methods and modeling parallel those employed by Staff in recent electric utility general rate cases. Staff continues to look primarily to referent federal sources for long-term GDP growth rates which weight long-run population, workforce participation, and productivity higher than current financial market events and global events with shorter if not transitory effects. Nevertheless, Staff monitors current financial news, and this testimony is informed by such.[28]

Q. Do you capture both the perspective of a buy and hold investor and an investor who plans to sell in the future?

A. Yes. Staff's recommended 8.9 to 9.3 percent range of reasonable ROEs is consistent with findings modeling the perspectives of both types of investors through Staff's two different three-stage DCF models.

Q. Does this approach capture a reasonable set of investor expectations like Staff's analysis in other recent general rate cases?

A. Yes.

Q. Is it appropriate to use estimates of long-term GDP growth rates to estimate future dividends for electric utilities?

[28] See Exhibit Staff/109, Muldoon/1-47 for news that investors in electric utilities are seeing.

A. Yes. In many of the Company's prior rate cases, Staff has shared plots of U.S. electric demand growth since 1950 on a three-year moving average. This downward trending consumption curve allows GDP growth to be a conservative proxy for both electric utility sales and dividend growth rates.

Q. Can relying on a long-term GDP growth rate overstate required ROE?

A. Yes. It is possible that Staff modeling anticipates greater growth than may be realized and so overstates required ROE to attract investors. Our highest growth rate presumes return to near historical U.S. GDP growth rates.

Q. Is it important to distinguish between long-run 20- to 30-year rates and rates over the next five years?

A. Yes. Over-extrapolating a snapshot of short-term data undermines confidence in modeling results. For example, Value Line, Blue Chip, and a variety of other financial resources focus primarily on the next five years. The next five years may be affected by recent events. Over the long run, population and productivity are the key drivers of economic growth. This is of concern with declines in the rate of growth of America's population.[29]

Q. In Staff's two different three-stage DCF models, Staff is looking for growth rates for a period between 10 and 30 years in the future, or an average of 20-years out. Why not just use a five- or ten-year projection?

A. Staff could use a five- or ten-year projection, but there is better information available. If a primary concern is whether enough Americans are both working

[29] See Exhibit Staff/109, Muldoon for concerns about Oregon population growth.

and highly productive to support a robustly growing economy 30 years from now, 10-year data will not be the most useful. This is because 10-year data is not yet impacted by retirement of persons born in 1960 or persons not immigrating and not being born to U.S. families now. A better solution is to use data that is projected with those difficulties in mind, i.e., 30-year data.

HAMADA EQUATION

Q. Your application of the Hamada Equation to un-lever peer utility capital structures and to re-lever at NW NATURAL's target capital structure increases required ROE. Why is this adjustment reasonable?

A. Staff employs the Hamada Equation to better compare companies with different capital structures driven by differing amounts of outstanding debt. As earlier discussed, Staff applied screening criteria already identify peers that have a very close capital structure to the Company. Use of the Hamada-adjusted results helps ensure that Staff has captured all material risk in our analysis because it captures additional risk associated with varying capital structure.

Within the confines of Staff's testimony, one can see the steps to un-lever and re-lever a peer company's capital structure as the equivalent of removing debt of peer companies with varying capital structures, and then adding enough debt back to equal the Company's balanced target capital structure in this general rate case.

Q. What accounts for differences in peer capital structures?

A. Each of the two models employs the Hamada equation[30] to calculate an adjustment for differences in capital structure between each peer utility and the Staff-proposed capital structure for the Company. When few peer utilities are available, the Hamada equation ensures Staff's analysis addresses differences in peer utility capital structures.

Q. Why is it important to consider capital structure when modeling ROE?

A. Different amounts of debt financing along with different tax rates result in disparate risk profiles among peer utilities used in ROE modeling to approximate the unknown appropriate ROE for the utility examined. All else equal, with more debt in a capital structure, investors require higher expected equity returns to compensate for the increased risk. Debt has a higher call on the company's available cash, and so less cash is available for equity holders. Staff uses the Hamada equation, named after Robert Hamada, to separate the financial risk of a levered firm from its business risk, and adjust the results of peer utilities to have results as though they had the same capital structure as the utility for whom an appropriate ROE is sought.

Q. Did Staff use a capital structure peer group screen with 40 percent to 60 percent debt, carrying more interest rate risk than NW Natural?

[30] Dr. Robert Hamada's Equation as used in Staff/404 separates the financial risk of a levered firm, represented by its mix of common stock, preferred stock, and debt, from its fundamental business risk. Staff corrects its ROE modeling for divergent amounts of debt, also referred to as leverage, between the Company and its peers.

A. Yes. Inclusive of Hamada adjustments, the higher debt sensitivity peer group would decrease Staff's recommended ROE by 24 basis points. In general, the Hamada equation addresses the capital structure itself to a certain degree, companies taking on more debt may also be taking on more risk in other areas than finance.

Q. Did Staff use robust and proven analytical methodologies?

A. Yes. Staff's methods are robust, proven, and parallel Staff's work for many years. The Commission, for example, expressly relies on the multi-stage DCF to determine the range of ROEs and relies on CAPM and risk premium models to check the reasonableness of results. This can be seen in Order No. 22-129 in Portland General Electric Company's GRC (Docket No. UE 394) as well as in Order No. 20-473 in PacifiCorp's GRC (Docket No. UE 374).

Q. Describe how you performed your analysis.

A. Using the cohort of proxy companies that met our screens, Staff ran each of Staff's two three-stage DCF models three times, each time using a different long-term growth rate.

Q. Was your analysis consistent with a range of reasonable ROE's from 8.9 percent to 9.3 percent?

A. Yes.

<u>Balanced Approach to ROE</u>

Q. Is picking a best fit ROE within Staff's suggested range of reasonable ROE's an easy decision for the Commission.

A. No. On the one hand, a lower ROE would reduce the impact of this general rate increase on NW Natural's utility customers in Oregon. This thought is likely foremost for CUB members and employees based on the earlier cited statement by Director Bob Jenks.

On the other hand, a higher ROE is more supportive of the Company's credit ratings, which are under pressure based on financial metrics and from those who would like to migrate from natural gas for space heating and other purposes to greater reliance on renewably generated electricity or other alternatives to natural gas. Also the Oregon overall regulatory environment is a very large part of rating agency decision making. And these ratings influence the Company's borrowing cost in a period of significant spending for plant additions. A utility customer might think of this like buying the same house at low or high interest / mortgage rates.

Balancing these and other considerations is necessary for the Commission to make decisions consistent with the Hope and Bluefield legal decisions mentioned earlier.

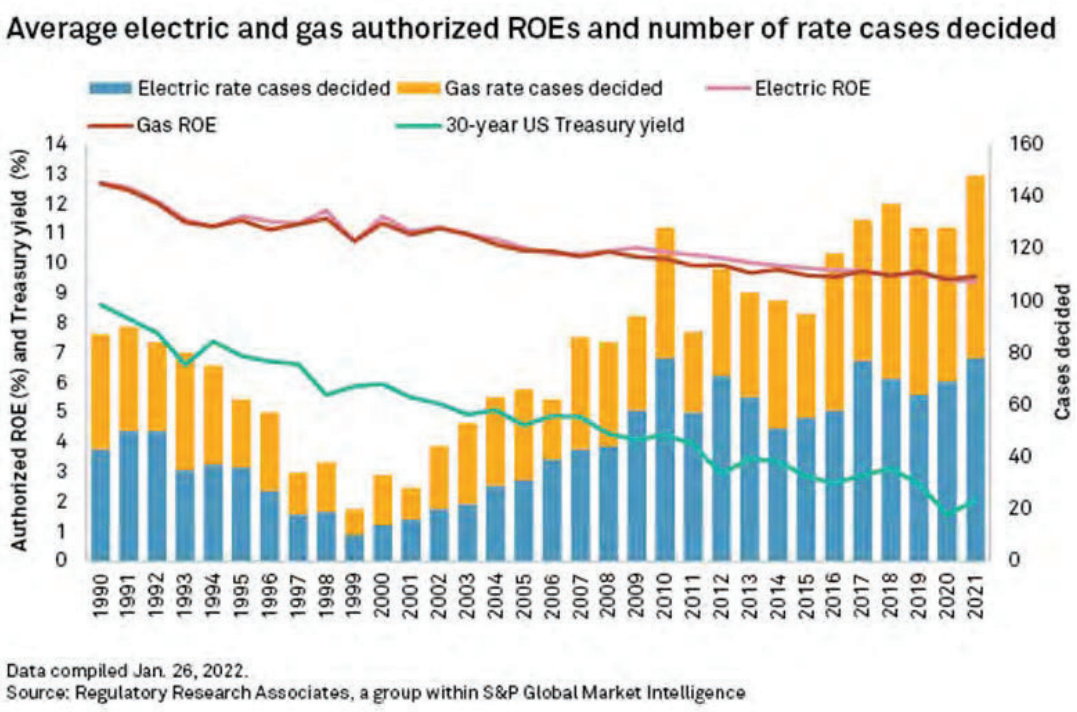
Q. Are we in a rising interest rate environment that compels higher ROEs?

A. No. The U.S. Federal Reserve expects to lower interest rates in the next two years.[31] Further interest rates and ROEs are both declining when looked at over a 30-year time frame. The downward glide path for ROE in Figure 1 below is not linear and may fluctuate through these uncertainties, but long-run

[31] See Staff/109, Muldoon/26.

GDP growth rates are mostly determined by the long future U.S. working age population and its productivity. These are downward pressures on GDP growth.

FIGURE 1 – Downward Glide Path of Utility ROES[32]



Q. What trend is Staff seeing?

A. Since 1990, according to Regulatory Research Associates (RRA), Electric and Electric Utility authorized ROEs have declined as the 30-year US Treasury (UST) has also declined. While the Fed recently raised interest rates, the Fed now anticipates loosening money supply soon.

Docket No: UG 490 Staff/100
Muldoon/37

GORDON GROWTH MODEL – As Check on ROE Findings

Q. What is the Gordon Growth model?

A. The Gordon Growth model (or Single Stage DCF model), similarly to the Three-Stage DCF model, is based on the principle that a company's value is equal to the net present value (NPV) of all its future cash flows and the company's current stock price. The Single-Stage DCF uses simpler assumptions than other models however, with dividend payments representing the only cash flow, and an assumption that growth will remain constant in perpetuity.[33]

Q. What are the positive aspects and potential shortfalls of the DCF model?

A. The most positive aspect of the Single-Stage model is its simplicity. An analyst can use this model to calculate a rudimentary cost of equity valuations without needing complex inputs or analysis, beyond selecting a trusted source for the next quarter's expected dividends. In fact, after some algebraic simplification, the return can be expressed by:

$$R = \frac{D_1}{P_0} + g$$

Where $\boldsymbol{R}$ is estimated ROE, $\boldsymbol{D_1}$ is the first dividend paid after stock purchase, $\boldsymbol{P_0}$ is the stock price, and $\boldsymbol{g}$ is the growth rate.

Caution and discretion must be used when sourcing inputs to the model; for example, growth rates should be based on well vetted and

[33] See Docket No. UG 347, Staff/1300, Muldoon Watson/31 – 39, for further discussion of the Single-Stage DCF model, and the Commission's historical treatment of its results.

reliable sources, as opposed to sell-side marketing information used by investment advisors to entice new investors. This is important to bear in mind when considering the results of any Single-Stage model, as reliance on overly optimistic inputs or use of outboard after-the-fact adjustments can have a large impact on the model output.

The Single-Stage model is based on simple principles and serves as a rough estimation of investor required ROE. It cannot incorporate known, measurable, and material information about the future usually built into Three-Stage DCF analysis. For this reason, Staff, consistent with Commission precedent, has traditionally only relied on it as a sensitivity check when rate making.

Q. How does Staff determine the dividend flow and growth rate for the single-stage DCF?

A. Much like Staff's Multi-Stage DCF, Staff sources its expected dividends from Value Line. We calculate the average dividend growth rate by comparing the expected dividend by Value Line and actual dividend for each for each company in the peer screen.

Q. What inputs does Staff use to build Staff's single-stage DCF model?

A. Staff uses the same representative draw of stock prices to build its single-stage DCF model as it uses in the three-stage DCF model. Current dividends and anticipated dividend growth are sourced from Value Line.

Q. What are the results of Staff's Gordon Growth model?

Docket No: UG 490

Staff/100
Muldoon/39

A. Using Staff's peer utility screen, the average required ROE under Staff's Gordon Growth model is 7.5 percent.

Docket No: UG 490 Staff/100
Muldoon/40

CAPM – As Check on ROE Findings

Q. What is the Capital Asset Pricing Model (CAPM)?

A. The CAPM assumes that a stock's return on equity is a function of a risk-free return and a risk premium and that the risk premium should be augmented by a company's level of risk relative to the market, which is captured by Beta or β. All told, CAPM takes the form:

$$\boldsymbol{Required\ Return} = \boldsymbol{r_f} + \boldsymbol{\beta}(\boldsymbol{r_m} - \boldsymbol{r_f})$$

Where $\boldsymbol{r_f}$ is the risk-free rate and $\boldsymbol{r_m}$ is the market return. Generally, the risk-free rate is assumed to be the rate of return on bonds. Taking cues from long-standing financial modelling, Staff calculates its CAPM using the yield on 30-year and 10-year US Treasury bonds as stand-ins the risk-free rate.

Q. Should the Commission scrutinize CAPM carefully?

A. Yes. CAPM only relies on a few inputs. In this case, there are three inputs: the risk-free rate, the market return, and the choice of Beta. Although it is generally agreed that the rate of return on US Treasury bonds is the proper choice for the risk-free rate, there is much discussion about what maturity should be used for Beta and the market return.

There are a variety of sources to find or calculate both Beta and the market return. Because there are so many sources for two inputs into this simple model, an uninformed or malicious investigator could use unrepresentative values to motivate abnormal required returns. It is therefore of the utmost importance to be thoughtful and consistent in choosing CAPM parameters. In Commission activities, we have standardized on Value Line

(VL) Betas that are broadly used to give apples-to-apples modeling output comparisons. Staff has used CAPM for validation rather than rate setting in past cases.

Q. Where do you find information on companies' Beta estimates?

A. Estimates of Beta can be found from many sources including Bloomberg, Yahoo Finance, and VL. Traditionally, the Commission has relied on Value Line's Beta estimates to conduct analysis to maintain consistency in regulation between rate cases. The perils of switching between Beta estimates, known as "Beta shopping," will be addressed later in this testimony.

Q. Where do you find information on market returns?

A. Market returns can also be found or calculated from a variety of places. Two common sources for market returns are historical returns on stock market indices and projections for future growth. As earlier discussed, care should be taken in selecting a market return due to the volatile nature of the stock market.

Q. What issues can arise from an improper market return selection?

A. For any company with a positive Beta, a higher market return translates directly into a higher required return according to the CAPM formula. Overstating market returns, a required return estimate can vary by up to three percent for a typical regulated utility.

Q. How does Staff recommend that market returns be calculated?

A. Staff recommends that market returns be calculated based off the historic long-run growth rates of stocks and an up-to-date measure of the risk-free rate. By using historical averages, a modeler does not run the risk of a large shock in

one period unnecessarily augmenting estimated returns, much like the large negative shock caused by the COVID-19 pandemic, the roaring economic recovery post-pandemic, or the ongoing conflict in Ukraine.

As has been done in past rate cases, Staff uses the market risk premium calculated by Ibbotson and the implied market risk premium from Morningstar's Stocks, Bonds, Bills, and Inflation 2015 Classic Yearbook, which measures average returns since 1926. These two sources imply that the risk premium would be 4.5 percent and 6.0 percent, respectively. Staff also calculates market risk premiums as described herein using annualized monthly data for 30 years of geometric S&P 500 returns paired with current 30-year UST yields.

Q. What recommendations do you have for the maximum authorized ROE according to CAPM?

A. As stated previously, Staff only uses CAPM for validation rather than rate setting due to its historic unreliability. Within Staff's peer utility screen, the estimated ROEs from Staff's CAPM under Staff assumptions average 9.2 percent. Using the Company's peer screen and Staff's methods, the average estimated ROE observed is 9.3 percent. If one uses the Company's inflated market risk premium, one can boost results to 12.4 percent like that found as underlying averaged components in NW Natural's testimony.

Q. Has the Commission determined that CAPM should not be relied upon as a stand-alone modeling method?

A. Yes. The Commission made this determination in two general rate cases in 2001 with the issuance of Order No. 01-777 and Order No. 01-787, but still permits use of the CAPM as a check on other modeling methods employed.[35]

DIFFERENCES IN NW NATURAL ROE MODELING FROM STAFFS

Q. What are other differences in the Company's modeling that lead to different ROE modeling results.

A. Staff relies on Value Line data, which generally avoids benchmark shopping.

Q. What is benchmark shopping?

A. Benchmark shopping is performing a review of different data sources with different calculation methods and taking from that cross section certain benchmark data that is then argued before the Commission is most appropriate for this instance of use. The Commission then gets to hear exhaustive arguments on subjects such as the reversion to mean calculations behind Value Line, Bloomberg, and various other potential benchmarks. After an exhaustive examination, the use of alternate benchmarks can be usually determined by the Commission to be obfuscation that detracts from the exercise or modeling at hand.

Q. What are other ways that NW Natural's testimony on ROE might be considered off target?

A. In the Company's discussion of its selection of Risk-Free Rate in CAPM analysis, the Company offers various methods and then averages them.

[35] *In the Matter of Portland General Electric*, Docket No. UE 115, Order No. 01-777 at 32; *In the Matter of PacifiCorp*, Docket No. UE 116, Order No. 01-787 at 21 (September 7, 2001).

What the Company does not mention is that it is averaging a variety of methods of inflating estimation of market results and market risk premium (MRP). For example, averaging super optimistic future projections of market returns with overly-long 90-year market returns does not yield a conservative MRP likely to reflect the near future. Think of this like trying to estimate the weight of your cat or dog. One could take the average weight of a whale, and the average weight of an elephant (both mammals) and suggest that would be an excellent proxy for the weight of your pet. The first estimate for the whale is too large. The second estimate of the elephant is also too large and not reflective of a conservative estimate because though it is smaller than that of the whale, it is still not a good estimate of the weight of your pet.

Q. What other misdirection might the Commission watch for?

A. The Commission should be vigilant for the substitution of five- to ten-year growth rates and other near-term data for 20- to 30-year data and projections from referent entities. Depending on the context, five- to ten-year data can be characterized as “long-term.” But, for purposes of the analysis to estimate ROEs, long-term means 20-30 years in the future.

Generally, Value Line and Blue-Chip type resources focus on the next one to five years and call a future projection five to ten years into the future their long-tern projection. In contrast the U.S.: Social Security Administration, the Congressional Budget Office, the Bureau of Economic Analysis, Energy Information Administration, and other federal referent bodies mean 20-30 years into the future when they say “long-term”.

Q. Why is that important in the context of ROE modeling?

A. Over the next few years, the United States still has a large working age population, despite the graying of America. Productivity has declined in recent years, but near-term GDP growth is still relatively strong.

But looking out 20-30 years, many Americans will be retired, and various other challenges cause referent entities to project lower GDP growth. So averaging a set of near-term growth numbers and using that average in lieu of long-run numbers from referent entities talking about 20-30 years in the future also boosts ROE modeling results.

Q. When will Staff provide more detailed examples of these approaches in NW Natural's ROE modeling?

A. Because Staff has just updated its natural gas utility peer market information to be current as of April, Staff will have time to illustrate how some of the above techniques are used in the Company's ROE modeling to present the appearance of conservative model building while inflating ROE model results.

Q. What was the result of Staff's updating its ROE modeling to incorporate most current market data?

A. Staff's top end of its ROE modeling results dropped 10 basis points from the modeling Staff did based on January 2024 market information.

Docket No: UG 490

Staff/100
Muldoon/46

6. PENSIONS AND POST RETIRMENT MEDICAL EXPENSE

Q. Does Staff recommend an adjustment to the Company's pensions and post-retirement medical expense in this general rate case?

A. No.

Q. Did Staff carefully analyze the Expected Return on Assets for each of the Company's pensions and post-retirement medical expense?

A. Yes. Staff performed its usual robust analysis, discussed these issues in detail at a workshop with the Company on March 5, 2024, and issued follow-up data requests, the responses to which corroborated Staff's findings. Staff found the Company's actuarial work consistent with the Company's benchmarks inclusive of EROA for Oregon Public Employee Retirement System (PERS), CA PERS, and California State Teachers' Retirement System.

Q. Did Staff carefully analyze the discount rate assumptions for each of the Company's pensions and post-retirement medical expense?

A. Yes. Staff also calibrated the revenue requirement impact of each of the above factors and confirmed that in aggregate the Company's work in this area was reasonable and no adjustment is required in this general rate case.

Docket No: UG 490

Staff/100
Muldoon/47

7. PHYSICAL AND CYBER SECURITY

Q. Does Staff recommend an adjustment to Information Technology (IT) and Security (IT&S) projects?

A. Please see Exhibit Staff/1000 Dyck for detail on Staff review of IT&S Projects that go into service in the test year.

Q. Does Staff Review the Company's project management performance and cost controls in compliance with TSA Security Directive 2 and updates thereto?

A. Yes. The Commission's RSUP group including Accounting and Finance, Safety, and Energy Costs Staff are reviewing the Company's investments in both physical and cyber security on an ongoing basis.

Q. Will Staff discuss the Companies practices and detailed costs of certain projects herein?

A. No. The Commission's RSUP group including X Accounting and Finance, Safety, and Energy Costs Staff are reviewing the Company's investments in both physical and cyber security on an ongoing basis to comply with U.S. Transportation Security Administration (TSA) and other agencies directives and to protect critical infrastructure in general.

Q. Why is this information on a "Federal Need to Know Basis"?

A. Proper handling of highly confidential critical infrastructure information protects the lives, livelihood, and modern standard of life for Oregonians.

Q. When federal agencies mandate the Company comply with new or updated directive does that give NW Natural a blank check to spend

whatever it takes and take a "cost is no object" approach to physical and cyber security?

A. No. Like all other project management the Commission reviews, NW Natural must consider less costly next best alternatives to its physical and cyber security capital spending and other initiatives. The Company must practice prudent project management and cost controls based on what is known and knowable at the time of NW Natural's decisions.

Q. What sort of risks does the Company have to consider in prudently managing its expenditures?

A. In general, the Company must consider two main types of risk. The first type is protection against something that is relatively likely to happen. One might think of this as a focus on the 95 percent of risks most likely to materialize.

But then a Commission jurisdictional energy utility must also consider and protect against High-Impact Low-Frequency (HILF) events. These are unlikely to happen, but if they do happen, outcomes could be catastrophic.

Q. Why does Staff look at these issues on an ongoing, open-ended basis?

A. Directives, standards, and best practices regarding physical and cyber security that the Company must comply with are regularly changing to address emerging concerns. Rather than a one-and-done review, Staff teams of financial and safety professionals, and engineers must vigilantly review incremental new Company initiatives and expenditures.

Just as utility customers cannot make necessary purchases at any price or only consider the most expensive options in life, utilities must frugally put in

place assets and processes that get the job done effectively at reasonable cost.

Docket No: UG 490

Staff/100
Muldoon/50

8. CONCLUSION

Q. What is Staff's recommendation regarding ROE?

A. Staff recommends that the Commission select a point ROE from within Staff's range of reasonable ROE's from 8.9 percent to 9.3 percent (after rounding). This is a difficult decision balancing financial market criteria and credit ratings on the one hand against reducing energy burden for Oregon customers of NW Natural on the other.

Q. What Rate of Return (ROR) is generated by the Staff's aggregated Cost of Capital recommendations on Capital Structure, ROE, and Cost of Long-Term Debt?

A. Staff provides an illustrative 6.906 percent Overall Rate of Return (ROR), based on the midpoint of Staff's range of reasonable ROEs of 9.10 percent, a 50 percent equity layer Capital Structure, and the settled 4.712 percent Cost of Long-Term Debt.

Q. What recommendation does Staff have regarding a point estimate within Staff's range of reasonable ROEs?

A. Staff finds that recommending a range is appropriate rather than any single point estimate. The range is from 8.9 percent to 9.3 percent. The range provides values from which the Commission can use to balance the interests of shareholders and energy affordability for Oregon utility customers and still meet statutory requirements to provide for a fair return on equity.

Q. Does Staff recommend an adjustment to pensions and post-retirement expense in this general rate case?

A. No. Staff's usual robust analysis found the Company's work on these issues to be reasonable and in aggregate consistent with Staff's benchmarks.

Q. Does Staff recommend incremental adjustments in this testimony over those provided IN Exhibit Staff/1000 Dyck for IT&S projects?

A. No.

Q. Does that conclude your testimony?

A. Yes.

Gordon Growth – Single Stage DCF

April 18, 2024

NWN UG 490 GRC | **Gordon Growth Single Stage DCF Model** | **Staff/105 Muldoon/1**

Staff's Representative Single Stage (Gordon Growth) Discounted Cash Flow (DCF) Model

Presumes the Peer Utility will pay its divident as a fixed multiple of growth into the future as it is now.

The results would be true only if the utility stock's dividends were to grow at a constant rate forever.

Value of Stock (P_0) = D_1 / (k- g) — Stock Price Now = Next Year's Dividend / (Required Stock Return - Growth in Dividends)

k = (D_1 / P_0) + g — Required Rate of Return on Utility Equity = (Next Year's VL Dividend / Recent Stock Price) - Perpetual Growth

Note **July 31, 2013, 14th Comprehensive Significant Revision:**
BEA revised its tables back to 1929 in to order to count:
1 Artistic Works
2 Research and Development
as Capital Investments that Depreciate Over Time rather than one time expenditures

From an Economy based on (Industry and Manufacturing) to one based on (Knowledge and Information)

Value Line (VL)
Natural Gas and Water Utilities

April 18, 2024

Stocks of a number of companies in *Value Line's* Natural Gas Utility Industry have been fairly rangebound since our last report in November. But that should come as no surprise, given that historical price movements of this typically defensive sector have tended to be on the steady side. It's also important to mention that the big draw here is these equities' reliable, healthy amounts of dividend income (which are sufficiently covered by corporate earnings). What's more, at recent quotations, 3- to 5-year capital appreciation potential for some of the stocks in our universe looks decent, resulting in solid total return possibilities.

Natural Gas Prices

Natural gas quotations have weakened significantly over the past few months reflecting, among other factors, heightened production levels and mild winter weather. Although this scenario does not augur well for companies that produce this commodity, regulated utility units generally benefit. That's partially because diminished gas pricing tends to lead to lower prices for customers, which may bring down bad-debt expense. Moreover, there is an increased possibility that homeowners will convert from alternative fuel sources, such as propane or oil, to natural gas. (At present, it's estimated that roughly half of all households in the United States use natural gas.) It should be mentioned, however, that nonregulated operations (discussed below) tend to underperform when gas pricing is at subdued levels.

Nonregulated Businesses

Some of our industry participants have dedicated substantial resources to the nonregulated arena, which includes pipelines and energy marketing & trading services, and we see this trend continuing in the future. Indeed, these units offer opportunities for utilities to diversify their revenue streams. Also, the fact that nonregulated segments can provide potential upside to earnings per share is notable, since the return on equity is limited by the regulatory state commissions (generally in the 9%-11% range) on the regulated divisions.

Interest Rates

In January, the Federal Reserve announced that it would keep interest rates steady while waiting to see if additional actions were necessary to combat inflation, which has eased some during the past year but remains elevated. (The central bank has been engaged in its fastest rate-increase cycle since the 1980s.) So, this raises the question, "How does a rising interest rate environment affect the participants in the Natural Gas Utility Industry?" One way is by increasing borrowing costs, an especially important factor because these companies tend to maintain substantial levels of debt. Furthermore, rising interest rates might make bonds more attractive to conservative, yield-oriented investors, the very ones who are typically drawn to utility stocks.

Attractive Payouts

The main appeal of utility equities is their dividends, which tend to be adequately covered by corporate profits.

INDUSTRY TIMELINESS: 66 (of 93)

(It's important to state that the Financial Strength ratings for more than half of the nine companies in our category are at least an A, and the lowest is a respectable B++.) At the time of this industry review, the average yield for the group was approximately 4.3%, nearly double the *Value Line* median of 2.2%. Standouts include *UGI Corp.*, *ONE Gas, Inc.*, *Northwest Natural Holding Co.*, and *Spire Inc.* When the financial markets experience heightened volatility (which seems to be more often the case these days), healthy dividend yields provide a measure of much-needed stability.

Prospects Out To Late Decade

We are optimistic, overall, about the industry's long-term operating performance. Natural gas should remain an abundant resource in the U.S., brought about partially by new technologies, so a shortage does not appear likely in the years ahead. Too, there are limited alternatives for the services the companies in this sector offer. Furthermore, it's a challenge for new entrants in the market, given such factors as the size of existing competitors and the substantial initial capital outlays that are required. Finally, the country's population, now numbering more than 330 million, should stay on a steady, upward course, which augurs well for future demand for utility services.

Conclusion

None of the equities in our Natural Gas Utility Industry stand out for Timeliness, at this juncture, besides *UGI Corp*. Nevertheless, they ought to be of interest to income-focused investors with a conservative orientation, given that these good-yielding issues boast high marks for Price Stability, and the majority are ranked 1 (Highest) or 2 (Above Average) for Safety. Consider, too, that there are some appealing choices for capital appreciation potential for both the 18-month horizon and over the pull to 2027-2029. As always, our subscribers are advised to carefully examine the following reports before committing funds.

BUSINESS: Atmos Energy Corporation is engaged primarily in the distribution and sale of natural gas to over three million customers through six regulated natural gas utility operations: Louisiana Division, West Texas Division, Mid-Tex Division, Mississippi Division, Colorado-Kansas Division, and Kentucky/Mid-States Division. Gas sales breakdown for fiscal 2023: 66.5%, residential; 28.0%, commercial; 3.8%, industrial; and 1.7% other. The company sold Atmos Energy Marketing, 1/17. Officers and directors own approximately .5% of common stock (12/23 Proxy). President and Chief Executive Officer: Kevin Akers. Incorporated: Texas. Address: Three Lincoln Centre, Suite 1800, 5430 LBJ Freeway, Dallas, Texas 75240. Telephone: 972-934-9227. Internet: www.atmosenergy.com.

Atmos Energy started fiscal 2024 with healthy bottom-line results. (The year concludes on September 30th.) First-quarter earnings per share of $2.08 were 9% higher than the $1.91 tally posted in fiscal 2023. That was made possible partly by positive rate-case outcomes. Diminished bad-debt expense helped, too. It should also be mentioned that the current-quarter figure was favorably impacted by legislation to reduce property-tax expenses in Texas. But increased depreciation expense and higher interest expense provided somewhat of an offset. Still, at this juncture, it appears that full-year profits will advance roughly 7%, to $6.55 per share, compared to fiscal 2023's $6.10 total. Regarding next year, share net stands to advance at a similar percentage rate, to $7.00, assuming additional widening of operating margins.

There's sufficient liquidity to satisfy various obligations for quite a while. When the December period ended, cash and equivalents sat at $278.3 million. Moreover, long-term debt looked reasonable (40% of total capital) and short-term commitments were minimal. Also, $3.1 billion in common stock and/or debt securities remained available for issuance (out of $5 billion) under a shelf registration statement expiring in March, 2026. Finally, the company had four undrawn revolving credit facilities aggregating $2.5 billion plus a $1.5 billion commercial paper program.

Prospects out to the end of the decade seem decent. Atmos Energy ranks as one of the nation's biggest natural gas-only distributors, with more than three million customers across several states, including Texas, Louisiana, and Mississippi. Furthermore, we believe the pipeline and storage segment has promising overall expansion opportunities, since it operates in one of the most-active drilling regions in the world. The solid balance sheet is another strength.

What about the stock? Capital appreciation potential over the 18-month span seems worthwhile. However, the dividend yield is lower than the average of *Value Line's* Natural Gas Utility Industry. Meanwhile, ATO shares are unfavorably ranked for Timeliness.

BUSINESS: Chesapeake Utilities Corporation consists of two main units. The Regulated Energy segment distributes natural gas in Delaware, Maryland, and Florida; distributes electricity in Florida; and transmits natural gas on the Delmarva Peninsula and in Florida. The Unregulated Energy operation wholesales and distributes propane; markets natural gas; and provides other unregulated energy services, including midstream services in Ohio. Revenue breakdown for 2022: Regulated Energy, 63.1%; Unregulated Energy, 41.2%; Other, d4.3%. Officers and directors own 2.7% of common stock; BlackRock, 13.9% (3/23 Proxy). Chairman and CEO: Jeffry M. Householder. Inc.: DE. Address: 909 Silver Lake Boulevard, Dover, DE 19904. Tel.: (302) 734-6799. Internet: www.chpk.com.

Chesapeake Utilities just concluded an important agreement with NextEra Energy. It paid that firm $923 million for Florida City Gas (FCG), serving 120,000 residential and commercial customers across eight counties in Florida, including Miami-Dade, Broward, Palm Beach, and Indian River. We like that move partly because it more than doubled the natural gas operations in The Sunshine State, which has bright growth prospects. Another plus is enhanced economies of scale. It's also worth mentioning that the deal was funded via a balanced mix of equity and long-term debt, thus maintaining the company's sound finances.

Another business was brought into the fold. Chesapeake purchased, for an undisclosed amount, the propane operating assets of J.T. Lee and Son's. As a consequence, its geographic footprint extended further into the promising North Carolina market, via the addition of 3,000 customers. Synergistic benefits are probable, as well. So, we would not be surprised to see similar transactions going forward.

It appears that the energy firm posted uninspiring 2023 results. Recall that for the first nine months, profits of $3.47 per share were a few pennies below 2022's $3.50 figure. That can be traced partly to much warmer weather in the northern service territories, especially during the first six months, which constrained customer consumption. Moreover, there were increased interest charges, employee-related expenses, and facilities & maintenance costs. However, the company's performance did benefit from factors such as contributions from a Florida natural gas base rate proceeding, increased propane margins and fees, plus pipeline expansion projects. Still, it seems that, for the entire year, earnings per share sat at around $4.85, modestly below 2022's $4.97 tally. But regarding 2024 and 2025, share net stands to reach $5.10 and $5.35, respectively (a 5% advance for both years), if the business climate cooperates.

The equity does not have much to offer other than decent 18-month capital gains potential. Upside possibilities out to 2027-2029 lack appeal. The dividend yield is not enticing, either, versus those of other Natural Gas Utility stocks we cover.

Frederick L. Harris, III February 23, 2024

(A) Diluted shrs. Excludes nonrecurring gains (loss): '08, (7¢); '15, 6¢; '17, 87¢; '22, 8¢. Excludes discontinued operations: '19, 24¢; '20, 5¢. Quarters for 2019 don't equal total because of rounding. Next earnings report due early May.

BUSINESS: New Jersey Resources Corp. is a holding company providing retail/wholesale energy svcs. to customers in NJ, and in states from the Gulf Coast to New England, and Canada. New Jersey Natural Gas had 576,000 cust. at 9/30/23. Fiscal 2023 volume: 128 bill. cu. ft. (23% interruptible, 50% residential, commercial & firm transportation, 27% other). N.J. Natural Energy subsidiary provides unregulated retail/wholesale natural gas and related energy svcs. 2021 dep. rate: 2.8%. Has 1,350 empls. Off./dir. own less than 1% of common; BlackRock, 15.9%; Vanguard, 11.4% (12/23 Proxy). CEO, President & Director: Steven D. Westhoven. Incorporated: New Jersey. Address: 1415 Wyckoff Road, Wall, NJ 07719. Telephone: 732-938-1480. Web: www.njresources.com.

New Jersey Resources finished fiscal 2023 in good shape. (Fiscal years end September 30th.) Net financial earnings per share of $0.30 in the fiscal fourth quarter propelled the bottom line to $2.70 over the full year, an 8% advance. These metrics aligned exactly with our earlier forecasts; however, revenues were well below our targets due to falling natural gas prices, which are a cost that is largely passed through to customers directly. Notably, strong customer growth at the utility, expansion of Clean Energy Ventures, and the completion of the Adelphia Gateway Pipeline all contributed to the solid twelve-month performance.

Earnings were down to begin fiscal 2024. Share net landed at $0.74 in the December period, well short of our call for $1.10 and the year-earlier tally. Part of the reason for the particularly poor comparison is due to the effect of winter storm Elliot at the end of 2022, which boosted earnings by as much as $0.20 per share. As a result, the Energy Services segment in particular registered a $45 million decrease in net financial earnings, whereas the other segments combined for a $7 million increase, notably led by a $14 million improvement at Clean Energy Ventures.

The remainder of 2024 looks likely to generate growth. While we have left our profit target in place despite the first-quarter earnings miss, management has recently increased its guidance for fiscal 2024, now forecasting a range from $2.85 to $3.00 per share. Winter weather in January was the stated impetus for the increase, with Energy Services set to generate a boost from its Asset Management Agreements. Our forecast reflects earnings growth expectations of 4% this year, versus the target long-run average of 7% to 9% annual increases.

Our long-term outlook provides the basis for solid capital appreciation potential. New rates expected in fiscal 2025 should help deliver towards our targets. Meantime, the stock is ranked to underperform the broader market (Timeliness: 5, Lowest). Thus, patient investors may well find a more favorable entry point, from which to buy-and-hold, in the year ahead.

BUSINESS: NiSource Inc. is a holding company for Northern Indiana Public Service Company (NIPSCO), which supplies electricity and gas to the northern third of Indiana. Customers: 479,185 electric in Indiana, 3,200,000 gas in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland, through its Columbia subsidiaries. Revenue breakdown, 2022: electrical, 31%; gas, 69%; other, less than 1%. Generating sources, coal, 69.4%; purchased & other, 30.6%. 2022 reported depreciation rates: 3.1% electric, 2.3% gas. Has 7,304 employees. Chairman: Richard L. Thompson. President & Chief Executive Officer: Lloyd Yates. Incorporated: Indiana. Address: 801 East 86th Avenue, Merrillville, Indiana 46410. Telephone: 877-647-5990. Internet: www.nisource.com.

NiSource's stock offers good value to risk-averse income investors. The natural gas and electric utility company's shares moved sideways in the three months since our November review, as the broader U.S. equity markets pushed on to record highs. Utilities have underperformed as bond yields and growth sectors have drawn investors' attention. Further, inflationary costs and higher interest rates (both of which we think are likely to decrease), have pressured growth, hurting this stock's performance. Yet, these shares have reached a compelling risk-adjusted valuation in comparison to others in the sector. Considering the ongoing transition to renewable energy and building of sustainable energy infrastructure, we see a lot of potential upside to buy-and-hold strategies.

Blackstone, Inc.'s recent acquisition of a non-controlling stake in NIPSCO, a NiSource subsidiary, points to the value here. Blackstone's infrastructure unit purchased 19.9% of the electric and gas subsidiary for $2.16 billion in January. The cash will aid the company's ambitious clean energy transition and decarbonization programs; NIPSCO is planning to phase out its coal-fired power plants by 2028, whereas this sourced 75% of power production as recently as 2018.

The significant investment required to reach its sustainability goals will be a key driver of growth. Capital investments amounting to $16 billion are planned over the next five years, contributing to an expected rate-base increase of 8% to 10% per year, and a 6% to 8% annual increase in earnings per share. Execution on regulatory approvals has been a key strength.

All told, we expect growth to continue at a moderate pace through the next three to five years. The utility likely ended 2023 in good form, and earnings per share probably grew roughly 9%. Note: The company was scheduled to report its annual results as we went to press with this Issue. We think earnings are likely to increase by about 7% per year on average, while dividends may grow by 5% annually.

This issue's Safety rank has risen a notch, to 2 (above average). Likewise, the risk-adjusted upside is attractive.

BUSINESS: Northwest Natural Holding Co. distributes natural gas to 1,000 communities, 795,000 customers, in Oregon (88% of customers) and in southwest Washington state. Principal cities served: Portland and Eugene, OR; Vancouver, WA. Service area population: 3.7 mill. (77% in OR). Company buys gas supply from Canadian and U.S. producers; has transportation rights on Northwest Pipeline system. Owns local underground storage. Rev. breakdown: residential, 37%; commercial, 22%; industrial, gas transportation, 41%. Employs 1,258. BlackRock Inc. owns 17.3% of shares; Vanguard, 12.2%; Off./Dir., .95% (4/23 proxy). CEO: David H. Anderson. Inc.: Oregon. Address: 220 NW 2nd Ave., Portland, OR 97209. Tel.: 503-226-4211. Internet: www.nwnatural.com.

Northwest Natural stock offers good value for income-seeking accounts. The stock's price has fallen from highs of $77 a share in as few as four years, as the appeal of a steady income stream from utility companies has been overshadowed by the growth potential of other sectors and diminished by higher interest rates. Indeed, this sets the stage for what we believe is an attractive combination of stability and value. The stock's 5.3% dividend yield, well above the *Value Line* median, is a strong incentive which provides a solid foundation for future total return potential. While government bonds offer a similar value proposition with less risk, the idea that interest rates may well come down in the near future adds to the appeal of receiving this dividend. Furthermore, the current price-to-earnings ratio of 12.5 is notably low for the stock, and the the issue's Safety rank was recently raised a notch, to 2 (Above Average).

The company likely ended 2023 in good shape. Note: The company was scheduled to report its annual results shortly after we went to press with this Issue. Our conservative fourth-quarter outlook is influenced by mild El Nino year regional weather, and some inflationary pressure. Nonetheless, full-year share earnings likely rose a decent 4%, thanks largely to a strong first quarter. We expect earnings per share to advance anothe 4% in 2024, and 9% in 2025.

Resilient economic trends and sustainability initiatives underscore our earnings growth outlook. The company's service area ranks among the middle of the pack in economic and population growth trends, which contributes to our expectations for stability. The company's sustainability strategies are the main impetus for growth. Investments in this domain, including its expanding water business, and continual infrastructure hardening, should lead to rate-case execution and earnings increases ahead.

Risks are worth noting. Two key areas of concern are the possible banning of natural gas in new construction (a growing urban trend), and the increasing threat from wildfires in the region. Also, the stock's Earnings Predictability rank is quite low.

The shares of ONE Gas, Inc. began trading "regular-way" on the New York Stock Exchange on February 3, 2014. That happened as a result of the separation of ONEOK's natural gas distribution operation. Regarding the details of the spinoff, on January 31, 2014, ONEOK distributed one share of OGS common stock for every four shares of ONEOK common stock held by ONEOK shareholders of record as of the close of business on January 21. It should be mentioned that ONEOK did not retain any ownership interest in the new company.

BUSINESS: ONE Gas, Inc. provides natural gas distribution services to more than two million customers. There are three divisions: Oklahoma Natural Gas, Kansas Gas Service, and Texas Gas Service. The company purchased 165 Bcf of natural gas supply in 2022, compared to 164 Bcf in 2021. Total volumes delivered by customer (fiscal 2022): transportation, 57.3%; residential, 31.2%; commercial & industrial, 10.8%; other, .7%. ONE Gas has around 3,600 employees. BlackRock owns 12.6% of common stock; The Vanguard Group, 11.5%; State Street Corporation, 11.5%; officers and directors, 1.5% (4/23 Proxy). CEO: Robert S. McAnnally. Incorporated: Oklahoma. Address: 15 East Fifth Street, Tulsa, Oklahoma 74103. Telephone: 918-947-7000. Internet: www.onegas.com.

ONE Gas, Inc. probably had a lackluster performance in 2023. (Fourth-quarter numbers were not available when this report went to press.) Recall that during the first nine months, profits of $2.87 per share were only one cent higher than the previous year's $2.86 tally. This stemmed, to a certain degree, from a 12.5% increase in total operating expenses, which particularly reflected greater depreciation & amortization and operations & maintenance costs. Also, interest expense rose sharply. The number of diluted shares outstanding was somewhat higher, too. But the company's results were helped partly by new rates. Moreover, the effective income tax rate dropped. Nevertheless, it seems that full-year earnings per share were around $4.15. That would be quite close to 2022's $4.08 figure.

We anticipate another underwhelming showing in 2024. Although ONE Gas stands to enjoy the benefits of new rates and customer growth, they ought to be offset by heightened expenses (including employee-related and contractor costs, depreciation expense, and interest costs). So, the bottom line may only finish in the vicinity of $4.05 per share, modestly below our target for last year. But looking at 2025, a nearly 4% advance, to $4.20 a share, appears possible based to some extent on our assumption that the business climate is generally favorable.

The quarterly dividend was recently raised by a penny, to $0.66 a share. The company says that it plans to keep the average annual dividend growth rate between 1% and 2% through fiscal 2028. We believe that substantially slower increase, versus prior years, is partly because operating expenses should continue to climb as ONE Gas expands. In any event, the payout ratio out to the end of the decade ought to be manageable, in the 55% to 60% range.

There are some things to like about these shares. Capital gains potential over the 18-month span is significant. Upside possibilities during the 2027-2029 period are worthwhile, too. The solid dividend yield is another plus. Consider, also, the 2 (Above Average) Safety rank and high Price Stability mark of 90 out of 100.

Frederick L. Harris, III February 23, 2024

(A) Diluted EPS. Excludes nonrecurring gain: 2017, $0.06. Next earnings report due early May. Quarterly EPS figures for 2022 don't equal total due to rounding.

(B) Dividends historically paid in early March, June, Sept., and Dec. ■ Dividend reinvestment plan. Direct stock purchase plan.
(C) In millions.

BUSINESS: South Jersey Industries, Inc. is a holding company. The company distributes natural gas in New Jersey and Maryland. South Jersey Gas rev. mix '21: residential, 48%; commercial, 23%; cogen. and electric gen., 9%; industrial, 20%. Acq. Elizabethtown Gas and Elkton Gas, 7/18. Nonutil. oper. incl. South Jersey Energy, South Jersey Resources Group, South Jersey Exploration, Marina Energy, South Jersey Energy Service Plus, and SJI Midstream. Has about 1,173 empl. Off./dir. own less than 1% of common; BlackRock, 14.4%; State Street Corporation, 13.9%; The Vanguard Group, 10.8% (3/22 proxy). Pres. & CEO: Michael J. Renna. Chairman: Joseph M. Rigby. Inc.: NJ. Addr.: 1 South Jersey Plaza, Folsom, NJ 08037. Tel.: 609-561-9000. Web: www.sjindustries.com.

South Jersey Industries is moving ahead with plans to be acquired. On February 24th the company entered into a definitive agreement to be acquired by the private capital Infrastructure Investments Fund (IIF) for $36.00 per share in an all cash bid. Following the announcement, the stock spiked 40% and have since been trading between $32 and $36 per share.

There are a few concerns to note, regarding the proposed transaction. Although unlikely, it is possible for IIF to back out of the deal. This scenario would be disadvantageous at this time, with shares trading at a significant premium to the preannouncement levels. Should this occur, IIF would be penalized up to $255 million, roughly $2 per share, but prices would likely retreat to between $25 and $30. Another consideration is that the deal may take longer than expected to materialize as there are many regulatory hurdles to clear. Currently, we look to the fourth quarter for a resolution in the takeover. The shares are trading fairly close to the buyout price, suggesting the likelihood that the deal should go through as planned. However, conserative accounts may want to sell their shares on the open market on the small chance the transaction is blocked. Relevant regulatory bodies have been known to delay or even prohibit similar acquisitions, and could potentially impede the deal to shareholder's detriment. We deem both scenarios as unlikely, but they are of significant consequence.

South Jersey Industries performed well in the third quarter. The bottom line came in worse than we expected, with a share loss of $0.18 versus our forecast of a $0.12 deficit. Revenue growth was strong, however, at $608 million it was more than 65% higher than in the same quarter last year. Most of this gain came from non-utility revenues, which experienced an equal-sized increase in expenses, contributing to the lowly bottom-line. This should reverse in the winter months, as the groundwork laid by the expensive non-utility infrastructure business will likely bolster earnings in the next two quarters.

These shares are trading with a 5.6% spread on the takeover bid. Pending a close, dividends will continue being paid out at $0.31 per quarter.

2024					

BUSINESS: Southwest Gas Holdings, Inc. is the parent holding company of Southwest Gas and Centuri Group. Southwest Gas is a regulated gas distributor serving 2.2 million customers in Arizona, Nevada, and California. Centuri provides construction services. 2022 margin mix: residential and small commercial, 85%; large commercial and industrial, 4%; transportation, 11%. Total throughput: 2.2 billion therms. Has 13,614 employees. Off. & dir. own .3% of common; BlackRock, 13.6%; Carl C. Icahn, 12.5%; The Vanguard Group, 9.7%; (3/23 Proxy). Chairman: Michael J. Melarkey. Pres. & CEO: Karen S. Haller. Inc.: DE. Addr.: 8360 S. Durango Drive, P.O. Box 98510 Las Vegas, Nevada 89193. Telephone: 702-876-7237. Internet: www.swgas.com.

Southwest Gas Holdings plans to pivot the spin-off of the Centuri Group. The company announced that it will pursue an initial public offering (IPO) for Centuri Holdings, Inc. versus earlier plans for a tax-free spin-off. Proceeds from the IPO will primarily be used to pay down the subsidiary's debt. Southwest Gas will continue to reduce its ownership interest thereafter. The offering is slated for the spring or summer of 2024, pending the replacement of the current Centuri CEO Paul Daily, after he announced plans for his retirement. The tax-free spin-off option is still available as a second resort. Note: Our forecasts do not account for pending deals until they are completed.

The company likely had a challenging year in 2023. (Southwest was scheduled to report its annual results shortly after we went to press with this Issue.) Although an improvement from a deficit in the year before, earnings in 2023 were likely well below the company's recent averages. A $71 million loss realized on the sale of MountainWest in the first quarter took a toll, along with a significant increase in interest costs. Some rate-base increases and gas purchase cost recoveries likely helped to partially offset these. Overall, net profits probably reached $205 million, which is about $25 million off Southwest's recent high in 2020, but also reflects slimmer margins and stagnant earnings growth. A rapid rate of share dilution made matters worse.

Earnings growth ought to recover over the intermediate term. Expectations for lower debt levels and interest payments, along with more efficient utility operations and tailwinds to the Centuri Group's infrastructure business should lead to a profit-growth recovery over the next two years. Too, we think ongoing changes in executive management and activism in the company's governance roles will likely put a priority on shareholder appeasement and accelerated earnings.

The stock's Timeliness rank remains suspended due to the pending corporate restructuring. While the planned IPO of Centuri Holdings should benefit Southwest Gas, our long-range projections for the company under its current configuration suggest limited upside for SWX.

Earl B. Humes *February 23, 2024*

BUSINESS: Spire Inc., formerly known as the Laclede Group, Inc., is a holding company for natural gas utilities, which distributes natural gas across Missouri, including the cities of St. Louis and Kansas City, Alabama, and Mississippi. Has roughly 1.7 million customers. Acquired Missouri Gas 9/13, Alabama Gas Co 9/14. Utility therms sold and transported in fiscal 2023: 3.2 bill. Revenue mix for regulated operations: residential, 67%; commercial and industrial, 25%; transportation, 5%; other, 3%. Officers and directors own 2.9% of common shares; American Century Companies, 15.4% (12/23 proxy). Chairman: Edward Glotzbach; CEO: Steve Lindsey. Inc.: Missouri. Address: 700 Market Street, St. Louis, Missouri 63101. Tel.: 314-342-0500. Internet: www.spireenergy.com.

Spire began fiscal 2024 (ends September 30th) on a sour note. First-quarter earnings per share slipped 8.4%, to $1.52, versus last year's $1.66 total. This was due partly to the fact that, for both the Gas Marketing and Midstream divisions, fiscal 2023's very favorable market conditions were not repeated. But on the plus side, the Gas Utility unit had a better performance, supported by the benefit of new rates. We do anticipate unspectacular consolidated results for the second quarter. Still, since the company faces easier bottom-line comparisons during the second half, full-year share net stands to grow roughly 6%, to $4.10, relative to the fiscal 2023 figure of $3.85. Regarding next year, profits stand to advance around 10%, to $4.50 a share, as operating margins expand further.

Capital expenditures for this fiscal year are expected to be around $765 million. (That's 15.5% higher than the fiscal 2023 level of $662.5 million.) Funds are being deployed to such areas as infrastructure upgrades at the utilities and new business development initiatives. Management adds that it looks for total spending from fiscal 2024 through fiscal 2033 to be $7.2 billion. Assuming that the balance sheet stays in healthy condition, Spire ought to have little trouble accomplishing these objectives.

Business prospects out to 2027-2029 appear decent. The gas utilities boast 1.7 million customers in Mississippi, Alabama, and Missouri. Too, the other operations, particularly pipelines, hold promise. Additional expansionary projects and technological enhancements in customer service and elsewhere should help Spire, as well. Finally, acquisitions are plausible, given the adequate finances. To that end, the company just completed the purchase of the MoGas and Omega pipeline systems (both serving customers in Missouri) from CorEnergy Infrastructure Trust, Inc. for $177.6 million.

What about the stock? Its dividend yield compares nicely to those of other equities in *Value Line's* Natural Gas Utility Industry. Moreover, capital gains potential over the 18-month span and out to 2027-2029 looks decent. Meanwhile, the Timeliness rank sits at 3 (Average).

Frederick L. Harris, III February 23, 2024

BUSINESS: UGI Corp. operates six business segments: AmeriGas Propane (accounted for 11.6% of net income in 2023), UGI International (28.1%), Gas Utility (35.7%), Midstream & Marketing (31.5%), and Corp. & Other (NMF). UGI Utilities distributes natural gas and electricity to over 672,000 customers mainly in Pennsylvania; wholly-owned AmeriGas Ptrs. is the largest U.S. propane marketer, serving about 1.5 million users in 50 states. Acquired remaining 80% interest in Antargaz (3/04); Energy Transfer Partners (1/12). Vanguard Group owns 12.5% of stock; BlackRock, 12.8%; Officers/directors, 1.2% (12/23 proxy). Has 10,000 empls. President & CEO: John L. Walsh. Inc.: PA. Address: 460 N. Gulph Rd., King of Prussia, PA 19406. Tel.: 610-337-1000. Internet: www.ugicorp.com.

Despite the stock slumping, earnings at UGI Corp. held up in fiscal 2023, through a challenging environment for utilities. (Fiscal years end September 30th.) The diversified natural gas company's stock fared much worse than its peers throughout 2023, losing 33% of its value over the twelve-month stretch. However, operating performance held up relatively well in a difficult environment characterized by cost inflation, higher interest rates, turbulent global energy markets, and unusually warm weather. Revenues declined roughly 12%, with all segments other than the regulated utility showing attrition. The adjusted net income of $613 million was fairly resilient, declining only 2% in comparison. The company recorded a few notable one-time charges - a $660 million goodwill impairment to AmeriGas and a $181 million cost related to the exit of the UGI International energy marketing business - which are not included in our adjusted earnings metric.

Our near-term expectations are for uneven sales and steady earnings growth. Indeed, earnings in the fiscal 2024 first quarter were spot on with our target, albeit the top line has slipped since the figure fell far short of our estimate. We are now expecting a dip in revenues over the next two years. Lower liquid propane gas volume trends persist, and the exit of the energy marketing business continues to offset top-line gains in other segments. However, recent investments and acquisitions in the natural gas businesses, and success in rate cases from the utility, are likely enough to start driving an earnings-growth recovery.

Over a multi-year outlook, current strategic initiatives are likely to contribute to financial improvements. Initially, management aims to further align its natural gas businesses to leverage efficiencies and drive cost savings. This should then support liquidity while attempting to delever, with a hefty $1.7 billion of long-term debt coming due in 2025.

Wide recovery potential makes this a compelling choice for risk-tolerant investors seeking a sizable dividend yield (6.3%). The stock offers well-above-average total return potential on a long-term basis, along with some risk.

The Water Utility Industry consists of six investor-owned companies that provide water services to residential, commercial, and industrial customers. It is a niche sector because most of the water utilities in the United States are run by states and local governments that do not issue stock.

In our last Industry report three months ago, we discussed how long-term interest rates had spiked higher. In retrospect, it was close to the peak yield on longer-duration Treasury bonds, which have declined sharply since the latter part of October.

The water infrastructure in the United States remains in subpar condition despite increased investment in this sector over the past decade or so.

Every water company we cover is in the midst of a large construction program. Many pipelines are corroding or leaking, and they need to be replaced.

Since the Industry is spending heavily on capital expenditures, the typical balance sheet in the this space is overleveraged.

The Water Utility Industry is very small. There are only six companies with a combined market capitalization of about $45 billion.

Shares of these stocks have performed very poorly in the recent past. Indeed, the Water Utility Industry is ranked among the lowest of the 93 industries followed by *Value Line*.

INDUSTRY TIMELINESS: 91 (of 93)

A Reversal In Long-Term Interest Rates

All types of utilities are often viewed as income equities due to their combination of high dividend yields and better-than-average distribution growth prospects. The yields on most water stocks are currently very close to the *Value Line* median, however. Indeed, *Essential Utilities's* 3.4% yield is the one exception in the group. In any case, as heavy borrowers of debt, lower interest rates ought to be beneficial to the Industry. On October 18th, the yield on the benchmark 10-year Treasury bond eclipsed 5% in intraday trading. Following some positive news on the inflation front and indications that the Federal Reserve may cut rates this year, long-duration bond prices have rallied strongly. Over the past 10 weeks, the yield on the 10-year Treasury has declined by about 110 basis points to approximately 3.90%.

Antiquated Infrastructure

For decades, annual capital expenditures on modernizing and upgrading assets such as pipelines and wastewater treatment facilities, were underfunded. For the sake of keeping customers bills low, major maintenance projects were deferred. About 10 to 15 years ago, both the operators of the water facilities and state regulators realized that the situation had to change. Depending upon the source of the information, the general condition of domestic pipelines is substandard, with the average age of pipes being anywhere from 50 to 75 years. As mentioned previously, water utilities have been working to upgrade their systems. Fortunately for them, this is a sort of pay-as-you go type of construction. Electric utilities, for example, have to make huge upfront payments to add a new base load unit. Hence, regulators have had a more-constructive relationship with water companies. However, in the years between the housing crisis of 2007-09 and the pandemic, inflation was very low. This made it easier to pass along high-single-digit rate increases without much pushback from customers. The spike in inflation that was caused by the monetary and fiscal policies aimed at combating COVID-19's impact on the economy has declined, but remains above the Federal Reserve's 2.0% target. Should double-digit rate hikes now be required to finance the construction programs, there could be greater displeasure shown by ratepayers (i.e. voters). This may cause regulators to become more restrictive in their rulings.

Growing Via Acquisitions

The water industry in the U.S. is mostly run by local, municipal water districts. (There are some major exceptions, such as in New York City.) As a result, there are tens of thousands of these entities operating separately. There is no need for such an immense number, as it leads to inefficiency. Small districts also do not have the financial wherewithal required to fund the needed upgrades. *American Water Works* and *Essential Utilities* are two companies that use bolt-on acquisitions as part of their overall strategy to expand their rate base. These big utilities can easily absorb smaller ones and achieve substantial cost savings by eliminating redundancies.

Conclusion

There are no stocks in this industry that stand out for having favorable short-term total appreciation potential. Despite the bad performance by these equities over the past few years, most continue to have high price-to-earnings ratios and are already trading in their 2026-2028 Target Price Ranges. One of the reasons these equities trade at such a premium is because of scarcity. Investors who want to be in this sector ought to be aware that they will have to pay for the privilege. The only equity followed here that has good long-term total-return potential is *Essential Utilities* and that's probably due to its presence in the gas utility sector.

As always, we strongly recommend that subscribers read each individual comment before investing to better understand the underlying risks associated with each stock.

BUSINESS: American States Water Co. operates as a holding company. Through its principal subsidiary, Golden State Water Co., it supplies water to 263,265 customers in 10 California counties. Service areas include the metropolitan areas of Los Angeles and Orange Counties. The company also provides electricity to 24,705 customers in Big Bear Lake and San Bernardino Cnty. Provides water & wastewater services to U.S. military bases through its ASUS subsidiary. Sold Chaparral City Wtr. of AZ. (6/11). Employs 811. BlackRock, Inc. owns 18.6% of out. shares; State St., 16.6%; off. & dir., 0.8% (4/23 Proxy). Chair.: Anne M. Holloway. Pres. & CEO: Robert Sprowls. Inc: CA. Address: 630 East Foothill Blvd., San Dimas, CA 91773. Tel.: 909-394-3600. Int.: www.aswater.com.

Rate relief probably enabled American States Water to complete a successful year. The water utility likely posted record profits last year due to a delay in a ruling by California authorities. According to the law, utilities seeking to raise customer bills to recoup expenses and capital investments must submit an official request to raise rates triennially. The California Public Utility Commission (CPUC) then rules on the petition. American States' Golden Water subsidiary followed the correct methods, but the CPUC issued its ruling very late. The utility was forced to absorb higher costs in 2022. Thus, when the rates were granted last year, they were retroactive to the beginning of 2022. The end result was that American States did poorly in 2022 and exceptionally well in 2023.

The bottom line will likely return to normal in 2024. We think that the company's share earnings can reach $3.00. Though it represents a decline, it will be a decent year. The question is whether the CPUC will permit new rates in 2025 or will make the company wait an additional year, like it did the last time.

Nonutility operations could well provide a lift to earnings growth. State regulators place a limit on the level that a utility can earn. There is less risk and less reward in this model. Through its ASUS subsidiary, the company is involved in managing water services at bases owned by the United States Army. There aren't many entities in this field, so ASUS has been successful in winning its share of bids on new 50-year contracts to service these facilities. Since rates of return aren't regulated in this sector, this business can generate higher returns than Golden States' regulated operations. Through the first three quarters, ASUS has been responsible for 14% of the American States share profits. We look for this percentage to rise as more military installations privatize their water operations.

These shares are ranked to perform in line with the market in the year ahead. Out to 2026-2028, the situation appears to be more unfavorable. Despite solid dividend growth prospects, the equity's total return potential to that time is well below the *Value Line* median.

BUSINESS: American Water Works Company, Inc. is the largest investor-owned water and wastewater utility in the U.S., providing services to approximately 14 million people in 24 states. Nonregulated business assists municipalities and military bases with the maintenance and upkeep as well. Regulated operations made up 86% of 2022 revenues. New Jersey is its largest market accounting for 25.9% of regulated revenues; Pennsylvania, 23.4%; Missouri, 10.9%. Has 6,500 employees. Vanguard owns 11.7% of outstanding shares; BlackRock, 8.6%; State St., 5.4%; officers & directors, less than 1.0% (3/23 Proxy). President & Chief Executive Officer: Susan Hardwick. . Address: 1 Water Street, Camden, NJ 08102. Telephone: 856-346-8200. Internet: www.amwater.com.

American Water Works intends to continue to expand both its rate base and operating margins via bolt-on acquisitions. The water industry in the U.S. is made up mostly of thousands of small, independent, water districts. Not only are these entities inefficient, but they lack sufficient funds to modernize their antiquated infrastructure. American Water expects to spend $4 billion to $5 billion on these types of purchases through 2033. The company has proven that it can take assets from other utilities and realize substantial cost savings. This increases its revenues and operating margins.

The already massive projected capital expenditure budget has been raised again. Previously, leadership forecast that the 10-year construction program would be in the range of $27 billion to $30 billion. In the most recent presentation made in December of 2023, this budget was hiked 10%-11%, to $30 billion to $33 billion.

The balance sheet ought to be healthy enough to handle these outlays. In the year just ended, we think the water utility spent $2.6 billion on capital expenses. A large equity offering that raised $1.7 billion increased shares outstanding 7%-8%. This was unusual, as management has historically been disinclined to raise money in this fashion. Indeed, the number of shares rose only 2.7% in the previous decade. More debt and some new equity issues will be required going forward. American Water's financial condition should remain at least average, however.

Earnings and dividend growth rates here ought to outpace other members of the industry. Assuming reasonable treatment by regulators on the utility's requests for rate relief (more below), we think annual increases in the payout and bottom line can average 7%-9%.

The wild card is here is the regulatory climate. The company has enjoyed constructive relationships with the authorities who determine its allowed returns. This was before the pandemic, though, when low inflation made it easier to pass along big rate hikes to customers.

These shares are untimely. Moreover, despite the stock's underperformance over the last three years, we think that it still doesn't offer much value to 2026-2028.

BUSINESS: California Water Service Group provides regulated and nonregulated water service to 496,400 customers in 100 communities in the state of California. Accounts for about 90% of total customers. Also operates in Washington, New Mexico, and Hawaii. Main service areas: San Francisco Bay area, Sacramento Valley, Salinas Valley, San Joaquin Valley & parts of Los Angeles. Acquired Rio Grande Corp; West Hawaii Utilities (9/08). Revenue breakdown, '22: residential, 67%; business, 20%; industrial, 3%; public authorities, 5%; other 5%. Off. and dir. own 1% of common stock (4/23 proxy). Has 1,184 employees. Pres. and CEO: Martin A. Kropelnicki. Inc.: DE. Addr.: 1720 North First St., San Jose, CA 95112-4598. Tel.: 408-367-8200. Internet: www.calwatergroup.com.

California Water Service Group's third-quarter financial results were unfavorably impacted by the state's continued indecision on the pending rate case approval. The company reported revenues of $255 million and earnings of $0.60 per share in the September period, with both figures contracting on an annual basis. Management estimated that a favorable decision would have added approximately $20 million to the top line in the third quarter. Meanwhile, a second judge was assigned to the rate case in late July of last year and, according to regulators, the time line for a decision was extended to the end of 2023. Thus, we expect a ruling on the approval to be imminent.

Our 2023 top- and bottom-line estimates are being reduced at this time. We now look for revenues of $795 million (down from our previous call of $805 million) and earnings of $0.80 per share (down from $0.95). Indeed, the slow-moving rate case gives us pause. Elsewhere, consumer water consumption likely remained soft for the remainder of the year. Moreover, higher operating costs, namely water production, purchased water, and labor expenses, probably persisted.

The long-term picture is notably brighter, however. Assuming the abovementioned rate case is approved by regulators, new customer pricing will be retroactive starting from January 1, 2023. These recouped funds, on top of higher rates going forward, augur well. Meanwhile, management is aggressively investing in upgrading its water system infrastructure ($274 million was spent in the recent period), which suggests that additional rate hike approvals may be pursued down the road. Lastly, a healthier economic backdrop ought to support an uptick in broader residential and business water consumption further out.

From an investment standpoint, California Water shares leave something to be desired at the moment. The stock is ranked to trail the broader market averages over the coming six to 12 months. What's more, at the recent quotation, total return potential three to five years hence is below the *Value Line* median.

BUSINESS: Essential Utilities, Inc. became the new name for Aqua America on Feb. 3, 2020, to reflect the acquisition of Peoples, a natural gas utility, which occurred in 3/20. In 2022, Aqua Amer. provided water and wastewater services in the states of PA, OH, TX, IL, NC, NJ, IN, VA NS WS. Acquired AquaSource, 7/13; N. Maine Util., 7/15; and others. Water respn. for 47% of revenues in 2022; residential, 27%; commercial, 7%; industrial, wastewater & other, 13%. Gas 50%; other, 3.0%. Employes 3,178. Off. & dir. own less than 1% of the common stock; BlackRock, 11.2%; Vanguard, 10.1%; Can. Pen. Plan 8.2% (3/23 proxy). Pres. & CEO: Christopher Franklin. Inc.: PA Addr.: 762 W Lancaster Ave., Bryn Mawr, PA 19010. Tel.: 610-525-1400. Int.: www.essential.co.

Essential Utilities posted strong third-quarter results. The water and gas utility company's share earnings of $0.30 were $0.01 above our expectations and a 15% increase over the year-ago period. Regulators allowed the implementation of higher rates on water customers' bills in eight different states. This brought in an additional $42.2 million. On the gas side, higher rates permitted by Pennsylvania and Kentucky state authorities brought in $21.3 million in revenues. Also providing a boost to the bottom line was an almost 3% decrease in operating and maintenance expenses. It should be noted that not all revenue is the same in the utility sector. Essential's top line actually declined 5.4% in the September period on a year-over-year basis. When gas is cheaper on the open market, a utility buys it and sells the gas to clients at the same price. So, it is just a pass-through revenue that doesn't impact net income.

The company likely ended 2023 on a positive note. Ongoing cost controls probably also helped profitability. Along with the rate relief, earnings per share probably increased by double digits. Since first-half earnings fell marginally, full-year earnings per share should have rose 5%.

We expect 2024 to be another decent year. Expenses ought to trend higher, but may be offset by rate relief granted in New Jersey, Ohio, and Virginia in the water segment. Overall, share earnings could rise another 5%-10%.

Essential is another member of the water sector that is increasing its size and income through acquisitions. In the U.S., the water industry is made up of thousands of independent, mostly municipally run entities that are often underfunded and inefficient. Like American Water Works, Essential is absorbing these water districts so that it can substantially widen margins on the purchases through economies of scale. Management thinks that these bolt-on purchases can expand its rate base by 2%-3% annually.

This good-yielding stock is ranked to underperform the market averages in the upcoming year. Looking further out to 2026-2028, shares of Essential have better total return potential than any other member of the Water Utility Industry.

BUSINESS: Middlesex Water Company engages in the ownership and operation of regulated water utility systems in New Jersey, Delaware, and Pennsylvania. It also operates water and wastewater systems under contract on behalf of municipal and private clients in NJ and DE. Its Middlesex System provides water services to 61,000 retail customers, primarily in Middlesex County, New Jersey. In 2022, the Middlesex System accounted for 65% of operating revenues. At 12/31/22, the company had 350 employees. Incorporated: NJ. President, CEO, and Chairman: Dennis W. Doll. Officers & directors own 1.9% of the com. stock; BlackRock Inst. Trust Co., 14.6% (4/23 proxy). Add.: 485 C Route 1 South, Suite 400, Iselin, NJ 08830. Tele.: 732-634-1500. Int.: www.middlesexwater.com.

Middlesex Water stock has treaded water since our previous review. Indeed, the equity, which etched an all-time high in late 2021, has contracted more than 40% in value over the past two years or so. After a prolonged period of relatively conservative allocation strategies, the investment community's appetite for riskier assets appears to have shifted somewhat. On balance, based on recent price and earnings momentum, Middlesex shares do not presently stand out for relative year-ahead price performance (Timeliness: 5, Lowest).

We are trimming our 2023 and 2024 bottom-line estimates subsequent to a softer third-quarter showing. The company posted September-period revenues of $47 million, or $3 million shy of our call. Meanwhile, net income of $0.56 per share, which was flat on a sequential basis, came in considerably below consensus expectations. A combination of lower customer demand and higher purchased water costs weighed on results. All told, we are shaving $0.35 and $0.20 per share from our 2023 and 2024 earnings estimates, to $2.05 and $2.55, respectively.

The board of directors recently raised the quarterly dividend payout 4%, to $0.325 per share. The modest annual increase is in line with the company's historical rate of distribution hikes. Moreover, Middlesex's fairly stable secular business model suggests that additional dividend increases are likely in the cards over the long haul.

Better days probably lie ahead. Looking further out, overall water consumption ought to perk up as economic conditions slowly improve. The company should also benefit from additional rate hike approvals. Capital spending on water infrastructure and delivery systems is likely to keep management active in filing for regulator-approved rate increases.

We think patient investors should also hold off, for now. Capital appreciation potential over the pull to late decade, even on a risk-adjusted basis, is nothing to write home about at recent levels. What's more, the current dividend yield is below the *Value Line* median, thus rendering Middlesex shares unenticing as a stand alone, income-generating option.

Nicholas Patrikis *January 5, 2024*

(A) Diluted earnings. Quarterly figures may not sum due to rounding. Next earnings report due early February.

BUSINESS: SJW Group engages in the production, purchase, storage, purification, distribution, and retail sale of water. It provides water service to approximately 231,000 connections with a total population of roughly one million people in the San Jose area and 16,000 connections that reach about 49,000 residents in the region between San Antonio and Austin, Texas. The company merged with Connecticut Water (10/19) which provides service to approx. 138,000 connections with a total population of 450,000 people. Has 757 employees. Officers and directors own less than 1.0% of outstanding shares (3/23 proxy). Chairman & CEO: Eric Thornburg. Incorporated: California. Address: 110 West Taylor Street, San Jose, CA 95110. Telephone: (408) 279-7800. Internet: www.sjwater.com.

SJW Group closed two acquisitions in Texas during the September period. Subsidiary Texas Water Company finalized the purchase of KT Water Development and KT Water Resources for undisclosed amounts. The former provides diverse water services to residential water connections, while the latter is a water wholesaler that will greatly increase Texas Water Company's available water supply over the next several years.

Third-quarter financial results were solid. SJW Group recorded revenues of $205 million, or a 16% annual advance. The gain was underpinned by recent rate increases and higher customer water usages, particularly amidst the end of the state's conservation requirements. On the earnings front, net income jumped 38%, to $1.13 per share, driven largely by strong top-line gains that more than offset a slight uptick in operating expenses, such as water production costs. As a result, we are raising our 2023 revenue and earnings calls from $640 million and $2.75 per share, to $660 million and $2.95 per share, respectively. We think moderate growth is also in the cards for 2024.

Rate case filings ought to continue in the coming years. Most recently, higher customer rates went into effect in Maine and California. Elsewhere, in October, SJW's subsidiary Connecticut Water Company filed an application with state regulators to amend rates. Filings have also been proposed in Texas. In the meantime, management is not likely to take its foot off the gas, in terms of infrastructure investment spending. In fact, the company plans to invest more than $1.5 billion over the next five years, of which a decent portion is expected to be recouped via additional rate hike approvals.

We are not presently recommending this stock. SJW shares are ranked to move in line with the broader market averages over the coming six to 12 months. Moreover, the current dividend yield is roughly on par with that of the *Value Line* median. On balance, total return potential over the 2026-2028 horizon does not stand out at recent levels. All told, we suggest that subscribers looking for exposure to regulated water utilities have a look elsewhere, for now.

Executive Summary

Introduction

Energy authorized returns on equity rose in 2023 as the pace of rate case activity reached record-high levels.

As per calculations from Regulatory Research Associates, the average authorized return on equity (ROE) for electric utilities in cases decided during 2023 was 9.60%, compared to the 9.54% average for cases decided in 2022. There were 63 electric ROE determinations reflected in the calculations for 2023 versus 53 in 2022.

Despite the rise in 2023, the average authorized ROE for electric utilities in 2023 remains near historic lows and was the sixth-lowest annual average over the more than 40 years RRA has tracked rate case activity.

The average ROE authorized for gas utilities was 9.64% for cases decided during 2023 versus the 9.53% average observed in 2022. RRA's calculations relied on 43 gas rate case decisions that included an ROE determination during 2023 versus 33 in 2022. For gas utilities, the average authorized ROE in 2023 was the seventh-lowest annual average on record.

Rate case activity reached record-high levels in 2023, with nearly 165 decisions issued by state public utility commissions, including 106 electric or gas equity return determinations.

While the reasons for a rate case filing are numerous, the main driver continues to be the recovery of capital expenditures. Energy utilities are investing in infrastructure to modernize transmission and distribution systems, build new natural gas, solar and wind generation, and deploy new technologies to accommodate the expansion of electric vehicles, battery storage and advanced metering infrastructure that facilitate the transition toward decarbonization. Other reasons for rate filings include rising expenses, revised cost-of-capital parameters, the impact of broader economic and sector-wide forces on operations, the need to address rate treatment to be accorded generation facilities being retired prior to the end of their planned service lives due to the energy transition, recovery of storm and severe-weather related costs, and regulatory approval for alternative regulatory mechanisms.

About this report

This quarterly report offers a detailed overview of electric and gas rate case decisions issued in the US during 2023 and select aggregated historical data. The information presented in this report utilizes the data compiled by Regulatory Research Associates for its rate case database, which is available on the S&P Capital IQ Pro platform. RRA endeavors to follow all "major" rate cases for investor-owned utilities nationwide, with "major" defined as a case in which the utility's request would result in a rate change of at least $5 million or in which the commission approves a rate change of at least $3 million. In addition to base rate cases, the rate case history database includes details regarding certain limited-issue rider proceedings, primarily those involving significant rate base additions recognized outside of a general rate case. In some of these cases, the rate change coverage criteria may not apply. Historical data in this report may not match earlier data provided in previous reports due to differences in presentation, including the treatment of withdrawn or dismissed cases and the addition of cases not previously included in RRA's coverage.

The Take

The average authorized returns in 2023 edged modestly higher than the annual levels observed in 2022 as higher interest rates began to impact authorized ROEs. The effect of interest rate increases on authorized returns will likely be limited, however, given that regulators are slower to adjust ROEs upward than downward, and affordability concerns persist as regulators contend with customer rate increases stemming from significant but necessary capital investment in the energy transition during a period of high inflation.

In recent years, rate case activity for investor-owned electric and gas utilities in the US has been elevated, with state public utility commissions issuing almost 165 decisions in 2023. With higher interest rates, higher inflation and accelerating capital spending to address public policy goals, particularly the energy transition, RRA anticipates rate case filings will remain robust.

Overview of electric and gas authorizations

The average electric and gas authorized returns on equity inched gently higher per averages calculated for 2023.

The average ROE authorized for electric utilities rose to 9.60% for rate cases decided in 2023 from the 9.54% average observed in 2022. There were 63 electric ROE determinations reflected in the calculations for 2023 versus 53 in full year 2022.

The average ROE authorized for gas utilities was 9.64% for cases decided in 2023, above the 9.53% average observed in 2022. There were 43 gas rate case decisions decided in 2023 versus 33 in full year 2022.

The electric data set includes several limited-issue rider cases. Historically, the ROEs authorized in limited-issue rider cases were meaningfully higher than those approved in general rate cases, driven primarily by incentives allowed in Virginia for certain types of generation investment. These premiums have largely expired. Excluding rider cases, the average authorized ROE for electric cases was 9.66% in 2023 versus 9.58% in full year 2022.

Excluding the six rider cases, the average authorized ROE for gas cases was 9.60% in 2023. There were no rider cases with a gas-authorized ROE in 2022. For the most part, limited-issue riders have a limited impact on average ROEs in the gas sector, as most of the gas riders rely on ROEs approved in a previous base rate case.

In 2023, the median ROE authorized in all electric utility rate cases was 9.50%, equal to that observed in 2022; for gas utilities, the metric was 9.64% in 2023 and 9.53% in full year 2022.

Historically, authorized returns have generally tracked the overall direction of interest rates, albeit with two important caveats to keep in mind — the magnitude of the change in authorized ROEs may not be as dramatic as that observed in interest rates, and changes in authorized ROEs may lag changes in interest rates, especially in the upward direction.

Interest rates — as measured by the 30-year US Treasury bond yield — fell almost steadily between 1990 and 2020, placing downward pressure on authorized ROEs. Between 1990 and 2020, Treasury yields fell more than 700 basis points, to 1.56% from 8.61%, while average authorized ROEs for electric and gas utilities combined fell less than 325 basis points, to 9.45% from 12.69%. The average authorized ROEs did not fall below 10% until 2011 for gas utilities and until 2014 for electric utilities. The calendar-year averages fell below 9.50% for the first time in 2020.

Average electric, gas authorized ROEs; number of rate cases decided

The decline in authorized ROEs has coincided with an upswing in rate case activity, with 100 or more cases adjudicated in 12 of the last 15 calendar years. This count includes electric and gas cases where no ROEs were specified, but it does not include withdrawn cases. At almost 165 cases decided, rate case activity in 2023 was the most robust observed in any year during the 1990–2023 period, with authorized increases totaling about $12 billion.

With interest rates and authorized ROEs declining at different rates between 1990 and 2020, the spread between authorized ROEs and the average yield on 30-year US Treasuries somewhat widened over this period — from a little over 400 basis points in 1990 to peaking at just under 800 basis points in 2020.

This occurrence is attributable primarily to the regulators' often-unstated understanding that the drop in interest rates caused by the Fed intervention was unusual. Consequently, regulators did not necessarily fully reflect the interest rate drop in newly authorized ROEs in some instances; in others, regulators acknowledged that the changing dynamics of the industry and instability in the overall economy presented increased risks for investors, justifying a higher premium over interest rates.

However, with the uptick in interest rates since 2020, the spread has begun to narrow, falling to around 550 basis points in 2023.

With the myriad factors putting upward pressure on customer bills, the spread may continue to narrow as regulators may become more reluctant to raise authorized returns.

Capital structure trends

The negative cash flow impact of federal tax changes that took effect in 2018 raised concerns regarding utility liquidity and credit metrics. In response, many utilities sought higher common equity ratios, and the average authorized equity ratios adopted by utility commissions in 2019 were modestly higher than those observed in 2018 and 2017.

For full years 2023, 2022, 2021, 2020, and 2019, the average equity ratios authorized in electric utility cases were 51.15%, 50.36%, 50.06%, 49.67% and 49.94%, respectively. The average equity ratios authorized gas utilities for these years were 52.45%, 51.38%, 50.94%, 51.87% and 51.86%, respectively.

From a longer-term perspective, equity ratios have generally increased over the last several years — the average equity ratio approved in electric rate cases decided during 2004 was 46.96%, while the average for gas utilities was 45.81%. Many commissions began approving more equity-rich capital structures in the wake of the 2008 financial crisis. For the bulk of the period since 2004, allowed equity ratios for gas utilities have been above those authorized for electric utilities.

A more granular look at ROE trends

Thus far, the discussion has looked broadly at trends in authorized ROEs; the following sections provide a more granular view.

RRA has observed that there can be significant differences between average ROEs based on the types of proceedings/decisions in which these ROEs were established.

As a result of the electric industry restructuring, certain states unbundled electric rates and implemented retail competition for generation. Commissions in those states now have jurisdiction only over the revenue requirement and return parameters for distribution operations.

RRA finds that the annual average authorized ROEs in vertically integrated cases involving generation have been about 30–65 basis points higher than in distribution-only cases, arguably reflecting the increased risk associated with the ownership and operation of generation assets.

The industry average ROE for vertically integrated electric utilities was 9.80% in 2023 versus the 9.75% average in 2022. For electric distribution-only cases, the industry average ROE was 9.24% in 2023 versus the 9.11% average in 2022.

Average authorized electric ROEs (%)

Settlements have frequently been used to resolve rate cases over the last several years, and in many cases, these settlements are “black box” in nature and do not specify the ROE and other typical rate case parameters underlying the stipulated rate change. Some states, however, preclude this type of treatment, and settlements must specify these values, if not the specific adjustments from which these values were derived.

For both electric and gas cases, RRA has found no discernible pattern in the average authorized ROEs in cases that were settled versus those that were fully litigated. In some years, the average authorized ROE was higher for fully litigated cases, while in others, it was higher for settled cases.

The following discussion focuses on the corresponding tables available here.

Table 1 shows the average ROE authorized in major electric and gas rate decisions annually since 1990 and quarterly since 2019, followed by the number of observations in each period. **Table 2** indicates the composite electric and gas industry data for all major cases, summarized annually since 2004 and quarterly since 2021.

Tables 3 and 4 provide comparisons since 2009 of average authorized ROEs for settled versus fully litigated cases, general rate cases versus limited-issue rider proceedings and vertically integrated cases versus delivery-only cases for electric and gas utilities, respectively.

The individual electric and gas cases decided in 2023 are listed in **Table 5**, with the decision date shown first, followed by the company name, the abbreviation for the state issuing the decision, the authorized rate of return, the ROE and the percentage of common equity in the adopted capital structure. Next, RRA indicates the month and year in which the adopted test year ended, whether the commission utilized an average or a year-end rate base and the amount of the permanent rate change authorized. The dollar amounts represent the permanent rate change ordered at the time the decisions were rendered. This study does not reflect fuel adjustment clause rate changes.

The simple mean is utilized for the return averages. In addition, the average equity returns indicated in this report reflect the ROEs approved in cases decided during the specified time periods and are not necessarily representative of the average currently authorized ROEs for utilities industrywide or the returns earned by the utilities.

Table 6 and the graph below track the combined average and median equity return authorized for all electric and gas rate cases since 1990. As the table indicates, since 1990, authorized ROEs have generally trended downward, reflecting the significant decline in interest rates and capital costs over this time frame.

Composite electric, gas average authorized ROEs; total number of rate cases

The Citizens' Utility Board Asked the Oregon Public Utility Commission to Dismiss Portland General Electric's Rate Request for 2025

by Pete Danko – Portland Business Journal – Mar. 15, 2024

In what it called an "unprecedented appeal" to regulators, **Oregon's residential ratepayer advocate** on Thursday formally **asked** the **P**ublic **U**tility **C**ommission to **dismiss P**ortland **G**eneral **E**lectric's **latest proposed rate increase**.

PGE late last month requested a 7.4% overall average rate increase in 2025, 7.2% for the residential customers that the Citizens' Utility Board represents. It would come on the heels of an 18% overall increase that hit PGE residential customers in January, with a smaller but not yet set rate boost for wildfire mitigation costs still due to kick in this April.

Rates also rose in 2023, and the new PGE request would push PGE prices some 40% above where they stood in 2022, according to CUB.

Something 'never done before'.

"We're asking the Commission to do something they have never done before," **Bob Jenks**, **CUB**'s executive director, **said** in a news release. "We are seeing historically high bills for many PGE customers, and we **need regulators** to **do something bold and unprecedented**. Now is the time to flip the script and show our utilities that consumer protections come before profits."

A PGE representative, responding to a request for comment, emailed that "PGE is and will continue to be fully engaged in the public Rate Review process administered by the Oregon Public Utility Commission."

If not a dismissal, **CUB asked the PUC** to "**segregate**" **several issues from PGE's request**, **including PGE's ask for** an **increase** in its **return on equity** — its profit margin, in essence — **from 9.5% to 9.75%**. **CUB said many of those issues** were **fought** over **in last year's PGE general rate case**.

"The **Company seeks** to re**-litigate many** of the **contentious issues** that were collaboratively resolved and determined to result in just and **reasonable** rates mere weeks earlier," it said in the PUC filing.

CUB said it was **supported in** its **motion by Lewis & Clark Law School's Green Energy Institute and** the Alliance of **W**estern **E**nergy **C**onsumers, which represents big energy users.

Rates are ultimately set by the three-person, governor-appointed PUC after a 10-month process that includes regulatory staff analysis and stakeholder and public input.

Docket No. UG 490

Staff/109
Muldoon/14

PGE's Battery Investments

With rates already on the rise, PGE executives earlier last month had told investment analysts that the company would look to file a narrowly focused general rate case, mostly to pay for new battery energy storage systems it expects to bring online next year.

But CUB saw the request that came less than two weeks later as far from narrow. Out of a $202 million revenue requirement boost, just $17.3 million was directly attributable to the battery systems.

PGE says associated substation costs also need to be paid for, along with other transmission and distribution system upgrades that it says will improve reliability and help it meet growing load.

–

Consumer Group asks Oregon Regulators to Dismiss New PGE Rate Hike Request

by Gosia Wozniacka - Oregonian – Mar. 15, 2024

A state nonprofit group that advocates for utility customers is asking Oregon regulators to dismiss Portland General Electric's newest rate increase proposal.

In a motion filed Thursday, the Oregon **C**itizens' **U**tility **B**oard **asked** the **P**ublic **U**tility **C**ommission to **throw out PGE's 7.4% increase request**. If approved by the commission, the increase would take effect in January 2025.

The **C**itzens' **U**tility **B**oard, which was **created via** a **1984 ballot measure**, said in a statement that it has never taken such an action before and is doing so now "in the face of record bills for PGE customers."

The board points out that PGE's residential customers have seen a 30% increase in power bills over the past two years. Their rates went up 12% in January 2023 and by 18% this past January.

Customers are reeling from record-high bills that resulted from this year's rate increase and the ice storm in January and many won't be able to handle yet another increase, said Bob Jenks, the board's executive director.

Jenks said the utility's latest request for 2025 will likely grow to cover other costs such as wildfire mitigation or winter storm recovery.

"We're asking the Commission to do something they have never done before," Jenks said. "We are seeing historically high bills for many PGE customers, and we need regulators to do something bold and unprecedented."

The **P**ublic **U**tility **C**ommission regulates investor-owned electric and other utilities. Commission spokesperson **Kandi Young said** the **Commission's normal practice**

would be to seek written replies from its staff and other parties and then issue a written ruling after reviewing responses. **But** Oregon **CUB's petition asks** the **Commission instead** to **decide** the **motion at** a **public meeting**.

"The Commission is considering CUB's request for a change to the standard process, and will advise parties when written responses are due," Young told The Oregonian/OregonLive via email.

PGE declined to comment on the petition and said it would continue to focus on its rate increase proposal.

"PGE is and will continue to be fully engaged in the public Rate Review process administered by the Oregon Public Utility Commission," the utility's spokesperson, Drew Hanson, said in an email.

PGE's 7.4% rate increase request is tied to clean energy needs – specifically, battery storage projects, PGE said previously.

In its petition, the Citizens' Utility Board told regulators that its review of the request found that the new Constable **Battery Storage** project, which is what's included in PGE's rate increase proposal, will cost only $17.3 million, or 8.5% of the total $202 million revenue demand.

The rest, said **Jenks**, will go toward higher profits for shareholders and shifting financial risk to customers, among other things – issues the **commission already ruled** on and rejected in **December for** the **increase that went into effect this year**.

If the **P**ublic **U**tilities **C**ommission **will not dismiss PGE's entire rate increase case**, the **C**itizens' **U**tility **B**oard **asks** that it **limit** the **scope** of what PGE can request, including **removing all** of the **items** that the **commission previously ruled against**.

Is Oregon Utility Regulation Part of the Problem?

by Bob Jenks – Oregon CUB – Jan. 25, 2024
Is Oregon Utility Regulation Part of the Problem? | Latest News | News | Oregon CUB

As utility bills in Oregon continue to rise in 2024, CUB is asking tough questions from state regulators. Currently, utility regulators spend a lot of time looking at many requests from utilities to raise rates. This analysis can take up to 10 months in many cases. But overall affordability to customers is not part of the equation for regulators.

We need to look at utility bills holistically – before we see rates skyrocket. Our current system means that customer advocates, decision-makers, and customers do not have a clear picture of what to expect from utility bills. And an even harder time knowing when rates will go up dramatically.

Exposing Flaws in Oregon's System of Utility Regulation

From December 2022 to January 2024, Portland General Electric (PGE) customers have seen bills go up by 30%. This large increase in 13 months shows real and significant flaws in Oregon's system of regulation utilities.

Docket No. UG 490

Staff/109
Muldoon/17

Our current structure leads regulation to focus on each individual line item, but not on the overall affordability of rates. There are several parts to this problem:

- Utilities have an incentive to spend money.
- Utilities can request dozens of rate increases a year.
- **Regulator looks at individual utility projects, not total rates.**
- Costs can be updated even after they are approved by regulators.
- Utilities work to keep information confidential from the public.

Electric utilities are typically the ones who see the most frequent requests for rate increases. PGE is not the only utility that has had large bill increases in the past few years. Pacific Power customers saw bills increase by 21% at the start of 2023 and by 11% on January 1, 2024.

Increasingly, gas utilities are also asking for more from customers more often. Alongside the big spikes in the cost of methane, NW Natural gas rates have increased by 32.7% since September 2022.

Utilities have an incentive to spend money

Utilities make a profit from making capital investments. This ability to profit from a new power plant, laying new lines, or other projects is protected by Oregon law. While many investments are necessary to maintain a reliable system, too many investments can cause rates to be unaffordable.

To justify a capital expense, a utility normally has to show that the investment was expected to bring benefits to the system and to customers. But affordability to customers is not part of the equation for regulators.

Example: Wildfire Mitigation

After the 2020 Labor Day fires, it became clear that utilities needed to invest money in wildfire mitigation. Oregon's utilities are now spending hundreds of millions of dollars to mitigate potential wildfires. Since a wildfire caused by a utility line can cause significant harm, it would be hard to argue that this is not a prudent and necessary investment.

For utilities, wildfire mitigation was an opportunity to spend money and increase profits. Did they ask whether this was affordable for customers? Did they look at other investments to see if there were costs that could be avoided or delayed?

Read More: **Protecting Oregon Customers from Wildfire Risk and Cost Increases**

Regulation Looks at Individual Investments, Not Total Rates

Under Oregon law, regulators at the Public Utility Commission are supposed to establish fair and reasonable rates. What regulators do not consider is how these costs affect customers overall.

Docket No. UG 490

Staff/109
Muldoon/18

When a utility asks regulators if it can charge customers more money, it brings a list of investments and expenses. Regulators go down the list, examining each cost to see if it is reasonable and justifiable. They ask questions like: Will this cost provide a benefit to the energy system? Will this investment be able to be used for its expected lifetime?

What **regulators do not ask**: How much will approving this cost increase customer bills? **What other costs is** the **utility asking for that will increase bills**? Can customers afford this large of an overall increase?

Investments.

When a utility makes an investment, it is motivated by profit first and meeting basic standards of providing service second. What is not considered is how an investment will impact the people they are charging.

While adding many new upgrades to the utility's system may help the system, when combined their cost may be beyond the reach of most customers when they are added to the bill. With neither utilities nor regulators considering whether families can afford total energy bills, a lot of pressure falls on advocates like CUB.

Single-Issue Rate-Making Makes Controlling Costs More Difficult

Holistic Utility Regulation: Under traditional regulation, regulators consider utilities' investments, the overall cost of providing service, profits, and more. For a long time, the holistic model was the standard for utility regulation. Over the past couple of decades, utilities have increasingly asked for surcharges outside of this process.

Single Issue Regulation (Surcharges): In the case of single-issue rate-making, regulators typically only look at the utility costs and surcharge requests related to a single issue. One recent example of a single-issue surcharge is the Wildfire Mitigation cases mentioned above. PGE and Pacific Power both asked to add a surcharge to cover costs related to wildfire prevention. Other examples of single-issue requests include surcharges to cover costs associated with the 2021 ice storm and pilot programs for electric vehicle investments.

Right now, electric utilities are the ones most likely to use the surcharge method to raise rates. But gas utilities are also able to use this tactic. Across the country, energy utilities are using single-issue regulation more and more often to get more and more money from customers

Costs are Updated After Regulators Review Them

In some of these mechanisms, PGE will file a proposal but is allowed to update the proposal. In the case of power costs, the final update is after the Commission actually issues its final order in the case. This means the Commission is expected to make a decision without knowing the rate that is established.

Lack of Transparency on Rate Impacts

Docket No. UG 490

Staff/109
Muldoon/19

In order to protect trade secrets, utilities are allowed to designate some information as **confidential**. But utilities abuse this process. When PGE updates its power cost forecasts in power cost cases, it designates the expected price increase as confidential. CUB cannot think of any reason why a forecasted rate increase could ever be considered confidential. But it does make it difficult to inform the public about what their rates will be, and it makes public discussion of future rate hikes more difficult.

Enough is Enough.

PGE's rates have **increased** by **30% in** the **last 13 months**. But no one has reviewed the overall rate level and asked the question: Are rates fair and reasonable?

Using the Tools in Regulators' Toolbelts

Regulators at the Public Utility Commission have tools that they can use to lower the impact to customers.

Directing Utilities to Adjust Expenses

First, the Commission can order a utility to propose and implement other measures to reduce **rate shock**. The regulators could tell the utility to **delay certain expenses**. They could also direct utilities to take other **cost-cutting measures**, reducing the need for a rate increase altogether.

Delaying Increases

Second, when regulators approve a rate increase, they can order the utility to delay some of that increase until sometime in the future. By **delaying increases**, electric customers in particular can avoid a large increase during winter when energy usage is the highest.

In the case of PGE's 2024 increase, regulators asked the utility to delay an additional 2% increase until the spring. In 2023, Pacific Power delayed the rollout of its 21% increase until the spring, lessening the impact of the winter heating season.

By delaying increases, regulators can help protect customers from surprisingly high bills during the winter months. This could be the difference between a household being able to keep the heat on or facing disconnection.

Tying Customer Costs to Allowable Profits

Third, regulators can add incentives to keep costs low by **lowering allowable profit margins** if the cost to customers is not controlled.

CUB is Pushing for Policy Changes

State utility regulators are required to set some costs, such as utility profits, at a reasonable level. However, the **P**ublic **U**tility **C**ommission **can set** the **rate at** the **lowest level** that is **considered reasonable**. For example, the **Commission might determine** that a **reasonable profit margin is anything between 9.0% and 10.0%**. Under normal circumstances, the Commission might set that margin at the midpoint or 9.5%.

Docket No. UG 490

Staff/109
Muldoon/20

But **to mitigate a large rate increase**, the **Commission can set** the **profit margin at** the **lowest point** which is **reasonable or 9.0%.** Lowering profits will lower the rate increase for customers. This is an important tool because it tells utilities that if they cannot control their costs, it will reduce their profit margins.

CUB advocates are hard at work this year to create lasting change to protect customers from more bill increases. In 2024, we are facing multiple requests from utilities to increase rates again. Oregonians from Newport to Ontario could be impacted.

Reduce the Number of Increases

A big policy issue for CUB this year is to **reduce** the **number of rate requests** that **utilities** are **asking for each year**. We have been pushing back against the rising tide of surcharges facing Oregon energy customers.

In the PGE case, CUB continued to fight for a more holistic approach to utility regulation and won on several issues we raised. Now, PGE is consolidating some of their requests and has dropped others. This is good for customers' ability to know what to expect from bills down the line.

Read more: **Are Utility Customers Being Nickled and Dimed? - CUB Blog**

Pushing for New Policy: Avoid Large Bill Spikes in the Winter

Regulators did the right thing in delaying even more increases for PGE customers this winter. Now, CUB is calling on the Public Utility Commission to make spreading high rate increases a standard practice to prevent disastrous winter bills for Oregonians.

While CUB has negotiated delays in winter increases with utilities, this is the first time in recent memory that the Commission has made such a request. Without this delay, customers could have seen a higher bill increase in January, a month that typically brings the highest energy bills of the year.

Stay Up to Date on Oregon Utility Issues

Muldoon/21

It's Been 30 Years Since Food Ate Up This Much of Your Income

by Jesse Newman and Heather Haddon – WSJ – Feb 26, 2024

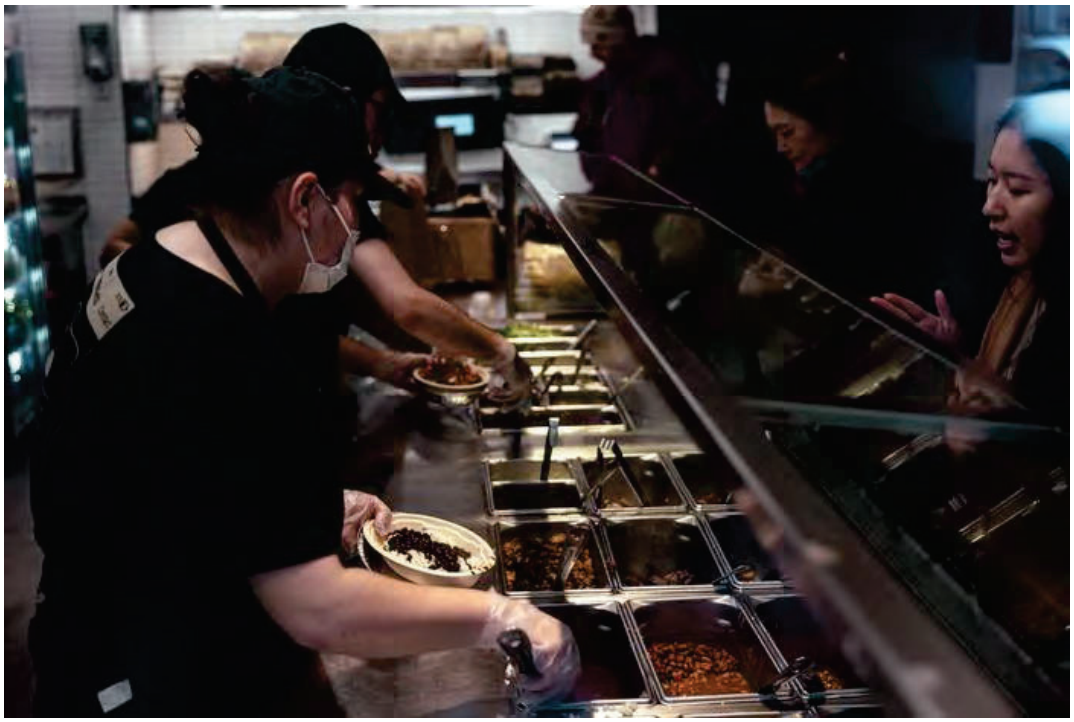
Ongoing high costs lead food manufacturers and restaurants to keep prices elevated.

The last time Americans spent this much of their money on food, George H.W. Bush was in office, "Terminator 2: Judgment Day" was in theaters and C+C Music Factory was rocking the Billboard charts.

Eating continues to cost more, even as overall inflation has eased from the blistering pace consumers endured throughout much of 2022 and 2023. Prices at restaurants and other eateries were up 5.1% last month compared with January 2023, while grocery costs increased 1.2% during the same period, Labor Department data show.

Relief isn't likely to arrive soon. Restaurant and food company executives said they are still grappling with rising labor costs and some ingredients, such as cocoa, that are only getting more expensive. Consumers, they said, will find ways to cope.

"If you look **historically after periods** of **inflation**, there's really **no period** you could point to **where** [**food**] **prices go back down**," said Steve Cahillane, chief executive of snack giant Kellanova , in an interview. "They **tend to be sticky**."



Companies are set to pay more for staffing, after 22 states in January lifted the minimum wage for hourly workers.

Docket No. UG 490

Staff/109
Muldoon/22

In **1991**, **U.S. consumers spent 11.4%** of their **disposable personal income on food**, according to data from the U.S. Agriculture Department. At the time, households were still dealing with steep food-price increases following an inflationary period during the 1970s.

More than three decades later, food spending has reattained that level, USDA data shows. In **2022**, **consumers spent 11.3%** of their **disposable income on food**, according to the most recent USDA data available.

Many diners have said they are going out less frequently or skipping appetizers, while buying cheaper store brands more frequently at supermarkets and seeking out promotions or deals offered via apps. That is starting to chip away at some sales for food makers and restaurant operators.

Food companies said they are feeling pinched themselves. While commodities such as corn, wheat, coffee beans and chicken have gotten cheaper, prices for sugar, beef and french fries are still high or rising. Companies across the U.S. economy have also raised prices beyond covering their own higher expenses, lifting profits for industries including retail, biotech and manufacturing.

Food inflation has raised the ire of President Biden, who took to Instagram during the Super Bowl to blast food makers that he said were providing less bang for consumers' buck – putting fewer chips in each bag or shrinking the size of ice-cream containers.

Food spending's share of disposable income

Muldoon/23

"The American public is tired of being played for suckers," Biden said. "I've had enough of what they call **shrinkflation**. It's a rip-off."

David Chavern, CEO of the Consumer Brands Association, which represents major food manufacturers, said the industry offers many choices at different price points. "We hope to work with the president on real solutions that benefit consumers," he said.

In suburban Chicago, Lisa Wister said her food bills are rising faster than her family's income, leading them to make their own granola from scratch and pack their own snacks for the movies. "Everything is a negotiation, an analysis about our budget," said Wister, an occupational therapist. "It's exhausting."

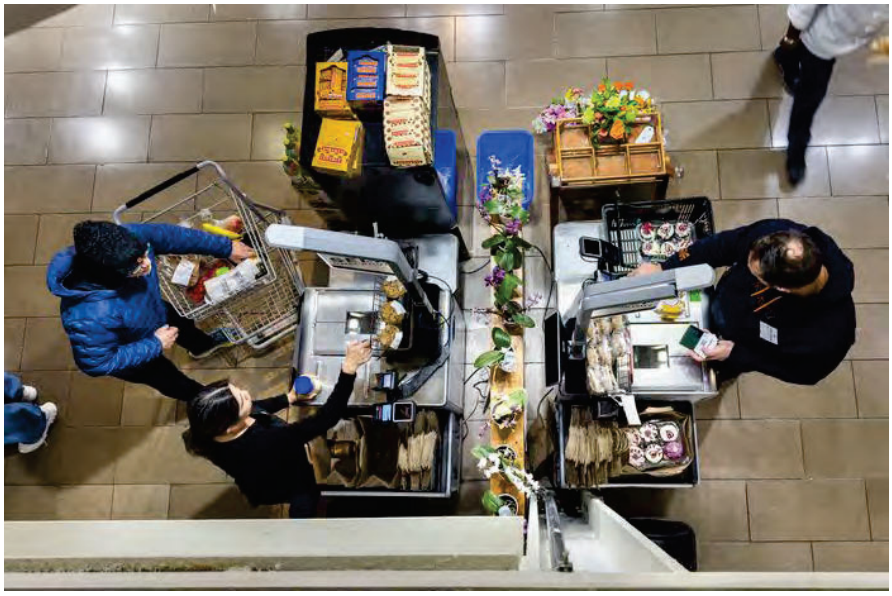
Denny's, Wendy's and other restaurant chains told investors this month that their guest counts fell last year compared with 2022 levels as consumers, in particular those with lower incomes, feel the financial pinch. Big food makers including Hershey and Kraft Heinz have reported that their sales volumes declined as prices rose for their products, with several reporting a hit to profits in the latest fiscal year – and others an increase.

Oreo maker Mondelez said in January it would continue raising prices on some of its products this year, largely because of cocoa prices, which earlier in February surged past a 46-year record. Hershey said this month it expects more expensive cocoa to cut into the company's profit this year. Kraft Heinz said inflation is moderating but that its costs are still higher, driven in part by pricier tomatoes and sugar.

Companies are set to pay more for staffing, after 22 states in January lifted the minimum wage for hourly workers. Hiring skilled workers like mechanics to replace employees who retired during the pandemic is particularly expensive, said Henk Hartong, CEO of Brynwood Partners, which owns 17 food and beverage plants that make Pillsbury cake mixes and other products.

Docket No. UG 490

Staff/109
Muldoon/24



Many people say they are buying cheaper store brands more frequently at supermarkets.

Restaurant chains said they are trying to operate more efficiently to help defray wage increases, but they also expect to raise prices.

"It's a really fast move and a high percent increase," Chipotle Mexican Grill CEO Brian Niccol said in an interview, referring to California's 25% minimum wage increase for fast-food workers employed by large chains, set to take effect in April. "Pricing is going to be part of the puzzle."

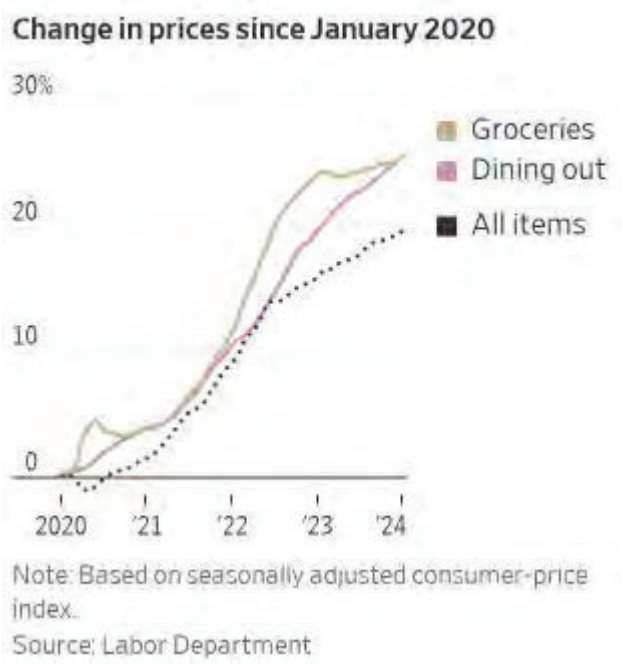
Some restaurant and food companies, including Kraft Heinz, Mondelez International and Olive Garden owner Darden Restaurants , are projecting higher earnings this year. Signs of a consumer-spending slowdown has led others to temper their outlooks, with same-store sales projection for 2024 and frozen-foods maker Conagra reducing its per-share earnings forecast.

Investors have cooled on food stocks. An S&P 500 subindex of restaurant stocks has risen 10% in the past 12 months through Wednesday's close, while the broader index gained about 25%. An S&P subindex tracking packaged food and meat companies fell roughly 8% over that period.

When Anna Zabinski and her husband eat out these days, she said, they ask themselves whether a side of macaroni and cheese is worth the extra $1.99, and often go for refills instead of ordering more expensive large-size drinks.

Docket No. UG 490

Staff/109
Muldoon/25



Zabinski, a professor from Normal, Ill., said they'll sometimes split a $20 steak and side dish at Texas Roadhouse or a large sandwich from Jimmy John's. Nonetheless, she said, "our daily and monthly expenditures still seem higher than even two years ago."

Food manufacturers and restaurants have been offering more deals on some items. J.M. Smucker and Conagra have reduced prices on coffee and margarine, passing through lower costs for coffee beans and edible oils. McDonald's and Wendy's said they would offer deals this year aimed at consumers seeking relief from rising prices.

Gary Pilnick, chief executive of WK Kellogg, said the company has been working to market cereals such as Frosted Flakes and Froot Loops to pressured consumers. An ad campaign launched in 2022, for example, encouraged consumers to eat cereal for dinner, pitching it as an easy, inexpensive alternative that, combined with milk and fruit, costs less than $1 per serving. "Give chicken the night off," the campaign's tagline says.

Although it is **rare for food prices to retreat**, it is **also unusual for prices** to **skyrocket as much as** they have in **recent years**, said TD Cowen analyst Robert Moskow. He said he expects grocery prices to decline for a period this year as food makers come under pressure from consumers and retailers.

Kraft Heinz said it is focused on providing affordable options for families, and that while its costs rose 3% in 2023, it raised prices by 1%. WK Kellogg said that before raising prices, the company tries to combat higher costs through greater productivity.

Kellanova said it is working to keep prices as low as possible. Cahillane declined to comment on pricing for his company's products this year but said that the maker of Pringles and Pop-Tarts hasn't raised prices to pad its profit.

Cahillane said that as consumers become accustomed to seeing higher prices on supermarket shelves, they will adjust.

"Just like a gallon of gas, it becomes the new price and people get begrudgingly used to it," he said.

No Surprise from the Fed

by Dante DeAntonio, Director – Moody's Analytics – Mar. 21, 2024

An **upbeat**, if still **cautious**, tone characterized the March meeting of the **Fed**eral Open Market Committee. The **fed funds rate target**, as anticipated, was kept **unchanged**, despite higher-than-expected consumer price inflation reports in recent months. However, reflecting recent communications, the **Fed**eral Reserve **dampened expectations** about the FOMC's urgency to **rush to rate cuts**.

The **committee's latest Summary of Economic Projections suggests** that **2024 will see 75 basis points' worth of cuts to** the **fed funds rate**, **unchanged from** the most recent Summary of Economic **Projections from December**. This reflects policymakers' continued confidence that policy tightening has worked and inflation will eventually return to target. However, the committee reiterated that it will not be appropriate to reduce the target range until it has gained greater confidence that inflation is moving sustainably toward 2%

Notably, though, policymakers are now more upbeat about a soft landing than they were in December. The FOMC's GDP forecast for 2024 was revised upward from 1.4% to 2.1%. Subsequently, the Fed predicts 2% growth for 2025 and 2026, up slightly from December without comparable changes to inflation and unemployment projections.

Inflation has receded meaningfully in the U.S. without the corresponding increase in joblessness historically observed when restrictive policy is needed to bring down inflation. However, early inflation readings in January and February came in higher than expected, owing to a large degree to sticky shelter inflation. As Fed Chair Jerome Powell reiterated, the Fed will need to see a few more reports to convince itself that inflation is on a sustainable trend back to target. This renders a May cut unlikely, given a limited number of outstanding inflation reports before then.

The labor market is still threatening to stall progress on inflation. Wage growth is a sizable margin above the level the Fed estimates as compatible with its inflation target. January and February payroll hiring accelerated from late 2023, and at 3.9%, the unemployment rate signals the U.S. labor market is unlikely to have come fully into balance

Our latest baseline forecast puts the first interest rate cut in June. In total, we expect a 75-basis point reduction by the end of 2024. We expect policy is loosened gradually and that the Fed's main policy rate remains restrictive through mid-2026.

CHIPS Act Awards Ramp Up

Federal subsidies to boost semiconductor production in the U.S. are accelerating. In December, U.S. Commerce Secretary Gina Raimondo said she expects to make around a dozen semiconductor chips funding awards within the next year under the CHIPS Act of 2022, some of them multibillion-dollar announcements. This prediction is coming true.

Docket No. UG 490

Staff/109
Muldoon/27

On Tuesday, the White House announced the biggest award yet, approximately $8.5 billion in direct subsidies to Intel along with up to $11 billion in loans. The company had previously announced that it expects to spend upward of $100 billion on U.S. facilities and research programs in Arizona, Ohio, New Mexico and Oregon. Two new facilities just outside Columbus OH will be part of a complex that could ultimately be among the largest chipmaking centers in the world.

Initial CHIPS Act payouts were slow in coming and relatively small. Now the pace is accelerating. On February 19, the Commerce Department announced a large award of $1.5 billion to GlobalFoundries to subsidize three projects. The bulk of the award is for construction of a new plant on the company's Malta NY site, which will make chips for applications in automotive, aerospace, defense and artificial intelligence.

A smaller part of the award is for expansion of the company's existing Malta facility by adding new technologies already in use in GlobalFoundries' Singapore and Germany facilities, which supply the auto industry. The third project is to upgrade and expand capacity in the company's facility in Essex Junction VT, creating the first U.S. facility for high-volume production of gallium nitride semiconductors used in electric vehicles, power grids, data centers, and 5G and 6G smartphones.

The GlobalFoundries award is significant because the company is the only U.S.-based "pure-play" foundry. In other words, it makes chips based on users' specifications, making it a competitor to Taiwan-based TSMC, albeit much smaller. Although GlobalFoundries is U.S.-based, it also has facilities in Europe and opened one in Singapore in September

The incentives to the company improve the prospects for domestic chip security in two ways: First, the better cost1effectiveness encourages the company to locate its next plant domestically. Second, as a competitor to TSMC, the company can potentially compete to supply some of TSMC's biggest U.S. customers, notably Apple and Nvidia.

Oregon Loses Jobs for the First Time Since 2021

Mike Rogoway – Oregonian –

Oregon's spectacular rebound from the pandemic recession may be coming to an end.

In January, the state posted a **net loss in jobs compared** to a **year earlier** – the first time that has happened since 2021. And the **unemployment rate climbed above 4%** for the first time in more than a year.

This isn't a recession. Far from it.

Wages continue climbing and Oregon's labor market remains tight, by historical standards. Employers say it's still very hard to find workers.

Still, it's clear that the robust growth that got underway three years ago, in the wake of COVID-19, is at last winding down.

The **state had 1.97 million jobs in January**, according to the latest seasonally adjusted data from the Oregon Employment Department. That's about **5,000 fewer** jobs **than** it had a **year earlier**.

It's a **tiny decline overall, 0.2% on** an **annual basis**. **But** it's a **sharp contrast** to the **prior three years**, when Oregon was adding several thousand jobs each month as the state roared back from the pandemic.

The slowdown isn't a big surprise. **Oregon's workforce had regained** all the **jobs** it **lost to** the **pandemic by** the **start of last year** and, with the **state's population stagnant**, Oregon simply doesn't have more people to fill job openings.

Oregon's slight decline in employment compares to 1.9% job growth nationally over the last 12 months. Employment department economist Gail Krumenauer notes in a new report that Oregon's slowdowns came mostly in the latter part of the year.

Manufacturing was among Oregon's weakest sectors last year, according to Krumenauer, declining by 3.4%. The state's factories began shedding jobs in 2022 and continued their downward trajectory through most of last year.

Blame the semiconductor industry for much of that decline. Chipmakers pulled back last year from three years of outstanding growth. Economists are expecting better results over the next few years as factory upgrades get underway at Intel and other large Oregon chip factories.

In 2023, Oregon also shed jobs in retail – a sector that never fully recovered from the pandemic – and posted declines in categories that include building maintenance and call centers.

Oregon's biggest gains, Krumenauer found, were in health care, local government and hospitality jobs. Construction, which had appeared to be a standout sector last year, actually grew little over the past 18 months, according to newly revised state data.

Docket No. UG 490

Staff/109
Muldoon/29

State economists expect Oregon will resume adding jobs this year, growing by almost 16,000 positions over the next year. Krumenauer notes that works out to about 1% annual growth, anemic by recent standards but suggestive of a state economy that is solid, though no longer spectacular.

Export Fight Risks Natural-Gas Swings

by David Uberti and Ryan Dezember – WSJ – Feb. 2, 2024

Americans' utility bills are getting wrapped up in the fight over President Biden's **pause** on most **new natural-gas exports**.

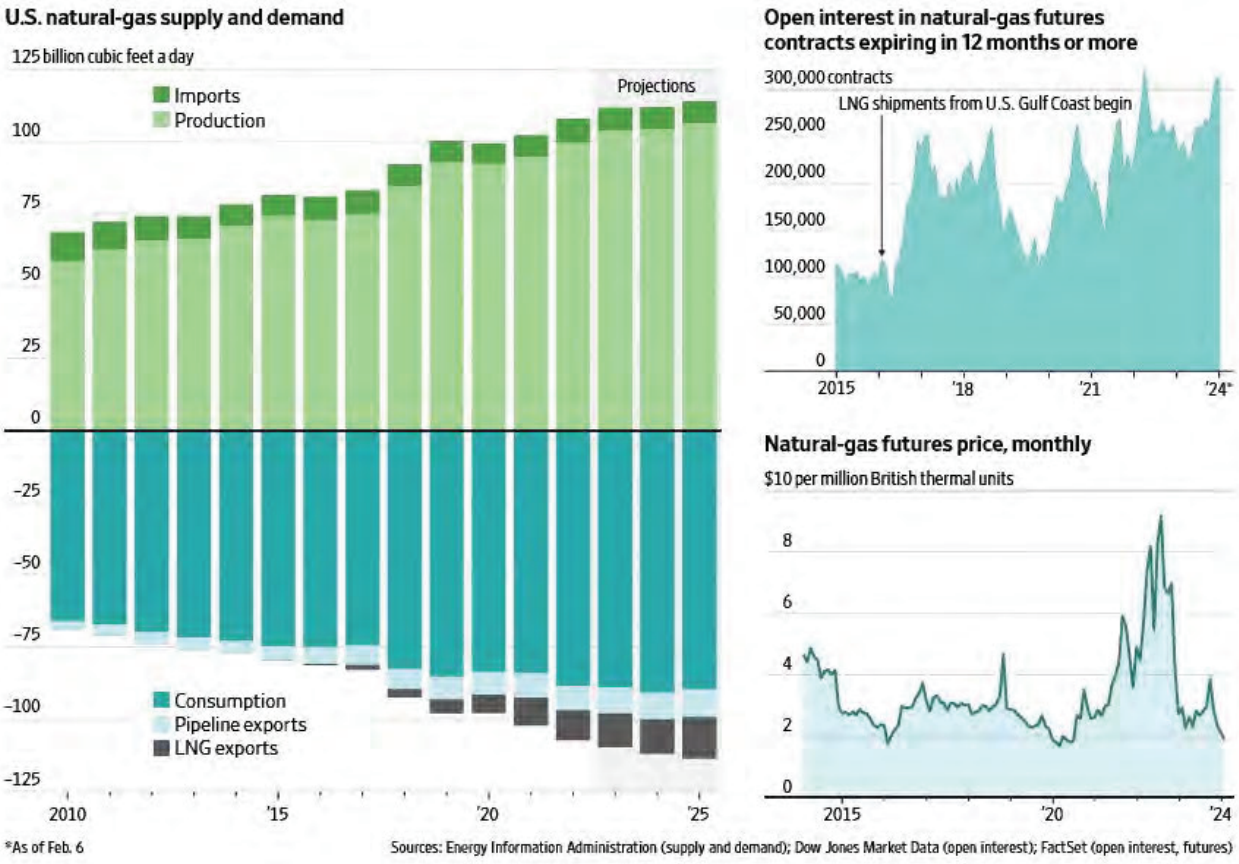
The White House last month effectively froze new approvals for liquefied natural gas shipments, a booming industry that helped turn the U.S. into an energy-export powerhouse. While environmentalists are urging officials to scrutinize projects' impact on the climate, producers warn the pause could hurt the country's ability to supply allies with fuel in the future.

Now, Americans' power and heating costs are becoming a growing part of the tug of war.

As the Energy Department weighs new criteria for greenlighting future exports, **some manufacturing groups and consumer advocates warn that America's ties to global markets could make price instability more** likely. The **fear** is that additional projects in the next decade **could push up Americans' heat and power bills**, **as well as costs to make everything from drywall to steel**.

Docket No. UG 490

Staff/109
Muldoon/30



At a Senate hearing Thursday, Deputy Energy Secretary David Turk said the administration aims to preserve the country's cheap gas. "That is a huge economic advantage," he said. "Do we want to give that up as a country? Again, we need to analyze that."

The **domestic impact of LNG exports** has been hotly contested since the country began funneling more gas-laden tankers to foreign buyers in 2016. While record production has largely kept U.S. costs low, international shocks in recent years have helped whipsaw prices to shale-era highs and have contributed to some of the most volatile periods in decades.

Thanks to warm weather and roaring production in Texas and Appalachia, benchmark U.S. gas prices this week fell to their lowest levels since the depths of the pandemic, closing Friday at $1.847 per million British thermal units.

But traders are betting on a rally sparked by projects currently under construction, which will allow more gas to flow to businesses across Europe and fast-growing economies in Asia. On Friday, some futures contracts for delivery in 2027 and 2028 traded for more than $4.50.

"Consumers can afford [$4 gas]," said Aubrey Hilliard, president of Texican Natural Gas's Carolinas division. "What they don't want is spikes to $9."

Docket No. UG 490 Staff/109
Muldoon/31

To limit that risk, Hilliard's company is advising customers such as glassmakers and cement producers to lock in supplies further toward 2030. The number of outstanding contracts for deliveries 12 months or more into the future has climbed as additional export terminals in Texas and Louisiana prepare to come online, according to Dow Jones Market Data.

The U.S. is already the world's largest exporter of natural gas. Traders last year sent roughly 11% of the country's production overseas, according to the Energy Information Administration. Analysts project that share could roughly double by the end of the decade and climb higher in the 2030s depending on how many proposals pan out.

Biden's pause on new exports to countries without free-trade agreements keys in on that future wave of projects. Still, industry groups warn the freeze is chilling investment and creating uncertainty for allies that turned stateside for gas after Russia's war on Ukraine set off an economic conflict between the Kremlin and the West.

In defending the climate effects of LNG, companies are highlighting the potential of gas to supplant coal worldwide.

Toby Rice, chief executive of EQT, a top producer, told lawmakers Tuesday that tapping deeper into the global market will push firms to pump more natural gas that can be redirected around the U.S. as needed. Surplus gas is the best defense against foreign shocks, Rice said, adding, "Exports are the only reason for us to create that surplus."

Australia served up a cautionary tale for exporters **during** a **2017 heat wave**, when **foreign shipments totaling** more than **60% of production failed** to **leave enough gas at home** to **prevent prices from surging**. Aluminum smelters cut output. Fishermen watched catches rot during blackouts.

Fears of a similar crunch in the **U.S.** didn't bear out until a string of weather events in 2021 sent prices skyrocketing.

A **deep freeze** in **Texas** in **February 2021** boosted demand and clogged wells with ice. After Americans and Europeans cranked up their air conditioners during a **sweltering summer**, **Hurricane Ida forced** nearly all of the **Gulf** of Mexico's **gas output offline**.

–

Water Utility National Equity Return Average Trends Up Slightly in 2023

by Heike Doerr – Regulatory Research Associates (RRA)
an affiliate of Standard and Poor's Global Market Intelligence – Feb 20, 2024

Nationwide, the latest activity with respect to water utility equity returns occurred in July 2023, when cost-of-capital changes were approved for the four largest California

investor-owned water utilities under the state's semi-automatic adjustment process. No water utility base rate cases were completed in July or August.

- The return on equity (**ROE**) **approved** for **water utilities nationwide** in **cases decided** during **2023** was **9.64%**. The base rate proceedings spanned nine states, with cost-of-capital parameters provided in seven proceedings, **ranging** from **8.7%** in **Connecticut** to **9.8%** in **North Carolina**. In **2022**, 10 water utility rate cases were completed nationwide, with an average ROE of **9.61%**.
- The **four cost-of-capital proceedings** completed in **California** incorporated the companies' **water cost-of-capital mechanism** (**WCCM**), which resulted in ROEs ranging from 9.31% to 9.8%. A subsequent increase tied to the WCCM, approved in November 2023 and effective Jan. 1, 2024, **increased ROEs by** an additional **70 basis points**.
- **Authorized ROEs for water utilities** are **in line with** the **gas utility average** and **remain above** that of **distribution-only electric utilities**.

Regulatory Research Associates evaluates water utility regulation in more than 20 state jurisdictions and monitors rate proceedings involving rate change requests of at least $1.0 million for the 12 largest investor-owned and privately held water utilities.

For additional details regarding water utility rate cases from Jan. 1, 2010, through Dec. 31, 2023, please refer to this industry document.

2023 rate case highlights

Connecticut – A litigated decision for Eversource Energy subsidiary Aquarion Water Co. of Connecticut Inc. included an 8.7% return on equity, the lowest nonpunitive return authorized for a water utility since 2010, as tracked by RRA. While ROEs authorized in Connecticut have historically been below the prevailing industry average, this return is considerably below the national average. On Eversource Energy's recent earnings call with investors, the company expressed an interest in selling its water business, which is over 90% in Connecticut.

California – ROE determinations for the state's energy and water utilities occur outside of general rate cases in cost-of-capital proceedings, usually conducted every three years. The class A water utilities are divided into two groups by size for cost-of-capital proceedings. At the June 29, 2023, California Public Utilities Commission meeting, the commission approved a proposed decision that laid out recommendations for the state's four largest investor-owned water utilities' ratemaking returns and capital structures through 2024.

The authorized returns for American Water Works Co. Inc. subsidiary California-American Water Co., California Water Service Group subsidiary California Water Service Co., American States Water Co. subsidiary Golden State Water Co., and SJW Group subsidiary San Jose Water Co. ranged from 9.31% to 9.8%, which included 50 basis points or so of benefit from the continued use of the WCCM.

Docket No. UG 490

Staff/109
Muldoon/33

In November 2023, the PUC approved the companies' advice letters based on the movement of the bond index underlying the WCCM. For additional details, refer to "Equity returns of California's largest energy, water utilities to bump up Jan. 1"

North Carolina – In June 2023, the North Carolina Utilities Commission authorized Essential Utilities Inc. subsidiary Aqua North Carolina, Inc. a 9.8% ROE following a decision in Corix Regulated Utilities (Us) Inc. subsidiary Carolina Water Service Inc. of North Carolina's base rate proceeding that utilized the same ROE. Neither decision was unanimous. The dissenting commissioners expressed concern that the ROE was too high, given "the reduced risk to shareholders" that stemmed from using a multiyear, forward-looking approach rather than a historical test year.

As a result of multiyear, performance-based rate plans being implemented, RRA raised its ranking of the North Carolina regulatory environment to Average/2 from Average/3 rating as it pertains to water utility regulation.

2023 Water utility rate case decisions

Order date	Company	State	Case type	ROR (%)	ROE (%)	Common equity as % of capital	Rate base ($M)	Test year end

ROE trends compared to electric and gas utilities

While the pace of rate case activity reached record levels across energy utilities, the number of base rate cases completed across the small water utility sector remained comparable to recent years.

The average ROE authorized for distribution-only electric utilities was 9.24% for cases decided during 2023 versus the 9.11% average observed in 2022. RRA's calculations relied on 12 distribution-only electric rate case decisions that included an ROE determination during 2023 versus nine in 2022.

The **average ROE authorized** for **gas utilities** was **9.64%** for **cases decided** during **2023 versus** the **9.53%** average observed in **2022**. RRA's calculations relied on 43 gas rate case decisions that included an ROE determination during 2023 versus 33 in 2022.

For additional details on electric and gas utility ROE trends, refer to "Energy authorized returns up modestly as rate case activity soared in 2023."

CenterPoint to Sell Gas Distribution Assets in Louisiana, Mississippi for $1.2B

by Nephele Kirong
Standard and Poor's Global Market Intelligence – Feb. 20, 2024

CenterPoint Energy Inc.has reached a **deal** to **sell** its **natural gas distribution operations** in **Louisiana and Mississippi** for **$1.2 billion to Bernhard Capital Partners Management** LP's **Delta Utilities**.

The assets covered by this transaction include approximately 12,000 miles of main pipeline serving approximately 380,000 customers. The price tag represents approximately 32 multiple of the two local distribution companies' (LDCs) earnings in 2023, CenterPoint said in a Feb. 20 news release announcing the transaction.

The anticipated $1 billion in after-tax proceeds will be recycled into service territory where **CenterPoint has both electric** and **natural gas operations** or where it has a larger presence "at a valuation that is more efficient than issuing common equity," President and CEO Jason Wells said.

"The sale will also enable us to redeploy approximately $1 billion of future capital expenditures intended for Louisiana and Mississippi into jurisdictions with less regulatory lag, thereby enhancing the ongoing earnings power of the company," Wells added. LDCs in the two states represent less than 4% of the company's overall rate base.

In **January 2022**, **CenterPoint closed** the **$2.15 billion sale** of its **Arkansas and Oklahoma gas utilities to Summit Utilities** Inc. **CenterPoint continues** to **hold natural gas utilities** in **Indiana**, **Minnesota**, **Ohio and Texas**. It also **has electric utilities** in **Indiana and Texas**.

For **Bernhard** Capital Partners, this newly announced transaction **builds upon** its previously announced **acquisition of Entergy** Corp.'s **natural gas distribution businesses** in **Louisiana**. "**Once both transactions** are **complete**, **Delta** Utilities will be a **leading natural gas utility** in **Louisiana and Mississippi** and among the top 40 providers in the United States," Jeff Jenkins, founder and partner at Bernhard Capital Partners, said in a separate statement.

The **CenterPoint transaction** is **expected** to **close** toward the end of the **first quarter** of **2025**, **subject to** customary closing conditions, including antitrust clearance and **state regulatory approvals**.

Morgan Stanley & Co. LLC and Wells Fargo Securities LLC were CenterPoint's financial advisers, and Latham and Watkins LLP, Phelps Dunbar LLP and Brunini Grantham Grower & Hewes PLLC were its legal advisers.

Jefferies LLC was lead financial adviser to Bernhard Capital, with Scotiabank also as financial adviser and Kirkland & Ellis LLP as legal adviser. Jefferies LLC and

Docket No. UG 490

Southwest Gas Holdings Reorganizes Centuri Ahead of Separation

by Noah Schwartz
Standard and Poor's Global Market Intelligence – Feb. 29, 2024

Southwest Gas Holdings Inc. is **restructuring Centuri** Group Inc. as the utility operator moves ahead with **plans** to **separate** the **utility infrastructure services unit** and operate **as** a **standalone natural gas company**, Southwest Gas executives said on a Feb. 28 earnings call.

The plan to offboard Centuri remains "on track," Southwest Gas CEO and President Karen Haller said. In December 2023, Southwest Gas brought in William Ferhman, the former president and CEO of Berkshire Hathaway Energy, to lead Centuri through the separation process.

Ferhman is prioritizing cost-cutting and reorganization as Centuri works toward independence from the parent company, executives said. The Las Vegas-based gas distributor **did not provide** a **timeline** of when the **Centuri separation** will take place.

"We're focused on reducing costs across all facets of the business, starting with sales, general and administrative expenses," Ferhman said. "I have eliminated two corporate leadership levels, which allows me to get very close to our operating businesses. Each of our business unit presidents now report directly to me."

The restructuring is intended to "streamline our cost structure and implement a disciplined accountability model," Ferhman continued, adding that the company plans to focus its maintenance and growth capital spending on the business lines that are "the most profitable and well run."

The **plan to spin off Centuri** hit a **snag** in **November 2023** when the **US I**nternal **R**evenue **S**ervice **declined** to **rule** on **whether** the **spinoff would qualify for tax-free status**. In an earnings presentation, the company said it will "continue to assess the attractiveness of a tax-free separation of Centuri (either following an IPO or in lieu of an IPO) against other taxable alternatives."

Southwest Gas has submitted a draft registration statement for a potential IPO, according to the investor presentation.

"I have been in this role for about a month so that work is just now beginning and will be more clearly articulated as we go through the IPO process here in a few weeks," Ferhman said on the separation process.

Haller indicated the **strategy for spinning off Centuri remains dependent** on **external factors**. "Following execution of expected IPO, Southwest Gas Holdings may ultimately separate the business through a series of sell-downs, or share exchanges, or

depending on market conditions, we could distribute the balance of Centuri shares to Southwest Gas Holdings shareholders through a spin," Haller said during the call.

Investor pressure

Activist investor Carl Icahn, who **became Southwest Gas' top shareholder** in **June 2023**, has **been applying pressure** on the company to cut costs and improve value for shareholders.

In **2021**, **Icahn vigorously opposed Southwest Gas' acquisition** of **Dominion** Energy Inc.**'s Questar Pipeline** Co. The move "will make all past errors pale in comparison," Icahn wrote on the then-rumored deal in a letter to the Southwest Gas board. Icahn then launched an attempted bid to take over Southwest Gas and stop the acquisition.

Despite Icahn's opposition, **Southwest Gas closed** on the nearly **$2 billion deal** in **December 2021**. In **February 2023**, **Southwest Gas completed** the **sale** of **Questar** – which had been **renamed MountainWest Pipeline** LLC – **to Williams** Cos. Inc. **for $1.5 billion**. Icahn supported both the MountainWest divestiture and the spinoff of Centuri.

Southwest Gas reported full-year 2023 adjusted net income of $238.4 million, or $3.36 per share, compared to $196.6 million and $3.00 per share in 2022. For the fourth quarter, the company reported adjusted net income of $81.2 million, or $1.13 per share, compared to $78 million and $1.16 per share in the year-ago quarter.

The company attributed its 2023 growth to a $107 million increase in operating margin from 2022. Executives said the jump in operating margin was fueled by a $53.8 million rate increase in its Arizona service territory that took effect in February 2023.

For 2024, the company issued net income guidance for its gas segment of $228 million to $238 million.

Haller said two pending rate cases will "provide the opportunity to start recovering the significant investments we have made to serve our customers." The company expects a decision on a $70 million rate case in Nevada in the spring and a separate $16 million rate case for its interstate pipeline affiliate, Great Basin Gas Transmission Gas Co., to be completed in the first week of March.

–

Utah Governor Names Telecom Vet to State Utility Commission

by Jason Lehmann – Regulatory Research Associates (RRA)
an Affiliate of Standard and Poor's Global Market Intelligence – Mar. 28, 2024

Utah Gov. Spencer Cox has **named Jerry Fenn**, a **Republican**, **to** a position on the three-seat **Public Service Commission** of Utah, to fill the remainder of a term expiring March 1, 2027.

Docket No. UG 490

Staff/109
Muldoon/38

- Utah Public Service Commission (PSC) members are appointed by the governor and subject to state Senate confirmation, generally for six-year terms. The chairperson may serve an indefinite term in office. No more than two commissioners may serve from the same political party.
- The **PSC** is **awaiting** a **major electric rate case filing from PacifiCorp** and is also considering a settlement recently filed in **Dominion** Energy Inc.'s **planned sale** of its **Questar Gas** Co.
- Regulatory Research Associates views the regulatory climate in Utah as somewhat more constructive than average from an investor point of view. The state remains traditionally regulated, and the PSC has been receptive to mergers. There has been little base rate activity in recent years.

Cox submitted Fenn's nomination to the Utah State Senate on March 18 for consideration.

Fenn previously was **president** of **Qwest Communications Utah** and **regional** vice president for **CenturyLink**. Fenn is currently self-employed as an attorney and consultant, and is an **adjunct professor** at **Brigham Young University**. He received a **bachelor's** degree in **economics**, a **master's** degree in **business administration** and his **juris doctorate** from **BYU**.

If confirmed, Fenn would **replace** former PSC Commissioner **Thad Levar**, who appears to have departed the PSC in early January. Levar, a Republican, was appointed to the PSC for a new term in 2021.

The **other members** of the **PSC** are **David Clark**, a **Republican** serving a term extending to March 2025, and **John Harvey**, who joined the PSC in June 2023 for a term expiring in March 2029.

Dominion and Berkshire Hathaway Energy **PacifiCorp** are the **state's major utility** operating **companies**.

The PSC is considering a settlement submitted earlier this month by Dominion, Enbridge Inc. and intervenors in the companies' merger proceeding before the PSC. Under the deal, announced in September 2023, **Dominion** is **selling Questar and other gas utility businesses** in **Ohio** and **North Carolina** and **other assets to Enbridge**.

In the coming weeks, the PSC will also begin adjudicating a planned PacifiCorp electric rate case application (Docket No. 24-035-04). **PacifiCorp proposes** implementing **new electric rates**, subject to commission authorization, on **Jan. 1, 2025.** The company's **last base rate change** took effect in **January 2021** after the commission authorized a $31.4 million electric base rate increase in Docket No. 20-035-04.

Docket No. UG 490

Staff/109
Muldoon/39

PacifiCorp sought a test period determination before filing the general rate case application, proposing a future test period for the 2024 rate case that uses the 12 months ending Dec. 31, 2025, with a 13-month average rate base. The Utah Division of Public Utilities did not oppose the proposal, and on March 11, 2024, the PSC issued an order approving it.

RRA view of Utah regulation

Regulatory Research Associates views the regulatory environment in Utah as somewhat more constructive than average from an investor point of view. The state remains traditionally regulated, and the PSC has been receptive to mergers. There has been little base rate activity in recent years; many prior proceedings had been resolved through settlement agreements, which had sometimes included multiyear rate adjustments.

The PSC's last rate case decision was issued in December 2022 when it authorized Dominion Energy Inc.'s Questar Gas Co. a $47.8 million gas distribution rate increase in Docket No. 22-057-03, effective Jan. 1, 2023. The authorized rate hike was premised upon a 9.6% return on equity (51% of capital) and a 6.856% return on an average rate base. The authorized return on equity (ROE) at the time was above the 9.42% average ROE accorded to gas utilities through the first nine months of 2022. The **average gas ROE authorized** in **2023** was **9.53%.**

–

WY Consumer Advocate Seeks Additional Conditions In Enbridge-Dominion Deal

by Monica Hlinka – Standard and Poor's Global Market Intelligence – Apr. 8, 2024

In **Enbridge** Inc.'s pursuit of **acquiring Dominion** Energy Inc.'s **gas utility businesses in Wyoming**, the **Office** of **Consumer Advocate offered** up **additional commitments** that should be **considered before** the **Wyoming P**ublic **S**ervice **C**ommission **issues** a **decision on** the **transaction**. (Docket No. 30010-218-GA-23)

- The Office of Consumer Advocate (**OCA**) filed **testimony** with the commission April 5 in **Enbridge's proposed acquisition** of **Questar Gas** Co. Overall, the OCA supports the deal on the condition that additional commitments are secured.
- The recommended commitments relate to **enhanced ring-fencing measures**, implementing a **cost allocation manual** and a **new low-income assistance** program. The OCA reiterated that the acquisition hinges on its alignment with the public interest and the assurance of the continued provision of safe, reliable natural gas service at reasonable rates.
- Under the deal, announced in September 2023, **Dominion would sell Questar and gas utility businesses in Ohio and North Carolina and other assets to Enbridge**. The sale is **expected** to **close in 2024**, assuming the requisite state and federal approvals are obtained.

➤ In its review, the PSC will examine the proposed deal to ensure that any reorganization resulting from the proposed transaction does not compromise Questar's capacity or ability to serve the public by delivering safe, dependable and reasonably priced natural gas service to its customers.

A prehearing conference is scheduled for May 9, and a two-day public hearing is set to begin May 23.

Questar Gas serves approximately 1.2 million customers **in Idaho**, **Utah and Wyoming**. The **acquisition also requires** approval from the **P**ublic **S**ervice **C**ommission of **Utah** (Docket No. 23-05-16). **While Questar Gas also operates** in **Idaho**, the **I**daho **P**ublic **U**tilities **C**ommission **does not have authority over** the **sale** of **gas utilities at** the **holding company level**.

Regulatory Research Associates views the Wyoming regulatory climate as relatively balanced from an investor point of view, according the jurisdiction an Average/2 ranking.

State law says the Wyoming PSC "shall not approve any proposed reorganization if the commission finds ... that the reorganization will adversely affect the utility's ability to serve the public." The law defines a reorganization as any transaction that results in a change in the majority ownership interest or control of a public utility or the majority ownership interest or control of any entity that owns a majority interest in or controls a public utility.

The commission requires several provisions to be included in an application, such as the utility's financial condition and the proposed transaction's effect on the utility's ability to provide service and on any other utility. There is no statutory time frame within which the PSC is required to render a decision regarding a proposed merger.

OCA recommendations

In its testimony, the OCA said the commitments offered in the initial application "are commendable ... it is imperative to introduce additional conditions and safeguards to ensure that the proposed merger is in alignment with the public interest."

Further, the OCA supports the approval of the acquisition, contingent upon the inclusion of the additional protections.

The **OCA requests** to **cap operating, maintenance, administrative and general expenses per customer for** the **12 months ended December 2023**, which is set at $180.98, **thereby capping** the **amount Questar could seek to recover** in its **next general rate case**. The OCA said this commitment would provide rate stability and facilitate Questar's integration with Enbridge without putting undue financial burden on Wyoming ratepayers.

The OCA also advocated for **further ring-fencing provisions** to **shield Questar from** the **potential adverse effects** of **Enbridge's lower credit rating**. As of March 29, Questar had a higher credit rating than Enbridge from two of the three rating

agencies, and therefore, the OCA said it is "important to safeguard Wyoming ratepayers from any adverse effects that may arise from a possible credit downgrade associated with the proposed merger."

The consumer advocate recommended a commitment that would require Questar, in its **next general rate case**, to **demonstrate** that its **requested cost of debt is not higher than** what **would have been incurred had** the **merger not occurred**. "This would entail [Questar] **utilizing** its **current credit rating as** a **benchmark unless** it **can substantiate any downgrade** resulting **from market forces beyond its control**," the OCA said.

In the **company's most recent Wyoming**-jurisdictional **rate case decision** issued Nov. 7, 2023, the **PSC approved** a settlement authorizing a **r**eturn **o**n **e**quity of **9.65%,** a long-term debt cost of 4.07%, and a **capital structure** of **51.56% equity** and 48.44% long-term debt. This results in an **overall rate of return** of **6.95%**.

The OCA said it is "crucial" for the parties to secure a commitment for a **comprehensive cost allocation manual** for services Enbridge provides to Questar. The consumer advocate noted that in Dominion's purchase of Questar in 2016, the approved settlement called for establishing a cost allocation manual outlining the precise methodology for assigning Dominion corporate services costs to Wyoming ratepayers. However, during Questar's most recent gas rate case, the OCA observed "that some progress has been made in presenting a comprehensive, Wyoming-specific cost allocation manual." The OCA said further work is necessary to "ensure accuracy and completeness in cost allocation to Wyoming and other entities within Enbridge."

In its initial application, **Enbridge committed** to "**transparently reporting all costs** and **investments** in its financial reports, including those directly assigned or allocated from another Enbridge subsidiary." The application also said the company agreed to maintain an **audit trail** to specifically identify allocable costs.

The **OCA noted** that on March **22**, **Enbridge reported** having **439 subsidiaries**. With such an extensive corporate structure, the OCA said it is "imperative" to have a complete and comprehensive cost allocation manual, and securing this commitment would "offer a suitable mechanism for tracking and auditing costs assigned to Wyoming ratepayers."

The OCA also requests a formal commitment by the companies to formalize **affiliate transaction reporting requirements**, which can provide information necessary to ensure Wyoming ratepayers receive the least-cost and least-risk service options.

Regarding Wexpro Co. and related entities, hedging policies and gas prices, the OCA is seeking a commitment from Questar to a meeting to review its forecast sources and pricing of natural gas following the issuance of an integrated resource plan and before the subsequent request for proposal process.

Docket No. UG 490

Staff/109
Muldoon/42

According to the OCA, Enbridge and Questar have outlined plans to invest roughly $4.6 million annually in capital expenditures in Wyoming from 2023 through 2027. These investments will support the maintenance and upkeep of Questar's natural gas delivery system in the state.

Regarding the potential implementation of clean energy projects, such as renewable natural gas, hydrogen and compressed natural gas, the OCA seeks a commitment from the companies that these initiatives must be proven to be the least costly and least risky option.

The OCA recommends that the commission direct Questar to engage in discussions with the OCA and commission staff to explore the potential establishment of a **low-income assistance program** for vulnerable ratepayers in **Wyoming**. Additionally, the OCA requests that shareholders commit $50,000 to initiate the program and consider allocating a portion of future charitable donations to Wyoming toward sustaining the program.

Overview of Questar's portion of transaction

On Sept. 5, 2023, **Dominion** announced its **plan** to **sell** its gas **utilities** – The **East Ohio Gas** Co., **Public Service Co**. of **North Carolina** Inc. (**PSNC**) and **Questar Gas** Co. – **to Enbridge for $9.4 billion** in **cash plus** the **assumption** of **$4.6 billion** of **debt**. **Enbridge** will **also acquire Wexpro** Co., **which develops and produces gas reserves**, **from Dominion**.

Enbridge will **pay** roughly **$3 billion** in **cash** and **assume debt** worth **$1.3 billion to acquire Questar** Gas from **Dominion**. The base purchase price is subject to adjustments for cash, indebtedness, working capital and capital expenditures, and any new regulatory assets and liabilities of Questar Gas arising between July 1, 2023, and the transaction's closing.

Following the announcement, **Questar** submitted an application to the Utah and Wyoming utility commissions seeking approval for a proposed corporate reorganization in which the company **would become** a **subsidiary** of **Fall West Holdco** LLC, a new holding company. The **Utah PSC approved** the **application** Nov. 3, **2023**, while the **Wyoming PSC unanimously approved** the proposed **reorganization** during a Nov. 16, **2023**, public meeting.

Additionally, **Dominion notified** the **Idaho PUC** in Case No. QST-G-23-01 of the **pending** acquisition, as required by a 2016 PUC order approving Dominion's acquisition of Questar **Gas**.

Applications were filed with the Utah PSC and Wyoming PSC on Oct. 20, 2023.

Within the proposed Questar Gas acquisition, **Enbridge Quail Holdings**, which was **created explicitly for** the **sale**, will acquire all of the outstanding equity interests in Fall West Holdco, thereby indirectly acquiring all of the equity interests of Questar Gas, the Wexpro companies, Dominion Gas Project Co. LLC and Questar InfoComm Inc.

Enbridge Quail Holdings commits to honoring all Wexpro agreements, stipulations and associated guideline letters.

The applications outlined various financial, managerial and technical commitments offered by the companies to secure approval for the acquisition.

In Utah, on March 21 Dominion, Enbridge and intervenors in the companies' merger proceeding before the Utah PSC reached a settlement outlining a proposed set of enhanced merger commitments that Enbridge intends to implement upon acquiring Dominion's Questar Gas Co. Surrebuttal testimony in the merger proceeding is due April 8, and an evidentiary hearing will be conducted April 11. If necessary, an additional hearing is reserved for April 12.

Additional related transactions

Regarding the sale of PSNC, **Dominion sought N**orth **C**arolina **U**tilities **C**ommission **approval** of a **proposed reorganization** in which **PSNC** would **become** a **direct subsidiary** of a **new holding company**, **Fall North Carolina Holdco** LLC, which would, **in turn**, be a **wholly owned direct subsidiary** of **Dominion**. The **commission approved** the corporate **reorganization** Nov. 20, **2023**.

Enbridge will **purchase** the **utility from Dominion for $2.2 billion** in **cash plus** the **assumption** of **debt worth $1 billion**.

On Oct. 20, 2023, PSNC and Enbridge filed a joint application with the commission seeking approval of the proposed transaction. Intervenor testimony is due by May 13, and rebuttal testimony is due by May 29. A hearing to receive expert witness testimony regarding the application is scheduled for June 11.

Regarding the **sale** of **East Ohio Gas** Co. **from Dominion**, **Enbridge** will **pay** roughly **$4.3 billion** in **cash** and **assume $2.3 billion** of **debt**. On March 6, the **P**ublic **U**tilities **C**ommission of **Ohio approved** the **transaction** after determining that the deal would not interrupt Dominion Energy Ohio's natural gas service and affirming Enbridge's commitment that it will not recover the transaction costs from customers. The **companies announced** the **completion** of the **sale March 7**.

The **companies** said they **expect** the **deal** to **close** in **2024**, subject to the receipt of several **regulatory approvals**. The expiration or termination of the waiting periods under the **Hart-Scott-Rodino Act** is also required, which occurred Nov. 1, 2023. The companies received final **clearance** from the **Committee** on **Foreign Investment** in the United States on Jan. 11, 2024. The **Federal Communications Commission** must also weigh in regarding the proposed transaction.

WITNESS: Luz Mondragon

PUBLIC UTILITY COMMISSION
OF
OREGON

STAFF EXHIBIT 200

REDACTED
OPENING TESTIMONY
Revenue Requirement Detail, Expense for Customer Service and Customer Accounts, Excess Deferred Income Tax, Interest Synchronization and Budget to Actual analysis.

April 18, 2024

Docket No: UG 490 Staff/200
Mondragon/1

Q. Please state your name, occupation, and business address.

A. My name is Luz Mondragon. I am a Senior Financial Analyst employed in the Accounting and Finance Section of the Rates, Safety and Utility Performance Program (RSUP) of the Public Utility Commission of Oregon (OPUC). My business address is 201 High Street SE, Suite 100, Salem, Oregon 97301.

Q. Please describe your educational background and work experience.

A. My witness qualifications statement is found in Exhibit Staff/201.

Q. What is the purpose of your testimony?

A. My opening testimony discusses Staff's analysis and position on the following issues:

- Summary of all Test Year adjustments proposed by Staff and the corresponding revenue requirement effect.
- Test Year expenses for Customer Service: Information and Sales Expense (Operations and Maintenance Non-Labor)
- Test Year Excess Deferred Income Tax
- Interest Synchronization analysis.
- Historical Budget to Actuals analysis.

Q. Did you prepare any exhibits for this docket?

A. Yes. I prepared the following supporting exhibits:

Exhibit Staff/201 ..... Witness Qualifications
Exhibit Staff/202 ……..... Exhibits in Support of Opening Testimony

Q. How is your testimony organized?

A. My testimony is organized as follows:

Introduction 3
Summary of Revenue Requirement 5
Issue 1. Customer Service & Information; Sales Expense O&M Non-Labor 8
Issue 2. Excess Defered Income Tax 16
Issue 3. Interest Synchronization 20
Issue 4. Budget To Actuals 22

Summary……..26

Q. Could there be changes or updates to Staff's position and recommendations?

A. Yes. My testimony represents issues identified to date. My recommendations and issues may change when informed by new data and after reviewing testimony and analysis by other parties.

Docket No: UG 490

Staff/200
Mondragon/3

INTRODUCTION

Q. What is the revenue requirement increase proposed by Northwest Natural (NW Natural or NWN) in this docket?

A. Northwest Natural is proposing an overall increase of $154.9 million, or a base increase of 16.62 percent.[1]

Q. What is the adjustment in revenue requirement recommended by Staff?

A. Staff proposes a reduction the Company's requested revenue requirement increase based on a range of ROE. Figure 1 below shows the reduction from the requested $154.913 million to **[BEGIN CONFIDENTIAL]**

- [redacted]
- [redacted]

[END CONFIDENTIAL].

Q. What adjustments are you proposing to the Company's revenue requirement?

A. I am proposing adjustments to the Company's Customer Service Test Year expenses and Average Rate Adjustment Method of Excess Deferred Income Taxes (ARAM EDIT).

Q. Are additional adjustments for other issues proposed by other Staff?

A. Yes. The Company's filing is complex, and a thorough review can involve multiple Staff members looking at different issues. Individual Staff are

[1] NW Natural/100, Palfreyman-Kravitz/Page 13.

reviewing additions to different categories of utility plant, test year operating expenses, revenues, and the effects of escalation on individual accounts.

Docket No: UG 490 Staff/200
Mondragon/5

SUMMARY OF REVENUE REQUIREMENT

Q. What factors did Northwest Natural identify in its initial filing as the drivers of the requested rate increase?

A. NW Natural states that it has generated revenue growth, but that growth has been insufficient to offset costs for O&M and investments in rate base.[2] The biggest factor to NW Natural's increase of $375.4 million in rate base is the significant effort to modernize customer meters throughout their system.[3]

Q. When was the Company's last general rate case in Oregon?

A. The Company's last rate case, UG 435, was filed in December of 2021 with approved rates going into effect on November 1, 2022.[4]

Q. According to the Company, how has the Company's Oregon jurisdictional rate base changed since its last filing?

A. The Company's Oregon jurisdictional rate base has increased from $1.7 billion in UG 435 to $2.1 billion in UG 490, an increase of $380.7 million.[5]

Q. According to the Company, how has the Company's Oregon jurisdictional total operating expenses levels changed since its last filing?

A. The Company filed to recover total operating expenses of $675.2 million in UG 435,[6] and it is requesting to recover $886.6 million in the current filing.[7]

---

2 NW Natural/1700, Walker/16.
3 NW Natural/100, Palfreyman-Kravitz/14.

6 UG 435-Exh. 1300-WP1 Revenue Requirements Model. The amounts include Gas Purchased.
7 UG 490-Exh. 1700-WP1 Revenue Requirements Model. The amounts include Gas Purchased.

Q. What is the Company's proposed cost of capital?

A. The Company's filing proposes a rate of return of 7.406 percent with a capital structure of 50 percent equity and 50 percent debt, a 4.712 percent cost of debt, and 10.1 percent return on equity.

Q. Did you review the Company's cost of capital proposal?

A. No. The Company's Cost of Capital (CoC) proposal is reviewed by Staff witness Matt Muldoon in Staff/100 and Rose Pileggi in Staff/1600.

Q. Please provide background on how the Commission reviews a utility's general rate case filing.

A. The rates charged by a utility are based on the utility's "revenue requirement." To determine a utility's revenue requirement, the Commission determines for a specified test year:

1. The utility's forecasted gross revenues;
2. The utility's operating expenses to provide utility service;
3. The rate base on which a return should be earned; and
4. The rate of return to be applied to the rate base.[8]

Once a utility's revenue requirement is established, the Commission determines the rates the utility must charge different classes of customers to collect that revenue requirement, considering the different costs each of the different classes of customers impose on the utility's system.

Q. Have the parties agreed to adjust any components of the $154.9 million proposed increase?

[8] *Pacific Power* and *Light*, UE 116, Order No. 01-787, pp.5-6 (September 7, 2001).

Docket No: UG 490

Staff/200
Mondragon/7

A. Yes, the parties have reached an agreement related to the Company's cost of Long-Term Debt.

Q. Please provide a table summarizing Staff's proposed adjustments.

A. Figure 1 provides a table summary of Staff's proposed adjustments. Table 1 shows Staff's testimony exhibit numbers, the names of the Staff sponsoring the testimony, and a description of the adjustments. The last two columns show adjustments to Test Year revenues, expenses or rate base, and the revenue requirement effect based on Staff's proposed ROE range. Full support and explanations of the proposed adjustments can be found in the respective Staff members' testimony.

ISSUE 1. CUSTOMER SERVICE & INFORMATION; SALES EXPENSE O&M (NON-LABOR)

Q. Please describe the activities and expenses associated with Customer Service and Information; Sales Expenses that you reviewed?

A. I reviewed Customer Service and Information; Sales Expense (Customer Service) recorded in FERC Accounts 907–916, excluding 909 Informational and Instructional Advertising Expenses and 913 Advertising Expense, which is analyzed separately. These expenses are for Supervision, Demonstrating and Selling, and Miscellaneous Sales expenses incurred in customer service and informational activities, promotional, demonstrating, and selling activities, except by merchandising, the object of which is to promote or retain the use of utility services by present and prospective customers.[9]

Q. Does the Commission Staff have a standard for how these expenses are treated for ratemaking purposes?

A. Oregon Administrative Rule 860-026-0020—Standards Governing Promotional Activities and Concessions—mandates that all promotional activities be just, reasonable, prudent, economically feasible and beneficial to both the utility and its customers.

Staff reviews expenses per appropriate use per FERC account. Staff also reviews transaction-level data to ensure expenses relate to activities such as responding to customer requests, inquiries, and safety concerns, resolving

[9] PART 201—Uniform System of Accounts Prescribed for Natural Gas Companies Subject to the Provisions of the Natural Gas Act. https://www.ecfr.gov/current/title-18/chapter-I/subchapter-F/part-201.

customer complaints, extending service to new customers, and providing information about safety and service issues.

Q. What is the Company proposing regarding Customer Service Information and Sales Expenses?

A. The Company is proposing to increase Oregon allocated expenses by $26 thousand or 5.6 percent to $470 thousand.

Figure 2: Base Year to Test Year

Account		Test Year 10/31/2025 Company Wide	Test Year 10/31/2025 Oregon Allocated	Base Year 12/31//23 Company Wide	Base Year 12/31//23 Oregon Allocated

TOTAL O&M Expense (Less Advertising)		533,822	470,207	504,046	443,981

Q. Please describe the Company's Customer Service Information and Sales Expenses in the Base Year and Test Year.

A. NW Natural's Base Year is January through December of 2023 using actual expenses through September 2023 and forecasting the remaining three months of 2023 to develop the total Base Year.[10] NWN adjusted Base Year

[10] NW Natural/1400, Davilla/2.

expense using the most current West Region Urban CPI of 5.6 percent to arrive at the Test Year amounts.

The Company reported a Base Year Oregon allocated non-labor total of $444 thousand for Customer Service expenses. Demonstrating and Selling expenses (FERC 912) make up 89 percent of the Customer Service Base Year. This includes the materials and expenses incurred in promotional, demonstrating and selling activities in the effort to promote and retain present customers and prospective customers. Of this amount, 76 percent of the expenditures in this account are professional services, materials, prices, meals, and sponsorships to support NWN's Corporate identity.

Q. How did Staff perform its analysis of Customer Expenses?

A. Staff reviewed Base Year expenses for appropriate use of FERC account, reviewed transaction-level data to ensure expenses relate to activities such as providing general direction of customer service activities, encouraging safe, efficient, and economical use of the utility's services, as well as costs associated with activities related to the promotion and retention of the use by present and prospective customers. Professional Services, Corporate Identity and Dealer Relations make up the majority of Base Year expenses.

Q. What is Staff's analysis of the programs included in Customer Expenses?

A. Most Professional Services were recorded in FERC Account 908 – Customer Assistance Expense. In this account, 90 percent of Professional services are related to the Weatherization program, while six percent are related to FERC

Account 912 – Demonstrating and Selling Expenses. It is worth noting that services related to the Low-Income Weatherization program are offset by the Company's Oregon Low Income Energy Efficiency (OLIEE) Program. The OLIEE Program is funded through the Public Purposes Funding Surcharge (Schedule 320) and is used to help customers who qualify as low-income, defined as less than 200 percent of the federal poverty line.[11] The Demonstrating and Selling costs were made up of help desks and booths as well as Safety and Innovation outreach and engagement events.[12]

Grand Total	142,875		151,394

Q. Did Staff perform any other analysis of the Customer Expenses?

A. Yes. Staff reviewed historical data for trends, variances, averages, and growth. Overall, the expenses in this category have declined since 2021. This result may be due to the Company incorporating the feedback received in the prior rate case and making changes to charge to non-recoverable cost centers. The only account to see an increase is Supervision (FERC 911), growing by 393 percent since 2021 and at 50 percent above the three-year average. Although these percentages seem large, the actual dollar amounts are small. Figure 6 below shows the comparisons.

Docket No: UG 490

Q. Does Staff recommend an adjustment?

A. Staff proposes two adjustments:

- As ratepayers receive little benefit from event sponsorships, fees paid to Home Building Associations, home tours, building industry events and other related activities they do not satisfy the criteria for rate recovery under OAR 860-026-0020(1). Staff recommends adjusting the Test Year expenses by ($108,457) system-wide or ($95,858) Oregon allocated to remove Dealer Relation costs.

Mondragon/16

ISSUE 2. EXCESS DEFERRED INCOME TAX

Q. Briefly describe excess deferred income taxes and the Commission's resolution in NW Natural's recent rate cases.

A. For purposes of this rate case, Excess Deferred Income Taxes (EDIT) are deferred taxes paid by customers in rates prior to 2018 that became refundable as a result of the 2017 Tax Reform Act that reduced the Federal corporate tax rate from 35 percent to 21 percent. EDIT can be either protected or unprotected. Protected EDIT can be returned to rate payers no faster than the rate allowed under IRS normalization rules (also known as the Average Rate Adjustment Method or ARAM). The 2017 Tax Act created three categories of EDIT for NW Natural:

- Protected EDIT
- Unprotected EDIT
- Gas Reserves EDIT

The ratemaking treatment of each type of EDIT has been addressed in prior Commission orders.[14] In this case, Staff has no issues with NWN's ratemaking treatment of Unprotected and Gas Reserved EDIT but does propose an adjustment to Protected EDIT.

13	Total Rate Base	2,136,361	2,451,905	1,826,116	2,090,666

In NW Natural's last GRC, UG 435, Staff proposed to increase ARAM EDIT amortization by $100 thousand from $3 million.[15]

Q. What is the ARAM "speed limit"?

A. The "speed limit" is a term coined by NW Natural in its 2020 rate case, UG 388, that simply means the maximum rate that ARAM EDIT benefits can be returned to ratepayers without triggering a normalization violation.[16]

Q. What is a normalization violation?

A. Normalization is a system of accounting used by regulated public utilities to reconcile the tax treatment of the Investment Tax Credit (ITC) or accelerated

[15] UG 435 Staff/300, Fox/17.
[16] See In the Matter of NORTHWEST NATURAL GAS COMPANY, dba NW NATURAL, Request for a General Rate Revision, Docket No. UG 388, NW Natural/2500, Borgerson/22.

depreciation of public utility assets with their regulatory treatment. Under normalization, a utility receives the tax benefit of the ITC or accelerated depreciation in the early years of an asset's regulatory useful life and passes that benefit on to ratepayers ratably over the regulatory useful life in the form of reduced rates.[17]

A violation of the normalization rules would, in particular, eliminate NW Natural's ability to use accelerated depreciation for tax purposes which would have significant negative impacts on the Company's cash flow.

Q. Please elaborate on the Company's response to Staff's data request regarding ARAM EDIT.

A. The Company provided its ARAM EDIT estimates through 2028. The Company estimates that under the current depreciation rates, 50 percent of plant EDIT will be amortized by 2038. Additionally, NWN estimates its actual ARAM amortization will average $2.99 million per year between 2024 and 2026.[18] The slightly higher benefit of $3.1 million in rates reduces the cumulative outstanding balance due to ratepayers that the Company estimates will be $817 thousand at the end of 2028. Increasing the benefit in rates to $3.2 million would bring the balance closer to zero.

Q. Will increasing the amortization by $100,000 cause NWN to violate the normalization speed limit?

---

17 IRS Revenue Procedure 2017-47.
18 Staff Exhibit 202, NW Natural's response to DR 215.

A. No. The Company provided their ARAM EDIT amortization workpapers where annual amortization and the ARAM Speed limit are calculated.[19] The Speed limit is the cumulative allowable ARAM amortization. Adjusting the amortization amount to $3.2 million annually, increases the actual amortization but stays under the cumulative allowable amount by $316 thousand in 2024 and $317, thousand in 2028, therefore not exceeding the Speed limit.

	Amortization Amount (calendar years)					
	2023	2024	2025	2026	2027	2028
ARAM	2,724,620	2,817,269	2,986,064	3,153,668	3,282,502	3,378,901
Amortization in Rates (Pre Gross-up)	3,100,000	3,200,000	3,200,000	3,200,000	3,200,000	3,200,000
Cumulative Allowable Amortization	13,951,714	16,768,983	19,755,047	22,908,714	26,191,217	29,570,117
Cumulative Actual Amortization	13,252,445	16,452,445	19,652,445	22,852,445	26,052,445	29,252,445
(Over)/Under ARAM Speed Limit	699,269	316,538	102,602	56,270	138,772	317,673

Q. What does Staff recommend?

A. Staff recommends increasing the ARAM EDIT amortization in rates from $3.1 million to $3.2 million, thereby decreasing the amount of federal tax expense by $100 thousand per year. This represents a compromise that will return benefits to customers faster while still leaving a reasonable buffer in the cumulative amount returned.

[19] Staff Exhibit 202, NW Natural response to DR 215.

Docket No: UG 490

Staff/200
Mondragon/20

ISSUE 3. INTEREST SYNCHRONIZATION

Q. Please explain what Interest Synchronization is.

A. Interest Synchronization computes the interest component of the revenue requirement. It is computed by multiplying the rate base by weighted cost of debt and comparing it against the interest expense used by the Company in the Test Year. The tax effect of the difference is adjusted and ensures that the revenue requirement reflects the change in interest.[20]

Q. What is the Commission's policy and historical treatment of Interest synchronization?

A. According to long-standing Commission policy, for ratemaking purposes, Staff routinely synchronizes interest expense to reflect changes to the regulated utility's cost of capital as initially filed in a general rate case. Interest expense must be coordinated or synchronized to determine the related adjustment for the income tax calculation.

Q. What is the Company proposing in rate base and weighted cost of debt in this rate case?

A. NW Natural is proposing $2.136 million in rate base and requesting a weighted cost of long term (LT) debt of 2.36 percent.

Q. Does Staff object to the Company's proposal?

[20] NARUC Revenue Requirement Model. https://pubs.naruc.org/pub.cfm?id=5389DCB3-2354-D714-5191-39A4E8DF9C2C.

A. No. during settlement discussions on February 12, 2024, Parties agreed on a cost of LT debt of 4.712 percent which resulted in a Weighted Cost of LT Debt of 2.36 percent.[21]

Regarding Rate Base, members of Staff will independently testify and propose adjustments to Rate Base, if any.

Q. Does Staff have any recommendations on this issue?

A. No. Staff has no recommendations given the result of the settlement of LT debt mentioned above.

[21] *In the Matter of Northwest Natural Gas Company, dba NW Natural, Request for a General Rate Revision*, UG 490, First Partial Multi-Party Stipulation (February 26, 2024).

Docket No: UG 490 Staff/200
Mondragon/22

ISSUE 4. BUDGET TO ACTUALS

Q. Please describe NW Natural's budgeting process?

A. The O&M budget is performed annually, typically beginning in October, and is finalized usually by year end. The budget is performed at the cost center and GL account level, however, not every cost center or GL receives a budget. The O&M FERC accounts are not considered in the budget process. Rather than being in 80 different cost centers, Budgets are accounted for, most often, in a single node and the variances are compared only at the node level.

Q. How does the Company monitor variances between budgeted and actual revenues and expenditures?

A. On a monthly basis, the Finance Committee reviews financial results and explanations or variances. On a quarterly basis, Internal Audit is invited to attend the monthly meetings.

The Income Statement and Balance Sheet are presented and explanation of cost drivers and changes from the prior month are discussed. O&M is reviewed at the Cost Center level with explanations required for areas greater than $25 thousand in variance.[22]

NW Natural states that

[T]he Company's goal is to manage operating expenditures to the *annual budgets. On a monthly basis, the business units are asked to provide variances for the month, YTD and for the remainder of the year. When variances are identified, the business units are asked to*

[22] Staff/Exhibit 202, NW Natural's response to DR 203.

identify if the variance is timing related or permanent. These variances for the business units are then rolled up, and if there are significant permanent overages on an aggregated basis, the Finance team engages the Company on an effort aimed at reducing the overage by reprioritizing expenses.[23]

Q. How did Staff perform its analysis of the Budget to Actuals?

A. Staff requested the budgeted and actuals amounts for each of the approximately 950 cost centers for the calendar years of 2021, 2022, and 2023. Staff then used NW listing of internal accounts and cost centers[24] to create connections between Cost Centers and categorized Cost Centers as either Operations or Administrative & General accounts. Staff analyzed and requested explanations from the Company for

- Variances in budgeted amounts versus actuals.
- Change in actuals over the years.
- Change in budgeting over the years.

Q. What were Staff's findings?

A. Staff's analysis found that overall the Company stayed under their annual budget in both 2022 and 2023 in Operations and A&G.

[23] Staff/Exhibit 202, NWN response to DR 204.
[24] Staff/Exhibit 202, NWN response to DR 78.

Docket No: UG 490

Staff/200
Mondragon/24

Figure 8: Budget to Actual Variances

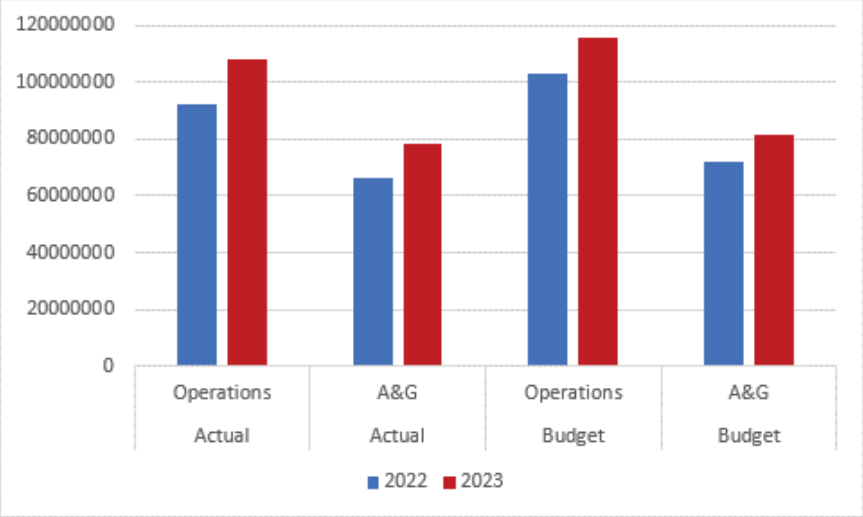
	2023		2022	
Operations	(7,494,832)	-6%	(10,781,599)	-10%
A&G	(3,101,664)	-4%	(5,904,083)	-8%

Although the Company has maintained cost control over expenditures, Staff found that the Company's budget as well as actuals have increased from 2022 to 2023. Staff has issued DRs for more information (due back April 5).

Docket No: UG 490

Staff/200
Mondragon/25

Figure 9: Change over the Years



Q. Does Staff have any concerns with the Company's ability to control costs?

A. Staff does not have concerns regarding the Company's ability to control costs.

Q. Does Staff recommend any adjustments?

A. No.

Docket No: UG 490

Staff/200
Mondragon/26

SUMMARY

Q. Please summarize your recommendations, identifying any adjustments you propose.

A. Staff proposes to the following adjustments

- Customer Service
  - Reduce Test Year A&G expense by ($95,858) Oregon allocated, related to Dealer Relation costs.
  - Adjust the Oregon allocated Test Year by a reduction of $5,810 to $368,859 to account for updated CPI escalations.
- Excess Deferred Income Tax
  - Increase the ARAM EDIT amortization in rates from $3.1 million to $3.2 million.

My recommendations may change based on further review and as informed by the testimonies offered by other parties.

Q. Does this conclude your testimony?

A. Yes.

WITNESS QUALIFICATIONS STATEMENT

NAME: Luz Mondragon

EMPLOYER: Public Utility Commission of Oregon

TITLE: Senior Financial Analyst
Rates, Safety and Utility Performance Program (RSUP)

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: Western Governors University
Bachelors of Science in Accounting

EXPERIENCE: I have been employed with the PUC since March of 2023 as a Senior Finance Analyst tasked primarily with research and analysis of utility company filings, including, affiliated interests and rate case dockets.
I have over 15 years of accounting/finance experience, most recently working for Northern Wasco County PUD as a Finance Analyst. My duties included financial reporting, internal and external, as well as budgeting. I also worked very closely with the Engineering team on work orders, inventory, capital budgets and Plant assets.

NW Natural®

Rates & Regulatory Affairs
UG 490
Request for a General Rate Revision
Data Request Response

Request No.: UG 490 Coalition DR 72

Please describe all promotional concessions NW Natural intends to offer during the Test Year.

Response:

NW Natural objects under OAR 860-001-0500 to the request that the Company describe all promotional concessions offered during the Base Year, in that the information requested is not relevant to this proceeding or not reasonably calculated to lead to admissible evidence and is not commensurate with the needs of this case, the resources available to the parties or the importance of the issues to which the discovery relates. The Company did not intend to seek cost recovery in this rate case for any promotional concessions.[1]

To that end, and without waiving the Company's objections, there are four expenses included in the filing that the Company inadvertently included in its cost recovery request.

Base Year total for these expenses is $31,992.99. Test Year total is $41,014.70. The Company will update its revenue requirement in its reply testimony.

The four Test Year expenses are explained here:

Date	Paid to	Purpose	Base year / Test Year expense
9/26/2023	NW Natural Appliance Center	Purchase of gas outdoor oven for installation at a home showcase. Demonstration of outdoor gas cooking equipment.	**Base Year:** $1,994.99 **Test Year** $2,185.63

[1] OAR 860-026-0015(1) states, in relevant part, that "promotional concession" means "any consideration offered or granted by an energy … utility or its affiliate to any person with the object, express or implied, of inducing such person to select or use the service or additional service of such utility, or to select or install any appliance or equipment designed to use such utility service." OAR 860-026-0015(2) provides examples of promotional concessions for illustrative purposes, and OAR 860-026-0015(3) lists activities that are not promotional concessions.

UG 490
2024 Oregon General Rate Revision
Data Request Response

Request No.: UG 490 SDR 78

Please provide a table in the format below (See Table 1) of all internal accounts used by the utility. Organize the list so that the FERC account numbers are listed in numerical order and each internal account assigned to that FERC account is also in numerical order. For each internal account number include the description provided to employees to assist them in allocating the item to the appropriate internal account(s). Please also provide a cross-reference document that lists all internal account numbers in numerical order and indicates to which FERC number they are assigned (See Table 2).

Table 1

FERC Account	Internal Account Number	Description of Internal
908	XXXX1	
908	XXXX2	

Table 2

Internal Account	FERC Account
XXXX01	90X
XXXX02	59X

Response:

Please see Excel file UG 490 SDR 78 Attachment 1. The Excel file lists all cost centers by FERC account used in NW Natural's SAP accounting system.

The Company updated its account coding processes in 2022 eliminating the statistical internal orders. Therefore, the results for SDR 78 and SDR 79 are both for cost centers only.

The spreadsheet contains the following two tabs:

Table 1 – By FERC Account

Table 2 – By Cost Center

NW Natural®

Rates & Regulatory Affairs
UG 490
Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 203

When executing an approved budget, please describe how NW Natural monitors and analyzes variances between budgeted and actual revenues and expenditures.

Response:

Financial results are reviewed monthly and explanations for variances are performed. Results are presented at a monthly Finance Committee which includes members from Accounting, Finance, Tax, Cash Mgmt., and Treasury. On a quarterly basis, also Internal Audit is invited to attend the review meeting.

The Income Statement is presented, and explanations and drivers of the variances are explained. Margin (revenues less cost of gas) and O&M are explained in further detail after the income statement review.

Margin is reviewed in greater detail and this includes not only financial variances but reviews customer counts, volumes and weather variances.

O&M is reviewed in greater detail as well each month and the review is performed at the cost center level with variance explanations required for those areas greater than $25K in variance.

Balance Sheet items are reviewed in the Finance Committee meeting. Changes are reviewed and discussed comparing current month results to the same month in the prior year.

Lastly in the Finance Committee, the Treasury and Cash Management teams walk through the Cash Forecast and explain the drivers of the difference between the cash or borrowing position compared to the budget.

Outside of the Finance Committee, Capital is also reviewed and explanations are gathered from the business unit to explain variances for the month and year to date at the applicant level.

NW Natural®

Rates & Regulatory Affairs
UG 490
Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 204

Referencing the data request immediately above, does NW Natural have defined budget variance tolerance levels for specific revenue or expenditure categories?

a. If yes, please include a brief description of how each variance tolerance threshold is developed.
b. If actual expenditures exceed budget variance tolerances without a commensurate increase in revenues, please describe the process for re-aligning expenditures to budgeted levels.

Response:

a. Yes, there are some variance tolerance thresholds that are defined. These are defined by management along with the SOX Compliance Office to determine the appropriate precision to ensure complete and accurate financial statements. NW Natural has defined SOX controls that require investigation into O&M cost center variances of $25k or more and remaining income statement variances of $50k or more.

b. The Company's goal is to manage operating expenditures to the annual budgets. On a monthly basis, the business units are asked to provide variances for the month, YTD and for the remainder of the year. When variances are identified, the business units are asked to identify if the variance is timing related or permanent.

   These variances for the business units are then rolled up, and if there are significant permanent overages on an aggregated basis, the Finance team engages the Company on an effort aimed at reducing the overage by reprioritizing expenses.

UG 490
Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 215

Regarding Exhibit 1710 Taxes

a. Please explain why corporate activity tax (CAT) expense is not being treated as deductible expense in the ratemaking state tax calculation.
b. At the current Average rate assumption method (ARAM) amortization rate, how many more years will it take NWN to amortize the $143 million in Plant EDIT that resulted from 2017 Tax Reform Act?
c. Please provide the actual and anticipated ARAM EDIT amortization, by year, from the date of inception through 2028. Provide data in a spreadsheet, including ongoing balances, keeping formulas intact and providing all workpapers with associated calculations.

Response:

a. It is our current position, and was our intention in preparing the revenue requirement, that the Oregon Corporate Activity Tax (CAT) be included as a deductible expense for purposes of calculating state income tax. We have reported the CAT in a similar manner when preparing our Oregon corporate income tax returns. Any deviation from this position is/was inadvertent and will be corrected.

b. As a result of the 2017 Tax Cut and Jobs Act (TCJA), NW Natural and interested parties determined that the Company's excess deferred income tax (EDIT) for plant was $143 million and that $128.4 million of the plant related EDIT was allocable to Oregon. The plant related EDIT balance is being amortized in rates, as a reduction of income tax expense, subject to the limitations imposed under the average rate assumption method (ARAM). The speed of amortization under ARAM is heavily influenced by the depreciation rates used for ratemaking and financial reporting purposes. Any changes in approved rates will result in changes to the ARAM amortization.

   Under currently approved depreciation rates in Oregon, we estimate that 50 percent of the total plant EDIT will be amortized by 2038 and 90 percent will be amortized by 2063. Under the updated cost recovery depreciation study, that is

currently before the OPUC, we estimate that 50 percent of the total will be amortized by 2032 and 90 percent will be amortized by 2048.

c. Please see the attachment, "UG 490 OPUC DR 215 NWN Attachment 1.xlsx." Excel columns BP through BZ display the calculated average rate assumption method (ARAM) amortization for the calendar years 2018 through 2028. Excel row 50, of the respective columns, indicates that over the eleven year period approximately 23 percent of the total Oregon allocated excess deferred income tax (EDIT) for plant will have amortized. Recall that, of the total plant related EDIT remeasurement of $143 million, $128.4 million was allocable to Oregon and documented in OPUC Order No. 19-105 (see pdf page number 22 of the Order).

Regarding North American Gas Heat Pump Collaborative (NAGHPC) expenses (the next-to-last two rows of UG 490 OPUC DR 334 Attachment 1).

- North American Gas Heat Invoice #307 – Oregon Allocated amount $21,200.24
- North American Gas Heat Invoice #206 – Oregon Allocated amount $19,074.43

Answers to Questions a, b, c, d are shown in the attached spreadsheet. Here is additional supporting information for NAGHPC expense:

NW Natural has recognized the need to reduce demand side gas usage. Adoption of Thermal Heat Pumps (aka Gas Heat Pumps or GHPs) are one means of doing so.

In our efforts to save customers energy and money, NW Natural is a member of the North American Gas Heat Pump Collaborative (the “Collaborative”). Its members are made up of energy efficiency professionals from gas and combination electric/gas utilities as well as the Northwest Energy Efficiency Alliance. The mission of the Collaborative is to accelerate the adoption of space and water heat GHPs for residential and commercial building applications as a means of reducing carbon emissions.

In pursuit of that mission, the Collaborative employs Market Transformation (MT) practices which have been employed by energy efficiency entities and utilities for emerging energy efficiency equipment and devices ranging from LED lighting to electric heat pump water heaters. MT can be defined as *the strategic process of intervening in a market to create lasting change that results in the increased and/or accelerated adoption of energy efficient products, services, and practices*.

MT picks up where technology development ends: with the product. As such, MT practices support emerging products to smooth their entry and adoption by supply chains, installers, and ultimately end-customers. This involves understanding and addressing the hurdles new equipment can face such as the distribution supply chain, establishing installation best practices and understanding among installers, determining how/where the equipment will fit within energy codes, etc.

Rather than bear the expense and efforts on our own, NW Natural has participated in the Collaborative to a) leverage the expertise and knowledge of energy efficiency professionals across utilities, and to b) share in the initial work and costs across members. The Collaborative has engaged Resource Innovations, a well-regarded and known energy efficiency program administrator, to facilitate its work.

CASE: UG 490
WITNESS: MICHELLE SCALA

PUBLIC UTILITY COMMISSION
OF
OREGON

STAFF EXHIBIT 300

Opening Testimony
Energy Justice

April 18, 2024

Docket No: UG 490

Staff/300
Scala/1

Q. Please state your name, occupation, and business address.

A. My name is Michelle Scala. I am the Energy Justice Program Manager employed in the Strategy and Integration Division (SID) of the Public Utility Commission of Oregon (OPUC). My business address is 201 High Street SE, Suite 100, Salem, Oregon 97301.

Q. Please describe your educational background and work experience.

A. My witness qualifications statement is found in Exhibit Staff/301.

Q. What is the purpose of your testimony?

A. The purpose of Staff's testimony is to provide and validate energy justice considerations as they intersect with the proposals and potential impacts of NW Natural's general rate case. I further elaborate on specific equity considerations in areas that have been identified as high-impact or high-priority energy justice issues; including, overall bill impacts, rate spread/rate design, and the residential bill discount update and associated cost recovery mechanism.

Q. Did you prepare any exhibits for this docket?

A. Yes. I prepared the following supporting exhibits:

Exhibit Staff/301. Witness Qualifications Statement

Q. How is your testimony organized?

A. My testimony is organized as follows:

Issue 1. Energy Justice Overview 3
Summary. Findings and Recommendations..... 24

Docket No: UG 490

Staff/300
Scala/2

Q. Could there be changes or updates to Staff's position and recommendations?

A. Yes. My testimony represents issues identified to date. My recommendations and issues may change when informed by new data and after reviewing testimony and analysis by other parties.

Docket No: UG 490

Staff/300
Scala/3

ISSUE 1. ENERGY JUSTICE OVERVIEW

Q. Please briefly describe the primary role of energy justice in utility ratemaking.

A. The primary role of energy justice in utility ratemaking is to advance the equitable distribution of energy system costs and benefits across all customer segments. It aims to address disproportionate impacts of rate structures and energy policies on environmental justice communities.[1] An energy justice informed review applies the concepts of equity, affordability, accessibility, and participation against the utility's general rate case filing and existing operations.

Q. How has the Commission considered energy justice in ratemaking historically?

A. Specific and explicit considerations for energy justice in Oregon regulated utility general rate proceedings have emerged on a more systematic basis in the last four years. This is not to imply that tenets and principles of energy justice such as affordability and distributional equity have not been a part of Commission decision making in the past; only that achieving socially just outcomes in regulatory processes is an ongoing, growing effort that has

[1] Per Oregon Revised Statute (ORS) 756.010(5), "Environmental justice communities" includes communities of color, communities experiencing lower incomes, tribal communities, rural communities, coastal communities, communities with limited infrastructure and other communities traditionally underrepresented in public processes and adversely harmed by environmental and health hazards, including but not limited to seniors, youth and persons with disabilities.

recently become a more prominent piece built into Staff's analytical framework for assessing rate proposals and other utility filings.[2]

Q. Please describe to what extent NW Natural's proposal in UG 490 has considered energy justice.

A. In NW Natural's (NWN or Company) opening testimony, the Company dedicates several pages of testimony to communicate its efforts to incorporate energy justice and equity into its operations. In NW Natural/200, Company witness Cecelia Tanaka details the Company's equity actions and proposals relative to the following topics:

- Community Equity and Advisory Group (CEAG)
- Low-Income Needs Assessment (LINA)
- Income-Based Bill Assistance Programs
- Oregon Low-Income Energy Efficiency
- Mitigating Energy Burden in This Case
- NW Natural's Efforts to Address Diversity, Equity and Inclusion.

Additionally, in NW Natural/100, Company witnesses Justin Palfreyman and Zachary Kravitz introduce components of a "responsible growth strategy", including changes to the residential basic charge structure, that are intended to "address intra-class equity concerns between [the Company's] existing and new residential customers."

[2] Oregon Public Utility Commission Diversity, Equity, and Inclusion Strategic Plan (https://www.oregon.gov/puc/forms/Forms%20and%20Reports/2023-PUC-DEI-Plan.pdf).

Docket No: UG 490

Staff/300
Scala/5

Q. Has Staff found the Company's existing actions and proposals sufficiently account for energy justice in this filing?

A. Not entirely. To clarify, Staff is very encouraged by the Company's dedicated space for equity testimony and actionable proposals to reflect affordability concerns and distributional equity in this filing. Staff also appreciates the Company's voluntary establishment and use of an equity advisory group in the CEAG. That said, there are some features of the Company's proposal where Staff is still investigating whether additional actions or adjustments are needed to optimize equity outcomes in this proceeding. Staff is particularly concerned with depth of the Company's analysis informing how environmental justice communities may be impacted by its proposals relative to:

- The Residential Bill Discount Program;
- Rate structure changes to the residential basic charge; and
- Overall impacts of the filed case on residential customers.

Staff also has some comments regarding the Company's use of the CEAG and whether there may be opportunities to explore increased visibility, impact, and accountability. Lastly, Staff wishes to elevate certain components of the Company's ongoing low-income energy efficiency program and provide considerations for how this activity may intersect with direct assistance programs such as the Residential Bill Discount, Schedule 33.

Q. Please briefly summarize Staff's energy justice concerns relative to the Company's proposed changes to Schedule 33, the Residential Bill Discount Program.

A. Staff witness Charles Lockwood discusses the Company's Schedule 33 proposal in length in Staff/1200. For the purposes of this testimony, Staff aims to amplify specific parts of Staff's review and position that are of particular import to equitable outcomes in the case. This includes concerns with the Company's methodology used to inform the Program revisions and the impact of the revisions and program growth, generally, on cost recovery through the Company's existing Schedule 335 rate structure.

Q. Please expand on Staff's concerns with the Company's methodology for informing Schedule 33 revisions.

A. Staff is not convinced that the model used by the Company to inform proposed changes in the Residential Bill Discount Program (BPD) adequately considers income distributions and levels of energy burden among participants.[3] In testimony, the Company proposes to revise its approach to setting discount tiers to reduce energy burden below three percent and explains its use of income mid-points in each of the discount tier income ranges as a means to estimate the level of assistance needed to do so.[4] In Staff/1200 Mr. Lockwood describes Staff's concerns that the use of a mid-point within any given income range to rationalize "better coverage

[3] Staff/1200.
[4] Energy burden in this context is a percentage based on the household's monthly energy bill divided by the household's income.

of reduced energy burden through the tier"[5] must assume a normal income distribution of participants within the tier. However, Staff has not seen evidence that this is in fact the case, nor that the methodology's assumed average residential customer usage value is representative of these groups either. As such, an arguably justified discount level, in reality, not only overlooks critical areas of need for households along the lower end of income ranges and/or higher end of usage patterns but may also limit the program's effectiveness for the majority of participants if the actual income distributions are skewed left and/or usage skewed right.

Q. Does Staff have any other concerns to share regarding this methodology?

A. Yes. Staff would note that the issues identified in the previous section are most pronounced for the highest burdened and lowest income households. To illustrate this point Staff uses the Company's estimates provided in NW Natural/200, Tanaka/24, which indicate that the mid-point methodology reduces estimated energy burden across tiers as depicted in Table 1.

Table 1. NWN Mid-point Methodology Estimated Energy Burden

Tier	Energy Burden		Level of Relief
	Before Discount	After Discount	
3	2.00%	1.70%	15%
2	2.80%	2.20%	20%
1	4.70%	2.80%	40%
0	14.00%	2.80%	80%

[5] NW Natural/200, Tanaka/23.

Looking at Tier 0, one can see much higher before discount energy burden that at or between any of the other tiers. Given that this is at the mid-point income, one can infer that energy burden exponentially increases as incomes approach zero. This is significant because it shows not only how extreme energy burden is for households qualifying in Tier 0, but also, that this particular design has rapidly declining benefits for those deeper in need (Table 2).

Table 2. Declining Tier 0 Impacts on Estimated Energy Burden

Tier 0			
% SMI	HH Income	Energy Burden	
		Before Discount	After Discount
0.15	$ 14,061.50	8.0%	1.6%
0.14	$ 13,124.07	8.6%	1.7%
0.13	$ 12,186.63	9.2%	1.8%
0.12	$ 11,249.20	10%	2.0%
0.11	$ 10,311.77	11%	2.2%
0.10	$ 9,374.33	12%	2.4%
0.09	$ 8,436.90	13%	2.7%
0.08	$ 7,499.47	15%	3.0%
0.07	$ 6,562.03	17%	3.4%
0.06	$ 5,624.60	20%	4.0%
0.05	$ 4,687.17	24%	4.8%
0.04	$ 3,749.73	30%	6.0%
0.03	$ 2,812.30	40%	8.0%
0.02	$ 1,874.87	60%	12.0%
0.01	$ 937.43	120%	24.0%

Q. Is Staff recommending that the Company offer deeper discounts for these customers?

A. Not at this time. Staff's discussion here is based on the intersection of two separate elements in the 2022 Key Baseline Evaluation Criteria shared in Docket No. UM 2211, the Energy Affordability Act Implementation Docket. Specifically, regarding the level of relief, Staff recommended utility interim rate programs 1) "prioritize [the] lowest income with the highest energy burden"; and 2) "explain how the interim rate was designed to provide a meaningful reduction of energy burden." [6]

Staff sees and appreciates NW Natural's methodology and proposal as endeavoring to meet the second criterion and looks forward to further exploration of rate designs in the ongoing dialogue on affordability and equity. However, in the interest of Staff's review and transparency in differential rate designs, Staff is compelled to point out the potential gaps in this model, particularly given its conflicts with the first criterion. Put simply, NW Natural's model, while generally benchmarked against a low energy burden target, obscures the level of need amongst the highest energy burdened households by using the mid-point income range absent consideration of actual participant income distributions in the program.

That said, Staff recognizes that this is a step forward from existing designs and would in fact bring more meaningful relief to all current and future participants in Tiers 1 and 0 simply by offering the higher discounts of 40 and 80 percent, respectively. Staff also acknowledges that it can be difficult to truly prioritize the lowest income with the highest energy burden,

[6] https://edocs.puc.state.or.us/efdocs/HAC/um2211hac17313.pdf

such that these households likely have zero income to weight against energy costs. To this end, Staff's recommendation here is not to discredit the proposal. Instead, Staff has asked the Company to frame this proposal as an incremental step to provide a more significant level of relief rather than a sound design based on the Company's mid-point methodology.[7]

Further, Staff supports the Company's intent to participate in the ongoing UM 2211 process. There, Staff, utilities, and stakeholders can continue to explore sustainable differential rate designs as well as how to leverage State and Federal partnerships in the efforts to reduce energy burden both via direct assistance and targeted demand side management.

Q. Does that mean Staff recommends the Commission adopt NWN's Residential Bill Discount proposal under this alternate framing?

A. Not yet. As explained in Staff/1200, the Company did not perform a cost analysis of the proposed changes on the program or Schedule 335 rates. Absent an understanding of how the Company expects the program to grow, both in terms of costs associated with the higher discount tiers and the participation rate, Staff is unable to assess the impacts of the proposal and cannot recommend approval at this time.

Q. If the Company is able to provide a cost analysis of the proposal on Schedule 335 rates, will Staff then support adoption?

A. No. Not only would Staff need to review the analysis prior to making its recommendation, but Staff also has preexisting concerns regarding the

[7] Staff/1200.

Schedule 335 rate structure that it recommends be addressed in this proceeding.

Q. Please explain.

A. Currently, the Company's cost recovery for the Residential Bill Discount Program is set up as a fixed dollar charge for all general service schedules. This structure effectively caps recovery from each customer type at the level of the fixed dollar charge. Table 3 displays NW Natural's current Schedule 335 rate structure.

Table 3. NW Natural Schedule 335, Bill Discount Program Recovery

Rate Schedule	Charge per Bill
2	$ 0.94
3	$ 3.24
27	$ 0.61
31	$ 25.90
32	$ 62.77

In PGE's 2023 General Rate Case, Docket No. UE 416, Staff argues, in length, about the importance of equitable cost recovery from these programs. While it is true that only income-qualified residential customers can participate and receive the direct benefits of these programs, Staff and other parties have also explained that the legal impetus for these programs omitted any cap on per site or per customer cost recovery and included nonbypassibility language. In this vein, Staff has argued that a more equitable cost recovery structure considers percentage of bill impacts when assessing the reasonableness of the per customer rate. Staff would also

note that implementing a more equitable rate structure does not necessarily preclude the existence of a cap if there is a sound argument to include one.

All that said, Staff does want to clarify that the actual average effect of the current structure shows minimal differences between residential and commercial customer percentage of bill impacts for Schedule 335. At this time, only industrial customers appear to have a lower Schedule 335 impact on average. Thus, the cost recovery restructure is not quite as pressing as Staff has observed in other programs. However, given the proposed changes to the discount structure and assumably, forecasted costs, Staff does believe it is necessary to evaluate Schedule 335 in this proceeding. Further, Staff also notes, generally, that it wishes to move towards a more consistent approach with interim bill discount program cost recovery and finds that the Schedule 335 fixed cost recovery model may be a potential deviation from recent recommendations.

Q. Are there any other concerns Staff would like to share relative to the Residential Bill Discount Program proposal at this time?

A. Yes. Staff would like to take this opportunity to reference its summary findings in its accompanying review of the Company's low-income energy efficiency operations and the 2022 Low-Income Needs Assessment (LINA) or Energy Burden Assessment (EBA). In short, Staff has found there to be significant opportunity for the Company to enhance energy efficiency programs among its environmental justice communities. Table 4 is a reproduction of the Company's Oregon Low Income Energy Efficiency

Docket No: UG 490

Staff/300

As can be seen, there are notable gaps between the Company's OLIEE projections and completions. The Company's 2022 EBA, spoke in length about reducing barriers to energy-efficiency programs and increasing participation rates in the Company's offerings. It noted, this is particularly salient for highly energy burdened households that tend to require more targeted designs and outreach/marketing strategies. To this end, Staff

notes that the Energy Affordability Act is a multiprong policy push to tackle energy burden and while the Residential Bill Discount Program represents a significant component of that strategy, it is best delivered with commensurately targeted energy efficiency.

Q. Is the Company doing anything about these issues at this time?

A. Yes. At the March 20, 2024 public meeting, the Commission adopted Staff's recommendation to approve, with modifications, NW Natural's proposals to adjust Schedule 320, Oregon Low-Income Energy Efficiency Programs.[8] This proposal was submitted following engagement with Staff, stakeholders, and CAP agencies in an effort to revise Schedule 320 such that more funds could be allocated to qualifying customers for energy efficiency measure, including expanding eligibility to qualify households earning up to 80 percent SMI and removing project caps for qualified measure to be eligible for up to 100 percent reimbursement of the installed cost.

Staff's modifications included limiting the amount of funding that could be spent on the newly eligible cohort of 61-80 percent SMI in order to "maintain that the majority of low-income weatherization funds be spent on those with the lowest incomes."[9] Staff would also note that in Docket No. ADV 1562, the Commission approved a pause on OLIEE program collections, via Schedule 301, the Public Purpose Funding Surcharge in

[8] Docket No. ADV 1593, Advice No. 24-02 (https://edocs.puc.state.or.us/efdocs/HAU/adv1593hau327269054.pdf).
[9] Id.

acknowledgement of the buildup of the balance in the OLIEE account[10]. According to the Company,

> "The build-up is the result of a deliberate increase in funding, which began in early 2020, intended to increase energy efficiency measures for low-income customer dwellings and to enable the OLIEE program to have broader reach to low-income residents that have not previously benefitted from the OLIEE program. This increased funding was developed with the OLIEE Advisory Committee and approved by the Commission in Advice No. 19-19, docketed as ADV 1056. Subsequently the COVID-19 pandemic severely impacted the delivery of OLIEE program benefits that rely on in person and in-home projects and measures. While OLIEE project spending has since bounced back from pre-pandemic levels, the collection of OLIEE funds at the increased rate has resulted in a build-up of the OLIEE account."[11]

Altogether, Staff finds the Company is actively pursuing ways to improve its low-income energy efficiency programs but encourages robust monitoring of the changes for unintended consequences and continued dialogue on how to effectively bundle OLIEE programs with the Residential Bill Discount Program in this and/or the UM 2211 process.

Q. Staff also mentioned the CEAG as a potential intersection with these topics; what is the relevancy here?

A. Staff appreciates the Company's sincere commitment to equity informed decision making through the CEAG. In Staff's review, the Company provided charter documents and general descriptions of how the CEAG provides input to the Company and used the Bill Discount Program design and outreach as an

[10] Docket No. ADV 1562, Advice No. 23-25 (https://edocs.puc.state.or.us/efdocs/HAU/adv1562hau325663054.pdf).
[11] Id.

exemplar. Staff's only flags regarding the CEAG at this time is uncertainty regarding:

1. The visibility of these conversations,
2. The level of accountability the Company provides to the CEAG based on their input, and
3. The Company's commitment to expanding the CEAG's influence to system planning and investment.

Q. Please explain.

A. Staff is not making any recommendations at this time but does wish to continue discussions with the Company in the appropriate venue about how to address or resolve the aforementioned concerns. For example, while Staff appreciates these conversations are happening and the input is being collected, there is still some uncertainty with how this is being recorded and to what extent it can be shared ahead of the Company's assertions that proposals were informed or endorsed by the CEAG.

Staff is also sensitive to how community engagement can easily sour if the format is extractive or lacks agreed upon feedback loops and accountability measures. This is not to say those have not been addressed in NWN's model, and Staff recognizes a meaningful compensation structure is in place. However, Staff still feels some additional visibility and potential sharing of space for a bit of diversity in the content brought before the CEAG may be worth exploring.

This is particularly relevant in the face of some big questions and uncertainty around the Company's future business model and evolving role in the Oregon energy system and decarbonization goals. Put plainly, the topic of stranded costs associated with customers leaving the gas system and concepts of a "just transition" amid calls for electrification have come up in multiple dockets over the last several years.

The CEAG has made valuable progress on issues of accessibility and procedural equity, the Company should work to expand its scope to inform major issues facing the users of NW Natural's system. Staff believes it is important to socialize the tradeoffs of different pathways for the future of NW Natural's system and make the priorities and other feedback available for use in planning and ratemaking dockets... Staff is interested in hearing how the Company plans to use CEAG input to tackle more practical issues that inform its Company's long-term business strategy.

Q. Does this cover Staff's energy justice review of the Residential Bill Discount Program, low-income energy efficiency programs, and CEAG?

A. Yes. However, as noted earlier, perspectives and positions may expand following additional review, process, and dialogue in this proceeding.

Q. Staff had also flagged the residential rate structure change to the basic charge as relevant to energy justice concerns, what can be said about that?

Docket No: UG 490

Staff/300
Scala/18

A. Staff wishes to use this testimony to highlight a particular concern regarding what Staff has found to be a significant and premature adjustment to the residential rate structure via the Company's basic charge proposal.

Q. Please explain.

A. The Company has proposed a revision to the basic charge that includes the following three changes:

- Increase the basic charge for residential single-family customer from $8 to $10.
- Implement a bifurcated basic charge that keeps the multi-family basic charge at $8.
- Create a new monthly charge of $16.25 for all new customers to the Company's system that would be added onto the Company's basic charge proposal.

This proposal was reviewed and discussed in length in Staff/1800. There, Staff notes that for the time being, it is supportive of the first two of the three changes. However, Staff opposes the new premise premium of $16.25 for several reasons also discussed in Staff/1800, the last of which how this proposal overlooks significant equity concerns that should be explored in further analysis. Specifically, the Company did not provide any visibility into the distribution of environmental justice communities comprising new premise customers versus existing customers.

While absent a more thorough exploration, one might assume that new premise customers are largely new homeowners, Staff's understanding is

that this cohort could just as easily include renters moving into newly constructed multi-family dwellings, some of which might be affordable housing units. To this end, it is very possible that this structural change exacerbates the disproportionate burdens faced by environmental justice communities. Specifically, Staff is referring to the interplay of environmental justice community households already having a reduced capacity to pay for a notably higher charge (i.e., more than three times the existing customer basic charge), with the possibility that these groups are overrepresented among new premise customers, leading to a cost shift at the expense of these groups.

Q. What was Staff referring to regarding the change being premature?

A. Staff notes that the Company referenced this change as one of the components to its "responsible growth strategy." Staff sees this effort to be ill-suited for a rate case proceeding that lacks the more diverse engagement framework and comprehensive planning approach of an IRP.

While Staff appreciates the Company's efforts to be a nimble and adaptive business amidst a changing energy landscape, Staff finds the "least regrets" approach in something as technical and granular to an overall business model as the residential basic charge structure to be to leave it as is. If the Company is able to clearly evidence that there are sufficient protections against exacerbating disproportionate burdens for environmental justice communities with this change, there may be merit to it at a future

point in time. However, until then, and in consideration of the significant dollar increase on its face, Staff does not support this change.

The last thing Staff would note regarding this particular topic is a concern that is broached in both Staff/1800 and Staff/900 regarding the Company's Line Extension Allowance (LEA) proposal. As Staff witnesses Mr. Shierman and Dr. Dlouhy explain, there is a level of ambiguity in the LEA changes that is not without consequences for customers. Specifically, the generous LEA, particularly when compared to relatively low volumetric gas prices, may not give customers full visibility into the uncertainty surrounding the future costs and risks of joining the gas system.[12] In this regard, the intersections of the LEA with the new premise premium adds a layer of complexity at best and deception at worst for new NW Natural customers.

While deferring to Dr. Dlouhy on the review and recommendations specific to the LEA, Staff believes that in the interest of socially just outcomes the Commission might look for least regrets actions to address the current state of uncertainty when considering the proposed residential rate design, given that:

1. Disparate impacts have not sufficiently been explored and mitigated; and
2. The proposed basic charge structure appears to offset the purported customer benefits of the LEA.

[12] Staff/900.

Q. Does Staff have additional comments regarding the residential rate design change?

A. Not at this time.

Q. Are there any other issues Staff wishes to raise on behalf of energy justice considerations?

A. Yes. The final issue Staff is prepared to raise at this time is a brief discussion on the overall impacts of this case on residential customer bills. Specifically, it is a known fact that environmental justice communities are disproportionately burdened by the energy system in general. This includes health disparities associated with pollution, proximity, and access to heating and cooling; as well as higher rates of energy burden, energy insecurity, energy poverty, and energy democracy.[13] What this means is that as certain components of the system change, such as costs recovered in rates, disproportionate burdens are worsened as the impacts of the changes are augmented for these communities.

Recall the discussion around energy burden and Table 2, displayed earlier in this testimony: as incomes draw nearer to zero, energy burden increases exponentially. Similarly, holding incomes constant, as rates increase, for households in the lowest rungs of the income distribution, energy burden increases exponentially. Noting that the magnitude of impact to residential customers in the Company's filing has already been assessed

[13] https://iejusa.org/section-1-defining-energy-justice/

by Staff as constituting rate shock for even the *average* non-energy burdened residential customer.

To this end, Staff is justifiably concerned about how the magnitude scales for environmental justice communities.[14] While the Residential Bill Discount Program is one tool available to address these higher burdens and impacts, Staff clarifies that this is not a comprehensive long-term affordability strategy, and the effects of Schedule 33 are limited to a customer's participation in the program.

In a review of the Company's most recently filed Bill Discount Quarterly Report[15] it appears that roughly six percent of NW Natural residential customers have enrolled in Schedule 33. Census estimates and poverty statistics generally show Oregon poverty levels between 12 to 20 percent with higher concentrations of persistent poverty in the Portland area.[16] Thus it is reasonable to infer that anywhere between 37,000 and 88,500 NW Natural customers are eligible for the Bill Discount Program but not enrolled, and thus expected to face even higher disproportionate energy burdens under the Company's proposal as filed.

Q. Has Staff proposed any changes to address this issue?

A. Staff witness, Eric Shierman has made recommendations to adjust the rate shock mitigation cap and ceiling tools in Staff/1800 (Rate Spread testimony)

---

14 Staff/1800.
15 RG 102.
16 https://data.census.gov/profile/Oregon?g=040XX00US41; https://www.governing.com/community/oregon-has-44-census-tracts-in-persistent-poverty.

as one means of tempering the effects of the Company's proposal on certain customer classes. That said, these are adjustments on behalf of customer classes as a whole or on average and do not necessarily fully mitigate the disparate effects faced by environmental justice communities.

As such, for the purposes of this testimony, Staff encourages the Company to explore additional ways to increase the Schedule 33 saturation rate, OLIEE offerings, and future evolutions to differential rate designs in UM 2211. Further, this testimony supports accompanying Staff positions that thoughtfully adjust revenue requirement items downward both on the merits of the analysis and in this instance, in recognition of broad affordability concerns impacting all customers.

Q. Does Staff have other energy justice concerns that relate to the overall impacts of this case?

A. Yes. Staff has heard stakeholders raise concerns regarding the disproportionate health and safety impacts that the natural gas system has on environmental justice communities. Staff seeks to highlight these concerns and encourages the Company to fully examine these issues as it explores the future of the gas system in planning and rate making conversations.

Docket No: UG 490

Staff/300
Scala/24

SUMMARY. STAFF RECOMMENDATIONS

Q. Please summarize your adjustments.

A. Staff has not made any specific recommendations that alter the Company's proposal which have not been discussed and summarized in other exhibits of Staff's Opening Testimony. That said, Staff has encouraged activities relative to promoting energy justice in this case and Company operations including:

- Continued and enhanced engagement of residential differential rate designs and programs, including discounts and energy efficiency/weatherization in UM 2211.
- Revisit the Schedule 335, Residential Bill Discount Program cost recovery for potential equity concerns.
- A discussion around the CEAG and the value of increased visibility and accountability.
- Continued consideration of how proposals disproportionately burden environmental justice communities, including the use of more granular customer segment analysis to inform strategies.

Q. Does this conclude your testimony?

A. Yes.

NAME: Michelle Scala

EMPLOYER: Public Utility Commission of Oregon

TITLE: Energy Justice Program Manager
Strategy and Integration Division

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: University of Hawaii, Manoa
Bachelor of Arts Economics

Bachelor of Arts Political Science
Concentration in Public Policy

EXPERIENCE: I have been employed by the Public Utility Commission of Oregon since July 2020 as a Senior Utility Analyst. I initially began work at the Commission in the then "Energy Rates, Finance and Audit Division" and transitioned to the Strategy and Integration Division upon its inception. In May of 2022, I was made Energy Justice Program Manager to the Utility Division where I lead energy equity work across utility rate, planning, and policy dockets. I have provided expert testimony as Commission Staff in general rate cases UE 394, UE 416, UE 426, UG 433, and UG 435, UG 461 and have consulted on others. I have over ten years of experience in policy analysis and program evaluation for state and local governments and received a graduate certificate in Public Administration in 2024. My work prior to the Commission included serving as a Senior Fiscal Analyst at the Oregon Department of Human Services and Economist at the Oregon Employment Department. Before coming to Oregon, I was employed at the Hawaii State Legislature as the Senior Budget and Policy Analyst to the Senate Committee on Ways and Means.

CASE: UG 490
WITNESS: MELISSA NOTTINGHAM

PUBLIC UTILITY COMMISSION OF OREGON

STAFF EXHIBIT 400

Opening Testimony
Public Comments

April 18, 2024

Docket No: UG 490 Staff/400
Nottingham/1

Please state your name, occupation, and business address.

A. My name is Melissa Nottingham. I am the Consumer Services and RSPF Manager. My business address is 201 High Street SE, Suite 100, Salem, Oregon 97301.

Q. Please describe your educational background and work experience.

A. My witness qualifications statement is found in Staff Exhibit 401

Q. What is the purpose of your testimony?

A. To provide the public comments submitted by consumers pertaining to UG 490 with a brief summary of issues and/or concerns identified, and if applicable, refer to the Staff testimony addressing the public comment.

Q. Please explain the reasoning behind the inclusion of public comments in Staff's testimonies.

A. Consistent with the Commission's Internal Operating Guidelines as addressed in Order 20-065 in Docket No. UM 2055, to provide more transparency about the public comments in contested cases, public comments received are now made part of the Staff's Opening Testimony.

Please see Staff Exhibit 402 for comments received to date in this general rate case. Staff will also publish supplemental opening testimony on May 7, 2024, with incremental comments received including those received at Commission Public Comment Hearings on April 16, 2024 (virtual).

Written comments received after preparation of Staff's Opening Testimony will be included in subsequent Staff testimony. However, Staff will not be able to testify regarding comments received after Staff prepares its final

round of UG 490 testimony.

Presenting comments at a Commission Informational Hearing or through the Commission's website does not make the commenter a “party” to the proceeding or subject the commenting person to cross examination. Any party that has intervened in the proceeding may respond to Staff's summary of the public comments or the comments themselves in evidentiary testimony.

1. Summary of Comments

Q. How are public comments received by Staff?

A. Comments may be submitted via an online form, an email, a letter, or a telephone call. All comments submitted and published to the Commission’s webpage and are available for review. Please see: UG 490 NW NATURAL REQUEST FOR A GENERAL RATE REVISION .

Q. Please summarize the public comments received to date in this rate case.

A. Northwest Natural’s request for general rate increase has received nine comments.[1] Issues raised by consumers included the following:

a. Affordability and impact of higher rates and the impact to communities with limited incomes.

b. Support for continued decarbonization efforts.

c. Concern about operational costs including wholesale gas market.

Q. Are the public concerns addressed in Staff’s testimony for UG 490?

A. Yes. Affordability of rates is included in Charles Lockwood’s testimony, Exhibit

[1] Staff/402, public comments.

1200, and operational costs including salaries is included in Stephanie Yamada's testimony, Exhibit 2000.

Q. Does this conclude your testimony?

A. Yes.

Name: Melissa Nottingham

Employer: Public Utility Commission of Oregon

Title: Consumer Services and Residential Service Protection Fund (RSPF) Manager

Address: 201 High Street SE, Suite 400
Salem, Oregon 97301

Education: Bachelor of Arts in English, Arizona State University

Experience:

My employment at the Public Utility Commission began on May 1, 2022. During my tenure, I manage a team of 14 employees overseeing consumer complaints, the Oregon Lifeline Program, and the Telecommunication Devices Access Program. Part of my role includes sponsoring and participating in dockets related to Oregon Administrative Rules Division 21 and other consumer protection by regulated utilities in Oregon. I have provided testimony for UM 1908 and UM 2203, and provided comments for AR 653, UM 2237, and ADV 1391.

Prior to my employment at the Public Utility Commission, I worked for PacifiCorp for 25 years. PacifiCorp is a multi-jurisdictional regulated electric utility. From 2010 until my departure in 2022, I was a Regulatory Manager. My responsibilities included ensuring regulatory compliance in six states including Oregon. I provided testimony in general rate cases in six states focusing on the company's Schedule 300 fees and any company tariff modifications. Other duties included: representing the company in formal customer complaints and small claims court, overseeing contracts for new service for loads more than 1 megawatt, sponsoring modifications to the company's rules, and participating in each state's administrative rule dockets.

	https://www.oregonlive.com/news/2021/02/amid-ongoing-pandemic-portlanders-will-pay-more-for-water-and-sewage.html PGE says ill-conceived trades cost the utility at least $104m; stock slides 8.3%: https://www.oregonlive.com/business/2020/08/pge-says-ill-conceived-trades-cost-the-utility-at-least-104-million-stock-slides-83.html
Jennifer Priest Portland	Thank you a million times to the PUC for standing up to the gas companies! https://www.opb.org/article/2024/03/15/oregon-natural-gas-companies-fail-approval-climate-action-plans/
Patel Neel Portland	Hello! My name is Neel Patel and I live in Portland, OR (97209). I write to express my concern about methane pollution from our utilities and discuss how the Oregon Public Utilities Commission can play a clean role in decarbonizing our grid. I first want to thank you for all the work you have done so far. I read on OPB that you are keeping the pressure on the 3 natural gas companies in Oregon to comply with our greenhouse gas emission reduction goals. I commend you three (Ms. Decker, MS Tawney, and now Mr. Perkins) on this climate focused action. These companies will try everything they can do to keep using methane when a rapid reduction in methane is one of the best things we can do right now to fight the climate crisis. From your actions, it is clear that you understand the issues with methane- the 80x global warming effect compared to carbon dioxide, the abundance of leaks in the supply chain, and the public health and safety risks, including explosions, degraded indoor air quality, and worsening respiratory conditions. As a physician in our community (I am a radiologist at OHSU), I am particularly concerned about how climate change and fossil fuel pollution interact to worsen human health and wellbeing. We are already feeling the climate change related health effects today: increased extreme weather, more heat related illnesses, asthma and respiratory diseases from particular pollution, and tropical diseases expanding from the tropics (like Dengue in Puerto Rico and Florida). Methane gas usage is particularly harmful. A peer reviewed study (PMID: 36612391) found that gas stove use indoors is attributable to 12.7% of childhood asthma. These effects will only get worse unless we can decarbonize quickly and effectively. Natural gas companies and other fossil fuel companies will continue to spread misinformation to downplay the climate and health risks to the detriment of regular Oregonians and to the benefit of their bottom line. However public utilities like Oregon's should keep the pressure up to force them to make changes to reduce emissions that will benefit all of us, including the people that work at those companies! I urge you to take strong action in regulating methane emissions from utilities, like

Docket No. UG 490

Staff/402
Nottingham/4

	imposing stricter leak detection standards, efficiency requirements for aging gas infrastructure, or rate-setting and rules that help incentivize cleaner sources of electricity. You can also impose regulations that encourage the switch from gas heating and cooking to electrification. Thank you for your hard work so far and keep up the fight to decarbonize our grid. -Neel Patel, MD
Graham Williams	Strongly oppose! How can we live in this state with your tax tax tax and now increase in electric & water & gas!??? We are all fed up! If we leave the state guess what - you get NO revenue
Kate Fuller	No increase! We are in our 70s, on a fixed income and this would raise our bill by $40 each month. NW turned off the gas while my husband was in cancer treatment. Left a card but never bothered to knock on the door. I prefer a 20% DECREASE please.

CASE: UG 490
WITNESS: David Abraham

PUBLIC UTILITY COMMISSION
OF
OREGON

STAFF EXHIBIT 500

Opening Testimony
Gas Storage Operating Expense, Gas Storage in Rate Base, and Major Storage Projects.

April 18, 2024

Docket No: UG 490

Staff/500
Abraham/2

Q. Please state your name, occupation, and business address.

A. My name is David Abraham. I am a Senior Economist employed in the Rates, Safety and Utility Performance Program of the Public Utility Commission of Oregon (OPUC or Commission). My business address is 201 High Street SE, Suite 100, Salem, Oregon 97301.

Q. Please describe your educational background and work experience.

A. My witness qualifications statement is found in Exhibit Staff/501.

Q. What is the purpose of this testimony?

A. My testimony presents Staff's analysis and recommendations regarding the rate treatment of gas storage operating expense, gas storage in rate base, and major storage projects.

Q. Did you prepare any other exhibits for this docket?

A. Yes. NWN's non-confidential responses to select data requests can be found in Exhibit Staff/502.

Q. How is your testimony organized?

A. My testimony is organized as follows:

Issue 1. Gas Storage Operating Expense 3
Issue 2. Gas Storage in Rate Base 9
Issue 3. New Plant – Major Storage Projects 13

Docket No: UG 490

Staff/500
Abraham/3

ISSUE 1. GAS STORAGE OPERATING EXPENSE

Q. What is NWN's gas storage operating expense?

A. NWN's gas storage operating expenses are related to the Company's underground and Liquid Natural Gas (LNG) storage facilities. The storage facilities allow NWN to store lower summer-priced natural gas to be used in the winter during high demand or peak day events. Like transportation, unneeded gas storage capacity can be optimized by selling into a future higher priced market. NWN records gas storage operating expenses in Federal Energy Regulatory Commission (FERC) Accounts 816 through 847, as detailed in the Company's filing.[1]

Q. Please summarize NW Natural's proposal related to gas storage operating expense.

A. The Company is proposing a non-labor Test Year gas storage operating expense of $6,210,300, on a total system basis, or $5,529,651 on an Oregon allocated basis.[2] NWN's gas storage forecast was developed using the Base Year spend multiplied by a Consumer Price Index (CPI) factor of 3.6 percent in 2024 and 2.9 percent for the 10 months in 2025. The Company also identified items that were adjusted according to their specific estimated increase or decrease.[3]

Q. Did Staff analyze if the cost of gas is included in base rates?

[1] NW Natural/1401, Davilla/1.
[2] Staff/502, NWN response to Staff DR 193, Attachment 1, Second Amended.
[3] NWN/1400, Davilla/8.

A. The annual Purchased Gas Adjustment (PGA) filing revises rates to include the forecasted cost of gas for the upcoming year through a mechanism outside of base rates. As a result, cost of purchased gas is addressed in the annual PGA rather than in a General Rate Case (GRC).[4]

Q. Did Staff analyze the Company's use of CPI factors to develop the Test Year gas storage expense?

A. Yes. NWN obtained the Western CPI factors used to develop the Test Year from the Oregon Office of Economic Analysis (OEA) as reported in the September 2023 Oregon Economic and Revenue Forecast. Staff recommends using the all-urban CPI. In addition, the OEA has since issued an updated forecast in March of 2024 and the new all-urban CPI factors are 2.7 percent for 2024 and 2.0 percent for 2025.

Q. Has Staff determined what the impact would be to the Company's Test Year gas storage expense if the updated CPI factors were used?

A. Yes. Staff has calculated the Oregon allocated non-labor gas storage expense would be reduced by $79,816 by using the updated all-urban CPI factors released by the OEA in March of 2024.

Q. What else did Staff consider regarding NWN's gas storage operating expense?

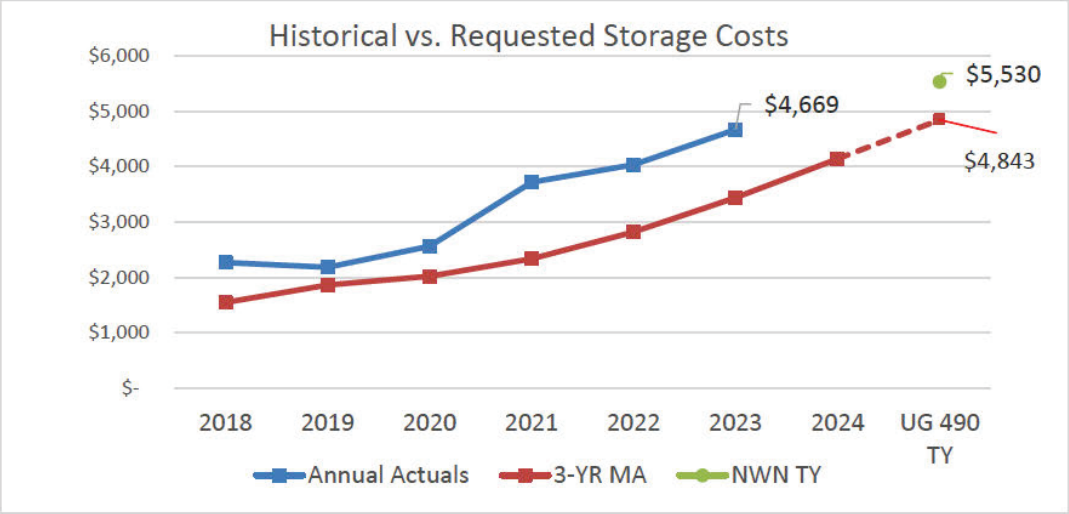
[4] NWN/1700, Wyman/21.

Docket No: UG 490

Staff/500
Abraham/5

A. Staff analyzed historical data provided by the Company in response to Data Request 193 and in the Company's supporting work papers.[5] Staff calculated a three-year moving average of Oregon allocated gas storage costs compared to the Test Year gas storage expense requested by the Company. The proposed Test Year dollar value of non-labor gas storage costs included in the filing and the Company's historic gas storage costs are summarized in Figure 1.

Figure 1 – Value of Historic vs Requested Gas Storage Costs ($000)



Q. Describe Staff's analysis regarding Test Year gas storage costs.

A. Staff's practice is to compare the previous three years' expense and longer-term trends to the requested Test Year amount, relying more heavily on recent trends unless there is a reason not to do so.[6] Staff extended the 2024 three-year moving average trend-line to compare to the Test Year request proposed

[5] NWN/Exhibit/1400/Davilla/Workpaper. See also NWN's response to Staff DR 193, Attachment 1, Second Amended.
[6] See UE 388, Staff/300/3.

by the Company by obtaining the year-over-year moving average growth in gas storage expense from 2023 to 2024 and then adding that increase to the 2024 moving average.

Q. What does Staff's comparison of the Company's Test Year gas storage costs to historical averages show?

A. The extended moving average trend-line, displayed in Figure 1, indicates the Company's Test Year amount would have to be reduced by $686,504 to align with the moving average trend.

Q. Did Staff identify any expenses related to the expansion of gas storage capacity in the Company's Test Year request that would explain why NW Natural's proposed Test Year expense exceeds what would be expected based on historical spend?

A. Staff did not identify any projects at the Mist facility, or any of the Company's LNG storage terminals, that provided for the expansion of gas storage capacity. However, the Company will be initiating rig-based casing inspections in 2024 to satisfy the conditions of 49 CFR 192.12(d)(3).[7] The Well Casing Integrity Inspection Program (FERC 832) is required to address safety issues related to downhole facilities, including wells and casings at underground natural gas storage facilities. The Company estimates the Test Year expense for the casing inspection program to be $625,000, on a total system basis, and $556,000 on an Oregon-allocated basis.

[7] NWN/1400, Davilla/10.

Docket No: UG 490

Staff/500
Abraham/7

Q. Describe Staff's analysis regarding rig-based casing inspection expenses.

A. NWN's rig based integrity inspection program requires additional operating costs that were not included in the historical moving average but will be incurred during the Test Year. Applying the extended three-year moving average alone would under-estimate the expected Test Year gas storage expense.

Q. Does Staff recommend including the rig-based casing inspection expenses in the Test Year adjustment?

A. Staff proposes that the rig-based casing inspection expense should be included as an off-set to the trend adjustment.

Q. Please summarize Staff's proposed adjustment to NWN's Test Year gas storage operating expense.

A. Staff proposes an Oregon allocated Test Year adjustment that will reduce NWN's requested gas storage operating expense by $210,320. As discussed above, the Company's Test Year expense is higher than what appears reasonable based on a comparison to historical amounts. The Company has explained why the forecasted costs are increasing, but its explanation does not support the full amount of the increase. Table 1 displays a summary of Staff's recommended adjustments to NWN's Oregon-allocated gas storage expense.

Docket No: UG 490

Staff/500
Abraham/8

TABLE 1. EFFECT OF STAFFS ADJUSTMENTS

Staff's Recommended Adjustments	Oregon Allocation
Staff Reduction due to Updated CPI Factors	$ (79,816)
Staff Reduction - Alignment to Historical Trend	$ (686,504)
Off set to Trend Due to Well Inspection Program	$ 556,000
Staff's Total Adjustment to NWN's Test Year Request	**$ (210,320)**

Staff's recommendation would reduce NWN's Oregon-allocated Test Year gas storage operating expense from $5,529,651 to $5,319,331.

Docket No: UG 490

Staff/500
Abraham/9

ISSUE 2. GAS STORAGE IN RATE BASE

Q. Please describe the gas storage costs at issue.

A. Storage gas consists of two components, "cushion gas" and "working gas inventory." "Cushion gas" is permanently retained in storage to maintain operational pressure and prevent water deterioration in an underground storage reservoir. "Working gas inventory" is the gas that flows in and out of the storage reservoir, or Liquid Natural Gas (LNG) tank, to serve customer loads.

Q. Please summarize NW Natural's proposed Test Year gas storage costs included in rate base.

A. NW Natural included a total of $43,888,538 for Oregon allocated gas storage in the Test Year rate base, of which $20,217,645 is cushion gas and $23,670,893 is working gas.[8] NW Natural's Oregon allocated working gas amount for the twelve-month Base Year period ending September 30, 2023, is $63,623,317. NWN's Test Year gas storage expense represents a 45.5 percent decrease compared to the Base Year.

Q. Please summarize the Commission's historical treatment of gas storage in rate base.

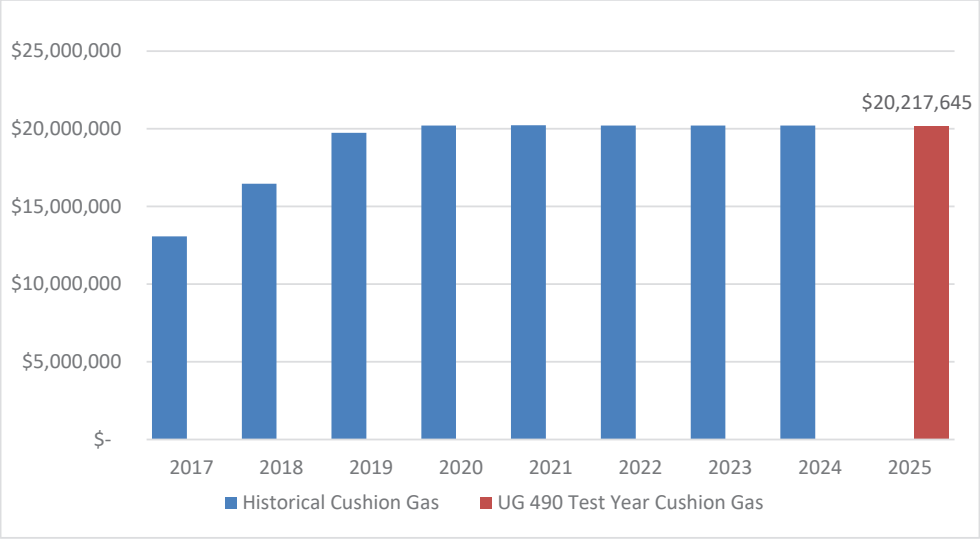
[8] NW Natural workpaper "UG 490 - Exhibit 1713 – WP2 – Other Rate Base Items", tab "Cushion Gas", rows 149-156.

A. All three regulated gas utilities serving in Oregon currently include these costs in rate base as a result of stipulations reached by the Parties and adopted by the Commission.[9]

Q. Please explain how Staff analyzed cushion gas costs in rate base.

A. Staff expects cushion gas volumes to remain constant unless there is a major expansion of storage. Typically, the value of cushion gas value is based on its cost when injected into the facility and should change very little in the absence of expansions. The proposed dollar value of cushion gas included in the filing, and the historic value of the Company's cushion gas is summarized in Figure 2.

Figure 1 - $ Value of Historic vs Requested Cushion Gas



Q. Does Staff propose any adjustments to cushion gas inventory included in Rate Base?

[9] See e.g., *In* the *Matter of Northwest Natural,* Order No. 13-349 at 5 (Commission adopting stipulation including NW Natural Gas Company's working gas inventory in rate base).

A. No. Staff does not propose any adjustment to cushion gas inventory in rate base at this time and is satisfied that the amount included in the Test Year filing is appropriate.

Q. Please explain how Staff analyzed working gas costs in rate base.

A. Staff analyzed historic data provided by the Company's supporting work papers.[10] The Company used the model "Sendout" to predict its gas prices and storage volumes by month for each storage asset. The requested $23,670,893 in working gas represents Oregon's share of the 13-month average of monthly averages (AMA) of the predicted inventory value in the Test Year.[11] Staff calculated the dollar amount for the working gas inventory in rate base using the 13-month AMA historical balances and a three-year calendar annual moving average. The proposed dollar value of working gas included in the filing, and the historic value of the Company's working gas is summarized in Figure 3.

Q. What are Staff's findings based on its analysis of working gas costs in rate base?

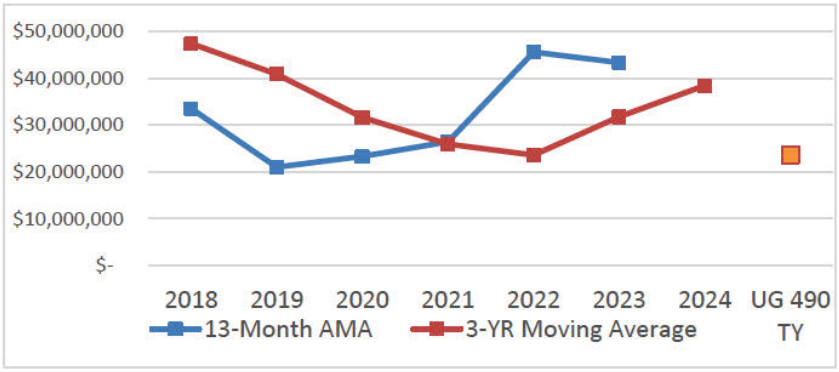
A. Staff found that the Company's requested $23.7 million for Oregon allocated working gas is below the most recent calendar year 13-month AMA and the three-year moving average. NW Natural's working gas request represents a decline of 45.5 percent compared to the 2023 base case.

[10] NW Natural workpaper "UG 490 - Exhibit 1713 – WP2 – Other Rate Base Items", tab "Cushion Gas", rows 146-156.
[11] Ibid.

Docket No: UG 490

Staff/500
Abraham/12

Figure 2 - $ Value of Historic vs Requested Working Gas[12]



Q. Please summarize Staff's proposed adjustment to Gas Storage in Rate Base.

A. Staff proposes no adjustment to either working gas or cushion gas at this time and recommends allowing the total amount of $43,888,538 for Oregon allocated gas inventory in the Test Year, as requested by NW Natural.

[12] Values presented on an Oregon basis.

Docket No: UG 490

Staff/500
Abraham/13

ISSUE 3. NEW PLANT – MAJOR STORAGE PROJECTS

Q. Please summarize Staff's analysis of NWN's major gas storage projects.

A. NWN's gas storage facilities include Portland LNG, Newport LNG, and Mist. Although this rate case includes maintenance and inspection projects related to all three storage facilities, Staff did not identify any major gas storage additions to the Company's overall storage capacity.

Q. Please summarize Staff's analysis of the Mist storage facility projects.

A. Staff identified several projects related to the Mist facility, which is an underground storage facility located in Mist, Oregon. In response to a Turbine Compressor Study completed in December 2022, the Company implemented the Mist GC500 Turbine Compressor Cold Spare Project and the Mist GC600 Turbine Compressor Cold Spare Project. The Company expects to complete both projects by October 2024. The cost estimate for both projects is approximately $4.8 million on an Oregon allocated basis.[13] The Mist Electrical Upgrades Project Phase 2 will replace end-of-life equipment and will cost approximately $2.0 million. The Mist Methanol Injection Project at I/W Wells will replace existing methanol tanks and injection systems and will cost approximately $4.1 million. Finally, the Mist Instrument and Controls Project will cost approximately $2.2 million.[14]

[13] NWN/500, Kizer/24.
[14] NWN/500, Kizer/30.

Q. Did Staff identify any other gas storage projects included in the filing?

A. Yes. The Portland LNG Plant will undergo a Valve and Controls Replacement Project, estimated to cost approximately $3.8 million, a Boil-Off Compressor Project estimated to cost approximately $4.2 million, and a Pretreatment Improvement Project estimated to cost approximately $2.3 million.[15] The Newport Plant includes a T-1 Tank Improvement Project, which implements the recommendations made in the Newport LNG Tank Study and includes a cost estimate of approximately $3.2 million, on an Oregon-allocated basis.[16]

Q. Does Staff recommend any adjustments to NWN's new plant additions for gas storage projects?

A. No. Staff did not identify any new plant additions that expanded storage capacity in this filing and has no proposed adjustments for gas storage projects included in this rate case at this time.

Q. Does this conclude your testimony?

A. Yes.

[15] NWN/500, Kizer/34.
[16] NWN/500, Kizer/41.

NAME: David Abraham

EMPLOYER: Public Utility Commission of Oregon

TITLE: Energy Costs Section Economist
Rates, Safety and Utility Performance Program

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: Master of Science, Economics
University of Texas,
El Paso, TX

Bachelor of Arts, Business Administration
University of Texas,
El Paso, TX

EXPERIENCE: I have been employed by the Oregon Public Utility Commission as an economist in the Energy Costs Section since November 2023. Prior to working for the Commission, I worked for an Investor-Owned Electric Utility in Texas beginning in 2009. I started with the utility as a real-time energy trader and transitioned into the Regulatory and Resource Planning Department in 2019. Within the planning department, I served as lead-forecaster and was responsible for producing the company's long-term energy forecast. I also prepared weather normalization schedules for regulatory filings and financial reconciliations. In 2019, I attended an electric utility ratemaking course offered through New Mexico State University and the Center for Public Utilities.

Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 193
Regarding gas storage expenses:

a. Please indicate whether gas storage expenses are included in the test year. Please provide a separate response for each of the following gas storage expense types:
    i. Underground gas storage,
    ii. LNG gas storage, and
    iii. Other gas storage.
b. If yes to (a), please provide a narrative explanation of how gas storage expenses are forecasted for the Test Year, providing copies of all underlying data used in the forecast in electronic workbook format, and providing references to where the forecast appears in the Company's workpapers. Please provide a separate response for each of the gas storage expense types listed under(a).
c. If yes to (a), please provide, in a single electronic spreadsheet format, for each calendar year from 2011 through 2022, and monthly through 2023, the Company's gas storage expenses. Please provide a separate response for each of the gas storage expense types listed under section (a), as well as a breakdown of the expenses into:
    i. Supervision and engineering,
    ii. Fuel,
    iii. Other equipment, and
    iv. Other expenses.

In response to (c), please separately identify any related labor expense and provide results separately for total company and for Oregon.
Please provide only those categories included in the Company's filing in this response (excluding categories which flow through the PGA).

Amended Response:

Please see "UG 490 OPUC DR 193 Attachment 1 Second Amended" data that only includes non-payroll.

Opening Testimony
Plant in Service

April 18, 2024

Docket No: UG 490

Staff/600
Anderson/1

Q. Please state your name, occupation, and business address.

A. My name is Laurel Anderson. I am a Senior Telecommunications Analyst employed in the Rates, Safety and Utility Performance Program of the Public Utility Commission of Oregon (OPUC). My business address is 201 High Street SE, Suite 100, Salem, Oregon 97301.

Q. Please describe your educational background and work experience.

A. My witness qualifications statement is found in Exhibit Staff/601.

Q. What is the purpose of your testimony?

A. My testimony addresses the Company's proposed additions to rate base for new plant.

Q. Did you prepare any exhibits for this docket?

A. No.

Q. How is your testimony organized?

A. My testimony is organized as follows:

Issue 1: Utility Plant in Service 2
Issue 3: Test Year Rate Base/Discrete vs. Non-Discrete Investments 6
Issue 4: New Plant Major Distribution Projects 9
Issue 5: New Plant – Resource Centers 14
Issue 6: Attestations and Proposed Project Adjustments 18

Docket No: UG 490

Staff/600
Anderson/2

ISSUE 1: UTILITY PLANT IN SERVICE

Q. Please define how NW Natural (NWN or Company) calculated Utility Plant in Service.

A. NWN starts with actual plant account balances as of September 30, 2023. It then forecasts additions, retirements, and transfers for all FERC accounts. As future plant balances are then developed, depreciation expense associated with each asset class can be calculated. Consistent with mass-asset accounting, both the gross plant and accumulated depreciation amounts are lowered to reflect forecasted asset retirements.

Q. Please summarize the amount and timing of the company's utility Plant in Service as proposed in the initial filing.

A. The Company is proposing utility plant in service of $4.121 billion dollars and accumulated depreciation of $1.639 billion, yielding a net utility plant of $2.482 billion[1] as of October 31, 2025, the end of the test year.

Q. Explain Staff's findings regarding how the Company calculated the amount for its Plant in Service.

A. Staff review of the underlying work paper indicates this amount is calculated using plant forecasts of plant in the November 1, 2024 to October 31, 2025, Test Year.[2] Staff notes that the Company's work paper detailing the increase in rate base is confidential in part.

1 NW Natural/1713, Walker/1.
2 NW Natural/1700, Walker/28.

Q. Please discuss the portion of rate base projections deemed to be confidential.

A. The Company states that "[a]ll data past September 30, 2023, or contained therein" is confidential. As stated in the UG 388 case, "All forward looking monthly data that has not been disclosed to the public has been deemed confidential."[3]

Q. Please discuss Staff's ongoing objection to a portion of rate base projections being designated as confidential.

A. In Staff's view there is a public policy issue here, as the Commission seeks to have as much transparency as possible in its activities.

Q. Please discuss the Company's methodology for developing utility plant estimates.

A. According to the Company's filing, the overall methodology can be summarized as follows:

- **Intangible – Software** (FERC Accts. 303.1 to 303.7) are allocated between Oregon and Washington on the basis of "all customers" allocation factor.[4]
- **Intangible – Other** (FERC Accts. 301 and 302) are specific to Oregon and Washington with no allocation between states.
- **Production** (FERC Accts. 304.1 to 319) are specific to Oregon and directly assigned.

[3] UG 388 Staff/200, Fox/2.
[4] NW Natural/1700, Walker/41.

- **Transmission** (FERC Accts. 365.1 to 367 and Acct. 369) are state situs and therefore are specific to Oregon.
- **Distribution** (FERC Accts. 374.1 to 387.3) are specific to Oregon and Washington with no allocation between states.
- **General** (FERC Accts. 390.1 to 398.5) are allocated using a 3-Factor & Direct method.
- **Storage and Storage Transmission** (FERC Accts. 350.1 to 363.42, and Accts. 367.21 to 367.26) are allocated based on Oregon's share of Firm Delivered Volumes.[5]
- **Land & Structures** (FERC Accts. 389 and 390) are allocated using a more detailed methodology further discussed below.
- **CNG/LNG Refueling Facilities** (FERC Accts. 363.5 and 363.6) are allocated using a 3-Factor method.

Q. Does Staff agree with the Company's calculation and methodology regarding its Plant in Service?

A. Yes. Staff agrees with the Company's methodology, which is consistent with prior rate cases.

Q. Does Staff propose any adjustments?

[5] The allocation methodology also includes a specific adjustment to allocate $33 million of the total South Mist Pipeline Extension to Oregon as agreed in a prior rate case. See the Company's Direct Testimony in UG 152 (UG 152/NWN/400 Stinson at pages 20 – 22) and NWN Advice No. 04-11A.

A. Yes, Staff proposes to remove plant additions that come on-line subsequent to the rate effective date. Staff discusses this in more detail below, along with the proposed amounts to be removed.

Docket No: UG 490

Staff/600
Anderson/6

ISSUE 2: TEST YEAR RATE BASE
DISCRETE VS. NON-DISCRETE INVESTMENTS

Q. Please define the difference between "discrete" and "non-discrete" expenditures.

A. Discrete investments are investments the Company has proposed and planned to implement to fulfill a specific operational aim, or to address a specific operational issue. Discrete projects tend to fall into subcategories of System Betterments, System Reinforcement Projects, Information Technology, and Land and Structures. Costs of discrete projects can vary widely year over year.

The second category can be thought of as "non-discrete capital expenditures," in which the Company generally does not exercise much discretion. These investments include Public Works, Relocates, Damages, Transportation and Equipment, Tools, Technical Refresh, Leakage, Customer Growth, Transmission Integrity Management Program ("TIMP"), and Distribution Integrity Management Program ("DIMP")

Q. Please discuss the discrete and non-discrete projects the Company plans to add to the rate base, and seek recovery in this case.

A. The Company seeks to add to rate base all capital expenditures completed since the Company's last rate case, UG 435, that will be used and useful as of the rate effective date of this case – November 1, 2024. NW Natural also

seeks to add all capital expenditures, both discrete and non-discrete that will be completed during the Test Year.[6]

Q. Please discuss Oregon's "used and useful" standard.

A. ORS 757.355 specifies that before costs of utility plant used to serve customers can be included in utility rates, the plant must be in service. Accordingly, property must be in service prior to the effective date of the rates.[7,8] The law applies to all utility plant including plant placed into service before the rate effective date and prior additions to rate base that are no longer used in providing utility service to customers.

Q. Does the Company's filing include discrete investments that will go into service after the rate effective date?

A. Yes. The Company included the North Coast Feeder Uprate project – Section B, which is expected to go into service in December 2025, after the rate effective date of November 1, 2024. As such the capital costs associated with this project should be removed from the revenue requirement.

Q. Does the Company's filing include non-discrete investments that will go into service after the rate effective date?

---

6 NW Natural/1400, Davilla/22.

7 ORS 757.355 prohibits the inclusion of property not presently used for providing utility service to the customer.

8 *In the Matter of PacifiCorp, dba Pacific Power, Request for a General Rate Revision*, UE 210, Order No. 10-022, p. 14 (January 26, 2010) ("ORS 757.355 prohibits a public utility from collecting in customer rates the costs of any property not presently used for providing utility service to those customers. . . .Given this evidence, and despite the parties' contentions about specific rate base adjustments, it is clear that the Stipulation will allow Pacific Power to collect in rates only the costs of property presently providing service to customers in conformance with ORS 757.355. We therefore deny ICNU's objection on this point.").

A. Yes. As noted above, the Company includes all capital investment in the Test Year, which is the twelve months following the rate effective date. Staff recommends the Commission include the non-discrete investment in retail rates. An incremental portion of the investment will be on-line each month, so monthly customer rates would not include costs of plant not in service.

Docket No: UG 490

Staff/600
Anderson/9

ISSUE 4: NEW PLANT MAJOR DISTRIBUTION PROJECTS

Q. Which major distribution projects removed from Docket No. UG 435 have been completed since the Company's 2022 rate case?

A. In its last rate case, the Company agreed to remove the E04 - 6 and 8 inch ILI Conversion Project, the Natural Forces Projects, the Newport Switchgear Replacement Project, the TBD1845 Fire System Upgrade Project (subsequently renamed the Mist Fire System Upgrade Project), and the Mist GC 500 Human-Machine Interface ("HMI") and Controls Project because they were not scheduled to be placed in service by October 31, 2022.[9]

Q. Please provide an update on the status of these projects.

A. The Company completed and placed in service the E04 – 6- and 8-inch ILI Conversion Project in December 2023, the Mist Fire System Upgrade Project in December 2023, the Newport Switchgear Replacement Project in July 2023, and the Mist GC 500 HMI and Controls Upgrade Project in May 2023. These projects are included in plant in the base year ended October 31, 2023.

Q. Please identify the significant distribution system projects included in the current rate case.

A. The Company is requesting recovery for the following significant distribution system projects:

- North Coast Feeder Project;[10]

[9] NW Natural/500, Kizer/2.
[10] NW Natural/500, Kizer/5-8.

- Tualatin-Sherwood Road Grading Project (the actual costs exceeding those already being recovered in rates);[11]
- P30 Willis Creek HDD Install Project;[12] and
- SE Gate Station Rebuild Project.[13]

Q. Please describe the North Coast Feeder Project

A. In 2018, the Company identified a potential pressure drop in the Northwest area of its service territory in violation of the Company's system reinforcement standards. To address this and other pressure drops the Company presented the North Coast Feeder Uprate Project for acknowledgement in its 2018 Integrated Resource Plan ("IRP") Update 3 filed in docket LC 71 on March 1, 2021. The Company has collected data revealing significant pressure drop violations which pose an unacceptable risk to safety and reliability.

Modeling indicated that, if left unmitigated, pressure drops could potentially reach 0 pounds per square inch gauge ("psig"). To mitigate observed and potential drops in pressure the Company proposed the North Coast Feeder Uprate Project: (1) uprating 6.6 miles of high pressure gas main on one section of its system between the Walluski district regulator and Rodney Acres Road from a maximum allowable operating pressure ("MAOP") of 175 psig to a MAOP of 575 psig ("Section A"); and then uprating another 22.2 miles of high pressure gas main on another section of its system from

[11] NW Natural/500, Kizer/8-11.
[12] NW Natural/500, Kizer/11-12.
[13] NW Natural/500, Kizer/12-13.

Warrenton to Cannon Beach from MAOP of 175 psig to a MAOP of 390 psig ("Section B").

Q. What is the timing and estimated cost to complete the North Coast Feeder Project?

A. The North Coast Feeder Uprate Project Section A is expected to be placed in Service in September 2024 at an expected cost of $8.2 million. Section B is expected to be completed in December 2025 at a cost of $6.4 million.[14]

Q. Please describe the Tualatin-Sherwood Road Grading Project.

A. The Tualatin-Sherwood Road Grading Project relocated approximately 6,400 feet of six-inch high-pressure main, approximately 11,000 feet of 4-inch main, three district regulators and two telemetry facilities on Tualatin-Sherwood Road.

Q. Please describe the additional cost recovery the Company is requesting for the Tualatin-Sherwood Road Grading Project.

A. The Tualatin-Sherwood Road Grading Project was included in the Company's last rate case (UG 435), the Commission-authorized revenue requirement in that case included a forecasted amount of $2.6 million and the actual cost stated in the attestation was $7.0 million. Only $2.6 million was included in the rate base in UG 435. The actual final cost is approximately $9.1 million.[15]

Q. Please explain why final cost for the Tualatin-Sherwood Road Grading Project increased from $7 million to $9.1 million.

[14] NW Natural/500, Kizer/8.
[15] NW Natural/500, Kizer/10.

A. According to the Company, the final impact to NW Natural facilities and the scope of relocation was not known during the processing of UG 435. Material changes to Washington County's roadway design and schedule beyond the Company's control drove increased construction costs for this project. Due to conflict with other utilities, the County did not permit NW Natural to install mains in the public utility easement. The design change required the new mains to be located within the existing roadway resulting in significantly higher costs.[16]

Q. What is the Company requesting for the Tualatin-Sherwood Road Grading Project in the current rate base?

A. The Company is requesting the recovery of $6.5 million, which is the difference between the initial amount estimated and the total actual costs incurred by the Company to complete the Tualatin-Sherwood Road Grading Project and place it in service.[17]

Q. Please describe the P30 Willis Creek HDD Install Project.

A. The P30 Willis Creek HDD Install Project entails relocating and lowering the P30 transmission pipeline via an HDD installation to mitigate the risk of rupture because of a potential landslide in the Willis Creek area. The Company submitted this project to bid in August 2023. Based on feedback from contractors the proposed solution was not constructable. Based on this

[16] NW Natural/500, Kizer/10.
[17] NW Natural/500, Kizer/11.

feedback, the project is being redesigned with a scheduled construction timeframe of Summer 2024.

Q. What is the Company seeking to recover for the P30 Willis Creek Project?

A. The estimated total cost to complete the P3 Willis Creek HDD Install Project is $3.5 million.[18]

Q. Please describe the SE Gate Station Rebuild Project

A. The SE Gate Station Rebuild Project involves replacing piping, valves, the line heater and station regulation, updating telemetry and controls, and installing a check meter and coalescing filter to improve the gate stations operation, safety, efficiency, and compliance.

Q. What is the timing and estimated cost to complete the SE Gate Station Rebuild Project?

A. The SE Gate Station Rebuild Project is expected to be placed in Service in October 2024 at an estimated cost of $2.3 million.[19]

[18] NW Natural/500, Kizer/12.
[19] NW Natural/500, Kizer/13.

Docket No: UG 490 Staff/600
Anderson/14

ISSUE 5: NEW PLANT – RESOURCE CENTERS

Q. Please list the Resource Center projects included in this rate case.

A. This case includes the following projects:

- Central Resource Center Phase 2 (Central RC);
- Sunset Resource Center (Sunset RC);
- Miller Station Tenant Improvements (Miller Station);
- Sherwood Data Center; and
- Security upgrades.

Q. Please describe the Central Resource Center Phase 2 project.

A. NW Natural initiated planning for the Central RC in September 2017 and is completing construction in phases. In Phase 1, the Company completed site work and constructed outbuildings. Phase 2 construction began in February 2023 and includes a one-story office building with an attached warehouse. Upon completion of Phase 2, the Company plans to use this property to house workspace for emergency response crews. The Central RC will also contain storage for equipment, parts, and materials and will provide parking for Company vehicles.[20]

Q. Why is the Central RC Phase 2 Project necessary?

A. Phase 2 is necessary to better serve customers, improve facility safety for employees, and meet the Company's increasing emergency response needs. The Central RC will enable the Company to improve response times for

[20] NW Natural/600, Pipes/7.

emergencies in the central business district and in the central east side of Portland.[21]

Q. Has Phase 2 been placed in service and what is the estimated cost?

A. The Company expected Phase 2 in Service in December 2023 at an estimated cost of $9.2 million. The Central RC is allocated 100 percent to Oregon.

Q. Please summarize the upgrades NW Natural is making to the Sunset RC.

A. The Company is making seismic upgrades to the Sunset RC to address resiliency of critical equipment and known seismic vulnerabilities. The Company is also installing a new decanter system and truck scale to enable more efficient operations and ensure compliance with applicable requirements.

Q. When will the upgrades to the Sunset RC begin, and when will they be placed in service and what is the estimated cost?

A. Work on the Sunset RC upgrades is scheduled to begin in April 2024, and expected to be placed in service in October 2024. The Company estimates the cost to $4.1 million for all of the upgrades. The Sunset RC is allocated 100 percent to Oregon. Staff recommends a NWN officer attestation be required that the plant is in service prior to the rate effective date. Otherwise the plant should be removed from the rate base used to calculate revenue requirements.

Q. Please summarize the Miller Station Tenant Improvements.

[21] NW Natural/600, Pipes/7.

A. Miller Station is located at the Mist Facility in Mist, Oregon. The Company is expanding the existing office space into the warehouse to accommodate more employees and is making structural improvements to address seismic deficiencies.[22]

Q. When will the Miller Station Tenant Improvement Project be placed in service and what is the estimated cost of construction?

A. Construction of the improvements began in May 2023 and finished in mid-November of 2023. The company estimates the cost at $3.2 million or $2.8 million on an Oregon-allocated basis.

Q. Please summarize the upgrades the Company is making to the Sherwood Data Center.

A. To make the Sherwood Data Center more reliable and less vulnerable to failure, the Company is upgrading the electrical system, the HVAC system, and the fire alarm system, and adding a remote monitoring system and seismic upgrades. The Sherwood Data Center hosts 98 percent of the Company's applications, including critical business systems used for all building and asset management. It also houses the servers that receive and compile 90 percent of the data from the Company's Supervisory Control and Data Acquisition ("SCADA") system, which is used to monitor the gas distribution system.

Q. Why does the Sherwood Data Center need to be upgraded?

[22] NW Natural/600, Pipes/18.

A. An outage at the Sherwood Data Center would cause customer service issues and interrupt many aspects of the Company's business. The biggest risk is the potential for the Gas Control department to lose visibility to the SCADA system.

Q. When does the Company expect the upgrades to the Sherwood Data Center to be placed in service, and what is the estimated cost to complete?

A. The expected in-service date for the electrical, mechanical, and alarm system work was December 2023. The seismic work will be complete in the summer of 2024. The current projected cost for all the upgrades is $3.0 million, or $2.7 million on an Oregon-allocated basis.

Q. Please summarize Staff's recommendation for New Plant – Resource Centers.

A. Staff has not identified any projects it believes to be imprudently incurred. However, Staff does have concerns regarding the reliability of the Company's estimates, especially for projects projected to be placed into service near the rate effective date, and recommends attestations for those projects as further discussed in Issue 6 below. Staff's conclusions regarding prudence are not final and may change based on evidence presented by other parties.

Docket No: UG 490

Staff/600
Anderson/18

ISSUE 6: ATTESTATIONS AND PROPOSED PROJECT ADJUSTMENTS

Q. Regarding projects specifically discussed in the Company's testimony, what does Staff recommend?

A. Staff recommends officer attestations for the following projects for the reasons stated:

- North Coast Feeder Project

  Section A is expected to be placed in service in September 2024. The estimated cost to complete Section A is $8.2 million. This project is expected to be placed in service just prior to the rate effective date of October 31, 2024.

  Section B is expected to be placed in service at the end of the test year in December 2025. Since this phase of the project will not be "used and Useful" prior to the prior to the rate effective date, Staff recommends this phase be removed from revenue requirements and rate base for this general rate case.

- Tualatin-Sherwood Road Grading Project (the actual costs exceeding those already being recovered in rates)

  The Company completed this project in October 2022. Actual costs to place the project in service should be available to replace estimates.

- P30 Willis Creek HDD Install Project

  This project is in the planning stages and scheduled for construction Summer of 2024. There is a risk that the project will not be in service prior to the rate effective date, and the estimated cost is a rough order of

magnitude estimate. Staff recommends a NWN Officer attestation that the plant is in service prior to the rate effective date. Otherwise the plant should be removed from the rate base used to calculate revenue requirements.

- SE Gate Station Rebuild Project

  The project is expected to be placed in service in October of 2024, just prior to the rate effective date. There is a risk that the project will not be in service prior to the rate effective date, and the estimated cost is a rough order of magnitude estimate. Staff recommends a NWN Officer attestation that the plant is in service prior to the rate effective date. Otherwise the plant should be removed from the rate base used to calculate revenue requirements.

Q. What is the net financial impact to Utility Plant in Service from Staff's recommendations?

A. Staff recommends adjusting the Utility Plant by a ($6.4 million) for Section B of the North Coast Feeder Project, which will not be used and useful prior to the rate effective date of October 31, 2024.

Q. Does this conclude your testimony?

A. Yes.

REDACTED
OPENING TESTIMONY
INSURANCE AND D&O
INSURANCE

April 18, 2024

Docket No: UG 490

Staff/700
Beitzel/1

Q. Please state your name, occupation, and business address.

A. My name is Russ Beitzel. I am Program Manager of the Rates and Telecommunications Section of the Rates, Safety and Utility Performance Program of the Public Utility Commission of Oregon (Commission or OPUC). My business address is 201 High Street SE, Suite 100, Salem, Oregon 97301.

Q. Please describe your educational background and work experience.

A. My witness qualifications statement is found in Exhibit Staff/701.

Q. What is the purpose of your testimony?

A. I present Staff's analysis in the general category of Insurance and Directors and Officers Insurance (D&O).

Q. Did you prepare any exhibits for this docket?

A. Yes. I prepared the following supporting exhibits beyond my witness qualifications:

- Exhibit Staff/702 NWN Responses to Staff Data Requests.

Q. How is your testimony organized?

A. My testimony is organized as follows:

Issue 1. Insurance (Non-Medical) and Risk (Non-Medical) 2
Figure 1: OR Allocated Totals for Insurance and Risk Premiums 3
Issue 2. Directors and Officers Insurance 5
Summary 7

Docket No: UG 490

Staff/700
Beitzel/2

ISSUE 1. INSURANCE (NON-MEDICAL) AND RISK (NON-MEDICAL)

Q. Does the Commission have a standard means of determining how insurance expenses are treated?

A. Yes. During a rate case, Staff will examine a company's current premiums and remove any costs that are attributed to non-operating and non-regulated operations. Staff reviewed the Company-provided insurance premium documents, noting that these are purchased on the free-market either directly or through a third party tasked with finding the option that meets the Company's requirements.[1]

Q. Please describe how the Company allocates insurance premiums.

A. The Company provided a description of its allocation method in Testimony.

> …these expenses were allocated using the Company's insurance allocation model. This allocation model is designed in compliance with the Company's CAM. Pursuant to the Company's CAM, individual premiums are allocated to entities consistent with the nature of the insurance policy. For example, workers' compensation policies are allocated based on payroll, and property insurance is allocated based on total assets. The Company uses four allocation factors to allocate insurance premiums to non-utility operations and affiliates: revenues, assets, payroll, and number of directors and officers.[2]

Q. Please explain what types of insurance were reviewed.

A. Staff reviewed documents related to insurance for property, liability, terrorism, workers' compensation, and other risk management. Please see Confidential Figure 1 for a list of these various types of insurances and a chart comparing

---

1 See Staff/702 Company response to Staff SDR 69 and Confidential response to Staff SDR 69 Attachment 1.

2 See NW Natural / 1400, Davilla / 13.

premiums from Base Year to Test Year.

FIGURE 1: OR ALLOCATED TOTALS FOR INSURANCE AND RISK PREMIUMS

[BEGIN CONFIDENTIAL]

[END CONFIDENTIAL]

Q. Is expense for insurance increasing?

A. The Company's forecasted Test Year expense for insurance exceeds the Base Year actuals by **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** This increase is similar to increases noted in other recent energy rate cases.[3]

Q. Please summarize the Company's proposed Test Year expense for FERC 924 (Property Insurance).

[3] See UE 416 Staff/900, Beitzel/6-7 and UE 426 Staff/500, Beitzel/6 Table 1.

A. For the Test Year, the Oregon-allocated total for FERC Account 924 (Property Insurance) is **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** increase from the Base Year (Highlighted in Figure 1 below).[4]

Q. Did Staff investigate the reason for the increase?

A. Yes. Staff reviewed the Company's response to Standard Data Request (SDR) Nos. 058 and 067-074 and DRs 224-225, including the confidential responses. In addition, Staff reviewed the Company's testimony on non-medical insurance in NW Natural/1400, Davilla/13.

Q. Is Staff proposing an adjustment involving any of these types of insurances?

A. No. In reviewing the premiums paid for each different type of insurance, Staff concluded the Company's decision to carry these types of insurance coverage is prudent and that the insurance premiums appear reasonable, despite the steady increases in cost. Because of the competitive nature of the insurance industry, it is Staff's position that premiums paid to protect the utility, and ultimately customers, from high dollar casualty losses represents a prudent business decision and that no adjustment is necessary.

[4] Staff/702, NW Natural amended response to Staff DR 224 - Confidential Attachment 1.

Docket No: UG 490

Staff/700
Beitzel/5

ISSUE 2. DIRECTORS AND OFFICERS INSURANCE

Q. What is D&O Insurance?

A. Directors and Officers insurance is liability insurance payable to the Directors and Officers of a company, or to the organization itself, as reimbursement for losses or advancement of defense costs in the event an insured suffers such a loss as a result of a legal action brought for alleged wrongful acts in their capacity as directors and officers. Such coverage can extend to defense costs arising out of criminal and regulatory investigations and trials as well. Intentional illegal acts, however, are typically not covered under D&O policies.

Q. Please explain the standard adjustment to D&O Insurance expense as it relates to NWN's request.

A. Staff has routinely recommend removal of 50 percent of Excess D&O liability insurance as a shareholder cost.[5] This methodology has been followed by Staff in previous dockets in both electric and natural gas utility general rate cases and approved by the Commission.[6] This adjustment is shown in Staff Exhibit 703.

Q. Please explain the rationale for this standard adjustment procedure.

A. D&O insurance protects senior management in the event that they are sued, whether by customers, shareholders, or others in conjunction with the performance of their duties. Customers, who have no say in electing or appointing a Utilities Directors or Officers, should not be held financially

---

5 *In re* Portland *General Electric Company*, OPUC Docket No. UE 197, Order No. 09-020 at 19-20 (Jan. 22, 2009).

6 *Ibid*.

responsible for providing 100 percent of the insurance coverage against business decisions or improprieties by management which results in lawsuits. Additionally, a large number of claims are brought by shareholders; customers should not have to pay the full costs of total D&O insurance. The excess insurance should be considered a joint shareholder/customer cost.

Q. Does the Company include the cost of D&O Insurance premiums in its Test Year expense?

A. Yes. As stated in NWN Confidential Response to DR 224, the Oregon Test Year amount for D&O Insurance is **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** Oregon allocated (Highlighted in Figure 1 above).[7]

Q. What is Staff's proposed adjustment?

A. Staff proposes to adjust D&O Insurance by a **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**.

[7] Staff/702, NW Natural amended response to Staff DR 224 - Confidential Attachment 1.

Docket No: UG 490

Staff/700
Beitzel/7

SUMMARY

Q. Please summarize your recommendations, identifying any adjustments you propose.

A. Related to the Insurance accounts, Staff proposes no adjustment at this time. Related to D&O Insurance expense, Staff proposes a **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**.

As noted earlier in my testimony, my recommendations may change based on further review and as informed by the testimonies offered by other parties.

Q. Does this conclude your testimony?

A. Yes.

Docket No: UG 490 Staff/800
Chipanera/1

Q. Please state your name, occupation, and business address.

A. My name is Itayi Chipanera. I am a Senior Financial Analyst employed in the Accounting and Finance Section of the Rates, Safety and Utility Performance Program (RSUP) of the Public Utility Commission of Oregon (OPUC). My business address is 201 High Street SE, Suite 100, Salem, Oregon 97301.

Q. Please describe your educational background and work experience.

A. My witness qualifications statement is found in Exhibit Staff/801.

Q. What is the purpose of your testimony?

A. My opening testimony discusses Staff's analysis and position on the following issues:

- Escalation of Test Year expenses.
- Test Year cash working capital included in rate base.
- Test Year expenses for Regulatory Fees.
- Test Year expenses for Income Taxes.
- Test Year leasehold improvements included in rate base.

Q. Did you prepare any exhibits for this docket?

A. No.

Q. How is your testimony organized?

A. My testimony is organized as follows:

Issue 1. Escalations 3

Docket No: UG 490 Staff/800
Chipanera/3

ISSUE 1. ESCALATIONS

Q. Please provide a summary of the Commission's historical treatment of expense escalations.

A. It is Staff policy to use the Consumer Price Index – All Urban Consumers for the U.S. (CPI, Urban U.S.) as published by the State of Oregon Office of Economic Analysis (OEA) for year over year escalation. The All-Urban CPI measures price changes in a fixed market basket of goods and services in categories, generally including housing, apparel, transportation, medical care, recreation, education, and others to urban consumers.

Q. Why is it necessary to evaluate the escalation factors applied by the Company?

A. The Company's system Test Year (2025) non-payroll operating, and maintenance expenses were filed as $133.4 million compared to $112.4 million in the Base Year (2023), an increase of $21 million.[1] The Company adjusted for some non-payroll O&M items directly without the use of a CPI, therefore the total increase in non-payroll O&M is not completely attributable to CPI escalation. The Company's application of escalation factors, however, is a very important aspect of its Test Year requested non-payroll O&M expenses and it is necessary for Staff to carefully evaluate the source of the escalation factors and how they are applied.

Q. How did the Company apply escalation factors in the filing?

A. According to the Company:

[1] UG 490 - Exh. 1400 - OM Model Workpaper.

> The Company escalated general non-payroll costs using year-over-year rates of change in the forecast of the West Region Urban CPI as reported in the September 2023 Oregon Economic and Revenue Forecast, published by the OEA. These escalation factors were applied on January 1, 2024, and January 1, 2025. The Company also identified several items where the growth projection was greater or lesser than using CPI and adjusted these items with their specific increase or decrease.[2]

Q. What is the Company's rationale for using the Western Region CPI instead of the All-Urban CPI?

A. The Company testifies, "NW Natural specifically selected the Western Region Urban CPI because a regional CPI provides better measure of aggregate changes experienced by the Company than the national CPI."[3] The Company says it sources its services and materials from within Oregon and Washington, therefore the regional CPI is more reflective of the price changes that the Company faces.

Q. Is using the West Region CPI reasonable considering the Company's cost escalation methodology?

A. No. The Company's claim the West Region CPI is more representative index is belied by their substitution of their own escalation rate for various cost categories. Staff does not disagree that it may be impossible to find an index that perfectly matches the inflation experienced by a utility in each cost category. However, Staff has consistently found the All-Urban CPI is a reliable and appropriate source for escalation and believes consistently using this

[2] NWN Natural/1400, Davilla/8, lines 13 to 19.
[3] NWN Natural/1400, Davilla/9, lines 3 to 5.

methodology eliminates "forum shopping" for the most favorable inflation escalator on a case-by-case basis.

Q. Have inflation forecasts changed since the September 2023 OEA report relied upon by the Company in its initial filing?

A. Yes. The most recent OEA publication was the March 2024 report, released on February 7, 2024.[4] The March report shows the 2024 and 2025 expected changes in the Western Region CPI index as 2.7 percent and 2.1 percent, respectively, and the change in All-Urban CPI index is expected to be 2.7 percent for 2024 and 2.0 percent for 2025.

Q. What is Staff's recommendation regarding the use of the Western Region CPI?

A. Although the expected changes in the Western Region CPI and All-Urban CPI index in the March publication are identical for 2024 and differ by 0.1 percent for 2025, Staff maintains its long-standing policy of relying on the All-Urban CPI. Staff recommends adjusting the Company's escalation factors to the All-Urban CPI factors as published in the March 2024 OEA report.

Q. Are you recommending any adjustments based on Staff's CPI recommendation?

A. No. Different parts of the Company's filing have been assigned to various Staff and they will apply Staff's recommended escalation factors in their individual reviews.

[4] Oregon Economic and Revenue Forecast, March 2024, Release Date: February 7th, 2024.

Docket No: UG 490 Staff/800
Chipanera/6

ISSUE 2. CASH WORKING CAPITAL

Q. What is cash working capital?

A. Cash working capital is the amount of investor supplied capital required by a utility to fund its day-to-day operations to provide service to customers prior to receipt of payment from customers. Cash working capital is included as part of the utility's rate base.

Q. Please provide a summary of the Commission's historical treatment of cash working capital.

A. The Commission has generally required a utility's request for cash working capital to be supported by a current lead/lag study.

Q. Did the Company support its cash working capital request with a lead/lag study?

A. Yes.

Q. How is cash working capital calculated?

A. Cash working capital is calculated by multiplying net lag days by the average daily cost of service. Average daily cost of service and net lag days can be broken into other components as shown in the series of equations below.

1. $Cash\ Working\ Capital\ = Daily\ Cost\ of\ Service * Net\ Lag\ Days$

$$Daily\ Cost\ of\ Service = \frac{Annual\ Cost\ of\ Service}{365}$$

$$Net\ Lag\ Days\ = Revenue\ Lag - Expense\ Lag$$

$$Revenue\ Lag = Service\ Lag + Billing\ Lag + Collection\ Lag$$

$$Service\ Lag = Meter\ Read\ Date - Mid\ Point\ of\ Customers\ \ Usage\ Period$$

$$Billing\ Lag = 0$$

$$Collection\ Lag = \frac{Average\ Monthly\ Receivables}{Average\ Daily\ Sales}$$

2. $Cash\ Working\ Capital = Daily\ Cost\ of\ Service * \{Service\ Lag + Billing\ Lag + Collection\ Lag - \ Expense\ Lag\}$

Q. How did Staff evaluate the Company's cash working capital calculation for reasonableness?

A. The breakdown of the cash working capital calculation into the series of equations shown above is useful for Staff to analyze the critical drivers of the requested cash working capital amount. Staff separately analyzed each of the components of the cash working capital calculation, particularly the revenue lag and expense lag.

Q. What is the revenue lag and how did the Company calculate its revenue lag?

A. The revenue lag represents the days between the receipt of services by customers and the eventual payment for those services. The revenue lag is the sum of the service lag, the billing lag, and the collection lag.

Q. How did the Company calculate its service lag?

A. The Company calculated its service lag as the "time from the midpoint of a customer's usage period to the meter read date. The Company bills all

customers on a monthly basis and, therefore, the average service lag equates to approximately half of a month or about 15.5 days."[5]

Q. What is Staff's view on the service lag calculated by the Company?

A. Staff believes the Company's service lag is overstated. The Company's method of calculating the service lag did not properly account for months that have an odd number of days and over counts the mid-point of months with odd days by half a day. Staff proposes a method that properly accounts for the half days that are part of a month with an odd number of days. Using Staff's proposed approach, Staff calculates a service lag of 15.2 days.

Last Day	Midpoint Date	Company Method	Staff Proposed Method
1/31/2022	1/16/2022	16	15.5
2/28/2022	2/14/2022	14	14.0
3/31/2022	3/16/2022	16	15.5
4/30/2022	4/15/2022	15	15.0
5/31/2022	5/16/2022	16	15.5
6/30/2022	6/15/2022	15	15.0
7/31/2022	7/16/2022	16	15.5
8/31/2022	8/16/2022	16	15.5
9/30/2022	9/15/2022	15	15.0
10/31/2022	10/16/2022	16	15.5
11/30/2022	11/15/2022	15	15.0
12/31/2022	12/16/2022	16	15.5
		15.5	15.2

Q. What is the impact of reducing the Company's service lag from 15.5 days to 15.2 days?

A. Using the Company's filed cash working capital workpaper,[6] Staff reduced the service lag from 15.5 days to 15.2 days and produced an Oregon allocated

[5] NW Natural/1700, Walker/33, line 19.
[6] UG 490 - Exh. 1713 - WP3 - Cash Working Capital – CONFIDENTIAL.

cash working capital amount that is $292.9 thousand lower than the Company's calculation.

Q. Does Staff have any concerns with how the Company estimated the collection lag and the billing lag?

A. No. The collection lag, which is the interval from the invoice date to the date until the customer pays for service, is calculated by dividing average monthly sales by average daily sales. The billing lag is the interval from when the meter is read and when the company processes an invoice in its billing system. The Company says it bills its customers on the same day that it reads meters, therefore the billing lag is zero days.

Q. How did the Company calculate its expense lag?

A. The Company studied expenses for materials received and services rendered separately. The expense lag for materials received was calculated by comparing the invoice date with the payment date. The expense lag for services rendered was calculated by comparing the midpoint of the service period with the payment date. The Company studied the following expense categories:

1. Purchased Gas,
2. Labor,
3. Payroll, Employee Benefits,
4. Prepaid Insurance,
5. Prepaid Information Technology,
6. Regulatory Fees,

7. Municipal Franchise Fees,
8. Other O&M, and
9. Payroll Taxes and Other Taxes (Federal/State, Corporate Activities Tax and Property Taxes).

Q. Does Staff have any concerns with how the Company calculated expense lead/lag days for any of the expense categories?

A. Yes. Staff is concerned that some of the data used to calculate the information technology expense lead days is not representative of the routine contract that requires the company to have a cash cushion provision in the Test Year. The Company said it conducted its analysis using all contracts that were active in calendar year 2022 and it does not forecast prepaid information technology amounts or contracts.[7] Staff identified three information technology contracts the Company has already paid in full even though they extend through the Test Period. Staff proposes to exclude these three contracts from the Test Year cash working capital calculation.

Q. Which three contracts is Staff proposing to exclude from the expense lag calculation?

A. Staff is proposing to remove the three contracts listed in the confidential table below.

[7] NW Natural response to DR 433.

Docket No: UG 490

Staff/800
Chipanera/11

[BEGIN CONFIDENTIAL]

[END CONFIDENTIAL]

Q. How does the exclusion of the informational technology contracts whose payment dates and prospective renewal dates fall outside the Test Year affect the Company's cash working capital calculation?

A. Excluding these contracts from the cash working capital calculation reduces the Company's information technology expense lead time from 216.04 days to 205.5 days. The change in the information technology lead time results in a reduction to the Company's cash working capital of $220.4 thousand.

Q. What is your total proposed adjustment to the Company's cash working capital?

A. Adjusting the Company's revenue service lag and the information technology expense lead time as proposed reduces the Company's cash working capital by $513.3 thousand.

Docket No: UG 490

Staff/800
Chipanera/12

ISSUE 3. REGULATORY FEES

Q. What is the Oregon regulatory commission fee in this docket?

A. The regulatory commission fee is composed of two fees, the Oregon Public Utility Commission fee (OPUC fee) and the Oregon Department of Energy, Energy Supplier Assessment (ODE ESA). The OPUC fee is a customer-funded fee whose purpose is to cover operating expenses of the Oregon Public Utility Commission. The Commission approves a rate used to collect OPUC fees and the rate is applied to a utility's revenues. The energy supplier assessment is similarly levied on energy suppliers operating in Oregon to fund the Oregon Department of Energy operations. Yearly energy supplier assessments are approved by the Oregon legislature and are capped at 0.375 percent of revenues.[8]

Q. How much is the Company requesting for OPUC fees in the 2024 Test Year and how does it compare to the 2022 Base Year?

A. The Company is requesting $4.024 million in regulatory fees for the Test Year compared to $4.006 million in the Base Year, an increase of 0.5 percent.

Q. What was the OPUC fee rate in effect at the time of the Company's filing?

A. At the time of NW Natural's filing the OPUC fee rate in effect was 0.43 percent.[9]

Q. Did the Company use the OPUC fee rate in effect at the time of its filing to calculate its Test Year OPUC fees?

---

[8] How We Are Funded, Oregon Department of Energy, published October 2023.
[9] *In the Matter of The Imposition of Annual Regulatory Fees upon Public Utilities Operating within the State of Oregon*, Docket No. UM 1012, Order No. 23-057.

A. Yes.

Q. Has the OPUC fee rate changed since the Company's filing?

A. Yes. The Commission approved a new rate of 0.45 percent in Order No. 24-054 entered on February 22, 2024.[10]

Q. What is Staff's proposed adjustment to OPUC fees?

A. Staff proposes to adjust the OPUC fees by applying the current effective rate of 0.45 percent. Applying the new rate produces a Test Year OPUC fees amount of $4.2 million, an increase of $187.2 thousand.

Q. How did the Company estimate the Test Year amount for the Department of Energy, Energy Supplier Assessment?

A. The Company used a three-year ODE ESA average rate and applied that rate to Test Year retail sales.

Q. What is Staff's view on how the Company estimated the ODE ESA?

A. Staff agrees with the Company's three-year average rate approach to determine the Test Year ODE ESA amount.

[10] *In the Matter of The Imposition of Annual Regulatory Fees upon Public Utilities Operating within the State of Oregon*, Docket No. UM 1012, Order No. 24-054.

Docket No: UG 490 Staff/800
Chipanera/14

ISSUE 4. INCOME TAXES

Q. Please summarize the Company's filing related to income taxes.

A. The Company presents Test Year state income taxes of $16.9 million and federal income taxes of $26.5 million on exhibit NW Natural/1705.[11] The calculated federal income taxes include $3.2 million of federal tax credits.[12]

Q. What are the requirements of Oregon law regarding the inclusion of income taxes in utility rates?

A. Income taxes in utility rates are subject to the requirements of ORS 757.269:

> **757.269 Setting of rates based upon income taxes paid by utility; limitation on use of tax information; rules**.
> (1) When establishing schedules and rates under ORS 757.210 for an electricity or natural gas utility, the Public Utility Commission shall act to balance the interests of the customers of the utility and the utility's investors by setting fair, just and reasonable rates that include amounts for income taxes. Subject to subsections (2) and (3) of this section, amounts for income taxes included in rates are fair, just and reasonable if the rates include current and deferred income taxes and other related tax items that are based on estimated revenues derived from the regulated operations of the utility.
>
> (2) During ratemaking proceedings conducted pursuant to ORS 757.210, the Public Utility Commission must ensure that the income taxes included in the electricity or natural gas utility's rates:
>
> (a) Include all expected current and deferred tax balances and tax credits made in providing regulated utility service to the utility's customers in this state;
> (b) Include only the current provision for deferred income taxes, accumulated deferred income taxes and other tax related items that are based on revenues, expenses and the rate base included in rates and on the same basis as included in rates;
> (c) Reflect all known changes to tax and accounting laws or policy that would affect the calculated taxes;
> (d) Are reduced by tax benefits generated by expenditures made in providing regulated utility service to the utility's customers in this state, regardless of whether the taxes are paid by the utility or an affiliated group;

[11] NW Natural/1705, Walker/1.
[12] NW Natural/1710, Walker/1.

(e) Contain all adjustments necessary in order to ensure compliance with the normalization requirements of federal tax law; and
(f) Reflect other considerations the commission deems relevant to protect the public interest.

(3) During a ratemaking proceeding conducted under ORS 757.210 for an electricity or natural gas utility that pays taxes as part of an affiliated group, the Public Utility Commission may adjust the utility's estimated income tax expense based upon:

(a) Whether the utility's affiliated group has a history of paying federal or state income taxes that are less than the federal or state income taxes the utility would pay to units of government if it were an Oregon-only regulated utility operation;
(b) Whether the corporate structure under which the utility is held affects the taxes paid by the affiliated group; or
(c) Any other considerations the commission deems relevant to protect the public interest.

(4)(a) Because tax information of unregulated nonutility business in an electricity or natural gas utility's affiliated group is commercially sensitive, and public disclosure of such information could provide a commercial advantage to other businesses, the Public Utility Commission may not use the tax information obtained under this section for any purpose other than those described in this section, in ORS 757.511 and as necessary for the implementation and administration of this section and ORS 757.511.

(b) The commission shall adopt rules to implement paragraph (a) of this subsection that:

(A) Identify all documents and tax information that an electricity or natural gas utility must file in its initial filing in a proceeding to change rates that include amounts for income taxes, recognizing that any party may object to providing such documents on the grounds that they are not relevant; and
(B) Determine the procedures under which intervenors in such proceedings may obtain and use documents and tax information to fully participate in the proceeding.

(5) As used in this section, "affiliated group" means a group of corporations of which the public utility is a member and that files a consolidated federal income tax return. [2011 c.137 §1]

Q. Please summarize Staff's review of income taxes in this case.

A. Staff initially reviewed tax information in the Company's filing and reviewed the Company's responses to standard data requests. Staff's examination and

discovery included confirming the federal and state tax rates, apportionment calculations, calculation of current and deferred income tax expense, application of federal and state tax credits, and the amortization of excess deferred income taxes (EDIT) resulting from the 2017 Tax Act.

Q. Please summarize the Company's filing regarding accumulated deferred income taxes.

A. The Company determined Test Year deferred income tax included in rate base by using the December 31, 2022, deferred income taxes and forecasting forward for incremental amounts. The Company said it considered new capital expenditures as well as previous basis amounts in generating book-tax differences and consequent tax.[13] The amount of Oregon allocated deferred income taxes included in Test Year rate base is $447.9 million compared to $438.1 million in the Base Year.

Q. Is Staff proposing adjustments to income tax expense other than those necessary to finalize the Company's revenue requirement?

A. Other than the EDIT adjustment proposed by Staff witness Luz Mondragon in Staff /200, Staff is proposing no further adjustments to the Company's income tax calculation.

[13] NW Natural/1700, Walker/31.

Docket No: UG 490 Staff/800
Chipanera/17

ISSUE 5. LEASEHOLD IMPROVEMENTS

Q. What is NW Natural's proposal regarding leasehold improvements in the filing?

A. The Company proposes to include $18.6 million in leasehold improvements in rate base. The filed leasehold improvements balances are primarily from the Company's headquarters building located at 250 Taylor, in downtown Portland.[14]

Q. What is the Commission's historical treatment of leasehold improvements?

A. The Company initially sought cost recovery associated with leasehold improvements at 250 Taylor in its 2020 GRC, UG 388. The Commission approved a Stipulation resolving all issues in that case that allowed the Company to include leasehold improvements balances as part of its rate base except for specific costs related to a fireplace, water feature, wine cooler, and board room table, which were excluded.[15]

Q. Is the Company's treatment of leasehold improvements consistent with UG 388?

A. Yes. The Company treated leasehold improvements in the same manner in UG 490 as it did in UG 388, including removing the costs that were identified to be excluded from rate base.

Q. Is Staff proposing any adjustments to leasehold improvements?

---

[14] NW Natural/1700, Walker/17.

A. No.

Docket No: UG 490

Staff/800
Chipanera/19

OTHER TOPICS REVIEWED

Q. Please summarize Staff's review of any other topics that were not explicitly discussed in this testimony.

A. Staff reviewed the Company's Test Year amounts for franchise fees and property taxes. In both cases, the Company relied on a historical three-year average rate applied to a suitable base to estimate the Test Year amounts. The suitable tax base for property taxes is assessed property values and the suitable tax base for franchise fees is the utility's revenue. Staff has relied on the three-year average rate approach in prior rate cases as a reasonable way to estimate franchise and property taxes.

Q. Does Staff agree with how the Company handled franchise fees and property taxes in the filing?

A. Yes.

Docket No: UG 490

Staff/800
Chipanera/20

SUMMARY

Q. Please summarize Staff's proposed adjustments in this testimony.

A. Staff is proposing to reduce the Company's Test Year cash working capital by $513.3 thousand and increase the Company's OPUC fees by $187.2 thousand.

Q. Does this conclude your testimony?

A. Yes.

NAME: Itayi Chipanera

EMPLOYER: Public Utility Commission of Oregon

TITLE: Senior Financial Analyst
Accounting and Finance Section

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: B.S., Economics
Idaho State University

M.S., Mathematics
University of Nevada – Reno

M.S., Accounting
Indiana University – Bloomington

EXPERIENCE: I have been employed by the OPUC in the Safety, Rates and Utility Performance Program since April of 2023. Prior to my employment with the OPUC I was employed in various finance roles in the insurance and banking industries including Advantis Credit Union where I was employed as a Senior Risk and Financial Analyst; City of Salem, Oregon, where I was a Finance Management Analyst; and SAIF Corporation where I was an Actuarial Research Analyst. I have worked as a revenue requirement summary witness on the following cases PGE UE 416, AVA UG 461, and IPC UE 426.

CASE: UG 490
WITNESS: CURTIS DLOUHY

PUBLIC UTILITY COMMISSION
OF
OREGON

STAFF EXHIBIT 900

REDACTED
Opening Testimony

April 18, 2024

Docket No: UG 490

Staff/900
Dlouhy/1

Q. Please state your name, occupation, and business address.

A. My name is Curtis Dlouhy. I am a Senior Economic and Policy Analyst employed in the Utility Strategy and Integration Division of the Public Utility Commission of Oregon (OPUC). My business address is 201 High Street SE., Suite 100, Salem, Oregon 97301.

Q. Please describe your educational background and work experience.

A. My witness qualifications statement is found in Exhibit Staff/901.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to address the Company's revised decarbonization asks following the invalidation of the Climate Protection Program (CPP), proposed changes to the renewable natural gas automatic adjustment clause, updates to the Company's residential line extension allowance, and meter modernization program.

Q. Did you prepare any exhibits for this docket?

A. Yes. I prepared the following exhibits:

- Exhibit 901: Witness Qualifications Statement
- Exhibit 902: Non-Confidential Responses to Data Requests used in Support of Opening Testimony
- Exhibit 903: Other Documents in Support of Opening Testimony
- Exhibit 904: Staff's Line Extension Allowance Model
- Exhibit 905: Excerpt from Staff's Final Comments in LC 79
- Exhibit 906: Past RG 41 Filings

- Exhibit 907: Confidential Responses to Data Requests used in Support of Opening Testimony

Q. How is your testimony organized?

A. My testimony is organized as follows:

Issue 1. Climate Protection Program 3
Issue 2. Renewable Natural Gas Automatic Adjustment Clause 12
Issue 3. Residential Line Extension Allowance 27
Issue 4. Meter Modernization Program 47

Docket No: UG 490

Staff/900
Dlouhy/3

ISSUE 1. CLIMATE PROTECTION PROGRAM

Q. What is the purpose of this section of your testimony?

A. I summarize the regulatory environment surrounding the Climate Protection Program (CPP) in Oregon and provide recommendations on the Company's requested five Full-Time Equivalents (FTEs) related to CPP compliance.

Q. What was the CPP and how did it relate to Executive Order 20-04?

A. Executive Order 20-04 (EO 20-04) was issued by former Governor Kate Brown on March 10, 2020. EO 20-04 directs various state agencies to take action to reduce and regulate greenhouse gas (GHG) emissions in response to climate change. In particular, EO 20-04 sets a target of reducing Oregon GHG emissions to at least 45 percent below the 1990 emissions level by 2030 and at least 80 percent below the 1990 emissions levels by 2050.[1] To meet these goals, Oregon Environmental Quality Commission (OEQC) and Oregon Department of Environmental Quality (ODEQ) were directed to cap and reduce emissions from large stationary sources of GHG emissions, transportation fuels, and all other liquid and gaseous fuels.[2] Among other things, the PUC was directed to prioritize activities that advance decarbonization and determine whether utility portfolios and customer programs reduce risks and costs to utility customers by making rapid progress towards reducing GHG emissions consistent with Oregon's goals.[3]

---

1 EO 20-04, page 5.
2 EO 20-04, pages 6-7.
3 EO 20-04, pages 7-8.

The CPP was a program implemented by OEQC and ODEQ to implement EO 20-04. The program subjected Oregon natural gas utilities to an annual cap on regulated GHG emissions. This cap would have declined annually until it was equal to a 50 percent reduction of the average annual 2017-2019 emissions in 2035 and a 90 percent reduction of the average annual 2017-2019 emissions in 2050. ODEQ planned to freely distribute the compliance instruments up to the amount of the annual cap, and entities could also choose to invest in bankable Community Climate Investments (CCIs) as an alternative way to meet compliance obligations. In effect, the CCIs would have helped fund decarbonization projects.

Q. Why was the CPP declared invalid and how does DEQ plan to respond?

A. As the Company describes in Exhibit 2000, the rules implementing the CPP were declared invalid on procedural grounds.[4] On January 22, 2024, the OEQC and ODEQ stated that they do not intend to appeal the court's decision but will instead begin a new rulemaking process in early 2024. The proposed rulemaking is active with engagement beginning on April 4, 2024, and is expected to conclude in June 2024. The stated goal is to, "[r]eestablish a climate program with comparable scope and emissions reduction ambitions as the previously adopted Climate Protection Program."[5] The Company expects that this process may take around 12 months to complete.[6]

4 NWN/2000, Kravitz – Therrien/3.
5 See the Climate Protection Plan Advisory Committee Rulemaking Schedule, here.
6 NWN/2000, Kravitz – Therrien/3-4.

Q. What was Northwest Natural's role in the decision by the Oregon Court of Appeals to declare the CPP invalid?

A. Northwest Natural, along with Oregon's two other investor-owned natural gas companies and several other entities, were the petitioners in the case in which the Court of Appeals ruled the rules establishing the CPP were invalid. Petitioners challenged the rules on both procedural and substantive grounds, but the Court of Appeals' opinion only addressed one procedural challenge, finding it was dispositive and there was no need to review the other challenges.[7]

Q. Why do you believe that this is relevant to your testimony?

A. While EO 20-04 is still effective, the future of the CPP is ambiguous in light of the likelihood that the petitioners in the 2023 Court of Appeals challenge will likely re-new the challenges to any EQC rules re-establishing the CPP. NW Natural and other entities have succeeded in delaying implementation of the CPP and it is likely these entities will continue to their challenges to the program if new rules are implemented. Given the uncertainty surrounding the future of the CPP, Staff is concerned that it is premature for NWN to receive rate recovery for costs to implement the CPP.

On the other hand, to properly plan around the regulatory uncertainty while still making progress towards decarbonization, Staff believes that taking "no regrets" actions that have system benefits whether or not the CPP is active

[7] *Northwest Natural Gas Company, et al., vs. Environmental Quality Commission*, 329 Or. App. 648 (2023).

is the most prudent path forward. These actions may include taking actions to limit system growth for the time being, pursuing energy efficiency actions, or investing in non-pipe alternatives.

Q. How does Staff believe these conflicting concerns be addressed?

A. Staff recognizes the need for a fine balance between allowing the Company to meet Oregon's decarbonization goals, advocating for policies in furtherance of said goals, while also taking into account the setbacks that have already occurred in implementing the CPP and the potential for future setbacks.

Q. Did the Company request that any costs related to the CPP be recovered?

A. Yes. In its opening testimony, the Company requests to recover costs associated with five additional FTEs focused on decarbonization and CPP compliance.[8] In its supplemental testimony, the Company reaffirmed its request to recover costs associated with these positions.[9]

Q. What are the job descriptions for these five positions and why does the Company believe that these positions should still be recovered following the invalidation of the CPP?

A. The Company requests that the following positions be recovered in this general rate case:

- Decarbonization Services Analyst: This position will research new and emerging technologies and develop business cases for decarbonization

[8] NW Natural/1500, Kravitz – Chittum/20.
[9] NW Natural/2000, Kravitz – Therrien/6.

services. The Company states that this is a necessary position because even though the CPP has been invalidated, the Company must take steps to decarbonize and DEQ is opening a new rulemaking related to EO 20-04.[10]

- Decarbonization Services Operations Support: This position exists largely to support the Decarbonization Service Analyst. The Company's reasons to continue asking recovery for this position are similar to the Decarbonization Service Analyst.
- Decarbonization Portfolio Manager: This position was intended to manage the Company's decarbonization portfolio prior to the CPP's invalidation.[11] The Company states that they envisioned this role managing CPP compliance workstreams pre-CPP invalidation. Post invalidation, the Company states that they envision this role as engaging in the upcoming rulemaking process.[12]
- Decarbonization Compliance Rates Analyst: This role focuses on providing regulatory analytical support for the Company's decarbonization efforts. The Company states that this role can support its decarbonization efforts, such as RNG acquisition.[13]
- Peak Load Management Analyst: This position performs research, analysis, and other tasks related to Demand Side Management (DSM)

[10] NW Natural/2000, Kravitz – Therrian/6-7.
[11] NW Natural/2000, Kravitz – Therrian/8.
[12] Id.
[13] NW Natural/2000, Kravitz – Therrian/9.

programs. The Company notes that the Commission stated that it expects the Company take seriously the expectation that they mitigate growth where reasonable while trying to maintain reliable service.[14]

Q. Does Staff believe that the Company should be allowed to recover costs related to all these positions?

A. No. Staff believes that only one of these positions' costs should be recovered for the reasons discussed above.

Q. Which role does Staff believe warrants cost recovery even though the CPP has been declared invalid?

A. Staff supports the inclusion of costs related in revenue requirement to the Peak Load Management Analyst. This support is grounded in Staff's experience and belief that exploring methods to reduce load holds intrinsic value for both the Company and its ratepayers, irrespective of the validity of the CPP or any future decarbonization obligation the Company may have. To this note, Staff views pursuing non-pipes alternatives to be a clear "no regrets" path amid the current regulatory uncertainty.

Q. Please explain your conclusion rate recovery for four or the decarbonization FTEs is not warranted at this time.

A. NW Natural's decarbonization efforts are not new. NW Natural has been actively seeking and investing in RNG projects for many years and has had the regulatory team necessary to obtain rate recovery for RNG investments. NW Natural also participated in the original rulemaking proceeding for the CPP.

[14] NW Natural/2000, Kravitz – Chittum/10.

Absent a new compliance program with which to comply, Staff does not think addition of four incremental FTEs to manage decarbonization portfolios, explore emerging technologies, manage compliance workstreams, and participate in the EQC rulemaking are warranted.

Q. Why does Staff believe rate recovery for a Decarbonization Compliance Rates Analyst is not warranted?

A. According to the Company's testimony, the Decarbonization Compliance Rates Analyst's primary job is to provide analysis and prepare documents for regulatory proceedings related to decarbonization.[15] Absent the CPP or a successor program, the Company states that this role would still have duties related to developing its RNG resources and working on decarbonization projects related to a future Oregon GHG emissions law.[16] Staff does not envision there being significant analysis of the rate impacts of decarbonization absent the CPP or a successor program and would like to reiterate that the SB 98 targets are entirely voluntary.

Q. Why does Staff believe that the Decarbonization Portfolio Manager does not have sufficient duties to warrant an extra FTE?

A. The Company states that if this position were approved, the duties of managing CPP compliance workstreams and recommending compliance actions will not be part of the job's initial duties.[17] Absent this, the only duty the Company lists

15 NW Natural/2000, Kravitz – Therrien/9.
16 Id.
17 NW Natural/2000, Kravitz – Therrien/8.

for this position is to engage in the upcoming rulemaking process and the implementation of new Oregon GHG laws and regulations.[18]

Staff has concerns with funding a position solely dedicated to participating in a GHG emissions rulemaking process. Staff reiterates that the Company states that the *sole* duty for this position is to engage in a single rulemaking process. Staff remains unconvinced that an entire FTE needs to be devoted to engaging in a *single* rulemaking process that may take upwards of a year. While Staff does not disagree with the Company's claim that managing a decarbonization workstream may warrant a full FTE if the CPP or a similar program were in place, Staff finds no reason that funding this position at the moment is in customers' best interest and believes that these duties could be easily managed by existing Company employees.

Q. Why does Staff oppose the inclusion of the FTEs associated with the Decarbonization Services Analyst and the Decarbonization Services Operations Support in rates?

A. According to the Company's testimony, these positions will pursue decarbonization projects. The Company's testimony emphasizes that absent the CPP, these positions can pursue RNG-related projects related to SB 98 RNG acquisitions targets.[19]

Staff first notes that the RNG acquisition targets are voluntary rather than mandatory. Therefore, Staff is skeptical of the customer benefit of giving the

[18] Id.
[19] NW Natural/2000, Kravitz – Therrien/7.

Company more resources to pursue RNG projects. The Commission has echoed this skepticism in its previous orders related to RNG acquisition.[20]

In other dockets, Staff has expressed its belief that the Company's RNG acquisitions have failed to provide adequate risk modeling or customer protections.[21] Staff finds it to be imprudent to allow additional RNG administrative costs to be recovered by customers given Staff's concerns about RNG project selection and performance.

Staff agrees with the Company that the Company's decarbonization obligations still exist due to EO 20-04 and believes that the continued decarbonization work must be done absent the CPP. However, given the set back to implementation of the CPP, Staff believes it is premature to include in revenue requirement the costs of five incremental employees to implement the CPP.

Q. Please summarize Staff's overall recommendation regarding the five new FTEs related to decarbonization.

A. Staff recommends that the costs associated with four of the new FTEs be removed from revenue requirement for the reasons described above. The rate impact of this adjustment is included in the overall labor cost adjustment in the testimony of Staff Witness Stephanie Yamada in Staff Exhibit 2000.

[20] Order No. 23-281, page 12.

Docket No: UG 490

Staff/900
Dlouhy/12

ISSUE 2. RENEWABLE NATURAL GAS AUTOMATIC ADJUSTMENT CLAUSE

Q. What is the purpose of this section of your testimony?

A. The purpose of this section of testimony is to summarize and respond to the Company's proposed changes to its Renewable Natural Gas (RNG) Automatic Adjustment Clause (AAC) mechanism, which is contained in Schedule 198.

Q. Please provide a brief history about how the RNG AAC in Schedule 198 came to be.

A. The RNG AAC was approved in UG 435 in Order No. 22-388. In this docket, NW Natural Proposed an AAC, Schedule 198, to recover its costs for the Lexington RNG project and future RNG projects. This would have an annual rate effective date of November 1. The Company also proposed to allow the inclusion of a deferral to track any startup O&M costs incurred prior to the RNG project being put into service and any revenue requirement between the project's in-service date and the rate effective date.[22]

Unanimous agreement on the Company's proposal was not reached, with some parties outright opposing the addition of Schedule 198 and other parties proposing modifications. Ultimately, the Commission adopted a version of Schedule 198 that incorporates proposed changes from CUB and Staff. The adopted version allows for the RNG AAC to have an annual rate effective date of November 1 and a deferral between forecasted and actual RNG costs subject to an earnings test at 50 basis points below authorized ROE but does

[22] *In the Matter of Northwest Natural Gas Company, dba NW Natural,* UG 435, Order No. 22-388, page 64 (October 24, 2022).

not allow for a deferral between the in-service date and the rate effective date.[23]

In making this decision the Commission noted that it had many concerns with the mechanism that the Company proposed. In Order No. 22-388, the Commission highlights that SB 98 contains *voluntary* RNG targets, whereas the CPP imposes a comprehensive and mandatory GHG cap and reduce mandate, with targets achievable through various channels. The Commission expressed concern that an overly generous AAC may skew the Company's analysis of CPP compliance towards RNG projects that receive full risk-free cost recovery.[24] Staff has previously expressed concern that the Company's current RNG acquisition strategy appears to be skewed to these rate based RNG projects with high customer risk relative to a less risky RNG off-take agreement.[25] The Commission also expressed that it is common practice to not allow for a deferral between the in-service date and rate effective date and did not find reason to change this practice for RNG projects given the Commission's other concerns.[26]

Q. What changes is the Company's proposing to Schedule 198, RNG cost recovery, and its RNG acquisition strategy?

A. In its opening testimony, the Company proposed to make two main changes to its RNG cost recovery:

[23] Order No. 22-388, page 82.
[24] Order No. 22-388, page 81.
[25] See UG 462, Staff/200, Drennan/9.
[26] Order No. 22-388, page 83.

1. Permit deferrals between the in-service date of the RNG project and the rate effective date,[27] and
2. Set the earnings test for the RNG AAC at the Company's authorized ROE.[28]

In addition to these main changes, the Company proposes to develop RNG investment projects through the utility rather than through an affiliate, which was used for the Lexington and Dakota City projects.[29]

Q. Regarding the Company's first proposed Schedule 198 change, what reasons does the Company give to justify a deferral for RNG projects between the in-service and rate effective dates?

A. The Company states that the CPP is a mandatory program that requires the Company to make investments for compliance purposes. NW Natural makes the comparison to the Renewable Resource Automatic Adjustment Clauses (RAC) that allow electric utilities to recover costs of renewable electric resources through both an AAC and deferral because such investments are necessary for an electric utility to meet its renewable portfolio standard (RPS) obligations.[30] The Company draws a comparison between the CPP and RPS and believes it is consistent to allow them to defer the revenue requirement between the in-service date and rate effective date for RNG resources.

Q. Does Staff agree that the RAC is a fair comparison?

---

[27] NW Natural/1500, Kravitz – Chittum/15.
[28] NW Natural/1500, Kravitz – Chittum/20.
[29] NW Natural/1500, Kravitz – Chittum/14.
[30] NW Natural/1500, Kravitz – Chittum/15.

A. Not entirely. Staff notes that RPS requires Oregon-regulated electric utilities to meet their obligation solely through generation of renewable energy whereas the CPP was more agnostic about how the Company can meet its emissions reduction targets. In theory, the Company could have met its entire GHG emissions reductions obligations by reducing its natural gas load to a non-zero level that brings its emissions below the CPP cap through strategic electrification, energy efficiency, non-pipes alternatives, or other means. While RNG is one tool that the Company could have used to meet this obligation, it was far from the only tool.

However, when it comes to RPS this was not possible. It is indeed true that an electric utility could offset some of their RPS obligations by pursuing load reducing strategies such as non-wires solutions, energy efficiency, or demand response. However, the RPS was structured as a percent of load program, meaning that an Oregon utility subject to the RPS would have some renewable energy obligations if it has *any* non-zero load. Therefore, an electric utility was forced to use some level of renewable electricity to meet its obligation in Oregon's RPS framework, whereas NW Natural would have had no obligation to use RNG to meet its CPP obligations.

Further, Staff notes that the regulatory environment surrounding renewable electricity when the RAC was approved is much different than the current challenges facing RNG. Whereas renewable electricity projects at the time the RAC was approved were widely commercially available and well

known, Staff notes that RNG is still expected to both be costly and risky—a point that the Commission noted in the Company's most recent IRP, LC 79.[31]

Q. Are there other reasons that Staff believes that comparing the Company's RNG AAC to the RAC is not a good reason to approve the Company's requested?

A. Yes. In UE 416 (PGE's 2023 GRC), Staff testified the use of the RAC should be investigated given the drastic change in policy landscape following the passage of HB 2021 to balance concerns of customer protections with resource acquisition.[32] Staff expressed concerns that the RAC—which was authorized as part of the RPS program— was being used to recover costs associated with HB 2021 that were not clearly needed for RPS compliance. While Staff did not necessarily say that this was detrimental to customers, Staff highlighted the need to balance renewable electricity acquisition with customer protection. If the Commission does believe that the RAC and the RNG AAC are suitable comparisons, Staff still believes that this need to balance acquisition with customer protection is extremely important. For reasons previously stated, Staff believes that the Company's current RNG AAC already benefits the Company at the expense of retail customers. Furthermore, Staff believes that the Company's proposed changes would only exacerbate the imbalance.

Q. Would Staff support this deferral if the CPP were in place?

---

[31] *In the Matter of Northwest Natural Gas Company, dba NW Natural 2022 Integrated Resource Plan*, LC 79, Order No. 23-281, page 12 (August 2, 2023).

[32] See UE 416, Staff/1100, Dlouhy/20.

A. No. As stated before, Staff does not believe that the comparison between the RAC and the CPP is fair and therefore does not necessarily warrant the same regulatory treatment. Further, Staff continues to hold the Commission's concerns in Order No. 22-388 that an overly generous RNG AAC mechanism would incentivize the Company to unfairly favor RNG investments in a way that may be detrimental to customers and that allowing this deferral would suboptimally shift both upside and downside risks onto customers.

Q. What reasons does the Company give to justify this deferral after the invalidation of the CPP?

A. The Company states that it still has a decarbonization obligation under ORS 468A.205 and will likely be subject to new laws or regulations concerning its customers' use of natural gas.[33] The Company believes that the deferral will allow it to balance interests of its shareholders and customers in pursuit of this goal.

Q. How does Staff's position on this issue change now that the CPP has been declared invalid over procedural concerns?

A. Staff remains unconvinced by the Company's updated arguments in Exhibit 2000 and believes that allowing a deferral between the in-service and rate-effective dates is even less appropriate now that the CPP has been declared invalid and a successor program is only in the rulemaking stage. Until a new set of rules to execute EO 20-04 are created, it is unclear how effective RNG will be as a compliance resource. As Staff has previously described, this

[33] NW Natural/2000, Kravitz – Therrien/11-12.

uncertainty can be attributed to the Company's own lawsuit that invalidated the CPP. While RNG acquisition would likely further the Company's decarbonization efforts in service of its obligations to a future CPP-like compliance program, Staff worries that allowing the proposed deferral would remove essentially all performance risk from the Company without a quantifiable benefit for customers.

Q. Regarding the Company's second proposed Schedule 198 change, what reasons does the Company give to justify setting the earnings test at authorized ROE?

A. The Company recommends that the earnings test be set at the Company's authorized ROE because the current structure provides a disincentive for projects that offtake more RNG than forecasted. The Company testifies that a project that produces more RNG than expected will have a lower per-unit cost but a higher overall revenue requirement due to the biogas contract being tied to the owner's production of biogas.[34] As a result, the Company may be forced to pay higher than forecasted costs for a project that is performing better than expected.

Q. Does Staff believe that this is a problem that can be solved with better forecasting or a one-sided adjustment to the forecast?

A. Not necessarily. While Staff expects that the Company's ability to forecast the productivity of its RNG projects will improve over time, Staff notes that there would still be differences between the forecasted and actual RNG production.

[34] NW Natural/1500, Kravitz – Chittum/18.

While it would be reasonable to expect that the Company absorbs trivial differences between the forecasted and actual costs, Staff notes that setting the earnings test at 50 basis points below ROE puts the Company in a regulatory bind that should be avoided.

Q. Why do you believe that 50 basis points below ROE earnings test may put the Company in a regulatory bind?

A. Staff believes it to be best practice to incentivize cost effective projects and to include only prudently incurred costs into rates. As the Company describes in its testimony, an RNG project that increases in total costs can also become more cost effective on a per-unit basis if it produces a high amount of RNG. Therefore, the Commission could incentivize high-upside projects by allowing the Company to provide higher RNG production forecasts and recover costs associated with higher RNG production.

This could result in a situation where the Company's over-forecasting allows it to systematically over-recover costs and retain the excess if the earnings test is not triggered. In this case, the Company would have a less effective project that underspends relative to the amounts included in rates, resulting in a situation where over-collected costs should be returned to ratepayers. If the Commission wanted to prevent this problem mainly through forecasting, it would adopt recommendations to forecast lower RNG production. This also presents a problem though, as these lower-production RNG projects are less likely to be considered cost effective in an RFP or prudence review.

Given the awkward push and pull between wanting to reward low per-unit-cost projects and wanting to maintain the lowest overall cost projects, Staff believes that a change to the earnings test for the RNG AAC may be warranted if the Company's characterization of the issue is correct or the magnitude of the costs associated with the volume of RNG is large enough.

Q. Does Staff believe that setting the earnings test for all costs at authorized ROE is the best way to address the issue raised by the Company?

A. No. It is worth reminding the reader that the total costs of the Company's current RNG projects are a mix between fixed costs and variable costs. Staff does not believe that an earnings test is appropriate for the recovery of the fixed costs associated with an RNG plant due to the perverse investment incentives identified by the Commission in Order No. 22-388. Staff believes that retaining the 50-basis point earnings test for these fixed costs is still optimal and could perhaps be optimal for all costs.

Q. How would Staff propose to address this issue while still being mindful of the perverse investment incentives identified by the Commission in Order No. 22-388 if the costs associated with the volumetric portion of each RNG project are substantial enough?

A. If the volumetric portion of the RNG costs subject to the AAC were substantial enough, Staff would recommend that the Commission subdivide the earnings test for the RNG AAC into two parts. The first part would consider the fixed costs recovered through the Company's RNG AAC; this earnings test would

remain at the existing 50 basis points below authorized ROE threshold. The second part would consider the volumetric costs recovered through the Company's RNG AAC; this earnings test would be set at the Company's authorized ROE. Staff believes that this would not over-incentivize RNG investment while still rewarding RNG projects that are more productive than expected.

However, Staff has reason to believe that these costs are trivial in the context of the overall revenue requirement of the RNG costs and thus do not rise to a high enough level of concern to warrant a change to the existing RNG AAC.

Q. How did Staff analyze which portions of the Company's forecasted costs related to its RNG project are fixed vs volumetric?

A. Staff issued a data request asking the Company to estimate the total cost of the Company's two RNG projects if the volume of RNG gas delivered was 20 percent above or below the amount forecasted.[35] Staff found that a change in the forecasted amount led to a trivial change in the overall project costs, **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**[36] According to the Company's response to Staff DR 459, a 20 percent increase in delivered RNG for Dakota City led to **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** and a 20 percent increase in delivered RNG for Lexington led to **[BEGIN**

35 Staff/907, Dlouhy/4.
36 Staff/907, Dlouhy/4.

CONFIDENTIAL] [redacted] **[END CONFIDENTIAL]**to the overall project costs and recommends no changes to the existing RNG AAC.

Q. The Company also stated that it plans to develop RNG investments through the utility rather than the affiliate. Why does the Company propose to do this?

A. The Company proposes to make this change to its RNG acquisition strategy because the process can be administratively burdensome, and the Commission had previously expressed that the affiliate structure may require additional risk sharing in UG 462.[37]

Q. How was the risk sharing between the Company and its customers resolved in UG 462?

A. In UG 462, the Commission adopted the stipulation between all parties that allowed for customers to only pay up to 75 percent of costs above the stipulated benchmark of the average price per Renewable Thermal Credit (RTC) of the next two lowest bids from NW Natural's 2021 RFP.[38] This was due to concerns about risk allocation between the affiliate and NW Natural customers.

Q. What issues of risk allocation exist between the NW Natural's affiliate and its customers?

A. In theory, the affiliate structure provides some level of separation between the utility and the RNG projects. Given that RNG is an emerging field, there is

[37] NW Natural/1500, Kravitz – Chittum/14.
[38] *In the Matter of Northwest Natural Gas Company, dba NW Natural, Renewable Gas Adjustment Mechanism - Dakota City,* UG 462, Order No. 23-367, Appendix A page 3 (October 16, 2023).

some benefit to insulating customers from a project that could become unwieldy if the project costs are borne in full by the affiliate. Conversely, the Company may be able to retain the excess profits in the event that a particular RNG project is overly successful.

That said, Staff has previously brought up concerns that the Company's chosen method of recovering the capital costs of the affiliate's investments rather than creating an off-take agreement essentially eliminates any of the customer risk mitigation benefits.[39]

Q. Does Staff see any benefit to the Company choosing to house these RNG investments under the utility rather than the affiliate?

A. Yes. Staff agrees with the Company that juggling the AI filing with the RNG AAC filing creates an administratively burdensome process that is hard to manage. AI filings have a statutory deadline to be addressed within 90 days of filing, and the prudence review for a new RNG project must be resolved prior to the November 1 rate effective date in the RNG AAC. It is entirely possible for issues in both dockets to be contingent upon decisions made in the other docket, but the timelines may not align to allow for the dockets to be properly consolidated. Further, Staff believes that it may be easier to scrutinize RNG project details and recommend O&M adjustments if the projects were under the utility's umbrella.

However, Staff also believes that the affiliate could be used more productively if the Company chose to structure the interaction between the

[39] UG 462 Staff/200, Drennan/10.

affiliate and the regulated utility differently. In particular as Staff has pointed out in the past, an affiliate-owned investment with an off-take agreement provides greater customer protection against both upside and downside risk.[40]

Q. Staff has previously recommended approving the use of an affiliate to Portland General Electric (PGE). How is this different?

A. Staff notes that the Commission has concerns about the usefulness of PGE's affiliate and only approved its use on a trial basis.[41] Notwithstanding, Staff notes that the affiliate was only approved with conditions to limit the ways in which the affiliate could operate and measures to ensure that customers remain unharmed should the structure not align with the Commission's goals. In that case, Staff notes that there were tangible investment tax credit (ITC) normalization consequences that translate to direct savings for customers. While some questions about risk sharing may apply to both NW Natural's and PGE's affiliates, Staff is unaware of a use case for NW Natural's affiliate that directly leads to savings for customers if the Company continues to recover the capital costs of the projects through rates.

Q. Does Staff believe that the Company should abandon using its affiliate for RNG acquisition?

A. It is unclear whether the Company should fully abandon the affiliate, but Staff believes that the affiliate is not currently being used in a way to shield customers form financial risk or maximize customer benefits. Staff notes that

[40] UG 462, Staff/200, Drennan/10.
[41] Order No. 23-294, page 1.

the ratepayer benefits of an affiliate entail the affiliate absorbing any positive or negative risks associated with a project that would otherwise be part of the Company's regulated operations. The structure approved in UG 462 of passing through 75 percent of added project costs above the benchmark puts risks back onto the Company's customers, thus diminishing the value of the affiliate in the eyes of the customer. Without the benefit of insulating customers from price shocks or output downsides, Staff doesn't see the value of using the affiliate for future RNG projects. However, Staff does believe that the affiliate could be valuable to the utility's customers if the risk sharing is fairly allocated between the Company's regulated and non-regulated entities.

Q. What is Staff's recommendation regarding the use of the affiliate in RNG acquisition?

A. At the moment, Staff recommends that the Company take one of two actions regarding its affiliate:

1. Stop using the affiliate and house all future RNG investments under the utility's regulated arm. If the Company were to do this, Staff notes that this would come with greater scrutiny about the prudency of the investments and the Company's choice to invest in RNG in a least-cost least-risk manner.
2. Continue to use the affiliate but structure any future agreement as an offtake agreement between the affiliate and the regulated utility. This would allow the Company to use the affiliate as intended while insulating customers from both upside and downside risk.

Staff/900
Dlouhy/26

Staff looks forward to reading other parties' testimony on the issue.

Docket No: UG 490

Staff/900
Dlouhy/27

ISSUE 3. RESIDENTIAL LINE EXTENSION ALLOWANCE

Q. What is the purpose of this section of your testimony?

A. The purpose of this section of my testimony is to respond to the Company's proposed changes to its residential line extension allowance program.

Q. What is a line extension allowance (LEA)?

A. As the Company describes in its opening testimony, LEAs are a general practice of providing new customers a discount to an existing natural gas or electric network. The traditional thinking is that these discounts, if quantified correctly, can benefit both new customers and existing customers by decreasing the cost of a new customer joining the system, which then leads to another customer on the Company's system who will be able to contribute to the recovery of the system's existing costs over time.

Q. How has the Company and the Commission treated residential LEAs prior to this case?

A. The Company currently uses a Revenue/Margin Multiplier approach for new residential customers, which was authorized in the Company's last general rate case.[42] Under this approach, the amount granted for a line extension equals a multiple of the annual expected non-fuel base distribution margin revenues.[43] In Order No. 22-388 in UG 435, residential LEAs were revised downward from the previous level of $2,875. The Commission directed the Company to calculate residential LEAs using a 5x margin approach with a cap of $2300. It

[42] NW Natural/1900, Therrien/8.
[43] NW Natural/1900, Therrien/6.

was also ordered that this amount would be lowered to a 4x margin on November 1, 2023, and then to a 3x margin on November 1, 2024.[44]

In making this decision, the Commission felt that the Company failed to integrate costs associated with new customers related to the CPP.[45] The Commission also felt that the Company's current LEA policy leaves unrecovered rate base even after 30 years of continued service.[46]

Q. How have natural gas LEAs been treated in other states with ambitious decarbonization mandates?

A. Staff Exhibit 903 contains recent orders from Washington and California, which both have decarbonization targets or mandates similar to Oregon's.

California's SB 1477 was signed into law in September 2018 and promotes building-related GHG reduction goals. After this was signed into law, the California Public Utilities Commission (CPUC) underwent a rulemaking to achieve "the State's goals of reducing economy-wide GHG emissions by 40 percent below 1990 levels by 2030 and achieving carbon neutrality by 2045 or sooner."[47] In furtherance of this goal, the CPUC eliminated residential LEAs and permitted non-residential LEAs only under special circumstances.[48]

Washington state passed the Climate Commitment Act (CCA) in 2021, which created a carbon cap-and-invest program to reduce the States' GHG emissions by 95 percent by 2050. In Docket UG 210729, the Washington

48 Page 81 of CPUC Decision 22-09-026 in Staff Exhibit 903.

Utilities and Transportation Commission (WUTC) considered whether natural gas LEAs should continue to be calculated assuming that a customer stays on the natural gas system perpetually. This was done by creating a net present value (NPV) LEA calculation with no end date. In this proceeding, the WUTC determined that natural gas companies LEA NPV should be calculated using a seven-year timeline, which in effect lowered the allowable LEA substantially and better aligned LEAs with the legislature's intent with the CCA.[49] In UE-220053 in Washington, settling parties in Avista's joint natural gas and electricity rate case later agreed to fully phase out natural gas LEAs by January 1, 2025.[50]

Q. Does Staff believe that the outcomes and conclusions from California and Washington are relevant to the LEA discussion in Oregon?

A. Yes. Much like both of Oregon's west coast peers, Oregon has an ambitious decarbonization target through EO 20-04. Therefore, it behooves the Commission to take cues from other jurisdictions where natural gas LEAs were considered in the context of a decarbonizing economy. In particular Staff believes it may be in the Commission's best interest to either consider reducing the timeline used in the NPV calculation of the optimal LEA or eliminating residential LEAs entirely if one were to only compare Oregon to its peers.

However, Staff also conducted its own analysis to determine whether residential LEAs still appeared to be in the best interest of Oregon customers.

---

49 Staff/903, Dlouhy/91
50 Staff/903, Dlouhy/99.

Q. How does this inform the Company's proposed updates to its residential line extension allowance?

A. The Company modeled the cost of CPP compliance in its updated residential LEA, as was directed in Order No. 22-388. To do so, the Company first changed its LEA calculation methodology to a Discounted Cash Flow (DCF) model wherein the Company calculates the LEA amount that would ensure that a new customer is neither subsidized by nor subsidizes existing customers. Underlying this method is the assumption that the new customer pays rates for some time horizon, thereby paying for existing assets that would otherwise only be paid for by existing customers. The use of a DCF model alone does not incorporate CPP compliance costs, but the Company also makes the following changes to incorporate these costs and update the model:

- An assumption that a new customer brings incremental expenses related to the CPP that are not already in base rates.
- An assumption that a new customer will help pay for additional CPP costs, which is incorporated as a credit in the model.
- Incorporate the new customer's contribution to new, non-growth capital and the decline in rates that occurs due to asset depreciation.
- Incorporate a higher fixed charge and new-customer fixed charge that would go into effect on November 1, 2024, if approved.

- An assumption that the DCF has a 25-year term rather than a 30-year term.[51]

Q. With these new assumptions in the model, what is the Company's new proposal for residential LEAs?

A. The Company's new residential LEA proposal is a four-tiered residential LEA based on expected usage. The Company breaks these four groups into customers expecting to use 0-250 therms, 251-450 therms, 451-650 therms, and over 650 therms per year. Following the invalidation of the CPP, the Company still assumes that it will have a future decarbonization obligation and assumes that the dollar value of the decarbonization obligation falls from the CPP CCA price of $123 per metric ton of CO2 to only $63 per metric ton of CO2.[52] This value was based on the price of a compliance instrument for the Washington Climate Commitment Act, which was the most expensive carbon credit that the Company was aware of in the US as of the publication of the Company's supplemental testimony filed on February 23, 2024.

At a high level, the inclusion of the costs associated with decarbonization makes residential customers with lower expected natural gas usage relatively more valuable to the system than customers with higher usage according to the Company's assumptions. The Company's updated proposed residential LEAs are included in its Exhibit 2000 and reproduced in the table below.

[51] NW Natural/1900, Therrien/19.
[52] NW Natural/2000, Kravitz – Therrien/18.

These represent a small increase in the LEAs proposed in the Company's opening testimony.

Table 1: NW Natural's Proposed Residential LEAs[53]

Supplemental Testimony Proposal				
Usage Tiers (therms)	0-250	251-450	451-650	650+
LEA	$3,700	$3,300	$2,950	$2,200

Q. What has Staff done to analyze the Company's proposed residential LEAs?

A. Staff began by first probing the Company's statement about what it believes makes a sound line extension policy and applied it to the current regulatory environment. This provided Staff with high level insights about the validity of LEAs as a general practice and ways in which the Company's model should be updated if one believes they should exist.

Staff then analyzed the Company's modeling choices to determine whether the updates to the LEA DCF model – both related to CPP costs and unrelated to CPP costs – appeared sound and appropriate.

Finally, Staff considered the equity and energy justice implications of LEAs and how it believes that these implications should fit into the Commission's overall direction on LEAs.

Q. Please summarize Staff's analysis of the Company's residential LEA proposal.

[53] NW Natural/2000, Kravitz – Therrien/23.

A. Staff believes that the Company's residential LEA analysis fails to take into account the true cost of CPP or decarbonization, best practices that Staff has pushed for in other dockets, or findings from other jurisdictions. Further, Staff does not believe that the Company's overall problem statement on line extensions is valid here, as a "least regrets" action may actually be taking actions to reduce customer count. Finally, Staff worries that line extensions could lead to greater stranded asset costs, which would likely inequitably harm future customers who are financially unable to electrify or otherwise decarbonize.

With this in mind, Staff recommends that the Commission take one of two actions. Staff's primary recommendation is that the Company stop its practice of offering residential LEAs. As an alternative recommendation, Staff recommends that the Commission maintain its previous decision on phasing out residential line extensions. Staff recommends the phase down follow the timing of having the residential LEAs to a level equivalent to the 2x margin beginning on November 1, 2025, and then 1x margin on November 1, 2026, then entirely eliminate residential LEAs by November 1, 2027.

Q. The Company states that one of the goals of a sound line extension allowance policy is to not subsidize new customers.[54] Is this goal accomplished if LEAs are eliminated?

A. Yes. If the Company eliminates line extension allowances, there are no concerns about existing customers subsidizing new customers.

[54] NW Natural/1900, Therrien/5.

Q. The Company also states that LEAs are meant to allow a level of investment from the natural gas utility commensurate with the incremental revenues from the new customer. [55] Do you agree with the Company's perspective that a line extension policy that supports new investments is necessary in the current regulatory climate?

A. No. While the Company makes a skewed attempt at incorporating decarbonization costs in its line extension allowance policy, the Company's analysis tacitly assumes that these new customers will remain on the system and that expanding or maintaining the Company's system is in the public interest. Although the CPP has been declared invalid, the Company still has aggressive decarbonization obligations through its own initiatives, ORS 468A.205, and EO 20-04 and the likely successor program to the CPP through the ongoing rulemaking.

In its last IRP, the Commission questioned the Company's optimistic assumptions around the availability of RNG and its outright refusal to consider electrification as a compliance resource for the CPP— which the Commission believes may potentially harm customers.[56] Staff believes the Commissions concerns remain valid and worries that a line extension allowance policy that continues to tacitly support future Company investments increases the potential for harm to befall the Company's customers through future stranded asset risk.

[55] Id.
[56] Order no. 23-281, pages 8-9.

Q. Why does Staff believe that the Company's LEA modeling fails to account for best practices or actual CPP costs?

A. Staff believes that there are multiple questionable assumptions in the Company's LEA DCF model that lead to an improperly large LEA. Namely:

1. The Company chose to use a 25-year payback period. Staff has advocated for a 20-year payback period in past dockets and the WUTC has recommended as little as a seven-year payback period. Given past feedback and the evolution of the LEA conversation, Staff finds it reasonable if not overly generous to use a 15-year payback period.
2. The later years in the Company's NPV model assume that the CPP compliance cost is based on RNG acquisition being the marginal resource and costing a fixed $22 per MMBtu. This is similar to the costs projected by the Company in LC 79 that Staff took issue with.
3. The Company's CPP revenue multiplier assumes that a new customer contributes more revenue to the Company's CPP compliance as the Company's CPP emissions cap decreases. This inherently assumes that the GHG emissions compliance obligations will be passed directly back to the new customer without any consideration of rate spread, rate design, or shareholder burden of decarbonization costs.
4. The Company's CPP model assumes the need for an exceptionally high amount of new non-growth capital expenditures that will be paid for by new customers. Despite Staff's concerns about the Company riskily choosing to invest in the system during a period of regulatory uncertainty,

Staff firmly disagrees with the Company's modeling of costs associated with non-growth capital.

5. The Company's model assumes that a residential new line extension is permanently occupied and paying rates. However, in reality there are likely periods where households remain unoccupied, thus not contributing to covering the Company's revenue requirement.

Q. Regarding your first point, why does Staff believe that a 15-year payback period is more appropriate than a 25-year payback period?

A. As Staff pointed out in UG 461, Staff believes that there is considerable payback risk if one assumes that a customer will continue to use the gas system after 20 years.[57] This could lead to a scenario where new customers are subsidized to join the Company's natural gas system, leave the system early due to future policies, energy preferences, or high natural gas prices, and then leave remaining customers to pay for stranded rate base investments that may not have otherwise been pursued. Even though the CPP has been declared invalid and a successor program is not finalized, Staff still agrees a shorter payback period is more appropriate than the Company's proposed 25-year payback period and its previous 30-year payback period. As Staff has expressed in this testimony, the Company still has its own decarbonization obligations through its own decarbonization targets, ORS 468A.205, and the new decarbonization program that is expected to be in place at the end of an ongoing rulemaking.

[57] UG 461 Staff/500, Bolton/9.

Staff finds that a 15-year payback period better captures Staff's concerns about stranded asset risks given the uncertain regulatory future created in part by the Company, and provides an upper bound for the possible system benefit of an LEA. Given the WUTC's mandate to use a seven-year payback period—before parties agreed to phase out natural gas LEAs entirely for Avista—and the CPUC eliminating LEAs entirely, Staff believes that a 15-year payback period is still perhaps on the longer timeline for the period over which calculating an LEA.

Q. How does changing the payback period affect the optimal LEA?

A. Lowering the payback period from 25 years to 15 years lowers the breakeven LEA in the Company's DCF model for all usage tiers. Due to lower-usage customers contributing less to CPP compliance costs than higher-usage customers in the last five years, the reduction in the breakeven LEA is felt most strongly in the lowest-usage tiers of the Company's proposed LEA.

Q. Regarding your second point, why do you believe that assuming a CPP compliance cost of $22/mmbtu is incorrect?

A. The Company states in its opening testimony that the $22/mmbtu is meant to represent RNG being the marginal CPP compliance resource. Staff notes that this cost is not far off from the Company's assumed cost of RNG acquisition in LC 79. The Commission raised multiple concerns about both the Company's RNG acquisition strategy and its modeling of RNG in LC 79,[58] and Staff

[58] Order No 23-281, Page 12.

expressed concerns in comments throughout the docket that the Company's modeling of RNG costs did not align with other RNG cost forecasts.[59]

Q. What do you believe is an adequate price to use to model RNG acquisition as the marginal CPP compliance resource?

A. Staff believes that assuming a compliance cost of $30/mmbtu is more reasonable. Staff arrived at this number by considering the costs presented in Table 3 of Staff's Final Comments in LC 79, which is reproduced below.[60] In particular, Staff notes that the Historic EPA D3 Cost ranges from a minimum of $22.46/MMBtu to a maximum of $40.95/MMBtu. S&P also provides estimates of RNG that range from $20/MMBtu to $35/MMBtu. Staff believes that assuming a compliance cost of $30/MMBtu is a suitable midpoint estimate of RNG costs outside of the Company's internal projections that Staff has previously been skeptical of.

Table 2: Staff's RNG Cost Projections in LC 79

	Price
Tranche 1 (1/3 of NWN RNG Supply)	Portfolio cost of $14/MMBtu
Tranche 2 (2/3 of NWN RNG Supply)	Portfolio cost of $19/MMBtu
S&P long-term utility purchase of RNG	$20-25/MMBtu
S&P Transportation RNG	$30-35/MMBtu
Historic EPA D3 Cost – minimum (1/4/2021)	$22.46/MMBtu
Historic EPA D3 Cost – maximum (1/3/2022)	$40.95/MMBtu

Q. Regarding your third point, what is the CPP Revenue multiplier in the Company's LEA DCF model and how is it calculated?

[59] Staff/905, Dlouhy/8.
[60] Id.

A. The Company's LEA DCF model assumes that as the CPP cap decreases, the costs associated with the cap rise. Additionally, the Company assumes that the revenues collected from the new customer rise in proportion to the ratio of the percent reduction in the cap in a certain year relative to the base year. This ratio is called the "CPP Revenue Multiplier" in the model. The value of the multiplier— which, by definition, varies between 0 percent and 100 percent— is multiplied by the CPP compliance costs added by the new customer to calculate the new CPP Revenues brought in by the new customer in the model. This is meant to represent new customers being responsible both for their additional CPP compliance costs and a share of future CPP compliance costs.[61]

Q. Do you agree with the way the Company chose to model these added CPP revenues?

A. No. The CPP revenues inherently assume that these new costs will be passed directly onto a new customer and the way that Company chooses to spread the recovery of new CPP costs is a foregone conclusion. It is very possible that these costs are not evenly recovered among the residential class, covered by entities outside of the residential class, or even passed on to the Company's shareholders if the costs associated with the continued practice of subsidizing new customers while needing to meet aggressive decarbonization obligations be considered imprudent or there exists another public policy reason to do so.

[61] NW Natural/1900, Therrien/30.

Staff, therefore, believes that the CPP revenues line item is a gross overestimation of revenues brought in by a new residential customer and therefore outputs a higher optimal LEA estimate than the DCF would if the more realistic assumptions were used.

Staff does however note that modeling the revenues generated to comply with the CPP is a tricky modeling exercise. For the purposes of this testimony, Staff leaves this line item unchanged as a bounding exercise. Due to this very generous assumption, Staff's resulting LEA estimates should therefore be interpreted as highest possible LEA to a new residential natural gas customer when incorporating CPP revenues.

Q. Regarding your fourth point, why do you disagree with the quantity of new non-growth capital assumed in the model?

A. As Staff has stated elsewhere, Staff believes that there is a very real possibility that the least-cost least-risk way to meet the Company's expected decarbonization obligations may be to reduce customer count. If this is indeed the least-cost least-risk strategy, then the amount of non-growth capital should reflect a declining system. However, in a period of regulatory uncertainty, Staff believes that there may be reason at the moment to model non-growth capital as if the customer count were static. Much like Staff's modeling choice for CPP revenues, Staff's choice to not adjust new non-growth capital expenditures downward should be treated as a bounding exercise to demonstrate the highest possible LEA.

Despite Staff's choice to keep non-growth capital expenditures modeled as if there were a static customer count, Staff believes that the Company overstates the amount of non-growth capital expenditures.

Q. Why does Staff believe that the amount of non-growth capital expenditures is overstated?

A. Staff inspected the underlying data that the Company used to model its non-growth capital expenditures, which was submitted in response to Earthjustice's Data Request 42. In a workpaper accompanying the response, Staff found that the Company nets out only some of the costs it classifies as being related to new customer acquisitions. While the costs associated with new mains and new services are removed from the capital expenditures, the Company still includes the costs associated with construction permits and meters and the revenues associated with retained contributions. These two items are clearly tied directly to adding a new customer to the Company's system and thus should be included in the Company's estimation of new non-growth capital expenditures. While the Company states that it excludes these costs in response to Earthjustice by reducing capital expenditures by $2 million, Staff found that this does not fully reflect the full effect of removing these costs. When these are included, Staff found that non-growth capital expenditures were overstated by approximately $25 million per year from 2024 through 2032.

Q. How did Staff choose to model the non-growth capital expenditures after including items that Staff believes the Company erroneously omitted?

A. Staff chose to model the omission of these costs as a decrease in new non-growth capital expenditures by $45 million each year through 2026 and $15 million in 2027 onward. Staff made this choice for two reasons. First, the Company's capital expansion workpapers showed a significant decrease in capital expenditures from 2027 onward, indicating a behavioral breakpoint in capital expenditures that should be preserved for modeling accuracy. Second, Staff notes that the Company's LEA DCF model shows a change in capital expenditures from 2027 onward, so Staff believes it best to be consistent with the Company's modeling choices as much as possible.

Q. What is the effect of including these items in the Company's capital expenditures included in the Company's DCF model?

A. Reducing the Company's capital expenditures in the DCF model reduces the amount of plant that a new customer helps pay for, which in effect reduces the size of the calculated LEA.

Q. Regarding your fifth point, why does it matter that a new connection has stretches where it is unoccupied when calculating an optimal LEA?

A. As the Company models them in their DCF workpapers, line extension allowances assume a new customer is continuously paying rates, thereby contributing to the cost recovery of base rates and lowering the revenue

requirement burden for existing customers. If a new line extension is paid for but the home is not yet occupied for a stretch of months or a customer moves and leaves a residence unoccupied for a stretch of months, then the value of the new customer to the system is diminished.

Q. Do you have evidence that a new residence granted a line extension has a period where it is unoccupied before the new customer moves in?

A. Yes. In response to Staff DR 135, the Company notes that there is a typical delay of three to six months from the time between a line extension installation and the time that the customer begins to take service, with the expected time being approximately four months.[62] This means that the first year of customer revenues in the Company's NPV calculation likely accounts for approximately four months' worth of revenues that do not actually occur, which would overstate the system value of the line extension allowance.

To account for this in Staff's modifications to the Company's LEA DCF workpapers, Staff reduces the distribution revenues in the first year by two-thirds to reflect that the Company is unlikely to begin receiving customer bills from a new line extension for approximately four months. In effect, this lowers the system value of a new residential LEA.

Q. Do you believe that Staff's adjustment to the first four months of the Company's LEA DCF model fully address the overvaluation problems that arise from a residence being unoccupied?

---

62 Staff/902, Dlouhy/3.

A. No. As stated previously, it is likely that a residence is not continuously occupied throughout the entire fifteen-year period that the new customer is assumed to be billed. While there are likely certain types of dwellings such as rental apartments where this is a large problem and owned single-family residences where this is less of a problem, Staff chose not to model this for the sake of feasibility. Given that the resulting model still overstates the months when a dwelling is occupied and a customer is paying natural gas bills, Staff's change only partially reflects the diminished value of a residential LEA relative to the Company's filed model.

Q. Does Staff make any other changes to the Company's LEA DCF model?

A. Yes, Staff makes the following changes to the Company's model to reflect our recommendations on other topic areas.

- Staff lowers the basic charge for a newly connected customer from $26.25 to $10. Staff Witness Eric Shierman discusses Staff's opposition to the new customer basic charge in Staff Exhibit 1800. In effect, this lowers the optimal LEA substantially.
- Staff updates the ROE and long-term cost of debt to reflect Staff's conservative alternative to the midpoint ROE in its opening testimony as well as stipulated agreements. The effect on the optimal LEA from this change is minimal.

Q. Based on all the changes Staff made to the Company's LEA DCF model, what does Staff believe to be the optimal residential LEA under the Company's current tiered LEA framework?

A. Staff's full DCF model can be found in Staff Exhibit 903. Based on these changes, Staff finds that at all tiers, a line extension *disallowance* is justified at every usage tier even with assumptions that Staff views as overly generous. Table 3 contains a summary of the calculated LEAs for each usage tier using Staff's edits to the Company's LEA DCF model.

Table 3: Staff's Residential LEA by Usage Tier

Model Results at Proposed Consumption Levels (Therms)				
UPC (Therms)	250	450	650	1,000
LEA	-$144	-$1,284	-$2,424	-$4,419
Times Margin	-0.4	-2.4	-3.4	-4.3

Q. Are there additional equity or energy justice reasons that it may be in customers' best interest to end the practice of natural gas residential LEAs?

A. Yes. Staff notes that a likely outcome of decarbonization is a decrease in natural gas use. Even if natural gas use falls across the Company's system, assets and other fixed costs will still be in base rates and contribute to revenue requirement. Even if these assets are not technically stranded assets, it is possible that customers who are induced to join the natural gas system now will be on the hook to pay for these assets in the future even if their usage declines. As these costs accumulate and compliance costs with a possible successor program to the CPP rise, one would expect that customers who have the means to switch away from natural gas will choose to do so for economic reasons or other personal preferences. In effect, this may result in

only customers with the lowest ability to leave the natural gas system stuck paying for system costs that they may not have had a part in.

A recent paper from Lucas Davis and Catherine Hausmann found that a ten percent decrease in natural gas utility customer count only results in a five percent decrease in utility revenues, with remaining customers left paying for the difference.[63] Staff finds that the potential exacerbation of energy justice concerns is yet another reason to view removing residential LEAs as a "least regrets" outcome at the moment.

Q. What is your recommendation for residential LEAs?

A. Staff recommends that the Commission take one of two actions. Staff's primary recommendation is that the Company stop its practice of offering residential LEAs. Staff believes this to be in the best interest of customers at the time given the regulatory uncertainty surrounding the successor program to the CPP and the results of Staff's model indicating that a line extension disallowance would be in customers' best interest even with the most generous assumptions.

As an alternative and more conservative recommendation, Staff proposes the Commission maintain its current policy that identified a phase down to the residential LEAs. Such a phase down could be to a level equivalent to the 2x margin beginning on November 1, 2025, and then 1x margin on November 1, 2026, and then entirely eliminate residential LEAs by November 1, 2027.

63 Staff/903, Dlouhy/177.

Docket No: UG 490

Staff/900
Dlouhy/47

ISSUE 4. METER MODERNIZATION PROGRAM

Q. What is the purpose of this section of your testimony?

A. This section addresses the Company's proposed meter modernization program contained in the Company's Exhibit 900.

Q. Please summarize the Company's proposed Meter Modernization Program (MMP).

A. The Company's MMP is an initiative undertaken by the Company to replace portions of its aging metering system. The MMP would replace meters that run "fast" – known as Periodic Cause for Change (PCC) meters – and failing Encoder Receiver Transmitter (ERT) devices.[64] In addition to these two main categories, the Company intends to replace its meter reading software and incorporate newer, ultrasonic meters.[65]

As part of the MMP, the Company also requests three new FTEs to run a new software suite, manage workstreams, and manage the meters' expanded AMI capabilities.[66]

The Company proposes to recover an Oregon-allocated $69.2 million in this rate case and the remainder of the capital costs of the four-year project through future rate cases and the Company's proposed multi-year rate plan.[67] The Company also proposes to use a deferral to capture the substantial but

64 NW Natural/900, Karney/3.
65 NW Natural/900, Karney/3-4.
66 NW Natural/900, Karney/34.
67 NW Natural/900, Karney/37-38.

short-lived O&M costs to deploy these meters rather than recover the costs through base rates.[68]

Q. What does it mean for a meter to run "fast" and what is the Company's criteria for a meter that runs too fast?

A. As the Company describes in its opening testimony, a "fast" meter is a meter that reads a higher volume of natural gas consumed than is actually consumed. A meter is determined to be PCC-eligible if it reads at least 102 percent of the actual metered volume of gas.[69] Existing meters that read between 98 and 102 percent of the actual volume of gas and new meters reading between 99 and 101 percent of actual volumes of gas are determined to be accurate.[70]

Q. Does Staff have any issues with these criteria to determine a fast or accurate meter?

A. Not at this time. Staff notes that the Company's forecasted average use per residential customer in the Company's territory is 660 therms in the test year.[71] A two percent increase in billed volume over the course of the year under the existing tariff rate of $1.29519/therm would improperly charge customers with a fast meter an additional $17 per year.

However, Staff was initially concerned that more could be done to verify whether replacing the family was the right decision ex post. Staff issued a data

[68] NW Natural/900, Karney/39.
[69] NW Natural/900, Karney/7.
[70] NW Natural/900, Karney/8.
[71] NW Natural/1800, Wyman/21.

request asking whether the Company does any analysis on the meters after an entire family is replaced. Based on the Company's response to this data request, the Company does do ex post testing that has indeed resulted in keeping meters in service that were previously thought to be PCC meters.[72]

Q. How does the Company determine which meters need to be replaced?

A. The Company designates all its meters pre-2020 into various families and subfamilies based on the manufacturer, meter characteristics, and the date that the meter is placed in service. Post-2020, families are made solely on the meter manufacture date.[73]

Within each family, the Company selects randomly sampled meters that are taken out of service and tested off site. The Company then determines whether more than 80 percent of meters are deemed to be accurate and more than 90 percent are deemed to be fast by taking into account family size and conducting additional testing on 10 year or older meters if needed. A meter family that is either fast or not accurate is a candidate for being changed out by the Company's criteria.[74]

Q. How long does the Company have to replace meters and how many meters has the Company identified for replacement?

A. The Company has four years following its annual Meter Sampling Report filed in RG 41 to remove any non-conforming meters identified in the report. The Company identifies almost 90,000 PCC meters that must be replaced by

---

72 Staff/902, Dlouhy/7.
73 Id.
74 NW Natural/900, Karney/9-10.

2026.[75] Additionally, the Company identified approximately 500,000 ERTs contained in the Company's meters that are expected to reach the end of their useful life between now and 2027.[76]

Q. Does the Company plan to replace their current meters with a similar design?

A. In part. The Company's Oregon territory is comprised of almost exclusively diaphragm meters, which uses mechanical components to measure the flow of gas. As part of the Company's MMP, the Company proposes utilizing an equal mix of diaphragm meters and ultrasonic meters.[77]

As the Company describes in its opening testimony, these meters are generally more accurate, have more reliable useful lives, and require less maintenance.[78] Overall, the Company plans to deploy approximately 40,000 diaphragm meters and 50,000 ultrasonic meters.[79]

Q. Please summarize the timeline, expected costs, and cost recovery plan for the Company's proposed MMP?

A. The Company expects the MMP to take approximately four years and plans to roll out the MPP in six batches:

- Batches 1-2: Urban areas that don't benefit as much from the ultrasonic cellular meters, such as Eugene and Corvallis.

[75] NW Natural/900, Karney/12.
[76] NW Natural/900, Karney/3.
[77] NW Natural/900, Karney/26.
[78] NW Natural/900, Karney/19.
[79] NW Natural/900, Karney/35.

- Batches 3-4: Rural and coastal areas that will primarily use the ultrasonic cellular meters from Itron. This batch is being deployed later than the first two batches to accommodate Itron's production timelines.
- Batches 5-6: Primarily replacing the PCCs and ERTs in the Portland metro area.[80]

The Company explains that rural and coastal areas are generally harder to reach for the Company's field crew and will likely benefit more from the remote shutoff capabilities of the ultrasonic meters in the event of disasters such as wildfires or tsunamis.[81]

Q. What does Staff think about the Company's prioritization of meter replacements and choice of where to use its various types of meters?

A. While Staff has some concerns about continuing to switch to primarily ultrasonic meters, Staff thinks that the Company's choice of where to deploy ultrasonic meters is sensible in some cases. Staff understands that servicing a meter in a remote location is relatively more costly than doing so in an urban environment and believes that it is prudent to prefer a slightly higher capital cost meter with lower O&M expenses in this circumstance.

However, Staff holds concerns about whether using ultrasonic meters across the Company's entire service territory would be in customers' best interest should the Company choose to move in that direction in the future. As the Company describes in its opening testimony, ultrasonic meters have a

[80] NW Natural/900, Karney/35.
[81] NW Natural/900, Karney/36.

useful life of approximately 20 years.[82] Based on the Company's response to Staff's data requests, these meters would need to be replaced in their entirety at the end of their useful lives.[83]

However, diaphragm meters generally have a suite of replaceable parts that can extend the useful life of the meter beyond the expected service life and in circumstances where a single component fails.[84] Further, diaphragm meters have an expected useful life of 30 years as opposed to the ultrasonic meter's 20-year useful life.[85] While O&M or warranty considerations may not make diaphragm meters the best option in all cases, Staff expects that there will be many cases moving forward where continuing to use diaphragm meters is a more cost effective way to provide service than a full ultrasonic meter conversion.

Q. Does this mean that Staff is supportive of the Company's MMP?

A. Not entirely. In relation to Staff's thoughts regarding the CPP, the RNG AAC, and the residential LEA, Staff is skeptical whether it is in the customers' best interest to undertake an aggressive initiative to replace and upgrade all the Company's meters at this time. As part of the Oregon's and Company's decarbonization goals, Staff expects that some amount of NW Natural customers will voluntarily choose to electrify for either personal or economic reasons. Any customer that receives a meter replacement and opts to fully

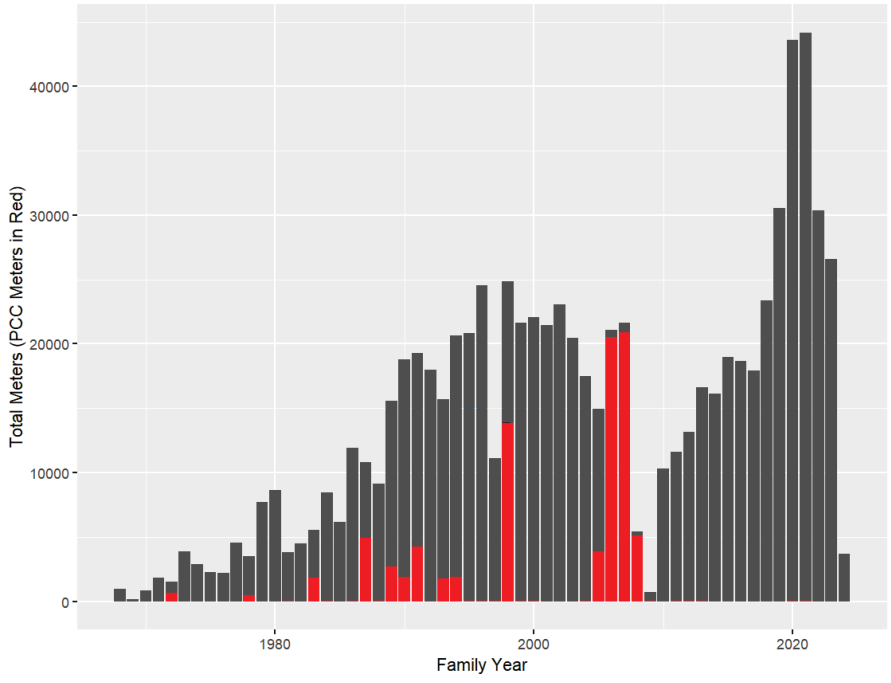
82 NW Natural/900, Karney/19.
83 Staff/902, Dlouhy/5.
84 Staff/902, Dlouhy/4.
85 Staff/902, Dlouhy/10.

electrify before the end of the new meter's service life will necessarily leave stranded asset costs that remaining customers are responsible for paying.

Q. Are there other reasons that Staff has concerns about allowing the Company to fund the replacement of meters through ratepayers?

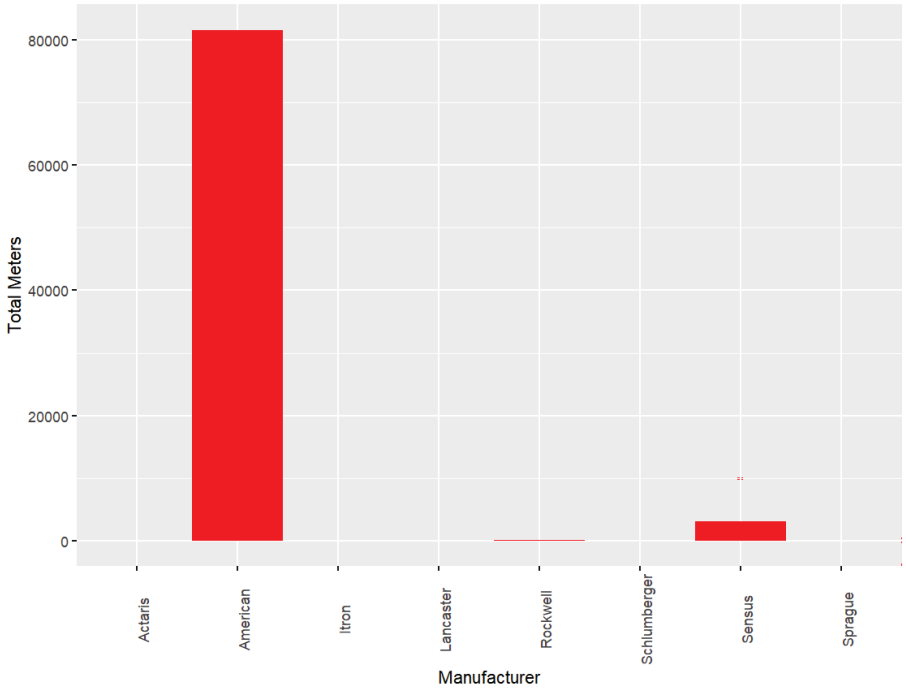
A. Yes. The bulk of the Company's PCC meters appeared to have failed between 2005 and 2008 and seem to come almost exclusively from a single manufacturer. Figure 1 presents a histogram of the Company's meters by their installation year and highlights the quantity of PCC meters within each installation year. The data presented in Figure 1 was compiled from the Company's response to Staff DR 382.

Figure 1 Total Meters and PCC Meters By Family Year



As can be seen in Figure 1, most meters flagged as PCC meters were installed between 2005 and 2008. Figure 2 presents the quantity of PCC meters by manufacturer.

Figure 2: PCC Meters by Manufacturer



Staff notes that the manufacturer American is also known as Honeywell. It can clearly be seen that the bulk of the meters came from American.

Q. Why does the Staff have concerns about the timing of the meter installations?

A. In its response to Staff DR 387, the Company stated that it typically has a 15-year warranty for its meters.[86] Staff notes that many of the PCC meters have been in service for just over 15 years, calling into question whether the

[86] Staff/902, Dlouhy/8.

Company was aware of the problem during the warranty period or should have been aware.

Further, based on the Company's response to DR 387 and discovery from previous dockets, **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

Q. Does Staff think that the Company could have been aware of these fast meters during the warranty period for the meters?

A. In some cases, yes. Staff Exhibit 906 contains the Company's RG 41 filings from the last four years. Within each year, there are a non-trivial number of meters in each filing that have been in service for less than 15 years.

Q. Has the Company pursued a warranty claim for any of these meters?

A. Yes. According to the Company's response to Staff DR 301 from UG 435, which the Company has provided with its response to Staff DR 387 in this docket, **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** Staff issued a follow up data request to

determine when these replacement meters were bought or placed in service. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**[87] **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**[88]

Q. Does Staff believe that the Company should have investigated other meters from the manufacturer that is responsible for the defective meters?

A. Yes. Staff notes that not only did the Company identify an entire batch of meters from American that it eventually got refunded through a warranty claim, but the Company also installed a large number of meters from the same manufacturer in each of the prior four years. Staff believes that it would have been a reasonable and prudent step to investigate whether these meters were also systematically running fast given that they came from the same manufacturer and have a similar vintage. Given the large confluence of meters from the same manufacturer that also failed the Company's inspection in such a similar timeframe, Staff is concerned that the Company did not properly

87 Staff/907, Dlouhy/8.
88 Staff/907, Dlouhy/9.

investigate this issue to determine whether it should pursue a warranty claim for these meters prior to the warranty expiring.

Q. What is the net book value of these meters and does the Company intend to remove the net book value of these meters from rate base?

A. It is difficult to exactly determine the net book value of these meters because the Company relies on group depreciation and groups all meters that were put into service in the same calendar year into a single group. Based on the Company's response to Staff DR 461, Staff estimates that the net book value of the PCC meters put into service from 2005 to 2008 to be approximately $9.3 million. Based on the Company's response to Staff DR 462, this amount would continue to be recovered through base rates based on common group depreciation practices.[89]

Q. Why does Staff believe that it is proper to take this amount out of rate base despite common group depreciation practices?

A. As stated previously, Staff believes that the Company could have caught these meters and replaced them under warranty had their quality control been more proactive. Further, Staff questions whether it is in the best interest in customers to replace these meters rather than to merely repair and redeploy them. Therefore, Staff believes that it is improper to fall back on depreciation practices that assume entirely probabilistic asset survival rate.

Q. How does Staff calculate this value?

---

89 Staff/902, Dlouhy/12.

A. Staff issued a data request asking for the net book value of meters in each family year. The Company explained to Staff that it uses group depreciation for its meters and could only provide the net book value at the installation year level and provide an average unit cost for the entire year. Using this information, Staff found the average book value of meters in the 2005 to 2008 range and multiplied that by the number of the PCC meters identified by the Company in these years. Staff made this choice after noticing that the in-service year in the Company's Attachment 2 to its response to Staff DR 461 did not perfectly align with the PCC meters by family year in Attachment 1. While Staff believes that this provides a reasonable estimate of the net book value of the meters that should be removed from rate base according to Staff's analysis, Staff welcomes other intervenors or the Company to provide a more accurate methodology to calculate the impact of removing the net book value of these meters from rate base.

Q. The Company states that it chose to replace drifting meters rather than propose a drifting adjustment due to the Commission's opposition to the adjustment in UG 461 and because the ERTs would need to be replaced anyway.[90] Do you think this is sufficient justification to replace PCC eligible meters?

A. Not entirely. Staff highlighted issues with the drift adjustment in UG 461 and the Company notes that it could not impose a drift adjustment if a meter's ERT

[90] NW Natural/900, Karney/32-33.

fails.[91] While Staff understands that there may be instances where it makes sense to replace a PCC meter, that this may be less cost effective than merely replacing the ERT and applying a drift adjustment. Given Staff's concerns about significant stranded asset costs, Staff believes the latter method may be more prudent.

According to the Company's opening testimony, the Company entered into a $28.8 million agreement with Itron to purchase approximately 400,000 ERTs over the coming years.[92] This amounts to a unit cost of approximately $72 per ERT, whereas a new ultrasonic meter with a new ERT costs $200.[93] Further, it is Staff's understanding that a new ultrasonic meter must be entirely replaced at the end of its useful life whereas a diaphragm meter can be refurbished or kept in service. Staff also points out that many of NW Natural's diaphragm meters are still in service well over 30 years. Staff questions whether it is in customers' best interest fully replace a PCC meter and its ERT rather than apply a drift correction and replace the ERT at a third of the cost.

Q. Does Staff have any objections to the three new FTEs related to the MMP?

A. Not at this time.

[91] NW Natural/900, Karney/33.
[92] NW Natural/900, Karney/35.
[93] NW Natural/900, Karney/19.

Q. The Company states that it intends to recover the capital costs of the MMP through a multi-year rate plan and the O&M costs through a deferral.[94] Does Staff agree with this approach?

A. While Staff has raised concerns about the cost effectiveness of the Company's MMP, Staff agrees with the Company that the O&M costs are likely better recovered through a deferral. It is Staff's understanding that the O&M costs are likely to be substantial and short term, meaning that there is risk of the Company over-collecting costs to fund the MMP if the costs remain in base rates and the Company stays out of a rate case for an extended period of time.

Q. Please summarize Staff's take on the Company's Meter Modernization Program.

A. Staff believes that the Company's Meter Modernization Program addresses some of the Company's needs, albeit not necessarily in the most cost-effective manner. Staff takes no issue at this time with the Company's plan to replace ERTs on meters that are nearing the end of their life.

However, Staff is skeptical of the value of transitioning to primarily ultrasonic meters in the long term. As the Company has stated, the more expensive ultrasonic meters have fewer replaceable parts than the existing diaphragm meters and will likely need to be replaced in full at the end of their service life whereas a diaphragm meter is cheaper and may be repaired and redeployed. While Staff believes that there may be appropriate use cases for ultrasonic meters, Staff is wary of investing in the highest-grade technology in

[94] NW Natural/900, Karney/38-39.

an era where the Company is faced with many decarbonization obligations that threaten to drive down the system value of the more expensive and nascent technology.

Staff is also concerned that the Company is replacing many of these meters well before the end of their useful life while keeping the remaining net plant of the meters in rate base. This concern is heightened by Staff's worry that the Company's meter testing practices failed to catch many PCC meters in the 2005-2008 family years while they were still under warranty. Staff recommends that the remaining net book value of the PCC meters in the 2005-2008 family years be removed from rate base to account for Staff's concerns about further building out the gas system in an era of decarbonization and about its concerns that the Company did not do enough to fully investigate the accuracy of these meters while they were still under warranty.

Q. What is Staff's overall adjustment regarding the Company's Meter Modernization Program?

A. Staff's adjustment lowers the Company's Oregon-allocated rate base by $9.316 million to reflect the net book value of PCC meters in the 2005-2008 family years.

Q. Does this conclude your testimony?

A. Yes.

WITNESS QUALIFICATION STATEMENT

NAME: Curtis Dlouhy

EMPLOYER: Public Utility Commission of Oregon

TITLE: Economist, Strategy and Integration Division

ADDRESS: 201 High St. SE, Ste. 100
Salem, OR 97301-3612

EDUCATION: PhD, Economics
University of Oregon,
Eugene, OR

Master of Science, Economics
University of Oregon,
Eugene, OR

Bachelor of Arts, Economics & Math
Nebraska Wesleyan
University, Lincoln, NE

EXPERIENCE: I have been employed by the Oregon Public Utility Commission (OPUC) in the Strategy and Integration Division since April 2022 and had previously worked in the Rates, Finance, and Audit Division since June 2020. My responsibilities include providing research, analysis, and recommendations on a range of regulatory issues. I have provided analysis and expert testimony in various contested cases including UG 388, UG 389, UG 390, UE 374, UE 390, UE 391, UE 394, UG 433, UG 435, UE 399, UE 400, UE 402, UE 416, UE 420, UE 427 (ongoing), and UG 490.

Prior to working for the Commission, I was employed by the University of Oregon as a graduate employee where I taught classes in Intermediate Microeconomics, Industrial Organization, and Antitrust Economics. My PhD dissertation won an award from the Transportation and Public Utility Working Group and covered topics in fossil fuel markets ranging from coal mine closure, dispatchable electricity choices under carbon taxes, and coal transport via railroad. While completing my PhD, I provided economic analysis for the Graduate Teaching Fellows Federation as a member of its contract bargaining team.

Non-Confidential Responses to Data Requests in Support Of Opening Testimony

April 18, 2024

NW Natural®

Rates & Regulatory Affairs
UG 490
Request for a General Rate Revision
Data Request Response

Request No.: UG 490 Coalition DR 42

Please provide all documents and data provided by NW Natural to Mr. Therrien which he relied upon to prepare NW Natural Exhibits 2000, 2001, 2002, 2003, 2004, 1900, 1901, 1902, 1903, 1904, 1905, 1906, 1907.

Response:

The Company objects to this data request under 860-001-0500 because the request for "all documents and data" is burdensome, overly broad and not commensurate with the needs of this case, the resources available to the parties or the importance of the issues to which the discovery relates. NW Natural also objects on the basis that some of the information requested includes attorney-client privileged information and attorney work product; the attachments to this response are compiled to not contain attorney-client privileged information or attorney work product. Without waiving these objections, the Company responds as follows:

Please refer to UG 490 OPUC DR 378 Attachment 1 and Attachment 2. The tabs, "Input Output - Exh. 1905" and "Input Output - Exh. 1905R (2002)" in Attachment 1 and 2, respectively, indicate data that the Company provided to Concentric Energy Advisors for the exhibits cited above. The data sources are consistent between both attachments. These files can be referenced as follows:

- UG 490 Coalition DR 42 Attachment 1: CPP Proxy Cost for Revised LEA Model.xlsx. Data input: CPP Cost ($/Therm).

- UG 490 Coalition DR 42 Attachment 2: DEQ Compliance schedule - 121621_AttachmentE_Locked.xlsx. Data input: CPP Revenue Multiplier (Annual Cap Percent Change).

- UG 490 Coalition DR 42 Attachment 3: Capex for LEA Analysis.xlsx. Data input: Forecasted System Capex. The "Summary" tab references "Per Jorge email." The referenced email from Jorge Moncayo, NW Natural's Business Planning Senior Director – Financial Analysis, described the $2 million/year reduction of the capex numbers to reflect the cost of meters and permits related to new growth, in keeping with the objective of determining future non-growth related capex. It also explained that for years beyond 2032, the capex for 2032 could be used as a proxy.

- UG 490 Coalition DR 42 Attachment 4: 2023 Plant Workpaper.xlsx. Data inputs: Gross Plant and Accumulated Depreciation.

- UG 490 Coalition DR 42 Attachment 5: NWN Depreciation Rates for Concentric.xlsx. Data inputs: Depreciation Accrual Rates.

- UG 490 Coalition DR 42 Attachment 6: NWNG Earnings Review Filing 12-31-2022.pdf. Data inputs: Deferred Taxes, Operations & Maintenance, and Net Utility Plant.

- UG 490 Coalition DR 42 Attachment 7: Workpapers_2022 IRP Scenario Results_v2 (1).xlsx. Data inputs: Customer Count.

Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 135

Please provide the expected length of time between a residential line extension being fully installed and a residential ratepayer's service with the Company beginning.

Response:

The Company has different expectations for the length of time between a residential line extension installation and when a residential customer is taking service (e.g., when a billing meter is installed and reporting load), depending on market segment. The expected timeline by market segment is as follows:

- Residential conversion services: Three months.
- Residential new construction subdivision services: The billing meter is typically set at the time of service installation, and if not, it is set within three months. The meter is generally set at the time of installation to provide dry-out services to the premise under Rate Schedule 27 Residential Heating Dry-Out Service.
- Residential new construction infill / spot lot services: These projects can occur over longer cycles relative to conversion and new construction subdivision services, but typically billing meters are set within three to six months.

Further, in its estimation of a New Premise Use-per-Customer ("UPC"), the Company found that "in general there is a about a four-month delay between when a [residential] service is initialized and when the bills show therm load.."[1] which is consistent with the Company's expectations described above. For a narrative summary of this analysis, please refer to NW Natural/1800, Wyman/21-24.

Rates & Regulatory Affairs
UG 490
Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 380

Please discuss whether an entire diaphragm meter must always be replaced at the end of its expected useful life. If it does not, please provide a list of individual components that may be replaced to extend the useful life of the meter, the useful life of these components and the cost of these components.

Response:

No, a diaphragm meter does not need to be replaced when it reaches its expected useful life. For example, if a diaphragm meter is performing normally, it may remain in service fully depreciated for many years after its expected useful life.

A diaphragm meter is considered at the end of its useful life when it must be removed from service. This includes, but is not limited to, when the meter has been declared non-conforming (PCC) by the Meter Sampling Program, if the meter is damaged or otherwise inoperable, the service is being relocated, the meter is sized incorrectly for the load, or if the meter family size is so small that statistical sampling is impractical.

Regardless of the reason for removal, NW Natural replaces these end-of-life diaphragm meters and does not refurbish them. The primary reason for utilizing new meters versus refurbished is that a refurbished meter carries a 1-year warranty, whereas a new meter is given a 15-year warranty from the manufacturer.

UG 490

Request for a General Rate Revision

Data Request Response

Request No.: UG 490 OPUC DR 382

For each family and subfamily of meters currently in service, please provide:

a. The quantity of meters in the family
b. The In-Service Year for the family
c. The meter manufacturer
d. The cost to purchase each meter
e. The O&M costs associated with installing the meter
f. A description of the geographic area(s) where the meters were installed.
g. An indicator about whether the meter family or subfamily is set to be replaced due to ERT replacement or PCC.

Response:

In response to a follow-up inquiry from the Company, the Staff Initiator of this data request clarified that Staff is requesting aggregated meter information at the family level for all meters. In response to the clarified data request, please see UG 490 OPUC DR 382 Attachment 1 for a comprehensive list of meter families, their in-service year, meter manufacturer, the geographic area where the meter is installed (by Company District) and the number of meters that require ERT replacement or have been declared non-conforming (PCC) and require complete meter replacement. This list is inclusive of the meters in the Company's Meter Sampling Program, which is reflective of approximately 99% of installed meters.

Please note that the list of meters in UG 490 OPUC DR 382 Attachment 1 were developed in response to this data request and will not perfectly tie out to the Company's initial filing in this case because the meter modernization program is already underway and the numbers have changed since that time.

In response to a subsequent follow-up inquiry from the Company, the Staff Initiator of this data request clarified that for subparts (d) and (e), the Company may provide an estimate of expected current costs for the purchase of a new meter (subpart (d)) and with the installation of a meter (subpart (e)). Regarding subpart (d), please see the Direct Testimony of Joe S. Karney, NW Natural/900, Karney/Page 19, Lines 11-15. Regarding subpart (e), please see the Company's response to UG 490 OPUC DR 124.

Rates & Regulatory Affairs
UG 490
Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 386

Please discuss whether the Company performs any ex post testing on a family of PCC meters that were removed.

Response:

NW Natural performs accuracy testing on each meter that is removed from service, including all PCC meters. These test results are recorded for each meter in the Company's Customer Information System. To evaluate the accuracy of the Meter Sampling Program statistical analysis, these test results are periodically evaluated to ensure that the PCC meters being removed from service exhibit the same performance characteristics of the sample meters upon which the PCC determination was based. If the test results from PCC meters removed from service exhibit statistically significant differences from the sample meters, the Company performs additional analysis to determine the reason for the difference.

An example of this analysis was discussed in the Company's RG 41 Annual Meter Sampling Program Report for 2022, included here as UG 490 OPUC DR 386 Attachment 1. A modification to the 2005 Perf #572 Sensus R-275 meter family was made after evaluating meter tests for PCC meters removed from service, where specific delivery lots for these meters were determined to be non-conforming, while others were determined to be conforming, resulting in reducing the number of PCC meters by 6,673. NW Natural continues to evaluate performance of all meters removed from service to ensure accuracy and compliance with the Meter Sampling Program.

UG 490
Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 387

Please discuss whether the Company pursues any warranty claims in the event that a family or subfamily of meters does not meet the Company's standards for measurement tolerance. If the Company does receive compensation from a warranty claim, please discuss whether and how the Company returns these monies to ratepayers.

Response:

NW Natural has a 15-year warranty from the three major diaphragm meter manufacturers that provide meters covered under the Company's Meter Sampling Program. These manufacturers are Honeywell (previously known as Elster or American Meter), Itron and Sensus (previously known as Rockwell). If a meter family is determined non-conforming and is within the 15-year warranty period, a warranty claim is pursued for those meters. The claim threshold defined by each warranty specifies that no less than 85% of each shipment shall maintain their original factory setpoint calibration plus or minus 2%, for a period of 15 years.

Warranty claims differ between manufacturers and claims. NW Natural has a pending warranty claim with Honeywell. For more information, please see the Company's response to UG 435 OPUC Confidential DR 301.

If the Company does receive compensation from a warranty claim, the gross plant of the affected meters will be reduced and overall rate base will be reduced. The warranty claims benefit customers by a lower return on meter investments as well as the depreciation expense (return of) those investments in the next rate case and until those meters are retired.

Request No.: UG 490 OPUC DR 460

Please provide the expected asset life of the PCC meters that the Company intends to replace as part of the Meter Modernization Program.

Response:

Meters and meter equipment are grouped into categories of like life characteristics as is the standard practice for recovery, therefore individual life per meter asset is not tracked. The current approved and proposed depreciation rate for Meters is based on an average service life of 30 years. Some of the meters being replaced are much older than 30 years and some are not which is consistent with a mortality curve for mass property gas assets.

Docket No. UG 490

Staff/902
Dlouhy/11

NW Natural®

Rates & Regulatory Affairs
UG 490
Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 461

Please list the dollar value of the gross plant, net plant, and accumulated depreciation of the meters that the Company plans to replace as part of the Meter Modernization Program. When responding to this data request, please break out this request by Family Year.

Response:

NW Natural met with the Staff Initiator on April 1, 2024, to clarify this request. As a result of that meeting, the Company responds as follows. There are two attachments included. UG 490 OPUC DR 461 Attachment 1 is an Excel version of an earlier provided spreadsheet of eligible PCCs by meter family year (UG 490 OPUC DR 382 Attachment 1). UG 490 OPUC DR 461 Attachment 2 is an export from PowerPlan referring to the gross plant, net plant, and accumulated depreciation as of 12/31/2023 of assets inclusive to Meter Modernization.

There are some caveats that should be noted.

For UG 490 OPUC DR 461 Attachment 1:

- Meter modernization will only be changing out residential meter sets from family years 1989 to current. All PCC's from earlier years will be changed out using our internal resources as business as usual.
- A PCC "Family Year" vs. "Purchase Year" may vary somewhat.

For UG 490 OPUC DR 461 Attachment 2:

- NW Natural uses group depreciation, so all vintage years are one asset.
- Average cost provided in column "C".
- For highlighted rows in yellow, we have not updated the quantity within the system yet.
- It reflects the years Meter Modernization will be including, along with the filter of residential meters only.

Docket No. UG 490

Staff/902
Dlouhy/12

NW Natural®

Rates & Regulatory Affairs
UG 490
Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 462

Please state whether the Company intends to remove from rate base any amounts related to meters that were removed before the end of their useful life as part of the Meter Modernization Program.

Response:

The meters will be retired from plant in service when they are removed and replaced. Based on expected mortality dispersion for all mass property accounts there are many assets that are expected to be replaced before the average and some after the average which is the case for meters. Therefore, rate base is recovered consistent with the mortality life cycle not just a useful life. However, any remaining rate base that may exist will be recovered over the remaining life of the surviving assets which is consistent with group depreciation.

PHASE III DECISION ELIMINATING GAS LINE EXTENSION ALLOWANCES, TEN-YEAR REFUNDABLE PAYMENT OPTION, AND FIFTY PERCENT DISCOUNT PAYMENT OPTION UNDER GAS LINE EXTENSION RULES

Summary

This decision adopts Energy Division's staff proposal to eliminate gas line extension allowances, the 10-year refundable payment option, and the 50 percent discount payment option provided under the current gas line extension rules. The elimination is for all customers in all customer classes effective July 1, 2023. This decision applies to new applications for gas line extensions submitted on or after July 1, 2023. Applications submitted before July 1, 2023 will not be affected by this decision.

These changes move the state closer to meeting its goals of reducing greenhouse gas (GHG)[1] emissions and combating climate change. The result will not only be significant reductions in GHG emissions but also improved quality of life and health for customers, hundreds of millions of dollars in ratepayer savings annually, greater equity for low-income customers, and greater certainty for builders, developers, and individual customers. This decision meets the statutory requirements as set forth in Public Utilities Code Section 783(b)-(d).

This proceeding remains open.

1. Procedural Background

1.1. Senate Bill (SB) 1477

On September 13, 2018, Governor Jerry Brown signed into law SB 1477 (Stern, 2018).[2] SB 1477 promotes California's building-related greenhouse gas (GHG) emission reduction goals, and makes available $50 million annually for

[1] *See* Appendix A for a list of abbreviations, acronyms, and definitions used in this decision.

[2] SB 1477 was codified as Public Utilities (Pub. Util.) Code Section 748.6, Section 910.4, and Sections 921-922.

four years,[3] for a total of $200 million, dedicated towards two building electrification pilot programs. The funds are derived from the revenue generated from the GHG emission allowances directly allocated to gas corporations and consigned to auction as part of the California Air Resources Board's (CARB) Cap-and-Trade program.[4]

On January 31, 2019, in response to the passage of SB 1477, the California Public Utilities Commission (Commission) initiated this rulemaking to support the decarbonization of buildings in California. The proceeding is:

> designed to be inclusive of any alternatives that could lead to the reduction of greenhouse gas emissions associated with energy use in buildings [related]… to the State's goals of reducing economy-wide GHG emissions 40% below 1990 levels by 2030 and achieving carbon neutrality by 2045 or sooner.[5]

1.2. Phase I

On May 17, 2019, the assigned Commissioner issued a Scoping Memo and Ruling setting forth the issues to be considered in Phase I of the proceeding (Phase I Scoping Memo). The Phase I Scoping Memo was amended on July 16, 2019 to include additional issues. Phase I was resolved in Decision (D.) 20-03-027, which established the two building decarbonization pilot programs required by SB 1477: the Building Initiative for Low-Emissions

[3] Fiscal Year (FY) 2019-2020 to FY 2022-23.

[4] Four gas corporations currently participate in California's Cap-and-Trade program: Southern California Gas Company (SoCalGas), Pacific Gas and Electric Company (PG&E), San Diego Gas & Electric Company (SDG&E), and Southwest Gas Corporation (SWG).

[5] Order Instituting Rulemaking (OIR) 19-01-011 at 2.

Development (BUILD) Program and the Technology and Equipment for Clean Heating (TECH) Initiative.[6]

1.3. Phase II

On August 25, 2020, the assigned Commissioner issued an Amended Scoping Memo and Ruling setting forth the issues to be considered in Phase II of this proceeding and included an associated Energy Division Staff Proposal. Phase II was resolved in D.21-11-002, which: (1) adopted guiding principles for the layering of incentives when multiple programs fund the same equipment; (2) established a new Wildfire and Natural Disaster Resiliency Rebuild (WNDRR) program to provide financial incentives to help victims of wildfires and natural disasters rebuild all-electric properties; (3) provided guidance on data sharing; and (4) directed California's three large electric investor-owned utilities (IOUs)[7] to each study energy bill impacts that result from switching from gas water heaters to electric heat pump water heaters, and to propose a rate adjustment in a new Rate Design Window application if their study reflected a net energy bill increase. D.21-11-002 also directed the IOUs to collect data on fuels used to power various appliances, including propane.

1.4. Phase III

On November 16, 2021, the assigned Commissioner issued an Amended Scoping Memo and Ruling setting forth the issues to be considered in Phase III of this proceeding (Phase III Scoping Memo). Appended to the Phase III Scoping Memo were an Energy Division Staff Proposal (Phase III Staff Proposal or Staff Proposal) and a list of questions to be addressed by respondents and parties. Specifically, Phase III considers eliminating gas line extension allowances

---

[6] *See* D.20-03-027 at 7.

[7] Southern California Edison Company (SCE), PG&E, and SDG&E.

(allowances), the 10-year refundable payment option (refunds), and the 50 percent discount payment option (discounts) (collectively, gas line subsidies) provided under the current gas line extension rules (gas rules).[8]

The Phase III Scoping Memo set a schedule for the filing and service of comments and reply comments on the Staff Proposal. It also required that comments and reply comments be verified.[9] Verification enables the creation of a robust and reliable record, and allows the Commission to find facts based on those pleadings. It also set a deadline by which parties could file a motion to request evidentiary hearings to cross-examine parties on disputed issues of material fact stated in comments or reply comments, or to seek leave to serve prepared testimony, which in turn might be subject to cross-examination.

Lastly, in compliance with Pub. Util. Code Section 783(c),[10] the Phase III Scoping Memo requested assistance and input from the following state agencies

---

[8] Gas Rules 15-16 for PG&E (https://www.pge.com/tariffs/assets/pdf/tariffbook/GAS_RULES_15.pdf, https://www.pge.com/tariffs/assets/pdf/tariffbook/GAS_RULES_16.pdf), SDG&E (https://tariff.sdge.com/tm2/pdf/GAS_GAS-RULES_GRULE15.pdf, https://tariff.sdge.com/tm2/pdf/GAS_GAS-RULES_GRULE16.pdf), and SWG (https://www.swgas.com/1409184638489/rule15.pdf, https://www.swgas.com/1409184638517/RULE_16--GRC_Eff-April-1-2021.pdf), and Gas Rules 20-21 for SoCalGas (https://tariff.socalgas.com/regulatory/tariffs/tm2/pdf/20.pdf, https://tariff.socalgas.com/regulatory/tariffs/tm2/pdf/21.pdf). Rule 15/20 pertains to gas distribution main extensions and Rule 16/21 pertains to gas service line extensions.

[9] *See* Rule 1.11 and Rule 18.1. Verification requires that the person filing the pleading knows that the statements in the document are true, except for matters which are stated on information or belief, and as to those matters requires that the person believes them to be true. Moreover, it requires that the person declare under penalty of perjury that the foregoing is true and correct. The Phase III Scoping Memo stated that unverified comments and reply comments would only be given the weight of argument.

[10] Pub. Util. Code Section 783(c) states: "The commission shall request the assistance of appropriate state agencies and departments in conducting any investigation or proceeding pursuant to subdivision (b), including, but not limited to, the Transportation Agency, the

Footnote continued on next page.

and departments: the California State Transportation Agency; the California Department of Food and Agriculture; the California Department of Consumer Affairs (DCA); the California Department of Real Estate (DRE); and the California Department of Housing and Community Development (HCD).[11] On November 17, 2021, the assigned Commissioner sent a follow up e-mail to the Executive Directors (or an equivalent position) of these agencies and departments and invited them to provide input on the Staff Proposal by December 20, 2021.

Verified comments and verified reply comments on the Staff Proposal were filed on December 20, 2021, and January 10, 2022, respectively, by 18 parties: PG&E, SDG&E, and SoCalGas (collectively, the Joint IOUs); SCE; SWG; the Public Advocates Office of the California Public Utilities Commission (Cal Advocates); Clean Energy; Coalition of California Utility Employees (CCUE); California Environmental Justice Alliance (CEJA), Environmental Defense Fund (EDF), Natural Resources Defense Council (NRDC), and Sierra Club (collectively, the Joint Parties); East Bay Community Energy (EBCE), Marin Clean Energy (MCE), Sonoma Clean Power (SCP), and Peninsula Clean Energy (PCE) (collectively, the Joint CCAs); The Utility Reform Network (TURN); and Small Business Utility Advocates (SBUA).[12] No comments or responses from the state agencies and state departments were received.

Department of Food and Agriculture, the Department of Consumer Affairs, the Bureau of Real Estate, and the Department of Housing and Community Development."

[11] Phase III Scoping Memo at 1 and 12.

[12] The parties filed individual pleadings in several instances and are cited as such in this order. The exception is when they filed jointly and are cited herein as Joint IOUs, Joint Parties, or Joint CCAs.

On January 28, 2022, the assigned Administrative Law Judges (ALJs) issued a ruling seeking clarifications and additional information to assist the Commission in resolving the Phase III issues. On February 21, 2022, comments were filed by Cal Advocates, Clean Energy, SBUA, the Joint Parties, PG&E, SWG, SDG&E and SoCalGas.

On March 22, 2022, the assigned ALJs issued a ruling revising the remaining proceeding schedule and addressing other procedural matters. Specifically, the ruling informed parties of a March 14, 2022, Energy Division data request (ED-DR) sent to PG&E, SoCalGas, SDG&E and SWG; directed the gas utilities to verify and serve their responses to the ED-DR on all parties; provided an opportunity for parties to comment on the gas utilities' responses to the ED-DR; and updated the schedule for the remainder of the proceeding. On April 4, 2022, the gas utilities verified and served their responses to the ED-DR. On April 11, 2022, Clean Energy filed comments on the gas utilities' responses to the ED-DR. On April 18, 2022, the assigned ALJs issued a ruling receiving into the evidentiary record the gas utilities' responses to the ED-DR (April 18, 2022 ALJ Ruling).

No motion was made for evidentiary hearing. No evidentiary hearing was held.

On May 4, 2022, opening briefs were filed and served by PG&E, SoCalGas, SDG&E, Cal Advocates, Clean Energy, the Joint Parties, TURN, and SBUA. On May 18, 2022, reply briefs were filed and served by PG&E, SoCalGas, SDG&E, Clean Energy, the Joint Parties, TURN, and SBUA. The record is the Staff Proposal; comments and reply comments; the gas IOUs' responses to the ED-DR; and parties' briefs. Phase III was submitted for decision on May 18, 2022 (upon receipt of reply briefs).

2. Issues Before the Commission

The Phase III Scoping Memo identified the following issues to be resolved:[13]

A. Whether the Commission should modify or eliminate gas line extension allowances for some or all customer classes (residential and non-residential);

B. Whether the Commission should modify or eliminate gas line extension refunds for some or all customer classes (residential and non-residential); and

C. Whether the Commission should modify or eliminate gas line extension discounts for some or all customer classes (residential and non-residential).

This decision addresses all the issues identified in the Phase III Scoping Memo and concludes Phase III of the proceeding. The proceeding remains open to consider additional building decarbonization issues in future phases.

3. Gas Line Subsidies

3.1. History of Gas Line Subsidies

The history of the gas rules in California dates back more than a century. With Commission decisions beginning in 1915 and continuing to today, California's gas IOUs have an obligation to provide prospective new customers the opportunity to receive utility service via a line extension based on a uniform set of rules. Under current rules, gas IOUs are not obligated to extend gas lines free of cost but must provide the opportunity for customers to be connected to the utility system at reasonable prices, terms, and conditions.

In general, applicants for new service must pay the full cost of the line extension and interconnection but are provided offsets for part of the cost. These offsets, or subsidies, were reasonable when utilities were in a declining cost

[13] Phase III Scoping Memo at 3-5.

industry, in which the addition of more customers led to reductions in the utility's costs and rates, thereby benefiting both old and new customers.

Conditions in the 1970s led the Commission to reconsider these gas line subsidies. These conditions included severe economic and energy challenges such as oil and natural gas embargos, shortages, and significant price increases; increasing cost and environmental concerns from the continued use, and new development of conventional thermal electric generating resources (including oil, gas, coal, and nuclear); inflation; economic stagnation; and repeated gas and electric utility cost and rate increases. In 1974, the Legislature requested that the Commission investigate electric rate structures and consider alternatives that would discourage, rather than encourage, increased energy consumption.

In 1977, the Commission opened an investigation to reconsider line extension rules given these fundamental changes.[14] Among the considerations was whether existing allowances for extensions of gas and electric service should be modified or abolished. Several decisions followed.

In D.91328, the Commission decided to abolish gas and electric line allowances, terminate refunds, and provide incentives for conservation.[15] On rehearing, the Commission decided to phase out line extension allowances over about five years, and established June 1, 1983, for the filing of utility tariffs to begin the phase-out.[16]

The legislature responded to the Commission's decisions ending and phasing out line extension allowances by passing an urgency bill to add

[14] Case 10260.

[15] D.91328, February 13, 1980.

[16] D.82-04-068, April 1982 and D.82-12-094, December 1982.

Pub. Util. Code Section 783.[17] The new law requires that the Commission continue the line extension rules that were in place on January 1, 1982, and not make any changes (with limited exceptions) unless the Commission made findings on each of seven issues set out in Pub. Util. Code Section 783. Shortly thereafter, the Commission rescinded all prior orders and closed its investigation into line extension rules.[18]

Further consideration of modifying or eliminating gas line subsidies is governed by Pub. Util. Code Section 783(b), which states that whenever the Commission:

> …institutes an investigation into the terms and conditions for the extension of services provided by gas and electrical corporations to new or existing customers, or considers issuing an order or decision amending those terms or conditions, the commission shall make written findings on all of the following [seven] issues.

In summary, the seven issues include an examination of the economic and other effects of line and service extension modifications upon residential and non-residential customers (*e.g.*, agricultural, commercial, industrial), locally funded governmental or district projects, redevelopment projects, existing ratepayers, energy consumption, and energy conservation.

Pub. Util. Code Section 783(c) requires that:

> The commission shall request the assistance of appropriate state agencies and departments in conducting any investigation or proceeding pursuant to subdivision (b), including, but not limited to, the Transportation Agency, the Department of Food and Agriculture, the Department of

[17] SB 48; Stats. 1983, Ch. 1229, Sec. 2, effective September 30, 1983.

[18] D.83-09-066, D.84-04-047.

> Consumer Affairs, the Bureau of Real Estate, and the Department of Housing and Community Development.
>
> Lastly, Pub. Util. Code Section 783(d) requires that:
>
> Any new order or decision issued pursuant to an investigation or proceeding conducted pursuant to subdivision (b) shall become effective on July 1 of the year which follows the year when the new order or decision is adopted by the commission, so as to ensure that the public has at least six months to consider the new order or decision.[19]

This ensures that the public has at least six months to consider the new order or decision.

3.2. Line Extension Costs and Subsidies

Under current gas rules, the total cost of a gas line extension for an entity (*e.g.*, builder, developer, individual customer) who seeks connection to the utility system (applicant) is paid by the applicant at project commencement. The total project cost is divided into two parts: non-refundable and refundable.[20] Both the non-refundable and refundable parts are paid by the applicant, but the refundable costs are offset or subsidized by all other ratepayers. Refundable costs are first subsidized by "allowances." Refundable costs in excess of allowances, if any, are returned to an applicant via either: (1) refunds over 10 years; or

---

[19] *See* https://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?sectionNum=783&lawCode=PUC.

[20] Both "refundable" costs and "non-refundable" costs are specified in Section D.6 of Gas Rule 15 for PG&E, SDG&E, and SWG and Gas Rule 20 for SoCalGas. Per Section D.6.a of Gas Rule 15/20, refundable costs include the total estimated installed cost, including taxes, to complete the distribution line extension. Per Section D.6.c of Gas Rule 15/20, non-refundable costs include the estimated value of all substructures and other protective structures. Section E.5 of Gas Rule 16 for PG&E, SDG&E, and SWG, and Gas Rule 21 for SoCalGas specifies that service line extensions are not eligible for refund.

(2) a one-time 50 percent discount at the option of the applicant. These three gas line subsidies are further described below.

3.2.1. Allowances

For residential customers, allowances are fixed amounts awarded by appliance per residential unit. Each gas utility has different allowance levels. The table below has the current allowances.

Table 1. Current Residential Gas Line Extension Allowances
(Per Meter or Residential Dwelling Unit, on a per unit basis)

Item	PG&E[21]	SCG[22]	SDG&E[23]	SWG[24]	
				Southern California	Northern California / South Lake Tahoe
Water Heating	$1,391	$1,138	$643	$183	$231
Space Heating	$987	$987	$698	$674	$862
Oven/Range	$84	$201	$114	$69	$28
Dryer Stub	$24	$289	$160	$115	$70
Space Cooling	NA	NA	$1,098	$1,765	NA

For non-residential customers, allowances are provided by a formula that is calculated on a site-specific basis taking into consideration usage, demand, and

[21] PG&E rates effective January 1, 2022 (https://www.pge.com/tariffs/assets/pdf/adviceletter/GAS_4488-G.pdf).

[22] SCG Rule 20 Gas Rules approved in 2022 (https://tariff.socalgas.com/regulatory/tariffs/tm2/pdf/20.pdf).

[23] SDG&E rates approved in 2020 (https://tariff.sdge.com/tm2/pdf/2866-G.pdf).

[24] SWG rates are bifurcated into their two non-contiguous territories (https://www.swgas.com/1409184638489/rule15.pdf).

other factors. The allowance value is equal to "net revenue"[25] divided by "cost of service factor."[26]

In 2021, three of the four California large gas IOUs spent over $104 million on allowances ($81 million on residential allowances and $23 million on non-residential allowances).[27] We note that this amount does not include SDG&E's allowance expenditures.[28] Therefore, if SDG&E's allowance expenditures were to be included, the total amount would be higher.

3.2.2. Refunds

Under the refund option, the gas IOU returns remaining refundable costs (*i.e.*, those that remain after application of allowances) to the applicant over the course of 10 years. Adjustments are made if further development occurs, and new customers are added that utilize the same newly constructed segment of the gas distribution line to fairly allocate common costs.

In 2021, California's four large gas IOUs spent approximately $2.9 million on refunds ($1.5 million in residential refunds and $1.4 million in non-residential refunds).[29] We note that this amount does not include all of SDG&E's refunds

[25] "Net revenue" is a projection of how much additional revenue a gas IOU is expected to net annually as a result of a new customer using gas.

[26] "Cost of service factor" is a figure that represents the annual cost of servicing one dollar's worth of capital investment for which ratepayers must pay.

[27] The three IOUs are PG&E, SoCalGas, and SWG. The data does not include SDG&E's allowances because SDG&E says that information is not available due to the limitation of SDG&E's project management system. (April 18, 2022 ALJ Ruling, Attachment 3 and Attachment 5.)

[28] SDG&E did not provide data on allowances to the Commission. In explanation, SDG&E says its project management system does not facilitate data extraction of allowances granted or discounts provided. (*See* April 18, 2022 ALJ Ruling, Attachment 3 at 1.)

[29] April 18, 2022 ALJ Ruling, Attachment 5.

expenditures.[30] Therefore, if all of SDG&E's refund expenditures were to be included, the total amount would likely be higher.

3.2.3. Discounts

The discount payment option is an alternative to the refund option. If the applicant selects the discount option over the refund option, they receive a one-time 50 percent discount on the refundable costs that remain after application of available allowances. The discount is received at the time payments are due and the applicant does not need to wait for refunds over several years.

In 2021, three of four California large gas IOUs spent approximately $23.4 million on discounts ($17.7 million in residential discounts, and $5.7 million in non-residential discounts).[31] We note that this amount does not include SDG&E's discount expenditures.[32] Therefore, if SDG&E's discount expenditures were to be included, the total amount would be higher.

3.2.4. Total Subsidies

Over the last five years (2017 to 2021), California's four gas IOUs (with partial data for SDG&E) spent approximately $622 million (approximately $124 million annually) on gas line subsidies, including allowances, refunds and

[30] SDG&E refund data includes residential and commercial, but not other non-residential (*e.g.*, industrial, agricultural). (April 18, 2022 ALJ Ruling, Attachment 3 at 1.)

[31] The data does not include SDG&E's discounts because the information is not available due to the limitation of SDG&E's project management system. (*See* April 18, 2022 ALJ Ruling, Attachment 3 and Attachment 5.)

[32] SDG&E did not provide data on discounts to the Commission. In explanation, SDG&E says its project management system does not facilitate data extraction of allowances granted or discounts provided." (*See* April 18, 2022 ALJ Ruling, Attachment 3 at 1.)

discounts.[33] Over the next five years (2022 to 2026) if gas line subsidies continue, the gas IOUs (with partial data for SDG&E) anticipate they will spend approximately $819 million (approximately $164 million annually) on gas line subsidies.[34] The gas IOUs' data shows that this totals more than $1.4 billion over the 10-year period from 2017-2026 (about $144 million annually). The table below provides each of the gas IOUs' historical (2017-2021) and forecasted total gas line subsidies (2022-2026).[35]

Table 2. 2017-2026 Historical and Forecasted Total Gas Line Subsidies ($ million)[36]

IOUs	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	Total (2017–2026)
PG&E	$44	$57	$75	$88	$69	$101	$106	$105	$101	$97	$843
SoCalGas	$48	$55	$51	$51	$57	$57	$57	$58	$58	$58	$550
SDG&E[37]	$1	$2	$2	$2	$1	$1	$1	$1	$1	$1	$13
SWG	$4	$3	$7	$3	$3	$3	$3	$3	$3	$3	$35
Total	**$97**	**$117**	**$135**	**$143**	**$130**	**$162**	**$168**	**$167**	**$163**	**$160**	**$1,441**

Once the gas line extensions are built, the gas IOUs own and operate the facilities as a part of their systems. The IOUs recover the expended gas line subsidies as capital costs through their ratebase, subject to depreciation and rates of return over the depreciable life (*e.g.*, 30 years) of the line extensions. As a

[33] The total amount includes SDG&E's amounts for refunds but not for allowances and discounts because the information is not available due to the limitation of SDG&E's project management system. (*See* April 18, 2022 ALJ Ruling, Attachment 3 and Attachment 5.)

[34] April 18, 2022 ALJ Ruling, Attachment 5.

[35] *Id.*

[36] *Id.*

[37] Only partial data for SDG&E.

result, the total amounts paid by ratepayers (revenue requirements) associated with the 2017-2026 total gas line subsidies would be well above the $1.4 billion.

4. Energy Division Staff Proposal

The Staff Proposal recommends eliminating the gas line subsidies for all customer classes. Staff argues that California's gas line subsidies are designed to encourage gas usage, as affirmed in both D.89177 and D.91328, and that by allowing builders to receive a separate allowance for each approved appliance type, builders are incentivized to install more gas appliances in order to defray more costs. Those gas appliances, in turn, perpetuate reliance on gas service and lock in all associated GHG emissions for the life of the appliance, which averages 10 to 20 years for a gas water heater and 18 years for a gas furnace unless the appliance is retired early and replaced with an electric alternative. Additionally, a key strategy to reach carbon neutrality by 2045 is to phase out gas usage in the building sector. Any new gas infrastructure is likely to become a stranded asset. The maintenance and operational costs associated with gas infrastructure will need to be paid for by a shrinking number of future gas customers, which will be reflected in higher rates. These customers are likely to be low-income customers as they face the greatest barriers to electrification, including affordability challenges presented by the upfront costs of electrification. As such, the provision of gas line allowances makes it harder to meet California's GHG reduction goals while increasing the future cost of gas service for customers that are unwilling or unable to switch from gas to electric service.[38] The Staff Proposal provides further details on the following benefits in support of eliminating gas line subsidies for all customer classes.

[38] Staff Proposal. (*See* Phase III Scoping Memo, Appendix A at 24-25.)

4.1. Lowers Gas Consumption and GHG Emissions

The Staff Proposal states that since these subsidies promote the increased and continued use of gas, they perpetuate reliance on gas service and lock in all associated GHG emissions for the life of the appliance unless the appliance is retired early and replaced with an electric alternative. Staff argues that the elimination of these subsidies would result in less gas consumption, more electricity consumption, fewer GHG emissions and less air pollution.[39]

4.2. Results in Ratepayer Savings

According to data submitted by the gas IOUs, and served in response to the March 22, 2022 Assigned ALJs' Ruling, the total amount of subsidies provided across all four gas IOU territories (partial data for SDG&E)[40] in 2021 was approximately $130 million. The IOUs project this to increase in coming years, peaking at $168 million in 2023.[41] Because of data deficiencies from SDG&E, these reported aggregated numbers are undoubtedly lower than the actual subsidies being paid. Additionally, the Staff Proposal states that if a new dual fuel building were to be constructed without gas line subsidies, gas ratepayers would save even more as a result of an additional customer sharing in costs necessary to maintain the common carrier pipeline network, so eliminating the line extension subsidies would save ratepayers hundreds of millions of dollars. Although it is noted that these savings could be used for a multitude of useful purposes, the Staff Proposal does not at this time make any

---

[39] Staff Proposal. (*See* Phase III Scoping Memo, Appendix A at 35, 40, and 44.)

[40] The total amount excludes SDG&E's amounts for allowances and discounts because the information is not available due to the limitation of SDG&E's project management system. (*See* April 18, 2022 ALJ Ruling, Attachment 3 and Attachment 5.)

[41] April 18, 2022 ALJ Ruling, Attachment 2 and Attachment 5 at 2.

recommendations on diverting funds for other purposes, but instead highlights that cost savings make other investments possible without causing upward rate pressure.[42] Eliminating gas line subsidies for all new constructions would result in the following estimated minimum savings below.

Table 3. Estimated Annual Savings to Gas Ratepayers from Eliminating Residential Gas Line Subsidies ($ million)

Gas Line Subsidies	**2021 Expenditures**[43]					**Estimated Annual Savings**[44] **(Average of Forecast 2024-2026)**

4.3. Places the Financial Responsibility on the Initiating Party

The Staff Proposal argues that eliminating gas line subsidies will force builders, or customers, to shoulder a greater portion of the expenses associated with gas line extensions if they choose to construct a building that uses gas or extends gas service on existing properties. That greater expense, in turn, would be passed on at the point of sale for a new building or directly absorbed by the customer for an existing building. This added up-front cost burden would send a signal to builders that building new gas infrastructure is more expensive, and thus make dual fuel new construction less desirable and more costly. As such, the builder community would be more likely to gravitate toward all-electric new construction. The Staff Proposal further notes that property price increases for

[45] April 18, 2022 ALJ Ruling, Attachment 5.

[46] Estimate based on IOU projections reported to CPUC and served as attachment in the April 18, 2022 ALJ Ruling. Figures are 2024 projections as that is the first full year that this decision would be in effect.

[47] Commercial only.

dual fuel new construction would become moot if all new homes and offices are built all-electric.[48]

4.4. Incentivizes New All-Electric Construction

The Staff Proposal argues that eliminating the gas line subsidies for all new construction would increase the number of newly constructed all-electric buildings which will likely cost less than newly constructed dual fuel buildings. Dual fuel buildings constructed without gas line extension allowances would be expected to cost more than they do today, but not by more than approximately 0.25 percent on average.[49] The Staff Proposal also notes that specifically eliminating refunds would remove additional incentives for builders to encourage even more dual fuel construction in the future. Because refund payments are contingent on additional dual fuel buildings being added to a newly constructed gas line extension, builders have a strong interest in adding more dual fuel homes in the vicinity of their dual fuel construction projects. Eliminating refunds removes such considerations and motivations for the builder.[50]

4.5. Provides Certainty to Builder Community for Future Projects and Planning

The Staff Proposal states that eliminating refunds has the additional benefit of encouraging a more predictable future for the building industry. California is already on a trajectory toward building decarbonization, which will eventually result in builders receiving less in refund payments as a greater percentage of homes and offices are built all-electric moving forward. Rather

[48] Phase III Scoping Memo, Appendix A at 31.

[49] Phase III Scoping Memo, Appendix A at 33-34 and 41.

[50] Phase III Scoping Memo, Appendix A at 36.

than have builders speculate as to whether they will ever be refunded their full advance payments for building gas infrastructure, eliminating refunds on a set date lets builders know from what point forward their refund payments will stop, thus enabling the builder community to build that knowledge into their project financing considerations and future revenue assumptions.[51]

4.6. Minimally Impacts Property Prices

The Staff Proposal argues that eliminating the gas line subsidies is not expected to lead to a significant rise in average property prices. To the extent that such a policy change leads to more all-electric new construction, those new homes and offices will be less expensive than if they were built dual fuel due to the elimination of any expense associated with installing gas infrastructure (*e.g.*, trenches, pipes, meters). If a builder opts to still build dual fuel, any resulting property price increase should be minimal.[52] If allowances are eliminated, residential property prices would increase between 0.21-0.25 percent,[53] and non-residential property prices would increase by 0.25 percent.[54] If refunds are eliminated, residential and non-residential property prices are estimated to increase by 0.07 percent.[55] If discounts are eliminated, residential and non-residential property prices are estimated to increase by 0.04 percent.[56] The combined effect of eliminating all subsidies (allowances,

[51] Phase III Scoping Memo, Appendix A at 37.

[52] Phase III Scoping Memo, Appendix A at 31-32.

[53] Phase III Scoping Memo, Appendix A at 32-33.

[54] Phase III Scoping Memo, Appendix A at 33.

[55] Phase III Scoping Memo, Appendix A at 32 and 37-38.

[56] Phase III Scoping Memo, Appendix A at 32 and 41-42.

refunds, and discounts) is 0.32-0.36 percent for residential and non-residential properties.[57]

5. Residential Gas Line Subsidies Revisions

Of the 18 parties commenting on eliminating the gas line subsidies for residential customers, 16 parties endorse the Staff Proposal (or suggest phased elimination) and two oppose.

5.1. Positions of Parties Supporting the Staff Proposal

The 16 parties who endorse the Staff Proposal to eliminate gas line subsidies for the residential sector (or who suggest phased elimination) are: PG&E, SDG&E, SCE, Clean Energy, Cal Advocates, CEJA, EDF, NRDC, Sierra Club, TURN, EBCE, MCE, SCP, PCE, and SBUA. SoCalGas did not oppose the recommendation on residential gas line extension allowances, refunds, and discounts as a policy matter. Parties supporting the Staff Proposal make several points.

- Elimination of the gas line subsidies will discourage construction of gas infrastructure while encouraging more all-electric new construction that together will help reduce GHG emissions and improve air quality consistent with California's decarbonization goals;
- Current gas line subsidies provide incentives to install appliances which largely lock-in that use over the 10 to 20-year life of the appliance, which are likely to become

[57] Non-residential property price impacts can be estimated based on the same logic used to estimate residential property price impacts. D.07-07-019 did not make any finding of fact regarding the property price impact associated with the elimination of line extension allowances for non-residential building, but the inputs and assumptions used to determine non-residential allowances (*e.g.*, demand, usage, *etc.*) are largely the same as for residential allowance computations. (Phase III Scoping Memo, Appendix A at 32.)

stranded assets given California's ambitious GHG emissions reduction goals;

- Elimination of gas line subsidies does not prohibit any customer from installing gas appliances in applications that need, or where the customer prefers, to use gas, but it relieves other gas ratepayers from subsidizing the extension for those customers and reduces average gas rates for all gas customers;
- Gas line subsidies originated when interconnecting more customers was thought to lower costs and benefit all; this is no longer the case and the benefits, if any, no longer outweigh the costs of increased GHG emissions and dependence on combustion fuels;
- The elimination of gas line subsidies will save ratepayers hundreds of millions of dollars; support equitable transition from gas to electricity; further California's climate goals; improve air quality and related health outcomes both inside and outside buildings; and provide greater certainty to builders, contractors, and gas distribution workers. Eliminating gas line subsidies is of particular benefit to low-income customers given these financial implications;
- Existing gas line subsidies work against the goals of multiple Commission-authorized building decarbonization programs also funded by ratepayers;
- There will be minimal or no overall negative impacts on workers, with the increased number of jobs in the electric industry being the same or more than the decrease of jobs in the gas industry;
- There will be minimal or no overall negative impacts on low-income customers, as programs such as BUILD, the California Energy Smart Homes Program, and discount rate programs such as the California Alternative Rates for Energy and Family Electric Rate Assistance help mitigate such upfront effects on the affordable housing and low-income sectors. Given their lower rate of new home

purchasing, low-income customers are not typically the ones benefitting from gas line subsidies, yet they contribute towards these subsidies which inequitably increases gas rates for all customers, including low-income customers;

- There will be minimal impacts on property prices, as all-electric new homes are less expensive to build than dual fuel homes. Additionally, programs such as the California Electric Homes Program will provide $75 million in financial incentives and technical support for the construction of new all-electric residential buildings;
- The Commission should consider changes to gas line extension rules in the broader context of California's climate change policy and consult with other state agencies;
- The Joint IOUs recommend a phased elimination to reduce the immediate negative impacts while still accomplishing the overall objectives in support of California's climate goals. In particular, they state that a phased approach would:[58]
    - Avoid near-term gas rate increases if the proposed changes substantially reduce the number of new connections relative to forecasts used in approved ratemaking proceedings;
    - Allow recognition of the varying schedules for future ratemaking proceedings;
    - Allow time for customers to account for increased project costs; and
    - Allow utilities time to study the impact on their electric load profiles and generation needs.

[58] Opening Comments of the Joint IOUs on Phase III Staff Proposal at 9-10.

5.2. Positions of Parties Opposing the Staff Proposal

The two parties who oppose the Staff Proposal in their comments are SWG and CCUE. They make several points in opposition.

- Gas line subsidies allow new customers access to clean, reliable, and affordable fuel (*e.g.*, renewable natural gas, hydrogen) that is poised to contribute significantly to decarbonization efforts;
- Fuel choice should be left to the customer and decisions to reduce GHG emissions should be energy commodity neutral;
- Natural gas systems can decarbonize and play an important role in meeting California's energy objectives;
- Prices for dual fuel homes will increase and prices for all-electric homes will decrease, requiring builders to charge more to offset the loss of the gas line subsidies where natural gas remains in demand (*e.g.*, cold climates);
- Gas rates will increase as fixed costs of the gas system will be spread over a declining customer base, leaving those who cannot afford to electrify or don't have the option to electrify, with higher gas rates;
- Gas industry workers will be negatively impacted, with fewer workers to safely operate and maintain the gas system, safely and properly decommission gas infrastructure, and install new technology, affecting safety and reliability;
- Grid reliability will be negatively impacted as California's supply of gas-fired generation decreases while the need for flexible, fast ramping generation and local reliability remains; and
- A decision in this proceeding should be delayed until Rulemaking (R.) 20-01-007 concludes because both proceedings address similar forward-looking gas infrastructure issues, and delineating the future of natural gas in California is a necessary threshold issue.

5.3. Discussion

5.3.1. Elimination of Gas Line Subsidies for Residential Customers: Approved

This decision adopts the staff's proposal to eliminate the residential gas line subsidies effective July 1, 2023. The elimination of subsidies applies to new applications for gas line extensions submitted on or after July 1, 2023, and will not affect applications submitted to the IOUs before July 1, 2023. Within 30 days of the date of this order, the gas IOUs shall each submit a Tier 2 Advice Letter (AL) to revise their respective gas rules to implement this decision.

We make this revision to the gas rules because it is consistent with state objectives and policy framework. It will move the state closer to meeting its goals of reducing GHG emissions and combating climate change. The cumulative ratepayer savings from avoided gas line subsidies over the life of the gas line extensions will be significant.

As noted above, the total amount in rates paid by all ratepayers (*i.e.*, revenue requirements) associated with the 2017-2026 total gas line subsidies will be at least $1.4 billion. In addition to the significant reductions in GHG emissions and ratepayer savings, these changes will also improve the quality of life and health for customers, provide greater equity for low-income customers, and greater certainty for builders, developers, and individual customers. These benefits are discussed in more detail below.

The Commission also notes the broad support for the Staff Proposal to eliminate the gas line subsidies for the residential sector from a cross-section of parties representing a wide range of interests (*e.g.*, utility, ratepayer, environmental, social justice, community choice aggregators). However, we also address other party concerns in more detail below.

5.3.1.1. Elimination of Residential Gas Line Subsidies Aligns with Overall State Decarbonization Goals

The current gas line subsidies were established during a period when the state's energy needs, and policy goals were very different from today's. They are no longer consistent with today's GHG emission reduction goals, the urgent need to reduce costs and rates, and the long term need to minimize future stranded investment.

The Commission agrees with the Staff Proposal, SCE, Cal Advocates, the Joint Parties, TURN, and the Joint CCAs that the continuation of these subsidies work against today's climate goals and conflicts with SB 32 and SB 1477. As the Staff Proposal correctly points out, current gas line subsidies encourage gas use by providing incentives to builders to install more gas appliances, perpetuating a continued reliance on the gas system both now and over the life of the appliance, and offsetting if not reversing any GHG emission reduction benefits secured through other decarbonization measures.

The Commission also agrees with the Joint Parties that the elimination of the gas line subsidies is essential in complementing the changes made to the 2022 Building Code,[59] which go into effect in 2023.[60] These changes include requiring an electric heat pump space or water heater in standard building design, and electrification readiness (including appropriate electric, space, and plumbing readiness to accommodate a heat pump water heater where not initially installed). The policy would also complement CARB's proposal, laid out in its

[59] 2022 Building Efficiency Standards (https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2022-building-energy-efficiency).

[60] Opening Brief of Joint Parties at 7-8.

Draft 2022 State Strategy for the State Implementation Plan,[61] to implement a zero-emissions standard for all new space and water heaters by 2030, citing the "opportunity for substantial emissions reductions where zero-emission technology is available."[62]

5.3.1.2. The Elimination of Residential Gas Line Subsidies Improves Overall Quality of Life (GHG Emissions Reductions, Ratepayer Savings, Benefits to Low Income, Greater Certainty)

The Commission also agrees with the numerous supporting parties that the elimination of these subsidies will result in significant societal and ratepayer benefits. These benefits include GHG emission reductions, with improved health conditions for customers via improved indoor and outdoor air quality, with particularly reduced health risks from the reduction of high GHG emitting appliances inside a home. Low-income customers are most likely to face these health risks given they often have less effective stove ventilation systems.[63]

Other impacts include reducing or eliminating a range of other negative environmental effects including land use impacts, wildlife impacts, and impacts on water use and water quality. Building out the natural gas system can cause erosion of minerals and toxins into nearby streams, contamination of drinking water sources, and high levels of water use.[64]

---

[61] Although still a draft, this proposal indicates the direction state policy is headed. CARB, Draft 2022 State Strategy for the State Implementation Plan at 86 (https://ww2.arb.ca.gov/sites/default/files/2022-01/Draft_2022_State_SIP_Strategy.pdf).

[62] Opening Brief of Joint Parties at 8.

[63] Opening Brief of Joint Parties at 8-9.

[64] Response of the Joint Parties to the January 28, 2022 Assigned ALJs' Ruling Seeking Clarifications and Additional Information at 5.

The benefits also include hundreds of millions of dollars in utility and ratepayer savings annually and over time. For example, the costs identified by Staff are the costs that the utility must spend each year for construction and installation.[65] Those costs are financed by the utility (*e.g.*, via stocks, bonds, retained earnings) so the funds are available to complete the line extension in the year requested. Those costs are then put into ratebase to be recovered over time (*e.g.*, 30 years) from ratepayers. Thus, the Joint Parties and TURN are correct that the savings identified in the Staff Proposal are understated with respect to the actual cost to ratepayers.[66] The cost is higher since recovery over 30 years costs ratepayers more than would a one-time charge. The elimination of gas line subsidies is one of many steps in furthering the decarbonization of buildings, while easing the burden on residential customers that currently subsidize the new interconnections. This is of particular benefit to low-income customers who face increasing affordability pressures. As the Joint Parties note, the current context perpetuates inequity (*i.e.*, low-income customers are not typically the ones benefitting from gas line subsidies given their lower rate of new home purchasing, yet they contribute towards these subsidies which increase gas rates for all customers).[67]

Additionally, eliminating gas line extension incentives will offer the benefit of greater certainty for the market. This is especially true for the builder community and the contractor community, as noted in the Staff Proposal.

---

[65] The customer pays the entire line extension cost upfront, but that total is offset by the subsidies (allowances, refunds, discounts). The utility must fund the subsidies to get back up to the total line extension cost.

[66] Opening Comments of Joint Parties and TURN on Phase III Staff Proposal at 6.

[67] Opening Comments of Joint Parties and TURN on Phase III Staff Proposal at 2.

Lastly, eliminating gas line extension allowances is not expected to lead to a significant rise in average property prices per the Staff Proposal. To the extent that such a policy change leads to more all-electric new construction, those new homes and offices will be less expensive than if they were built dual fuel due to the elimination of any expense associated with installing gas infrastructure. On the other hand, construction cost/property prices are likely to increase for those that build dual fuel, necessitating gas line extensions. Data provided in the Staff Proposal, however, shows this increase is limited to about 0.32 percent to 0.36 percent.[68] The Commission agrees that this is a minimal effect on the total cost of a new residential and commercial building. Thus, we find the net benefits from these eliminations to be greater than the additional costs that would be placed on to builders or experienced by owners of new buildings choosing dual-fuel construction.

5.3.1.3. The Elimination of Residential Gas Line Subsidies Benefits Low Income and Vulnerable Communities

Eliminating gas line subsidies will advance equity. This occurs given that low-income customers contribute towards these subsidies through gas rates even though they are typically not the ones applying for, or benefiting from, the gas line subsidies (due to the fact that they are more likely to be renters than homeowners). Equity is advanced by revenue requirements being reduced for

[68] Staff Proposal from ruling of November 16, 2021 at 33 (*see* Phase III Scoping Memo, Appendix A). An increase of 0.036 percent is an increase of $36 for each $100,000.

everyone, including low-income customers, estimated at approximately $164 million annually.[69]

We also note the concern with low-income and vulnerable communities not having the means to electrify, and whether or not they will be "left behind" to carry the burden of higher gas rates as other customers leave the gas system. This is at least in part addressed by current programs, including BUILD and California Energy Smart Homes, which help mitigate these effects by offering subsidies and technical assistance to build homes that are all electric and beyond the current building code. BUILD, in particular, is focused on low-income housing.[70]

Lastly, the Commission agrees with the Joint Parties that:

> …negative implications for affordable housing developers and low-income home purchasers, in terms of upfront purchasing costs, are very small if nonexistent… at least one study has found that electrification in new construction reduces costs over the lifetime of appliances when compared to new homes built with fossil-fuel burning appliances.[71]

5.3.1.4. The Elimination of Residential Gas Line Subsidies Has a Net Positive Impact on Workforce

The Commission acknowledges that as more buildings electrify, there is likely to be a shift in demand for work in both the gas and electric fields. CCUE

---

[69] Over the next five years (2022 to 2026) if gas line subsidies continue, the gas IOUs (with partial data for SDG&E) anticipate they will spend approximately $819 million (approximately $164 million annually) on gas line subsidies (April 18, 2022 ALJ Ruling, Attachment 5).

[70] Program details about BUILD are available at: https://www.energy.ca.gov/programs-and-topics/programs/building-initiative-low-emissions-development-program. Program details about the California Smart Energy Homes program are available at: https://www.caenergysmarthomes.com.

[71] Opening Comments of CEJA, EDF, NRDC, Sierra Club, and TURN at 7

claims there will be a loss of more than 10,000 gas distribution jobs in California due to decarbonization,[72] while SCE claims a net gain of 7,000 full time jobs (12,400 full time electricity generation and distribution jobs offset by 5,400–6,800 fewer full-time gas distribution jobs).[73] The Commission agrees with SCE that there will likely be a net positive impact as we are likely to see an increase in demand for skilled workers in several economic sectors, including in the electric industry, construction jobs for energy efficiency improvements and building retrofits.

Additionally, since Track 2 of the Long-Term Gas Planning OIR, R.20-01-007, will be addressing the issue of ensuring an equitable future that minimizes workforce disruption, CCUE's concerns are best addressed in that proceeding. The Scoping Memo in that proceeding lays out a scope that includes how negative impacts on workforce from building decarbonization can be mitigated, what the costs of these mitigation strategies are, and who should be responsible for paying them, among other questions.[74]

5.3.1.5. The Elimination of Residential Gas Line Subsidies Maintains Customer Choice and Advances Equity

The Commission disagrees with SWG that we are removing customer choice by eliminating the gas line subsidies. We reiterate that customers can continue to select their choice of fuel. The only difference is that existing and

[72] Comments of the CCUE on Phase III Staff Proposal at 5.

[73] Comments of SCE on Phase III Amended Scoping Memo and Ruling of Assigned Commissioner at 4.

[74] OIR to Establish Policies, Processes, and Rules to Ensure Safe and Reliable Gas Systems in California and perform Long-Term Gas System Planning, Section 2.3.2 at 7 (https://docs.cpuc.ca.gov/PublishedDocs/Efile/G000/M415/K275/415275138.PDF).

future gas customers will no longer have to subsidize investments in the gas infrastructure for new customers. Requiring the new customers to pay their full costs of gas line extensions only places the responsibility back onto builders or customers to shoulder a greater portion of the expense if they choose to construct a building that uses gas or extend gas service on existing properties. Therefore, this change aligns the cost responsibility with the customer who causes the costs, thereby advances equity for all customers.

5.3.1.6. The Elimination of Residential Gas Line Subsidies Will Not Create a Death Spiral

The Commission disagrees with CCUE that this decision will lead to a "death spiral." We acknowledge that the effect of eliminating gas line extension incentives would be that the cost of constructing a building that uses gas, or extends gas service on existing properties, may increase relative to the status quo. This cost would in turn likely be passed down at the point of sale for a new building or directly absorbed by the customer for an existing building. Neither CCUE nor any other party presents any credible data to show that the gas rates increase will cause the cost of a building to escalate so much that demand for buildings will disproportionately decline, leading to higher gas rates and even less building until the gas utility goes out of business, or some other catastrophic outcome for the gas system. Further, there is no support for the argument that there will be a "death spiral" due to the elimination of gas line extension subsidies that leads to an unreliable and unsafe utility system, as discussed more fully below.

Rather, eliminating gas line extension incentives will send a price signal that building new gas infrastructure is more expensive, thus making dual fuel new construction less desirable and financially riskier. As such, there would be a

gravitation toward all-electric new construction, leading to all the benefits described above, helping California meet its decarbonization goals. We conclude that these benefits outweigh any concerns about a hypothetical "death spiral" due to the decisions we make here.

5.3.1.7. The Elimination of Residential Gas Line Subsidies Maintains Gas System Reliability and Safety

CCUE argues that the elimination of the gas line subsidies will lead to fewer gas customers and higher rates, putting the utilities at risk of not having enough revenue to cover the costs to pay workers to maintain the system, which leads to a less safe and less reliable gas system. CCUE states that some of the anticipated impacts include fewer leaks detected and repaired (impacting both safety and the climate), reduced customer response levels at call centers, extended response time from reconnections, longer service outages, deferred reliability maintenance projects, deferred gas pipeline replacements, and slower emergency response times.[75]

CCUE's concerns are misplaced. The Commission disagrees with CCUE that eliminating gas line extension subsidies would adversely impact gas system reliability and safety. The Commission's regulatory and ratemaking process consistently ensures that utilities have sufficient resources to operate and maintain a safe and reliable system, and minimize rate impacts. The utilities' revenue requirement covers worker compensation, essential work including leak detections and leak repairs, appropriate customer response levels at call centers, reasonable response times, minimizing service outages, not deferring projects

[75] Comments of CCUE on Phase III Staff Proposal at 3-4.

that are necessary for reliability, not deferring replacements, and maintaining responsible emergency response times. There is no credible evidence that the authorized revenue requirements have been, or will be, inadequate to maintain safe and reliable gas systems. And there is certainly no evidence that utilities will not apply for additional funding as and when necessary. In setting the overall revenue requirement, the Commission does not micromanage how utilities spend their authorized revenue. Utility managements are responsible for allocating the authorized revenue (with limited exceptions) to meet all requirements of the utility system, and apply for additional funding when necessary.

But let there be no misunderstanding, safe and reliable services of the utilities the Commission regulate is our top priority. We disagree that the changes we make in this decision compromises that priority in any manner.

5.3.2. Elimination of Gas Line Subsidies for Residential Customers Through a Phased Approach: Denied

This decision denies the Joint IOUs' proposal to eliminate the gas line subsidies through a phased, or delayed, approach. The Joint IOUs argue that: (1) removing the gas line subsidies too quickly could result in a near-term increase in gas rates if the proposed changes substantially reduce the number of new connections relative to the forecasts within the utilities' approved and ongoing ratemaking proceedings; (2) gas utilities have varying schedules for their ratemaking proceedings so a utility-specific phase-in may be appropriate; (3) customers will have time to account for increased project costs; and (4) utilities will have time to study the impact to its electric load profile and

generation needs to ensure the safety and reliability of services.[76] The Joint IOUs recommend a workshop to explore these issues in more detail.

The Commission is not convinced by the Joint IOUs' arguments for a phased approach. Rather, we agree with SCE that we must pursue carbon neutrality with unprecedented urgency and commitment as California is already behind in meeting its 2030 emission reduction targets.[77]

The Joint IOUs do not provide a detailed plan for a phased approach (other than a recommendation to simply delay the elimination of the gas line subsidies). Nonetheless, the Commission considers each of the Joint IOUs' claims with the information we do have but do not find any of them convincing.

The Commission disagrees, for example, that eliminating gas line subsidies now could result in unreasonable near-term rate increases due to a reduction in the number of residential customers. In fact, no credible evidence is presented on what the impact will be on gas rates, let alone that it will be unreasonable. We understand that the change for residential customers due to the policy we adopt today may have an incidental effect on gas rates. We do not, however, foresee that it will be such a significant increase in the near term as to require a phasing in of our policy, particularly given the unprecedented urgency with which we must pursue carbon neutrality. Many variables affect the final determination of the gas rates. The Commission is not convinced that the policy change we adopt today requires special treatment; rather, it can be reasonably addressed when we address all relevant variables in determining gas rates.

---

[76] Opening Comments of the Joint IOUs on Phase III Staff Proposal at 9-10.

[77] Comments of SCE on Phase III Amended Scoping Memo and Ruling of Assigned Commissioner at 2.

The Commission disagrees that utilities' varying ratemaking schedules require a utility-specific phase in. No credible evidence is presented that the impact on rates, if any, will be so dramatic that we must account for the timing of various ratemaking proceedings, nor that any effect on rates cannot be addressed within current ratemaking tools.

The Commission also disagrees that customers need more time to adjust. The available evidence is that all electric homes are less costly to construct than dual fuel homes. Customers do not need time to adjust when costs decline. Further, given that the elimination of the gas line subsidies would not take effect until July 1, 2023 (the time required by Pub. Util. Code Section 783(d)), there is already a reasonable amount of time built in for the change, particularly for those customers who still require dual fuel service. Therefore, the Joint IOUs' concerns about sufficient time with regards to the implementation of any changes have already been addressed by statute.

Finally, the Commission disagrees that electric utilities need time to study the impact on load and generation requirements. No credible evidence is presented that the change in the number of residential customers will cause such a dramatic change in the near term as to require delayed implementation in order to study load and generation requirements, particularly with respect to safety and reliability. The changes will be incremental and can be factored into current tools to forecast load and generation requirements to ensure safe and reliable service.

Utilities are obligated to provide safe and reliable service. The Commission adjusts rates so that each utility has the financial resources to do so. Utilities continually consider safety and reliability of their systems and make necessary changes. SCE says, for example, that it continuously evaluates how the grid must

evolve to support California's GHG reduction goals. Each year, SCE reports that it conducts transmission, sub-transmission, and distribution system planning assessments for a 10-year planning horizon that identify the grid needs to accommodate new generation resources, customer load and Distributed Energy Resource growth. SCE says it will continue working with the California Energy Commission (CEC) to develop the building electrification forecast and include it in the Integrated Energy Policy Report load forecast to ensure the reliable and affordable integration of building electrification growth into SCE's annual system planning assessments.[78]

The Commission expects that each electric utility, just like SCE, continuously evaluates how the grid needs evolve to support a wide range of goals, including California's GHG reduction goals.

Based on these considerations, the Joint IOUs' request for additional workshops is unnecessary and denied. We conclude that the elimination of the gas line subsidies for the residential sector effective July 1, 2023 complies with the timelines required under Pub. Util. Code Section 783(d) and should not be further delayed.

5.3.3. Continued Coordination/ Consultation with Other State Agencies: Approved

Cal Advocates recommend that the Commission coordinate with the state agencies that are responsible for the state building code (*e.g.*, the CEC) and that the Commission should "approach GHG reductions broadly and work to promote GHG reduction across all sectors."[79] The Commission agrees with

[78] Opening Comments of SCE on Phase III Amended Scoping Memo and Ruling of Assigned Commissioner at 14.

[79] Opening Comments of Cal Advocates at 3.

Cal Advocates that coordination is critical. The Commission has and will continue to consult with the CEC and CARB, and other agencies as appropriate, on these issues.

The publications of both CEC and CARB reflect relevant views on eliminating line extensions and building electrification, which we note here. The 2021 Integrated Energy Policy Report, published by the CEC, recommends that the "CPUC should continue to investigate eliminating line extension allowances for new gas hookups."[80] CARB has released its draft 2022 Scoping Plan for Assembly Bill 32 compliance, and dedicates an appendix chapter to building electrification, strongly advocating for electrification as a means to reduce GHGs from the building sector.[81] CARB notes that scaling back natural gas infrastructure is a potential action to support a successful transition to building electrification.[82] CARB further notes that the Staff Proposal to eliminate gas line subsidies "can encourage all-electric new construction and help alleviate future gas rate escalation."[83]

The Commission will continue to work closely with CEC, CARB, and other state agencies on these issues to ensure consistency in our approaches to GHG reductions broadly.

---

[80] CEC, Final 2021 Integrated Energy Policy Report at 182 (https://efiling.energy.ca.gov/GetDocument.aspx?tn=241599).

[82] CARB, Draft 2022 Scoping Plan, Appendix F (https://ww2.arb.ca.gov/sites/default/files/2022-05/2022-draft-sp-appendix-f-building-decarbonization.pdf).

[83] *Id.* at 22-23.

5.3.4. Delay Decision Until the Conclusion of the Long-Term Gas System Planning Rulemaking (R.20-01-007): Denied

SWG recommends that a decision on gas line subsidies be suspended until R.20-01-007 concludes because the relationship between this proceeding and R.20-01-007 requires further analysis, and that "delineating the future of natural gas in California is a necessary threshold issue." They argue that addressing similar forward-looking gas infrastructure issues in separate, concurrent proceedings could result in inconsistent factual findings and policy determinations, potentially causing future confusion and inefficiencies.[84] The Commission disagrees.

R.20-01-007 includes two tracks. The scope of Track 1A includes reliability standards that reflect the current and prospective operational challenges that face gas system operators. Track 1B addresses market structure and regulation. Track 2A addresses the appropriate gas infrastructure for California given the state's GHG reduction laws, addressing gas transmission and distribution infrastructure. Track 2B addresses equity, rate design, and gas revenues, with a particular lens for low-income customers and those residing in disadvantaged communities. Track 2C addresses forecasting and data.[85]

Both R.20-01-007 and this proceeding address issues relating to gas systems; however, the scope of this decision is narrowly focused on the elimination of the gas line subsidies. Our decision on this limited issue here will not have a material impact on any issues scoped in R.20-01-007. Therefore, we

[84] Opening Comments of SWG at 7.

[85] R.20-01-007 Scoping Ruling dated January 5, 2022 at 2-11.

deny SWG's recommendation to delay a decision in this proceeding until R.20-01-007 concludes.

6. Non-Residential Gas Line Subsidies Revisions

Of the 18 parties commenting on eliminating the gas line subsidies for non-residential customers, 12 parties support the Staff Proposal and six oppose.

6.1. Positions of Parties Supporting the Staff Proposal

The 12 parties who endorse the Staff Proposal to eliminate gas line subsidies for the non-residential sector are: SCE, Cal Advocates, CEJA, EDF, NRDC, Sierra Club, TURN, EBCE, MCE, SCP, PCE, and SBUA. In addition to many of the same points made supporting the elimination of the gas line subsidies for the residential sector as discussed above, they make these additional points in support of eliminating the gas line subsidies for non-residential customers:

- Elimination of the gas line subsidies is a reasonable and necessary step in pursuit of reducing GHG emissions given that California is at substantial risk of not achieving its SB 32 requirement to reduce emissions to 40 percent below 1990 levels by 2030, and as such, California must pursue carbon neutrality with urgency;
- Elimination of the gas line subsidies does not equate to a gas ban as builders and customers can continue to build new facilities with gas service capabilities, and there is currently no mandate prohibiting customers from continuing to install gas infrastructure; and
- Large non-residential customers are the most significant contributors to GHG gas emissions with great potential to drive problematic expansion of the main gas line infrastructure further beyond existing use areas.

6.2. Positions of Parties Opposing the Staff Proposal

The six parties who oppose the Staff Proposal to eliminate gas line subsidies for the non-residential sector are: PG&E, SDG&E, SoCalGas, SWG, Clean Energy, and CCUE. In addition to many of the same points made opposing the elimination of the gas line subsidies for the residential sector as discussed above, they make these additional points in opposition to eliminating the gas line subsidies for non-residential customers:

- There is continued need for gas and the natural gas system specifically in the industrial sectors that have yet to see energy options that can help them transition to a decarbonized future. Cleaner gases can replace or contribute to the natural gas service and full electrification, contributing to California's energy objectives;
- Removing gas line subsidies for large non-residential or industrial customers will result in a net increase in GHG emissions because it will disincentivize the use and production of cleaner gases, which can replace higher GHG emitting fuels, or "dirtier fuels";
- Removing gas line subsidies for large non-residential or industrial customers will increase project costs and create additional hardship, which may cause developers to slow down projects, abandon projects or develop projects outside California, negatively impacting California's economy; and
- Minimizing short lived climate pollutants (SLCPs) should be the Commission's top priority, as opposed to eliminating non-residential gas line subsidies, as these are the only reductions that benefit the climate immediately.

6.3. Alternate Proposals

6.3.1. Exemptions for Specific List of Projects that Provide Environmental or Financial Benefits (Joint IOUs)

The Joint IOUs propose to continue the non-residential gas line subsidies for several categories of non-residential projects that provide environmental or financial benefits to California ratepayers. They also propose a mechanism to update these categories periodically. According to the Joint IOUs, the following 10 non-residential projects would provide environmental or financial benefits to California ratepayers:[86]

- Renewable Natural Gas (RNG) or Hydrogen (Piped and Virtual);
- Compressed Natural Gas (CNG), Liquid Natural Gas, and Hydrogen Stations;
- Electric Generation Projects;
- Backup Generation Projects;
- Facility Conversions (facilities switching from dirtier fuels);
- Large Commercial Customers;
- Industrial Customers;
- Transmission Customers;
- Critical Load; and
- Restaurants (proposed by SDG&E and SoCalGas).

The Joint IOUs also propose that the categories of customers receiving gas line subsidies would be reviewed via a Tier 2 AL (to be filed every three years starting in 2026) or that a cadence for re-visiting the subsidies be established in the ongoing long term gas planning proceeding (R.20-01-007). In support, they

[86] Opening Comments of the Joint IOUs on Phase III Staff Proposal at 7.

say the review would ensure that gas ratepayers continue to benefit from providing gas line subsidies. According to the Joint IOUs, "non-residential customers identified as having economic and environmental benefits to gas ratepayers can shift over time and that the removal of residential allowances may have a negative impact on affordable housing developers."[87]

Additionally, PG&E proposes two new methods for calculating the allowance amounts for non-residential projects that provide environmental or financial benefits to California ratepayers: (1) the ability for all current calculations of distribution to be applied to the non-residential projects; and (2) the addition of a graduated discount when additional load reduces GHG emissions. PG&E also proposes that the gas line subsidies be modified such that customers cannot switch from core service to noncore service until the allowance amount is fully recovered through revenue. In support, PG&E states that the current practice of switching from core to non-core service creates an unsustainable loophole where core customers can receive a higher allowance amount which may not be fully repaid should they switch to non-core service before the allowance amount is recovered.[88]

6.3.2. Exemptions for Projects That Enable Hydrogen, RNG and CNG Use (Clean Energy)

Clean Energy recommends that the Commission prioritize the phase-out of diesel in the transportation, electricity, and agricultural sectors. To do this, Clean Energy proposes maintaining incentives for customers seeking to develop hydrogen, agricultural customers seeking to produce biogas and RNG from

[87] Opening Comments of the Joint IOUs on Phase III Staff Proposal at 10.

[88] Opening Comments of the Joint IOUs on Phase III Staff Proposal at 13.

manure, and private companies investing in CNG fueling stations that distribute RNG to facilitate reductions in SLCP.[89]

For the transportation sector, Clean Energy states that the gas line subsidies make construction of new CNG fueling stations financially viable and present opportunities for collocation with hydrogen fueling stations.[90] For the electricity sector, they argue that renewable gas, including biogas and hydrogen from organic waste, can provide the same reliability services with far lower emissions than diesel backup generators.[91] For the agricultural sector, they state that agricultural feedstock RNG (particularly negative carbon RNG feedstock such as animal agriculture) can significantly lower GHG emissions, and help the state achieve its climate goals.[92] Therefore continuing gas line subsidies for these customers will encourage further development of these "carbon beneficial" fuel options.

6.3.3. Application Process for Select Projects that Provide Environmental or Financial Benefits (Joint Parties and TURN)

The Joint Parties and TURN oppose providing any exceptions to offering the gas line subsidies, but state that if the Commission decides to provide limited exemptions, it should require the IOUs to submit a stand-alone application seeking ratepayer support for specific line extension projects. They assert that the

[89] Comments of Clean Energy on Amended Scoping Memo and Ruling and Staff Proposal at 2-3.

[90] Comments of Clean Energy on Amended Scoping Memo and Ruling and Staff Proposal at 11-13.

[91] Comments of Clean Energy on Amended Scoping Memo and Ruling and Staff Proposal at 6.

[92] Response of Clean Energy to Assigned ALJs' Ruling Seeking Clarification and Additional Information at 10-15.

IOUs should demonstrate that ratepayer funding is just and reasonable in light of reasonably anticipated ratepayer benefits and in furtherance of California's decarbonization policy.[93] Specifically, the Joint Parties propose that the application meet the following minimum criteria: (1) the extension does not emit local criteria or toxic air pollution; (2) the extension is not located in an environmental and social justice community; (3) the extension is consistent with all California climate goals; (4) the project does not claim any environmental credits; and (5) there are no feasible non-pipeline alternatives to the extension.[94] Given the need to verify these facts with discovery, the Joint Parties recommend an expedited application process that should receive at least the same level of scrutiny as a Tier 3 AL, where the applicants must demonstrate the factual basis for its assertions, and parties are allowed to conduct discovery to verify that each of the suggested criteria have been met. TURN also recommends that if exceptions are made to preserve gas line subsidies for some non-residential customers, the Commission should protect residential customers and require the non-residential customer classes to subsidize the costs.[95]

6.3.4. Assistance for Low Income, Rural and Small Businesses (SBUA)

SBUA supports the elimination of gas line subsidies for non-residential customers, but recommends replacing the allowance regime with direct assistance to small businesses not currently connected to gas infrastructure but who upgrade to high-efficiency electric appliances in furtherance of the state's

[93] Reply Comments of Joint Parties and TURN on Phase III Staff Proposal at 10-14.

[94] Response of CEJA, EDF, NRDC, and Sierra Club to the Assigned ALJs' Ruling Seeking Clarifications and Additional Information at 6-10.

[95] Reply Brief of TURN at 8.

GHG emission goals. More specifically, they propose: (1) opening a further phase of this proceeding to understand the support required to assist small businesses in overcoming barriers to electrification, such as by providing subsidies for appliance or panel upgrades in locations where stranded asset problems are most likely to be acute or where propane reliance is high; (2) establishing a pilot project to investigate the effectiveness of electrification incentive programs, akin to the San Joaquin Valley Pilots (D.18-12-015) referenced in the Staff Proposal; and (3) requiring electric utilities, through the advice letter process, to gather further data on bill savings comparisons between gas and electric usage and propose programs to address financial barriers to adoption of electric appliances.[96]

6.4. Discussion

6.4.1. Elimination of Non-Residential Gas Line Subsidies: Approved

This decision adopts the staff's proposal to eliminate the non-residential gas line subsidies effective July 1, 2023. The elimination of subsidies applies to new applications for gas line extensions submitted on or after July 1, 2023, and will not affect applications submitted before July 1, 2023. Within 30 days of the date of this order, the gas IOUs shall each submit a Tier 2 AL to revise their respective gas rules to implement this decision.

Gas line subsidies are eliminated for the non-residential sector for the same reasons as for the residential sector. These benefits include significant ratepayer savings, reductions in GHG emissions, combating climate change, improved overall quality of life, greater certainty for the builder community, and benefits

[96] Opening Brief of SBUA at 8-9.

to low-income customers. The Commission reiterates that the elimination of these subsidies is one of many necessary and important steps in furthering California's decarbonization goals, while easing the burden on gas ratepayers, ensuring grid safety and reliability, and continuing to promote alternative clean fuels.

We also adopt the proposal of the Joint Parties and TURN, with modifications, to allow individual applications for the provision of gas line subsidies for select unique projects meeting specific application criteria discussed below.

The Commission agrees with SBUA and other parties that large non-residential customers are the most significant contributors to GHG gas emissions,[97] making it especially important to adopt this policy change for this customer segment. Absent this change, non-residential customers create the great potential to drive problematic expansion of gas line infrastructure beyond existing use areas, and create additional stranded investment.

Therefore, we eliminate gas line subsidies to promote the many benefits of this policy. However, gas line subsidies may be extended to a limited number of unique gas line extension projects meeting specific criteria, and will be reviewed through the application process outlined below.

6.4.2. Exemptions for Specific List of Projects that Provide Environmental or Financial Benefits: Denied

This decision denies the Joint IOUs' proposal to continue offering gas line subsidies to their proposed list of 10 non-residential project categories that might

[97] Reply Brief of SBUA at 2 and https://ww2.arb.ca.gov/ghg-inventory-data.

provide environmental and financial benefits to ratepayers. We are not convinced by the Joint IOUs' argument that an exception for a specific group of projects is necessary given the urgent nature of California's decarbonization goals and the likelihood that any new gas investments could become stranded assets in the future. Rather, as explained below, the potential benefits of an exemption for a specific group of customers are outweighed by the environmental and stranded investment costs.

The Joint IOUs propose this exception for a group of large non-residential customers that they argue provide environmental and financial benefits. The categories, however, are very broad and vague, such as "large commercial customers" and "industrial customers." It would not be reasonable to adopt a category as broad as "industrial customers" since not every project serving an industrial customer can be said to provide environmental or financial benefits to California ratepayers. Adopting the Joint IOUs' proposal as is could effectively make the elimination for the gas line subsidies largely meaningless, while adding confusion and administrative inefficiencies to the process as the categories are reviewed and parties argue for adjusting the categories.

Moreover, most parties, even when prompted by the assigned ALJs to be more specific,[98] did not provide a sufficiently unambiguous and clear definition of what constitutes environmental and financial benefits for the Commission to adopt this as a workable basis to establish categories. Instead, the Joint IOUs only provide a list of 10 categories they claim provide financial and/or environmental benefits to California ratepayers.

[98] January 28, 2022 ALJ Ruling Seeking Clarification and Additional Information, Attachment 1 at 3.

PG&E and Clean Energy, on the other hand, propose the following definitions within the limited context of this proceeding. PG&E proposes:[99]

- Direct Environmental Benefit: A project offers a direct environmental benefit where it provides on-site GHG, NOx, or other pollutant reduction compared an existing fuel baseline.
- Indirect Environmental Benefit: A project offers an indirect environmental benefit where it displaces either existing gas system emissions (*e.g.*, through renewable natural gas) or off-site (*e.g.*, through CNG) GHG, NOx, or other pollutant emissions.
- Financial Benefit: Broadly, a new gas connection offers financial benefit to all gas ratepayers where the connecting customer financially contributes, via gas rates, in excess of the costs to extend gas service to that customer. The customer may also offer financial benefit in the form of externalities that are more difficult to quantify (*e.g.*, job creation, increased state and local tax revenue, and local development).

Clean Energy proposes:[100]

- Environmental Benefit: (a) receipt of any tradable environmental attributes; (b) reduction of SLCPs; (c) reduction of GHG emissions; or (d) reduction of regulated air or water pollutants.
- Financial Benefit: (a) addresses the pay-back period for the gas line subsidies; (b) reduces system costs by more than the cost of the subsidy; or (c) contributes significantly to racial or social equity, public health, community resilience, or a robust economy.

[99] PG&E's Response to Assigned ALJ's Ruling Seeking Clarification and Additional Information at 6-7.

[100] Reply Comments of Clean Energy on Amended Scoping Memo and Ruling and Staff Proposal at 4.

We appreciate the proposals of PG&E and Clean Energy but find these definitions overly broad and lacking in adequate benchmarks or specific criteria for how to establish the 10 categories for potentially vast numbers of different projects, all of which would qualify for the exception. Absent an adequate definition or a reasonably accurate baseline for calculating environmental or financial benefits, many categories of projects could broadly make a case for the exception, and many customers might be granted exemptions even if the criteria are imprecise. We share TURN's concern that:

> Any project that adds new customer load to the gas system could, all else being equal, provide a contribution to margin for at least some amount of time. However, any system buildout today could become a stranded asset well before the end of the asset's life because of electrification — whether mandated by state or local building codes or inspired by ratepayer-funded incentive programs and market transformation. This serious risk cuts against any near-term financial benefits from increased sales associated with new customer load.[101]

Thus, along with the lack of adequate definitions and criteria provided by the Joint IOUs, PG&E and Clean Energy, and without sufficient information and analysis on the record, we are not convinced that continuing gas line subsidies for this broad set of non-residential projects would lead to the benefits claimed.

We acknowledge that there may be limited circumstances where gas line extensions for some non-residential projects can be beneficial. Nonetheless, these potentially limited circumstances are not sufficient to warrant blanket subsidies for various broad categories of projects, such as the 10 project types proposed by the Joint IOUs. Not only would this be complicated, but more importantly, this

[101] Opening Brief of TURN at 8.

would be misaligned with California's overall decarbonization goals. Exceptions for such broad categories of projects would perpetuate, even if on a smaller scale, the continued reliance on gas and locking in gas use for the life of the asset.

Instead, we adopt a limited alternative below that considers applications for specific and unique projects meeting a narrow set of criteria that may warrant gas line subsidies. This will account for the special cases of environmental, financial, or other benefits without creating up to 10 broad project categories.

This decision also denies PG&E's proposal for two new methods for calculating allowance amounts. We find this proposal now moot since we eliminate all gas line subsidies. Moreover, we do not wish to complicate the application process described below with additional factors.

6.4.3. Exemptions for Projects That Enable Hydrogen, RNG and CNG Use: Denied

This decision denies Clean Energy's proposal to continue offering blanket gas line subsidies for non-residential transportation, agricultural, commercial, and industrial projects that enable RNG use in order to prioritize reduction in SLCP emissions. We are not convinced by Clean Energy's argument that gas line subsidies should continue to be offered to the non-residential sector to advance the goal of reducing SLCPs. Rather, we believe that ending gas line subsidies and supporting the hydrogen/RNG/CNG sector to reduce SLCPs can be successfully achieved together.

Clean Energy claims that the lack of gas line subsidies could be the sole reason that a new project will not be built, because the project may no longer be economical.[102] Clean Energy argues that typically, a CNG project will cost

[102] Opening Brief of Clean Energy at 24.

approximately $1.5-$2.0 million plus a gas line extension cost of $400,000-$500,000 — approximately 25 percent of the investment.[103] Clean Energy does not, however, state whether the full gas line extension cost is eligible for gas line subsidies. As noted earlier in this decision, gas line extension costs are made up of a refundable portion and a non-refundable portion, with only the refundable portion being eligible for a subsidy. Clean Energy also does not provide data on average subsidies received for its projects. Recent data provided by the IOUs show the following average non-residential subsidies paid below.

Table 5. Average Subsidies Paid to Non-Residential Projects in 2021

	Average Subsidies Paid Per Project in 2021[104]			
Gas Line Subsidies	**PG&E**	**SoCalGas**	**SDG&E**	**SWG**
Allowances	$12,030	$7,058	Not Provided	$107,228
Refunds	$490	$0	$9,056	Not Provided
Discounts	$8,702	$74	Not Provided	$4,418

Although these average subsidies are not identified by project type, we note that they are far below the CNG gas line extension estimate of $400,000 to $500,00[105] provided by Clean Energy. Given the absence of sufficient information to support Clean Energy's claim, and based on the gas IOUs' 2021 average subsidies as shown above, the Commission is not convinced by the speculative argument that eliminating the gas line subsidies for non-residential project could be the sole reason that a new project will not be built.

[103] *Id. at* 30.

[104] April 18, 2022 ALJ Ruling, Attachment 5.

[105] Assuming the full amount is refundable as defined under the gas rules.

While this analysis suggests that the average subsidies may be small compared to the overall project costs, we acknowledge that there may be some CNG/RNG/hydrogen projects at the margin where the subsidy makes up a larger portion of total project costs. However, no compelling evidence demonstrates that the gas line subsidies are actually necessary, or are the tipping point, to encourage these larger customers to make the "cleaner" gas investments. Rather, many factors are involved in a developer deciding to develop or not develop a project. While we understand that the elimination of these subsidies would make some projects more expensive, simply pointing this out does not prove it is the driving or controlling factor in a decision, and we are not convinced, absent specific evidence or examples of representative projects, that it is a significant enough change to halt such projects altogether. This is especially true given that there are existing subsidies and programs that offer incentives for the development of alternative fuels, including $40 million for bio-SNG (synthetic natural gas) incentives that was authorized in D.22-02-025.[106]

The Commission also disagrees with Clean Energy that by making these projects more expensive, we are decelerating the move towards the use of cleaner fuels in the transportation/mobility sector that would otherwise reduce GHG emissions and help displace SLCPs. Many factors affect the use of alternative fuels in transportation, such as technology and state policy. As discussed above, gas line subsidies date back to the 1970s and the current rules on gas line subsidies were adopted in 2007. Yet, Clean Energy's data shows that only

[106] D.22-02-025, Ordering Paragraph 43.

3 percent of trucks in large fleets are powered by natural gas, and 0.01 percent are powered by hydrogen.[107]

Although we agree with Clean Energy that the use of CNG/RNG/ hydrogen is a preferred option over diesel and other "dirtier" fuels during a transition to full electrification, it is still not the preferred option in the long term over full electrification.[108] Our priority in the long term is to move away from fossil fuels altogether, including in the transportation sector, as opposed to supporting less harmful fossil fuels. This has been consistent and reiterated in several Commission proceedings.[109] It is also the policy of our sister agencies, which have also encouraged the move away from fossil fuel investment. For example, the CEC's California Clean Transportation Program has shifted focus significantly since 2019 to heavily prioritize zero emission vehicles (ZEVs) over near zero emission vehicles. CARB has adopted rules requiring 100 percent medium duty and heavy duty ZEVs by 2045 (to the fullest extent feasible). It has explained that "Infrastructure for methane trucks is expensive and would become a stranded asset if use of those [electric-fueled] trucks continued to expand; EV infrastructure, in contrast, will be needed indefinitely."[110] In light of these state policies, long term gas line subsidies to expand CNG infrastructure does not merit a categorical exemption from our overall policy adopted here.

---

[107] Opening Brief of Clean Energy at 28.

[108] Further, even though electrification is our preferred option, we recognize that for now, RNG plays an important role in reducing GHG emissions. This decision is not intended to conflict with that policy, as outlined in D.22-02-025.

[109] D.22-03-006, D.19-09-051, D.22-02-025, and Rejection of SoCalGas's AL 5590.

[110] CARB Technical Analysis of End of Useful Life Scenarios at 2 (https://ww2.arb.ca.gov/resources/documents/technical-analysis-end-useful-life-scenarios-statewide).

Additionally, we note that most of the cleaner fuels are already heavily subsidized, and eliminating the gas line subsidies would not undermine their development in any significant way. The table below summarizes these subsidies as approved by the Commission, and does not include additional subsidies that may be available from other sources.

Table 6. Commission Approved Subsidies for Alternate Fuels

Fuel type	Subsidy Budget	Authorized By
Bio-SNG	$40 million	D.22-02-025
Biomethane	$40 million	D.15-06-029
Biomethane (augment)	$40 million	D.20-12-031

Lastly, we reiterate that the elimination of these subsidies does not remove the builder or developer's choice to build the CNG/RNG facility, it only requires that the costs caused by new customers be paid by those customers. And, in the limited cases where a gas line subsidy may still be warranted, we provide an application process below to consider specific, unique projects that claim to be unable to proceed without a gas line subsidy.

6.4.4. Application Process for Select Projects that Provide Environmental or Financial Benefits: Approved with Modifications

This decision approves the Joint Parties and TURN's proposal for an application process, with modifications, for those specific, unique non-residential projects where a gas line subsidy may still be warranted. For these projects, the gas IOUs shall evaluate the project based on the criteria established in this decision and file an application with the Commission for approval of a gas line subsidy on behalf of the project applicant(s).

The IOUs shall ensure that projects seeking a gas line subsidy shall meet the following minimum criteria based on the information provided by the applicant(s) before including it in an annual filing to the Commission seeking such subsidies. These minimum requirements are:

(1) The project will lead to a demonstrable reduction in GHG emissions;

(2) The gas line extension required for the project is consistent with California's climate goals, including those articulated in SB 32 (Pavley, 2016); and

(3) The project applicant demonstrates that it has no feasible alternatives to the use of natural gas, including electrification.

We do not include the other criteria proposed by the Joint Parties and TURN (the extension is not located in an environmental and social justice community, and the project does not claim any environmental credits) at this time. We are not persuaded that these additional criteria are necessary in assessing the impacts of the project.

If there are projects seeking gas line subsidies that an IOU determines meets the above criteria, the IOU shall file an annual application, by July 1 of each year beginning in 2023, and include all qualified projects requesting a gas line subsidy. Even though this decision eliminates gas line subsidies for all customer classes, it does not change the methodology for the calculation of gas line subsidies if the Commissions grants gas line subsidies for specific projects through the application process. In its annual filing, each IOU should include an update to the non-residential gas line extension allowance calculations based on the current methodology (including all inputs used, *e.g.*, cost of service factor). The IOUs, on behalf of the project applicant(s), must demonstrate the factual basis for the project applicants' assertions, and confirm that the minimum

requirements have been met based on the information provided by applicants.[111] The Commission will evaluate the types of applications that are found to be deserving of gas line subsidies over the next few application cycles, and may revisit the need for categorical exemptions at a later time. The IOUs may propose potential categorical exemptions in their annual filing after two application cycles. The IOUs may also reference similar projects that have received gas line subsidies in their annual filing, and over time, this could reduce the burden on applicants and IOUs in demonstrating eligibility for these subsidies.

Lastly, the Commission denies TURN's proposal to modify the cost allocation/collection methodology of these subsidies to only require non-residential customer classes to subsidize the costs.[112] We do this because these projects, if approved for subsidies through this application process, would have demonstrated that they will reduce GHG emissions and be consistent with California's climate goals. This benefits all ratepayers, not just the non-residential customer class. The Commission also believes the resulting subsidies, if any, will not be so large as to justify the additional administrative burden to distribute the costs in proportion to the benefits received by customer class.

6.4.5. Assistance for Low Income, Rural and Small Businesses: Approved with Modifications

We approve SBUA's proposal to further investigate the needs of small businesses not currently connected to gas infrastructure that move towards electrification. Although this decision does not make any special exceptions for

[111] Each IOU must determine that each applicant's project meets the criteria based on the information provided by the applicants. In addition, each IOU's application may include prepared proposed testimony from the applicant in support of the application.

[112] Reply Brief of TURN at 8.

the treatment of small businesses in regard to electrification, we are committed to considering the unique challenges to electrification faced by small businesses in future phases of this proceeding.

7. Compliance with Pub. Util. Code Section 783(b)-(d)

Pub. Util. Code Section 783(b) states that:

> Whenever the commission institutes an investigation into the terms and conditions for the extension of services provided by gas and electrical corporations to new or existing customers, or considers issuing an order or decision amending those terms or conditions, the commission shall make written findings on all of the following issues:
>
> (1) The economic effect of the line and service extension terms and conditions upon agriculture, residential housing, mobile home parks, rural customers, urban customers, employment, and commercial and industrial building and development.
>
> (2) The effect of requiring new or existing customers applying for an extension to an electrical or gas corporation to provide transmission or distribution facilities for other customers who will apply to receive line and service extensions in the future.
>
> (3) The effect of requiring a new or existing customer applying for an extension to an electrical or gas corporation to be responsible for the distribution of, reinforcements of, relocations of, or additions to that gas or electrical corporation.
>
> (4) The economic effect of the terms and conditions upon projects, including redevelopment projects, funded or sponsored by cities, counties, or districts.
>
> (5) The effect of the line and service extension regulations, and any modifications to them, on existing ratepayers.

(6) The effect of the line and service extension regulations, and any modifications to them, on the consumption and conservation of energy.

(7) The extent to which there is cost-justification for a special line and service extension allowance for agriculture."[113]

Pub. Util. Code Section 783(c) states that:

The commission shall request the assistance of appropriate state agencies and departments in conducting any investigation or proceeding pursuant to subdivision (b), including, but not limited to, the Transportation Agency, the Department of Food and Agriculture, the Department of Consumer Affairs, the Bureau of Real Estate, and the Department of Housing and Community Development.[114]

Lastly, Pub. Util. Code Section 783(d) requires:

Any new order or decision issued pursuant to an investigation or proceeding conducted pursuant to subdivision (b) shall become effective on July 1 of the year which follows the year when the new order or decision is adopted by the commission, so as to ensure that the public has at least six months to consider the new order or decision.[115]

7.1. Staff Proposal

In response to Pub. Util. Code Section 783(b) the Staff Proposal addresses each of the seven issues as follows.[116]

---

[113] *See* https://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?sectionNum=783&lawCode=PUC.

[114] *See* https://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?sectionNum=783&lawCode=PUC.

[115] *See* https://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?sectionNum=783&lawCode=PUC.

[116] Phase III Scoping Memo, Appendix A at 33-36, 38-40, and 42-45.

On Issue 1, Staff expects that the elimination of gas line subsidies would increase the number of newly constructed all-electric buildings and that prices for those all-electric buildings will likely be less than those for an equivalent newly constructed dual fuel building. Dual fuel buildings constructed without gas line subsidies would be expected to cost more than they do today, but minimally (anywhere from 0.07 percent to 0.25 percent depending on the gas line subsidies type). Whether or not customer bills would be higher or lower in a new all-electric building vis-à-vis a new dual fuel building would depend on numerous factors that include tariff type, climate zone, future electricity prices, future gas prices, customer energy consumption habits, and time of energy usage.

On Issue 2, Staff does not expect the elimination of gas line subsidies to affect the current methods of providing transmission or distribution facilities for future customers, as the Staff Proposal is not proposing to modify such rules. If gas line subsidies are eliminated as proposed, and builders increase their rate of all-electric new construction, builders building dual fuel new construction further away from a point of gas pipeline interconnection could expect to pay more than they otherwise would be expected to if they have to pay for additional trenching and infrastructure that neighboring all-electric buildings did not need and thus did not help pay to extend from its current cut-off location.

On Issue 3, Staff expects the elimination of gas line subsidies for all new construction to result in increased costs to any customer seeking to extend a gas line. Depending on what infrastructure upgrades are necessary to extend gas service to the customer's building, the increased costs would vary.

On Issue 4, Staff does not expect the elimination of gas line subsidies for all new construction to result in changes specific to projects sponsored by cities,

counties, or districts, as the Staff Proposal is not proposing any such changes. Should those projects be constructed all-electric, they will be less expensive than they are today, and should those projects be constructed dual fuel, they are anticipated to be only slightly more expensive than they are today.

On Issue 5, Staff expects the elimination of gas line subsidies for all new construction to lead to an annual reduction of approximately $115,528,305 in allowances,[117] $2,625,678 in refunds,[118] and $26,195,639 in discounts[119] (with partial data for SDG&E) as a result of gas ratepayers no longer having to pay for gas line subsidies.[120] If a new building were to be constructed dual fuel without a gas line subsidy, gas ratepayers would save even more as a result of an additional customer sharing in costs necessary to maintain the common carrier pipeline network.

On Issue 6, Staff expects the elimination of gas line subsidies for all new construction to result in less gas consumption and more electricity consumption. Because gas consumed in California is overwhelmingly non-renewable and electricity is increasingly carbon-free, the encouragement of fuel substitution associated with adoption of Staff's recommendation would result in fewer GHG emissions and less air pollution. However, additional electrical load will gradually result in the need for additional electricity procurement and could pose challenges to managing winter peak electric demand if not properly planned for.

---

[117] Phase III Scoping Memo, Appendix A at 35.

[118] Phase III Scoping Memo, Appendix A at 39.

[119] Phase III Scoping Memo, Appendix A at 44.

[120] We note that since the publication of the Staff Proposal, the gas IOUs provided updated projections. (*See* April 18, 2022 ALJ Ruling, Attachment 5.)

On Issue 7, Staff does not recommend any special allowance for agricultural customers and, as such, there is no cost-justification for such an allowance. Agricultural operations typically use gas primarily for greenhouse heating and grain drying, both of which can be done using electricity. Additionally, the small property price increase for new dual fuel construction that can be expected if Staff's recommendation is adopted is insufficiently high to merit a special allowance for any customer class.

In response to Pub. Util. Code Section 783(c), Commission staff requested the assistance of the California State Transportation Agency, California Department of Food and Agriculture, DCA, DRE,[121] and HCD in developing the recommendations in its Staff Proposal. Staff states that the feedback that was received was considered as part of Staff's recommendations. Additionally, Staff consulted with CARB, CEC, and the California Strategic Growth Council.[122]

Lastly, in response to Pub. Util. Code Section 783(d), Staff recommends an effective date of July 1, 2023, in compliance with the minimum time required.

7.2. Positions of Parties Supporting the Staff Proposal

Of the 14 parties commenting on the Staff Proposal's findings pursuant to Pub. Util. Code Section 783(b), 10 parties agree with the Staff Proposal's assessment of the seven issues and agree that eliminating gas line subsidies is within the Commission's legal purview. These parties are: Cal Advocates, CEJA, EDF, NRDC, Sierra Club, TURN, EBCE, MCE, SCP, and PCE. They make several points in support.

[121] Statute requires the CPUC to request the assistance of the Bureau of Real Estate, which has since become DRE.

[122] Phase III Scoping Memo, Appendix A at 2.

- The Staff Proposal sufficiently addresses the seven issues to make the requisite written findings;
- Statute does not specify the exact nature of the economic analysis required for the Commission to make the necessary findings pursuant to this section; and
- Statute does not require that new rules result in any particular findings (*e.g.*, favorable rate effects for customers) simply that they be documented.

7.3. Positions of Parties Opposing the Staff Proposal

Of the 14 parties commenting on the Staff Proposal's findings pursuant to Pub. Util. Code Section 783(b), four parties disagree with the Staff Proposal's assessment of the seven issues citing insufficient analysis. These parties are: SDG&E, SoCalGas, SBUA, and Clean Energy. They make several points in opposition.

- The record of this proceeding does support written findings on all seven issues;
- There has been no examination of the impacts on agriculture, mobile home parks, rural and urban customers, employment, or commercial and industrial buildings and development (Pub. Util. Code Section 783(b)(1));
- There has been no examination of the impacts to customer bills (Pub. Util. Code Section 783(b)(5));
- There has been no discussion of the impact on the development of RNG fueling stations or hydrogen production sites;
- The Staff Proposal does not address the equity concern between the customer applying for the extension now and future customers applying for line extensions at a later time (Pub. Util. Code Section 783(b)(2));
- The Staff Proposal failed to show that staff consulted any city, county or district before arriving at the conclusion that

eliminating gas line subsidies would not have any effect on redevelopment projects, funded or sponsored by cities, counties, or districts (Pub. Util. Code Section 783(b)(4)); and

- A study should be conducted on the economic effects on residential housing, rural customers and urban customers and must include low-income customers, disadvantaged communities, and the affordable housing sector.

7.4. Discussion

7.4.1. Compliance with Pub. Util. Code Section 783(b)

In this decision, the Commission makes findings on each of the seven issues included in Pub. Util. Code Section 783(b). We do so by relying on the best information we have in the record of this proceeding.

We agree with the Joint Parties and TURN that the statute requires the Commission to make findings on questions such as "the effect of requiring new or existing customers applying for an extension to an electrical or gas corporation to provide transmission or distribution facilities for other customers who will apply to receive line and service extensions in the future." However, it does not require that the Commission arrives at any particular conclusions (*e.g.*, favorable rate effects for customers) simply that the Commission arrives at written findings for all seven issues set out in Pub. Util. Code Section 783(b).[123]

Moreover, the statute does not require the Commission to conduct or commission a study, or specify the exact nature of the economic analysis required before the Commission can make the necessary findings.

The Commission has considered the potential impacts of these changes as further discussed below and concludes that eliminating gas line subsidies will

[123] Opening Comments of Joint Parties and TURN on Phase III Staff Proposal at 4.

have a net positive impact on all sectors mentioned in Pub. Util. Code Section 783(b) for all the reasons discussed in earlier sections of this decision. The record in this proceeding provides the Commission sufficient basis to eliminate gas line subsidies for all customer classes and we determine that this decision is in California's best interest and is consistent with other Commission decisions and legislative intent. More specifically, we make the following findings on each of the seven issues.

(1) The economic effect of the line and service extension terms and conditions upon agriculture, residential housing, mobile home parks, rural customers, urban customers, employment, and commercial and industrial building and development.

The Commission finds that the elimination of the gas line subsidies will have an overall net positive economic effect on these groups of customers. Gas rates paid by all gas customers will be reduced due to the reduction in gas line subsidies, estimated at an annual savings of $164 million.

The Commission agrees with the Joint Parties that in light of state climate and equity objectives and the importance of price signals to discourage the expansion of the gas system and reliance on gas appliances, the benefits of ending gas line extensions outweigh the economic impact upon those customers that may incur additional line or service extension costs by continuing to choose to build an extension connecting to the gas system.[124] We also note that there are programs that can help reduce any potential cost increase for these groups including the Manufactured and Mobile Homes Program, the Mobile Home Park Utility Conversion Program, and BUILD.

[124] Opening Brief of Joint Parties at 19-21.

In terms of employment, and as discussed in this decision, the Commission finds that there will likely be a net positive impact as we are likely to see an increase in demand for skilled workers in several economic sectors, including in the electric industry, construction jobs for energy efficiency improvements and building retrofits.

In terms of commercial and industrial building and development, and as discussed in this decision, the Commission finds that there will likely be an increase in the number of newly constructed all-electric buildings which will likely cost less than newly constructed dual fuel buildings.

Therefore, the Commission finds the "economic effect of gas line and service extension terms and conditions upon agricultural, residential housing, mobile home parks, rural customers, urban customers, employment, and commercial and industrial building and development" to be overall net positive.

(2) The effect of requiring new or existing customers applying for an extension to an electrical or gas corporation to provide transmission or distribution facilities for other customers who will apply to receive line and service extensions in the future.

The Commission agrees with the Staff Proposal[125] and the Joint Parties[126] that the elimination of gas line subsidies will have no effect on the current methods of providing transmission or distribution facilities for future customers.

We note that the elimination of gas line allowances may shift who pays which costs, but there is no change in the extent to which new or existing customers applying for an extension provide transmission or distribution facilities for future customers. We acknowledge that builders building dual fuel

[125] Phase III Scoping Memo, Appendix A at 34, 39, and 42-43.

[126] Opening Brief of Joint Parties at 21.

new construction away from a point of gas pipeline interconnection may pay more (*e.g.*, for additional trenching and infrastructure) than neighboring all-electric buildings (who do not need the additional trenching and gas infrastructure).

With respect to the magnitude of any such cost shift, no party presented credible evidence that it would be material and significantly disrupt necessary expansion of utility service. In light of the state's climate and equity objectives, the benefits of ending these subsidies to all gas customers outweigh any economic impact of developers that may receive lower subsidies due to neighboring developments opting for all-electric designs.

Therefore, we find that the actions in this decision do not have the "effect of requiring new or existing customers applying for a gas line extension to provide transmission and distribution facilities to other customers who receive line and service extension in the future." We find that the effect of this decision is limited to a shift in who pays which costs, this is not a material effect, and the negative effects on some customers, if any, are offset by the overall positive effects of reducing GHG emissions, improved quality of life and health for customers, hundreds of millions of dollars in total ratepayer savings annually, greater equity for low-income customers, and greater certainty for the builder and contractor community.

(3) The effect of requiring a new or existing customer applying for an extension to an electrical or gas corporation to be responsible for the distribution of, reinforcements of, relocations of, or additions to that gas or electrical corporation.

The Commission agrees with the Staff Proposal[127] and the Joint Parties[128] that the elimination of gas line subsidies for all new construction will result in increased costs to any customer choosing to extend a gas line, with costs depending on what infrastructure upgrades are necessary to extend gas service to the customer's building. However as mentioned above, the benefits of ending these subsidies to all gas customers outweigh any economic impact on developers seeking to extend gas lines. Therefore, we find the "effect of requiring a new or existing customer applying for an extension to an electrical or gas corporation to be responsible for the distribution of, reinforcements of, relocations of, or additions to that gas or electrical corporation" to be: the new or existing customer will be responsible for and must pay the costs that are caused by that customer's line extension (including reinforcements, relocations, or additions). These costs are outweighed by the economic and environmental effects along with increased equity of having the cost-causer pay the costs that are incurred.

(4) The economic effect of the terms and conditions upon projects, including redevelopment projects, funded or sponsored by cities, counties, or districts.

The Commission agrees with the Joint Parties that the elimination of gas line subsidies may increase project costs (including those that are funded or sponsored by cities, counties, or districts) that choose to connect to the gas system.[129] However, as discussed above, the rates paid by all gas customers (including cities, counties, or districts as utility customers themselves) will be

[127] Phase III Scoping Memo, Appendix A at 34, 39, and 43.

[128] Opening Brief of Joint Parties at 21.

[129] Opening Brief of Joint Parties at 21-22.

reduced due to the millions of dollars in ratepayer savings from eliminating the gas line subsidies. As such, we find that the "economic effect of the terms and conditions upon projects, including redevelopment projects, funded or sponsored by cities, counties, or districts" to be higher costs for those projects that choose to connect to the gas system but offset (at least in part) by reduced gas rates, and also offset by the environmental and social benefits of ending gas line subsidies.

(5) The effect of the line and service extension regulations, and any modifications to them, on existing ratepayers.

The Commission estimates that the elimination of gas line subsidies for all new construction (residential and non-residential) will lead to an annual savings of approximately $164 million per year, as noted above. In addition to the ratepayer savings, other benefits to the ratepayers include reduction in GHG emissions and improving public health outcomes due to improved air quality. Thus, we find that the "effect of the line and service extension regulations, and any modifications to them, on existing ratepayers" is a savings of at least $164 million per year, plus additional environmental, social and health benefits.

(6) The effect of the line and service extension regulations, and any modifications to them, on the consumption and conservation of energy.

The Commission agrees with the Staff Proposal that the elimination of gas line subsidies for all new construction will result in less gas extensions, less gas consumption, and more electricity consumption.[130] This will also result in fewer GHG emissions and less air pollution. That is because electric generation is now produced by a substantial amount of non-GHG polluting power plants, and the

[130] Phase III Scoping Memo, Appendix A at 35, 40, and 44.

percentage of non-GHG producing power plants will increase over time as California meets its 100 percent clean electricity mandate of SB 100. With regard to energy conservation, to the extent elimination of these subsidies results in more all-electric construction, we agree with the Joint Parties that energy conservation will likely increase due to the efficiency of electric appliances.[131] Thus, we find the "effect of the line and service extension regulations, and any modifications to them, on consumption and conservation of energy" to be a reduction in gas consumption, an increase in electricity consumption, lower GHG emissions, less air pollution, and more energy conservation, with overall environmental, social and health benefits.

(7) The extent to which there is cost-justification for a special line and service extension allowance for agriculture.

The Commission find no impacts here as the proposal to eliminate gas line subsidies for all customer classes does not include special allowances for agricultural loads. No credible evidence was presented on a cost-justification, if any, for a special line and service extension allowance for agriculture.

Therefore, we conclude on these seven issues that the record in the proceeding provides the Commission sufficient basis to end gas line subsidies for all customer classes as this change is in California's best interest and is consistent with other Commission decisions and legislative intent. As attested by numerous parties, there are significant economy-wide climate, health, affordability, and equity benefits to eliminating gas line subsidies, in addition to the significant ratepayer savings as supported by the data in the Staff Proposal and the IOUs' ED-DR responses. In light of California's climate objectives and the importance of market signals to discourage further reliance on gas, we find that the benefits

[131] Opening Brief of Joint Parties at 22.

of ending these subsidies as discussed thoroughly in this decision outweigh any potentially negative economic effects to any particular customer classes described within these seven issues.

7.4.2. Compliance with Pub. Util. Code Section 783(c)

In compliance with Pub. Util. Code Section 783(c), the Phase III Scoping Memo requested the assistance and input of the agencies and departments included in the statute. The Commission served the Phase III Scoping Memo on these agencies and invited them to participate in this proceeding (*e.g.,* submit comments and reply comments on the Staff Proposal).[132] Additionally, on November 17, 2021, the assigned Commissioner sent a follow up e-mail to the Executive Directors (or an equivalent position) of these agencies and departments and invited them to provide input on the Staff Proposal by December 20, 2021. No comments or responses from the state agencies and state departments were received.

7.4.3. Compliance with Pub. Util. Code Section 783(d)

Lastly, the revisions to the gas rules adopted in this decision are effective July 1, 2023, consistent with Pub. Util. Code Section 783(d).

8. Conclusion

Based on the record and the analysis above, we conclude that, consistent with the policy objectives of this rulemaking and the state's climate goals, the current gas line subsidies for all customer classes should be eliminated, effective July 1 of the year following today's order pursuant to Pub. Util. Code Section 783(c), on July 1, 2023. We also adopt an application process through which the

[132] Phase III Scoping Memo at 1 and 12.

IOUs may seek gas line subsidies for individual projects meeting the criteria set out in this decision. This decision meets the statutory requirements as set forth in Pub. Util. Code Section 783(b)-(d).

9. Comments on Proposed Decision

The proposed decision of Commissioner Clifford Rechtschaffen in this matter was mailed to the parties in accordance with Pub. Util. Section 311 and comments were allowed under Rule 14.3 of the Commission's Rules of Practice and Procedure (Rules). Comments were filed on August 30, 2022 by PG&E; SDG&E; SoCalGas; SCE; SWG; Clean Energy; the Joint Parties; SBUA; and The California Manufactures and Technology Association (CMTA). Reply comments were filed on September 6, 2022 by PG&E; SDG&E; SoCalGas; Clean Energy; the Joint Parties; SBUA; CMTA; and TURN.

Consistent with the Rules, we give no weight to comments that fail to focus on factual, legal, or technical errors (Rule 14.3(c)). In particular, we disregard comments that only reargue a party's position. In response to comments, we make the following revisions and clarifications:

- Corrections to non-substantive typographical errors and omissions.
- Clarification on the requirement of the IOUs, on behalf of the project applicant(s) seeking gas line subsidies, to demonstrate the factual basis for the project applicants' assertions, and confirm that the minimum requirements have been met based on the information provided by applicants.
- Removal of the requirement of the IOUs, on behalf of the project applicant(s) seeking gas line subsidies, to disclose all other incentives received by each project.

10. Assignment of Proceeding

Clifford Rechtschaffen is the assigned Commissioner and Scarlett Liang-Uejio and Ava Tran are the assigned ALJs in this proceeding.

Findings of Fact

1. The Commission initiated this proceeding to consider policy frameworks supporting decarbonization of buildings, including ongoing efforts to reduce GHG emissions associated with energy use in buildings.

2. The Phase I decision established the BUILD Program and the TECH Initiative pursuant to SB 1477.

3. The BUILD Program provides incentives to new residential housing projects that are all-electric and have no hookup to the gas distribution grid.

4. The TECH Initiative is a market transformation program providing incentives to advance the adoption of low-emission space and water hearing technologies.

5. The Phase II decision adopted: (a) guiding principles for the layering of incentives provided by multiple building decarbonization programs; (b) the WNDRR Program; (c) guidance on data sharing of customer and other information; and (d) requirements for the three large electric IOUs to conduct studies on bill impacts that result from fuel substitution for water heaters from natural gas to electric.

6. The Phase III Scoping Memo determined the issues to be resolved in Phase III including: (a) whether the Commission should modify or eliminate gas line extension allowances for some or all customer classes (residential and non-residential); (b) whether the Commission should modify or eliminate gas line extension refunds for some or all customer classes (residential and non-residential); and (c) whether the Commission should modify or eliminate

gas line extension discounts for some or all customer classes (residential and non-residential).

7. The Energy Division Staff Proposal recommends revisions to the current gas rules to eliminate the gas line subsidies for all customer classes effective July 1, 2023.

8. Of the parties commenting on eliminating the gas line subsidies for residential customers, there is wide support for the Staff Proposal among parties representing a substantial range of social, economic, and environmental interests.

9. Of the parties commenting on eliminating the gas line subsidies for non-residential customers, there is substantial support for the Staff Proposal among parties representing a wide range of interests.

10. The current gas line subsidies were established during a period when the state's energy needs and policy goals were very different from today's, and are no longer consistent with today's GHG emission reduction goals, the urgent need to reduce gas rates to ensure affordability, and the long term need to minimize future stranded investment.

11. The Commission adopted a uniform set of rules for gas utility line and service extensions beginning in 1915.

12. Under current rules, gas IOUs are not obligated to extend gas lines free of cost but must provide the opportunity for customers to be connected to the utility system at reasonable prices, terms, and conditions.

13. Current gas rules incentivize the installation of more gas appliances which perpetuate reliance on gas service and lock in all associated GHG emissions for the life of the appliance unless the appliance is retired early and replaced with an electric alternative.

14. The elimination of gas line subsides would make gas line and service extensions more expensive to the applicant for new gas service, and dual fuel new construction less desirable and financially riskier.

15. Eliminating gas line subsidies for all customer classes will result in significant ratepayer savings over the life of the gas line extensions.

16. Eliminating gas line subsidies for all customer classes is a logical step toward building decarbonization, consistent with state objectives and the Commission's policy frameworks. It will further the state's climate goals of reducing GHG emissions 40 percent by 2030 and achieving carbon neutrality by 2045 or sooner.

17. Eliminating gas line subsidies for all customer classes will improve overall quality of life (GHG emissions reductions, ratepayer savings, benefits to low income customers), and provide greater certainty for the builder community and the contractor community.

18. Eliminating gas line subsidies for all customer classes will result in a net positive impact on the workforce, as any potential decrease in demand for jobs within the gas industry is offset by the likely increase in demand for workers in several economic sectors, including in the electric industry, construction jobs for energy efficiency improvements and building retrofits.

19. Eliminating gas line subsidies for all customer classes does not remove customer choice as customers can continue to select their choice of fuel, with the difference being that existing and future gas customers will no longer have to subsidize investments in the gas infrastructure for new customers.

20. Eliminating gas line subsidies for all customer classes will not negatively impact energy reliability.

21. Eliminating gas line subsidies for all customer classes will have minimal impacts on property prices.

22. Eliminating gas line subsidies for all customer classes and supporting the hydrogen/RNG/CNG sector to reduce SLCPs can be successfully achieved together.

23. Large non-residential customers are the most significant contributors to GHG emissions.

24. There may be limited circumstances where gas line extensions for some non-residential projects can be beneficial, and gas line subsidies for these projects may be warranted.

25. Consideration of modifying or eliminating gas line subsidies is governed by Pub. Util. Code Section 783(b), which requires the Commission to make written findings on the following seven issues:

(a) The economic effect of the line and service extension terms and conditions upon agriculture, residential housing, mobile home parks, rural customers, urban customers, employment, and commercial and industrial building and development;

(b) The effect of requiring new or existing customers applying for an extension to an electrical or gas corporation to provide transmission or distribution facilities for other customers who will apply to receive line and service extensions in the future;

(c) The effect of requiring a new or existing customer applying for an extension to an electrical or gas corporation to be responsible for the distribution of, reinforcements of, relocations of, or additions to that gas or electrical corporation;

(d) The economic effect of the terms and conditions upon projects, including redevelopment projects, funded or sponsored by cities, counties, or districts;

(e) The effect of the line and service extension regulations, and any modifications to them, on existing ratepayers;

(f) The effect of the line and service extension regulations, and any modifications to them, on the consumption and conservation of energy; and

(g) The extent to which there is cost-justification for a special line and service extension allowance for agriculture.

26. Eliminating gas line subsidies will have the following impacts on the seven issues governed by Pub. Util. Code Section 783(b):

(a) The "economic effect of gas line and service extension terms and conditions upon agricultural, residential housing, mobile home parks, rural customers, urban customers, employment, and commercial and industrial building and development" will be overall net positive;

(b) The "effect of requiring new or existing customers applying for a gas line extension to provide transmission and distribution facilities to other customers who receive line and service extension in the future" will be limited to a shift in who pays which costs, will not be a material effect, and any negative effects on some customers, if any, will be offset by the overall positive effects of reducing GHG emissions, improved quality of life and health for customers, hundreds of millions of dollars in total ratepayer savings annually, greater equity for low-income customers, and greater certainty for the builder and contractor community;

(c) The "effect of requiring a new or existing customer applying for an extension to an electrical or gas corporation to be responsible for the distribution of, reinforcements of, relocations of, or additions to that gas or electrical corporation" will be that the new or existing customer will be responsible for and must pay the costs that are caused by that customer's line extension (including reinforcements, relocations, or additions). These costs will be outweighed by the economic and

environmental effects along with increased equity of having the cost-causer pay the costs that are incurred;

(d) The "economic effect of the terms and conditions upon projects, including redevelopment projects, funded or sponsored by cities, counties, or districts" will be higher costs for those projects that choose to connect to the gas system but will be offset (at least in part) by reduced gas rates, and also offset by the environmental and social benefits of ending gas line subsidies;

(e) The "effect of the line and service extension regulations, and any modifications to them, on existing ratepayers" will be savings of at least $164 million per year, plus additional environmental, social and health benefits;

(f) The "effect of the line and service extension regulations, and any modifications to them, on consumption and conservation of energy" will be a reduction in gas consumption, an increase in electricity consumption, lower GHG emissions, less air pollution, and more energy conservation, with overall environmental, social and health benefits; and

(g) There will be no "extent to which there is cost justification for a special line and service extension allowance for agriculture."

27. Pub. Util. Code Section 783(c) requires that:

The commission shall request the assistance of appropriate state agencies and departments in conducting any investigation or proceeding pursuant to subdivision (b), including, but not limited to, the Transportation Agency, the Department of Food and Agriculture, the Department of Consumer Affairs, the Bureau of Real Estate, and the Department of Housing and Community Development.

28. Pub. Util. Code Section 783(d) requires that:

Any new order or decision issued pursuant to an investigation or proceeding conducted pursuant to subdivision (b) shall become effective on July 1 of the year which follows the year

when the new order or decision is adopted by the commission, so as to ensure that the public has at least six months to consider the new order or decision.

29. During the course of this proceeding, the Commission provided notice and an opportunity to comment to those agencies identified in Pub. Util. Code Section 783(c).

Conclusions of Law

1. The Commission should eliminate gas line extension allowances, refunds, and discounts for all customer classes, with limited exceptions.

2. The Commission should allow limited exceptions to the elimination of gas line subsidies by permitting a utility to file an application for projects that meet specific criteria.

3. The application should be filed each year by July 1 and must demonstrate that each project meets the following criteria:

(a) The project shows a demonstrable reduction in GHG emissions;

(b) The project's gas line extension is consistent with California's climate goals, including those articulated in SB 32 (Pavley, 2016); and

(c) The project demonstrates that it has no feasible alternatives to the use of natural gas, including electrification.

4. The changes adopted in this decision to the gas rules comply with the statutory requirements of Pub. Util. Code Section 783(b)-(d).

5. The gas IOUs should each submit a Tier 2 AL to revise their gas line extension rules to eliminate gas line extension subsides in conformance with this decision. The revised rules should include the application process adopted in this decision allowing limited projects meeting the specific eligibility criteria set out in this decision to seek gas line extension allowances, refunds, and discounts.

O R D E R

IT IS ORDERED that:

1. Gas line extension allowances, the 10-year refundable payment option, and the 50 percent discount option in current utility gas line extension rules shall be eliminated, as provided below:

   (a) Gas Line Extension Allowances: All allowances set forth in utilities' Gas Rule Nos. 15 and 16 (for Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southwest Gas Corporation) (collectively, the three gas utilities) and Gas Rule Nos. 20 and 21 (for Southern California Gas Company (SoCalGas)) shall be removed effective July 1, 2023, subject to the application process described in Ordering Paragraph (OP) 2 of this decision;

   (b) 10-Year Refundable Payment Option: All refunds set forth in utilities' Gas Rule Nos. 15 and 16 (for the three gas utilities) and Gas Rule Nos. 20 and 21 (for SoCalGas) shall be removed effective July 1, 2023, subject to the application process described in OP 2 of this decision; and

   (c) 50 Percent Discount Option: All discounts set forth in utilities' Gas Rule Nos. 15 and 16 (for the three gas utilities) and Gas Rule Nos. 20 and 21 (for SoCalGas) shall be removed effective on July 1, 2023, subject to the application process described in OP 2 of this decision.

2. Pacific Gas and Electric Company, San Diego Gas & Electric Company, Southern California Gas Company and Southwest Gas Corporation (collectively, the gas utilities) may request approval from the California Public Utilities Commission (Commission) by an annual application for a gas line extension allowance, a 10-year refundable payment option, or a 50 percent discount payment option (gas line subsidy) for specific, unique non-residential projects meeting the criteria established in this decision. For those eligible projects, the gas utility shall file an application with the Commission, on behalf of the

applicant(s), for approval of a gas line subsidy, by July 1 of each year starting in 2023. In its annual filing, each investor-owned gas utility shall include an update to the non-residential gas line extension allowance calculations based on the current methodology (including all inputs used, *e.g.*, cost of service factor). The criteria are:

(a) The project shows a demonstrable reduction in greenhouse gas emissions;

(b) The project's gas line extension is consistent with California's climate goals, including those articulated in Senate Bill 32 (Pavley, 2016); and

(c) The project demonstrates that it has no feasible alternatives to the use of natural gas, including electrification.

3. For those specific, unique non-residential projects where a gas line extension allowance, the 10-year refundable payment option, and the 50 percent discount payment option may still be warranted, the gas utilities, on behalf of the project applicants, shall demonstrate the factual basis for the project applicants' assertions, and confirm that the minimum requirements have been met based on the information provided by applicants before filing the annual application with the California Public Utilities Commission.

4. Within 30 days of the date of this order, Pacific Gas and Electric Company, Southern California Gas Company, San Diego Gas & Electric Company, and Southwest Gas Corporation shall each submit a Tier 2 Advice Letter to revise tariffs for their respective gas line extension rules that eliminate gas line extension subsides in conformance with this decision. The revised tariffs shall include the application process adopted in this decision allowing limited projects meeting the specific eligibility criteria set out in this decision to seek gas line extension allowances, 10-year refunds, or 50 percent discounts payment option.

5. Rulemaking 19-01-011 remains open.

This order is effective today.

Dated September 15, 2022, at Clovis, California.

In the Matter of Chair Danner's Motion to Consider Whether Natural Gas Utilities Should Continue to Use the Perpetual Net Present Value Methodology to Calculate Natural Gas Line Extension Allowances	DOCKET UG-210729 ORDER 01 AUTHORIZING AND REQUIRING TARIFF REVISIONS

INTRODUCTION

1 **PROCEDURAL HISTORY.** On September 21, 2021, the Washington Utilities and Transportation Commission (Commission) issued a Notice of Item to be Considered at the Commission's Regularly Scheduled Open Meeting and Notice of Opportunity to File Written Comments (Notice). The Notice explained that Commission Chair David Danner, on his own motion, seeks input from regulated natural gas companies and stakeholders addressing whether natural gas utilities should continue to use the current Perpetual Net Present Value (PNPV) methodology for calculating natural gas line extension allowances.

2 The Notice explained that the Commission would address this issue at its October 28, 2021, regularly scheduled open meeting and requested that interested persons file written comments by October 25, 2021.

3 **BACKGROUND.** Natural gas utilities provide line extension allowances to partially offset the cost of expanding the natural gas distribution system to new customers. In 2014, the Commission opened Docket UG-143616 to discuss the need for natural gas distribution infrastructure expansion as well as the options available to implement such an expansion. Part of that discussion included adopting the PNPV methodology,[1] which significantly increased the credit provided to customers through natural gas line extension allowances.

4 On February 25, 2016, Avista Corporation d/b/a Avista Utilities (Avista) proposed tariffs adopting the PNPV method for calculating line extension allowances. The Commission

[1] Under the PNPV method, a line extension allowance is calculated using the anticipated revenue from the customer divided by the authorized rate of return, which results in the net present value of the customer's presence on the system. The current calculation assumes that a customer will remain on the natural gas system in perpetuity. See Commission Staff's Comments, page 1-2.

authorized the change and increased Avista's natural gas line extension allowance from $1,920 to $4,482 for residential customers. The PNPV method for calculating Avista's natural gas line extensions was made permanent on February 19, 2019.[2]

5 On July 29, 2016, Cascade Natural Gas Corporation (Cascade) filed proposed revisions to its Tariff WN U-3 that adopted the PNPV method to calculate line extension allowances. This change increased the company's line extension allowance from $572 to $3,255 for residential customers. The tariff revisions became effective by operation of law on September 1, 2016.[3]

6 On December 6, 2016, Puget Sound Energy (PSE) filed a tariff revision proposing to implement Rule No. 6 – Extension of Distribution Facilities, which adopted the PNPV methodology consistent with Avista's and Cascade's line extension tariffs. This change increased PSE's natural gas line extension allowance from $1,932 to $4,179 for residential customers. The Commission authorized the tariff change at its January 12, 2017, open meeting.[4]

7 In PSE's 2019 General Rate Case, the Commission received testimony from the Northwest Energy Coalition (NWEC) noting that the current PNPV calculation can result in subsidies from current natural gas customers to new customers and recommending that the Commission require PSE to revert to its previous line extension allowance calculation methodology or to revisit the issue in a broader forum. The Commission declined to adopt NWEC's recommendation as part of that rate case but signaled its intention to revisit the issue in a future proceeding.[5] Chair Danner dissented from this decision. In a concurring statement, Commissioner Rendahl supported revisiting the issue because the record evidence in the rate case was insufficient to support making a change.

8 **STAKEHOLDER COMMENTS.** The Commission received written comments from numerous stakeholders, including Commission staff (Staff). Most comments recommend discontinuing natural gas line extension allowances entirely or at least discontinuing the use of the PNPV methodology. The Alliance of Western Energy Consumers (AWEC) filed comments recommending the Commission retain the PNPV methodology, but later revised its comments at the open meeting to support Staff's or Northwest Natural Gas Company's proposals.

---

[2] Docket UG-152394, Staff Memo (Feb. 25, 2016).

[3] Docket UG-160967, Staff Memo (Aug. 29, 2016).

[4] Docket UG-161268, Staff Memo (July 10, 2017).

[5] Docket UE-190529 *et. al.*, Final Order 08 ¶ 614 (July 8, 2020).

9 The City of Seattle urged the Commission to consider the costs of expanding fossil fuels, including the social cost of greenhouse gas, and whether benefits would still accrue for ratepayers, including low-income and vulnerable customers.

10 The Public Counsel Unit of the Attorney General's Office (Public Counsel) recommends the Commission discontinue the use of PNPV and provide line extension allowances that minimize the socialized costs of line extensions while still providing adequate access to natural gas for new customers. At the open meeting, Public Counsel noted that reducing the use of natural gas is consistent with legislative clean energy goals and recommended the Commission adopt an alternative to PNPV that is consistent with Washington state clean energy policy.

11 Avista supports discontinuing the use of the current PNPV methodology and reverting to its prior methodology, or, in the alternative, adopting Staff's recommendation. Avista proposes to use values from its Natural Gas Decoupling Mechanism baseline to determine the natural gas line extension allowance, resulting in an allowance for residential customers of $2,100 (compared to the present allowance of $4,678) and a Non-Residential per therm allowance of $1.36/therm (compared to the present allowance of $3.44/therm). At the Commission's open meeting, Avista stated that it has 272 customers currently under construction and receiving line extension allowances and more than 1,000 customers in the design phase. Avista thus requests a transition date of April 1, 2022, to allow customers who have already begun the line extension process to move forward under the current PNPV calculation.

12 Northwest Natural Gas Company (NW Natural) does not currently use PNPV. Rather, NW Natural calculates its line extension construction allowance as five times the delivery margin for the applicable rate schedule multiplied by the annual estimated therm usage attributable to the customer's installation. NW Natural believes that its existing Schedule E tariff is designed to determine the fair cost of providing fuel choice while economically eliminating cross-subsidization between existing ratepayers and new customers.

13 PSE supports discontinuing the PNPV methodology because it is increasingly out of step with the evolution of the State's energy policy. PSE supports a methodology that reasonably ensures existing natural gas customers are not subsidizing the connection of new natural gas customers and better aligns with both Washington's and PSE's decarbonization goals. To that end, PSE believes that promptly reverting to something like its previous methodology for determining natural gas line extension allowances may be appropriate. PSE's previous line extension allowance used a discounted cash flow

Facilities Investment Analysis (FIA) methodology.[6] PSE supports immediately changing back to the FIA methodology in the interim and addressing this issue more fully in Docket U-210553, the Commission's examination of energy decarbonization impacts and pathways for electric and gas utilities to meet state emissions targets. At the Commission's open meeting, PSE reiterated its recommendation to conduct a broader investigation into this issue and stated that it supports Staff's recommendation.

14 The Department of Commerce (Commerce) asserts that PNPV is contrary to state policy and urges the Commission to consider discontinuing line extension allowances altogether. In the alternative, Commerce supports Staff's recommendation to modify the PNPV calculation.

15 RMI and the Natural Resources Defense Council observe that the line extension allowances generated by the PNPV method are 1.5 to 3 times higher than allowances in Colorado and California, both of which use revenue-based formulas to calculate allowances.

16 Cascade proposes reverting to its previous calculation method of 3.3 times margin allowance for service connections and an additional 3.3 times margin allowance if main extensions are also required. Cascade proposes a transition period to allow the company to complete line extensions already in progress using the current PNPV method.

17 350Seattle recommends ending all natural gas line extension allowances and instead providing allowances for beneficial electrification.

18 The Sierra Club urges the Commission to implement a complete moratorium on new natural gas collections or, in the alternative, to end natural gas line extension allowances.

19 NWEC recommends the Commission evaluate and potentially discontinue line extension allowances completely. NWEC further recommends the Commission evaluate the need for regulatory tools for natural gas utilities to meet state greenhouse gas emission reduction targets.

---

[6] The FIA methodology provides a line extension allowance based on a calculation that includes, for example, consideration of the natural gas powered appliances being installed, annual therm assumptions estimated using square footage, whether a main extension is required, and whether other new customers would be included along the same extension the FIA methodology does allow more precise assumptions that can be tailored to reflect current state policy including building codes and to align with PSE's decarbonization goals.

20 The 37th Legislative District Democratic Environmental Caucus recommends discontinuing the use of PNPV or any rate-based fees for extending natural gas distribution infrastructure.

21 Staff recommends retaining the PNPV method but updating the discount timeframe as a matter of policy. Overall, Staff believes this revised PNPV method results in a simpler tariff structure and makes the relevant calculations easier to understand, perform, and apply. Staff also believes that this PNPV method ensures that line extension allowances are economically justified. Staff recommends adopting a Net Present Value (NPV) method that updates the discount timeframe based on consideration of the following policy factors:

- Cost of greenhouse gas emissions
- Environmental impact from oil furnaces and wood-burning stove emissions
- Economic development from expanding service to areas not currently served by natural gas
- Increasing energy efficiency
- Historical equity in access to natural gas for marginalized communities and vulnerable populations
- The treatment of natural gas versus electric infrastructure by the State of Washington

22 Staff recommends using an eight-year timeframe because it aligns the margin allowance discount timeframe with the implementation of the Clean Energy Transformation Act (CETA).[7] Additionally, Staff believes that a calculation using the 8-year timeframe will be closer to or lower than an updated margin allowance calculation using PSE's FIA model.

23 Chair Danner proposes to adopt Staff's recommendation, in part, and modify the PNPV method to include a timeline of seven years, which will result in a limited line extension allowance more consistent with state policy and closer to the amount allowed in 2014 prior to the adoption of PNPV.

[7] Chapter 19.405 RCW.

DISCUSSION AND DECISION

24 We agree with Staff's recommendation, in part, and require PSE, Avista, and Cascade to file tariff revisions by November 17, 2021, adopting a Net Present Value (NPV) methodology using a seven-year timeline for calculating natural gas line extension allowances for the reasons discussed below.

25 In recent years, the legislature has enacted several laws aimed at reducing greenhouse gas emissions, including emissions from natural gas. In 2019, the legislature passed CETA, which requires electric utilities to eliminate coal by 2025 and all carbon-emitting resources by 2045. In 2021, the legislature amended RCW 80.28.074 to clarify that advancing the availability of natural gas services to Washington residents is no longer state policy. Additionally, as several commenters noted, the legislature directed that Washington's energy code be revised to make new construction more efficient, which will result in new homes and buildings using less natural gas than existing structures currently use.

26 Further, this year, the legislature also passed the Climate Commitment Act,[8] under which gas companies must meet specific emissions reductions requirements and must surrender allowances to cover the greenhouse gas emissions from the use of their product. While gas companies will receive free emissions allowances to address cost impacts to current customers, almost all new customers are excluded from this part of the program.

27 We appreciate the thoughtful perspectives offered by the companies, consumers, and stakeholders, most of whom agree that the current PNPV methodology is contrary to the legislature's clear direction to reduce greenhouse gas emissions and the use of fossil fuels. As many commenters aptly observed, it is imperative that we address climate change, including the health impacts of greenhouse gases and methane emissions on Washington's communities and citizens. Recognizing the urgency of this issue, we view our decision today as an interim measure that will substantially reduce line extension allowances while we continue to engage in dialogue with regulated utilities and other stakeholders in Docket U-210553, the Commission's broader examination of energy decarbonization impacts and pathways for electric and gas utilities to meet state emissions targets.

28 The comments we received in this docket offer several important factors to consider as we move forward, including the likelihood that natural gas lines will not be serving customers in Washington in perpetuity, the laws and rules in Washington related to greenhouse gas emissions, new requirements in the State Energy and Building Codes,

[8] RCW 70A.65.900.

ensuring that utility tariffs do not increase the likelihood of stranded assets in the future, and ensuring that line extension policies do not shift the cost burden from new to current customers. Although the proceeding in Docket U-210553, which is already underway, provides a more appropriate forum to ensure that these factors are thoroughly considered, we conclude that discontinuing use of the current PNPV calculation immediately is in the public interest because it can result in existing customers subsidizing new customers while significantly increasing reliance on fossil fuels. Given the recent changes to laws and policies discussed above, we conclude that the current PNPV calculation is no longer a valid line extension allocation method for Washington utilities or their customers.

29 Accordingly, we agree Staff's recommendation and require PSE, Avista, and Cascade to adopt an NPV calculation for natural gas line extension allowances. This methodology is simple to calculate because it requires a single assumption — the length of time the service will be installed — and relies on information from recent rate cases. Imposing a seven-year calculation timeline will reduce the line extension allowance for the residential customers of each company to approximately $2,000, which is a substantial, but gradual, decrease from current values.

30 Finally, Avista, Cascade, and PSE request that we provide a transition period for customers who have received approval for a line extension allowance under the current tariff. We agree that the companies should be authorized to exempt from the new tariff provisions those customers who have submitted applications that are approved or pending as of the date the revised tariffs become effective, as well as those customers who can demonstrate or attest that their applications have been submitted to local permitting offices. This exemption will expire on April 1, 2022.

FINDINGS AND CONCLUSIONS

31 (1) The Commission is an agency of the State of Washington, vested by statute with authority to regulate rates, rules, regulations, practices, and accounts of public service companies, including natural gas companies, and has jurisdiction over the parties and subject matter of this proceeding.

32 (2) PSE, Avista, and Cascade are natural gas companies subject to Commission regulation.

33 (3) This matter came before the Commission at its regularly scheduled open meeting on October 28, 2021.

34 (4) The PNPV methodology currently in effect for calculating natural gas line extension allowances significantly increases the margin allowances for each utility and thus increases reliance on fossil fuels contrary to state policy and laws.

38 (5) The NPV methodology proposed by Staff and calculated using a seven-year timeline provides a substantial but gradual decrease in natural gas line extension allowances that is better aligned with the legislature's direction and policy goals and is therefore in the public interest.

39 (6) The Commission should require PSE, Avista, and Cascade to file by November 17, 2021, tariff revisions that reflect the use of the NPV methodology using a seven-year timeframe for calculating natural gas line extension allowances.

ORDER

THE COMMISSION ORDERS THAT:

35 (1) Puget Sound Energy, Avista Corporation d/b/a Avista Utilities, and Cascade Natural Gas Corporation are required and authorized to file by November 17, 2021, tariff revisions necessary and sufficient to effectuate the terms of this Order.

36 (2) The Commission retains jurisdiction to effectuate the terms of this Order.

DATED at Lacey, Washington, and effective October 29, 2021.

WASHINGTON UTILITIES AND TRANSPORTATION COMMISSION

DAVID W. DANNER, Chair

ANN E. RENDAHL, Commissioner

Service Date: December 12, 2022

**BEFORE THE WASHINGTON
UTILITIES AND TRANSPORTATION COMMISSION**

WASHINGTON UTILITIES AND TRANSPORTATION COMMISSION, Complainant, v. AVISTA CORPORATION, d/b/a AVISTA UTILITIES, Respondent	DOCKETS UE-220053, UG-220054, UE-210854 *(Consolidated)* FINAL ORDER 10/04
In the Matter of the Electric Service Reliability Reporting Plan of AVISTA CORPORATION, d/b/a AVISTA UTILITIES.	REJECTING TARIFF SHEETS; GRANTING PETITION; APPROVING AND ADOPTING FULL MULTIPARTY SETTLEMENT STIPULATION SUBJECT TO CONDITIONS; AUTHORIZING AND REQUIRING COMPLIANCE FILING

Synopsis: *The Washington Utilities and Transportation Commission (Commission) approves and adopts subject to conditions a full multiparty settlement stipulation (Settlement) that resolves all contested issues and is agreed to by all Parties except the Public Counsel Unit of the Washington Attorney General's Office (Public Counsel), which contests some portions of the Settlement.*

Public Counsel opposes the Settlement's resolution of power costs, insurance expense balancing account, wildfire-related issues, cost of capital, and the overall revenue requirement, but either supports or does not oppose all other terms of the Settlement, including: cost of service, rate spread, and rate design; the Residual Tax Customer Credit; Colstrip investments, tracker, and Tariff Schedule 99; the escalation study; capital planning; distributional equity analysis; capital projects review; natural gas transition issues; transportation electrification; performance-based ratemaking; low-

income issues; the Climate Commitment Act; small business energy efficiency; electric service reliability report plan; depreciation rates and regulatory amortizations; annual filing dates; annual reporting obligations of Docket U-210151; software licensing; and the decoupling earnings test.

The Commission finds that the Settlement is lawful, supported by an appropriate record, and consistent with the public interest, subject to the conditions outlined in paragraphs 78, 85, 99, 112, and 146 of this Order. Accordingly, the Commission determines that approval of the Settlement, subject to conditions and in concert with other findings, will establish rates, terms, and conditions for Avista's electric and natural gas service to Washington customers that are equitable, fair, just, reasonable, and sufficient.

The Settlement is results-focused and provides a results-only resolution for Avista's overall revenue requirement.[1]

By approving the Settlement, the Commission authorizes revenue requirement increases for Avista over a multi-year rate plan (MYRP) covering the upcoming two-year period. The Settlement returns Residual Tax Customer Credit amounts of approximately $27.6 million and $12.5 million to electric and natural gas customers, respectively, over the term of the MYRP. Prior to the impact of the Residual Tax Customer Credit, the Settlement provides a $38.0 million annual increase to the Company's electric revenues, and a $7.5 million in natural gas revenues in Rate Year 1, and, in Rate Year 2, an additional increase of $12.5 million to the Company's electric revenues, and $1.5 million in natural gas revenues.

As a result of the Settlement, a typical residential electric customer using 932 kWhs per month will pay $4.47 more per month in Rate Year 1, for an average monthly bill of $89.99, and a typical residential electric customer using 932 kWhs per month will pay $2.24 more per month in Rate Year 2, for an average monthly bill of $92.23. A typical residential natural gas customer using 67 therms per month will pay $0.20 more per month in Rate Year 1, for an average monthly bill of $65.06; and a typical residential natural gas customer using 67 therms per month will pay $0.52 more per month in Rate Year 2, for an average monthly bill of $65.58.

---

[1] The Commission is working to adopt more inclusive language in its documents, and therefore describes a settlement as "results-focused" or "results-only" when underlying components of a settlement are not enumerated or supported by calculations. We encourage all investor-owned utilities, parties to proceedings, and interested persons to do the same. Please refer to footnote 239 for a more detailed explanation.

Other noteworthy terms the Commission approves as part of the Settlement include the establishment of a new Tariff Schedule 99 (the Colstrip Tracker) with an annual true-up to separately track and recover certain costs related to the Colstrip generating plant.

The Commission's approval of the Settlement also results in the historic first set of performance metrics (Attachment B to the Settlement and two metrics related to transportation electrification plus the commitment to develop additional reliability metrics) that will track data agreed to by the Settling Parties related to Avista's performance during the MYRP. The results of these metrics will be published, maintained, and tracked on Avista's website for public access and reported to the Commission. The metrics will be reported on either a quarterly or annual basis beginning 45 days after the end of the first quarter of 2023.

In addition to approving the Settlement, the Commission fulfills its obligation under RCW 80.28.425(7) to determine a set of performance measures to use in assessing Avista's operations during the MYRP. In particular, the Commission adopts nine performance measures related to operational efficiency, earnings, affordability, and energy burden for the purpose of assessing how much expense Avista incurs for every dollar it earns; the efficient use of Avista's assets to generate revenue, maintaining liquidity; how much net profit Avista gains through the revenues it earns; the amount of earnings retained by Avista vis-à-vis its total equity; and tracking affordability for, and the energy burden of, residential customers.

BACKGROUND

1 This case concerns Avista Corporation's d/b/a Avista Utilities (Avista or Company) 2022 electric and natural gas general rate case (GRC) and its electric service reliability reporting plan.

2 On November 11, 2021, Avista filed with the Washington Utilities and Transportation Commission (Commission) its Electric Service Reliability Reporting Plan in Docket UE-210854 pursuant to Washington Administrative Code (WAC) 480-100-393, modifying its previous plan.

3 On January 21, 2022, Avista filed with the Commission revisions in Docket UE-220053 to its currently effective electric service tariff, Tariff WN U-28, and in Docket UG-220054 to its natural gas service tariff, Tariff WN U-29 (Avista 2022 GRC). The Company proposed a two-year rate plan with increases for electric and natural gas operations for Rate Year 1 effective December 21, 2022, and for Rate Year 2 effective December 21, 2023, as depicted in Table 1, below.

4 Concurrent with the effective date of its 2022 GRC, Avista proposes to partially offset the Company's requested increases, and return to customers the estimated incremental customer tax Accumulated Deferred Income Tax (ADIT) benefits of approximately $25.5 million for electric and $12.5 million for natural gas over a two-year amortization period through separate Tariff Schedules 78 (electric) and 178 (natural gas).[2] We refer to this return of tax benefits as the "Residual Tax Customer Credit" throughout this Order.[3] Rate Year 1 rates are offset by this tax credit to result in an increase of 7.4 percent to *billed* rates for electric operations and 2.5 percent for natural gas operations.[4] Rate Year 2 rates, as proposed by Avista, already embed the tax credit in base rates, but Avista notes that the resulting increase to *billed* rates is 3.0 percent for electric operations and 1.1 percent for natural gas operations.[5]

---

[2] Andrews, Exh. EMA-1T at 5:29-6:7. The amount of ADIT benefits to be returned to customers was updated during these consolidated proceedings to $27.6 million for electric.

[3] Avista refers to this return of tax benefits as the "Tax Customer Credit" under its initial proposal. Vermillion, Exh. DPV-1T at 18:18-23.

[4] *Id.* at 18:23-19:14.

[5] *Id.* at 19:5-14; *see* Avista Electric Summaries for Rate Year 1 & Rate Year 2 (filed Mar. 28, 2022) and Natural Gas Summaries for Rate Year 1 & Rate Year 2 (filed Jan. 21, 2022).

5 **Table 1. Avista's Initial Proposal for Net Revenue Increases *(in millions)***

	Electric		Natural Gas	
Rate Year 1	$ 52.9	9.6%	$ 10.9	9.5%
Residual Tax Customer Credit[6]	$ (12.8)		$ (6.3)	
Net Increase	**$ 40.1**	**7.4%**	**$ 4.6**	**2.5%**
Rate Year 2	$ 17.1	2.8%	$ 2.2	1.7%
Residual Tax Customer Credit[7]	$ (0.0)		$ (0.0)	
Net Increase	**$ 17.1**	**2.8%**	**$ 2.2**	**1.7%**

6 On January 27, 2022, the Commission entered Order 01, consolidating Dockets UE-220053 and UG-220054, suspending the tariff revisions, and setting the matters for adjudication.

7 The Commission entered a Protective Order, Order 02, in Dockets UE-220053 and UG-220054 *(Consolidated)* on January 31, 2022.[8]

8 On February 14, 2022, the Commission convened a virtual prehearing conference before Administrative Law Judge Andrew J. O'Connell.

9 On February 16, 2022, the Commission issued Order 03, Prehearing Conference Order; Notice of Hearing, adopting with minor modifications the agreed procedural schedule and setting a hearing to begin on September 21, 2022. Order 03 also granted intervention to the Alliance of Western Energy Consumers (AWEC), the NW Energy Coalition (NWEC), The Energy Project (TEP), Sierra Club, and Small Business Utility Advocates (SBUA).

---

[6] Amortized over two years, Avista's initial proposal for the Residual Tax Customer Credit of approximately $25.5 million for electric would result in approximately $12.8 million annually, and of approximately $12.5 million for natural gas would result in approximately $6.3 million annually.

[7] Amortization of the Residual Tax Customer Credit is embedded in year two base rates.

[8] The Commission would later consolidate these dockets with Docket UE-210854 by Order 07/01.

10 On February 16, 2022, Walmart, Inc., (Walmart) filed a late-filed petition to intervene.

11 On February 28, 2022, the Commission convened a second virtual prehearing conference to address processes, procedures, and applications for participatory funding. Pursuant to RCW 80.28.430, utilities must enter into funding agreements with organizations that represent broad customer interests. The Commission is directed to determine the amount of financial assistance, if any, that may be provided to any organization; the way the financial assistance is distributed; the way the financial assistance is recovered in a utility's rates; and other matters necessary to administer the agreement.[9]

12 The Commission's Policy Statement on Participatory Funding for Regulatory Proceedings (Policy Statement) provides "high-level guidance regarding the amount of financial assistance that may be provided to organizations, the manner in which it is distributed to participants and recovered in the rates of gas or electrical companies, and other matters necessary to administer agreements."[10] In Docket U-210595, the Commission approved and adopted an interim agreement on participatory funding, subject to certain modifications.[11]

13 On March 1, 2022, the Commission entered Order 04, Second Prehearing Conference Order, granting Walmart's unopposed late-filed petition to intervene and adopting the schedule discussed at the February 28, 2022, conference. Order 04 required organizations seeking a fund grant to file a request for case certification and notice of intent to request a fund grant by March 9, 2022.

14 By March 9, 2022, AWEC, TEP, NWEC, and SBUA had each filed with the Commission a request for case certification and notice of intent to request a fund grant.

15 On March 16, 2022, the Commission issued a Notice of Bench Requests Nos. 1 and 2, requesting additional information relevant to participatory funding from NWEC, TEP, and SBUA. NWEC, TEP, and SBUA each filed its response with the Commission on March 18, 2022.

---

[9] RCW 80.28.430(2).

[10] *In re Examination of Participatory Funding Provisions for Regulatory Proceedings,* Docket U-210595, Policy Statement, ¶ 3 (Nov. 19, 2021) [hereinafter Participatory Funding Policy Statement].

[11] *In re Petition of Puget Sound Energy, et al.*, Docket U-210595, Order 01 (Feb. 24, 2022).

16 On March 24, 2022, the Commission entered Order 05, Granting Requests for Case Certification. Order 05 granted case certification to AWEC, NWEC, TEP, and SBUA, and directed each to file a proposed budget within 30 days.

17 AWEC, TEP, NWEC, and SBUA all timely filed with the Commission proposed budgets by April 25, 2022.

18 On May 27, 2022, the Commission entered Order 06, Approving and Rejecting Proposed Budgets for Fund Grants. Order 06 approved the proposed budgets of AWEC, NWEC, and TEP, but rejected the proposed budget of SBUA, finding that SBUA failed to establish a sufficient connection to Washington ratepayers.

19 Also on May 27, 2022, the Commission entered Order 07/01, consolidating Dockets UE-220053 and UG-220054 with Docket UE-210854 pursuant to Commission staff's (Staff) unopposed motion to consolidate.

20 On June 6, 2022, SBUA filed with the Commission a petition for interlocutory review, requesting the Commission modify Order 06 and approve SBUA's proposed budget.

21 On July 11, 2022, the Commission entered Order 08/02, Granting Petition for Interlocutory Review, In Part; Approving Proposed Budget Subject to Condition (Order 08). Order 08 approved SBUA's proposed budget in the amount of $20,000 to be used for attorney fees and expert witness fees only, subject to the condition that SBUA file a confidential list of its members concurrent with its request for reimbursement later in these consolidated proceedings.[12]

22 On June 13, 2022, the Commission suspended the procedural schedule in these consolidated matters pursuant to a joint request from the parties, indicating that the parties had reached a full multiparty settlement.

23 On June 22, 2022, the Commission issued a Notice Adopting Agreed Procedural Schedule and Notice of Hearing, setting a virtual hearing on the full multiparty settlement

[12] Order 08 found that requiring the confidential submission of its membership list is neither unusual nor extraordinary, observing that other organizations have provided confidential membership lists in other proceedings and would assist the Commission with evaluating SBUA's connection to Washington ratepayers (citing AWEC's confidential filing of its membership lists in Cascade Natural Gas Corporation's general rate case, Docket UG-210755, in support of its proposed budget and in Puget Sound Energy's general rate case, Dockets UE-220066 and UG-220067 *(Consolidated)*, in support of its petition to intervene). Order 08 at 6, ¶ 20, n. 4.

for September 21, 2022. Avista, Staff, AWEC, NWEC, TEP, Sierra Club, SBUA, and Walmart (Settling Parties) agreed to the full multiparty settlement.

24 On June 28, 2022, the Settling Parties filed with the Commission their Full Multiparty Settlement Stipulation (Settlement). The Settlement and Attachment A to the Settlement are attached to this Order as Appendix A.

25 On July 8, 2022, the Settling Parties filed with the Commission their joint testimony in support of the Settlement.

26 On July 29, 2022, the Settling Parties filed with the Commission their supplemental joint testimony in support of the Colstrip Tracker and Tariff Schedule 99, one of the items addressed by the Settlement.

27 Also on July 29, 2022, the Public Counsel Unit of the Washington Attorney General's Office (Public Counsel) filed with the Commission its testimony opposing the Settlement.

28 On August 19, 2022, Avista filed with the Commission rebuttal testimony responding to Public Counsel's opposition testimony.

29 On September 7, 2022, the Commission issued Order 09/03, granting an unopposed motion by Avista to revise Attachment C to the Settlement.

30 Also on September 7, 2022, the Commission held a virtual public comment hearing in these consolidated matters. No person offered comments.

31 On September 21, 2022, the Commission held a virtual settlement hearing and received testimony from a panel of witnesses representing the Settling Parties and Avista witnesses. At the hearing, the parties stipulated to the admission of all exhibits into the record. Due to time constraints, the Commission continued a portion of the hearing until a later date.

32 On September 23, 2022, the Commission issued a notice reconvening the virtual settlement hearing for September 30, 2022, to receive testimony from Avista witnesses whose testimony could not be heard on September 21, 2022.

33 On September 30, 2022, the Commission reconvened the virtual settlement hearing and received all remaining testimony from witnesses.

34 On October 14, 2022, Public Counsel filed with the Commission its response to Bench Request No. 3, which contained all public comments received in these consolidated dockets. Over the course of the proceeding, including the public comment hearing, the Commission and Public Counsel received 30 comments from Washington customers regarding the proposed rate increases. All comments opposed a rate increase.[13] The comments focused on a variety of topics, including the unaffordability of residential rates (especially for those on fixed incomes), insufficient or inadequate programs, and rate design.[14]

35 On October 20, 2022, Avista filed with the Commission its responses to Bench Requests Nos. 4-6, which regarded details of how the Residual Tax Customer Credit was to be passed back to customers during the proposed two-year rate plan, the cumulative impact on net plant balances related to removing Colstrip Dry Ash from Rate Year 1 and Rate Year 2, and the resulting monthly bill for average electric and natural gas residential customers if the Settlement were approved, respectively.

36 On October 21, 2022, Avista, Staff, Public Counsel, AWEC, NWEC, TEP, and SBUA filed post-hearing briefs with the Commission. Walmart filed a letter with the Commission indicating it would not file a post-hearing brief.

37 Also on October 21, 2022, Avista filed with the Commission its 2022 Draft Electric Service Reliability Reporting Plan for informational purposes.

38 On November 23, 2022, Avista filed with the Commission its response to Bench Request No. 7 related to the Settling Parties' reference to Avista's updated cost of debt during the pendency of these consolidated proceedings and the source material for that update.

39 David J. Meyer, Vice President and Chief Counsel for Regulatory and Governmental Affairs, Spokane, Washington, represents Avista. Sally Brown, Senior Assistant Attorney General, Jeff Roberson, and Nash I. Callaghan, Assistant Attorneys General, Olympia, Washington, represent Staff.[15] Nina Suetake, Ann Paisner, and Lisa Gafken, Assistant

[15] In formal proceedings such as this, the Commission's regulatory staff participates like any other party, while the Commissioners make the decision. To assure fairness, the Commissioners, the presiding administrative law judge, and the Commissioners' policy and accounting advisors do not discuss the merits of this proceeding with the regulatory staff, or any other party, without giving notice and opportunity for all parties to participate. *See* RCW 34.05.455.

Attorneys General, Seattle, Washington, represent Public Counsel. Tyler Pepple and Sommer J. Moser, Davison Van Cleve, P.C., Portland, Oregon, represent AWEC. Irion Sanger, Joni Sliger, and Ellie Hardwick, Sanger Law P.C., Portland, Oregon, represent NWEC. Yochanan Zakai and Stacy Lee, Shute, Mihaly & Weinberger LLP, San Francisco, California, represent TEP. Gloria D. Smith, Managing Attorney, Sierra Club Environmental Law Program, Oakland, California; James M. Van Nostrand, Oakland, California; and Jim Dennison, Colorado, represent Sierra Club. Jeff Winmill, James M. Birkelund, and Jennifer Weberski, San Francisco, California, represent SBUA. Vicki M. Baldwin, Parsons Behle & Latimer, Salt Lake City, Utah, represents Walmart.

DISCUSSION AND DECISION

40 The Commission's statutory duty is to establish rates, terms, and conditions for electric and natural gas services that are equitable, fair, just, reasonable, and sufficient. In doing so, the Commission must balance the needs of the public to have safe, reliable, and appropriately priced service with the financial ability of the utility to provide that service. The rates thus must be equitable, in that the distribution of burdens and benefits should reduce, rather than perpetuate, ongoing systemic harms; fair to both customers and the utility; just, in that the rates are based solely on the record in this case following the principles of due process of law; reasonable, in light of the range of potential outcomes presented in the record; and sufficient, to meet the financial needs of the utility to cover its expenses and attract capital on reasonable terms.

41 The Commission is presented with a Settlement that proposes to resolve all disputed issues. The Commission approves settlements "when doing so is lawful, the settlement terms are supported by an appropriate record, and when the result is consistent with the public interest in light of all the information available to the commission."[16] The Commission may approve the Settlement, with or without conditions, or reject it. We determine that, subject to conditions, the Settlement is lawful, its terms are supported by an appropriate record, and its result is consistent with the public interest in light of all the information available. We explain our reasoning, below.

42 In the decisions we make in this Order, we also consider recent federal legislative action that will impact Washington investor-owned utilities. On November 15, 2021, President Biden signed the Infrastructure Investment and Jobs Act (IIJA), which provides a strategic opportunity to upgrade the nation's energy infrastructure for a clean, resilient,

[16] WAC 480-07-750(1).

and secure energy future.[17] The IIJA funds over 350 programs to be overseen through more than a dozen federal departments and agencies.[18] On August 16, 2022, President Biden signed the Inflation Reduction Act (IRA) into law.[19] The IRA is a fiscal policy instrument enacted by the federal government to counterbalance the effects of inflation in specific areas of the economy. It also represents the United States' single largest investment to date to modernize its energy system.[20]

43 The impacts of these laws on rates are not yet known, but it is apparent that both could greatly impact Avista's utility operations during the multi-year rate plan (MYRP) agreed by the Settling Parties. Many aspects of Avista's operations, costs, funding, and financial health may be impacted by these new laws including extension of investment tax credits, creation of new tax credits, accelerated depreciation of clean electricity facilities, and extension of tax credits for investment in certain energy properties, among other aspects.[21] The Biden administration announced additional funding to provide increased

[21] Several sections of the law are included for reference:

Modifies and extends through 2024 the tax credit for producing electricity from renewable resources. IRA at § 13101.

Creates a new clean electricity investment tax credit for investment in qualifying zero-emissions electricity generation facilities or energy storage technology. IRA at § 13702.

Allows a five-year recovery period for the depreciation of clean electricity facilities placed in service after 2024. IRA at § 13703.

Extends through 2024 the tax credit for investment in certain energy properties (*e.g.*, solar, fuel cells, waste energy recovery, combined heat and power, small wind property, microturbine property, and microgrid controllers). Increases credit rate for projects that pay prevailing wages and meet registered apprenticeship requirements. Allows a bonus credit amount for facilities that meet domestic content requirements for steel, iron, and manufactured projects and for facilities located in an energy community. IRA at § Sec. 13102.

Modifies the energy tax credit to allocate 1.8 gigawatts for environmental justice solar and wind capacity credits in low-income communities and Indian lands in 2023 and 2024. Facilities

support for low- and moderate-income families, and complementary tax credits that families and building owners can use under the IRA to install energy-saving equipment and to make building upgrades.[22] More specifically, new resources have been allocated for the federal Low-Income Home Energy Assistance Program (LIHEAP), which has funds that will go to states, territories, and Tribes.[23]

44 Other regulatory commissions have taken action to engage in participative processes to allow interested parties to discuss their thoughts on implementation and to take advantage of the benefits that the laws provide.[24] The impacts of tax credits and other financial provisions will result in changes that impact utility revenue requirement and, ultimately, changes in customers' bills. The IRA could bring significant reductions to energy costs

---

receiving allocations must be placed in service within four years after the allocation date. IRA at § 13103.

Creates a new tax credit for qualified commercial clean vehicles. IRA at § 13403.

for customers, up to $500 in energy bills savings per year.[25] At least one utility, the Florida Power & Light Company, is planning to phase in nearly $360 million in additional federal tax savings for future planned solar projects starting in 2023 and through 2025. Other, more immediate, savings to customers will be provided in a one-time refund of $25 million in the month of January 2023.[26]

45 All testimony and exhibits were prefiled prior to the enactment of the IRA except for Avista's rebuttal testimony in support of the Settlement. The parties to these consolidated proceedings had no opportunity to consider any of the possible impacts of the IRA and IIJA while negotiating, drafting, or presenting the Settlement to the Commission. Because these changes are significant, we make minor, prudent modifications to the Settlement where necessary to include the impacts of the IRA and IIJA in our retrospective review of provisional plant. In addition, for any other IRA and IIJA benefits unmentioned or unaddressed by this Order, we expect Avista will file with the Commission an accounting petition requesting to defer those benefits.

A. FULL MULTIPARTY SETTLEMENT STIPULATION[27]

46 The Settlement submitted by the Settling Parties proposes to resolve all disputed issues in the proceeding. The Settlement's resolutions of many issues are uncontested or supported by Public Counsel. In its opposition testimony filed with the Commission on July 29, 2022, Public Counsel affirmatively states that many of the Settlement's terms are in the public interest.[28] These issues include:

- Performance Metrics;

[26] *FPL proposes plan to refund customers nearly $400 million in federal corporate tax savings*, News Releases, NEXTera Energy (Sep. 23, 2022), *available at* https://www.investor.nexteraenergy.com/news-and-events/news-releases/2022/09-23-2022-133107538.

[27] The Settlement is included as Appendix A to this Order. Appendix A is incorporated into, and made part of, this Order by this reference. In this Order, we briefly summarize the Settlement's proposed commitments. To the extent any arguable inconsistency exists between our summary and the terms of the Settlement, the terms of the Settlement control.

[28] Dahl, Exh. CJD-1T at 5:17-18.

- Colstrip Cost Recovery: investments in the Dry Ash Disposal System, Colstrip Tracker – Tariff Schedule 99;
- Low-Income Programs;
- Capital Projects Review;
- Residual Tax Customer Credit;
- Cost of Service, Rate Spread, and Rate Design;
- Climate Commitment Act (CCA);
- Small Business Energy Efficiency;
- Natural Gas Transition;
- Distributional Equity Analysis; and,
- Transportation Electrification.

47 However, Public Counsel argues that the Settlement as a whole is not in the public interest, and contests several of the Settlement's terms.[29] Public Counsel asserts that "many components of the Settlement are unreasonable and lack the evidence necessary to support the included terms."[30] Public Counsel recommends that the Commission accept its proposals to resolve certain issues differently than the Settlement.[31] Those contested issues include:

- Overall Revenue Requirement;[32]
- Cost of Capital;
- Projected Energy Imbalance Market (EIM) Benefits;
- Insurance Balancing Account; and,
- Wildfire Issues.

---

[29] *Id.* at 5:15-20.

[30] *Id.* at 5:18-19.

[31] *Id.* at 5:21-6:2.

[32] Public Counsel witness Dahl includes "Rate Escalation Study Terms" in Public Counsel's list of Settlement terms it contests. Dahl, Exh. CJD-1T at 8:11. Upon further examination, we understand that Public Counsel's opposition to the rate escalation study is tethered to its opposition to the Settlement's revenue requirement, which Public Counsel argues are derived by use of the rate escalation study. *See* Brief of Staff at 3, n. 3. Public Counsel witness Coppola testifies that Public Counsel agrees with the Settling Parties that the escalation study filed by Avista is not reasonable and should not be used in future rate cases. Coppola, Exh. SC-1CT at 35:3-6. Because this reflects the Settlement's terms regarding the rate escalation study, we consider this an uncontested issue in the remaining discussion of this Order but will consider Public Counsel's arguments as part of its opposition to the Settlement's revenue requirement.

48 It is clear from testimony supporting the Settlement that the Settling Parties entered into an agreement through a complex negotiating process that required them to give and take in different areas to arrive at a combination of resolutions that, taken as a whole, they support as consistent with the public interest.[33] Ultimately, Public Counsel's recommendations would require the Commission to upset the balance struck by the Settling Parties and reject the Settlement as a whole, including the many terms that Public Counsel asserts are in the public interest.[34] We decline to take such action. Instead, in review of the entire record before the Commission, we determine that the Settlement strikes an appropriate balance among the varied and diverse interests presented and find that it meets the standard for the Commission's approval, subject to certain conditions.

49 We address the uncontested and contested issues of the Settlement, in turn, below.

1. UNCONTESTED TERMS

50 Although a number of elements in the Settlement were uncontested, our statutory obligation to regulate in the public interest requires us to evaluate whether the Parties' agreed resolution of issues complies with applicable legal requirements, is supported by an appropriate record, and is consistent with the public interest based on all of the information available to the Commission. Upon review, we find that the Settlement's proposed resolutions of the uncontested issues are lawful, supported by an appropriate record, and consistent with the public interest.

i. Cost of Service: Rate Spread, Rate Design

51 The Settling Parties agree to Avista's rate design proposal in its initial filing but agree not to change the basic charge for Schedules 01/02 (electric) and Schedules 101/102 (natural gas).[35] Public Counsel supports the rate design agreed by the Settling Parties and believes it is in the public interest.[36] The Settling Parties agree to the rate spread illustrated in Table 2 and Table 3, below.[37] Public Counsel neither supports nor opposes the electric

Commission Determination

54 We find the Settlement's proposed rate spread and rate design are appropriate and in the public interest. The Settling Parties' agreement moves the electric schedules gradually closer towards cost of service parity by allocating a larger share of the electric rate increase to residential customers – a consideration in cost of service that we discussed at length in Avista's 2020 GRC Final Order.[39] While this attributes more of the electric revenue requirement increase to residential customers, the Settling Parties relieve some of this burden by agreeing to return a larger share of the Residual Tax Customer Credit, discussed in detail later, to residential customers, as can be seen by comparing the percentage increase attributed to the residential schedules identified in the column labeled

[39] Miller, Exh. JDM-1T at 7:20-8:3; *see Wash. Utils. & Transp. Comm'n v. Avista Corp., d/b/a Avista Utils.,* Dockets UE-200900, UG-200901, and UE-200894 (*Consolidated*), Final Order 08/05, 109-13, 116, 120-21, ¶¶ 307-20, 328-29, 341-42 (Sep. 27, 2021) [hereinafter 2020 Avista GRC Final Order].

"before Offset" with the column labeled "after Offsets" in Table 2 and Table 3, above.[40] Prior to offsets, which include the Residual Tax Customer Credit, residential customers will see a 10.8 percent increase in billing rates in Rate Year 1, while the average increase in billing rates across all electric customers is 6.8 percent. After offsets including the Residual Tax Customer Credit, the increase in billing rates is reduced to 5.5 percent for residential customers and an average 4.3 percent increase across all electric customers.

55 All parties support the electric rate design, natural gas rate design, and natural gas rate spread. The Settling Parties' agreement removes Avista's initially proposed increase to all electric basic charges and residential natural gas basic charges but maintains increases to the natural gas basic charge for some non-residential schedules.[41] Lastly, all parties support the agreed natural gas rate spread terms that will share an equal percentage of margin increase to the schedules.

56 As a result of the Settlement, in Rate Year 1 a typical residential electric customer using 932 kWhs per month will pay $4.47 more per month, for an average monthly bill of $89.99. In Rate Year 2, a typical residential electric customer using 932 kWhs per month will pay $2.24 more per month, for an average monthly bill of $92.23. In Rate Year 1, a typical residential natural gas customer using 67 therms per month will pay $0.20 more per month, for an average monthly bill of $65.06. In Rate Year 2, a typical residential natural gas customer using 67 therms per month will pay $0.52 more per month, for an average monthly bill of $65.58.[42]

57 We find the Settlement's resolution of the cost of service issues, including the electric and natural gas rate spread and rate design, appropriate and in the public interest. Accordingly, we determine that the cost of service, rate spread, and rate design terms should be approved.

---

[40] Joint Testimony, Exh. JT-1T at 17:21-18:2. While stating that it does not oppose or support the Settlement's electric rate spread terms, Public Counsel recognizes that the Settling Parties' agreement provides a larger share of the tax refund amounts to residential customers and "is intended to offset a portion of the increased rates allocated to residential customers." Dahl, Exh. CJD-1T at 27:7-11.

[41] Joint Testimony, Exh. JT-1T at 16:12-17:20, 18:9-19:7, 20:7-21:5.

[42] Response to BR-6.

ii. Residual Tax Customer Credit

58 On March 11, 2021, the Commission entered Order 01 in Dockets UE-200895 and UG-200896, which granted Avista's petition requesting the Commission (1) authorize changing the Company's accounting method from normalization to flow-through for regulatory purposes for federal income tax expense associated with Industry Director Directive No. 5 (IDD #5) and meters, and (2) allow Avista to defer for later ratemaking treatment the tax benefits associated with the change. That change in methodology resulted in amounts due to be returned to customers of approximately $58.1 million, electric, and $28.2 million, natural gas (Tax Customer Credit).[43] In the Final Order of Avista's 2020 GRC, the Commission determined that the Tax Customer Credit amounts should be returned to customers through Tariff Schedules 76 and 176 over a two-year period beginning October 1, 2021, according to the rate spread approved in the 2020 Avista GRC Final Order to offset exactly, in conjunction with the AFUDC Deferral established by the settlement agreement in the 2020 Avista GRC, the rate increase approved by the 2020 Avista GRC Final Order.[44]

59 A portion of the Tax Customer Credit remains unreturned to ratepayers.[45] This unused portion is approximately $27.6 million, electric, and $12.5 million, natural gas (Residual Tax Customer Credit).[46] In the 2020 Avista GRC Final Order, the Commission stated it would reexamine the Residual Tax Customer Credit amount and how to appropriately return it to customers in this current GRC.[47]

60 The Settling Parties agree that Avista will return the Residual Tax Customer Credit of approximately $27.6 million, electric, and $12.5 million, natural gas, to customers through separate Tariff Schedules 78 (electric) and 178 (natural gas) over a two-year amortization period beginning December 21, 2022. Public Counsel supports accelerating the pass-through of tax benefits to customers.[48]

[47] 2020 Avista GRC Final Order at 46, ¶ 121.

[48] Coppola, Exh. SC-1CT at 13:13-14:11.

Commission Determination

61 We find the Settlement's proposed treatment of the Residual Tax Customer Credit to be in the public interest. The Residual Tax Customer Credit will be amortized over the two-year rate plan to provide a substantial reduction to customer bills as illustrated in Table 2 and Table 3, above. No party opposes this treatment. As the Commission reasoned in the 2020 Avista GRC Final Order, we likewise find the Settling Parties' proposal to return the Residual Tax Customer Credit through separate Tariff Schedules 78 (electric) and 178 (natural gas) appropriate because it will allow the Commission to best track the return of these benefits to customers. We also find that beginning the process of returning these benefits to customers on the effective date of December 21, 2022, to coincide with the MYRP proposed by the Settlement, will appropriately offset a significant portion of the revenue requirement increases we approve with this Order. Accordingly, we determine that the Settling Parties' agreed treatment of the Residual Tax Customer Credit should be approved.

iii. Colstrip Cost Recovery: Investments in the Dry Ash Disposal System, Colstrip Tracker – Tariff Schedule 99

62 The Settlement contains two terms, in addition to their incorporation into the agreed rate spread and rate design, related to the Colstrip generation plant: the Dry Ash Disposal System, and a new Colstrip Tracker using Tariff Schedule 99.[49] First, the Settling Parties agree that the Settlement's revenue requirement does not include any costs related to the Dry Ash Disposal System.[50]

63 Second, the Settling Parties propose a mechanism with an annual true-up to separately track and potentially recover, subject to a prudence review, certain costs through Tariff Schedule 99 (Colstrip Tracker).[51] The Colstrip Tracker will allocate costs to the rate schedules using a proportional allocation of the first rate year's base revenue spread

---

[49] Settlement at 7-9, ¶ 14. Regarding Schedule 99's rate spread and rate design, the Settling Parties agree that the costs removed from base rates will be allocated to the rate schedules through Schedule 99 using a proportional allocation of the Rate Year 1 base revenue spread and that the revenue will be recovered through volumetric charges on a uniform cent per kWh basis. *Id.*

[50] Joint Testimony, Exh. JT-1T at 21:18-20; Joint Testimony, Exh. JT-3T at 4:16-5:1.

[51] Joint Testimony, Exh. JT-1T at 22:2-6; Joint Testimony, Exh. JT-3T at 3:1-5, 4:6-11.

recovered through volumetric charges.[52] The following Colstrip costs, totaling approximately $23.9 million, will be removed from base rates and tracked, reported, and recovered, subject to review, through the Colstrip Tracker:

a. Colstrip Unit 3 and 4 utility plant net of accumulated depreciation (A/D) and ADFIT, excluding all costs associated with the Dry Ash Disposal System project as agreed in the Settlement;

b. Colstrip Regulatory Asset and Liability balances related to decommissioning and remediation (D&R) costs, as first agreed by the settling parties in the 2019 Avista GRC;[53]

c. Production O&M;

d. Depreciation and amortization expense, including the recovery of plant and the Colstrip Regulatory Asset/Liability for D&R costs; and

e. Other costs, including the amortization expense of the Deferred Colstrip Transition Fund, Federal income tax expense, and the tax benefit of debt interest.[54]

64 The Colstrip Tracker will begin December 21, 2022, with the effective date authorized by this Order, and Avista will make an annual filing every October 31 to true up and reset the mechanism effective each January 1.[55] Parties will have 60 days to review Avista's Colstrip Tracker filing and any new Colstrip capital investment for prudency.[56] The Settlement prohibits opposition to either a request for an adjudication or an extension of the 60-day review period.[57]

---

[52] Joint Testimony, Exh. JT-3T at 5:4-10, 9:27-32. The proportion of Tariff Schedule 99 allocated to each rate schedule is the same as the proportion of revenue being removed from the base rates of each schedule. *Id.* The Settling Parties agree that this allocation will be used for the life of Tariff Schedule 99. *Id.* Tariff Schedule 99's rate design recovers the revenue through the volumetric charges on a uniform cent per kWh basis. *Id.*

[53] *Wash. Utils. & Transp. Comm'n v. Avista Corp., d/b/a Avista Utils.*, Dockets UE-190334, UG-190335, UE-190222 *(Consolidated)*, Final Order 09, ¶¶ 47-50 (Mar. 25, 2020).

[54] Joint Testimony, Exh. JT-3T at 3:1-12, 4:6-6:5, 8:6-9:19; Joint Testimony, Exh. JT-1T at 22:2-6. The costs removed do not include Dry Ash Disposal costs (which will not be recovered according to the Settlement), or the transmission investment and costs included in the Energy Recovery Mechanism, which would both remain in base rates.

[55] Joint Testimony, Exh. JT-3T at 6:7-10.

[56] *Id.* at 10:13-15.

[57] *Id.*

65 According to the Settlement, the review of Avista's Colstrip Tracker filing will include a prudency review of incurred costs; O&M and other expense items (production O&M and amortization expense) on the test period/restated basis during the two-year rate plan agreed in this case and forecasted thereafter; updated lifetime D&R cost estimates; actual non-O&M costs from the filing year through August 31 and estimated through December 31 (which creates a one-year lag in the recovery of these actual costs), and a true-up to actuals of any forecasted amounts.[58]

66 Finally, the Settlement outlines how it accommodates the requirements of Washington's Clean Energy Transformation Act (CETA) to remove the total costs for Colstrip capital investment and operating expenses, excluding Colstrip transmission investments and ongoing D&R costs, from customer rates after December 31, 2025.[59] The Settling Parties state that "after December 31, 2025, the net Colstrip rate base balances included within Tariff Schedule 99 on a 2025 AMA basis and the appropriate Colstrip expenses would be removed from Tariff Schedule 99."[60] Thus, beginning January 1, 2026, the Colstrip Tracker will include only annually-updated ongoing D&R net rate base balances and Colstrip Regulatory amortization expense (items b. and d. from the above list of costs to be removed from base rates).[61] While the Colstrip D&R cost accounting was included in this GRC, it will not be included in future GRCs because the Settlement removes the costs from base rates.[62] Instead, the accounting for these D&R costs will continue according to the settlement approved in Avista's 2019 GRC, but the recording and tracking will be included in the annual Colstrip Tracker.[63] Public Counsel supports the Settlement's Colstrip terms.

Commission Determination

67 We find the Settlement's agreement related to Colstrip reasonable and appropriate. Public Counsel argues that the Settlement's terms regarding Colstrip are in the public interest

---

[58] *Id.* at 6:11-21.

[59] *Id.* at 12:8-13, 13:11-23.

[60] *Id.* at 12:10-13.

[61] *Id.* at 13:1-4.

[62] *Id.* at 13:24-26, 14:18-20.

[63] *Id.* at 14:20-23; *Wash. Utils. & Transp. Comm'n v. Avista Corp., d/b/a Avista Utils.*, Dockets UE-190334, UG-190335, UE-190222 *(Consolidated)*, Final Order 09, ¶ 49 (Mar. 25, 2020). Avista's share of these D&R costs is currently estimated at $28 million, $4.0 million of which has been incurred by Avista through September 30, 2021. Joint Testimony, Exh. JT-3T at 15:1-2.

because "they will assist in the Company's CETA compliance obligations" and will "assist the Commission and other [interested persons to] identify which Colstrip-related costs should and should not be included in customer rates as the clean energy transition proceeds."[64] We agree.

68 CETA requires each Washington electric utility to "eliminate coal-fired resources from its allocation of electricity" exclusive of "costs associated with decommissioning and remediation of" coal-fired facilities.[65] The Settling Parties' agreement will aid the Commission and all interested parties in identifying and tracking costs appropriately recovered from Washington ratepayers. In addition, the Settlement establishes expectations and procedures that will ensure a transparent and fair review of the amounts to be recovered through the Colstrip Tracker. Accordingly, we determine that the Settling Parties' agreements regarding Colstrip should be approved.

iv. Escalation Study

69 In its initial filing, Avista presented an escalation study with a growth rate methodology to use "for the purposes of escalating certain regulatory balances in the determination of future revenue requirements during multi-year rate plans, and beyond first or second year pro forma study levels."[66] The escalation study is described in Avista's initial filing by its witness Andrews and utilizes Dr. Forsyth's Escalator Growth Rates.[67] The Settlement provides that "[t]he Settling Parties do not agree that the escalation study filed by Avista is reasonable or should be used in future rate cases."[68] Public Counsel agrees with the Settling Parties.[69]

Commission Determination

70 We find the Settlement's agreement related to Avista's escalation study reasonable. Accordingly, we determine that the Settling Parties' agreement regarding Avista's escalation study should be approved.

v. Capital Planning

71 As a term of the Settlement, Avista agrees to make a compliance filing in these Dockets by the end of the MRYP, demonstrating how it considers equity in its capital planning process.[70] Specifically, Avista will include in its compliance filing a process or procedure for how its Board of Directors and senior management will incorporate equity into its business planning, including how Avista will plan for equitable outcomes when evaluating business cases.[71] Avista will also include templates to be used in its business cases.[72] These templates will require sponsors to demonstrate how they planned for equitable outcomes in each business case.[73] In addition, Avista will work with its Equity Advisory Group (EAG) and interested persons to develop new equity-related measures, costs, and benefits to be included in its benefit and cost analysis, including qualitative and non-qualitative measures related to societal impacts, non-energy benefits and burdens, indoor and outdoor air quality, the Social Cost of Carbon, and Named Communities.[74]

72 Avista will also include in its post-MYRP compliance filing a plan for measuring and tracking the impacts from each business case after the project's completion, "with a specific eye towards identifying equitable outcomes, and how the Company will engage in adaptive management to correct course during Business Cases when it is necessary to avoid inequitable outcomes."[75] The plan for measuring and tracking impacts must include assessments of impacts from business cases and, wherever possible, feedback from interested persons and communities impacted by the business case.[76] The plan for measuring and tracking impacts should also demonstrate the importance of the issues to Named Communities along with "a holistic picture of the current conditions faced in those communities."[77]

Commission Determination

73 We find the Settlement's terms related to Avista's capital planning and the inclusion of equity considerations in that planning appropriate. As we stated in our final order in Cascade Natural Gas Company's most recent general rate case (Cascade Final Order), "Recognizing that no action is equity-neutral, regulated companies should inquire whether each proposed modification to their rates, practices, or operations corrects or perpetuates inequities."[78] Accordingly, the Settlement terms requiring Avista to make a compliance filing demonstrating changes to its capital planning to include equity considerations will provide an opportunity for Avista to demonstrate its progress towards addressing the principles identified in the Cascade Final Order, and in particular a comprehensive understanding of the ways systemic and historical inequities are present and continue to operate. We therefore approve the terms.

74 The processes or procedures Avista considers for all capital planning should consider and implement energy justice and its core tenets. The core tenets of energy justice are:

- Distributional justice, which refers to the distribution of benefits and burdens across populations. This objective aims to ensure that marginalized and vulnerable populations do not receive an inordinate share of the burdens or are denied access to benefits.

- Procedural justice, which focuses on inclusive decision-making processes and seeks to ensure that proceedings are fair, equitable, and inclusive for participants, recognizing that marginalized and vulnerable populations have been excluded from decision-making processes historically.

- Recognition justice, which requires an understanding of historic and ongoing inequalities and prescribes efforts that seek to reconcile these inequalities.

- Restorative justice, which is using regulatory government organizations or other interventions to disrupt and address distributional, recognitional, or procedural injustices, and to correct them through laws, rules, policies, orders, and practices.[79]

[78] *Wash. Utils. & Transp. Comm'n v. Cascade Natural Gas Corp.,* Docket UG-210755, Order 09, 19, ¶ 58 (Aug. 23, 2022) (citing RCW 80.28.425(1) [hereinafter Cascade Final Order].

[79] *Id.* at 18, ¶ 56.

vi. Distributional Equity Analysis

75 To better incorporate equity into its capital planning processes, the Settling Parties agree to develop methods and standards for distributional equity analysis (consistent with guidance provided in the New York University Institute for Policy Integrity, 2022), and to file those methods and standards for Commission approval within 24 months of this Order.[80] The Settlement provides that Staff will direct this process and select a facilitator for Avista to hire.[81] If the Settling Parties disagree regarding these methods and standards, the Settling Parties agree that each will file separate proposals for Commission consideration and approval.[82] Public Counsel agrees with the Settling Parties that the agreement to develop methods and standards for distributional equity analysis is in the public interest.[83]

Commission Determination

76 There is a clear need for a process to develop methods and standards for distributional equity analysis. Additionally, we agree that of all the Settling Parties, Staff possesses an expertise and impartiality that makes its selection as the directing party in the proposed process appropriate. We disagree, however, that the process proposed by the Settling Parties is the most appropriate option and find that it is appropriate for the Commission to establish a Commission-led collaborative proceeding to address these issues.

77 The issue of equity, broadly, and the need to consider distributional equity in planning processes affects all utility companies regulated by the Commission. The development of a plan for distributional equity requires input, collaboration, and buy-in from persons and parties not included or represented in Avista's general rate case. Lastly, the importance of this work demands a shared burden of responsibilities and a process that shares and allocates power inclusively. For the above reasons, the Commission finds it appropriate to require the modification of the Settling Parties' agreement for distributional equity analysis and determines that it will facilitate a broader Commission-led collaborative involving all regulated utilities and interested persons. In their post-hearing briefs, both

[80] Settlement at 11, ¶ 19.

[81] *Id.*; Joint Testimony, Exh. JT-1T at 27:19-20.

[82] Settlement at 11, ¶ 19.

[83] Dahl, Exh. CJD-1T at 24:12-13.

Staff and Avista conveyed comfort with and support for a Commission-led collaborative or generic proceeding.[84]

78 Accordingly, we determine that approving the Settlement should be conditioned on certain modifications to the process outlined by the Settling Parties' agreement to develop methods and standards for distributional equity analysis.

> **Condition.** We condition our approval of the Settlement on the modification of the portion regarding distributional equity analysis. Instead of the process the Settling Parties have agreed (that Staff will direct this process and select a facilitator for Avista to hire), we determine that the Commission should establish a broad, Commission-led collaborative process to establish methods and standards for distributional equity analysis and that Avista should be required to participate, as is the expectation for all Washington investor-owned utilities. Subject to this condition, we determine that the Settling Parties' agreement regarding distributional equity analysis is in the public interest and should be approved.

vii. Capital Projects Review

79 The Settling Parties agree to the reporting process for reviewing capital projects outlined in Avista witness Andrews's testimony, with certain changes.[85] Avista's provisional capital reporting will include assurance that the "provisional capital included prior to the rate effective period (for 2022 capital) and during [Rate Year 1] (2023 capital) and [Rate Year 2] (2024 capital) is in service for customers during the rate effective periods, or will be subject to refund."[86] The Settling Parties' proposed changes extend the review period from three to four months to allow parties to review and respond to Avista's annual capital report filing. Within 30 days of completing the capital projects review, Avista would be required to file with the Commission an accounting petition to provide refunds, and create a separate tariff through which rate refunds to customers will be returned and spread to schedules based on an equal share of base rate revenues, exclusive of tax credit refunds.[87] For the purposes of the Capital Projects Review only (*i.e.*, for the comparison of provisional capital additions included in Rate Year 1 and Rate Year 2), the Settling Parties further agree that Rate Year 1 and Rate Year 2 capital additions and rate base are

adopted as initially filed by Avista except with the exclusion of the Dry Ash Disposal System.[88] Table 4, below, illustrates the updates from the Settlement to net plant balances for Rate Year 1 and Rate Year 2.[89] Public Counsel supports the terms regarding Capital Project Review and believes they are in the public interest.[90]

80 **Table 4. Two-Year Rate Plan Net Plant After ADFIT Balances *(in thousands)*[91]**

	Electric Rate Base	Natural Gas Rate Base
Test Period	$ 1,797,278	$ 438,149
Adjustments	*$ 189,878*	*$ 71,999*
Rate Year 1	$ 1,987,156	$ 510,148
Dry Ash Disposal System	$ (3,123)	---
Settlement Balances[92]	$ **1,984,033**	$ **510,148**
Adjustments	*$ 80,506*	*$ 22,198*
Rate Year 2	$ 2,067,662	$ 532,346
Dry Ash Disposal System	$ (2,112)	---
Settlement Balances[93]	$ **2,065,550**	$ **532,346**

Commission Determination

81 We find the Settlement's agreement related to Capital Projects Review reasonable for the resolution of the issues presented in this GRC.

82 We expressly limit our approval, however, to this GRC and emphasize that our decision should not be considered precedential for future proceedings. Some impacts from the

[88] Joint Testimony, Exh. JT-1T at 28:13-16.

[89] *Compare with* Andrews, Exh. EMA-1T at 31:17-22.

[90] Brief of Public Counsel at 43-44, ¶ 96.

[91] Net Plant for each calendar year represents "all actual additions, retirements, offset by Accumulated Depreciation (A/D) and [ADFIT]." Andrews, Exh. EMA-1T at 46:10-15.

[92] Net Plant balance for Rate Year 1 effective 12/31/2022.

[93] Net Plant balance for Rate Year 2 effective 12/31/2023.

IRA and IIJA will affect capital investment and could provide immediate customer savings, as we highlighted previously.[94]

83 The Commission intends to initiate a collaborative or generic proceeding to include all affected, or potentially affected, utilities as well as interested persons to discuss, address, and plan for benefits and opportunities resulting from the IRA and IIJA that may impact the companies' costs. This is not a condition of our approval of the Settlement, but an indication of action tangential to this GRC that the Commission will take to appropriately address impacts to all regulated utilities, not only Avista.

84 As it concerns the Settling Parties' agreement for capital projects review during the MYRP, we take a particular interest in how the IRA and IIJA may impact the retrospective review of provisional plant (capital projects). The precise impacts and extent of those impacts is currently unknown. However, it is apparent that there are opportunities for benefits to Avista for planning of capital projects, and more urgently in capturing any changes that will result in immediate customer savings. We find it imperative that Avista pursue what opportunities the IRA and IIJA might offer during the time the MYRP is effective. For that purpose, we find it appropriate for Avista to record and share its efforts for identifying opportunities for rate mitigation, its efforts in seeking federal benefits, as well as those benefits it actually receives under the federal programs.

85 Accordingly, we determine that approval of the Settlement should be conditioned on certain modifications to the Settling Parties' agreement for the review of capital projects during the MYRP.

> **Condition.** We condition our approval of the Settlement on the modification of the capital projects review, requiring that Avista must demonstrate all offsetting benefits received or for which it has applied for through the IRA and IIJA for all retrospective review of provisional plant (capital projects). Further, we require Avista's reporting to include all funding for which it has applied and the reasons justifying any decision not to pursue IRA and IIJA funding options for which it may be eligible. Subject to this condition, we determine that the Settling Parties' agreement regarding capital projects review is in the public interest and should be approved.

---

[94] *Supra* paragraphs 42-45.

viii. Natural Gas Transition Issues

86 The Settling Parties agree to several terms related to natural gas transition, including terms regarding line extension allowances, non-pipe alternatives, customer reporting requirements, and the development of a natural gas decarbonization plan.[95] In particular, the Settlement establishes a timeline to phase out the Natural Gas Line Extension Allowance by January 1, 2025.[96] It also requires Avista to consider "non-pipe alternatives" in its gas distribution planning process and to discuss this consideration in future natural gas integrated resource plans.[97] Avista must also provide quarterly reporting on the number of new gas customers relative to new electric customers.[98] Last, in its 2023 Natural Gas IRP, Avista must include a plan for complying with the CCA.[99] Public Counsel supports the Settlement's natural gas transition terms and believes that they are in the public interest.[100]

Commission Determination

87 We find the Settling Parties' agreements regarding natural gas transition issues appropriate. The CCA implements a statewide cap-and-invest program that will make Washington carbon-neutral by 2050, cut Washington's carbon emissions by 95 percent compared to 1990 emission levels by 2050, and offset the remaining 5 percent using carbon reduction, removal, or avoidance projects.[101] The CCA sets a limit on overall carbon emissions in the state and requires emitters to obtain "emission allowances" equal to their covered greenhouse gas (GHG) emissions.[102] Avista, as an electric and natural gas utility, must comply with the CCA.

---

[95] Settlement at 12-13, ¶ 21.

[96] *Id.* Line extension allocation will be based on the net present value methodology using a two-year timeframe for 2023 and one-year timeframe for 2024. Joint Testimony, Exh. JT-1T at 29:6-19.

[97] Settlement at 12-13, ¶ 21(b). The Settlement provides that at minimum, "non-pipe alternatives" include demand-side management measures, envelope efficiency measures, electrification, and gas demand response. *Id.*

[98] Settlement at 13, ¶ 21(c).

[99] *Id.* ¶ 21(d); Joint Testimony, Exh. JT-1T at 29:6-31:3.

[100] Brief of Public Counsel at 43-44, ¶ 96; Dahl, Exh. CJD-1T at 30:1-7.

[101] *See* RCW 70A.65.005(2)-(7).

[102] RCW 70A.45.020; RCW 70A.65.060; RCW 70A.65.070; RCW 70A.65.080; RCW 70A.65.200.

88 The Settling Parties' agreement will promote prudent planning and, in many ways, will aid Avista's compliance with the requirements of the CCA. Accordingly, we determine that the Settlement's natural gas transition terms agreed by the Settling Parties are reasonable, in the public interest, and should be approved.

ix. Transportation Electrification

89 Consistent with RCW 80.28.360, the Settling Parties agree that Avista's request for an incentive rate of return (ROR) on transportation electrification investments is embedded within the revenue requirement for the duration of the MYRP subject to the establishment of two performance metrics.[103] The transportation electrification performance metrics are: (a) percent of utility-owned and supported electric vehicle supply equipment (EVSE) by use case located within and/or providing direct benefits and services to Named Communities; and, (b) percent of load shifted to off-peak periods attributable to transportation electrification tariff offerings by use case, including electric vehicle load subject to managed charging.[104] The Settling Parties also agree to minimum payment method requirements for publicly-accessible charging stations and agree that any party can oppose or propose alternative approaches to incentive return on equity (ROE) for transportation electrification in future cases.[105] The Settlement does not establish any performance incentive mechanisms. Public Counsel supports the Settlement's transportation electrification terms and believes that they are in the public interest.[106]

Commission Determination

90 We find the Settlement's transportation electrification terms, including authorizing an incentive rate of return (ROR) on transportation electrification investments, to be reasonable. It is appropriate that the terms of the Settlement do not prevent parties from opposing or proposing new and alternative solutions related to incentivizing transportation electrification in the future.

91 In addition, the incentive ROR included in revenue requirement for transportation electrification investments is subject to the establishment of the related performance

---

[103] Settlement at 13-14, ¶ 22; *see* RCW 80.28.360.

[104] Settlement at 14, ¶ 22.

[105] Settlement at 13-14, ¶ 22.

[106] Brief of Public Counsel at 43-44, ¶ 96; Dahl, Exh. CJD-1T at 30:15–31:10.

metrics.[107] As we describe in further detail below regarding the Settlement's agreed performance metrics, we accept the establishment of the performance metrics proposed by the Settling Parties related to Avista's transportation electrification investments. We also find it important to note that the Settling Parties' agreement incorporates the incentive ROR for transportation electrification into the results-only revenue requirement and is not *in addition to* the agreed results-only revenue requirement agreement.[108] We find it appropriate that, in the context of a results-only revenue requirement agreement, the agreed amount of the incentive ROR for transportation electrification is not in addition to the agreed revenue requirement. Accordingly, we determine that the Settlement's transportation electrification terms agreed by the Settling Parties are reasonable, in the public interest, and should be approved.

x. Performance Based Ratemaking

92 The Settling Parties agree to 92 performance metrics included in Attachment B, which includes two metrics related to transportation electrification plus the commitment to develop additional reliability metrics.[109] The Settling Parties' agreement does not include the proposal by Avista in its initial filing regarding financial performance incentive mechanisms (PIMs).[110] The 92 metrics identified in Attachment B to the Settlement regard numerous topics, which are categorized by Table 5, below.

---

[107] Settlement at 13, ¶ 22.

[108] *See* Joint Testimony, Exh. JT-1T at 31:17-19.

[109] Settlement at 14-15, ¶ 23.

[110] *Id.*; Joint Testimony, Exh. JT-1T at 32:1-6, 32:11-14, 34:6-7; Settlement Stipulation Attachment B.

93 **Table 5. Settlement Performance Metrics by Topic and Sub-Topic**

Topic	Sub-Topic	# of Metrics
Affordable Service		15
Capital Formation		2
Equitable Service		17
Satisfy Customer Needs	Electric Reliability	15
	Wildfire	17
	Customer Experience	6
Advance Societal Outcomes	Pollution, GHG Emissions Reduction	7
	Electric Grid Benefits	10
Natural Gas System Benefits		3
Total		92

94 The metrics listed in Attachment B will be used for tracking purposes.[111] As part of the Settlement, Avista agrees to report and publish, on either a quarterly or annual basis starting 45 days after the first quarter of 2023, the results of each metric on its website and to maintain and make public the historical results.[112] Each metric will be reported in real terms while "using an appropriate measure of inflation."[113] Additionally, the Settling Parties propose to develop by March 31, 2023, reliability metrics to be tracked and reported by the beginning of Rate Year 2.[114]

95 Public Counsel supports the Settlement's terms regarding performance-based ratemaking and believes that they are in the public interest.[115]

[111] Settlement at 14-15, ¶ 23.

[115] Public Counsel Brief at 43-44, ¶ 96; Crane, Exh. ACC-1T at 10:11-18:16.

Commission Determination

96 We find the Settlement's agreed performance metrics appropriate but find that Avista should be required to report all of the Settlement's metrics to the Commission. The Commission finds that the performance metrics are measures consistent with RCW 80.28.425, that these metrics will be informed by the Commission's performance-based regulation proceeding in Docket U-210590, and that establishing metrics and measures for performance-based ratemaking is an iterative process. In Docket U-210590, a Performance Metric or Performance Measure is defined as measurable and quantifiable data used to track specific actions, outcomes, or results. It is often expressed in terms of standard power system measures or consumer impact measures. Additionally, we agree with Public Counsel who, in brief, explains that:

> Approval of these performance metrics and associated Company activities included in the Settlement meets the requirements of the Multiyear Rate Plan statute. The statute does not define "measure," but the dictionary definitions of the word include "an action to achieve something" and "a step planned or taken as a means to an end." The statute is not prescriptive as to the types of actions that constitute a "measure." The list of performance metrics, coupled to the requirement that Avista track each of the ninety-two separate metrics, are an action intended to collect and track utility performance in nine different performance categories through the multiyear rate plan.[116]

97 The terms of the Settlement provide that these performance metrics are for tracking purposes and do not state whether these metrics should be used to evaluate the MYRP.[117] The Settlement lacks detailed information identifying or directing how the Commission might use these metrics to evaluate the MYRP or the agreed calculations for all metrics under RCW 80.28.425(7). The Commission therefore finds it necessary to meet its statutory obligation under RCW 80.28.425(7) by adopting a limited number of performance measures, described later in Section C of this Order, that it will use to

---

[116] Brief of Public Counsel at 45, ¶ 98 (citing MacMillian Education Limited: MacMillian Dictionary.com, *MacMillian Dictionary* https://www.macmillandictionary.com/us/dictionary/american/measure_1 (last accessed Oct. 20, 2022); Merriam-Webster, Merriam-Webster.com Dictionary, https://www.merriam-webster.com/dictionary/measure (last accessed Oct. 20, 2022)).

[117] Settlement at 14-15, ¶ 23.

evaluate Avista's operations during the MYRP. The Settling Parties do not oppose adding requirements for Avista to report the performance metrics to the Commission, and we determine that such reporting will be useful as the Commission and parties refine their use of performance metrics over time. Further, the Settlement's agreed performance metrics are not binding on the Commission, and we expressly determine that our approval of the Settlement should not impute precedential value to their continuation should the Commission determine that other or additional metrics or measures are more appropriate in the future for the same or other purposes.

98 Last, the Commission declines to provide guidance on PIMs in this Order. These issues and their relation to the statutory requirements of RCW 80.28.425(7) will be explored in Phase 3 of the Commission's performance-based ratemaking proceeding in Docket U-210590. Staff and all other parties are invited to provide comments and proposals in that proceeding.

99 Accordingly, we determine that approval of the Settlement should be conditioned on certain modifications to the Settlement's agreed performance metrics.

> **Condition.** We condition our approval of the Settlement on the inclusion of requirements for reporting the performance metrics to the Commission. Avista must report each of the performance metrics in a filing with the Commission within 45 days of the conclusion of the relevant reporting period. We also require the Settling Parties to review reported performance metrics and provide feedback and recommendations for the Commission to consider within 45 days from the filing date of the report. Subject to these conditions, we determine that the Settling Parties' proposed metrics and proposal for performance-based ratemaking is reasonable, consistent with applicable law, in the public interest, and should be approved.

xi. Low-Income

100 The Settling Parties agree to several terms affecting Avista's low-income programs.[118] First, the Settling Parties agree to recommend that the Commission not approve certain proposals in Avista's initial filing, and that the proposals will be further discussed and developed in consultation with the Company's Energy Assistance Advisory Group (EAAG), with Avista filing the resulting proposals with the Commission on July 1,

[118] Settlement at 15-17, ¶ 24.

2023.[119] Specifically, Avista agrees to consult and seek consensus with its EAAG concerning program design and implementation issues, including the joint administration of enrollment by Avista or the Community Action Agencies (CAAs); the use of self-attestations of income along with random audits instead of verifying all participating customers' income, and, the management of overlap between the federal Low-Income Home Energy Assistance Program (LIHEAP) and Avista's Bill Discount program.[120]

101 Second, the Settling Parties agree that Avista's proposal for the administration and program support budget apportioned to the CAAs is the minimum amount that will be made available for the 2023-2024 and 2024-2025 Low-Income Rate Assistance Program (LIRAP) years.[121] Avista agrees to collaborate with its EAAG to determine the appropriate method, amounts, and administrative structure for future LIRAP years.[122] Any funding increases proposed by its EAAG will be included in the July 1, 2023, filing , and Avista's 2024 annual filing in September.[123]

102 Third, the Settling Parties agree that Avista may only recover the following expenses through Schedules 92 and 192: Direct Services to customers, CAA Administration and Program Delivery, CAA Conservation Education Staff and Labor, Avista Conservation Education, and LIRAP Outreach.[124]

103 Fourth, Avista agrees that it will work with its EAAG to identify a new renewable energy project or projects for the direct benefit of low-income customers.[125] In addition, the Settling Parties agree that Avista may identify a new renewable energy project or projects

---

[119] Settlement at 15, ¶ 24(a).

[120] Settlement at 15, ¶ 24(a)(i).

[121] Settlement at 15, ¶ 24(b); *see* Bonfield, Exh. SJB-1T.

[122] Settlement at 15-16, ¶ 24(b).

[123] Settlement at 16, ¶ 24(b).

[124] Settlement at 16, ¶ 24(c). The Settling Parties agree that Avista cannot recover other expenses through Schedules 92 and 192, including Avista's associated labor; EAAG expenses, including facilitator and participant payments; labor or other costs associated with the reporting of metrics concerning low-income customers and energy burden pursuant to CETA or performance-based regulation metrics, and labor and other costs associated with reporting to the Washington Department of Commerce. *Id.*; *but cf.* Settlement at 16-17, ¶ 24(d).

[125] Settlement at 16, ¶ 24(d). The Settling Parties agree that funding may come from Schedules 92 or 192 but may only fund projects benefitting eligible low-income customers. Settlement at 16-17, ¶ 24(d). *See* Cebulko, Exh. BTC-1T at 9:12-18.

for the direct benefit of customers residing in Named Communities.[126] Avista agrees to file with the Commission a work plan describing its plan to facilitate the development of a new renewable energy project or projects, including the budget, funding sources, timeline, and community partners, by December 1, 2023.[127]

104 Last, Avista agrees to low-income conservation and weatherization terms, including increasing low-income conservation and weatherization funding through Schedules 91 and 191 up to $4.0 million in 2023 and $4.25 million in 2024; developing a pilot program in consultation with its EEAG to overcome the inability to weatherize homes because of deferred maintenance or large repairs, and surveying actual installed measure costs and, based on the results of the survey, adjusting the rebate amounts if warranted and fully funding low-income conservation measures.[128]

105 Public Counsel supports the Settlement's low-income terms and believes that they are in the public interest.[129]

Commission Determination

106 We find that the Settlement's low-income terms are positive steps designed to remove barriers to access and seek greater engagement with Highly-Impacted Communities and Vulnerable Populations. As the Commission determined in the Cascade Final Order, advancing energy justice is integral to achieving equity in Washington's energy regulation. Among other things, energy justice focuses on ensuring that individuals have access to energy that is affordable, safe, sustainable, and affords them the ability to sustain a decent lifestyle. Here, the low-income provisions of the Settlement propose that

---

[126] Settlement at 16, ¶ 24(d). The Settling Parties agree that funding may come from Avista's Named Communities Investment Fund. *Id.*

[127] Settlement at 17, ¶ 24(d). The Settling Parties agree that this requirement is independent of and incremental to condition 10 of Avista's CEIP. *Id.* Condition 10 of Avista's CEIP states:

> By December 1, 2022, in collaboration with its EAG and EAAG and per WAC 480-100-640(5)(a) and (c), Avista agrees to identify at least one specific action that will serve a designated subset of Named Communities, to be funded by the Named Communities Investment Fund, and to identify and track all CBIs relevant to this specific action. The location identified for the specific action will be at the granularity of the designated Named Communities subset.

Cebulko, Exh. BTC-1T at 9, n. 13.

[128] Settlement at 17, ¶ 24(e).

[129] Brief of Public Counsel at 43-44, ¶ 96; Dahl, Exh. CJD-1T at 18:10-23:4.

the Company work with its EAAG to make significant changes to Avista's low-income programs that will increase access to, and enrollment in, those programs. Specifically, the Settlement increases the EAAG's involvement in program design and implementation, demonstrates a deeper understanding of the flexibility necessary for certain budgeting structures, and demonstrates the Settling Parties' intent to proactively incorporate considerations for including low-income and Named Communities in new renewable energy projects. Consistent with our decision on the retrospective review of provisional plant, we find it imperative that Avista seek out IRA and IIJA funding opportunities related to supporting and promoting low-income programs, projects, and interests.

107 Public Counsel, while not a party to the Settlement, highlights several barriers that the Settlement will, or at least will attempt to, remove. Regarding barriers to enrolling customers in need of assistance, Public Counsel witness Dahl explains that

> removing barriers to customers qualifying for and receiving energy assistance funds has been a major point of conversation among stakeholders. Determining how to use and assess the accuracy of self-attested income to demonstrate qualifications is an important step toward reducing the administrative barriers customers with high energy burdens face. These assessments should strike a balance between gathering information necessary to determine compliance rates and creating new, unintended barriers to program participation.[130]

108 We agree and find that the Settlement's terms requiring Avista and its EAAG to engage in consensus-seeking consultations on the new program design, including self-attestation of income with random audits, should remove barriers and result in increased enrollment. We also find that the terms requiring Avista to file the resulting design recommendations will create a fair procedure, an appropriate timeline, and incentives for productive engagement.

[130] Dahl, Exh. CJD-1T at 19:19-20:4. The Commission is working to eliminate from its documents the non-inclusive and historically problematic term "stakeholders" and instead use terms like "interested persons," "participants," "persons," or "non-company parties," depending on the situation. We urge others to do the same.

109 Regarding low-income weatherization, witness Dahl explains that

> In many cases, weatherization measures are unable to be installed or would be ineffective without addressing maintenance issues in customers' homes. This is an issue agencies who coordinate funding and implementation of low-income weatherization projects raise regularly. Piloting a program to remove this important obstacle to completing projects is in the public interest.[131]

We agree. While some programs do not require a pilot, we find that the Settling Parties' agreement to begin a pilot program for these purposes is appropriate because it will likely expedite its implementation.

110 TEP, a party to the Settlement, filed separate testimony in support of the Settlement, addressing its support of many of Avista's low-income proposals. In particular, TEP witness Cebulko discussed Avista's proposed five-tier bill discount program as it is paired with programs that address arrearages. Witness Cebulko explains that

> TEP strongly supports the use of a five-tier bill discount program, where customers with the lowest incomes receive the largest bill discount in the first tier, customers with slightly higher incomes receive a slightly lower bill discounts in the second tier, and so on. Similarly, TEP strongly supports the Past Due Payoff (PDP) program immediately forgiving past due balances for the customers with the lowest incomes, and the Arrearage Management Plan (AMP), which forgives past due balances for other low-income customers who sustain regular payments. Taken together the five-tier bill discount program and PDP/AMP show promise as a cornerstone strategy to reduce household energy insecurity and retain access to essential utility service in Washington.[132]

111 We agree that reducing household energy insecurity and retaining access to essential utility services in Washington are important equity considerations that are consistent with the public interest. It appears, however, from the absence of terms in the Settlement

[131] Dahl, Exh. CJD-1T at 23:16-20.

[132] Cebulko, Exh. BTC-1T at 6:19-7:7.

outlining the PDP, AMP, or five-tier bill discount program, that more discussion is needed regarding these programs and their designs. We support the Settlement's terms under which Avista will further engage with the EAAG to collaboratively develop program designs that promote equity and access to those in need of its energy assistance programs.

112 We find the low-income terms in the Settlement remarkable for the progress they make towards reducing barriers and promoting equity and access.[133] However, we find that some elements are missing, albeit due to circumstances and timing beyond the parties' control. Funding available through the IRA and IIJA might be attainable for supporting and promoting many programs, including low-income programs, projects, and interests. Critically, we find that considerations of what funding may be available cannot wait and should be undertaken immediately in appropriate forums. Here, we find that Avista's consultations with its EAAG is an appropriate forum. We observe, unfortunately, that the Settlement lacks any indication of how the IRA and IIJA might be beneficial for low-income considerations. Accordingly, we determine that approval of the Settlement should be conditioned on certain modifications to the Settlement's low-income terms.

> **Condition.** We condition our approval of the Settlement on the inclusion in Avista's consultations and consensus-seeking with its EAAG, as well as its July 1, 2023, and September filings with the Commission, of its considerations for how funds through the IRA and IIJA might be used to support and promote low-income programs, projects, and interests. Further, Avista will report in future low-income annual filings during the MYRP its actions to seek funding through the IRA and IIJA to support and promote low-income programs, projects, and interests. Subject to this condition, we determine that the Settling Parties' agreed low-income terms are reasonable, consistent with applicable law, in the public interest, and should be approved.

---

[133] Neither Avista, nor any other regulated company, should consider the equity considerations in this Order comprehensive, as we will continue to expand upon this discussion of equity in future proceedings. We decline to provide specific programmatic guidance, as our discussion of equity and the low-income terms of this Settlement is only the beginning of a broader understanding and expectation of equity considerations in Washington's energy regulation going forward. For now and the near future, we reiterate our expectation set out in the Cascade Final Order that Avista, and all other regulated investor-owned utility companies, must integrate considerations of equity into every proposal through an energy justice lens.

xii. Climate Commitment Act

113 The Settlement provides that, within 60 days of the adoption of the final Department of Ecology rules implementing the CCA (Chapter 173-446 WAC), Avista will begin consulting with its applicable advisory groups to develop plans for compliance with the CCA, including reporting requirements, proper treatment of revenues from the consignment of allowances, and the investment of any proceeds from the sale of allowances during the MYRP.[134] Public Counsel supports the Settlement's CCA terms and believes that they are in the public interest.[135]

Commission Determination

114 We find the Settlement's terms related to the CCA appropriate. At hearing, Commissioner Doumit inquired whether the parties would find it helpful and if they would support Commission efforts to schedule consultative and collaborative meetings to discuss utility compliance with the CCA, generally.[136] Both Avista and NWEC stated that work sessions around compliance with the CCA would be helpful.[137]

115 We agree with the Settling Parties that Avista should begin consulting with its advisory groups concerning the requirements of the CCA, CCA allowances, and the accounting treatment of proceeds under the CCA. Additionally, the Commission intends to schedule meetings, workshops, or collaborative work sessions as described by Commissioner Doumit during these consolidated proceedings' hearing to discuss utility compliance, generally, with the CCA. Accordingly, we determine that the Settlement's CCA terms are in the public interest and should be approved.

xiii. Small Business Energy Efficiency

116 The Settling Parties agree that Avista will begin, by June 30, 2023, discussions with its Energy Efficiency Advisory Group (EEAG) and other interested persons concerning eligibility criteria for small business customers in its energy efficiency offerings.[138] Avista will also further explore mirroring residential customer offerings for small

---

[134] Settlement at 17-18, ¶ 25.

[135] Brief of Public Counsel at 43-44, ¶ 96; Dahl, Exh. CJD-1T at 31:3-10.

[136] Commissioner Doumit, TR at 146:9-24.

[137] Ehrbar, TR at 147:2-7; McCloy, TR at 147:9-11.

[138] Settlement at 18, ¶ 26.

business customers.[139] The Settlement provides that discussions must begin no later than June 30, 2023, and must include a conversation of budget impacts, which will be funded through Schedules 91 and 191, and a timeline for completing the pursuit of additional program offerings for small business customers no later than December 31, 2023.[140] Public Counsel supports the Settlement's terms regarding small business energy efficiency and believes that they are in the public interest.[141]

Commission Determination

117 We find the Settlement's small business energy efficiency terms appropriate. It is equitable, reasonable, fair, just, and in all cases appropriate that small business customers should be included in considerations regarding how they also can participate in and benefit from energy efficiency efforts. This is both for their benefit as well as Avista's because the Company must maintain compliance with statutory requirements for energy efficiency, conservation, and for providing energy to its customers while reducing GHG emissions. Accordingly, we determine that the terms regarding small business energy efficiency are timely, reasonable, and should be approved.

xiv. Electric Service Reliability Report Plan

118 Avista also agrees that it will include its final electric service reliability reporting plan with the compliance filing in these consolidated proceedings.[142] The Settlement proposes two terms regarding Avista's electric service reliability report plan: first, Avista agrees to clarify its presentation and distinction of "Washington-only" metrics as compared with "system-wide" metrics, including with the presentation and distinction of System Average Interruption Frequency Index (SAIFI), System Average Interruption Duration Index (SAIDI), and Customer Average Interruption Duration Index (CAIDI) performance and historical trends; second, Avista agrees to participate in any multi-party collaborative seeking to establish common measures and reporting formats among Washington's investor-owned utilities for electric distribution system reliability.[143]

---

[139] *Id.*

[140] *Id.*

[141] Public Counsel Brief at 43-44, ¶ 96; Dahl, Exh. CJD-1T at 29:16-21.

[142] Settlement at 18, ¶ 27.

[143] *Id.*

Commission Determination

119 We find the Settlement's agreement related to Avista's electric service reliability report plan appropriate. No party opposes this portion of the Settlement. Clarifying and differentiating the metrics of service reliability to exclude Avista's system performance in other states from Washington holds unquestionable value. Service reliability provided by Avista in Idaho or Oregon is only tangentially relevant, due to the unique and different circumstances in those jurisdictions for Avista's service to its customers residing there, for our consideration of the reliability of service provided by Avista to Washington customers. Accordingly, we determine that the Settlement's electric service reliability report plan terms are equitable, reasonable, just, and should be approved.

xv. Miscellaneous Uncontested Terms

120 The Settling Parties agree to several other terms identified in the Settlement as "miscellaneous." We summarize and address these terms together.

a. *Depreciation Rates and Regulatory Amortizations*

121 The Settling Parties agree to terms regarding the depreciation rates and regulatory amortizations as included in Avista's initial filing for certain adjustments, which are detailed in Attachment D to the Settlement.[144] These relate to the amortization of deferrals and remaining balances previously approved by the Commission.[145] Without Commission authorization, the Company would be unable to amortize or depreciate these balances.[146]

b. *Annual Filing Dates*

122 The Settling Parties agree to the proposals in Avista's initial filing to change the rate effective dates for several annual filings. First, the Settling Parties agree to move the annual Schedule 98 Renewable Energy Credit (REC) filing from July 1 to August 1 to coincide with other rate changes.[147] Second, the Settling Parties agree to move the proposed low-income rate assistance program (LIRAP) Schedule 92/192 effective dates

---

[144] Settlement at 19, ¶ 28(a); *see* Settlement at Attachment D.

[145] Settlement at 19, ¶ 28(a) and accompanying notes.

[146] *Id.*

[147] Settlement at 19, ¶ 28(b); *see* Miller, Exh. JDM-1T, 34:10-14.

from October 1 to November 1.[148] Last, the Settling Parties agree to move the Wildfire Deferral filing date from July 31 to September 1 and to also move the effective date from October 1 to November 1.[149]

c. *Annual Reporting Obligations of Docket U-210151*[150]

123 Avista agrees to provide recommendations in its initial filing of its next GRC regarding how it will streamline its existing required annual reporting obligations (provided in Docket U-210151).[151] Avista also agrees to provide a detailed matrix of all reporting obligations annually along with a matrix of any recommendations for streamlining, as provided in Docket U-210151.[152]

d. *Software Licensing*

124 Avista agrees to provide templates and vendor contact information for any vendor software licensing agreements, such as Energy Exemplar, with each filing.[153]

e. *Decoupling Earnings Test*

125 The Settling Parties agree to replace the current earnings test with the earnings test provided in RCW 80.28.425(6).[154]

Commission Determination

126 We find the Settlement's miscellaneous terms, described above, appropriate. No party opposes any of the agreements contained in these terms. We find the Settling Parties' agreement to continue authorization of depreciation rates and regulatory amortizations previously authorized by the Commission reasonable. In addition, we find nothing

---

[148] Settlement at 19, ¶ 28(b); *see* Bonfield, Exh. SJB-1T, 36:9-17.

[149] Settlement at 19, ¶ 28(b); *see* Andrews, Exh. EMA-1T, 63:6-17.

[150] In error, the Settling Parties refer in the Settlement and in their Joint Testimony to Docket U-210501. Settlement at 19, ¶ 28(c); Joint Testimony, Ext. JT-1T at 40:7-11. The relevant docket is U-210151. We have made this ministerial correction to the Settlement's referenced docket throughout this Order.

[151] Settlement at 19, ¶ 28(c).

[152] *Id.*

[153] Settlement at 19, ¶ 28(d).

[154] Settlement at 19, ¶ 28(e); *see* Ehrbar, Exh. PDE-1T, 37:14-38:25, describing how the existing earnings test conflicts with the earnings test provided in RCW 80.28.425(6).

objectionable to the Settlement's terms allowing Avista to modify certain filing dates and effective dates to create greater efficiencies, those terms encouraging streamlining in reporting obligations, and those requiring the sharing of vendor contact information. Each of these terms are reasonable and will promote greater efficiency for the Commission's regulation and review, as well as that of interested persons. Lastly, recently enacted legislation requires the deferral of earnings that are more than 0.5 percent higher than the ROR authorized by the Commission and reported annually through a company's Commission Basis Report (CBR).[155] The Commission authorizes replacing the existing decoupling earnings test with the earnings test provided in RCW 80.28.425(6). Further, the Commission clarifies that the decoupling deferral must include accruing ROR on the balance of the deferral. Lastly, the Commission determines that Avista should be authorized and required to defer any earnings greater than 0.5 percent above its authorized ROR, consistent with this Order, the Settlement, and RCW 80.28.425(6).

127 Accordingly, we determine that the Settlement's miscellaneous terms – regarding depreciation rates and regulatory amortizations, modifications to filing and effective dates, recommendations for streamlining reporting obligations, sharing of contact information for vendor agreements, and the decoupling earnings test – are reasonable, not contrary to law, in the public interest, and should be approved.

2. POWER COSTS

128 The Settling Parties agree to two terms regarding power costs. First, the Settling Parties agree to accept the 2023 Pro Forma Power Supply expense and Energy Recovery Mechanism (ERM) Baseline included in Avista's initial filing.[156] Second, they agree that Avista will not perform the 60-day power cost updates that it had proposed in its initial filing.[157] Instead, the ERM Baseline will remain as indicated in Avista's initial filing for the duration of the MYRP and is included as Attachment C to the Settlement.[158] Public Counsel generally supports the Settlement's power cost terms.[159] It takes issue, however,

---

[155] RCW 80.28.425(6). On April 25, 2022, during the pendency of these consolidated proceedings, Avista filed its 2021 electric and natural gas CBRs in Dockets UE-220288 and UG-220289, respectively, indicating the Company's actual cost of capital as of December 31, 2021.

[156] Settlement at 9, ¶ 15.

[157] *Id.*

[158] *Id.*; *see* Kalich, Exh. CGK-6.

[159] Earle, Exh. RLE-1T at 2:9-10.

with the energy imbalance market (EIM) benefit projections embedded in Avista's initially-filed ERM baseline and revenue requirement because they are based on a 2017 study by Energy and Environmental Economics (2017 E3 Study).[160] Public Counsel, therefore, contests this term of the Settlement and proposes that the Commission either annualize one month of the California Independent System Operator's (CAISO) estimated benefits amounts or direct Avista to update the 2017 E3 Study prior to the effective date in these consolidated proceedings.

Commission Determination

129 We find that the power supply terms proposed by the Settlement are reasonable and supported by the record. To calculate the EIM benefits included in the ERM baseline, Avista relies on the 2017 E3 Study that estimates benefits of approximately $5.8 million on a system basis.[161] Public Counsel argues that the study should not be used to approximate the EIM benefits because the study is denominated in 2017 dollars.[162] Instead, Public Counsel recommends that the study be updated based on actual data from Avista's participation in the market.[163] In the absence of an updated study, Public Counsel recommends using the results from CAISO's benefits estimation. Because only one month of results was available at the time testimony was filed, Public Counsel annualizes one month of benefits to derive an annual amount.[164] Public Counsel's revenue requirement proposal incorporates this alternative position.

130 Public Counsel's preferred proposal is that the 2017 E3 Study be updated using more recent input data.[165] Avista argues in rebuttal that it is impossible for the 2017 E3 Study to be updated before the statutory deadline in these consolidated proceedings.[166] We agree. Directing Avista to update its 2017 E3 Study prior to the effective date of these consolidated proceedings is impractical and we decline to set such a requirement.

131 In the alternative, Public Counsel proposes annualizing the March 2022 EIM benefits from CAISO's benefits study to estimate the benefits in all of 2023. Avista opposes

---

[160] *See* Kinney, Exh. SJK-3.

[161] Kinney, Exh. SJK-1T at 8:5-7.

[162] Earle, Exh. RLE-1T at 7:12-16.

[163] *Id.* at 9:18-21.

[164] *Id.* at 10:1-12.

[165] *Id.* at 9:18-10:3.

[166] Kinney, Exh. SJK-13T at 6:13-20.

Public Counsel's proposal, arguing that "[w]ithout any operating experience it is too early for the Company to tell whether the CAISO benefit calculation methodology . . . will accurately reflect estimated benefits for Avista. . . ."[167] Further, at hearing and in prefiled written testimony, Avista witness Kinney explained a number of factors that either influenced CAISO's benefits study in the beginning of 2022 or will present an unknown degree of influence, including the amount of hydro, price volatility, transmission interconnection, availability, the CCA and its potential interaction with California markets, Bonneville's entrance into the EIM market, and a new, long-term power purchase agreement that will begin during the MYRP.[168]

132 We agree with Avista. We find that annualizing amounts into rates based on one month of data is not a sound methodology, cannot account for the unknown influences of a number of factors in 2023, and is more flawed than retaining the current 2017 E3 Study's estimates. Public Counsel's proposal is also problematic due to the uncertain timing of how and when EIM benefits will accrue.

133 While the 2017 E3 Study is not without flaws, its selection by the Settling Parties is supported by the record and reasonably balanced by the terms of the Settlement. The 2017 E3 Study was conducted several years ago, and while supported in this record and that of prior GRCs, the Settlement does not propose any update or comparison with any additional data. We find, however, that the flaws and associated risks of the Settling Parties' selection of the 2017 E3 Study are balanced by Avista's negotiated risk to forgo a 60-day power cost update, which will maintain the power cost level established in Avista's initial filing for the entirety of the MYRP.

134 We accept the Settling Parties' agreement to use the 2017 E3 Study to estimate EIM benefits included in the ERM baseline and reject Public Counsel's proposals to either annualize one month of CAISO's estimated benefits amounts or direct the Company to update the 2017 E3 Study prior to the effective date in these consolidated proceedings. None of the three options advanced are ideal, but the Settlement's proposal is reasonable and a well-balanced resolution to the issue.

135 Further, there is a balance struck by the Settlement between Avista and its customers. Avista argues that Public Counsel "cherry-picks" one element of Avista's power supply levels by updating for a decrease in the ERM baseline, while ignoring updates to different

---

[167] *Id.* at 7:2-4.

[168] *Id.* at 3:8-11; Kinney, TR at 295:11-298:14.

offsetting factors that could increase the baseline.[169] We acknowledge the risk Avista explains in testimony that it has agreed to as part of the give and take of negotiations. In addition, we agree that the Settling Parties have reached a balanced result with shared risk and some protection for both the Company and its customers, via the ERM, should power supply components vary from the baseline levels.[170]

136 Ultimately, we find that in lieu of using a more recent or updated benefits study, Avista's agreement to incur additional risk by agreeing to not include a 60-day power cost update prior to new rates going into effect for each year of the MYRP is supported by the record and is a fair, reasonable, and balanced resolution of this issue. Accordingly, we determine that the Settlement's power costs terms are in the public interest and should be approved.

3. INSURANCE BALANCING ACCOUNT

137 The Settling Parties agree to two balancing accounts: a Wildfire Expense Balancing Account; and an Insurance Expense Balancing Account.[171] We address the former later in this Order, along with other wildfire-related issues.

138 The Settling Parties agree to the proposal in Avista's initial filing to create an Insurance Expense Balancing Account for the MYRP.[172] The Settling Parties recognize that Avista will bear the burden of supporting deferrals for the account when seeking recovery in a future rate proceeding.[173] The Settling Parties specify that the establishment of an Insurance Expense Balancing Account is not precedential and its continued existence may be challenged by any party in a future proceeding.[174] The Insurance Balancing Account Baseline over the MYRP will be approximately $8.3 million for electric and $1.7 million for natural gas.[175]

[175] Joint Testimony, Exh. JT-1T at 25:7-11; Andrews, Exh, EMA-1T at 64:23; Coppola, Exh. SC-6Cr (Public Counsel Data Request No. 103C).

139 Public Counsel opposes the creation of an insurance balancing account, including any establishment of a baseline.[176] Instead of the Settlement's proposal to accept Avista's expected insurance expense amounts of approximately $8.3 million for electric and $1.7 million for natural gas for each year of the MYRP and use them to establish a baseline for the balancing account, Public Counsel proposes to identify its own insurance expense adjustment within the revenue requirement authorized in this GRC but not allow that amount to be used as a baseline in a balancing account.[177] We address Public Counsel's expense adjustment later in this Order, in our discussion of the Settlement's agreed revenue requirement, but as part of our consideration of the Settlement's insurance balancing account terms we note the amounts presented by Public Counsel in this section.

Commission Determination

140 We find the Settlement's terms establishing a non-precedential Insurance Balancing Account appropriate, subject to a documenting and reporting condition. We agree with the principle underpinning Public Counsel's opposition to the creation of the Insurance Balancing Account: generally, authorizing a pass-through such that a company is guaranteed recovery of its costs in a certain area removes the business incentive for the company to control those costs. However, we find that the record supports the creation of an Insurance Balancing Account, as agreed to in the Settlement, in particular because of the unique circumstances and terms presented.

141 Namely, we find that Avista has demonstrated unprecedented increases and volatility in its insurance costs.[178] We agree that Avista has shown the insurance expense increases in recent years are "extraordinary" and "volatile" and caused an under-recovery of approximately $5.3 million in 2022.[179] We also find that Avista has demonstrated that it has taken and is taking appropriate steps to try to control these costs, but has shown unprecedented recent increases in insurance that are largely out of its control. These increases have been driven primarily by the Company's general liability premiums, which cover wildfire risk and property insurance premiums, and which tend to react to insurance industry losses due to natural disasters.[180] In addition, we agree that these costs

---

[176] Brief of Public Counsel at 17, ¶ 35; Coppola, Exh. SC-1T at 24:19.

[177] *See* Coppola, Exh. SC-1T at 23:15-24:16; Coppola, Exh. SC-8.

[178] This results from significant increases in insurance expenses in recent years, which have increased approximately 107 percent from 2020 to 2022. Andrews, Exh. EMA-7T 25:16-18.

[179] Andrews, Exh. EMA-1T at 66:16-19 and Exh. EMA-7T 28:5-11.

[180] *See* Andrews, EMA-1T at 64:2-74:19; Brandkamp, Exh. REB-1CT at 3:22-8:12.

have increased due to factors outside the Company's control and despite the Company's best efforts under its Wildfire Resiliency Plan.[181]

142 We also observe that the amounts proposed as a baseline by the Settlement and as insurance expense calculated by Public Counsel are similar,[182] but find that Public Counsel's methodology would present risks, flaws, and precedent that strongly disfavor its adoption. Public Counsel disagrees with Avista's method of projecting its insurance expense, preferring to use a Consumer Price Index (CPI) inflation factor.[183] We are unpersuaded by Public Counsel's arguments to adopt an unrelated inflation factor to calculate projections for insurance costs during the MYRP. Public Counsel's proposal to use inflation factors projecting growth in this area is incongruous with its support for the Settlement's terms excluding escalation factors projecting growth – a portion of the Settlement supported by all parties. In addition, as Avista notes in the record, the insurance market does not generally correlate with CPI factors, as shown by increases in recent years.[184]

143 Conversely, Avista's estimates are based on consultations with insurance brokers to identify overall trends and projected movements in future premiums in the industry.[185] We agree with Avista that the inflation factors projecting growth in this area are unrelated to insurance or utility costs and have no bearing on the insurance risks being borne by Avista or its expected insurance premiums.[186] The Settlement proposes a balancing account baseline representing increases to Avista's total system invoiced 2022 insurance levels of 12.9 percent (electric and natural gas). After allocation, this results in an increase of 6.7 percent (WA electric) and 0.6 percent (WA natural gas) above invoiced 2022 levels.[187] Public Counsel proposes increases to Avista's total system invoiced 2022 insurance expense levels during the MYRP of 2.4 percent (electric and natural gas) in 2023 and 2.3 percent (electric and natural gas) in 2024.[188] Thus, we find the method supported by Avista and the Settlement to establish the Insurance Balancing Account

baseline is appropriate, and the method proposed by Public Counsel for calculating the insurance expense, or to substitute it as the baseline, is not.

144 Last, we find that the Settlement reasonably addresses the concerns from both perspectives as it counterbalances the creation of the account as a protection for both customers and the Company as well as with non-precedential treatment and a limited timeframe of two years. The proposed balancing account would protect ratepayers and the Company from over- or under-collection, by deferring actual insurance expense above or below the baseline amount (the amount included in base rates), similar to that approved in the 2020 Avista GRC for the Company's wildfire expense balancing account. The deferred accounting mechanism would ensure that customers pay no more and no less than the actual expenses incurred over the two-year rate plan. Recovery or refund of any deferred balance would be made through an annual compliance filing beginning September 1, 2023, to become effective November 1, 2023, where the insurance expense deferred balance as of July 31 would be rebated or surcharged through a separate tariff.

145 We emphasize that this is not precedential, but for this case only, and the authorization granted by this Order will cease at the conclusion of the MYRP. In addition, we find a condition necessary to underpin and safeguard the delicate balance in this term of the Settlement to ensure Avista will continue to seek the best insurance at the best price and any savings below the baseline will be returned to customers.

146 Accordingly, we determine that approval of the Settlement should be conditioned on a modification to this term to ensure Avista takes appropriate action to negotiate and attain the best insurance at the lowest costs.

> **Condition.** We condition our approval of the Settlement on the modification of this term to include the requirement that Avista document its action to seek out, negotiate, and attain the best insurance at the lowest costs and file with the Commission such documentation, with explanatory narratives, in Avista's annual filing beginning September 1, 2023. Subject to this condition, we determine that the Settling Parties' agreement to create an Insurance Balancing Account, including the proposed baselines for electric and natural gas, is in the public interest and should be approved.

4. WILDFIRE

147 As previously discussed, the Settling Parties agree to 16 performance metrics related to wildfires and to move the filing date for the Wildfire Deferral from July 31 to September 1 as well as the effective date for the Wildfire Deferral from October 1 to November 1.[189] In addition to these terms already discussed, the Settling Parties agree to accept Avista's proposal to update its Wildfire Expense Balancing Account baseline to $5.1 million, as initially filed by Avista, for the duration of the MYRP.[190]

148 Public Counsel does not oppose any of the above terms of the Settlement. Instead, Public Counsel proposes several general modifications to Avista's Wildfire Plan. In particular, Public Counsel recommends that the Commission require Avista to clarify the definitions, purpose, and cost basis of wildfire activities in order to provide the Commission and ratepayers information on what wildfire activities customers are paying for with supporting evidence for cost recovery.[191] Public Counsel also proposes adjustments to decrement wildfire expenses and capital additions.[192]

Commission Determination

149 Public Counsel proposes revenue requirement adjustments to Avista's wildfire expenses and capital additions.[193] While the Settling Parties agree to update the Wildfire Balancing Account baseline, the Settlement does not accept Avista's initially-filed proposals related to wildfire adjustments for purposes of calculating an agreed revenue requirement.[194] We find it sufficient and appropriate, therefore, to further address Public Counsel's proposed adjustments to Avista's wildfire expenses and capital additions only as part of this Order's discussion of the Settlement's revenue requirement agreements.[195] Below, we turn to Avista's Wildfire Resiliency Plan and Public Counsel's proposed modifications.

---

[193] *See* Brief of Public Counsel at 19, 33-34, ¶¶ 40, 74-75; Tam, Exh. AT-1T at 10:16-19; Coppola, Exh. SC-1CT at 25:22-26:19, 80:9-12.

[194] *See* Settlement at 4-5, 9, ¶¶ 10, 16(a).

[195] *See infra,* Section A.6.

150 We find the Settlement's wildfire-related terms appropriate and find insufficient cause to condition our approval of these terms. Avista's Wildfire Resiliency Plan was first published in May of 2020. It has four major categories: grid hardening, enhanced risk-based vegetation management practices, grid control and monitoring technology and use of Dry Land Mode, and emergency operations and planning.[196] In the 2020 Avista GRC Final Order, the Commission approved a two-way balancing account to track variability in wildfire expenses, setting the initial baseline at $3.065 million.[197] The Settlement proposes to update the account's baseline to $5.1 million for the duration of the MYRP.[198]

151 Public Counsel recommends that the Commission require several changes to Avista's Wildfire Resiliency Plan to "clarify the use and definitions of terminology and purpose of activities; improve risk and fire event tracking; add reliability metrics; and improve communications, outreach, and stakeholder collaboration with a clear communications and outreach plan with associated metrics."[199] Regarding terminology, Public Counsel requests that the Commission issue specific guidance, in these consolidated proceedings or in Docket U-210254, regarding wildfire plan elements including a glossary of terms for standardization purposes.[200] Public Counsel further asserts that Avista could improve mitigation components of the Plan by having the Company specify the exact purpose of each wildfire program component and what risk each component attempts to mitigate.[201] Public Counsel recommends that Avista track and report additional wildfire metrics related to risk events, ignition events, reliability, and communications and outreach.[202]

[197] 2020 Avista GRC Final Order at 81-91, ¶¶ 231-259 and accompanying notes; Joint Testimony, Exh. JT-1T at 24:5-8.

[198] Settlement at 9, ¶ 16(a) and accompanying notes.

[199] Public Counsel Brief at 38-39, ¶ 85; Tam, Exh AT-1T at 11:19-12:2. As the Commission has become aware that the term "stakeholder" is non-inclusive and historically problematic, we are working to substitute terms like "interested persons," "participants," "persons," or "non-company parties," depending on the situation. We urge others to do the same.

[200] Public Counsel Brief at 39, ¶ 86; Tam, Exh AT-1T at 16:11-16.

[201] Public Counsel Brief at 40, ¶ 87; Tam, Exh AT-1T at 16:19-20.

[202] Public Counsel Brief at 40-43, ¶¶ 88-95; Tam, Exh AT-1T at 30:17-31:9; 32:7-9; 37:13-39. Public Counsel's requests include one that the Commission adopt best practices from "California Energy Safety and issue specific guidance in Docket U-210254 which should include uniform, regular risk event and ignition reporting requirements across all Washington investor-owned utilities." Brief of Public Counsel at 41, ¶ 90; *see* Tam, Exh. AT-1T at 31:17-32:4.

152 Avista indicates that it will be incorporating many of Public Counsel's recommendations as helpful and constructive improvements.[203] Avista agrees to add a glossary of terms into its reports and will make an effort to use the same terminology in most wildfire documents to promote consistency and understanding.[204] In addition, Avista contends it cannot enforce standardization of terminologies with other utilities, but agrees to be open to updating, improving, and refining its own definitions and descriptions in light of these interactions.[205] Avista also updated and provided a new table to better describe how programs will mitigate wildfires, detailing the work category, program, primary purpose, and mitigation value.[206] Avista provided a second table to detail the distributed grid hardening treatment with the risk reduction outcome expected.[207]

153 For Public Counsel's other critiques, Avista responds that it is either currently working on or improving numerous aspects of its Wildfire Resiliency Plan, including: equipment replacement; wildfire metrics for performance measures; tracking of pole fires and fiberglass cross-arm replacements alongside each other; limitations of existing Outage Management System; the need for geographic tracking of risk events and ignitions; additional metrics used by California utilities; tracking of outages and ignitions from trees outside the utility corridor; tracking outages during different Dry Land Mode settings; tracking wildfire-related communication and outreach metrics; improve Access and Functional Needs outreach; provide translated wildfire-related materials; and engaging with community-based organizations related to special-needs and limited English proficiency customers.[208] Avista explains that some of the improvement areas are due to technical constraints during the transition of new programs.

154 We are satisfied with Public Counsel's and Avista's dialogue in these consolidated proceedings and Avista's adoption of many of Public Counsel's recommendations. We find that the record demonstrates Avista's openness to feedback and willingness to adopt constructive suggestions. Many of Public Counsel's suggestions have either already been adopted or will be adopted by Avista when technically feasible. We decline to require or condition approval of the Settlement upon Avista adopting additional proposals but

[206] *Id.* at 28:1-23.

[207] *Id.* at 29:1-30:1.

[208] *Id.* at 3:18-27, 10:4-15:9; 16:1-19:14; 21:15-25:22; 26:6-27:6; 28:1-37:20.

expect Avista to remain open to more improvements going forward and to continue its involvement and participation in Docket U-210254, which is a more appropriate forum for pursuing many of Public Counsel's recommendations.[209] We encourage Public Counsel to redeliver its suggestions and recommendations, in particular those that have universal effect for Washington's investor-owned utilities, in Docket U-210254 to help promote, among other things, standardization of wildfire terminology and risk event and ignition reporting concerns that might aid further development of utility preparedness.

155 Accordingly, we determine that the Settlement's wildfire terms, exclusive of the expense and capital additions that we include in our discussion of the Settlement's revenue requirement terms, should be approved without condition.

5. COST OF CAPITAL

156 The Settling Parties agree to an ROR of 7.03 percent for both years covered by the Settlement.[210] Like the revenue requirement for both electric and natural gas operations discussed later in this Order, this term of the settlement is a results-only agreement. The Settlement identifies no component of the cost of capital used to calculate the agreed ROR, namely: return on equity (ROE), cost of debt, and capital structure. In a footnote to their joint testimony (Footnote 8), however, the Settling Parties provide hypothetical components illustrating how the agreed ROR "could be derived using Avista's currently-authorized Return on Equity of 9.4 percent, 48.5 percent equity layer, 51.5 percent debt layer, and a 4.8 percent cost of debt that was updated during the case."[211] The Settling Parties state that this would produce "a result within the zone of reasonableness."[212]

157 Public Counsel opposes the Settlement's proposed ROR of 7.03 percent. In addition, Public Counsel opposes all hypothetical components of the proposed ROR that are implied by Footnote 8: the capital structure, ROE, and cost of debt. Table 6, below, illustrates Avista's currently authorized cost of capital, Avista's actual cost of capital reported to the Commission in its 2021 Commission Basis Report, and the cost of capital positions presented in this proceeding.

Commission Determination

158 We find the Settlement's agreed ROR of 7.03 percent appropriate. The record supports the cost of capital terms agreed by the Settling Parties and we find that the Settlement's agreed ROR falls within a range of reasonableness. In this case, the Commission received three cost of capital testimonies: Avista's initial testimony, Public Counsel's opposition testimony, and the Settling Parties' rebuttal testimony (Avista's witnesses).[216] Ultimately, we find that the Settlement's agreed ROR is supported by the record and falls within a

[213] With its support of the Settlement and the Settling Parties' proposal to a results-only ROR of 7.03 percent, Avista no longer supports the testimony and evidence it initially filed regarding cost of capital.

[214] *See* Avista's 2021 Electric & Natural Gas CBRs, Dockets UE-220288 and UG-220289 (Apr. 25, 2022).

[215] The cost of capital elements provided as hypothetical illustration only are not agreed to by the Settling Parties and are not included as a term in the Settlement. Settling Parties provide the information in Footnote 8 only as a hypothetical illustration of how the ROR *could be derived* using Avista's currently authorized capital structure, ROE, and updated cost of debt. *See* Response to BR-7.

[216] *See, e.g.,* Garrett, Exh. DJG-1T at 9:1-12, stating "In my opinion, an authorized ROE greater than the 8.75 percent ROE I recommend would be unreasonable." *See, e.g.,* McKenzie, Exh. AMM-1T at 6:1-4, stating "Based on the results of my analyses shown on Exh. AMM-4, and giving less weight to extremes at the high and low ends of the range, I conclude that the cost of equity for the proxy group of utilities is in the 9.5 percent to 10.9 percent range."

range of reasonableness and find Public Counsel's arguments unconvincing that the agreed ROR is unsupported and unreasonable.

159 Public Counsel's arguments regarding cost of capital, like most of its opposition testimony, are presented in contrast to Avista's initial filing. Specifically, Public Counsel focuses its testimony on components of cost of capital not specified in the Settling Parties' agreement. Public Counsel's argument might have been more persuasive if it were focused more on its opposition to the Settlement terms that we must evaluate.[217] Public Counsel's proposed cost of capital would reduce the initial filing's revenue requirement in the first rate year by $23.0 million for electric and $5.8 million for natural gas, and in the second rate year by $0.9 million for electric and $0.2 million for natural gas.[218] Public Counsel's direct recommendation regarding the Settlement's ROR is that the Commission should reject it because it fails to reduce the initial filing's revenue requirement *as much as* Public Counsel's.[219] We find this argument unpersuasive.

160 Public Counsel focuses its arguments on ROE and capital structure, while accepting the initial filing's cost of debt. Public Counsel witness Garrett argues that the agreed ROR is unreasonable because it is derived from an implied ROE of 9.68 percent.[220] Garrett also argues that the level of equity in the capital structure proposed by Avista in its initial filing is too high.[221] Again these arguments focus opposition on Avista's initial filing, instead of the Settlement, which is what we must evaluate and consider. This flaw is particularly fatal given the lack of ROE, capital structure, or cost of debt enumerated in

---

[217] Public Counsel witness Coppola testifies that

> Public Counsel's lower cost of capital represents the largest adjustment to Avista's proposed revenue requirement, reflecting primarily the excessive ROE rate of 10.25 percent the Company proposed and an inflated equity ratio of 48.5 percent. The Commission should not accept the Company's overstated rate of return, and instead should accept Public Counsel's proposed overall cost of capital . . . .

Coppola, Exh. SC-1CT at 16:13-14.

[218] *Id.* at 16:4-7.

[219] The Settlement ROR would reduce the initial filing's revenue requirement in the first rate year by only $7.6 million for electric and $1.9 million for natural gas, and in the second rate year by only $0.3 million for electric and $0.1 million for natural gas. *Id.* at 16:18-17:8.

[220] Garrett, Exh. DJG-1T at 9:1-4; 15, Figure 3. Garrett uses Avista's currently authorized capital structure and the cost of debt in the initial filing. *Id.* Garrett also argues that an ROE of 9.4 percent is unreasonable. *Id.* at 56:3-14.

[221] *See* Garrett, Exh. DJG-1T at 57:2-64:7.

the Settlement. The only element of cost of capital agreed by the Settling Parties is the resulting ROR, which they present as a fair end result that falls within the range of reasonableness supported by the testimony in these consolidated proceedings and as the result of a negotiated settlement. Nevertheless, we examine the evidence presented by Public Counsel and explain our determinations.

161 Public Counsel employs CAPM and DCF models supporting ROE results of 7.5 percent and 8.3 percent.[222] Avista witness McKenzie, on behalf of the Settling Parties, critiques Public Counsel's analyses, arguing that they misapply risk philosophies and are undermined by methodological flaws.[223] We agree and note, first, flaws with Public Counsel's over reliance on long-term forecast of Gross Domestic Product (GDP) from the Congressional Budget Office (CBO) due to CBO's own characterization of its projections as "very uncertain" and exacerbated by the unknown effects of the pandemic, and, second, Public Counsel's reliance on a market risk premium based upon the assumption that a long term growth rate would equal the then-current yield on United States' Treasury bonds.[224] During these consolidated proceedings, the CIP inflation increased to over 9 percent.[225] In part due to changing economic conditions since its filed testimony, Public Counsel's proposals based upon assumptions of a 3.8 percent nominal growth rate are simply too tenuous to be persuasive.[226] Thus, we determine the Settlement's agreed ROR should not be modified based upon Public Counsel's ROE arguments and proposal.

162 We are likewise unpersuaded by Public Counsel's arguments that the Settlement's agreed ROR should be modified by Public Counsel's proposed capital structure. Public Counsel recommends a capital structure with an equity ratio of 45.6 percent, which is less than Avista's current authorized ratio of 48.5 percent.[227] Public Counsel argues that a utility, like Avista, would have an incentive to keep less equity and fund its operations with a greater portion of debt than reflected in its authorized capital structure because equity

---

[227] Garrett, Exh. DJG-1T at 64:9-11.

receives a larger return than debt, and debt has a lower cost.[228] We are reassured by testimony supporting the Settlement that establishes Avista's intent and practice of maintaining a level of equity near its authorized level. We find no concern at this time that Avista is manipulating its level of equity in the ways Public Counsel says are possible.[229] Further, due to the terms' results-only nature, the level of equity and debt is undefined and, therefore, impossible for us to determine without upsetting the Settlement. In addition, Avista's recent CBRs add support to the conclusion that Avista is not at this time manipulating its authorized level of equity. The CBRs show the Company's actual equity ratio as of December 31, 2021, at 47.56 percent, which is closer to Avista's authorized equity ratio than Public Counsel's proposed equity ratio.[230] Thus, we determine the Settlement's agreed ROR should not be modified based on Public Counsel's capital structure proposal.

163 The resulting ROR that Public Counsel recommends is 6.46 percent and would represent a 66 basis point decrement upon Avista's currently-authorized ROR if adopted.[231] Public Counsel's recommendation is based upon a 7.9 percent ROE, 4.45 percent cost of debt, and an equity ratio of 45.6 percent. The Settling Parties argue that Public Counsel's proposal is unreasonably low. Avista witness McKenzie, on behalf of the Settling Parties, provides the most updated five-year average ROE of 9.44 percent and a median of 9.49 percent approved by state utility commissions.[232] With this context, the Settling Parties argue that Public Counsel's estimate of Avista's cost of equity as 7.9 percent is not credible, fails to meet accepted benchmarks, and would be an extreme result falling "far below the lowest ROE awarded by any state regulatory commission in modern history."[233] We agree, but recognize that basing our approval of ROE on the results of other state utility commissions represents a circular and self-fulfilling argument because those commissions may be making decisions the same way. Public Counsel's recommendation to set an ROR of 6.46 percent based, in part, upon decrementing Avista's currently authorized ROE by approximately 150 basis points below the average

[232] McKenzie, Exh. AMM-15T at 5:3-5. McKenzie's data is taken from S&P Global Market Intelligence, Major Rate Case Decisions – January-June 2022.

[233] Ehrbar, Exh. PDE-2T at 3:19-24 (citing McKenzie, Exh. AMM-15T); *see* McKenzie, Exh. AMM-15T at 4:11-19:9.

allowed ROE for other electric utilities in the first half of 2022 would be a shock to Avista's financial integrity and impact its ability to attract capital on reasonable terms.[234] The record's demonstrated and explained economic circumstances scarcely justify any consideration of authorizing an unprecedented decrement to Avista's authorized ROR. Ultimately, we find Public Counsel's analyses and recommendations unconvincing and unpersuasive because they are too speculative and unreliable.

164 ROR is the most important element of cost of capital for regulatory purposes. For example, the ROR is reported in Avista's annual CBR and used in Avista's decoupling mechanism to trigger a refund to customers. Prior to this GRC, that earnings test would return half the Company's earnings that exceeded its authorized ROR (currently 7.12 percent).[235] The Settlement replaces this earnings test with language from RCW 80.28.425(6), triggering a refund to customers of *all* earnings more than one-half percent above Avista's authorized ROR.[236]

165 The Settlement's agreement would reduce Avista's currently authorized ROR from 7.31 percent to 7.03 percent. Using Avista's currently authorized ROR would create a refund threshold of 7.81 percent, but the Settlement lowers the threshold for a refund of *all* earnings to 7.53 percent. While the Settlement increases Avista's revenue requirement, the agreed decrement to Avista's ROR is a gradual step that benefits Avista's ratepayers. The give and take of the Settling Parties through negotiation of this term is, therefore, readily apparent in achieving a fair balance of opposing interests. Accordingly, we determine that the Settlement's agreed ROR is a fair end result that falls within a range of reasonableness, that it is supported by the record, and that it should be approved.

6. OVERALL REVENUE REQUIREMENT

166 As described above in Table 1, Avista proposed in its initial filing an annual revenue increase for Rate Year 1 for its electric operations of approximately $52.9 million, or 9.6 percent, and for its natural gas operations of approximately $10.9 million, or 9.5 percent. For Rate Year 2, Avista proposed an annual revenue increase for its electric operations of

[234] *See* McKenzie, Exh. AMM-15T at 20:18-21:21.

[235] Avista Tariff Schedules 75 (electric) and 175 (natural gas).

[236] Settlement at 20, ¶ 28(e); Ehrbar, Exh. PDE-1T at 37:14-38:24. One-half percent above the agreed ROR of 7.03 percent.

approximately $17.1 million, or 2.8 percent, and an increase for its natural gas operations of $2.2 million, or 1.7 percent.[237]

167 The Settlement provides for a $38.0 million annual increase to Avista's electric revenues, and a $7.5 million annual increase to its natural gas revenues in Rate Year 1. In Rate Year 2, the Settling Parties agree to an additional $12.5 million annual increase to Avista's electric revenues, and $1.5 million to its natural gas revenues.[238] The Settlement also includes a proposal to return the Residual Tax Customer Credit of $25.5 million for electric (approximately $12.8 million annually) and of $12.5 million for natural gas (approximately $6.3 million annually) to partially offset the revenue increases.

168 The Settling Parties' agreement regarding Avista's revenue requirement during the MYRP is a "results-only" settlement.[239] The Settling Parties agree that the overall resulting rate increases in the MYRP are equitable, fair, just, reasonable, and sufficient, and with the exception of certain items (*e.g.*, ROR), do not agree to any specific adjustments necessary to reach the agreed revenue requirement. Specifically, no individual adjustments made to net operating income or rate base were enumerated to calculate the revenue requirement. The parties attest that the results-only Settlement represents a give-and-take on multiple issues that characterizes settlement discussions and reflects a reasonable balance of differing interests.[240]

169 While Public Counsel accepts nearly all the Settlement's terms, it contests the overall revenue requirement and argues that the Commission should adopt a revenue requirement that relies on its adjustments to the revenue requirement models presented in Avista's initial filing.

170 In general, the revenue requirement is the increase or decrease in additional or reduced annual revenue derived from a calculation using a modified historical test year based on

---

[237] Vermillion, Exh. DPV-1T at 18:11-17.

[238] Joint Testimony, Exh. JT-1T at 2:15-22.

[239] Previously, the Commission has described such agreements as "black-box" settlements. However, as we have become aware that this description has negative connotations that reinforce anti-Blackness by using colorist language, we intend to reference such agreements as "results-only" or "results-focused" settlements. Similarly, as noted above, we intend to substitute for the historically problematic term "stakeholder" terms such as "interested persons," "participants," "persons," or "non-company parties," depending on the situation. We urge parties before the Commission to adopt the same or similarly informed and updated language.

[240] Joint Testimony, Exh. JT-1T at 12:3-9.

adjustments to a company's currently authorized ROR to its rate base, expenses, and revenues. A results-focused Settlement means that its revenue requirement components are neither articulated in a way that allows others to reproduce the calculation nor identified for purposes of allowing any numerical increase or decrease.

171 Table 7, below, summarizes the revenue requirement proposals and adjustments presented by Avista's initial filing, Public Counsel's opposition testimony, and the Settlement.

172 **Table 7. Revenue Requirement Summary (*before* Residual Tax Customer Credit)**
(in millions)

Position		**Electric**		**Natural Gas**	
		Rate Year 1	Rate Year 2	Rate Year 1	Rate Year 2
Initial Filing		**$ 52.9**	**$ 17.1**	**$ 10.9**	**$ 2.2**
Public Counsel Adjustments to Initial Filing	*ROR Reduction*	*$ (23.0)*	*$ (0.9)*	*$ (5.8)*	*$ (0.3)*
	O&M Reductions	$ (10.4)	$ (4.9)	$ (2.1)	$ (0.9)
	Rate Base Reductions	$ (7.2)	$ (8.7)	$ (1.4)	$ (0.8)
	O&M Offsets Reversal	$ 0.2	$ (0.2)	$ (0.04)	$ (0.01)
	EIM Benefit	$ (12.1)	-	-	-
Public Counsel		**$ 0.4**	**$ 2.8**	**$ 1.7**	**$ 0.2**
Settlement		**$ 38.0**	**$ 12.5**	**$ 7.5**	**$ 1.5**

Commission Determination

173 Ultimately, we find the revenue requirement Settlement terms balance appropriately with all terms of the Settlement, are supported by the record, and result in rates across the MYRP that are equitable, fair, just, reasonable, and sufficient. We are not troubled by the results-only nature of the Settlement's revenue requirement terms. Results-only revenue requirement agreements that propose fair and just end results without specifying most, or any, underlying adjustments used to arrive at the resulting revenue requirement would be troubling only if the record, and Settlement, lacked sufficient support demonstrating that

the revenue requirement are equitable, fair, just, reasonable, and sufficient. Here, the Settlement's terms are supported sufficiently, including explanations of the delicate balance struck between the Settling Parties in consideration of the revenue requirement and the non-revenue related terms.

174 In evaluating settlements, we consider the entire record. Here, the record for our consideration includes all initial testimony and exhibits, the Settlement and supporting testimony and exhibits, and the testimony and exhibits opposing the Settlement. The Settlement's proposed revenue requirement provide no indications as to any adjustment that may be included in or excluded from the resulting revenue requirement calculations. Considering Public Counsel's opposition, this has two consequences. First, a results-only revenue requirement provides approval for no investment or adjustment for which Avista sought recovery in this case. By approving the proposed revenue requirement, the rate base approved in Avista's most recent rate case remains undisturbed and no determination relating to prudence or any party's proposed adjustments would be affected.

175 Second, should we agree with Public Counsel on any of its proposed adjustments to the revenue requirement, we would be unable to identify whether the adjustment advocated for had already been incorporated into and made part of the results-only revenue requirement terms and would, therefore, be unable to effectuate any single adjustment. Taking into consideration our rejection of Public Counsel's cost of capital proposals, the revenue requirement proposed by Public Counsel is similar enough to the agreed revenue requirement that it could be calculated by selecting and rejecting some, but not all, of Public Counsel's adjustments. This illustrates the probability that some, but perhaps not all, of the considerations raised by Public Counsel to arrive at its proposed revenue requirement may already have been considered by the Settling Parties. We cannot, however, speculate upon which issues the Settling Parties entered into negotiated agreements and, ultimately, determined to resolve their further disputes by agreeing to the results-only revenue requirement. All the Settling Parties agree the revenue requirement amounts are fair even if they are unable to enumerate the specific adjustments agreed to in order to arrive at the fair, just, and reasonable end results.

176 This is different and distinct from our recent Cascade Final Order. That case presented a settlement that adopted much of the company's initial filing, including the enumeration of adjustments to arrive at an agreed revenue requirement. The Commission was able to determine in that case which revenue requirement adjustments the settling parties adopted that could be modified. Here, we cannot. Instead, we must consider the aggregate and

whether the results-only revenue requirement to which the Settling Parties agreed represents, when considered as part of the Settlement as a whole and balanced by the numerous non-revenue terms, a fair, just, and reasonable end result. Here, we determine that the end-results revenue requirement is supported by an appropriate record and, in the context of the entirety of the Settlement, is in the public interest and should be approved. We explain in greater detail, below.

177 Rather than responding to the merits of the resulting revenue requirement in the context of the entire Settlement, which contains many terms Public Counsel asserts are in the public interest, Public Counsel responds primarily to the merits of the proposals and adjustments presented in Avista's initial testimony, relying on its adjustments to Avista's revenue requirement models to present its own revenue requirement recommendations. Public Counsel's proposed revenue requirement reductions stem from adjustments to the Settlement's cost of capital, which we have previously addressed in this Order, eight expense items in the Company's initial filing, and 16 capital additions included in the Company's initial filing.

178 The specific expense items Public Counsel recommends adjusting are: Insurance Expense, Vegetation Management, Customer Service Expense, Pension Expense and Other Post-Employment Benefits Expense, Miscellaneous Operations and Maintenance Expense, Information Systems and Information Technology Expense, and CETA Labor Expense.[241] The capital additions Public Counsel recommends adjusting are: Distribution Management System, Gas Non-Revenue Program, EV Transportation, Customer Experience Platform, Customer Transaction Systems, Distribution System Enhancements, Electric Relocation and Replacement Program, Energy Delivery Modernization, Energy Resources Modernization, Gas Aldyl-A Pipe Replacement Program, Gas Meter Change Program, Substation – New Distribution Station Capacity Program, Substation – Station Rebuilds Program, Wildfire Resiliency Plan, Wood Pole Management, and Enterprise and Control Network Infrastructure.[242]

179 Public Counsel opposes the Settlement's agreed revenue requirement on two bases. First, Public Counsel argues that the proposed revenue requirement is excessive given current economic conditions and, if the Commission were to accept the Settlement's revenue

---

[241] Coppola, Exh. SC-1CT at 18:1-25:17, 25:18-27:8, 27:9-30:5, 30:8-32:9, 33:3-36:3, 36:7-38:12, 38:14-41:4.

[242] *Id.* at 46:14-49:9, 49:11-50:18, 51:2-53:18, 54:3-57:16, 57:18-60:12, 60:14-63:9, 63:13-68:4, 68:6-72:3, 72:5-74:13, 74:18-79:4, 79:6-84:3, 84:5-86:14, 86:16-89:4.

requirement, the resulting bill impacts would unfairly compound the effects of inflation on customers.[243] Further, Public Counsel argues that growing corporate profit margins are partially responsible for inflation growth and that the Company seeks to earn excessive profits at a time when its customers are struggling.[244] Second, Public Counsel argues that the proposed revenue requirement is inequitable. Referencing the relevant statute for MYRPs, Public Counsel argues that the revenue requirement and resulting rate increase will disproportionately burden low-income and marginalized customers who are already experiencing the impacts of high inflation and other economic challenges.[245] Because of this, Public Counsel argues that the Settlement does not result in equitable rates.[246]

180 Public Counsel's presentation is neither persuasive nor well-founded. The Settling Parties' revenue requirement agreements are results-focused and provide no detail as to which adjustments may have been negotiated by the Settling Parties to reach the resulting agreements. Public Counsel's strategy of recommending adjustments to a results-only revenue requirement makes it difficult, if not impossible, for the Commission to effectuate any of Public Counsel's positions because we cannot determine which, if any, of Public Counsel's positions were already adopted or considered in the negotiations of the Settling Parties when arriving at the agreed revenue requirement. Thus, contrary to Public Counsel's arguments, we find its presentation cannot serve as an appropriate basis to decrement the Settlement's revenue requirement. We decline to break the results-only terms of the Settlement's revenue requirement in order to specify or enumerate any of the adjustments proposed by Public Counsel that might be considered in a fully litigated proceeding or a settlement that enumerated specific adjustments.

181 Avista's initial filing and Public Counsel's adjustments to that filing are record evidence that provide essential context for our evaluation of what balance the Settling Parties have struck between their revenue requirement agreements and the Settlement's other non-revenue terms. However, Avista no longer supports the revenue requirement proposed in its initial filing. That filing does not provide insight into the formulation of the Settling Parties' results-only revenue requirement agreements. Likewise, Public Counsel's arguments against Avista's initial filing provide no insight into what reductions to the

---

[243] Dahl, Exh. CJD-1T at 13:9-14:2.

[244] *Id.* at 14:9-19.

[245] RCW 80.28.425 permits the Commission to consider environmental health and greenhouse gas emissions reductions, health and safety concerns, economic development, and equity in determining whether rates are in the public interest.

[246] Dahl, Exh. CJD-1T at 17:10-18:2.

results-only revenue requirement agreements could be justified. In consideration of all the record evidence, we are persuaded that the many terms in the Settlement are fair, just, and reasonable and represent an appropriately negotiated balance between the needs of the Company and the needs of its customers.

182 In addition, we are not merely approving rates that will remain static without oversight of Avista's performance. We assure Public Counsel and Avista's customers that the regulation of Avista going forward will be quite the opposite. For all capital additions during the MYRP, Avista will annually file in these consolidated dockets support for the additions that will be reviewed by the parties and the Commission to determine if any refunds are due customers. We accept and adopt the Settlement's many performance metrics, requiring that Avista file reports on these metrics with the Commission, and place additional assessment measures (pursuant to RCW 80.28.425(7)) for evaluating the MYRP going forward. We address and explain this in greater detail in Section C of this Order. We fully expect, encourage, and welcome Public Counsel's and other ratepayer representatives' engagement in the evaluating investments in the provisional capital review process, evaluating Avista's performance during the MYRP reporting periods, in the Docket U-210590 performance-based ratemaking collaborative, as the regulation of Washington's investor-owned utilities continues to move towards more performance-based regulation as required by statute.

183 Accordingly, for the reasons explained above, we determine that the Settlement's revenue requirement terms should be approved. Based on the decisions we make in this Order for the purposes of authorizing rates that are equitable, fair, just, reasonable, and sufficient, we authorize an increase to Avista's revenue requirement prior to the inclusion of the Residual Tax Customer Credit as set forth in the Settlement of approximately $38.0 million, or 6.9 percent over base rates, for the Company's electric operations in Rate Year 1 of the MYRP, and $12.5 million, or 2.1 percent over base rates, for the Company's electric operations in Rate Year 2 of the MYRP. For the Company's natural gas operations, we authorize an increase of $7.5 million, or 6.6 percent over base rates, in Rate Year 1 of the MYRP, and $1.5 million, or 1.2 percent over base rates in Rate Year 2.

B. SETTLEMENT DETERMINATION

184 Having reviewed the Settlement, its supporting evidence, and all evidence in the record, we conclude that the Settlement is lawful, supported by an appropriate record, and consistent with the public interest, subject to the conditions outlined in this Order.

Accordingly, we determine that approval of the Settlement subject to conditions in concert with the other findings we have made and explained, above, will establish rates, terms, and conditions for Avista's electric and natural gas service to Washington customers that are equitable, fair, just, reasonable, and sufficient. We therefore approve the Settlement subject to the conditions outlined in paragraphs 78, 85, 99, 112, and 146.

185 The Commission's procedural rules require, if we condition our approval of a settlement on terms that are not included in the settlement agreement, as we do here, that we provide the Settling Parties with an opportunity to accept or reject the Commission's conditions.[247] If any of the Settling Parties reject any of the conditions or does not unequivocally and unconditionally accept all of the conditions of our approval of the Settlement as set out in this Order, the Commission will notify the parties that it deems the Settlement to be rejected and will return the adjudication to its status at the time the Commission suspended the procedural schedule for the purpose of considering the settlement subject to compliance with any statutory deadline.[248] Because the statutory deadline in this case is December 21, 2022, the Commission would be unable to complete this proceeding absent the Company's agreed extension of the suspension date.[249] Accordingly, if any of the Settling Parties objects to any of the conditions of our approval of the Settlement in this Order, the Settlement will be deemed denied on the basis that it proposes rates that are not equitable, fair, just, reasonable, or sufficient.

186 We authorize and require Avista to make a compliance filing by December 14, 2022, consistent with the Settlement's terms, our directions and conditions in this Order in these consolidated dockets to recover in prospective rates its revenue deficiency.

C. PERFORMANCE MEASURES PURSUANT TO RCW 80.28.425(7)

187 The Commission must, by law, "determine a set of performance measures that will be used to assess a gas or electrical company operating under a multiyear rate plan."[250] This statutory obligation is placed on the Commission, not any company or party to a GRC. Measures that the Commission might determine appropriate *may* be based on a company's filing, record testimony and evidence, or the proposals made by a company or

[247] WAC 480-07-750(2)(b).

[248] WAC 480-07-750(2)(b)(ii); WAC 480-07-750(2)(c).

[249] WAC 480-07-750(2)(c).

[250] RCW 80.28.425(7) (emphasis added).

other party throughout the proceeding.[251] The Commission's determination, therefore, need not be based upon a company's initial filing, the record testimony and evidence, or the proposals made by a company or party throughout the proceeding. It is not only within the Commission's authority and its discretion to determine a set of performance measures to assess an MYRP, but a requirement of law.

188 As the Settling Parties noted during hearing, the Commission has initiated a proceeding in Docket U-210590 to examine and establish performance metrics, performance incentives and penalties.[252] The Commission's efforts in that docket are proceeding in parallel with the efforts to establish performance measures in this and other general rate case proceedings. Because the Settlement was filed before the Commission issued a Notice of Opportunity to File Written Comment in Docket U-210590 on August 5, 2022, the Settlement's 92 performance metrics do not necessarily reflect the Commission's regulatory goals and desired outcomes or design principles provided in Docket U-210590, which is the Commission's collaborative proceeding concerning performance-based ratemaking.

189 The Settlement proposes 92 performance metrics to be recorded and tracked, but these metrics are not specifically measures appropriate for evaluating Avista's operations under the MYRP. The Settlement's 92 performance metrics also fail to aid the Commission in meeting its statutory obligation because the Settlement lacks detailed information related to how the Commission should use the 92 metrics to evaluate Avista's MYRP or provide all the agreed metric calculations.

190 We therefore determine that certain measures, independent and aside from the 92 metrics included in the Settlement, are necessary for the Commission's future assessment of Avista's operations under the MYRP. We adopt the measures outlined in Table 8, below, regarding operational efficiency, company earnings, affordability, and energy burden. All required reporting should use the same formatting for reporting usage by kilowatt-hours and therms as identified in paragraph 56, above.

---

[251] RCW 80.28.425(7).

[252] Section (1) of Engrossed Substitute Senate Bill 5295, Chapter 188, Laws of 2021, directs the Commission initiate a proceeding to address performance based regulation, among other things: "To provide clarity and certainty to stakeholders on the details of performance-based regulation, the utilities and transportation commission is directed to conduct a proceeding to develop a policy statement addressing alternatives to traditional cost of service rate making, including performance measures or goals, targets, performance incentives, and penalty mechanisms."

191

Table 8. MYRP Performance Measures and Outcomes

Topic	Measure/Calculation	Outcome[253]
Operational Efficiency	O&M Total Expense *divided by* Operating Revenue	Assesses how much expense was incurred for every dollar earned. Results at 1.00 or greater might reflect reduced efficiency in controlling O&M spending.
	Operating Revenue *divided by* AMA Total Rate Base and[254] Operating Revenue *divided by* EOP Total Rate Base	Assesses efficient use of rate base to generate revenue. Results less than 1.00 or excessively low results might reflect reduced efficiency in utilizing rate base to generate revenue.
	Current Assets *divided by* Current Liabilities[255]	Assesses liquidity of current assets covering current liabilities. Results less than 1.00 might reflect issues or concerns with liquidity.
Earnings	Net Income *divided by* Operating Revenue	Assesses the amount of net profit gained through revenues earned. Results should be multiplied by 100, to calculate a percentage result, and compared to the authorized ROR.
	Retained Earnings *divided by* Total Equity	Assesses the amount of earnings retained by a company compared to its total equity. Excessively low or high deviations might indicate that the company is paying out more earnings than reinvesting or that the company is retaining more than it needs, respectively. This metric will require baseline information to understand reinvesting and payout patterns.
Affordability[256]	Average Annual Bill Impacts (by Census Tract)	Assesses the average annual residential bill impacts to better understand, over time and by location, affordability of residential rates using the same average energy usage from year to year for better comparability over time.
	Average Annual Bill Impacts (by Zip code)	
Energy Burden[257]	Average Annual Bill *divided by* Average Median Income (by Census Tract)	Assesses the average energy burden of residential customers over time and by location. Results greater than 6 percent indicate energy burden concerns.[258]
	Average Annual Bill *divided by* Average Median Income (by Zip code)	

192 The measures we require Avista to track and report, outlined above, will provide essential and critically important business and customer equity data for the Commission's evaluation of Avista's performance during this MYRP. We also observe that the measures we require, outlined above, will likely continue to be consequential, even beyond this MYRP, for assessing the Company's performance during future MYRPs. Performance-based ratemaking is an iterative process and flexibility is critical. We encourage the parties to these consolidated proceedings to continue to participate in Docket U-210590 through collaboration with the Commission to further assess and define these metrics

193 Likewise, we would find extraordinary benefit from all the historical data related to these measures. At this time, we will not require Avista to search, collect, compile, and provide to the Commission *all* historical data it might have related to these measures. For now, we find that only recent history is necessary for our ability to understand and evaluate Avista's performance at the end of this MYRP. Thus, we require Avista to make a compliance filing within 45 days of this Order to provide the measures and calculations outlined in Table 8, above, for the years 2019-2022 (beginning January 1 and ending December 31 of each year) in order to establish a baseline for our understanding and evaluation. In addition, we require Avista to report the performance measures outlined in Table 8, above, for each year of the MYRP (beginning January 1 and ending December 31 of each year and within 45 days of the end of the reporting period). We will utilize the information gathered through these measures to evaluate the MYRP only, for now, at its conclusion and consider such in our determinations of Avista's next GRC and future MYRPs.

---

[253] Outcome descriptions are approximate. Baseline data is required prior to a full understanding of outcomes and results.

[254] Provide results for both calculations but indicate in report whether the Commission authorized the use of AMA or EOP.

[255] "Current" means all current assets that can be converted into cash within one year and all current liabilities with maturities within one year.

[256] These measures are similar to metric 1 in Attachment B to the Settlement. These measures track both by census tract and by zip code. Avista should provide separate results for electric-only customers, gas-only customers, and combined electric and gas customers.

[257] These measures are similar to the metric 2 in Attachment B to the Settlement. These measures track both by census tract and by zip code. Avista should provide separate results for electric-only customers, gas-only customers, and combined electric and gas customers.

[258] *See* Chapter 480-100 WAC.

FINDINGS OF FACT

Having discussed above in detail the evidence received in this proceeding concerning all material matters, and having stated findings and conclusions upon issues in dispute among the Parties and the reasons therefore, the Commission now makes the following summary of those facts, incorporating by reference pertinent portions of the preceding detailed findings:

194 (1) The Commission is an agency of the State of Washington vested by statute with the authority to regulate rates, regulations, practices, accounts, securities, transfers of property and affiliated interests of public service companies, including electric and natural gas companies.

195 (2) Avista is a "public service company," an "electrical company," and "gas company" as those terms are defined in RCW 80.04.010 and used in Title 80 RCW. Avista provides electric and natural gas utility service to customers in Washington.

196 (3) Avista's currently effective rates were determined by the Commission's Final Order in *Wash. Utils. & Transp. Comm'n v. Avista Corp. d/b/a Avista Utils.*, Dockets UE-200900, UG-200901, and UE-200894 *(Consolidated)*, Order 08/05 (Sep. 27, 2021).

197 (4) On January 21, 2022, Avista filed with the Commission revisions to its currently effective Tariffs WN U-28, Electric Service, and WN U-29, Natural Gas Service, proposing a two-year rate plan with increases for its electric and natural gas operations for Rate Year 1 effective December 21, 2022, and for Rate Year 2 effective December 21, 2023.

198 (5) Avista initially requested an increase in its annual electric revenue requirement of approximately $52.9 million (9.6 percent) in Rate Year 1 and of approximately $17.1 million (2.8 percent) in Rate Year 2, and an increase to its annual natural gas revenue requirement of approximately $10.9 million (9.5 percent) in Rate Year 1 and of approximately $2.2 million (1.7 percent) in Rate Year 2.

199 (6) Avista initially requested to partially offset its requested increases with the Residual Tax Customer Credit of approximately $25.5 million for electric and $12.5 million for natural gas. This modified Avista's initial request for an increase

during Rate Year 1 to approximately $40.1 million (7.4 percent) for electric and $4.6 million (2.5 percent) for natural gas.

200 (7) On May 27, 2022, the Commission entered Order 07/01, consolidating Dockets UE-220053 and UG-220054 with Docket UE-210854 pursuant to Staff's unopposed motion to consolidate. Avista had filed in Docket UE-210854 its Electric Service Reliability Reporting Plan pursuant to Washington Administrative Code (WAC) 480-100-393, modifying its previous plan.

201 (8) On June 28, 2022, the Settling Parties filed the Settlement, which proposes to resolve all disputed issues and is attached to this Order as Appendix A. Public Counsel contests certain terms of the Settlement, but either supports or does not oppose the other terms.

202 (9) Subject to the conditions we outline in paragraphs 78, 85, 99, 112, and 146 of this Order, the Settlement proposes equitable, reasonable, fair, just, and well-balanced resolutions, supported by the record, to all disputed issues: overall revenue requirement; cost of capital; cost of service, rate spread, and rate design; the Residual Tax Customer Credit; Colstrip investments, tracker, and Tariff Schedule 99; power costs; the insurance expense balancing account; the escalation study; capital planning; distributional equity analysis; capital projects review; natural gas transition issues; transportation electrification; performance-based ratemaking; low-income issues; the CCA; small business energy efficiency; electric service reliability report plan; depreciation rates and regulatory amortizations; annual filing dates; annual reporting obligations of Docket U-210151; software licensing; decoupling earnings test; and wildfire issues including the wildfire expense balancing account.

203 (10) Avista's currently effective electric and natural gas rates do not provide sufficient revenue to recover the costs of its operations.

204 (11) The performance measures outlined in paragraph 191 and their related reporting requirements are fair, reasonable, consistent with applicable law, in the public interest, and will provide necessary information to allow the Commission to evaluate Avista's operations during the MYRP.

CONCLUSIONS OF LAW

Having discussed above all matters material to this decision, the Commission now makes the following summary conclusions of law, incorporating by reference pertinent portions of the preceding detailed conclusions:

205 (1) The Commission has jurisdiction over the subject matter of, and parties to, this proceeding.

206 (2) Avista is an electric company, a natural gas company, and a public service company subject to Commission jurisdiction.

207 (3) At any hearing involving a proposed change in a tariff schedule the effect of which would be to increase any rate, charge, rental, or toll theretofore charged, the burden of proof to show that such increase is just and reasonable will be upon the public service company. RCW 80.04.130 (4). The Commission's determination of whether the Company has carried its burden is adjudged based on the full evidentiary record.

208 (4) Avista's existing rates for electric and natural gas service are neither equitable, fair, just, reasonable, nor sufficient, and should be adjusted prospectively after the date of this Order.

209 (5) Subject to the conditions in paragraphs 78, 85, 99, 112, and 146, the rates, terms, and conditions in the Settlement are equitable, fair, just, reasonable, and sufficient.

210 (6) The Commission should approve the Settlement subject to the conditions in paragraphs 78, 85, 99, 112, and 146, because it is lawful, supported by an appropriate record, consistent with the public interest in light of all the information available to the Commission. The Settlement, subject to conditions, should be incorporated by reference into the body of this Order, as if set forth in full.

211 (7) The Commission is legally obligated by RCW 80.28.425(7) to determine a set of performance measures that will be used to assess Avista's operations under the MYRP.

212 (8) The Commission's determination of a set of performance measures need not be based upon a company's initial filing, the record testimony and evidence, or the proposals made by a company or party throughout the proceeding.[259]

213 (9) The Commission should adopt the performance measures outlined in paragraph 191 and Avista should be authorized and required to make necessary and sufficient future compliance filings in accordance with the directions and conditions of this Order.

214 (10) Avista should be authorized and required to make a compliance filing within 45 days of this Order to provide the measures and calculations outlined in paragraph 191 for the years 2019-2022 (beginning January 1 and ending December 31 of each year).

215 (11) Avista should be authorized and required to make an annual compliance filing to report the performance measures outlined paragraph 191 for each year of the MYRP (beginning January 1 and ending December 31 of each year and within 45 days of the end of the reporting period).

216 (12) Avista should be authorized and required to make a compliance filing by December 14, 2022, and make future compliance filings consistent with the directions and conditions in this Order in these consolidated dockets to recover in prospective rates its revenue deficiency prior to the inclusion of the Residual Tax Customer Credit of approximately $38.0 million for its electric operations in Rate Year 1, $12.5 million for its electric operations in Rate Year 2, $7.5 million for its natural gas operations in Rate Year 1, and $1.5 million for its natural gas operations in Rate Year 2.

217 (13) The Commission should authorize and require Avista to replace the existing decoupling earnings test with the earnings test provided in RCW 80.28.425(6), including accruing ROR on the balance of the decoupling deferral, and deferring any earnings greater than 0.5 percent above its authorized ROR, consistent with the Settlement and RCW 80.28.425(6).

218 (14) The Commission should authorize and require all Settling Parties to separately notify the Commission by December 19, 2022, by a letter to the Commission

[259] *See* RCW 80.28.425(7).

Secretary filed in these consolidated dockets whether each accepts the conditions of approval set by this Order on the settlement stipulation.

219 (15) The Commission Secretary should be authorized to accept by letter, with copies to all Parties to this proceeding, filings that comply with the requirements of this Order.

220 (16) The Commission should retain jurisdiction over the subject matter and the Parties to effectuate the terms of this Order.

ORDER

THE COMMISSION:

221 (1) Rejects the proposed tariff revisions Avista Corporation d/b/a Avista Utilities filed in these dockets on January 21, 2022, and suspended by prior Commission order.

222 (2) Determines the settlement stipulation is lawful, supported by an appropriate record, and consistent with the public interest and therefore approves it subject to the conditions set by the Commission in paragraphs 78, 85, 99, 112, and 146.

223 (3) Authorizes and requires replacing the existing decoupling earnings test with the earnings test provided in RCW 80.28.425(6), including accruing a rate of return on the balance of the decoupling deferral, and deferring any earnings greater than 0.5 percent above its authorized rate of return, consistent with the settlement stipulation and RCW 80.28.425(6).

224 (4) Authorizes and requires all Settling Parties to separately notify the Commission by December 19, 2022, by a letter to the Commission Secretary filed in these consolidated proceedings whether each accepts the conditions of approval set by this Order on the settlement stipulation.

225 (5) Adopts the performance measures outlined in paragraph 191.

226 (6) Authorizes and requires Avista Corporation d/b/a Avista Utilities to make all compliance filings determined by this Order in these consolidated dockets, including all tariff sheets that are necessary and sufficient to effectuate the terms of this Order as well as including the compliance filing within 45 days of this

Order to provide the measures and calculations outlined in paragraph 191 for the years 2019-2022 (beginning January 1 and ending December 31 of each year).

227 (7) Authorizes the Commission Secretary to accept by letter, with copies to all Parties to this proceeding, filings that comply with the requirements of this Order.

228 (8) Retains jurisdiction to effectuate the terms of this Order.

DATED at Lacey, Washington, and effective December 12, 2022.

APPENDIX A

MULTIPARTY SETTLEMENT STIPULATION

Who Will Pay for Legacy Utility Costs?

Lucas W. Davis, Catherine Hausman

Abstract: The growing "electrify everything" movement aims to reduce carbon dioxide emissions by transitioning households and firms away from natural gas toward electricity. This paper considers what this transition means for the customers who are left behind. Using historical evidence from growing and shrinking US natural gas utilities, we show that utilities add pipelines but rarely remove them, even when the customer base from which to recover costs is shrinking. Correspondingly, we find that utility revenues decrease less than one for one when a customer base is shrinking, consistent with higher bills for remaining customers. We then use our empirical estimates to predict how customer bills might increase in the future for different levels of building electrification. We highlight the equity implications of our results and conclude by discussing alternative utility financing options such as recouping fixed costs through taxes rather than prices.

broad range of goods: electricity, natural gas, water, wastewater services, garbage collection, and more. Seldom discussed in the literature is that in times of a shrinking customer base, this approach can lead to difficulties recovering fixed costs; either prices must rise, or costs (such as maintenance of infrastructure) must be cut.

This dynamic is important for understanding the effects of environmental policies that target utilities. In particular, this issue is currently coming to a head with US natural gas utilities due to a growing number of policies aimed at transitioning customers away from natural gas toward electricity.[1] Building electrification has been called "a linchpin solution for decarbonization" (National Academies of Sciences, Engineering, and Medicine 2021), and recent proposals for a transition to carbon neutrality rely on scenarios in which the vast majority of the building stock is transitioned to all electric in a few decades (Larson et al. 2020; National Academies of Sciences, Engineering, and Medicine 2021; Williams et al. 2021).

This paper considers what such a transition would look like for the natural gas customers who are left behind. The current push for building electrification is still in its early stages, so it is too soon for an empirical analysis of how utility behavior responds to this policy push. Instead, we use historical evidence from growing and shrinking utilities. Although mostly driven by reasons other than building electrification, this evidence is nonetheless a valuable opportunity to learn how utilities change their operations and finances when large numbers of customers enter or exit.

First, we demonstrate that both customer base growth and customer base loss are commonplace among US natural gas distribution utilities during our sample period of 1997–2019. We observe, for example, 320 utilities that experienced five or more consecutive years of customer growth, and 250 utilities that experienced five or more consecutive years of customer base decline. Although the total number of natural gas customers in the United States has increased 25% over this time period, many specific regions have lost population, and we show that customer base declines are associated with net migration patterns. For example, Alabama Gas Corp—a large utility serving Birmingham and much of central Alabama—has consistently experienced a shrinking customer base at the same time the city of Birmingham has lost population.

Second, we examine what these customer base changes mean for utility operations. For most natural gas distribution utilities, the pipeline infrastructure is the single largest asset and the single largest fixed cost. We compile annual data on the total number of pipeline miles operated by each utility and test how this responds to changes in the customer base. We find that when utilities are growing, they add pipelines. A 10% increase

1. A number of policies have been introduced to encourage electrification, including municipal bans on natural gas in new construction, electric preferred building codes, and subsidies for heat pumps. These policies are in part motivated by the ongoing decline in emissions from the electricity sector (Holland et al. 2020), which means that transitioning households and firms from natural gas to electricity could significantly reduce environmental damages.

UG 527/CUB/118
Wochele-Jenks/560

Staff/903
Docket No. UG 490 Dlouhy/179

in the number of residential customers leads to a 4% increase in the length of the distribution network. However, when utilities are shrinking, they do not remove pipelines. A 10% decrease in the number of residential customers has a precisely estimated 0% effect on the length of the distribution network. Utilities add pipelines but rarely remove them, even when the customer base from which to recover costs is shrinking.[2]

Third, we test for changes in utility finances. As with pipelines, we find that utility revenues respond asymmetrically to changes in the customer base. New customers lead to one-to-one revenue increases, with a 10% increase in residential customers increasing revenues by 10%. In contrast, customer losses lead to a less than one-to-one decrease in revenue, with a 10% decrease in residential customers decreasing revenues by only about 5%. This pattern implies that remaining customers make up about half of the lost revenue through increased prices. The remaining half may represent cost savings, or it may represent losses to shareholders, an issue we discuss. While previous white papers have pointed to the possibility of bill impacts, we provide the first empirical evidence on the magnitude of these effects using comprehensive data and a quasi-experimental strategy.

These increased bills for remaining customers have significant equity implications. We show that many shrinking utilities in our data serve cities with high rates of poverty and with large African American populations in parts of the Rust Belt and Appalachia and in some rural areas. Looking forward, the current push for building electrification is likely to lead to a very different pattern of customer exit. Nonetheless, in both cases there is a set of remaining customers left facing higher bills, and our results underscore the potential for these impacts to be highly uneven across income levels and racial groups.

We use our empirical estimates to predict how customer bills might increase in the future for different levels of building electrification, absent regulatory changes. We find that bill impacts are modest as small numbers of households transition away from natural gas: for a 20% reduction in residential gas customers, we calculate bill increases of around $40 per year for remaining customers. However, impacts increase nonlinearly as an increasing number of households leave natural gas. For a 40% reduction in customers, we calculate bill increases of $115 per year.

To understand how customer exit could lead to these outcomes, we next examine ancillary data on categories of expenditures for a sample of large US natural gas utilities. We show that a substantial portion of expenditures are fixed costs that, at least in the short run, are unlikely to change as customers leave natural gas service. This includes capital costs (25%), maintenance and operations (10%), and administrative expenses such as pension payments (10%).

Finally, we discuss various alternatives for financing legacy costs. While the norm has been to pay for these costs through monthly bills, we explore, for example, the

2. A similar asymmetry arises with "durable housing" and the idea that it is relatively easy to build more homes as demand increases but that those homes remain even after demand decreases (Glaeser and Gyourko 2005).

UG 527/CUB/118
Wochele-Jenks/561

Staff/903
Docket No. UG 490 Dlouhy/180

possibility of collecting hook-up and exit fees. We also raise the possibility of shifting costs to utility shareholders, across utilities, or to the general tax base. With each alternative we briefly discuss the likely impacts for remaining customers as well as the broader implications for efficiency and equity.

Several features of the natural gas market make it a particularly good setting for such an analysis. First, natural gas distribution is a quintessential natural monopoly, making it an ideal setting for studying what happens to legacy utility costs during market transitions. Second, even relative to other utilities like electricity distribution companies, both the physical pipeline infrastructure and financial data such as revenue are particularly well observed, a product of the highly regulated nature of the industry. We note that the industry is regulated in part precisely because it is a natural monopoly but also because proper maintenance of the distribution network is important for safety and environmental reasons—inadequate maintenance can lead to pipeline explosions and to methane leaks. Finally, natural gas has historically provided important services (heating, cooking, and water heating) to a large portion of US households and firms. As of 2019, natural gas was used in the United States by 70 million households and 6 million commercial establishments, and sales in these two sectors totaled $70 billion.

Our paper contributes to a broader literature on infrastructure investment, fixed cost recovery, and the optimal regulation of natural monopolies. This literature has emphasized a number of regulatory challenges in this environment, including how to create incentive-compatible regulations that allow for cost-minimization without sacrificing infrastructure quality or other goals (Bonbright 1941; Averch and Johnson 1962; Viscusi et al. 2005; McRae 2015). We consider a previously understudied dynamic issue: customer base loss and the recovery of legacy infrastructure costs. While we focus on natural gas in our empirical example, the mechanisms we document are likely to apply to other natural monopolies that recover fixed costs by spreading fees across customers, including water utilities, urban transit, the transition from landlines to wireless, the impact of rooftop solar on electricity distribution, and so forth.[3]

Our paper also contributes to a broader literature on natural gas utilities. Natural gas combustion currently makes up around one-third of total US fossil-fuel related CO_2 emissions (Environmental Protection Agency 2021), and papers exploring how the natural gas sector contributes to climate change include Newell and Raimi (2013), Hausman and Kellogg (2015), Mason et al. (2015), and Marks (2022). Focusing on distribution utilities, Hausman and Muehlenbachs (2019) look at regulatory impacts on the incentives for environmental and safety protection. Natural gas rate design has been explored

3. Cost recovery difficulties associated with customer base changes have been pointed out for water utilities (Beecher et al. 1990; Beecher et al. 1992; Faust et al. 2016; Beecher 2020; Swain et al. 2020); and Galster (2017) makes this connection for population loss and the provision of city services. Gabel and Burns (2012) similarly discuss cost recovery issues in the transition from landlines to wireless and voice-over internet.

by Knittel (2003), Davis and Muehlegger (2010), Borenstein and Davis (2012), Hausman (2019), and Auffhammer and Rubin (2021). Perhaps most closely related is the work on bypass, which examines industrial customer retention (Laffont and Tirole 1990), for instance, at the time of deregulation of wholesale natural gas prices.[4]

Our paper speaks directly to policy issues around building electrification. Davis (2021) empirically examines the customer decision making around home heating technologies, calculating willingness to pay to avoid an all-electric transition. A number of white papers have examined costs and benefits of building electrification in California (Bilich et al. 2019; Greenlining Institute 2019; Gridworks 2019; Mahone et al. 2019; Aas et al. 2020). But we are not aware of any statistical analysis applying to the broader United States.

Our work also speaks to questions of the incidence of environmental policies, an issue explored at depth in Bento (2013) and Fullerton and Muehlegger (2019). In particular, our analysis is related to a recent and growing literature on equity issues in energy transitions. This is crucial for analyzing climate policies, including how to best structure them and who will be the winners and losers of the policies. For instance, Van der Ploeg and Rezai (2020) discuss how an unanticipated transition could result in billions of dollars in stranded assets in fossil fuel industries.

Most closely related in this vein is the work examining how rooftop solar can push fixed cost recovery onto low-income customers (Burger 2019; Borenstein et al. 2021)—this is a function of high mark-ups in high-solar penetration areas like California. In contrast, the mechanism in our paper is a function of customer losses, which applies even when fixed costs are recovered through fixed fees. Thus the standard rate reforms that are frequently suggested for rooftop solar would still lead to fixed cost recovery issues and equity challenges in our setting. A similar mechanism could apply to the electricity sector in future scenarios with so-called "grid defection," in which the installation of storage along with the rooftop solar allows a customer to disconnect from an electric utility altogether (Gorman et al. 2020). More broadly, the equity issues we document may interact with preexisting equity issues in residential energy markets (Reames 2016; Carley and Konisky 2020; Lyubich 2020).

Finally, our results on economic and racial inequities also contribute to the literature on rural depopulation (Johnson and Lichter 2019) and on shrinking cities (Beauregard 2009), where a combination of economic forces and racial antagonism has been identified

4. Relatedly, studies of electricity market deregulation have emphasized the crucial role played by stranded costs, i.e., utility investments which would be unrecoverable in a deregulated market. White (1996, 242) argues that "this stranded cost problem is by far the most controversial aspect of regulatory reform in the electric power industry." Borenstein and Bushnell (2015, 443) argue that US electricity market deregulation was motivated largely by "an opportunity to shift responsibility for paying the sunk costs of what were considered uneconomic stranded assets." Although the catalyst is quite different (deregulation vs. energy transition), the economics of these fixed, mostly sunk costs is similar to the legacy costs that would be borne in a transition away from natural gas.

(Boustan 2010; Galster 2017). We empirically show that these broad migration patterns in the United States can directly impact the ability of utilities to provide the basic services that households require. While we focus on natural gas, similar mechanisms are expected in water and other utility services.

1. DATA

1.1. Data Sources

Our empirical analysis takes advantage of the unusually rich data available for the US natural gas distribution sector. The highly regulated nature of this sector means that detailed information is available from multiple government agencies, including the Department of Energy and the Department of Transportation. We are able to observe key aspects relating to both physical infrastructure and to the utilities' financials, including sales, revenues, and prices.

Our core data set is an annual panel describing essentially the universe of US natural gas distribution utilities for the years 1997–2019. Most of this information comes from an annual census of natural gas distribution utilities conducted by the US Department of Energy's Energy Information Administration (EIA).

This EIA-176 data set reports customer count, volume sold, and revenue collected by end-user sector (e.g., residential vs. commercial).[5] These data also report the utility's ownership structure (investor-owned, municipal, etc.).[6] For utilities that operate across multiple states, there is a separate entry for each state's operations. From EIA, we also observe average citygate prices at the state level, that is the average price (in dollars per thousand cubic feet [mcf]) paid by utilities in that state when purchasing natural gas. We deflate all revenue and prices by the annual consumer price index from the Federal Reserve Economic Data (FRED), reporting all dollar amounts in 2019 dollars.

One of our primary outcome variables is "net revenue," which we calculate by taking total utility revenue and subtracting off the portion of revenue that is collected to pay for purchasing natural gas. These additional revenues are collected to pay for pipeline investments, maintenance and operations, administrative salaries, and other costs. Whereas natural gas purchases can be easily adjusted upward and downward in response to changes in customer counts and fluctuating consumption levels, this net revenue stream is how the utility pays for fixed costs. Focusing on net revenue means that throughout the analysis we

5. Our analysis throughout ignores industrial customers, as they make up a very small fraction of total customers and because there is too little change in the number of industrial customers to support an empirical analysis.

6. We simplify the designations somewhat by combining some categories. For instance, we combine "investor-owned utilities" and "privately owned utilities," regardless of whether they are, for instance, publicly traded. We also group into the "municipal" category some rural cooperatives and a few other kinds of government-run agencies such as county-run utilities. See the appendix for details.

are able to largely ignore variation in natural gas commodity prices, weather, macroeconomic shocks, and other factors that lead to short-run fluctuations in utility total revenue.

Our other key data source is an annual utility-level census (1997–2019) from the Pipeline and Hazardous Materials Safety Administration (PHMSA) at the Department of Transportation. Natural gas distribution utilities are required under federal law to submit annual reports to PHMSA. This information is used by PHMSA and other government agencies to enforce pipeline safety regulations, track and investigate incidents, and plan inspections. Utilities are required to submit separate reports for each state in which they operate.

The primary variable we use from this data set is the total "distribution main mileage" per utility per year. Distribution mains are the pipelines that carry natural gas under city streets. To merge the EIA and PHMSA data, we use a fuzzy string match on utility names and an exact match on the state within which the utility operates. We are able to match 83% of the EIA observations to PHMSA data (representing 87% of residential customers). See the appendix (available online) for details.

Finally, we collect weather data from the National Oceanic and Atmospheric Administration (NOAA), specifically annual heating and cooling degree days at the state level.

1.2. Summary Statistics

Table 1 provides summary statistics. Our sample consists of an unbalanced panel with around 1,300 utilities per year. Of these, around one-quarter are investor-owned utilities and three-quarters municipal utilities. The summary statistics reveal the tremendous variation in utility size, including substantial skew. The mean number of residential customers is 41,000, but the median number is 1,000. This skewness reflects the fact that there are many small municipally operated natural gas utilities, as well as a much smaller number of large investor-owned utilities like Southern California Gas Company, which serves nearly six million households.

Our main specification limits the sample in a few ways to reduce measurement error. First, we focus on utilities for which at least 90% of residential customers are "bundled," rather than "retail choice." Fewer than 2% of utilities are dropped because of this exclusion. Second, we assign new utility identification numbers when we observe an annual residential customer change of more than 20 log points or a commercial change of more than 50 log points. These large changes likely indicate service territory adjustments, mergers, or acquisitions rather than true customer growth or loss. In specifications using differences, this assignment of a new identification number drops the year with the large change but keeps subsequent years. Third, we drop a small number of extreme outliers for the other variables, which we attribute to clerical errors and other reporting mistakes. See the appendix for details.

Finally, in our regression analysis we focus on utility-years that are part of at least a two-year period of sustained growth or loss. That is, we drop observations where a utility grows in one year, shrinks in the next, and so forth. We do this for two reasons.

Table 1. Summary Statistics

	N	Mean	Median	SD	Min	Max
Residential:						
Customers, '000s	29,392	41.31	1.07	229.60	.00	5,607.69
Bundled customers, proportion	29,392	1.00	1.00	.01	.90	1.00
Dummy, customer base growing	27,671	.51	1.00	.50	.00	1.00
Sales, bcf	29,388	2.91	.06	14.58	.00	277.72
Average price, $/mcf	29,382	13.56	12.95	5.41	.58	445.40
Revenue, '000,000s	28,977	27.54	.72	129.95	.00	3,515.88
Net revenue, '000,000s	28,644	17.44	.37	86.02	.00	2,101.42
Per customer, '000s	28,630	.37	.35	.19	.00	3.40
Per mcf	28,641	6.99	6.27	4.02	.00	52.48
Citygate price, $/mcf	29,392	6.77	6.13	2.53	2.03	36.07
Miles of pipeline, '000s	24,452	.77	.06	3.07	.00	51.25
= 1 if investor-owned utility	29,392	.24	.00	.43	.00	1.00
= 1 if municipal utility	29,392	.76	1.00	.43	.00	1.00

Note. This table provides summary statistics for our main estimation sample, an unbalanced panel covering the period 1997–2019, with approximately 1,300 natural gas distribution utilities per year. The sample excludes a small number of utilities for which more than 10% of customers buy natural gas from a retail choice provider. There are fewer observations for the "Dummy, customer base growing" variable because it cannot be calculated for the first year a utility appears in the sample. There are fewer observations for the "Miles of pipeline" variable because of imperfect matches across data sources. Commercial customer summary statistics are in the appendix. bcf = billion cubic feet; mcf = thousand cubic feet.

First, for our thought experiment of a utility losing customers because of electrification, we are interested in sustained patterns of loss. Second, if the miles and customer counts are measured at different times in a year, the year-on-year changes may not match up in time. This would be most concerning if a utility grows in one part of a year but shrinks in another part of the year. In the appendix, we show results relaxing this and each of the other sample selection criteria.

2. GROWING AND SHRINKING UTILITIES

We are interested in how utility operations and infrastructure investments respond to changes in the size of the customer base. Of course, historical evidence of these patterns is only valuable to the degree that utilities actually experience meaningful changes in the customer base. In this section, we describe the patterns of customer base growth and loss over the past two decades. Absent from most policy discussions about the energy transition is ex post evidence on how utilities have historically managed customer base loss. We show that such experiences are commonplace, and we argue that important lessons can be drawn from these utilities.

2.1. Preliminary Graphical Evidence

Figure 1 plots residential customer counts over time for a random 4% of utilities. We normalize each utility's count to 1 at the beginning of the sample. As illustrated by the figure, there are widely differing experiences across utilities. Even though the US population is growing, a substantial portion of utilities lose customers over this 22-year period. There are many utilities that grow by 20% or more, but also many utilities that shrink by 20% or more.

The figure also reveals considerable persistence in both growth and loss. Recall that table 1 shows that about half of all utility-year observations involve customer base loss; figure 1 illustrates that this is not due to one-year "blips." For example, we observe around 320 utilities that experience five or more consecutive years of customer base growth but also around 250 utilities that experience five or more consecutive years of customer base loss.

2.2. Compositional Patterns

To better understand the patterns driving these periods of growth and loss, we summarize in table 2 the "proportion growing" variable across different utility types. Investor-owned

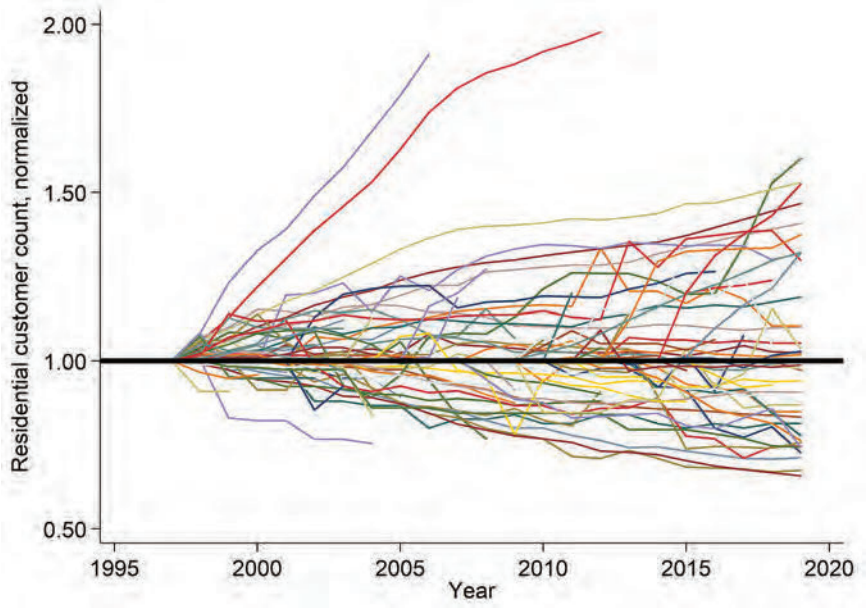

Figure 1. We observe growing and shrinking utilities. This figure shows residential customer counts for a random 4% sample of utilities, normalized to 1 in their first year. Large changes have been assigned a new utility ID to account for the possibility of mergers and acquisitions. The graph has been zoomed in to a maximum of 2.0 on the *y*-axis; the two utilities with the largest growth continued on an upward trend (not shown).

By geographic region:		
New England (CT, MA, ME, NH, RI, VT)	504	.89
Pacific (CA, OR, WA)	465	.83
Mountain (AZ, CO, ID, MT, NM, NV, UT, WY)	1,230	.74
Middle Atlantic (NJ, NY, PA)	642	.70
East North Central (IL, IN, MI, OH, WI)	3,134	.55
West North Central (IA, KS, MN, MO, ND, NE, SD)	4,541	.54
East South Central (AL, KY, MS, TN)	5,483	.53
South Atlantic (DC, DE, FL, GA, MD, NC, SC, VA, WV)	3,640	.48
West South Central (AR, LA, OK, TX)	4,904	.37

Note. This table describes our main estimation sample, classifying observations along several different dimensions. For each subset of the sample, the table reports the total number of utility-year observations as well as the proportion of utility-year observations for which the residential customer base grew.

utilities are more likely to be growing than are municipal utilities, but even for investor-owned utilities more than one-quarter of utility-year observations are not growing. The high loss portion in municipally owned utilities is likely related to rural depopulation in the United States, discussed further below.

In addition, we find that medium and large utilities tend to be growing, while small utilities tend to be shrinking. For these statistics we measure the number of residential customers during the first year the utility appears in our sample. The proportion of all utility-year observations growing is monotonic across size categories, ranging from 92% for very large utilities to 31% for very small utilities.

Finally, we see a clear geographic pattern. The regions with the most customer growth include New England and the West ("Pacific" in the census region nomenclature), with over 80% growth in each. The regions with the most customer loss include the South Atlantic and the Gulf Coast/Oklahoma/Texas area ("West South Central" in the census region nomenclature). These geographic differences are difficult to interpret by themselves, because different regions have different utility sizes and different utility ownership patterns, for historical reasons. As such, we next analyze these regional differences separately for investor-owned utilities and municipal utilities.

2.3. Additional Geographic Evidence

In figure 2, we provide two maps aimed at better understanding the geographic pattern. We plot, at the state level, the proportion of utility-year observations with residential customer growth for investor-owned utilities (fig. 2*A*) versus municipal utilities (fig. 2*B*). The high proportion of growth in New England reflects that the region is served only by investor-owned utilities and not by any municipal utilities. In contrast, the high proportion of growth in the Pacific region is seen in both the investor-owned and municipal utility maps.

These maps suggest that customer base changes are somewhat correlated with regional population changes. Western states such as New Mexico, Washington, Utah, Nevada, and Idaho experienced growth at all investor-owned utilities in all years. Notably, all of these states also experienced substantial population growth over the 1997–2019 time period, with Nevada, Arizona, and Utah experiencing the largest population growth rates in the country. In contrast, West Virginia lost population over this time period, and southern states like Mississippi and Louisiana had fairly slow population growth rates compared to much of the country.

To corroborate this pattern, we merged population estimates from the US Census Bureau with the geographic boundaries of US natural gas distribution utilities as of 2017.[7] This exercise is imperfect because it fails to capture changes in service territory boundaries over time and because overlapping service territory boundaries and other issues introduce measurement error. Nevertheless, we are able to show using these merged data that population changes are highly correlated with changes in residential customer counts, particularly for larger utilities. Although there are many factors driving residential customer counts, it seems clear that population changes are the primary driver. See table A3 (tables A1–A11 are available online).

2.4. Anecdotal Evidence from Selected Utilities

The correlation between customer count changes and population changes matches anecdotes from several utilities. In a rate case filing for DTE—a large utility serving Detroit and southeast Michigan—one analyst testified that "the poor local economic

7. Details are in the appendix.

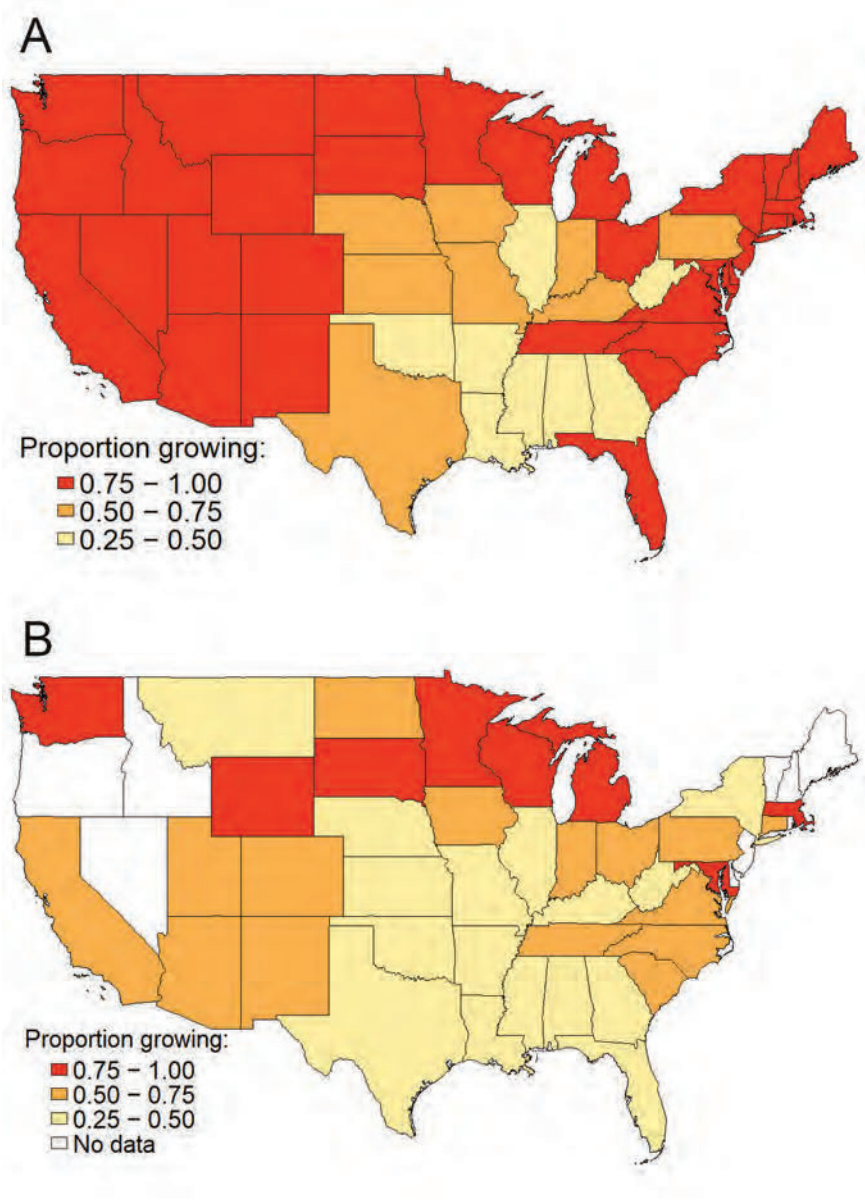

Figure 2. Regional patterns in residential customer base changes. These maps show by state the proportion of utility-year observations with residential customer growth separately for investor-owned (*A*) and municipally owned (*B*) utilities. White states in panel *B* do not have any municipal utilities.

Docket No. UG 490 Dlouhy/189

conditions in DTE Gas's service territory as well as declining population exacerbate the effect of declining sales in increasing the downside risk that DTE Gas may not be able to fully recover its fixed costs."[8] National Fuel, serving upstate New York and parts of Pennsylvania (such as Pittsburgh) similarly argued that "it grapples with a declining population and a weak economy in its service territory" (Robinson 2001). A rate case for Centerpoint Arkla (Arkansas) discusses related challenges, with a growing number of pipeline miles but a decreasing number of customers: "declining revenues and increasing costs make it difficult, if not impossible, for the Company to recover its cost of service."[9]

An especially compelling case study is that of Philadelphia Gas Works, the largest municipally owned gas distribution utility in the country. A white paper details the financial struggles, noting: "The challenging demographics of PGW's customer base are a byproduct of Philadelphia's shrinking population and high concentration of poverty. The City has lost nearly 30% of its population over the past half-century." The report goes on to note implications for prices that we discuss further below: "with a declining customer base characterized by a high concentration of poverty, the need for additional price increases to cover fixed expenses seems inevitable" (Economy League of Greater Philadelphia 2008).

Municipal utilities tend to serve rural populations, and as such their customer base loss (with the exception of some urban utilities like Philadelphia Gas Works) may reflect rural depopulation. For this utility type, Cairo Public Utility Co. of Illinois provides a clear case study. A series of news articles from 2017 summarizes the financial challenges facing this rural utility and the high bills facing its customers. As one of the articles notes, "[utility administrators] said that part of the issue with Cairo Public Utility Co. is that they are managing a system that was originally built for 20,000 people, and today Cairo is home to only about 2,500" (Smith 2017).

In contrast to these anecdotes from rural areas, the Rust Belt, and parts of the Southeast, utilities in the Southwest and the West note a very different experience. For instance, the annual report for Southwest Gas (serving Arizona, Nevada, and California), notes, "Southwest Gas remains among the top utilities for customer growth with 26,000 net new customer additions in 2015. This is due in part to a growing economic recovery across Southwest Gas service territories," going on to describe how projected population growth rates in its major metro areas are much higher than for the United States as a whole.[10]

Similarly, Questar Gas's annual report notes, "The population of the Company's service area in Utah continues to grow faster than the national average."[11]

Overall, the main takeaway is that many US natural gas utilities have faced years of customer base loss. This is especially true of small utilities and of municipal utilities, and a major factor appears to be population changes. The experience of these utilities might be informative as policies seek to transition building energy use from natural gas to electricity. We next turn to an empirical examination of utility operations and finances.

3. RESULTS

3.1. Pipelines

We begin by examining the relationship between the physical pipeline network and the number of customers. Figure 3 plots the relationship between the log change in pipeline miles and the log change in residential customer counts. The figure also shows a histogram of log residential customer count changes—matching the summary statistics in table 2, the histogram shows that roughly half of residential customer changes are positive and half are negative.[12]

A clear positive relationship emerges in figure 3. As utilities grow, they add pipelines. However, a clear asymmetry is also visible. In addition to the scatterplot (with markers sized by initial utility size), we overlay a lowess smoother. Importantly, this lowess smoother does not impose any asymmetry—but one emerges naturally. With growth in the residential count, that is, on the right-hand side of the plot, there is an upward-sloping, nearly linear fit between the log growth in miles and the log growth in residential customers. With loss in the customer count, that is, on the left-hand side of the plot, there is essentially no change in the log mile count. There is a slight upward tick on the far left side of the plot, but there are almost no observations in that region, as shown in the histogram along the bottom. In contrast, there is a substantial mass of observations closer to the origin, that is, at around zero to five log points of loss. Typically when a utility loses a small percentage of customers, it experiences no change in its pipeline miles.

We next formalize this intuition with two sets of regressions. First, we regress the log change in pipeline miles on the log change in residential and commercial customer counts. The regression takes the form:

$$\Delta \ln M_{i,t} = \alpha + \beta \Delta \ln R_{i,t} + \gamma \Delta \ln C_{i,t} + \varepsilon_{i,t}, \quad (1)$$

11. Questar Gas 1999 Annual Report. https://www.sec.gov/Archives/edgar/data/68589/0000068589-99-000002.txt (accessed May 18, 2021).

12. In the appendix, we show a histogram for the change in log miles. Five percent of observations involve a reduction in log miles from one year to the next; these observations have a median log change of −0.006.

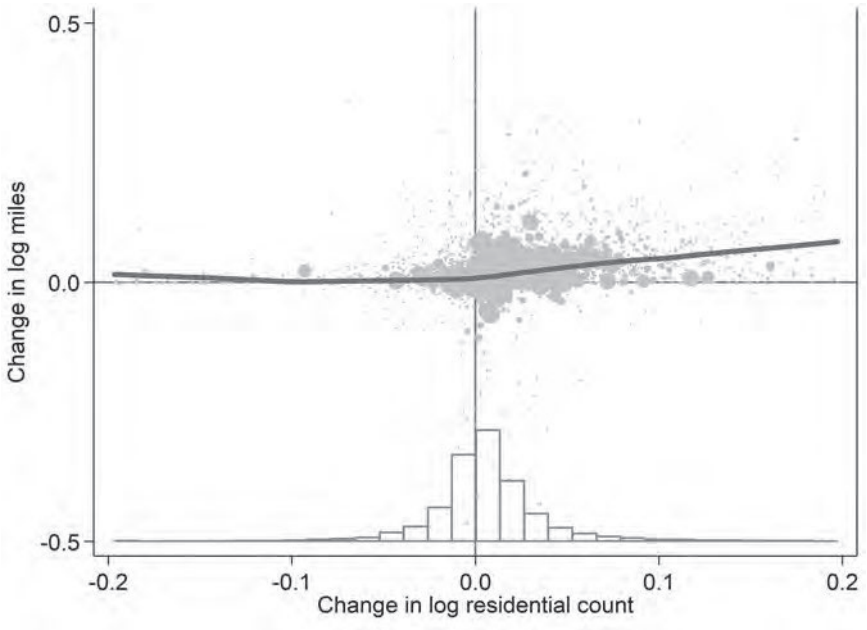

Figure 3. The asymmetric relationship between pipelines and customers. The thick dark line shows a lowess fit. The lowess has been fit to the full estimation sample, but the scatterplot is zoomed in to [−0.5, 0.5] on the *y*-axis to make the lowess slope more visible. A histogram for changes in residential counts is included at the bottom of the figure. Color version available as an online enhancement.

where $M_{i,t}$ is the miles of pipeline mains at utility i in year t, $R_{i,t}$ is the count of residential customers, and $C_{i,t}$ is the count of commercial customers. Standard errors are clustered by utility to account for serial correlation.

We use logs to ease comparisons across large and small utilities. We use differencing because we are interested in what happens as utilities grow or shrink, rather than in cross-sectional differences between large and small utilities. One could instead use fixed effects, which we show in the appendix. In our baseline specification, we do not use any controls, as we do not expect there to be factors that require a utility to grow its pipeline network other than the growth of its customer base, but we examine specifications with additional controls in the appendix.

Table 3, column 1, shows the estimation results for equation (1). A 10% increase in the residential customer count is associated with a roughly 2.5% increase in pipeline miles, statistically significant at the 1% level. A 10% increase in the commercial customer count is associated with a 0.3% increase in pipeline miles, statistically significant at the 1% level. The magnitude difference between the residential and commercial estimates is intuitive: as shown in the appendix, the typical utility has 10 times as many residential

Note. This table shows point estimates and standard errors corresponding to two separate least squares regressions. In both columns the dependent variable is the total number of miles of pipeline mains in logs. The regressions are estimated in differences. The *p*-value rows show the results of tests that the growing and shrinking coefficients are equal to one another. The "miles per 100 customers" rows show the marginal effects at the median values of the dependent variable and the median customer count. The sample includes annual observations from 1997 to 2019, with around 400 utilities per year. Residential customer log changes of more than 0.2 (in absolute value) and commercial log changes of more than 0.5 (in absolute value) are dropped, as they likely indicate service territory changes. The sample is limited to periods when the utility grew or shrank for two or more consecutive years, matching the policy thought experiment in the paper. Alternative samples and specifications are shown in the appendix. Standard errors are clustered by utility.

* Significant at the 10% level.

** Significant at the 5% level.

*** Significant a the 1% level.

customers as commercial customers, so a 1% change in residential customers is a much larger change in customers than is a 1% change in commercial customers. This can be seen by looking at level effects of the estimates at the median values. The elasticity of 0.25 for residential customers translates into 1.1 miles for every 100 residential customers,

as shown at the bottom of the table. The elasticity of 0.03 for commercial customers translates into 1.3 miles for every 100 commercial customers (not shown, for space).

3.2. Asymmetric Impacts

The first regression results, however, mask important differences between periods of customer base growth and loss. Once a pipeline is built, a utility is unlikely to remove it or to stop selling gas via it. This is particularly true if customer base loss is geographically dispersed, for instance, if driven by urban vacancy rates.

We next estimate an asymmetric specification, allowing for differential impacts of customer growth and loss:

$$\Delta M_{i,t} = \alpha + \sum_{s \in R,C} \beta_s^+ (\Delta N_{i,t}^s)^+ + \sum_{s \in R,C} \beta_s (\Delta N_{i,t}^s) + \sum_{s \in R,C} \eta_s \mathbf{1}(\Delta N_{i,t}^s)^+ + \varepsilon_{i,t}. \quad (2)$$

For the sake of brevity, we omit "ln" in the equation above but all variables are in logs as in equation (1). The dependent variable $\Delta M_{i,t}$ is again the log change in pipeline miles for utility i in year t. The coefficient β_s^+ is the impact of the log change in customer counts for sector s (residential or commercial) at utility i ($\Delta N_{i,t}^s$) when the log change is strictly positive, and β_s is the impact when the log change is weakly negative. Because $(\Delta N_{i,t}^s)^+$ is an interaction term between the log change in customer counts $\Delta N_{i,t}^s$ and an indicator for whether that change is positive, we also include this indicator on its own: $\mathbf{1}(\Delta N_{i,t}^s)^+$. We expect the coefficient on this indicator to be close to zero, as we do not expect a differential change in miles for utilities with very slightly positive versus very slightly negative customer count changes.

Results are presented in the second column of table 3. In keeping with figure 3, this specification shows statistically and economically significant asymmetry in the impact of a changing customer base on pipeline infrastructure. A 10% increase in the number of residential customers is associated with a 3.9% increase in pipeline length. This coefficient is precisely estimated, and statistically different from 0.25, the coefficient in column 1. In contrast, for decreases in the number of residential customers, the typical utility sees essentially no decrease in the number of miles; the coefficient is –0.001 and is not statistically different from zero. As shown at the bottom of the table, symmetry can be rejected at the 1% level for the residential specification. As in the symmetric specification, the coefficient for commercial count growth is fairly small, and again, there is essentially no response for commercial loss.

The evidence in table 3 implies less than one-for-one pipeline growth in response to residential customer increases. This is somewhat surprising. However, there are several likely explanations. First, residential customers do not make up all of the utility network; one must also consider commercial customers. That is, when a utility grows its residential customer base by 1%, it is not growing its entire customer base by 1%. So, a test of the linear combination across sectors is a more appropriate comparison. Second, some of the time when utilities are growing, they are adding customers to existing neighborhoods and

therefore not constructing new pipelines. Finally, there may be differences in the timing of when utilities measure the addition of new pipelines versus the addition of new customers (e.g., year-end vs. mid-year). In the appendix, we consider long-run estimates that address these latter two potential explanations, using an error correction model. The long-run results again show an asymmetry, with a larger coefficient when growing (0.65) and a near-zero coefficient when shrinking.

Finally, it is worth noting that the constant is positive and statistically significant in both columns. The positive constant implies that even a utility with flat residential and commercial counts tends to see a modest increase in pipeline miles. This is consistent with some churn within the service territory, for instance, if urban customers leave the city center to move to new suburban developments within the same utility's service territory.

3.3. Finances

We next perform a similar analysis using data on utility revenues. Utilities collect revenue from customers to pay for capital and operating costs, and we want to understand how these revenues respond to changes in the customer base. Part of our motivation for the paper is that many categories of utility expenditures are likely to be "legacy costs" that do not necessarily disappear as customers leave the system.

We use regression specifications very similar to the specifications used for pipeline miles. Specifically, we regress net revenue (total revenue collected minus gas costs, as described above) on customer counts. We begin with a symmetric specification, as in equation (1) and then proceed to an asymmetric specification, as in equation (2). As with the pipeline analysis, we drop large changes in customer counts that likely indicate mergers, acquisitions, and so forth.

These specifications differ from the estimation with pipeline miles in a few ways. First, our sample size is larger, as we can now include the utilities for which we were unable to merge the EIA data on customer counts and revenues with the PHMSA data on pipeline miles. Second, because we observe net revenue separately for the residential and commercial sectors (whereas we only observed combined miles), we can now estimate separate regressions by sector.

These regressions are designed to ask, "If the customer base grows or shrinks, while weather remains unchanged and while the quantity sold to the typical customer remains unchanged, what happens to a utility's revenue net of gas costs?" Accordingly, we introduce three new control variables. We include the log change in quantity sold per customer (also in differences). Utility net revenues are directly impacted by changes in quantity, as the typical utility includes a substantial per-unit mark-up to cover fixed costs. As a result, exogenous changes in quantity consumed per customer as a result of weather changes or economic shocks can substantially change net revenues. In addition, we include weather, both heating degree days and cooling degree days (also in differences). Together, this quantity sold variable and the two weather variables assist in two ways. First, they reduce noise in the net revenue variable and thus improve the precision of our estimates. Second, it is

possible that new customers and departing customers have different consumption patterns. Thus growing or shrinking the customer base could change the average quantity sold and thus net revenues. By controlling for quantity sold per customer, our primary specification purges our estimates of the customer base impact of this effect on average.

Results are shown in table 4 (for brevity, we display only the coefficients on customer counts; point estimates on the control variables are shown in table A6). The first column shows that a 10% change in residential customers is associated with a roughly 6.5% change in residential net revenue. The estimate in column 2 is slightly higher for commercial. These estimates translate into roughly $200 of net revenue per residential customer and $1,000 per commercial customer.

Table 4. The Impact of Customer Base Changes on Net Revenue

	Residential Net Revenue (1)	Commercial Net Revenue (2)	Residential Net Revenue (3)	Commercial Net Revenue (4)
Customers (log)	.65***	.75***		
	(.09)	(.06)		
Customers (log), when growing			1.01***	.86***
			(.13)	(.10)
Customers (log), when shrinking			.47**	.77***
			(.20)	(.11)
Constant	.00*	.00*	.00	.01**
	(.00)	(.00)	(.01)	(.01)
Observations	14,437	14,017	14,437	14,017
R^2	.02	.08	.02	.08
Dollars per customer	211	988		
When growing			328	1,137
When shrinking			152	1,015
p-value: null of symmetry			.02	.53

Note. This table reports point estimates and standard errors corresponding to four separate least squares regressions. The dependent variable in cols. 1 and 3 is net revenue from the residential sector, in logs. The dependent variable in cols. 2 and 4 is net revenue from the commercial sector, in logs. The regressions are estimated in differences. The *p*-value rows show the results of tests that the growing and shrinking coefficients are equal to one another. The "dollars per customer" rows show the marginal effects at the median values of the dependent variable and the median customer count. The sample includes annual observations from 1997 to 2019, with around 600 utilities per year. Residential customer log changes of more than 0.2 (in absolute value) and commercial log changes of more than 0.5 (in absolute value) are dropped, as they may indicate service territory changes. The sample is limited to periods when the utility grew or shrank for two or more consecutive years, matching the policy thought experiment in the paper. Alternative samples and specifications are shown in the appendix. Standard errors are clustered by utility.

UG 527/CUB/118
Wochele-Jenks/577

Staff/903
Docket No. UG 490 Dlouhy/196

Columns 3 and 4, however, show marked asymmetry, particularly for residential customers. Although the point estimates suggest less asymmetry for commercial customers, the standard errors are wide enough that we are hesitant to draw strong distinctions between customer classes. A utility that adds 10% more residential customers increases its net revenue by 10%, an elasticity of one. This translates into $328 per customer (as shown at the bottom of the table), roughly matching the median net revenue per customer in our sample (table 1). This is intuitive if utilities do not change their pricing structure when they are growing, so that new customers translate directly into new revenues.

In contrast, a utility that experiences a 10% decrease in residential customers decreases its net revenue by only 5%. It is intuitive that this is not equal to zero (and is statistically different from zero at the 5% level), since costs may fall when a customer departs. These may represent falling costs of service provision (e.g., meter reading becomes easier with fewer customers), or they may represent decreased returns to investors, as we discuss below.

However, it is also important to note that the growing and shrinking estimates are statistically different from one another at the 5% level, as shown in the bottom row of the table. In level terms, losing one customer translates into a revenue decrease of $152, whereas gaining one customer translates into a revenue increase of $328. That is, utilities with shrinking customer bases do not experience shrinking revenues at a one-for-one rate. This asymmetry is interesting and important because it indicates that utility shareholders are not bearing the full brunt of legacy costs. With shrinking utilities, it appears that ratepayers are bearing a large share of these costs—consistent with utilities raising prices to increase total revenue collection per customer for those customers who continue to receive natural gas service.

A hypothetical numerical example is helpful. Suppose a utility initially has 10,000 customers and collects $300 per customer each year, so that its net revenue is $3 million. It then loses 5% of its residential customer base, that is 500 customers. If prices do not change, net revenue would be $2.85 million. But according to the estimates in table 4, the utility's residential net revenue would decrease by 2.5%, leaving it with a net revenue of $2.925 million. This translates into $308 per customer—prices for the remaining customers have risen by about 2.5%. We further explore this under future potential scenarios below.

3.4. Robustness Checks and Additional Specifications

In the appendix, we show a large number of robustness checks and additional specifications, ultimately concluding that our results on the impacts of a changing customer base on pipeline miles and on net revenue collected are robust.

Results for the impact of customer base changes on pipeline miles are shown in table A4. We include utilities with a large fraction of retail choice customers; this adds around 300 observations but essentially does not change the point estimates. We next include large year-on-year customer changes that likely indicate mergers, acquisitions, and so forth.

We next include one-year periods of growth or loss. This has the greatest impact on our observation count of any robustness check—in the raw data, many utility-year observations are one-year blips in either customer growth or customer loss. This is especially true because we drop the observations that experience such a blip in either the residential or the commercial sector. The robustness check that includes these one-year periods yields qualitatively similar coefficients and conclusions. Most importantly, the asymmetry we see in customer growth or loss is still notable in this robustness check. The coefficient on residential customer growth is somewhat smaller, which is intuitive if pipeline miles do not need to grow in response to one-year blips that do not represent sustained customer growth.

We include utilities with small mile counts, which somewhat attenuates the coefficient on growing miles but does not change our conclusions about asymmetry.[13] We next include large changes in miles that may indicate measurement error. Alternatively, we use a more stringent definition of outliers in this variable.

We next limit the sample just to investor-owned utilities, dropping municipal utilities. Alternatively, we limit the sample to medium and large utilities, that is, those with at least 10,000 residential customers in every year. Next we include the additional weather and quantity-per-customer controls that we include in the net revenue specifications. Next we add either year effects or fixed effects, while still estimating the regression in differences.

Across all of these additional specifications, we continue to find an asymmetric impact of customer base changes on miles. The estimates for residential customer growth are all qualitatively similar, and all specifications have comparable statistical significance. The impact of customer loss is generally close to zero. The one exception is the specification that limits the sample to investor-owned utilities. For that specification, we are unable to precisely estimate the impact of residential customer loss because, as we show in table 2, most investor-owned utilities are growing over our sample period.

We similarly estimate several additional specifications for the net revenue variable, concluding that our main results are robust (tables A7, A8). We estimate regressions using alternative samples as we did for the miles specification (e.g., including retail choice, limiting to investor-owned utilities, etc.). In addition, we include a specification that has both residential and commercial counts on the right-hand side, a specification with an alternative net revenue measurement, and a specification that limits the sample to just those utilities for which we observe pipeline miles. Across this broad suite of robustness checks, we continue to estimate a coefficient close to 1 when residential customer count is growing and a coefficient of around 0.5 when the residential customer count is shrinking. As with the miles specification, we lose power on the shrinking coefficient when we limit to investor-owned utilities; we also lose power when we limit to large utilities or when we add fixed effects (akin, in this differences specification, to

13. This is explored in greater depth in table A5.

UG 527/CUB/118
Wochele-Jenks/579

Staff/903
Docket No. UG 490 Dlouhy/198

utility-specific trends). Commercial results are similarly robust across these additional specifications.

To summarize, we show that growing utilities add new pipeline infrastructure, but utilities with shrinking customer bases continue to maintain the same amount of legacy pipeline infrastructure. In keeping with this, utility revenues rise (with an elasticity of one) when the customer base grows but shrink by a smaller amount when the customer base shrinks. That is, prices for remaining customers rise. We next turn to a discussion of the implications for equity across customers as well as an examination of utility expenditures.

4. DISCUSSION AND POLICY IMPLICATIONS

4.1. Income and Racial Equity

Increasing prices for remaining customers at a shrinking utility will clearly have equity implications. This is true both historically, for the customer base shrinking that we observe in our sample, and in the future, for example, with customers leaving the utility due to building electrification. As customers leave natural gas service, they stop paying for the pipeline infrastructure that they leave behind. How this interacts with income, racial, or other inequality depends on the characteristics of the customers who leave, as well as on the characteristics of the customers who get left behind.

Table 5 describes the eight utilities that experienced the largest loss in residential customers as well as the eight utilities that experienced the largest increase in residential customers. These 16 utilities are generally large utilities (almost all have more than 100,000 residential customers at the beginning of our sample, and the largest serves more than 4 million residential accounts). They are generally investor-owned utilities, with the exception of the municipally operated Philadelphia Gas Works and a municipal utility in Albany, GA. And, they generally experienced prolonged periods of either growth or loss over our time period, as opposed to one-time changes (fig. A2; figs. A1–A8 are available online).

For each utility, we list the largest city served, according to the utility's website. Our data are at the utility level, not household level, and we do not have demographic or socioeconomic information about the composition of customers who exit or enter natural gas service, nor do we have comprehensive information on service territories over time. Nonetheless, broader city-level demographic and socioeconomic information for the largest city served can shed light on the type of communities that have experienced customer loss and gain.

We list four demographic characteristics for each city: the population change over the 2000–2019 period, the percentage of the city's population that is Black or African American, the poverty rate, and the annual per capita income (in thousands of dollars).[14]

14. The socioeconomic variables are reported at the city level by the Census Bureau using data from the American Community Survey five-year estimates; we report vintage year 2019 estimates.

There are several striking features of table 5. First, the utilities with the largest customer losses generally serve cities with declining or flat populations. Several cities experienced large losses in population: Birmingham, AL, and Charleston, WV, each with a drop of 13%; also Mobile, AL, Albany, GA, and Shreveport, LA. In contrast, the utilities with the largest customer gains generally served cities with growing populations: Aurora, IL, experienced a 37% increase in population and Las Vegas 35%. The growing utilities nearly all serve states in the West and Southwest, consistent with regional demographic trends in the United States over this time period.

Second, the utilities with large customer losses overwhelmingly serve cities with large African American populations. With the exceptions of Charleston, WV, and Lawton, OK, the largest cities served by the shrinking utilities have populations that are 40% or more African American. In contrast, the utilities with growing customer bases generally serve cities with much smaller African American populations. A number of economic and social forces may be at play here; Beauregard (2009) identifies several factors responsible for shrinking cities over the 1980–2000 period, including suburbanization, racial antagonisms, and more. For instance, one important force behind migration in the United States has been White flight and suburbanization, the latter frequently racially restricted. While most work has emphasized the postwar period, Crowder and South (2008) and Beauregard (2009) suggest that this legacy continues in more recent decades. Future work could look at whether historical White flight has led to a stranded pipeline infrastructure that must be maintained by the remaining African American population.

Table 5 also shows a pattern of income inequality that is correlated with shrinking or growing customer bases. The median poverty rate in the large cities served by shrinking utilities is 23%, and the median rate for the growing utilities is 16%. Similarly, the median per capita income in the shrinking sample is $27,000, compared to $34,000 in the growing utilities. This pattern matches that explored by Faust et al. (2016), who examine water infrastructure management in four shrinking cities. They focus on the Rust Belt and not the South but, like us, show that the shrinking cities have low incomes, and therefore "shrinking cities face not only a decline in [water] customers but also the inability of the existing customers to afford drastically increasing rates" (133). The pattern is also consistent with the vicious cycle of urban economic decline described by both Faust et al. (2016) and Galster (2017); the latter writes that "selective outflow renders the city increasingly occupied by the disadvantaged," noting also that "out-mobility of disadvantaged households who are African-American or Latino may be further constrained by illegal discrimination in housing markets outside of declining cities" (357).

The evidence on mostly larger, mostly urban utilities in table 5 complements the evidence shown earlier on declining residential customer counts for municipal utilities (table 2), which are typically small and rural. This customer base loss for municipalities is intuitive given the rural depopulation of much of the United States. As Johnson and Lichter (2019, 4) write, "population loss has seemingly become the new demographic norm across broad regions of rural America."

Table 5. Demographic Characteristics of Shrinking and Growing Utilities

Note. This table describes the eight natural gas utilities in our sample which experienced the largest loss in residential customers along with the eight utilities which experienced the largest gain in residential customers from 1997 to 2019. Columns 3 and 4 list the initial count of residential customers and the change in residential customers over our sample, respectively. The last four columns provide demographic statistics from the US Census Bureau for the largest city served by each utility.

Docket No. UG 490 Dlouhy/202

Overall, we highlight three equity-related implications of our work. All three are suggestive, but future work could explore these on a national scale. First, we show patterns of customer base loss in predominantly African American cities, which may contribute to higher energy bills for urban African American populations. Second, rural depopulation may also lead to a rural/suburban divide in energy bills and infrastructure quality. Finally, if future electrification leads to inequality in energy expenditures (an issue we next explore in depth), it may be worth investigating how these future issues interact with the past inequities described above.

4.2. Simulating Bill Impacts of Customer Exit

As we discuss above, building electrification is emerging as a central policy issue for climate change mitigation. Our results point to a thorny issue during a transition period in which some, but not all, buildings electrify. If building electrification occurs in a geographically dispersed manner, utilities will need to continue to pay for pipeline networks but will have fewer customers to bear these costs. As we show above, shrinking customer bases lead to rising prices for remaining customers, with implications for equity. In this section, we explore potential price impacts in greater detail. We focus on the residential sector, for which the equity implications are clearest, but we note that similar mechanisms are at play in the commercial sector. We assume throughout this analysis that there is no cross-subsidization across sectors, that is, the revenue requirement in the residential sector does not depend on what occurs in the commercial sector, consistent with traditional utility practice.

In figure 4 we plot (thick, middle line) the implications of the estimates from table 4 for a rise in prices under different magnitudes of natural gas customer exit. Specifically, in a scenario in which 0% of residential natural gas customers exit, we assume that the typical customer pays $328 per year in net revenue.[15] Then we assume that each 1% of lost gas customers leads to a 0.53% rise in prices for everyone else, based on the 0.47 coefficient in column 3 of table 4.

Figure 4 shows that bill impacts are small when only a small percentage of customers exit the natural gas sector but increase substantially as a higher percentage of customers exit. To understand why this relationship is nonlinear, imagine that all customers but one exit, and that remaining customer must cover all of the utility's legacy costs. Recent papers on US economy-wide decarbonization assume a rapid electrification of residential buildings (Aas et al. 2020; Larson et al. 2020; National Academies of Sciences, Engineering, and Medicine 2021; Williams et al. 2021). Larson et al. (2020) and Williams et al. (2021) assume something on the order of a 15% reduction in natural gas residential customers by 2030 and 40% or more by 2040. Our estimates imply that customer

15. Our estimate for net revenue at growing utilities in table 4 is $328; it is also similar to the median residential net revenue value of $350 in table 1.

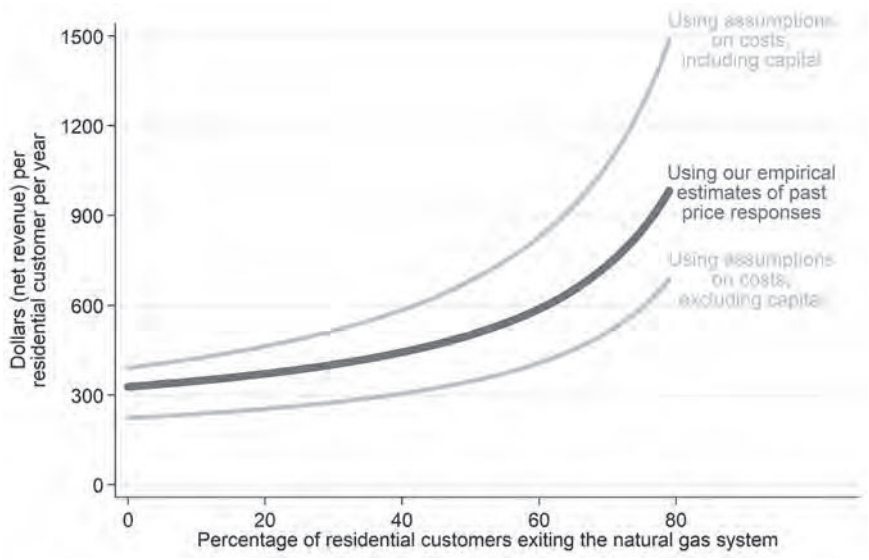

Figure 4. Utility bills rise nonlinearly with customer exit. This figure plots how the net revenue per residential customer (i.e., bill totals net of gas costs) changes as other customers exit, for instance, because they switch to electric heating and cooking. The thick, middle line uses empirical estimates from past utility behavior, specifically the estimates in table 4. The top and bottom lines provide approximate bounds for these estimates, calculated based on financial data from a sample of utilities as described in section 4.3. The upper and lower bounds reflect a representative utility at the beginning and end of the depreciation schedule, respectively. If gas costs were included, it would simply shift all three lines up by a constant amount, equal to around $300 per customer per year (table 6) but fluctuating with weather, macroeconomic conditions, and natural gas wholesale prices. Color version available as an online enhancement.

exit of this level this would translate into annual bill increases of $31 and $116 per customer, respectively. These higher natural gas bills will then prompt additional customer exit, in the natural gas version of the "utility death spiral."[16]

This general pattern is similar to previous calculations by policy analysts. Gridworks (2019) calculates a roughly 100% increase in residential natural gas bills for a 60% decrease in residential gas demand in California (although note that figure includes gas

16. Several previous papers document a negative price elasticity of demand for natural gas. Davis and Muehlegger (2010) estimate short-run elasticities of –0.28 and –0.21 for residential and commercial customers, respectively. Hausman and Kellogg (2015) estimate short-run elasticities of –0.11 and –0.09 and long-run elasticities of –0.20 and –0.23 for residential and commercial customers, respectively. Auffhammer and Rubin (2021) estimate a medium-run elasticity of –0.20. Finally, Davis (2021) shows that natural gas prices also matter for extensive margin decisions, with a 10% increase in natural gas prices increasing adoption of electric heating by 2 percentage points.

commodity costs, which we have not included). As another point of comparison, a California Energy Commission analysis (Aas et al. 2020) describes a scenario in which prices increase by 80% by 2030 and 480% by 2050, although that includes other cost drivers too.

Nonetheless, it is important to emphasize that these calculations are based on our empirical analysis of past customer losses. However, under a transition away from natural gas, the composition of customer exit could be quite different from the historical pattern. Moreover, utility and regulator behavior could change, for example, resulting in larger reductions in maintenance expenditures than have been observed historically. To better understand how the impact of future electrification might differ from the past impact of customer base loss, and to inform potential policy options, we next examine data on expenditure patterns at US natural gas utilities and discuss how different categories of expenditure might change with widespread building electrification.

4.3. Utility Expenditures

In this section, we turn to financial data from an ancillary data source in order to provide additional details about the different categories of utility expenditures. The American Gas Association (AGA), a large trade organization, conducts an annual benchmarking survey of around 80 natural gas distribution utilities. The utilities represented are a mix of investor-owned and municipal utilities. They are not a random sample, but together they represent a substantial portion (around 70%) of all customers nationwide. Details on this AGA report, and the calculations we make using it, are in the appendix.

In table 6, we describe the expenditures of a typical natural gas distribution utility. Perhaps not surprisingly, the single largest expenditure is purchasing natural gas (over $300 per residential customer per year). Recall that our previous analysis netted out this expenditure to focus on fixed costs related to pipelines.

The second largest expenditure for a typical utility (around $170 per residential customer per year) is for past capital expenditures. The largest capital expenditures are main and service pipelines, but examples of smaller categories are compressor station equipment, building structures, tools, and trucks. The capital expenditures category is composed of both annual write-downs of past capital (i.e., depreciation)—around $63 per residential customer per year—and a payment to investors for their return on past capital expenditures (around $105). At any given utility, this amount will depend on depreciation to date as well as the rate of return allowed by utility regulators. These first two categories, expenditures for natural gas and capital expenditures, together account for about two-thirds of total utility expenditures.

The remaining one-third consists of operating expenditures and taxes. The next category ($85 per residential customer per year) is administrative expenses, including salaries to executives, pension payments, and so forth. Distribution operations and maintenance (averaging around $66 per residential customer annually) refers to labor and materials for operating and maintaining the distribution network (pipelines as well

Table 6. Expenditure Categories for US Natural Gas Distribution Utilities

Category	Example	Average Dollars per Customer Annually	Assumed Portion Leaving with the Customer
Gas cost	Cost of purchasing natural gas	312	1.0
Capital-related expenditures:			
Depreciation	Annual write-down of past capital expenditures	63	.0
Return on net utility plant	Return for investors on past capital expenditures	105	.0
Operations-related expenditures:			
Administrative	Administrative salaries, outside services, pensions, injuries and damages, customer assistance, advertising	85	.5
Distribution operations and maintenance	Maintenance of distribution mains, service lines, and meters	66	.1
Accounts	Meter reading, customer records, and uncollectibles	25	.9
Taxes	Sales, income, property, etc.	47	.6
Total expenditures		703	.6

Note. This table was constructed by the authors based on financial data from the American Gas Association's "2016–2018 Performance Benchmarks for Natural Gas Utilities" report EA 2020-03. The last column shows the assumptions we make regarding what portion of the category's expenditures are eliminated when a customer leaves; for instance, a utility no longer needs to purchase any gas for that customer (first row) but must still recover all of its past capital expenditures (second and third rows). Note that the "Total expenditures" row at the bottom includes gas costs and is therefore higher than the net revenue plotted in fig. 4. The 0.6 calculations in the "Taxes" and "Total" rows reflect a weighted average of the assumed portion for the individual categories. Details on the AGA report and on the assumed portion column are in the appendix.

as customer meters). Finally, utilities have expenditures related to servicing accounts ($25 per residential customer per year), which includes meter reading but also expenses related to nonpayment.

The last column of table 6 shows our assumptions about how each of these categories of expenditure change in response to customer base loss. First, we assume that 100% of expenditures on natural gas are eliminated when a customer exits. The utility no longer needs to procure natural gas on that customer's behalf so these costs are clearly marginal

to the customer. Second, we assume that 0% of past capital expenditures are eliminated when a customer exits, reflecting the fact that these are a sunk cost that must still be recovered even when a customer exits.[17]

Third, we assume that between 10% and 90% of operating expenses are eliminated when a customer exits, with the exact percentage varying across categories. We assume that half of administrative expenses are eliminated but half are not. Pensions, for instance, must still be paid when a customer exits. However, expenditures on customer assistance can presumably decrease as there are fewer customers to assist. In contrast, we assume that almost none of the distribution operations and maintenance expenditures are eliminated—since the pipeline network has not changed, the same amount of maintenance must be conducted for safety to not be compromised.[18] We assume that some are eliminated because, for instance, the departing customer's meter may no longer need the same maintenance. We assume that most customer-related account expenditures are eliminated, as a meter reader is no longer needed for that household. We assume that not all of these expenses are eliminated since, for instance, a utility without internet-connected meters must still send a person down the street to read nearby meters of remaining customers, so the cost of meter reading does not decrease one for one in some cases. For taxes, we use the weighted average portion from the other categories.

Based on these assumptions, we plot two additional lines in figure 4, intended to represent upper and lower bounds. As explained earlier, this figure describes how net revenue per customer would change under increasing levels of customer exit, and the central estimate is based on our empirical estimates in table 4. We construct the bounds using cost information and baseline assumptions from table 6. For the upper bound, we use all cost categories, including the two categories of capital costs. For the lower bound, we include all cost categories except for the two categories of capital costs.

The upper and lower bounds can be thought of as the price paths for a representative utility at the beginning and end of the depreciation schedule. Going forward, natural gas utilities may choose to cease new capital investments if they expect a high degree of building electrification. Without new capital investments, the capital cost component of bills would decrease until eventually reaching zero as these assets are fully depreciated. Thus we would expect the actual price path to be between these upper and lower bounds, but closer to the lower bound in the long run.

Overall, this bounding exercise yields price paths that are remarkably similar to the path we constructed using our empirical estimates. This similarity provides reassurance that our empirical estimates are broadly representative, even though the utilities that experienced customer losses during our sample period tend to be municipally owned,

17. While cost disallowances are relatively rare in practice, there is precedent for public utility commissions to disallow cost recovery, as we discuss in the following section.

18. It is also possible that a struggling utility would cut back on maintenance (Evans and Gilpatric 2017). We discuss potential policy implications in the Conclusion.

smaller, and rural. Probably the most important take-away from the broader analysis is that a considerable portion of capital and operating expenses is not eliminated by customer exit. This is consistent with our empirical analysis of net revenue as well as with these calculations based on financial data, and it implies that under electrification scenarios remaining natural gas customers can expect significantly rising bills.

4.4. Policy Alternatives

The main takeaway from our empirical analysis is that as customers exit natural gas service, this increases bills for customers left behind. These bill increases have important implications for equity, and we show that there has tended historically to be a pronounced pattern in which these remaining customers disproportionately come from disadvantaged groups. In this section, we discuss alternative options for utility financing that could break this historical pattern, and what these alternatives could mean for efficiency and equity.[19]

4.4.1. Changing the Composition of Customer Exit

We first discuss a set of policies that would change the composition of customer exit. For example, one type of policy intervention would be to subsidize building electrification for low-income households or other disadvantaged groups, thereby changing the composition of customer exit (and perhaps accelerating overall electrification). While this approach could improve equity, simply funding low-income electrification projects will still result in higher natural gas bills for remaining users, which may prove burdensome for low- and middle-income customers who do not enroll in the program. Some of these customers may prefer natural gas over electricity (Davis 2021), may fail to qualify if they are middle income (Forrester and Reames 2020), or may have trouble accessing the program (Fowlie et al. 2015; Raissi and Reames 2020). In addition, such a policy by itself would not solve the underlying financial difficulties of the natural gas utility.

A related set of policies would target electrification policies geographically. Targeted electrification has been suggested as one way to reduce ongoing operations and maintenance costs; in this scenario, whole areas are electrified so that entire sections of the pipeline network can be shut down. One could imagine targeting based on safety and climate goals, particularly in areas where aging pipelines would otherwise be replaced to prevent methane leaks and pipeline accidents—incurring capital costs that would need to be paid by future customers. Such a targeted electrification policy could lead to a more equitable or a less equitable transition, depending on which areas are targeted. Of course, this policy alone does not solve the problem of how to pay for system-wide legacy costs.

---

19. These alternative policies have been previously discussed in Bilich et al. (2019), Greenlining Institute (2019), Gridworks (2019), Mahone et al. (2019), Aas et al. (2020), Larson et al. (2020), Karas et al. (2021), National Academies of Sciences, Engineering, and Medicine (2021), and Williams et al. (2021).

4.4.2. Changing How Utility Customers Pay

Another set of policies would change how customers pay for natural gas service. For example, one alternative would be to accelerate the depreciation schedules used by utility commissions in rate making. Accelerated depreciation allows the utility to recover capital costs more quickly, meaning that these investments remain in the rate base for fewer years. This approach could reduce the degree to which these capital costs are shifted over time onto a smaller set of remaining customers. However, this approach does not address the problem of ongoing maintenance costs associated with sparsely used pipelines; as we show above, these are not trivial. Another limitation of accelerated depreciation is that it will, in the short term, raise prices for remaining customers even further.

Other related policies would target more directly the underlying incentive problems. Fundamentally, utility financing relies on a stable or growing customer base to recover past costs; in this way, incentives for customer entry and exit are not correctly aligned. One could imagine pricing schemes that correctly align incentives for customer entry and exit. For instance, customers could pay hook-up fees that cover the future stream of capital and operations and maintenance costs, so that if they later exit, they are not leaving remaining customers on the hook.

This approach has some promise but also faces challenges. Utilities have generally wanted to grow their customer base to bring in new sources of revenue, and a high connection fee disincentivizes future growth (Sherman and Visscher 1982).[20] This kind of policy may also face pushback from ratepayer advocates who value energy access.

A closely related alternative would be to charge exit fees. That is, customers departing the system would be asked to cover a portion of the capital and operations and maintenance costs they leave behind. Our empirical analysis implies that exit fees would need to be large—in excess of $1000 per household—if they were to completely cover the present discounted value of legacy costs. Such a solution could be very effective at reducing cost shifts but is likely to be politically and logistically challenging and would, of course, be highly unpopular with customers, who would correctly claim that they were not warned about such fees when they initially signed up for natural gas service. In addition to these substantial obstacles, exit fees would delay the transition of households away from on-site consumption of fossil fuels.

20. It is worth noting that the discussion around widespread customer loss is relatively new—as recently as 2013, some states were instead investigating policy issues related to natural gas distribution extensions, because of low commodity prices induced by fracking. Costello (2013, 35) discusses rate-setting principles in this setting, for instance "growth should pay for itself by requiring new customers to pay the full costs for extending service to their areas"—but does not consider how this principle might account for the potential exit of customers in the future.

4.4.3. Shifting Costs to Utility Owners

There is also the possibility that utility owners would bear some of these legacy costs. For the hundreds of investor-owned and privately owned utilities in the United States, legacy costs could be disallowed or partially disallowed by regulators, thereby mitigating additional price increases. Cost disallowances would shift the burden away from ratepayers and toward shareholders and other owners. Municipal utilities are not privately owned, so this alternative does not apply. There is a large literature in law and economics on the question of what costs can be disallowed by regulators versus what costs they must allow utilities to recover. Prominent court cases like *Hope Natural Gas Co.*, *Market Street Railway*, and *Duquesne Light Co.* have considered this question in a number of different contexts. While *Hope* offers utilities the right to a fair rate of return, the *Market Street* decision by the Supreme Court makes clear that this does not protect a utility from market forces that are rendering its service obsolete. See, for example, Kahn (1997), Graffy and Kihm (2014), and Raskin (2014).

Some of the questions that have arisen in these and related cases are (1) whether the investments were prudent at the time they were made, versus whether the investments continue to be economically viable (i.e., used and useful), (2) whether the utility's very existence is at risk, (3) whether the utility has an obligation to serve remaining customers, and (4) whether the risk faced by the utility arises from market forces or from actions taken by regulators. In some of these cases, commissions have allowed utilities to recover investment costs themselves (i.e., depreciation) but not a rate of return on those investments (Rose 1996). Any whole or partial disallowances would decrease the value of the utility, leading shareholders to bear some of these legacy costs.

It is still too early to say what approach utility commissions will take. From an economic perspective, there are clear efficiency benefits from making sure that shareholders have some "skin in the game." A central tenet of law and economics is that agents should bear the costs of their actions. Utilities are constantly making long-term investments and the threat of disallowances helps encourage utilities to make these decisions efficiently, for example, avoiding expensive pipeline replacement projects in locations undergoing rapid building electrification. On the other hand, it is unrealistic to think that shareholders could be made responsible for the entire legacy gas infrastructure. Disallowing too many of these costs would raise the cost of capital for utilities, making it hard for them to finance basic operations and potentially leading to bankruptcy.

4.4.4. Paying for Costs Elsewhere

In addition, there are policy alternatives that would involve shifting legacy costs out of the natural gas sector altogether. One possibility is that customers of electric utilities could instead cover the transition costs associated with the electrification transition. How this is structured would depend on whether the same utility serves gas and electric customers and, if not, on the way in which each utility is regulated. In the United States there are large numbers of both "single-fuel" (selling only natural gas) and "dual-fuel"

UG 527/CUB/118
Wochele-Jenks/591

Staff/903
Docket No. UG 490 Dlouhy/210

utilities (selling both natural gas and electricity) (Knittel 2003). An interesting question moving forward is whether dual-fuel utilities might begin cross-subsidizing natural gas customers by increased revenue collection from electricity customers. This type of cross-subsidization has not been widely done historically and tends to go against the utility ethos of "cost allocation." In addition, electricity rates already include considerable fixed costs of their own, resulting in a price per unit of electricity that exceeds social marginal cost in most parts of the United States (Borenstein and Bushnell 2022).

Finally, utility fixed costs could be recovered through the general tax base rather than from utility customers. This could include transfers from federal, state, or local government. Indeed, this is done for other natural monopolies, such as the postal service. This approach has also been proposed for electric utilities facing declining cost recovery because of residential rooftop solar adoption (Borenstein et al. 2021).[21] A variant on this would use cap and trade or carbon tax revenues, rather than the general tax base.[22]

4.4.5. Summary

To summarize, a number of policies have been suggested. Our results can contribute to these discussions in a number of ways. First, by recognizing that the transition difficulties associated with electrification are fundamentally a result of the way that natural monopolies in the United States recover their fixed costs, proposals that address the underlying issue can be crafted. Second, we point out that there are multiple issues to be addressed, and as such multiple policies may be needed: capital cost recovery, ongoing maintenance cost recovery for safety and environmental reasons, and equity issues. Fully addressing all of these will likely require a combination of policies. Finally, researchers and policy makers may be able to learn from successful policies used in other domains (natural gas, electricity, water, transportation), since the underlying market structure is similar and the underlying economic issues nearly the same.

5. CONCLUSION

The utility business is often thought of as stable and predictable. But we show that US natural gas utilities have experienced a surprisingly large amount of recent change, with many utilities consistently gaining customers while other utilities consistently lost customers over our sample period, 1997–2019. Our paper leverages these changes to test

21. Beecher (2020) also discusses the possibility of funding fixed costs via local property taxes, arguing that it may be less regressive than current pricing structures (although note that local taxes would not decouple cost recovery from migration impacts).

22. Such a policy has been proposed for low-income energy assistance; see Fowlie (2021). A related policy has also been proposed for a more general reform of electricity sector pricing (Shawhan 2016). The pros and cons of recovering fixed costs through the general tax base are discussed in Viscusi et al. (2005)—particularly political economy questions and incentives to control costs.

how utility operations and finances evolve during growth and loss. We show that utilities expand the distribution network during years of customer growth but rarely shrink the network during periods of customer loss. Moreover, we find that utility revenues increase one for one during years of growth but decrease by only half as much during years of loss, implying that remaining customers make up the difference through increased prices.

These dynamics have important implications for a growing set of climate policies aimed at transitioning households and firms away from natural gas toward electricity. We show that during our sample period the utilities experiencing customer losses tended to be in cities with higher poverty rates and a higher percentage of African American residents. Future energy transitions will not follow the exact same pattern, but our results nonetheless highlight the potential for bill impacts to be distributed across households in ways that exacerbate existing societal inequalities. In addition, we use simulation evidence and ancillary data on typical expenditures for US natural gas utilities to show the large potential magnitude of bill impacts. Based on our empirical estimates, for example, we show that bills can be expected to increase by $115 dollars per year in response to 40% of residential customers exiting the system. In our calculations, residential bills increase sharply and nonlinearly in response to additional customer exit.

These dynamics also have major implications for efficiency. A central theme in energy economics is the importance of pricing energy efficiently (Borenstein and Bushnell 2022). Putting more fixed costs into retail prices threatens to increase deadweight loss for remaining customers. At the same time, higher retail prices for natural gas will also accelerate the transition away from natural gas, prompting further exits, and thus additional price increases, in the natural gas version of the "utility death spiral." Of course, if the environmental externalities of natural gas are very large, this is a "virtuous cycle" in that it accelerates decarbonization. While these dynamics will not last forever, an energy transition of this magnitude affects a large number of US households and businesses, so it is critical to trace out the implications for both efficiency and equity.

Our findings are also relevant for ongoing policy debates about how to handle aging infrastructure in the natural gas system, which carries safety risks and environmental risks. Several of the states that are leading on building electrification are also states working to ameliorate methane leaks and explosion risks (e.g., California, Massachusetts, and New York). Future work could examine the optimal suite of policies to meet multiple goals, especially in older utility service territories with aging pipelines. Future work could also investigate whether there are perverse incentives for utilities with customer base loss—either to cut back on important maintenance, as in Evans and Gilpatric (2017), or to overinvest in capital-intensive replacement projects to earn a future rate of return (Averch and Johnson 1962).

Finally, it is worth highlighting that this issue of legacy utility costs is not unique to this particular sector. While our analysis focuses on natural gas distribution utilities, customer exit raises similar challenges for funding inter- and intrastate natural gas pipeline

UG 527/CUB/118
Wochele-Jenks/593

Staff/903
Docket No. UG 490 Dlouhy/212

infrastructure. As the amount of gas flowing through these long-distance pipelines decreases, the fixed costs associated with these investments are spread over a smaller number of customers. The extent to which this occurs in the future depends not just on what happens with building electrification but also on whether a transition away from natural gas occurs in the industrial and electric power sectors. More generally, our work highlights a broader dynamic that can occur in many sectors with large fixed costs, including public transportation, water distribution, mail delivery, and traditional telephone service.

Workpaper: Line Extension Allowance Model - Supplemental
Concentric Energy Advisors
Supplemental Filing Workpaper for NW Natural/2000, Kravitz-Therrien
UG 490 OPUC DR 378 Attachment 2

Directives in Order No. 22-388:

- The company's best reasonable estimate of present and future CPP compliance costs;
- An analysis of how each new customer addition changes the costs of CPP compliance for other customers;
- An explanation of how the proposed LEA incorporates and recognizes the costs of CPP compliance;
- An analysis supporting the company's assumptions about the expected time frame over which new customers will remain on the system, and how changing policy dynamics were factored in; and
- A demonstration of the expected year-by-year economic impact on existing customers from the addition of new customers under the proposed LEA, such that the "breakeven" year is shown, along with the costs and benefits expected in other years, and a demonstration of when rate-based investments for customer additions covered by the LEA are depreciated and removed.

Excerpt from Staff's Final Comments in LC 79

April 18, 2024

4.8 - RNG Modeling and Appendix K

Ted Drennan, Energy Policy Analyst

Appendix K

Staff appreciates the Company's response to Staff Request 24 from Opening Comments and the additional detail provided to describe the differences between the RNG Evaluation Methodology provided in UM 2030 and methodology ultimately presented in the IRP. Staff requests that future IRPs include a clear report of any key changes in the methodology similar to that included in the Company's Reply Comments.[100]

When the Company filed its IRP on September 23, 2022, it did so without including Appendix K. The Company subsequently filed Appendix K on October 21, 2022. The Company then met with Staff to discuss its modeling of RNG on January 20, 2023, in response to Staff Request 25, which requested a meeting with the Company to discuss questions about the RNG workbook. At that time NW Natural indicated it would file a corrected version of Appendix K in February, which, as of March 23, 2023, has not been filed.

Staff has been unable to resolve all concerns as it has yet to see an updated version of Appendix K the Company had indicated it would provide. Further, Staff continues to see opportunities to improve risk inputs and modeling. However, Staff is comfortable enough with the current RNG modeling in this IRP to recommend continued use of the methodology and delay discussion of workbook improvements until future proceedings. Staff's willingness to address these issues in a future proceeding does not imply prudence for projects selected using the method.

Recommendation 34: The Company should provide an updated Appendix K which correctly describes the Company's modeling for RNG projects.

RNG Workbook

The issues regarding the RNG workbook that were discussed at the January 20 meeting included: 1) selection of "Type of Project" and associated outboard modeling, and 2) risk inputs and associated modeling.

In its response to Staff's Data Request 13, the Company explained that the "Project Type" in the RNG models submitted by the Company might not reflect the actual project because there had been additional outboard modeling, i.e., modeling that occurs outside of the RNG workbook. This outboard modeling was used in a number of ways. One way was to determine the total revenue requirement to input in the RNG model, which was derived in a cost-of-service model. The Company also used outboard models to calculate the value associated with the sale of brown gas in some of its earlier models. Where this occurred, the Company selected

[100] NW Natural Reply Comments at 53.

"Unbundled Environmental Attribute Purchase" for the project type, when the actual project was "RNG with Sale of Brown Gas." The Company addressed Staff's concern about this discrepancy between modeled projects and actual projects at the January 20 meeting. Staff understands this to be an issue with earlier models and likely will not be an issue going forward.

Staff's concerns with NW Natural's risk modeling for the RNG model in opening comments remain. In summary, these include the choice of risk distribution, the lack of inclusion of downside risk, and the lack of information on how the risk bands are selected by internal experts. For risk distribution, the Company uses a lognormal distribution for asymmetric risks but has offered no foundation for this approach.[101] Staff raised a question regarding the approach using a hypothetical example in opening comments[102] of a +/-20 percent risk band versus one with -19 percent and +20 percent. The risk distribution for the former would be assumed normal, the latter assumed lognormal. At the January 20 meeting, the Company explained under this hypothetical that the results would be similar under either lognormal or normal distributions. While this may be true in the hypothetical posed, it still does not provide rationale for the assumptions of a lognormal risk distribution. For reference, an example of the hypothetical risk data for a project included with the Company's RNG Incremental Cost Workbook is included below.

Risk Analysis Key Inputs		
RNG Volume Uncertainty		
Annual Prob RNG Supply Ceases		0.5%
Prob of Delay (1 and 2 year)	30%	5%
% Δ From Base Case	5th %	95th %
Project Volume Output	-20%	10%
Project Cost Uncertainty		
% Δ From Base Case	5th %	95th %
Carbon Intensity	-15%	15%
Payments to Investments	-5%	30%
Other non-output costs	-3%	5%
Non-offtake Variable Costs	-20%	30%
Offtake/Biogas Price	0%	0%
Other Offsetting Revenues	-12%	30%

[103]

The Company did not provide additional information on the reasons for ignoring downside risk (i.e., risks that could lower expected costs) in their modeling. Staff provided a hypothetical in opening comments for this as well.[104] In Staff's hypothetical there should be a clear preference for one project over another, but due to the Company's modeling approach the Company would be indifferent between the projects.

[101] RNG Incremental Cost Workbook.
[102] See Staff Comments at 56-57.
[103] RNG Incremental Cost Workbook, RNG Dashboard Tab.
[104] Ibid at 57.

Finally, there is a lack of a standardized approach to risk modeling, or selection of risk bands, which is still concerning to Staff. Here the Company's internal experts assess risks associated with various factors included in Table k.2 Project Evaluation Component Description.[105] There are no formal rules or processes for assigning risks, so it is not clear that results of the analysis would be the same under two different subject-matter experts. Comments from CUB highlight concerns about relying on internal experts with regard to gas heat pump adoption rates which were more optimistic than adoption rates from NEEA experts.[106] NW Natural's RNG modeling likewise relies on internal experts to assess risks associated with different projects. It is not clear to Staff whether there are policies in place at the Company to assure modeling of risks related to RNG projects are standardized, or if expert biases might systemically favor one type of project versus another. As discussed in Section **3.6 - RNG: OWNERSHIP VS. CONTRACTUAL PURCHASES**, the approach of the electric utilities, especially PacifiCorp which allows self-scoring for non-price attributes, would bring standardization and transparency to this process. Appendix K, when corrected, could also allow for additional information related to RFP modeling and scoring.

Recommendation 35: In the next IRP, the Company should provide support for risk modeling approach (i.e. lognormal vs normal risk distributions, ignoring upside risks) and ensure this topic is discussed in a technical working group meeting for the next IRP.

Recommendation 36: In the next IRP, the Company should standardize their approach to selecting risk values such that modeling could be duplicated and ensure this topic is discussed in a technical working group meeting for the next IRP.

Recommendation 37: The Company should provide an explanation for why it does not consider downside risks in its models and demonstrate that this approach results in least-cost, least-risk resources.

4.9 - RNG, Hydrogen, and Syngas

4.9.1 - RNG Availability and Cost

Ted Drennan, Energy Policy Analyst

As discussed in Opening Comments, NW Natural is placing a heavy reliance on non-emitting supply-side resources for decarbonizing their system. Staff appreciates the additional information provided by the Company regarding its cost assumptions for RNG, hydrogen, and synthetic methane. The Company's experience with RNG development and its exposure to market prices and availability helps support its near-term assumptions. However, Staff still has some concerns with how the Company's RNG costs compare to other forecasts and with the longer-term cost and availability trends. In particular, Staff has concerns regarding availability assumptions that rely on 'all-hands-on-deck' approach to RNG and the Company's minimal consideration to competition for RNG.

Staff has looked more in depth at the Company's reliance on a study from ICF. This further dive into the study has not alleviated concerns of the appropriateness of relying on the study.

The study was discussed in the Company's third technical workshop on March 28, 2022. At the discussion, it was reported the values are dependent on a deep decarbonization scenario that "requires aggressive deployment of emission reduction measures across the country."[107] This is also called an "all-hands-on-deck approach." While this approach helps demonstrate the role decarbonized fuel could play under a best-case scenario, Staff does not believe it provides a reasonable foundation for understanding potential availability because it is premised on a flawed policy assumption. Recent legislative actions in the US challenge the assumption that all groups are working together regarding emission reductions from natural gas. A few simple illustrative examples follow.

On January 6, 2023, a law in Ohio was signed that declared natural gas is green energy. From HB 507:[108]

> (43) "Green energy" means any energy generated by using an energy resource that does one or more of the following:
> (a) Releases reduced air pollutants, thereby reducing cumulative air emissions;
> (b) Is more sustainable and reliable relative to some fossil fuels.
> "Green energy" includes energy generated by using natural gas as a resource.

[107] See Supply Side Resources Technical Working Group No. 3 Presentation, slide 72 (March 28, 2022).
[108] See Sub. H.B. No. 507, 134th Ohio General Assembly (Effective Date April 7, 2023).

The Wyoming legislature considered a resolution titled "Phasing out new electric vehicle sales by 2035." While Senate Joint Resolution SJ004[109] died in committee, it was not in line with the 'all hand-on-deck" approach in the ICF study.

The Kentucky Senate approved a bill SB 4,[110] that will, "prohibit the Public Service Commission from approving a request by a utility to retire a coal-fired electric generator unless the utility demonstrates that the retirement will not have a negative impact on the reliability or the resilience of the electric grid or the affordability of the customer's electric utility rate".

More locally, parties need look no farther than the situation with the Colstrip generating plants. Here the Montana legislature passed laws that were designed to stop the majority owners from closing the power plant. The laws were found to be unconstitutional,[111] although it looks like the plant will continue to operate.

Besides the issues raised above, the methodology of the study is a concern. As discussed by ICF, the 2021 study was based off of ICF's 2019 study. The 2019 study had two scenarios, a low-resource and high-resource approach. The 2019 study contained one price curve, for the high-resource scenario. The costs were less in this scenario than the low-resource scenario.

For the 2021 update relied on by NW Natural, ICF eased the constraints on what was available to produce RNG but kept the same cost curves. Thus, the supply increased, at constant costs, which does not seem reasonable. Table 2 below shows the assumptions between the two cases in ICF's 2019 study, along with the updated assumptions in the 2021 study. The latest assumptions are substantially greater than the earlier ones.

Table 2: ICF Study Comparisons

RNG Feedstock	ICF 2019 Study: Low Resource	ICF 2019 Study: High Resource	ICF Updated Study
LFG	50% of EPA's candidate landfills	80% of EPA's candidate landfills	95% of eligible landfills
Animal Manure	30% of technically available animal manure	60% of technically available animal manure	75% of technically available
WRRF	30% of WRRFs with a capacity greater than 7.25 million gallons per day	50% of WRRFs with a capacity greater than 3.3 million gallons per day	95% of facilities w/>3.5MGD
Food Waste	40% of the food waste available at $70/dry ton	70% of the food waste available at $100/dry ton	95% @ $100/ton

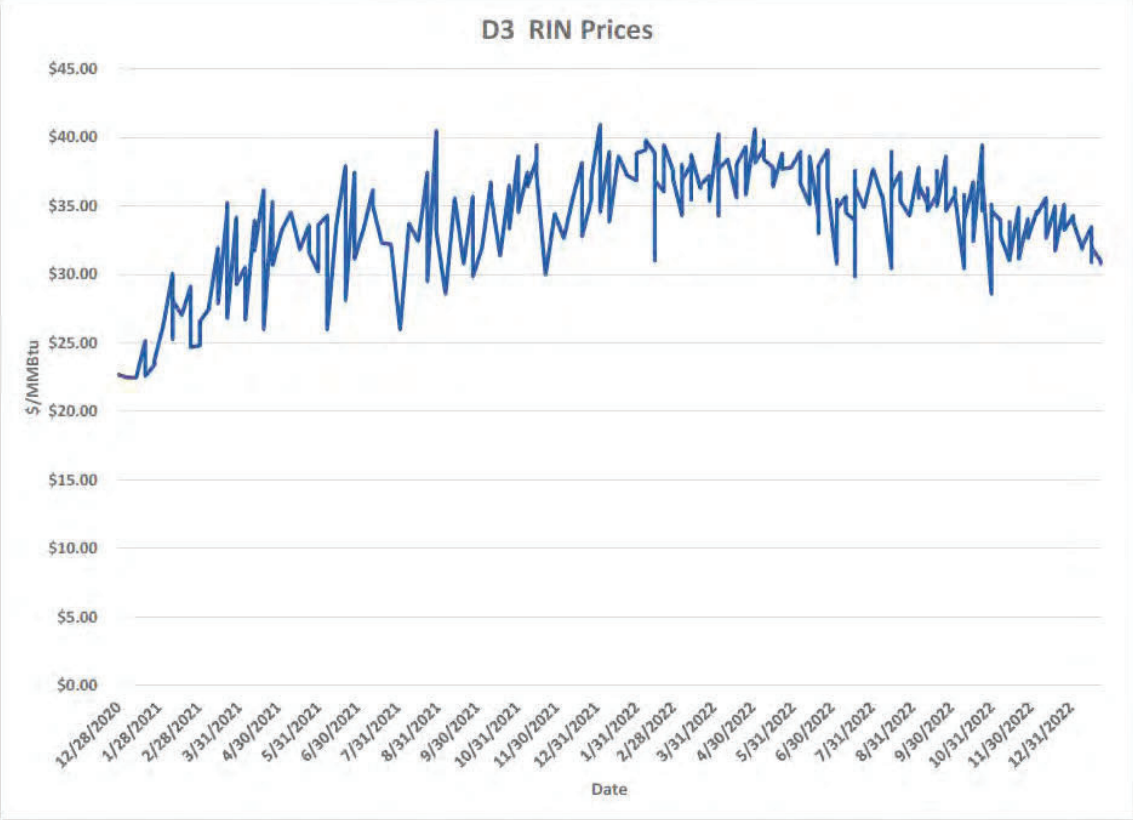
P2G	50% capacity factor for dedicated renewables	80% capacity for dedicated renewables	NA

Staff continues to have concerns with the price forecasts for RNG used by the Company. Competition for RNG is high in the renewable fuel market. Transportation RNG, with its environmental attributes represented by D3 Renewable Identification Numbers (RINs), receives premium rates. Figure 6 below highlights the historic prices for D3 RINs as reported by the EPA for 2021 through February 10, 2023. The D3 RIN prices [112] have been higher than NW Natural's current RNG projections for Tranche 2, which is estimated at $19/MMBtu. This means that NW Natural could have difficulty finding large quantities of RNG at prices much below prices of RIN RNG. In a recent filing, NW Natural discusses how the RNG market is driven by the fuels markets, including D3 RINs.[113] The Company points out that while volatile, "the overall value or RNG in these markets remain strong, with a 2-year average of over $33/mmbtu.[114]

[112] Data selected from https://www.epa.gov/fuels-registration-reporting-and-compliance-help/rin-trades-and-price-information last accessed March 11,2023. Prices are reported at the RIN level, which were converted to $/MMBtu. One MMBtu of RNG is approximately 11.7 RINs.
[113] See UG 462, NW Natural 100, Chittum/Page 25-26, lines 14-1. The current market for D3 RINs, which is the type of RNG the majority of resources we would purchase for RNG Statute and CPP Rule compliance would generate, is quite strong.
[114] See UG 462, NW Natural 100, Chittum/Page 26, lines 3-5.

Figure 6: D3 RIN Prices2021-Feb 10, 2023



Others looking at the RNG market have differing views than those in NW Natural's IRP as well. A recent article by S&P Global[115] addresses the current market for RNG, including the competing markets for RNG, i.e., use in transportation or by utilities:

> Transportation RNG -- which is typically priced around the value of conventional gas, plus D3 RIN credits -- is currently marketable between $30-$35/MMBtu, while RNG sold to utilities, manufacturers and other end users in the voluntary market is marketable between $20-$25/MMBtu, with normal production costs around $15/MMBtu and under, Kinder Morgan's Holsapple told S&P Global.

These estimates conflict with NW Natural's RNG projections. The same S&P Global report notes that producers are expecting prices for RNG around $20/MMBtu for long-term projects:[116]

[115] See https://www.spglobal.com/commodityinsights/en/market-insights/latest-news/natural-gas/121622-rng-industry-expects-us-voluntary-customers-to-spur-demand-after-early-transport-boom last accessed March 11,2023.
[116] Ibid.

> A recent survey of 450 RNG producers by US clean energy consultancy EcoEngineers found that many companies are beginning to draw around $20/MMBtu for RNG sold into voluntary markets on a long-term basis.

Table 3 below compares the historic maximum and minimum EPA values in Figure , the values from S&P, and NW Natural's values for Tranche 1 and 2. Even NW Natural's projections for the higher-cost Tranche 2 are lower than historical and expected costs.

Table 3: RNG Cost Comparison

	Price
Tranche 1 (1/3 of NWN RNG Supply)	Portfolio cost of $14/MMBtu
Tranche 2 (2/3 of NWN RNG Supply)	Portfolio cost of $19/MMBtu
S&P long-term utility purchase of RNG	$20-25/MMBtu
S&P Transportation RNG	$30-35/MMBtu
Historic EPA D3 Cost – minimum (1/4/2021)	$22.46/MMBtu
Historic EPA D3 Cost – maximum (1/3/2022)	$40.95/MMBtu

Request 28 from Staff's opening comments requested further discussion supporting and providing justification for RNG, hydrogen, and synthetic [methane] cost assumptions. In the Company's response, it explains that "larger and larger scale RNG projects are being developed."[117] Further, the Company suggests, "if the utility developed RNG projects become a larger percentage of the utility's RNG portfolio, then costs for NW Natural customers will trend toward production costs."[118]

Staff agrees that utility-developed RNG projects will result in prices that trend toward production costs, as utility projects are generally provided to ratepayers at cost (plus rate-of-return). However, even the Company's Tranche 1 costs are lower that production costs noted by Kinder Morgan. Thus, it does not alleviate Staff's concerns with current long-term RNG price forecasts used in the IRP. Further, in the same section NW Natural cites World Resource Institute, which forecasts project costs from $3 to $30/MMBtu. The $30 is much higher than the Tranche 2 estimates, which top out at under $20/MMBtu. Overall, Staff is not persuaded by the Company's response regarding RNG price assumptions.

Staff understands that the Company provided a scenario with higher RNG costs in the 2022 IRP, however in the next IRP Staff would like to see a sensitivity with costs based on the higher end of recent, relevant publicly available forecasts. Additionally, given the wide range of forecast RNG prices, utilizing more than two tranches may help improve accuracy for costs and availability at different price ranges.

[117] See NW Natural reply comments at 59.
[118] *Ibid*.

Prior to the Company's next IRP technical working groups, Staff plans to explore engaging an independent third party to review the reasonableness of key technology and market assumptions for use in the next IRP.

Recommendation 38: For the next IRP, the Company should provide an analysis that would examine high-cost RNG, hydrogen, and synthetic gas as a sensitivity. The cost estimates should be on the higher end of recent, relevant publicly available forecasts, and the Company should provide the sources used for each cost forecast.

Recommendation 39: For the next IRP, the Company should provide a literature review of RNG price and availability forecasts.

4.9.2 - Hydrogen and Syngas Cost and Availability

Rose Anderson, Senior Economist

As discussed in Staff Opening Comments, NW Natural's estimates for hydrogen costs appear to be on the low end of available forecasts. NW Natural's hydrogen cost trajectory, based on advice from third party consultants, is among the lowest forecasts for hydrogen prices that Staff has reviewed. However, aggressive cost declines for green hydrogen are a real possibility given that renewable energy is ever-more abundant in the region and recent policies have taken aim at significantly reducing the cost of green hydrogen.

In Opening Comments, CUB argues that NW Natural's hydrogen cost estimates are concerning in part because the Company's IRP described hydrogen electrolyzers as dispatching opportunistically based on wholesale market prices. CUB argues that any electric rate paid by NW Natural to an electric utility is not likely to reflect opportunistic wholesale market prices. Staff agrees with this assessment. However, in NW Natural's Reply Comments, the Company explains that IRP hydrogen costs include the cost of a dedicated renewable resource and are not based on opportunistic wholesale market purchases.[119,120]

Staff reviewed the sources provided by the Company for its hydrogen cost estimates and finds that the materials provided offer only minimal support for the Company's estimates. While consultants provided cost estimates for a variety of hydrogen projects, NW Natural provided no clear documentation of its process for translating the third-party studies to a hydrogen price forecast that reflects NW Natural's unique circumstances. Electrolyzer size, capacity factor, and the manner of obtaining renewable energy are all important to the cost of hydrogen, and it is unclear what assumptions were used in this IRP. For example, **[Begin Confidential]** [redacted]

Re: RG 41: Meter Sampling Program Report for 2019

At the request of Commission Staff, Northwest Natural Gas Company, dba NW Natural, submits herewith its 2019 Meter Sampling Program Report.

As required by our Meter Testing Standards and Procedures document, the accuracies of all operating families of diaphragm meters with capacities 1000 ft^3/hr and below have been statistically analyzed for the year 2019. This analysis utilized all relevant meter tests conducted during the five calendar years between January 1, 2014 and December 31, 2019. The results of this analysis are as follows:

- As of December 31, 2019, we had 728,495 installed meters covered under the Meter Sampling Program. These meters formed 410 meter families. This total does not include meters determined to be non-conforming.
- Over the course of 2019, the company tested 5,271 meters. Over the five-year period of 2014 through 2019, the company had a total of 29,353 meter samples from which to base its results.
- 404 meter families either had sufficient meter samples to establish statistical confidence in their accuracy, or are so new that they do not yet require minimum sampling. These meter families amount to 706,867 meters, or 97 percent of the total meter population. The performances of these families are exhibited in Appendix A.
- 9 new meter families were added in 2019. 3 meter families were removed from service due to small family size, during the normal course of business.
- 34 meter families, consisting of a total of 42,046 meters, are not conforming. Due to the number of meters requiring change-out (5.5% of the total population), these meters have been put on the list to be removed over the course of the next 4 years, by December 2023, per Meter Sampling Program (MSP) guidelines outlined in NW Natural Engineering Procedure Z-1. The performance of these families is exhibited in Appendix B.
- A further breakdown of the non-conforming meter families and associated meters described above are as follows, the performance of these families is exhibited in Appendix B:
    - 17 meter families, totaling 41,876 meters had sufficient meter tests available to have their accuracy determined statistically and determined non-conforming.
    - 15 meter families, totaling 52 meters, will be removed from service due to their small population size and age.
    - 2 meter families, totaling 118 meters will be removed from service due to small family size and sampling requirements exceeding 34% of the total family population.
- Compared to the results above, the Year 2018 report resulted in 11,566 meters being put on the list for removal by the end of 2019.

If you have any questions or comments, please contact me at (503) 226-4211 ext. 5542.

e-FILING REPORT COVER SHEET

COMPANY NAME: NW Natural

DOES REPORT CONTAIN CONFIDENTIAL INFORMATION? ☐ No ☐ Yes If yes, submit a redacted public version (or a cover letter) by email. Submit the confidential information as directed in OAR 860-001-0070 or the terms of an applicable protective order.

Select report type: ☐ RE (Electric) ☐ RG (Gas) ☐ RW (Water) ☐ RT (Telecommunications)
☐ RO (Other, for example, industry safety information)

Did you previously file a similar report? ☐ No ☐ Yes, report docket number: RG 41

Report is required by: ☐ OAR
☐ Statute
☐ Order
Note: A one-time submission required by an order is a compliance filing and not a report (file compliance in the applicable docket)
☑ Other At request of Commission Staff
(For example, federal regulations, or requested by Staff)

Is this report associated with a specific docket/case? ☐ No ☐ Yes, docket number: RG 41

List Key Words for this report. We use these to improve search results.

Meter Sampling for 2020, NW Natural

Send the completed Cover Sheet and the Report in an email addressed to PUC.FilingCenter@state.or.us

Send confidential information, voluminous reports, or energy utility Results of Operations Reports to PUC Filing Center, PO Box 1088, Salem, OR 97308-1088 or by delivery service to 201 High Street SE Suite 100, Salem, OR 97301.

Re: RG 41: Meter Sampling Program Report for 2020

At the request of Commission Staff, Northwest Natural Gas Company, dba NW Natural, submits herewith its 2020 Meter Sampling Program Report.

As required by our Meter Testing Standards and Procedures document, the accuracies of all operating families of diaphragm meters with capacities 1000 ft^3/hr and below have been statistically analyzed for the year 2020. This analysis utilized all relevant meter tests conducted during the five calendar years between January 1, 2015 and December 31, 2020. The results of this analysis are as follows:

- As of December 31, 2020, 732,541 installed meters are covered under the Meter Sampling Program. These meters formed 383 distinct meter families. This total does not include meters determined to be non-conforming.
- Over the course of 2020, the company tested 8,247 meters. Over the five-year period of 2015 through 2020, the company had a total of 31,269 meter samples from which to base its results.
- 372 meter families either had sufficient meter samples to establish statistical confidence in their accuracy, or are so new that they do not yet require minimum sampling. These meter families amount to 699,268 meters, or 95 percent of the total meter population. The performances of these families are exhibited in Appendix A.
- 11 new meter families were added in 2020. 20 meter families were removed from service due to small family size, during the normal course of business. 7 meter families were removed from service due to the number of supplementary samples required exceeding 50% of the family size, with a family size less than 100 meters.
- 40 meter families, consisting of a total of 27,204 meters, are not conforming. Due to the number of meters requiring change-out (3.7% of the total population), these meters have been put on the list to be removed over the course of the next 4 years, by December 2024, per Meter Sampling Program (MSP) guidelines outlined in NW Natural Engineering Procedure Z-1. The performance of these families is exhibited in Appendix B.
- A further breakdown of the non-conforming meter families and associated meters described above are as follows, the performance of these families is exhibited in Appendix B:
    - 13 meter families, totaling 27,069 meters had sufficient meter tests available to have their accuracy determined statistically and determined non-conforming.

NW Natural®

250 SW Taylor Street
Portland, OR 97204

503-226-4211
nwnatural.com

- 20 meter families, totaling 45 meters, will be removed from service due to their small population size and age.
- 7 meter families, totaling 90 meters, will be removed from service due to a family size less than 100 meters, and sampling requirements exceeding 50% of the total family population.

- Compared to the results above, the Year 2019 report resulted in 42,046 meters being put on the list for removal by December 2023.
- Regarding the planned 4-year removal of meters determined non-conforming in 2019, 15,084 meters remain of the 42,046 meters determined non-conforming for removal in 2020 to 2023. The remaining meters are planned to be removed by December 2023.

If you have any questions or comments, please contact me at 503-610-7494.

Sincerely,
/s/ *Michael J. McKenzie*

e-FILING REPORT COVER SHEET

COMPANY NAME: NW Natural

DOES REPORT CONTAIN CONFIDENTIAL INFORMATION? ☐ No ☐ Yes If yes, submit a redacted public version (or a cover letter) by email. Submit the confidential information as directed in OAR 860-001-0070 or the terms of an applicable protective order.

Select report type: ☐ RE (Electric) ☐ RG (Gas) ☐ RW (Water) ☐ RT (Telecommunications)
☐ RO (Other, for example, industry safety information)

Did you previously file a similar report? ☐ No ☐ Yes, report docket number: RG 41

Report is required by: ☐ OAR
☐ Statute
☐ Order
Note: A one-time submission required by an order is a compliance filing and not a report (file compliance in the applicable docket)
☑ Other At request of Commission Staff
(For example, federal regulations, or requested by Staff)

Is this report associated with a specific docket/case? ☐ No ☐ Yes, docket number: RG 41

List Key Words for this report. We use these to improve search results.

Meter Sampling for 2020, NW Natural

Send the completed Cover Sheet and the Report in an email addressed to PUC.FilingCenter@puc.oregon.gov

Send confidential information, voluminous reports, or energy utility Results of Operations Reports to PUC Filing Center, PO Box 1088, Salem, OR 97308-1088 or by delivery service to 201 High Street SE Suite 100, Salem, OR 97301.

Re: RG 41: Meter Sampling Program Report for 2021

At the request of Commission Staff, Northwest Natural Gas Company, dba NW Natural, submits herewith its 2021 Meter Sampling Program Report.

As required by our Meter Testing Standards and Procedures document, the accuracies of all operating families of diaphragm meters with capacities 1000 ft^3/hr and below have been statistically analyzed for the year 2021. This analysis utilized all relevant meter tests conducted during the five calendar years between January 1, 2016 and December 31, 2021. The results of this analysis are as follows:

- As of December 31, 2021, 787,474 meters are installed and covered under the Meter Sampling Program. Of these, 735,372 meters, forming 368 distinct meter families, are conforming. The remaining 52,102 are non-conforming and are scheduled for replacement.
- Over the course of 2021, the company tested 5,790 meters. Over the five-year period of 2016 through 2021, the company had a total of 31,609 meter samples from which to base its results.
- 357 meter families either had sufficient meter samples to establish statistical confidence in their accuracy, or are so new that they do not yet require minimum sampling. These meter families amount to 719,174 meters, or 91 percent of the total meter population. The performances of these families are exhibited in Appendix A.
- 12 new meter families were added in 2021. 14 meter families were removed from service due to small family size, during the normal course of business. 4 meter families were removed from service due to the number of supplementary samples required exceeding 50% of the family size, with a family size less than 100 meters.
- 30 meter families, consisting of a total of 35,677 meters, are not conforming. Due to the number of meters requiring change-out (4.5% of the total population), these meters have been put on the list to be removed over the course of the next 4 years, by December 2025, per Meter Sampling Program (MSP) guidelines outlined in NW Natural Engineering Procedure Z-1. The performance of these families is exhibited in Appendix B.
- A further breakdown of the non-conforming meter families and associated meters described above are as follows, the performance of these families is exhibited in Appendix B:
    - 12 meter families, totaling 35,511 meters had sufficient meter tests available to have their accuracy determined statistically and determined non-conforming.

503-226-4211
nwnatural.com

  - 14 meter families, totaling 41 meters, will be removed from service due to their small population size and age.
  - 4 meter families, totaling 125 meters, will be removed from service due to a family size less than 100 meters, and sampling requirements exceeding 50% of the total family population.
- Compared to the results above, the Year 2020 report resulted in 27,204 meters being put on the list for removal by December 2024.
- Regarding the planned 4-year removal of meters determined non-conforming in 2019 and 2020, the following meters remain:
  - PCC Year 2020 (for removal 2020 to 2023): 5,906 remain out of 42,046 determined
  - PCC Year 2021 (for removal 2021 to 2024): 14,113 remain out of 27,204 determined
  - PCC Year 2022 (for removal 2022 to 2025): 32,083 remain out of 35,677 determined

e-FILING REPORT COVER SHEET

COMPANY NAME: NW Natural

DOES REPORT CONTAIN CONFIDENTIAL INFORMATION? ☐ No ☐ Yes If yes, submit a redacted public version (or a cover letter) by email. Submit the confidential information as directed in OAR 860-001-0070 or the terms of an applicable protective order.

Select report type: ☐ RE (Electric) ☐ RG (Gas) ☐ RW (Water) ☐ RT (Telecommunications)
☐ RO (Other, for example, industry safety information)

Did you previously file a similar report? ☐ No ☐ Yes, report docket number: RG 41

Report is required by: ☐ OAR
☐ Statute
☐ Order
Note: A one-time submission required by an order is a compliance filing and not a report (file compliance in the applicable docket)
☑ Other At request of Commission Staff
(For example, federal regulations, or requested by Staff)

Is this report associated with a specific docket/case? ☐ No ☐ Yes, docket number: RG 41

List Key Words for this report. We use these to improve search results.

Meter Sampling for 2020, NW Natural

Send the completed Cover Sheet and the Report in an email addressed to PUC.FilingCenter@state.or.us

Send confidential information, voluminous reports, or energy utility Results of Operations Reports to PUC Filing Center, PO Box 1088, Salem, OR 97308-1088 or by delivery service to 201 High Street SE Suite 100, Salem, OR 97301.

Re: RG 41: Meter Sampling Program Report for 2022

At the request of Commission Staff, Northwest Natural Gas Company, dba NW Natural, submits herewith its 2022 Meter Sampling Program Report.

As required by our Meter Testing Standards and Procedures document, the accuracies of all operating families of diaphragm meters with capacities 1000 ft^3/hr and below have been statistically analyzed for the year 2022. This analysis utilized all relevant meter tests conducted during the five calendar years between January 1, 2017, and December 31, 2022. The results of this analysis are as follows:

- As of December 31, 2022, 791,368 meters are installed and covered under the Meter Sampling Program. Of these, 695,137 meters, forming 369 distinct meter families, are conforming. The remaining 96,231 meters forming 78 distinct meter families are non-conforming and are scheduled for replacement. 60 non-conforming meter families were identified in prior years and 18 new meter families were identified as non-conforming in 2022. The 96,231 non-conforming meters represent 12 percent of the total meter population.
- Over the course of 2022, the company tested 9,577 meters. Over the five-year period of 2017 through 2022, the company had a total of 37,442 meter samples from which to base its results.
- 369 meter families either had sufficient meter samples to establish statistical confidence in their accuracy, or are new for 2022. These meter families amount to 695,137 meters, or 88 percent of the total meter population. The performances of these families are exhibited in Appendix A.
- 1 meter family, Perf #572, the 2005 Sensus R-275, was previously declared PCC for PCC Year 2022. However, after performing and evaluating the results of 5,569 meter tests in 2021 and 2022, specific delivery lots of these meters were determined to be non-conforming, while other lots remained conforming. Due to this, a population of 6,673 meters were removed from the PCC schedule and will remain in the Meter Sampling Program. As of 12/31/2022, 4,424 meters from specific lots of Perf #572, 2005 Sensus R-275 remain listed for removal in the 2022 PCC program.
- 12 new meter families were added in 2022, reflecting new meters placed in service during the normal course of business, as well as meter replacements to replace non-conforming meters. 8 meter families were removed from service, due to small family size, during the normal course of business. 3 meter families were removed from service due to the number of supplementary samples required exceeding 50% of the family size, with a family size less than 100 meters.

mike.mckenzie@nwnatural.com

250 SW Taylor Street
Portland, OR 97204
503-226-4211
nwnatural.com

- 18 meter families, consisting of a total of 70,251 meters at the time of declaration, were identified as not conforming in 2022. Due to the number of meters requiring change-out (8.9% of the total population), these meters have been put on the list to be removed over the course of the next four years, by December 2026, per Meter Sampling Program (MSP) guidelines outlined in NW Natural Engineering Procedure Z-1. The performance of these families is exhibited in Appendix B.
- A further breakdown of the 18 non-conforming meter families and associated meters described above are as follows, the performance of these families is exhibited in Appendix B:
    - 7 meter families, totaling 70,167 meters had sufficient meter tests available to have their accuracy determined statistically and determined non-conforming. Significant results include:
        - 42,486 meters from the 2006 & 2007 American AC-250 meter families make up the bulk of this lot, reflecting the last American AC-250 meters in service from the 2005-2010 timeframe.
        - 13,495 American AL-175 meters from 1987, 1989, 1991
        - 14,106 American AC-250 meters from 1998
    - 8 meter families, totaling 25 meters, will be removed from service due to their small population size and age.
    - 3 meter families, totaling 59 meters, will be removed from service due to a family size less than 100 meters, and sampling requirements exceeding 50% of the total family population.
- Compared to the results above, the Year 2021 report resulted in 35,677 meters being put on the list for removal by December 2025.
- Regarding the planned four year removal of meters determined non-conforming from 2019-2022, the following meters remain:
    - PCC Year 2020 (for removal 2020 to 2023): 2,583 remain out of 42,046 determined
    - PCC Year 2021 (for removal 2021 to 2024): 9,487 remain out of 27,204 determined
    - PCC Year 2022 (for removal 2022 to 2025): 14,977 remain out of 35,677 determined
    - PCC Year 2023 (for removal 2023 to 2026): 69,184 remain out of 70,251 determined
- Consistent with the NW Natural's tariff, bills for meters that are subject to the four year removal schedule and are later found to not meet the accuracy requirement are deemed subject to refund to customers based on the date when the meter family was determined to require change-out to the date the meter was replaced.

e-FILING REPORT COVER SHEET

COMPANY NAME: NW Natural

DOES REPORT CONTAIN CONFIDENTIAL INFORMATION? ☐ No ☐ Yes If yes, submit a redacted public version (or a cover letter) by email. Submit the confidential information as directed in OAR 860-001-0070 or the terms of an applicable protective order.

Select report type: ☐ RE (Electric) ☐ RG (Gas) ☐ RW (Water) ☐ RT (Telecommunications)
☐ RO (Other, for example, industry safety information)

Did you previously file a similar report? ☐ No ☐ Yes, report docket number: RG 41

Report is required by: ☐ OAR
☐ Statute
☐ Order
Note: A one-time submission required by an order is a compliance filing and not a report (file compliance in the applicable docket)
☑ Other At request of Commission Staff
(For example, federal regulations, or requested by Staff)

Is this report associated with a specific docket/case? ☐ No ☐ Yes, docket number: RG 41

List Key Words for this report. We use these to improve search results.

Meter Sampling for 2020, NW Natural

Send the completed Cover Sheet and the Report in an email addressed to PUC.FilingCenter@puc.oregon.gov

Send confidential information, voluminous reports, or energy utility Results of Operations Reports to PUC Filing Center, PO Box 1088, Salem, OR 97308-1088 or by delivery service to 201 High Street SE Suite 100, Salem, OR 97301.

Re: RG 41: Meter Sampling Program Report for 2023

At the request of Commission Staff, Northwest Natural Gas Company, dba NW Natural, submits herewith its 2023 Meter Sampling Program Report.

As required by our Meter Testing Standards and Procedures document, the accuracies of all operating families of diaphragm meters with capacities 1000 ft^3/hr and below have been statistically analyzed for the year 2023. This analysis utilized all relevant meter tests conducted during the five calendar years between January 1, 2018, and December 31, 2023. The results of this analysis are as follows:

- As of December 31, 2023, 803,119 meters are installed and covered under the Meter Sampling Program. Of these, 716,844 meters, forming 362 distinct meter families, are conforming. The remaining 86,275 meters form 83 distinct meter families and are non-conforming and are scheduled for replacement. 59 non-conforming meter families were identified in prior years and 24 new meter families were identified as non-conforming in 2023. The 86,275 non-conforming meters represent 10.7 percent of the total meter population.
- Over the course of 2023, the company tested 7,996 meters. Over the five-year period of 2018 through 2023, the company had a total of 41,217 meter samples from which to base its results.
- 362 meter families either had sufficient meter samples to establish statistical confidence in their accuracy, or are new for 2023. These meter families amount to 716,844 meters, or 89.3 percent of the total meter population. The performances of these families are exhibited in Appendix A.
- 14 new meter families were added in 2023, reflecting new meters placed in service during the normal course of business, as well as meter replacements to replace non-conforming meters. 17 meter families were removed from service due to small family size, during the normal course of business. 4 meter families were removed from service due to the number of supplementary samples required exceeding 50 percent of the family size, with a family size less than 100 meters.
- 25 meter families, consisting of a total of 2,612 meters at the time of declaration, were identified as not conforming in 2023. Per Meter Sampling Program (MSP) guidelines outlined in NW Natural Engineering Procedure Z-1, these will be removed by the end of 2024. The performance of these families is exhibited in Appendix B.
    - The 2023 Meter Sampling Annual Report shows a significant decrease in meters declared non-conforming when compared to the 2022 annual report. In 2022, NW Natural declared 70,251 meters as non-conforming, which consisted predominantly of 42,486 American AC-250 meters

NW Natural®

nwnatural.com

set in 2006 and 2007, and an additional 14,106 American AC-250 meters set in 1998. These meter families are large, and were predominantly made up of the American meter families that NW Natural has seen fail earlier than expected, which were set from 2005-2009. Those meters from 2005-2009 have now all been declared PCC. For 2023, NW Natural has seen what we would consider a more typical year with only one larger meter family, the 1994 American AL-175 being declared PCC, and we would expect this trend to continue as meters age into the 30-40 year range.

- A further breakdown of the 25 non-conforming meter families and associated meters described above are as follows, the performance of these families is exhibited in Appendix B:
  - 4 meter families, totaling 2,525 meters had sufficient meter tests available to have their accuracy determined statistically and determined non-conforming.
  - 17 meter families, totaling 33 meters, will be removed from service due to their small population size and age.
  - 4 meter families, totaling 54 meters, will be removed from service due to a family size less than 100 meters, and sampling requirements exceeding 50 percent of the total family population.
- Compared to the results above, the Year 2022 report resulted in 70,251 meters being put on the list for removal over five years by December 2026.
- Regarding the planned four-year removal of meters determined non-conforming from 2020-2023, the following meters remain:
  - PCC Year 2020 (for removal 2020 to 2023): 1 remains out of 42,252 determined
    - 1 meter remains for PCC Year 2020 due to access issues.
  - PCC Year 2021 (for removal 2021 to 2024): 6,515 remain out of 27,898 determined.
  - PCC Year 2022 (for removal 2022 to 2025): 9,783 remain out of 35,677 determined.
  - PCC Year 2023 (for removal 2023 to 2026): 67,484 remain out of 70,251 determined.
  - PCC Year 2024 (for removal in 2024): 2,492 remain out of 2,612 determined.

If you have any questions or comments, please contact me at matt.miller@nwnatural.com.

Sincerely,
/s/ *Matt Miller*

Opening Testimony
IT&S Projects, Cloud-based Software, Administrative and General Expenses

April 18, 2024

Docket No: UG 490

Staff/1000
Dyck/1

Q. Please state your name, occupation, and business address.

A. My name is Julie Dyck. I am a Senior Economist/Utility Analyst employed in the Energy Costs Section of the Rates, Safety and Utility Performance (RSUP) Program of the of the Public Utility Commission of Oregon (OPUC). My business address is 201 High Street SE., Suite 100, Salem, Oregon 97301.

Q. Please describe your educational background and work experience.

A. My witness qualifications statement is found in exhibit Staff/1001.

Q. What is the purpose of your testimony?

A. My testimony details the recommendations by Staff regarding IT&S projects, cloud-based software, and administrative and general (non-labor) expenses.

Q. Did you prepare an exhibit for this docket?

A. Yes. I prepared Exhibit Staff/1002, comprised of Northwest Natural non-confidential responses to Staff data requests and Exhibit Staff/1003, which includes Northwest Natural confidential responses to data requests.

Q. How is your testimony organized?

A. My testimony is organized as follows:

Issue 1. IT&S Projects and Cloud-Based Software 2
Table 1: Intangible Software Plant Accounts 8
Table 2: IT&S Projects that go into place by the Test Year 9
Table 3: Contingency Funds 11
Table 4: FTE Count of IT Staff 21
Issue 2. Administrative and General (Non-Labor) Expense 23
Figure 1: OR Allocated FERC 921 Expenses 26
Figure 2: OR Allocated FERC 930 Expenses 27
Figure 3: OR Allocated FERC 931 Expenses 28
Table 5: FERC 930 Expenses to be Shared 29
Table 6: Non-Labor Adjustments using updated escalation values 31

Docket No: UG 490 Staff/1000
Dyck/2

ISSUE 1. IT&S PROJECTS AND CLOUD-BASED SOFTWARE

Q. Please summarize where NW Natural's IT&S Projects can be found.

A. In NWN Natural's Exhibit/700, Company witness Downing provides an overview of 11 separate Information Technology (IT) projects that are expected to be in service by the rate effective date of November 1, 2025. IT&S rate base expenses are found in FERC Accounts 303 (Miscellaneous tangible plant), 391 (Office furniture and equipment), and 397 (Communication equipment); this Testimony focuses mostly on amounts recorded in FERC Accounts 303. Although there are O&M related IT&S expenses that are in additional FERC accounts, they are analyzed by different Staff in their respective testimonies. For example, I analyze Office supplies and expenses (FERC 921) in Issue 3 that contain IT&S related O&M expenses.

Q. Detail how IT&S project costs are split.

A. IT&S project costs are split between capital and O&M. The Company's Capital Asset Policy outlines what is considered capital vs O&M and general guidance is included in the Company's Project Management Handbook.[1] IT Software (on-premises, cloud licensing, and maintenance) and hardware (initial purchase and on-premises maintenance) are typically capital meanwhile project management costs are typically charged to O&M expense accounts.

IT Projects (electronic equipment and computer software/hardware equipment) have continued to be a main driver of NW Natural's capital expenditures. According to NW Natural, "[t]hese costs have experienced an

[1] Staff/1002, DR 162 Attachment 1, Project Management Handbook, 22-23.

increase due to cybersecurity threats and other increasing demands and complexity in the IT arena."[2] NW Natural explains that another driver of capital costs is that the cost of first-year maintenance paid as part of the software purchase is capitalized, as are additional costs related to changes in system design and/or system selection during implementation and the development of process manuals and documentation.[3]

Q. Distinguish between the terms cloud-based software and IT&S investments.

A. Cloud-based software and non-cloud-based software fall under the umbrella of IT&S investments.[4] Migration to the cloud is sometimes necessary to avoid transitioning to a new software system or tool, and cloud-based software can be more quickly updated. "Providers like Amazon Web Services (AWS), Microsoft Azure, and Google Cloud Platform have become essential partners for businesses of all sizes."[5] The Company explained five detailed ways that cloud-based and non-cloud-based options differ. Cloud based solutions:

1. Are hosted and managed by third-party providers as opposed to on-premises solutions that have Company owned hardware and equipment.
2. Are more flexible and scalable as there is not a need to usually invest in additional hardware.

---

4 Staff/1002, NWN Response to DR 156 (pdf). See also NWN/700, Downing/8-11 for a detailed discussion of the differences between the two basic IT&S hosting options: cloud-based and on-premises.
5 Staff/1002, NWN Response to DR 156 Attachment 1 (pdf).

3. Create an incremental O&M increase that escalates through time because businesses only pay for the resources they use on a monthly or yearly basis. Therefore, the programs can be capitalized but the depreciation is approximately five years which often cause a lag in recovery.
4. Tend to be more reliable and secure as the cloud providers invest heavily in security measures and disaster recovery protocols.
5. Typically have automatic upgrades and updates for hardware and security, which reduces IT burden.

Q. Was cloud-based software addressed in previous GRCs?

A. Yes, it was discussed in NW Natural's two most recent rate cases, UG 435[6] (2022) and UG 388 (2020).[7] In UG 435, the Commission adopted a stipulation under which the Horizon 1 cloud-based assets are amortized into rates over a ten-year life.[8] In that stipulation, NW Natural agreed that if the asset was removed from service in less than ten years, the Company would apply the modified blended treasury (MBT) rate to the remaining balance of the asset and defer the difference between the Company's cost of capital and the MBT rate until such time that general rates are changed.[9] In UG 388, while no IT-related issues were in the final settlement, Staff did initially propose the

7 See UG 388, NWN/600, Downing/11-14, 16-27, 39, 50; UG 435 NWN/1600, Downing/22.
8 *See also In the Matter of Northwest Natural Gas Company, Application for Accounting Order for Approval of Depreciation and Amortization of Rates for Investment in Certain Software*, UM 2215, Order No. 23-079 (March 10, 2023) (Accounting order authorizing NWN to use ten-year amortization period for cloud-based asset and implementation costs).
9 *In the Matter of Northwest Natural Gas Company, Request for a General Rate Revision*, UG 435, Order No. 22-388, Appendix A Page 9 of 37.

reduction of support for Microsoft Office 365 and IT&S staffing. It appears that Staff had no issues with NWN rate basing various amounts from IT projects in UG 435 and UG 388.

Q. Does NW Natural include cloud-based assets in its rate base for this GRC?

A. Yes. Staff is also under the impression that licenses fees and hosting fees are not included in these totals. While implementation costs can be capitalized, license fees can only be capitalized under certain conditions, and hosting fees and maintenance/support are O&M expenses. Staff asks that the Company specify in their Reply Testimony whether there are license or hosting fees included in rate base. If these fees are included, the Company should explain what licensing fees or hosting fees are included as part of rate base and explain the rationale.[10] If Staff's current assumption that there are no such fees is incorrect, Staff will update its recommendation in subsequent testimonies.

Q. Please explain NW Natural's rationale for including cloud-based assets in rate base.

A. The Company explains that whether "Cloud Computing Arrangements" meet the criteria for capitalization is determined under accounting rules. FERC (Regulatory) and GAAP do not differ on the types of costs that can be capitalized or expensed for Cloud Computing Arrangements. NW Natural states that "FERC made a final ruling on ASU 2018-15: Customer's Accounting

[10] This was an issue that was brought up in Robert Young's testimony in Exh 2100 in UE 416, PGE's previous GRC.

for Implementation Costs Incurred in a Cloud Computing Arrangement that is a Service Contract to all jurisdictional public utilities and licenses, natural gas companies and centralized service companies. For regulatory accounting, capitalized implementation costs should be recorded as utility plant assets in FERC Account 303 (Misc. intangible plant - computer software) and should be amortized over the term of the associated cloud computing arrangement in FERC Account 403 (Depreciation expense)."[11]

Q. Please describe how the IT&S individual business unit develops their forecast for capital.

A. The Company and each business unit use a bottom-up approach which is typically driven by business needs. Business units coordinate with the Portfolio Management Committee (PMC) to discuss, review, prioritize, and approve funding for projects. Following approval, projects are included into the forecast cycle.

However, the Company's strategy for cloud-based solutions was developed in partnership with Deloitte.[12] **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**[13]

[11] Staff/1002, NWN Response to DR 416 (pdf).
[12] NW Natural/700, Downing/8.
[13] Staff/1003, NWN Response to CONF DR 168 Attachment 1 Page 7 of 21. See also Staff/1002, NWN Response to DR 162 Attachment A (pdf), Page 5 and page 21 are included as an attachment to show the capital planning process in more detail. Page 37 of 50 details that Planview is NW Natural's Project Portfolio Management (PPM) tool. Projects are required to leverage Planview for stage gates, status reporting, schedules, resource management and budgeting, as it serves as the source of truth for much of NWN's rates reporting.

Q. What is the Commission historical treatment of IT capital investment?

A. In previous rate cases, Staff has performed prudence reviews and examined whether the investment satisfies the "used and useful" criteria to determine whether IT investments are includable in rates.[14] Past Staff testimony has focused on a few IT&S projects that were cause for concern. It is also important to acknowledge that there is a knowledge asymmetry that exists between IT&S Staff at the Company and OPUC Staff when it comes to analyzing whether expenses were prudent. This is usually the case with more specialized expense categories but is also mitigated by Staff issuing multiple DRs, reading past testimonies, participating in workshops, and covering the same issue in multiple GRCs.

Q. How did Staff review and analyze the proposed IT projects?

A. Staff initially reviewed Mr. Downing's testimony, noting in particular the Company's statements regarding the current age and cybersecurity vulnerabilities of certain legacy information systems the "IT Projects" will replace. Staff issued a number of data requests to gain a better understanding of the underlying functionality of the proposed projects, why they are needed now, and what steps the Company took to achieve least cost/least risk solutions.[15]

Q. Please detail the IT&S projects that are requested for UG 490 and expected to go into place by the Test Year.

---

[14] See *In the Matter of PacifiCorp Request for a General Rate Revision,* Docket No. UE 246, Order No. 12-493 at 25 (Dec. 20, 2012).

[15] Staff issued DRs 156-187 and 408-428 on IT&S related expenses.

A. Rate base IT&S expenditures are found in the "Intangible" and "General" categories of utility plant in service. The Intangible plant is fully comprised of IT&S capital expenditures. IT&S expenditures within the General category are isolated to FERC Accounts 391 for Computers, Computer Horizon, and Computer Bloodhound.[16] **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL].**[17] Average rate base balances were calculated using monthly forecast amounts to construct a 10-month AMA for all rate base components.[18] Table 1 shows a list of the plant accounts included. However, Staff's analysis primarily focuses on the IT&S Projects that are listed in Table 2 and described in NWN/700, as these are new projects that are expected to be in place by the Test Year.

TABLE 1: INTANGIBLE SOFTWARE PLANT ACCOUNTS

FERC	Description
303.1	Computer Software
303.2	Customer Information System
303.3	Industrial & Commercial BIL
303.4	CRMS
303.7	Cloud-Based Software
303.11	Computer SW Horizon
303.12	Computer SW Bloodhound
303.71	Cloud-Based SW Horizon

16 Staff/1002, NWN Response to DR 411 (pdf).
17 See CONF workpaper on Rate base and accumulated depreciation in the rate base net plant tab; see also Staff/1002, NWN Response to DR 411 Attachment 1 (excel). While the information included in the response to DR 411 Attachment 1 is non-confidential, Staff labeled this statement as confidential to err on the side of caution since the other workpaper is conf.
18 See NWN/1700, Walker/29.

303.71	Cloud-Based SW Bloodhound

TABLE 2: IT&S PROJECTS THAT GO INTO PLACE BY THE TEST YEAR

Projects	Capital Investment	Incremental O&M[19]	Cloud Based
IQGeo Upgrade Project (Field and Web Mapping)	$1.71M System ($1.5M Oregon Allocated)		Y
MapFrame Replacement Project (General Map viewer)	$5.5M System ($4.8M)		N
Composition 2.0 Project (Customer Bills)	$4.4M System ($3.9M)	$87K ($77K OR Allocated) for hardware and software licensing	N
Genesys Re-platform Project (Call Routing Software)	$2.3M System ($2.0M)	$289K ($254K)	Y
Start-Stop-Transfer Project (Relocate Service)	$2.7M ($2.4M)		N
Clevest Optimization Project (Mobile workforce management software)	$7.5M ($6.6M)		N
Identity Governance and Administration Automation Project (Secure onboarding and offboarding)	$3.0M ($2.6M)	$113K ($99K for software licensing)	Y
Telemetry Refresh Projects (Remote monitoring and control sites)	$6.8M ($6.0M). Of this amount, $4.1M ($3.6M) is associated with the One Pacific Square (OPS) 4-wire sites.[20]		N
Utilities International Planner Re-platform Project (UI Planning System)	$1.8M ($1.6M)	$208K ($183K)	Y
PowerPlan Project (Capital Settlement Process)	$1.7M ($1.5M)		N
SAP Treasury Project	$2.9M ($2.5M)		N
Total	$40.31M ($35.4)	$697K (613K)	

Q. Do any of the projects have prepayments?

[19] These amounts are viewable in IT&S forecast tab and show the amounts that are attributable to things other than inflation.
[20] The Company's former headquarters.

A. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**[21] "For each of the contracts entered into for the IT&S projects included in Exhibit 700, the payment terms were for 30 days after receiving an invoice (i.e., "Net 30")."[22]

Q. Which projects are considered out of service in the Test Year?

A. The Genesys and Utilities International (UI) Planner are two projects that are going out of service and will be re-platformed. The remaining rate base amounts as of October 1, 2023, are -$3,404,683 and -$331,789, respectively. NWN did not include these projects in its forecasted retirements and will therefore update this in its Reply Testimony.[23]

Q. Have these projects been moved into a regulatory asset account?

A. No. "The Company uses the Group Depreciation Method which does not depreciate these assets individually, the total cost of the group is spread out over the useful life of the entire group. Through the depreciation study process the Company reassess the useful life and salvage value of the assets in each group, including retirements, and adjustments to depreciation rates may be made accordingly."[24]

24 Staff/1002, NWN Response to DR 415 (pdf).

Docket No: UG 490

Staff/1000
Dyck/11

Q. Does Staff have any adjustments before discussing each of the individual IT Projects?

A. Yes. Out of the 11 projects referenced above in Table 2, only eight of those projects have contingency funds. Staff recommends removing the contingency funds of five projects,[25] which results in a total adjustment to NW Natural's proposed rate base of ($1,649,887), Oregon allocated. Of the remaining three projects below, two projects have already used them, one project I am recommending to be removed in its entirety, and it was stated that other projects are not expected to use their contingency funds.[26] Of the eight projects below, one is supposed to be in service 1/24, one is supposed to be in service 6/24, and the other six are supposed to be in service September or October of 2024. Therefore, if the contingency funds have not been used yet, they are unlikely to be used.

TABLE 3: CONTINGENCY FUNDS

Project	Project #	Contingency		Contingency Used
		System Level	Oregon Allocated	
SAP Treasury	I-202722	$ 100,000	$ 87,890	$ 100,000
Comp 2.0	I-202725	$ 262,180	$ 230,430	$ -
Identity Governance & Admin	I-202723	$ 200,000	$ 175,780	$ -
IQGeo Upgrade	I-202804	$ 100,000	$ 87,890	$ 100,000
Clevest	I-202721	$ 645,038	$ 566,924	$ -
TSA	I-202667	$ 430,000	$ 377,927	$ -
MapFrame	I-202862	$ 340,000	$ 298,826	$ -
Genesys	I-202840	$ 200,000	$ 175,780	$ -

[25] This excludes SAP Treasury, IQ Geo Upgrade, and Genesys. The reason for the exclusion of Genesys is described later. The other two projects have already used their contingency funds.

[26] Staff/1002, NWN Response to DR 185 Attachment 1 (excel) and NWN Response to DR 424 (pdf).

Q. What is IQGeo Software and does Staff have any concerns with including costs of this investment in rate base?

A. IQGeo Software is a web mapping tool. NW Natural states it uses mapping tools to provide field and office personnel with visual online and offline representations of NW Natural facilities and assets, which they use for various business purposes, including inspection compliance programs.[27] NW Natural has upgraded the IQGeo software because it is no longer fully supported, and the project will re-platform the software to a new more cybersecure cloud environment. Staff has reviewed the rationale and costs of the investment and has identified no concerns. NW Natural anticipated that this project will be online in January 2024.

Q. What is MapFrame and does Staff have concerns with including this investment in rate base?

A. MapFrame transitions away from an existing end-of-life software system that has not received a software update from its developer since 2015. Staff reviewed the costs of the project and has not identified costs that should be disallowed. NW Natural anticipates that this project will be online by the end of Summer 2024, so the project should be used and useful before the effective date of rates filed in this case.

Q. Does Staff have any concerns with the Composition 2.0 Project?

A. No. The Composition 2.0 Project modernizes the Company's electronic and printed documents for customers, including bills, notices, letters, welcome

[27] NW Natural/700, Downing/15.

packages, and refund checks. The customer bills (Composition 2.0 project) and Start-Stop-Transfer Project (discussed below) seem important and a good use of funds as there was a big difference in the change of bill formats and being able to automatically transfer account info to online forms. NW Natural anticipates this project will be on-line in September 2024. Staff will monitor the project to make sure it is used and useful prior to the November 1, 2024 effective date for rates in this case.

Q. What is the Genesys Re-platform project?

A. Genesys is the Company's existing on-premises advanced call routing software provider. The Genesys Re-platform Project transitions the Genesys call routing solution to a cloud environment, in response to the impending termination of Genesys' software support for the PureConnect platform by the software provider.[28] Genesys is phasing out the availability of and support for the PureConnect system, first by ceasing to offer new support agreements in January 2024, and then by fully ceasing support and operation of the system on July 31, 2025.[29]

Q. Does Staff have concerns with this project?

A. Staff is concerned that the Genesys re-platform was completed earlier than it needed to be. Full support and operation of the System was guaranteed until July 31, 2025, but the project is underway and is on track to be placed in service by October 2024.

[28] NW Natural/700, Downing/24.
[29] NW Natural/700, Downing/24-25.

Staff believes this project has been rushed to ensure that it was in place before the rate effective date even though the previous call routing platform would have been fully supported through July 31, 2025. Notably, other software that NW Natural is replacing has been unsupported for years. For example, the IQGeo software has been unsupported since June 2022, MapFrame has not been updated since 2015, and UI Planner is no longer supported as of 2023. Notwithstanding, NW Natural was able to wait until 2024 to transition to a cloud-based solution for these applications. However, it is unclear what the Company means by "fully ceasing support and operation of the system" and whether the System could continue to operate after July 31, 2025.

Staff believes it would have been prudent for NW Natural to wait to implement this change to moderate the cost impact of these significant IT investments in this rate case. Therefore, Staff recommends removing the total Genesys re-platform project from rate base because at the time it was an imprudent expense to make given the longevity of the Genesys call routing software. This is a total adjustment of ($2 million) to rate base, Oregon allocated, and ($254,000) in incremental O&M for software licensing.

Q. What is the Start-Stop-Transfer Project and has Staff identified any concerns with including the costs of this project in rate base?

A. The Start-Stop-Transfer Project provides a new web-based tool that will allow customers to initiate, terminate, or relocate their service with NW Natural using

the Company's website.[30] Staff believes this project will be beneficial to ratepayers and has identified no costs that should be disallowed, other than the contingency fund. NW Natural currently anticipates that this project will be on-line in October 2024.[31] As this is right before the effective date of rates from this GRC, Staff will monitor the progress of this project as the case goes on.

Q. What is the Clevest Optimization Project and has Staff identified any issues with the project?

A. Clevest is NW Natural's mobile workforce management software used to schedule, dispatch and complete all work in the field—ranging from emergency response to routine maintenance work. Clevest replaced NW Natural's previous end-of-life application, PragmaCad ("P-CAD"), was developed and implemented as part of the Horizon 1 Project, and has been in service since 2022.[32] The Clevest Optimization Project is an incremental effort to improve the Clevest mobile work management system, including (1) resolving post-deployment issues identified in the product's performance ("stabilization") and (2) adding new functionalities that were initially not included but, following the product's launch, turned out to be critical ("optimization").[33]

Although Staff has no monetary adjustment, Staff has identified a concern. The Company states that since Clevest was fully deployed in 2022 it has had difficulty accommodating the complexity of actual operations, referencing lag

30 NW Natural/700, Downing/26.
31 NW Natural/700, Downing/29.
32 NW Natural/700, Downing/29.
33 NW Natural/700, Downing/30.

times between 3-5 minutes and up to 30 minutes. The Optimization at issue in this GRC is necessary because the Company initially determined that certain features and functions were not essential and deprioritized. Staff recommends that the Company spend more time in a training environment to prevent situations like this from occurring, which in the end can increase the number of rate impacts for customers and the magnitude of those impacts.

Finally, NW Natural projects that the Clevest Optimization Project will be deployed in October 2024,[34] which is right before the rate effective date for this GRC. Accordingly, Staff will continue to monitor this project to ensure it is used and useful before the investment is placed in rate base.

Q. What is the Identity Governance and Administration (IGA) Automation Project and has Staff identified any concerns?

A. The IGA Automation Project involves implementing a comprehensive new software solution to track and manage the security access and identity management for Company personnel, particularly during onboarding, transfers, and offboarding. The Company testifies that currently, security access and other privileges are handled manually, with no centralized control point. As a result, there is currently no mechanism to certify that an individual's access to security and other functions has been removed following offboarding or other role changes.[35] The Company anticipates the software will be in service by June 2024.[36] Although Staff does not have a particular monetary adjustment to

[34] NW Natural/700, Downing/36.
[35] NW Natural/700, Downing/37.
[36] NW Natural/700, Downing/41.

the project totals, Staff is concerned that the process to acquire the IGA Automation project was convoluted with multiple consultants, including Forrester, with whom they have a subscription, and Integral Partners.[37] For other projects, like Clevest, the Company committed a dedicated business lead and project manager to focus on the work. Staff is generally concerned about the increase from $2.7 million in UG 435 to $9.1 million in UG 490 on consultants.[38] Staff is continuing to investigate this issue. Staff asks that the Company confirm whether this project and supplier and the other projects and suppliers were contracted are a result of an RFP.

Q. What are the Telemetry Refresh Projects and has Staff identified any issues?

A. The Telemetry Refresh Projects replace outdated monitoring and control equipment. The majority of the costs are associated with replacing telemetry equipment (OP 4-Wire sites) that transmitted to the basement of NW Natural's former headquarters, One Pacific Square, in order to avoid the need to renew the OPS basement site lease. NW Natural anticipates the projects will be on-line in October 2024.[39] Staff did not find any issues with these projects at this time but will monitor to ensure the projects are used and useful before they are included in the Company's rate base for this GRC.

Q. What is the Utilities International (UI) Planner Re-platform Project and has Staff identified any issues?

---

37 Staff/1002, NWN Response to DR 184 (pdf).
38 Staff/1002, NWN Response to DR 159 Attachment 1 (Excel).
39 NW Natural/700, Downing/43-44.

A. The UI Planner is NW Natural's corporate financial and regulatory finance planning system used to perform complex, iterative forecasts and problem-solving.[40] The Company's legacy version of UI Planner was first implemented in 2014 and will no longer be supported by the software provider after 2023.[41] The Company anticipates that the project will be online in August 2024. Staff has not identified issues with the project but will monitor to be sure it is used and useful before it is included in rates.

Q. What is the PowerPlan Project and has Staff identified issues with this project?

A. The PowerPlan Project transitions a key accounting function, known as the capital settlement process, from the Company's existing PowerPlan tool and into the broader SAP ERP system. The capital settlement process tracks costs accumulated under work orders and projects and allocates those costs to various accounts in PowerPlan.[42] The Company states the transition into the broader SAP Enterprise Resource Planning (ERP) System will improve the accuracy of the Company's capital projects tracking and reporting data. Staff has identified no issues with the project. The Company anticipates the project will be complete in October 2024, so Staff will monitor to ensure it is used and useful prior to the rate effective date.

Q. What is the SAP Treasury Project and has Staff identified issues?

---

40 NW Natural/700, Downing/44-45.
41 NW Natural/700, Downing/45.
42 NW Natural/700, Downing/45.

A. The SAP Treasury Project implements a software tool to automate and manage the Company's treasury functions—such as financial tracking and payment approval systems. The new tool replaces previous manual spreadsheet-based processes and according to the Company provides consolidated and comprehensive visibility into the Company's financial risk management using the necessary subset of SAP's "Treasury Track" software functionalities.[43] The SAP Treasury Project was placed in service in October 2023.[44]

Q. Does Staff have comments regarding the IT&S FTE request?

A. Yes. Staff has comments below although the dollar value adjustment is included in Stephanie Yamada's testimony regarding labor, wages and salaries, and FTE.

Q. How many IT&S positions are being requested?

A. NW Natural is requesting eight new IT&S positions aka full-time employees (FTEs). Four of the eight FTEs[45] are essential to support Horizon 2: Vista (H2: Vista). The other four FTEs are needed to support NW Natural's Supervisory Control and Data Acquisition (SCADA) telemetry systems, gas/pipeline control operations, and identity governance administration.[46]

Q. Should the Company be allowed to recover the costs for the H2: Vista related positions in this GRC?

---

43 NW Natural/700, Downing/48.
44 NW Natural/700, Downing/50.
45 NW Natural/700, Downing/50-55
46 NW Natural/700, Downing/53-55.

A. No. H2: Vista will comprehensively update the customer information system (CIS) but no cost recovery for the investment is requested in UG 490 because it will not be online by the rate effective date. The Company states cost recovery for incremental employees is appropriate even though the investment will not be in rates because the Company intends to immediately begin recruiting three of the four positions and expects all four positions to be hired prior to the rate effective date (i.e., November 1, 2024), although the exact dates will depend on finding qualified candidates.

H2: Vista is replacing NW Natural's legacy, 26-year-old CIS.[47] Staff expects that current CIS employees will be cross trained for H2: Vista, as this is replacing the legacy system. Those employees that were working on CIS-related projects before are better equipped to learn a new system. In addition, NW Natural's IT&S FTE count in 2023, when completing the larger Horizon 1 program was 104, whereas their UG 490 request is 116. So even if all eight positions are approved, the Company's total IT&S FTE are likely to be around 112, which is four less than their request, since they are unlikely to fill all positions.

Moreover, H2: Vista is the second phase of a two-phase project. Horizon 1 was approved for recovery in UG 435 and successfully implemented on time and on budget. H2 will comprehensively update the customer information system (CIS) but no cost recovery is requested in UG 490.

[47] Staff/1002, NWN Response to DR 357 (pdf).

In 2023, NW Natural was able to complete the work of Horizon 1 while being "understaffed" from their previous request. Therefore, Staff proposes to remove the dollar value for the four positions. See Table 4 which shows the NW Natural's FTE count for IT Staff.

TABLE 4: FTE COUNT OF IT STAFF[48]

	2018	2019	2020	2021	UG 435 Request	2023	UG 490 Request
FTE	77	84	92	90	92	104	116

Q. Are the four positions for H2 Vista expected to be included in the deferral that they will file later this year?

A. Yes. "The Company expects to include the costs of these FTEs in the deferral until such time base rates are updated on November 1, 2024, at which point the Company will recover their costs in base rates. The cost of these FTEs is estimated to be incurred prior to the Test Year, during the Test Year and will be ongoing costs." The Company's currently plans to file the Horizon 2, or H2: Vista, deferral application in the third quarter of 2024. The Company will update its plans in its Reply Testimony.[49]

Q. Please summarize Staff's adjustments for IT&S costs.

A. Staff recommends a total adjustment of ($3.7 million) to rate base, which is comprised of ($1.7 million) in contingency funds, ($2 million) of capital costs

[48] Staff/1002, NWN Response to DR 160 Attachment 1 (excel).
[49] Staff/1002, NWN Response to DR 419 (pdf).

and an adjustment of ($254 thousand) to Test Year O&M costs for the Genesys Re-platform Project. Staff's FTE adjustment is included in Staff Opening Testimony for Stephanie Yamada in Exhibit 2000. My recommendations may change based on further review and as informed by the testimonies offered by other parties.

In addition, Staff intends to follow-up with data requests on the following concerns and asks that the Company address these concerns in their Reply Testimony.

1. Are licensing fees or hosting fees included as part of rate base?
2. Can Genesys continue to operate after July 31, 2025?
3. What is the company's policy for spending time in a training environment for IT projects and are they open to amending the time spent in a training environment?
4. Can the Company confirm IT projects and suppliers were contracted as a result of an RFP?
5. What are their plans for including Genesys and Utilities International (UI) Planner in their forecasted retirements and how will that impact their Test Year request?
6. Is there an update on the planned deferral for Horizon 2 program costs?

Docket No: UG 490 Staff/1000
Dyck/23

ISSUE 2. ADMINISTRATIVE AND GENERAL (NON-LABOR) EXPENSE

Q. Please describe the expenses included in this issue.

A. I review non-labor Administrative &General (A&G) expenses and credits recorded in FERC Accounts 921 (Office Supplies and Expenses, 922 (Administrative Expenses Transferred-Credited), 930.2 Miscellaneous General Expenses) and 931 (Rents). Other Staff review other categories of A&G expense such as 924 (Property Insurance), 925 (Injuries and Damages), and 926 (Employee Pensions and Benefits) and their conclusions and recommendations can be found in Exhibit 700 and 1500.

Q. Does the Commission Staff have a standard for how A&G expenses are treated for ratemaking purposes?

A. Expenses are reviewed for reasonableness and appropriate use. Typically, Staff will evaluate the reasonableness of costs by comparing the Company's forecasted costs to the Base Year actuals, a three-year historical average of actual costs, a review of transactional details, and consideration of any trends or changes that may impact the Company's Test Year expense. The Company uses discrete internal "Cost Element" codes to book a range of administrative and general (A&G) expenses into FERC accounts. Staff elicits information regarding the expenses through Standard Data Requests and Data Requests issued throughout the GRC.

Q. What is NW Natural's Test Year proposal for the A&G expenses?

A. NWN is proposing to increase non-labor administrative and general expenses (in FERC 921, 930, and 931) from $54.8 million in the Base Year to $63.8

million in the Test Year. This represents an increase of $9 million, or 16 percent. This increase in expense outpaces the inflation over the same period and is mostly attributed to FERC 921. The following individual FERC account balances were proposed for the Test Year:

FERC 921 (Office Supplies) - NWN is seeking an increase of $8.1M.[50]

FERC 922 is a credit increase.

FERC 930 (Misc General) - NWN is seeking an increase of $417K.

FERC 931 (Rents) - NWN is seeking an increase of $406K.

Q. How did NWN escalate costs from the Base Year to the Test Year.

A. "The Company escalated general non-payroll costs using year-over-year rates of change in the forecast of the West Region Urban CPI as reported in the September 2023 Oregon Economic and Revenue Forecast, published by the OEA. These escalation factors were applied on January 1, 2024, and January 1, 2025 The Company also identified several items where the growth projection was greater or lesser than using CPI and adjusted these items with their specific increase or decrease."[51]

Q. What does Staff recommend for an escalation factor?

A. It is Staff policy to use the Consumer Price Index – All-Urban Consumers for the U.S. (CPI, Urban U.S.) as published by the State of Oregon Office of Economic Analysis for year over year escalation. The escalation factors used in the Company's filing are greater than those used by Staff. Staff proposes an

[50] Staff/1002, NWN Response to SDR 58 Attachment 2 (excel).
[51] NWN/1400 Davilla/8.

adjustment to use the most recent All-Urban CPI as reported in the March 2024 Oregon Economic and Revenue Forecast (2.7 percent for 2024, 2.0 percent for 2025).[52] In its Opening Testimony, the Company uses 3.6 and 2.9 percent. It is worth noting that even the Western CPI has come down in the March OEA forecast compared to the September values used by the Company in their OT.

Q. Please describe Staff's analysis of NW Natural's proposed Administrative and General expenses?

A. Staff reviewed the corresponding sections of the Company's Application, reviewed the responses to the Standard and Staff DRs[53] pertaining to Admin and General expenses, and analyzed the corresponding transactional data. My analysis focuses on historical A&G expense trends, transactional detail, and NWN's proposed escalation adjustment to non-labor A&G expense. Other Staff reviewed the remaining adjustments, and their conclusions and recommendations regarding their analyses can be found in their testimony.

Q. Describe the Company's proposed Test Year expense for FERC 921 (Office Supplies and Expense). [54]

A. The largest components of this IT&S O&M Expense increase are addressed in NWN/700 and NWN/800 as most are related to IT&S related costs.[55] Figure 2

---

52 https://www.oregon.gov/das/oea/Documents/OEA-Forecast-0324.pdf

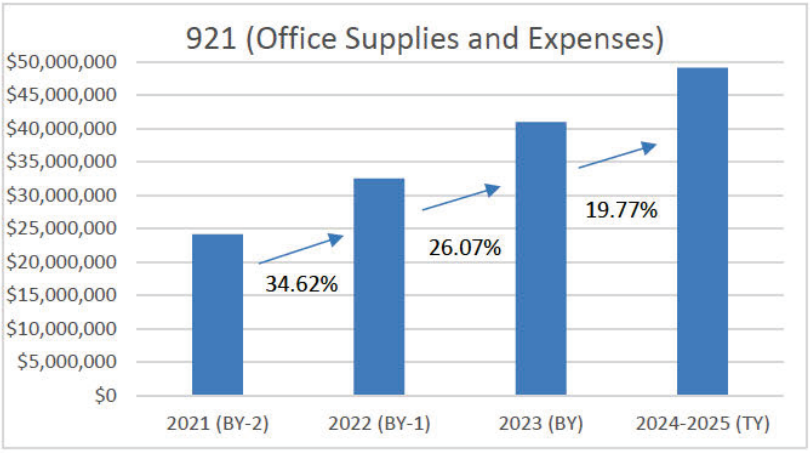
53 Staff DRs 200-202 and 425-428

54 It is worth noting for future Staff to reference that "this adjustment could have been performed more clearly in the workpaper to make reviewing easier." See Staff 1002, NWN Response to DR 408 (pdf) and DR 409 (pdf). For example, "IT&S adjustments were made to increase the total IT&S Test Year amount by $7.7M. How the expenses were allocated to each month in the workpaper was not an emphasis, so the Company spread those expenses equally to each month."

55 Despite the Highly Confidential mention above, all of the material below is non-confidential.

shows the large increase year over year as requested for new expenses such as software and hardware maintenance, legal fees, etc.[56]

FIGURE 1: OR ALLOCATED FERC 921 EXPENSES

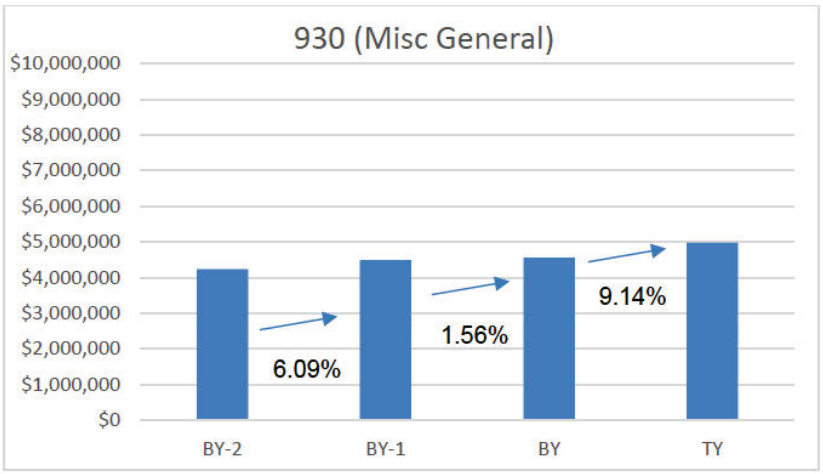


Q. How did the Company arrive at its forecast for general miscellaneous A&G expense recorded in FERC 930?

A. The Company's Test Year FERC 930 expenses are based on escalation; there are no new expenses.

[56] See Exh 1400 OM Model Workpaper_Non-Confidential, tab Dept Non-Payroll Forecast.

FIGURE 2: OR ALLOCATED FERC 930 EXPENSES



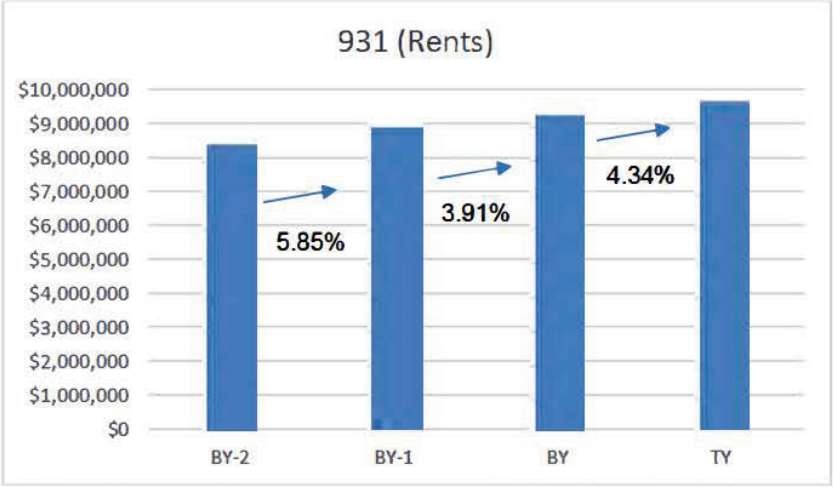
Q. How did the Company forecast its expense for FERC 931 (Rents).

A. The Company states that "An escalation factor should only be relied on where costs are unknown or otherwise fail to be indicative of future costs."[57] One line item in FERC 930 that the Company calls out specifically where this is not the case is for the contracted headquarters lease expense and tenant improvement amortization. As a result, an adjustment was made to reduce what the Test Year expense would have been as a result of inflation values used by the Company. The total expense adjustment decrease in the Test Year is $186 thousand and the OR allocated amount after administrative transfer is $107 thousand as a result of the above line item. Other rents are still expected to increase and therefore, overall FERC 931 costs increased modestly.[58] On the one hand, for the other rent expenses, Staff believes we should not assume that they are increasing at the CPI but given that the

[57] NWN/1400, Davilla/9.
[58] NWN/1400, Davilla/9.

allowable increase, as mandated by SB 608 (2019) and SB 611 (2023), and as calculated by the Oregon Department of Administrative Services (DAS) for 2024 is 10 percent,[59] Staff does not have an additional adjustment (beyond updated escalation figures) to FERC 931.

FIGURE 3: OR ALLOCATED FERC 931 EXPENSES



Q. Does Staff have adjustments to any of the above accounts?

A. Yes. Staff witness Paul Rossow recommends an adjustment to expenses in FERC accounts 816-930 of ($324,660) to remove fifty percent of expense for items classified as meals and entertainment. Most of this expense is in FERC Account 930. It is also worth noting that there is an additional $36,527 in First Class airfare that is also addressed in Paul Rossow's testimony. I have additional adjustments beyond what Paul Rossow has to FERC Account 930, as shown in Table 5 below.

[59] https://oregoneconomicanalysis.com/2023/09/26/oregon-maximum-rent-increase-2024-10-0/

Docket No: UG 490

Staff/1000

TABLE 5: FERC 930 EXPENSES TO BE SHARED[60]

Cost Center	Cost Center	GL Account	GL Account	FERC	Test Year Request	Sharing
10768	CORP SECRET-MISC GE	613200	BUSINESS TRAVEL	930	$78,562	$39,281
10768	CORP SECRET-MISC GEN	613100	CONFERENCE TRAVEL	930	$5,051	$2,526
10768	CORP SECRET-MISC GEN	601100	EDUCATION	930	$29,689	$14,845
10768	CORP SECRET-MISC GEN	604800	LAUNDRY	930	$244	$122
10768	CORP SECRET-MISC GEN	601500	MILEAGE REIMBURSE	930	$1,603	$801
10768	CORP SECRET-MISC GEN	603000	OFFICE SUPPLIES	930	$4,612	$2,306
10768	CORP SECRET-MISC GEN	602100	OTHER CONTRACT WORK	930	$1,275	$637
10768	CORP SECRET-MISC GEN	602466	P CARD UNCODED CHARG	930	$39	$20
10768	CORP SECRET-MISC GEN	604700	PARKING	930	$819	$410
10768	CORP SECRET-MISC GEN	606200	PERMITS AND FEES	930	$2,749	$1,374
10768	CORP SECRET-MISC GEN	602800	POSTAGE	930	$77	$39
10768	CORP SECRET-MISC GEN	605100	PROFESSIONAL SERVICE	930	$261,592	$130,796
10768	CORP SECRET-MISC GEN	602700	TELEPHONE	930	$5,454	$2,727
10768	CORP SECRET-MISC GEN	612200	TRAVEL IN TERRITORY	930	$32,736	$16,368
Total Adjustment						**$212,252**

Q. Is there a history of decisions in favor of the 50/50 sharing of costs between shareholders and ratepayers for other expenses?

A. Yes. Staff follows this guidance for the following expenses, Directors and Officers (D&O) liability insurance,[61] meals, entertainment, gifts, airfare, travel, lodging, awards,[62] office refreshments, catering, promotional items,[63] and bonuses and incentives.[64]

---

60 These can be found in UG 490 - Exh. 1400 -OM Model Workpaper_Non-Confidential in the Dept. Non-Payroll tab.

61 In UE 197, the Commission adopted Staff's principal that D&O insurance should be shared equally between shareholders and ratepayers to properly reflect the benefits and burdens of the expense (Order 09-020 at 19-20).

62 In UE 197, the Commission adopted Staff's principal that costs for meals and entertainment are discretionary and should be shared equally by ratepayers and shareholders (Order 09-020 at 20-21).

63 In UE 197, the Commission adopted Staff's principal that these costs are discretionary and should be shared equally by ratepayers and shareholders (Order 09-020 at 20-21).

64 The Commission's policy is to disallow 75 percent of performance-based bonuses (because they are generally focused on increased earnings and, therefore, bring more benefit to shareholders) and disallow 50 percent of merit-based bonuses (because they equally benefit shareholders and ratepayers). Union bonuses are treated in the same manner as non-union bonuses. (Order 99-697 at 44-45; Order 99-033 at 62.)

Docket No: UG 490

Staff/1000
Dyck/30

Q. Summarize Staff adjustments for expense recorded in FERC accounts 921, 922, 930 and 931 as a result of using different escalation figures.

A. This adjustment of ($652,794) in Table 6 was determined by using the sum of the departmental and corporate values for nonpayroll for each of the FERC categories below.[65] This escalation adjustment was made independent of any cost sharing recommended in Table 5 or removals recommended in other testimonies. Therefore, the total recommended adjustment Staff is making in this issue is a combination of the two values, which is ($865,046). In the event there is some other adjustments to expenses in these accounts, the escalation adjustments listed below would also need be updated because there would be new values from which to start the escalation. However, in the Company's O&M model workpaper, their escalation figures are embedded in their Test Year request values in the Dept. Non-Payroll forecast tab, that is why it is difficult to make the cumulative calculations that would be needed to show what updated escalations would be if the requested values had been different or had included the specific adjustments by FERC Account.

[65] See Exh 1400 – OM Model Workpaper, tab O&M TY FERC Allocation Summary and SDR 58 Attachment 2 Non-Labor O&M.

Docket No: UG 490

OREGON

STAFF EXHIBIT 1001

Witness Qualifications Statement

APRIL 18, 2024

Docket No. UG 490

Staff/1001
Dyck/1

WITNESS QUALIFICATIONS STATEMENT

NAME: Julie Dyck

EMPLOYER: Public Utility Commission of Oregon

TITLE: Senior Utility Analyst
Rates, Safety and Utility Performance Program

ADDRESS: 201 High Street SE. Suite 100
Salem, OR. 97301

EDUCATION: I have a Bachelor of Science from Berea College in Political Science. I also hold a Masters of Integral Economic Development Policy specializing in the public sector and econometrics. I have completed rate school with NARUC, a data analytics course with Google, and am currently a NABE Frank Schott Scholar working towards becoming a Certified Business Economist.

EXPERIENCE: I was employed as a Junior Utility Analyst by the Oregon Public Utility Commission starting in June 2021 in the Telecommunications and Water division. I transitioned to the ERFA/RSUP Division in July of 2022 as a senior economist. Within this division, I currently perform a range of financial analysis duties related to natural gas and electric utilities, with a focus on Power Cost filings. In addition, I assist with Purchased Gas Adjustments, Annual Power Cost filings, and General Rate Cases. Rate case experience include: UG 435, UE 399, UE 416, and UG 461. I was previously employed as an adjunct professor of Econometrics at the Catholic University of America and as an Analyst in the Office of Management and Budget (OMB) within the Executive Office of the President (EOP), where I worked as part of a team on higher education funding. Prior to EOP, I was an Economic Consultant for the U.S. Conference of Catholic Bishops.

CASE: UG 490
WITNESS: JULIE DYCK

PUBLIC UTILITY COMMISSION
OF
OREGON

STAFF EXHIBIT 1002

Exhibits in Support
Of Opening Testimony

April 18, 2024

- Disclosure: Risks scored in red must be disclosed on status reports, including mitigation strategy.
- PM Role: The PM is responsible for communicating and escalating issues and ensuring that all impacted parties understand the possible negative consequences. They are accountable for ensuring the risk reaches the appropriate level of response, but are not always accountable for the mitigation itself.
- SteerCo and Sponsor Role: For red exposure risks the Sponsors and/or Steering Committee are responsible for making critical risk decisions (e.g. approving how are we going to tackle this risk) and accountable for ensuring the mitigation strategy is implemented (e.g. working to identify new resources to support a capacity risk).

Yellow Risk Exposure

- Mitigation Strategy: Yellow exposure risks should likely have a mitigation strategy, although in some cases accepting the risk may be acceptable. If this is the case, all impacted parties, including sponsors and steerco need to be aware and sign off on the impact.
- Disclosure: Risks scored in yellow must be actively discussed and managed in the project leadership team meetings.
- PM Role: The PM is responsible for communicating and escalating risks to the appropriate members in project team; they are accountable for ensuring the risk reaches the appropriate level of response, but are not always accountable for the mitigation itself.
- Sponsor Role: The Sponsor is responsible for acknowledging risk mitigations, and removing barriers for the risk owner to tackle the mitigation.

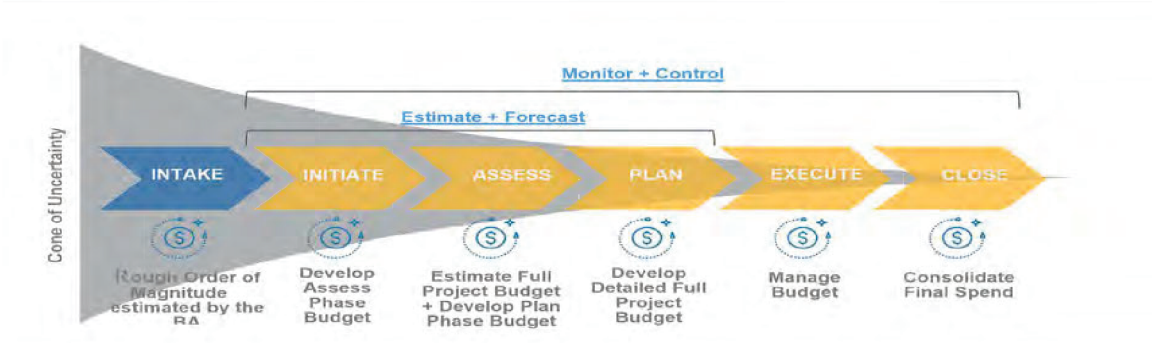
Green Risk Exposure

- Mitigation Strategy: Green exposure risks need to be monitored, but do not necessarily need an active mitigation strategy
- Disclosure: Green risks should be part of the risk register but do not need to be escalated.
- PM Role: The PM is responsible for monitoring the risk and ensuring it does not increase in probability or impact.

As risks occur, the PM moves them into the Planview issues list, which is also monitored to ensure all stakeholders understand the consequences.

Accounting and Budgeting Practices

Project managers are responsible and accountable for maintaining a project's budget – from the estimates generated during the Initiation phase through finalization of the project's actual spends at Project close. The diagram below outlines the high-level Budgeting activities that take place throughout the project's life cycle:



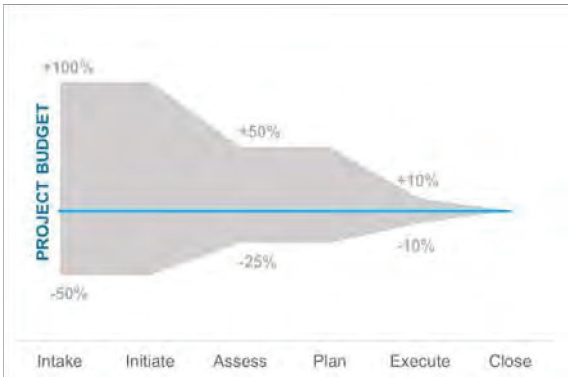
In order to effectively manage budgets, PMs are responsible for tracking and managing internal and external spend and submitting change orders as needed to keep the budget balanced and accurate. Our PMO Cost Accountant closely monitors spending on a month-to-month basis to ensure we're providing enough transparency as a public utility.

Forecasting / Estimation

Project Managers will begin their forecasting at Initiation. At this phase of the project, Project Managers should work closely with stakeholders and Accounting to begin outlining high level project costs; these estimates should become more refined as the project progresses.

Cone of Uncertainty

As you develop your budget, the cone of uncertainty provides the acceptable amount of variance at each stage. Communicate thoughtfully to key stakeholders about the cone of uncertainty. Explain that at this phase in a project, the budget is an estimate with a wide potential variance. This will become more defined as the project unfolds. For a typical project, the variance at each phase is usually:



- Intake: When a project is first proposed at Intake, there is a Rough Order of Magnitude (ROM) estimate provided. Given that this estimate is provided before any stakeholders have been engaged or SOWs generated, it is an extremely high-level estimate. At this stage the rough order of magnitude is entered into the Triage form where we expect the variance to fall anywhere from -50% to +100% of the eventual project budget; for those projects that do not have much precedent, variance may be even larger.
- Initiate: As the project enters the "Initiate" phase, you will develop a budget for the Assess phase however you will NOT be required to formally estimate total project costs at this juncture.
- Alternatives Analysis: At the end of the Assess phase when you submit the AA, the project should have the first solid estimate of full project cost. At this point, some variability is still expected: -25% to +50%
- Plan: Finally, as you work through the Planning stages you will be further refining your project forecasts. You should be receiving completed RFPs from prospective vendors. These, along with other refined estimates, will allow you to submit your full project budget, which will constitute your project baseline as you enter Execution. This estimate is expected to fall within +-10% of your actual spends.

Capital vs. O&M

As you begin to estimate project costs, you should speak with Accounting about setting up your project costs. Project Costs are split between Capital and O&M, and both should be included in your budget for all elements (internal labor, external labor, materials, etc.). The capital asset policy outlines what is considered capital vs O&M, but here is a general guideline:

- Interest on mortgages accrued at date of purchase
- Accrued and unpaid taxes at date of purchase
- Other costs incurred in acquiring the land
- Water wells (includes initial cost for drilling, the pump and its casing)
- Right-of-way and easements

CWIP – Construction Work in Progress

Construction Work in Progress consists of construction costs incurred until a capital construction project is put into service; only directly related costs, AFUDC, and Construction Overheard (COH) can be capitalized. Generally, internally developed computer software projects are considered construction projects. Please consult the Accounting Manager if you believe you have a capital internally developed software project to further understand the types of costs that may be capitalized; the accounting guidance related to internally developed software is specific and technical and should not be interpreted without the Accounting Manager's involvement. CWIP project costs are included in FERC account 107 and can include the following

- Direct costs
- Construction Overhead (COH)
- Allowance for Funds Used During Construction (AFUDC)

Completed construction not classified (CCNC) amounts are included in FERC account 106. This account is used to classify capital costs that have not been transferred from work orders to plant retirement units. The transfer from CWIP to CCNC places the asset in service, stops AFUDC, and begins the charging of depreciation expense based on the FERC plant account.

Information Technology Project Capitalization

Information Technology Projects are generally a mix of both O&M Expense and Capital, depending on the nature of the work performed and the time during the Project's lifecycle when the work is performed. At the beginning of an Information Technology Project, the identification and documentation of system requirements, the evaluation and analysis of alternative systems, and the selection analysis is charged to O&M expense. Project management during the system evaluation and selection phase is also charged to O&M expense.

After the software selection has been made, future Project costs are capitalized. Specifically, costs associated with project management, documentation of the "As-is" and the "To-Be" processes, conversion and loading of historical data, and the configuration of the new software is capitalized. The "As-Is" processes are those being followed with either manual or existing software. The "To-Be" processes are those that will be followed in the future using the new software. Further, the cost of "first-year maintenance" paid as part of the software purchase is capitalized and additional costs related to changes in system design and/or system selection during the implementation effort and the development of process manuals and documentation is also capitalized.

Requirements gathering, design and implementation of enhancements to existing systems, and system upgrades may be capitalized if they add significant new functionality to the system; please work with the accounting department to make this determination.

After "Go-Live" follow-on costs relating directly to the project are capitalized. For example, bug fixes and minor enhancements would be capitalized up to the point in time when the system is stable and working as designed. At the end of the Information Technology Project's life cycle, many costs are charged to O&M expense. For example, training for users and training for information technology staff is charged to O&M expenses. Ancillary training expenses, typically meals, travel, and lodging, are also charged to O&M. Costs associated with shelved/abandoned improvements, sunk costs as a result of system reevaluation and re-selection, legal and other administrative costs associated with a contract dispute with a software/system vendor, etc. are charged to O&M expense.

Report development capitalization should be discussed on case by case basis with the assumption that the development of most reports will be classified as O&M expense. Exceptions may include reports being developed as part of a new system implementation project or reports requiring significant data model/structure development for an existing system. Examples of these reports include the following:

- Building new SAP Business Warehouse "cubes" or "extractors" to enable the creation of new reports.
- Reports associated with a Capital Project (e.g., Project Systems reports) regardless of whether they are on an existing system.

System Integrity Costs

Typically, our general rate cases will allow for a system integrity program, allowing the Company to track into rates in the following year the costs of maintaining our distribution and transmission system. Typically, these programs will require the Company to expense of a portion of the costs, for example the current program requires the Company to expense the first $4,500,000 and any balance over this amount is reclassified to Plant Capital Accounts and tracked into rates in the following year through the Purchased Gas Adjustment.

Fleet Charges

Generally, fleet costs are allocated via overhead rate to their respective work orders based on employee work hours. Work orders determine how these charges are allocated to O&M and capital. New vehicle costs, plus the cost to ready it for service are capitalized.

Minor Item Service and Damage Repair Capitalization Considerations

Line repairs requiring 10 feet of pipe or more are capitalized. Repairs are generally expensed but total replacements of retirement units are capitalized. Grading and sewer work on Company land is generally considered capital construction costs. See Table 1 below for specific treatments.

Table 1. Service and Repair Considerations

Work Category	Expense	Capitalize
Service Line Repair / Replacement	Replacement of less than 10 feet or repair to current service line.	Replacement of 10 feet or more of service line
Main line Repair / Replacement	Replacement of less than 10 feet or repair to current main line	Replacement of 10 feet or more of main

Rates & Regulatory Affairs
UG 490
Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 156
Was cloud-based software addressed in UG 435 or any of the other prior general rate cases (GRCs)?

a. If so, identify which GRCs this issue was addressed in.
b. Are the terms cloud-based software and IT&S investments used interchangeably?
c. Explain how cloud-based solutions are different than their alternatives.
d. Please distinguish projects that are cloud-based and those that are not.
e. Is it typical to have this many IT&S projects up for recovery in a GRC?

Response:

Yes, cloud-based software was addressed in UG 435 and UG 388.

a. UG 435 OPUC DR 482 NWN Response, part b (attached as UG 490 OPUC DR 156 Attachment 1). UG 388, NWN/600, Downing/11-14, 16-27, 39, 50; NWN/1600, Downing/22.
b. No, the terms cloud-based software and IT&S investments are not interchangeable. Cloud-based software falls under the umbrella of IT&S investments. But investments that are not in the cloud are included as well.
c. Please refer to NWN/700, Downing/8-11 for a detailed discussion of the differences between the two basic IT&S hosting options: cloud-based and onpremises. Importantly, many software vendors are transitioning their offerings to be solely cloud-based, meaning that certain products are no longer available as on-premises solutions. For instance, SAP SuccessFactors, which is used for human resources management, is available only via the cloud, while other software vendors such as Genesys have announced terminating support deadlines for on-premises solutions.

   Where both cloud-based and on-premises solutions are available, the two options differ in several ways:

   1. Infrastructure Ownership and Management: With on-premises solutions, businesses own and manage all the necessary hardware, networking equipment, and software licenses themselves. In contrast, cloud-based solutions are hosted and managed by third-party providers. This means

businesses do not need to purchase and maintain physical hardware necessary to host the software service, or expend the same level of resources to develop and implement software updates and patches.

2. Scalability and Flexibility: Cloud-based solutions offer much greater scalability and flexibility compared to on-premises alternatives. Businesses can easily scale their resources up or down based on demand without having to invest in additional hardware. This elasticity ensures that resources are allocated efficiently.

3. Cost Structure: Cloud-based solutions often operate on a subscriptionbased pricing model, where businesses pay only for the resources they use on a monthly or yearly basis, which is creates an incremental O&M increase and generally escalates through time. The implementation of these programs can be capitalized but the depreciation schedule is approximately 5 years, which often causes lag in recovery for a significant portion of the investment. On-premises solutions, on the other hand, require significant upfront capital expenditure but the depreciation schedule is approximately 15 years.

4. Reliability and Security: Cloud providers invest heavily in infrastructure redundancy, security measures, and disaster recovery protocols, often providing higher levels of reliability and security than what can be achieved with on-premises solutions. However, businesses must still carefully evaluate and choose reputable cloud providers and implement best practices to ensure data security and compliance.

5. Maintenance and Updates: Cloud-based solutions typically handle maintenance tasks such as software updates, security patches, and hardware upgrades automatically, reducing the burden on IT staff. Onpremises solutions require businesses to manually manage these tasks, which can be time-consuming and costly.

d. For all cloud based investments, please see submitted workpaper "UG 490 – Exh. 1714 -WP1 – Cloud Based Assets – CONFIDENTIAL".

e. We interpret this question as asking whether the number of IT&S projects included for cost recovery in this rate case is typical of the current state of the industry. Based on that understanding: yes. IT&S modernization is occurring industry-wide as companies are:

a. Required to update or replace non-supported systems.
b. Forced to transition to cloud solutions as vendors have no other options.
c. Managing risk and regulatory requirements by mitigating cybersecurity threats.

Rates & Regulatory Affairs
UG 435
Request for a General Rate Revision
Data Request Response

Request No.: UG 435 OPUC DR 482

482. In reference to NW Natural/600, Downing/page 30, Table 1 at line 6:
a. Please clarify that the total Oregon allocated dollar amount for Horizon capital costs of $63.7 million excludes the other IT projects noted in NW Natural/600, Downing/page 2, lines 5-11.
b. If the Horizon Program is primarily a cloud based solution, please provide a detailed response explaining how significant capital costs associated with this project are prudent.
c. Regarding the $8.8 million in "contingency and other costs", have any of the contingent funds been used or are projected to be used? If yes, please provide:
- i. A breakout for each specific project cost overrun necessitating the use of contingency funds.
- ii. A detailed explanation describing why each cost overrun occurred.
- iii. A detailed description of the steps the Company took to manage project costs and adhere to the Company approved project budget.
- iv. If the contingency funds are not needed to complete the project, how will the Company remove these costs from this rate case?

Response:

a. The total Oregon allocated dollar amount for Horizon capital costs of $63.7 million excludes the other IT projects noted in NW Natural/600, Downing/page 2, lines 5-11.

b. The Financial Accounting Standards Board (FASB) issued Accounting Standards Update 2018-15 (ASU 2018-15) specifically to address accounting for cloud-computing software. This update requires companies to capitalize certain costs associated with implementing a cloud arrangement. These costs include implementation to get the hosted service set up, configured, and ready for use. Additionally, new software licenses qualify for capitalization as they fall in the category of Bring Your Own License (BYOL). This means we own the licenses and could pull them from the cloud and install locally if we chose to in the future.

The implementation for cloud or on-premise solutions of these applications will still require design, configuration, development, testing and deployment activities to be successful.

c. Contingent funds have been used and are projected to be used.

i. Please see UG 435 OPUC DR 482 attachment 1, column E – Amount of Change. Total approved contingency use through March 31, 2022, is $4,519,671, Column E Row 23.
Total projected contingency use through March 31, 2022 is $975,000, Column E Row 29. Analysis is still underway for scope and work effort; these are estimates provided by our service integrator.
The Horizon Program is still in process and additional items requiring the use of contingency funds may be required. At this point, the project anticipates a need to use the remainder of the contingency funds by October 31, 2022, but are not currently projected or known. ii. Please see UG 435 OPUC DR 482 attachment 1, column G – Reason for Change.
For the change orders over $1 million dollars, we have attached the change order requests that provide additional details around the explanation of cost overrun.
IQGEO change order for $2 million, see UG 435 OPUC DR 482 attachment 2.
Reporting change order for $1.5 million, see UG 435 OPUC DR 482 attachment 3.
For the projected change orders, analysis is still underway for scope and work effort; these are estimates provided by our service integrator and will follow our change control process for approval.

iii. The Horizon Program is a multi-tier structured and adhered-to governance model with key leadership providing direction and oversight. Please see attachment UG 435 OPUC DR 482 attachment 4.

The Horizon Program has an established Change Control Process that aligns to the governance model. Please see attachment UG 435 OPUC DR 482 attachment 5.
Below is the Horizon Program meeting cadence directly related to project costs:

1. Weekly review of project costs with NWN program Finance and Accounting

2. Weekly review of contractual obligations and service level credits with NWN program team and NWN legal team

3. Weekly review of change control board

4. Monthly Service Level Agreement metrics review with program team and Accenture

5. Monthly invoice review with Accenture and program Finance and Accounting

6. Monthly review of project costs with program Finance, Accounting, Rates and Regulatory, and Program Executives

7. Quarterly review of projects costs with the Senior Executives and IT&S Alignment Team

Following the Horizon Program governance model, change control process, and meeting cadence describes the process that the Horizon Program follows to manage project costs and adhere to the Company approved project budget.

iv. If contingency funds are not needed to complete the project, the Company is willing to adjust the capital in its compliance filing to the actual amount spent for Horizon, when the project goes into service.

NW Natural®

Rates & Regulatory Affairs
UG 490
Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 416

Have you estimated the net benefits of any of the capital projects?
If yes, please describe. Explain the rationale for including cloud-based assets in rate base.

Response:

All Information Technology & Services (IT&S) capital projects are expected to have net benefits, as compared to not undertaking the project or undertaking a project alternative analyzed by the Company. These benefits can manifest in various ways, including but not limited to the maintenance of safe and efficient operations, improved customer experience, data protection and privacy, business continuity, network integrity, risk mitigation and enhanced functionality. The benefits and costs of each capital project is set forth in testimony, NW Natural/700. For instance, at NW Natural/700, Downing/4344, the Company explained that the Telemetry Refresh Projects support the Company's prompt and accurate control of the gas distribution system; by undertaking the upgrades and replacing outdated technologies, the Company can not only ensure the safe and reliable provision of service, but avoid the need to maintain a lease at the Company's former headquarters location.
The Accounting rules determine the capitalization treatment of Cloud Computing Arrangements if the criteria are met for capitalization. FERC (Regulatory) and GAAP do not differ on the types of costs that can be capitalized or expensed related to Cloud Computing Arrangements. As it relates to Cloud Computing Arrangements (CCA) that are Service Costs, FERC made a final ruling on ASU 2018-15: Customer's Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement That Is a Service Contract to all jurisdictional public utilities and licenses, natural gas companies and centralized service companies. For regulatory accounting, capitalized implementation costs should be recorded as utility plant assets in Account 303 (Intangible Plant - Computer Software) and should be amortized over the term of the associated cloud computing arrangement in Account 403 (Depreciation Expense).

Rates & Regulatory Affairs
UG 490
Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 206

Please provide a narrative description of NWN's capital budgeting process including but not limited to development responsibilities, load study process, annual timing, and approval process.

Response:

The capital forecast is updated multiple times throughout the year. This forecast incorporates the most recent information based on requirements to maintain a safe and reliable system. Each year's budget is based on the forecast created in December, which is presented to and approved by the Board of Directors.

Finance facilitates the process with the five individual business units that provide those forecasts: Engineering, Customer Acquisition, Information Technologies, Facilities, and Transportation & Meter Shop. Review meetings take place with the managers, directors, and officers where the assumptions and forecast are reviewed and determined. Once approved, each group sends their forecast to Finance for inclusion in our overall forecast. The overall forecast is used to inform various groups on progress, adjust our planned spend and include impact the current and long-range forecast. Finance also facilitates a monthly review of current year variances against the approved budget.

Each business unit uses a bottom-up approach, where they determine required and run rate work in addition to identifying other projects that are needed. Detail is provided for applicants and projects.

Facilities:

Potential projects are identified by the business and/or Facilities department for consideration. The facilities projects steering committee reviews all requests, validates the potential need for the projects and determines if the projects should be added to the facilities 5-year roadmap for further evaluation.
Forecasts for each project are updated quarterly and reviewed by the Facilities Steering Committee, Finance team, and officers.

Transportation and Meters:

Vehicle replacements are evaluated based on a combination of vehicle vintage and mileage. Each year the list of vehicles that meet either the age or mileage limits are evaluated. That list along with department feedback creates the replacement list for the following year. Equipment and Trailers are determined to be replaced based on business need and, on a case-by-case basis. Tools are also requested by departments and are evaluated for business need and included on a list for purchasing the following year. Meter needs are developed based on current meter inventory, customer growth forecasts, meter change outs, PCC changes as well as factoring in vendor lead times.

Customer Acquisition:

Services and Mains capital spend is forecasted based our customer growth forecast or footage of mains multiplied by estimated cost. Housing start projections from the Oregon Department of Economic Analysis are a key assumption when developing new customer projections. Permits are based on previous year actuals plus inflation. Meter installations are based on estimate number of units times cost per unit.

Engineering:

Planned projects are based on need, resource, and supply chain availability. A significant amount of work is driven by jurisdiction and compliance requirements. Planned capital work is typically identified in advance based on long range plans, Facility assessment reports, Equipment studies, safety plans or DIMP & TIMP plans. Prioritization is given to projects based on urgency or feedback from operations personnel. Nearer term planned work can be due to equipment unexpectedly failing or showing near end of life, avoidance of potential pipeline safety impact due to natural forces, and jurisdictional franchise obligations. Larger, discrete projects are individually assigned projects in our project management office and have capital spend budgets and expected in-service dates that are managed through the duration of the project. Those are all individually tracked through our forecasting process. Forecasts for some categories of work are based on historical spend trends.

IT&S:

The collection of projects reflects various business needs. Enterprise Applications projects are driven by new or changes to existing systems to support new or changed compliance requirements, or to support new business needs. Information Security projects follow the cybersecurity strategic plan. The Enterprise Architecture forecast follows the IT&S 5-year strategic plan and are typically new capabilities driven by business needs focusing on building resilient modern platforms, optimizing value of existing platforms and building new

A project's Team site is capabilities as required. Network, Infrastructure and Service delivery typically entail technical refresh cycles. Finally Operational Technology represent engineering projects that require IT&S execution, so this forecast follows the needs and projections of some of the engineering's forecasted capital plan.

The business units where applicable coordinate with the Portfolio Management Committee which meets to discuss, review, prioritize and approve funding for projects and determine if it should be added to the portfolio. Considerations included for discussion are urgency, capital spend and resource constraints. The business units triangulate with the portfolio management committee to ensure that projects are approved and being included in the budget/forecasting process. Following approval, projects are included into the forecast cycle.

Microsoft Teams

Overview: intended for the internal (contractor and FTE) project team to collaborate, discuss and conduct core project activities. Individual workstreams use themed channels chat and document sharing without breaking the thread of discussion. The tool provides continuity of knowledge for project team members joining mid-project and ensures remote access to documents and chat via the Teams Mobile app.

Requesting a Site: When a project is initiated, the PM should request at Team collaboration site by visiting the request form. Instructions on how to complete this form can be found here (use the directions attached to project sites). This will instigate the creation of both a SharePoint site for the project, and an associated Team site configured based on the project's discipline for the PM to adjust to the needs of the team.

Channels and Access: By default, your project Team will be private (invite only). It is the Project manager's responsibility to manage access to the Team and individual channels making sure that the right people have access to each section of the Team. Remember that each channel has its own document storage, and those with access to that channel will be the only ones able to see that documentation. This likely means a contract or procurement channel that is available only to the PM and legal (as needed), and then workstream channels that are available to everyone in the project team for visibility (e.g. Change Management, Project Management, Testing, etc.). Recommended channels will already be set up for the PM to work with but can be adapted to the project need.

Tabs: We recommend that the project manager configure the Tabs (header links) in the Team's channels to provide easy navigation to project resources. The recommended tabs are below, with the associated app to use to add that link (Hint: click on the + symbol at the top of the channel to add new Tabs).

Training and Resources: A high level overview of how to leverage Teams as a project is available here, and additional tutorials on how to use Teams are available on the M365 initiative page.

Planview

Overview: Planview is NW Natural's Project Portfolio Management (PPM) tool, our home-base for the project process - from idea to closure. Projects are required to leverage Planview for stage gates, status reporting, schedules, resource management and budgeting, as it serves as the source of truth for much of NWN's rates reporting. You can access Planview on your web browser when you're within the NW Natural network and have been granted access to the tool.

Resources: This handbook references Planview for how the tool should be used through each phase (see initial checklists). In addition, guides on how to use the tool can be found on the Hub. We recommend Project Managers watch the full training series listed at the bottom of the PM column as they get started leveraging Planview.

* indicates that the document must be complete and accepted in order to move to the next phase

blue indicates that the document is formally attached or described to the stage gate request

Project Lifecycle at a Glance

Goal	INTAKE Understand the root problem and opportunity to inform the selection of the right projects at the right time	INITIATE Align and approve on business case, and the resources needed to assess the project	ASSESS Develop requirements, assess options, determine alternatives and preferred solution	PLAN Fully flesh out the selected solution and define the execution path to achieve the project goals	EXECUTE Track, monitor and control the project as work is completed	CLOSE Operationalize, adopt and hand over the project deliverables
Project Management (Budget, Schedule, Scope, Resourcing + Project Governance)	*Sponsor: Intake form *PMC: Project review and selection	***PM: Assess Phase Budget** ***PM: Initial Project Charter** ***PM: Decision Log, Risk Log, Issues Log** ***PM: Assess Phase Resource Plan** ***PM: Monthly Status Reports** ***PM: Org Chart** *PM: **RACI** and **RAPID** PM: Teams and SharePoint Site PM: Stakeholder Register PM: Steering Committee + CCB **Sponsor**: Project oversight + governance *PM: Submit "Move to Assess" Gate	PM: Assess the cost of possible solutions ***PM: Design/Plan Phase Budget** ***PM: Design/Plan Phase Resource Plan** *PM: Design/Plan Phase Schedule ***PM :Final Project Charter** ***PM: Decision Log, Risk Log, Issues Log** ***PM: Monthly Status Reports** **Sponsor**: Project oversight + governance ***PM/Sponsor**: Alternatives Analysis (if over $1MM w/ COH) *PM: Submit "Move to Plan" Stage Gate	PM: Confirm the costs of the selected solution, forecast costs to plan the project ***PM: Execution Budget and forecast** *PM: Project Execution Approach / Plan ***PM: Execution Phase Resource Plan** *PM: Execution Phase Schedule ***PM: Monthly Status Reports** **PM/BA/Tech Lead/Sponsor:** Determine final project scope ***PM: Decision Log, Risk Log, Issues Log** **Sponsor**: Project oversight + governance **PM/Sponsor**: Transition to Operations Plan (IT only) *PM: Submit "Move to Execute" Stage Gate	**PM**: Weekly Status Reports PM: Monitor and control costs, compare to actuals PM: Monitor and control scope delivery, resource capacity, schedule and all other project aspects to ensure project is on track ***PM: Decision Log, Risk Log, Issues Log** **Sponsor**: Project oversight + governance PM: Go/No Go Criteria ***Sponsor**: Go/No Go Approval PM: Move project to "Prepare for Closure"	**Sponsor**: Project oversight + governance *PM: Lessons Learned *PM: TECO *PM: Project close activities **PM/Sponsor**: Final Transition to Operations Plan (IT only) *PM: Final budget true-up **PM**: Submit "Move to Close" Stage Gate
